The primary mission of the 470th CIC Detachment remained the security of "the entire Canal Zone from Balboa to Colon against the dangers of sabotage, subversion, and espionage both from United States personnel and Foreign Nationals crossing the canal."

Cargoes and passenger lists of merchant ships crossing the isthmus were checked by agents of the 470th. On numerous occasions, surveillance of suspected foreign national passengers was maintained during their entire trip across Panama.

The 470th accomplished security investigations on all personnel employed in key positions with the Panama Canal Department. References to the CIC Center reported a unique problem to the CIC Board: "Because the preponderance of the personnel comprising our Armed Forces stationed in the Canal Zone are of Puerto Rican extraction, of which many are influenced by political philosophies contrary to the best interests of the United States, the loyalty clearance functions of this detachment are voluminous."

All Agents Operate in Civilian Clothes

The local situation in mid-1946 was summed up as follows: "The political situation of Panama is characteristic of all small Latin American countries, constantly turbulent, disorderly, restless and agitated. There have been incidents in which the opposition parties have attempted to gain power of the

Government by violence, but these attempts have been promptly repelled by the Government through its police department as Panama has no army."[104]

Returnees from Panama had several standard complaints and problems to put before the Center's CIC Board.

Investigative supplies, particularly film, were extremely scarce. In some instances, outdated film was received; and in others heat exposure on southern docks took its toll. Arrangements to receive film from local Signal units were made to partially correct this difficulty.

Detachment vehicles were reported in 1949 to be in "very poor condition." Many had been in use since 1942. Their state of repair was such that frequent surveillances were failures because the subject's car was simply too fast for CIC's vehicle.[105] All detachment personnel put in long hours. One returnee reported a 60-hour work week was average. Indications are that the heavy work load had no adverse effect on the morale of the detachment.[106]

Personnel Allotment of 471st CIC Detachment Decreased

The 471st CIC Detachment had its headquarters in San Juan, Puerto Rico. Authorized strength at the war's end was three officers, six warrant officers, and 13 enlisted men. In subsequent years, this allotment underwent a considerable reduction. By September 1948, the 471st was authorized two officers, one warrant officer and five enlisted men.[107]

In mid-1946, the functions of the Detachment were described as consisting of "routine personnel investigations (clearance by agency check of FBI, ONI, G2 and Insular Police files of applicants for WD jobs); special investigations of disaffected

MISSION OF THE COUNTER INTELLIGENCE CORPS

"The mission of the Counter Intelligence Corps is to contribute to the operations of the Army Establishment through the detection of treason, sedition, subversive activity, and disaffection, and the detection, prevention, or neutralization of espionage and sabotage within or directed against the Army Establishment and the areas of its jurisdiction."

Auth: AR 381-100

U. S. ARMY INTELLIGENCE CENTER
FORT HOLABIRD, BALTIMORE 19, MARYLAND

ACSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

THE INCEPTION OF THE COUNTER INTELLIGENCE CORPS

WORLD WAR I - 1917-1918

I. THE FIRST AEF UNIT

Army Intelligence Organized

The Counter Intelligence Corps of the United States Army had its inception as the Corps of Intelligence Police in World War I, and in the following fifteen months proved itself worthy of being a permanent part of the Army. This achievement is especially remarkable when it is recalled that at the outbreak of World War I the United States Army did not have an intelligence service.*

When the Military Information Section of the War College Division of the War Department General Staff was re-established on 3 May 1917, one of its functions was "The supervision and control of such system of military espionage and counter-espionage as shall be established by authority of the Chief of Staff or the Secretary of War, during the continuance of the present war...."** Three months later a system for counterespionage was authorized.

"Inclusion of the words' supervision and control reflected the initial intelligence concept that this general staff agency should have centralized control and handle operations instead of being solely a policy and planning division."*** Differences of opinion on this concept were to result in numerous reorganizations and consequent confusion for nearly forty years. It was not until 1 September 1954 that an Army Intelligence Center was created and became a step toward taking the Army G2 out of operational activities.****

Colonel (later Major General) Ralph H. Van Deman, who had pioneered the establishment of an Army intelligence service, was named chief when the Military "Information" Section was established in 1917. One of his first organizational problems was the designation of various intelligence terms to define the mission and scope of the new service.*****

[redacted]

While Colonel Van Deman was in the process of organizing this section,* a British military mission arrived in the United States. One of its purposes was the establishment of a more intimate British-American military intelligence collaboration in London. Since it appeared likely that the United States Army would operate very closely in Europe with units of the British Army, it was decided "...to base the organization of the American departmental intelligence agency on that of the British." The British term "intelligence" came to replace the word "information" as the name of the section although no official change was authorized.** Later some of the titles adopted turned out to be misnomers such as "Field Intelligence" which was actually "Field Training."***

Colonel Van Deman had preferred the term "secret service" to denote the American military organization to hunt down subversive influences within the United States Army, but Secretary of the Treasury William G. McAdoo claimed sole right to this title for his service. Consequently the continental army terms of "espionage" and "counter-espionage" were adopted.****

From the British, Colonel Van Deman derived the terms "positive" and "negative" intelligence which simplified organizational problems by making a functional division between collecting military information about other nations in contrast to preventing other nations from collecting unauthorized military information about the United States.***** Unfortunately, in practice, intelligence refused to be accurately defined by these simple, convenient labels and many problems resulted in the years that followed when attempts were made to operate strictly within arbitrary divisions, of positive and negative intelligence.

AEF Requests a "Secret Service"

Overseas, Major General John J. Pershing, accompanied by his advance party of the American Expeditionary Force (AEF), had arrived in England on 3 June 1917, and had reached France five days later. With him was Major Dennis E. Nolan in charge of the Intelligence Section of the General Staff.******

*** Ibid., Ch V-33.
**** Ibid., Ch V-27.
***** Ibid., Ch V-35.
****** Ibid., Ch V-18.

During the following month Major Nolan held a number of conferences with officers of the British Intelligence Service of the War Office at London and a study was made for him by a Captain of the British Intelligence Service on the organization of a secret service division of the Intelligence Section of the AEF Staff.*

On 11 July 1917, Major Nolan requested the Chief of Staff of the United States Army to send the AEF fifty company grade officers for counterespionage work in cooperation with the English and French at various ports in France and "in the zone of advance with the troops." These officers were requested from the groups which would be graduated from United States training camps on August 15th. Of these officers twenty-five fluent in French and twenty-five speaking both French and German were desired.**

Secondly, he asked "that fifty secret service men who have had training in police work who speak French fluently be enlisted as sergeants of infantry in service in intelligence work and sent to France at an early date. As these men will be in intimate relation with the French people it is a matter of great importance that they not only speak the language but are men of high character."***

Third, Major Nolan requested "...that four specially selected men, who have had some training in secret service work, of unquestioned character and capacity, --such that they can be trusted with considerable funds--be sent here for training in espionage methods with a view to their use later in charge of counter-espionage work in neutral countries...." Major Nolan concluded, "It is a matter of great importance that these men are of proved experience, courage and unquestioned probity."****

This request provided for both officers and high-grade enlisted men in a "Secret Service division" and assumed that the American counterespionage system would follow the British and French procedures in having counterespionage agents working directly with espionage activities in neutral countries.*****

Plans for Intelligence Officers

Colonel Van Deman had anticipated the need for Intelligence Officers and on 7 July 1917, the Adjutant General had alerted all Department commanders that 160 specially qualified men were to be commissioned First and Second Lieutenants and assigned as Intelligence Officers to be "attached to the larger units sent abroad." These officers were to be employed in collection and examination of information relating to individuals in the military service and in the preparation of statistics and data relating to personnel."*

Qualifications for this assignment were clearly stated: "A high degree of intelligence and a capacity for painstaking work are essential. A working knowledge of French is most desirable. A working knowledge of German is desirable, but in less degree. There are no age limits...." The alert stated, however, "It is believed that young college professors and instructors are best suited for this character of work." On 13 August 1917, the Chief of Staff authorized selection of fifty of these officers for immediate service in France to fill the AEF request.**

Authority for the enlistment of fifty secret service men as sergeants of infantry was found under Section 2 of the act passed 18 May 1917 which authorized the President of the United States to increase temporarily the military establishment of the United States. This law provided that "the President is authorized to raise, maintain by voluntary enlistment or draft, as herein provided, special and technical troops as he may deem necessary and to embody them into organizations."***

By WCD 10155-3 Par 6 of the Memorandum for the Adjutant General from the Acting Chief of Staff, Tasker H. Bliss, dated 13 August 1917, a "Corps of Intelligence Police," National Army, was authorized "to consist of fifty men with the rank, pay, and allowances of sergeants of infantry, for duty under the direction of the Commanding General, American Expeditionary Forces...."****

Thus in less than a month, Major Nolan had been authorized the officer personnel and the men he desired for his "secret service division." Unfortunately, however, some organizational difficulties were involved which were to result in a number of immediate problems and problems that continued for many years to come. One of the first was that the draft of a General Order to establish the "Corps," which was forwarded with the Memorandum, was not published, and authority for the creation of the Corps was based only on the approved Memorandum.*

The General Order draft was intended to authorize a Corps of Intelligence Police "for service under the supervision of the Commanding General, American Expeditionary Force." "...the enlisted strength therefor being raised and maintained by voluntary enlistment or draft...." Quite obviously, officers as well as enlisted men were intended.** Another significant phrase was that the men were not designated "sergeants," but "with the rank, pay, and allowances of sergeants of infantry" -- a simulated rank for pay and allowance purposes. Apparently this distinction, which appeared in both the draft order and the Memorandum, was not recognized, and the assumption that these men were actually sergeants contributed to the problems of the years that followed.

Existing records do not reveal how the title "Corps of Intelligence Police" was derived. "Intelligence" obviously came from the British and "Police" from Nolan's request that the men have been trained in police work. But the choice of the word "Corps" remains a mystery. Major Nolan had asked for a "secret service division of the Intelligence Section" of an Expeditionary Force staff. However, the term "secret service" was not permitted and, in addition, there was the problem that at the War Department, Intelligence was only a section of a division, even though strong efforts were being made to attain divisional status.***

Since Intelligence was not a division or corps and had none of the prerogatives of an arm or service, officers had to be "detailed" for intelligence work, and commissioned in existing arms or services.

Enlisted personnel were at first recruited specially for the CIP and discharged if found unsuitable, but within a few months this procedure was changed and men

*** History of MID, Ch V-13.

[redacted]

were transferred in from other Army units, and transferred out if found unsuitable.* CIP service was in effect a "detail" with enlisted personnel handled as infantrymen until after World War I when they attained the status of the Detached Enlisted Men's List (DEML). In the original request for officers for intelligence it was implied that they would be in the Adjutant General's department and the War College recommended that the Adjutant General commission them.** Still later, the problem arose of assigning officers with "service" commissions to work with "line" outfits.***

In practice, Colonel Van Deman and his staff had to "beg" for officer commission vacancies anywhere they could find them, and this situation continued to a large extent even after World War I when a Military Intelligence Reserve was created. In one instance, a limited number of civilian specialists were commissioned by a personal agreement made with the Chief of the Signal Corps to use unfilled allotments established for the Aviation Section of the Signal Corps.****

Major Nolan's request for counterintelligence personnel to work in neutral countries met with a flat disapproval from the Secretary of War with the statement, "All matters pertaining to the collection of military information in neutral countries in Europe are in the charge of our military attaches who are in close cooperation with British and French attaches in counter-espionage work. Our attaches have been instructed to send direct to the Commanding General, American Expeditionary Force, all matters of military importance to that command."*****

This decision was based on the opinion of Brigadier General Joseph E. Kuhn, Chief of the War College Division of the General Staff, who advised the Chief of Staff that Major Nolan's request for the four men "is not considered either necessary or desirable."******

****** CIP Records, Document #124.

Unfortunately, Major Nolan had not given any justification in his request for these four men, and General Kuhn's decision was based on the assigned mission of the Military attaches "to collect military information."* No inquiry was made to determine to what extent military attaches, who were recognized as espionage agents, and also circumscribed by diplomatic protocol, could fulfill their respective counterespionage requirements, and whether supplemental coverage was essential. Instead, this purely jurisdictional decision set the precedent. Negative intelligence was to be confined to operations in areas under control of the United States or its lines of communications. Efforts to keep within this concept caused complications for decades although its adverse effects were clearly evident by the end of World War I. In his "History and Critical Analysis of the Functions and Operations of G2, SOS, " its Chief, Colonel Cabot Ward, had described what he termed "the unfortunate results of the complete divorce between G2, SOS, and all Intelligence work in enemy and neutral countries."**

Officer Procurement Problems

Intelligence officer procurement encountered its first problem from lack of Corps status in connection with the commissioning of officers at the various training camps in the United States who had been selected for intelligence duties. First Lieutenant (later Colonel) Royden Williamson of New Rochelle, New York, first commanding officer of the Corps of Intelligence Police, has written, "... If a man, apparently suitable, was not a rookie, but already commissioned in the Reserve, he was invited to resign such commission by signing a form submitted to him, which bore the phrase: 'In consideration of a new commission in Intelligence...' etc., etc., or words to that effect. When the new commissions were received, the officers were perplexed when they found themselves commissioned as 'First Lieutenant, Statistical Section, Adjutant General's Department'."***

This confusion was only the start. On arrival in Washington in mid-August 1917, some eight or ten of these "new" First Lieutenants reported to the Officer Section of the Adjutant General's Department at the State, War and Navy Building as their orders directed. They were promptly assigned to a newly created "Information Section" of the AGD and put to work filing papers. Since one of the officers was a Rhodes Scholar, another an ex-embassy official, another a world-traveler and prominent socialite, and the others all had backgrounds considerably above file-clerk level, after a few days the suspicion dawned that this assignment might be a mistake, and not one of the mysterious ways intelligence moves its wonders to perform. With the permission of the Major in command, who was as

* History MID, Ch V-11.
** History of G2, SOS, p. 138.
*** Williamson, p. 3.

puzzled as they were at his high-caliber help, the group went en masse to the "Information" Section at the War College where Captain A. B. Coxe, Colonel Van Deman's executive officer, said the section had been looking for them for several days. Coxe agreed that things were confused.

The officers realized they were more than confused when Captain Coxe continued by saying that they were all wrongly commissioned, and would have to wait a few days until they could be recommissioned as "line" officers. He explained that the first problem was to find which line branch could provide the commission vacancies.* Shortly the group were commissioned in the Corps of Engineers, USA, and enrolled as students at the War College for about a month in a newly organized course in intelligence duties.

The "borrowing" of officer spaces from the arms and services had a highly adverse effect on intelligence officer procurement. The caliber of officer wanted for intelligence represented the best type of any arm or service, and quite naturally the arms and services desired to retain such officers. An officer who volunteered for intelligence risked disfavor with the branch he was assigned to. Later, when officers were drafted from the branches for intelligence, all too frequently the officer selected was the one the branch could best spare, and this usually was not top quality.

This situation continued through World War II and into the Occupation Era that followed. Commenting on it in 1950, Major General Van Deman, then retired, wrote, "There is one point in connection with the matter of officer personnel which I feel it my duty to call to the attention of all of the intelligence officers who may read this memorandum. This is: It is my careful considered opinion after being closely associated with Military Intelligence matters over a period of some fifty-five years that the Army will never have a really efficient intelligence service until it is made into what is known as a 'career' service. In other words, until the officers who have proved themselves to be competent and efficient intelligence officers are allowed and encouraged to make military intelligence their army careers. This should, of course, only apply to the higher ranking officers since the efficiency of all intelligence officers must be based on the thoroughness of their training in the military service and this requires years of both study and actual experience."**

---

* Williamson, p. 5

** Maj Gen R. H. Van Deman Memoirs, 5 June 1950, CIC Historical File, Vol. 2, Introduction, p. "b". (Hereafter this reference will be referred to as "Van Deman".)

A survey made at a number of army installations in 1918 by a Military Intelligence Section officer revealed that line officers were "greatly disappointed to receive an intelligence officer appointment and had little interest in their work; that they felt hopelessly lost in attempting to learn." Moreover, the survey revealed that local military authorities seldom appreciated the importance of counterintelligence operations and displayed little knowledge of the qualities desirable in an intelligence officer.

Due to this lack of understanding on the part of higher authorities, the intelligence officers "were often given many tasks which had no connection with military intelligence and seriously interfered with the execution of their primary mission." The result was that in many cases, these officers "usually carried out their counter-espionage mission in a perfunctory manner only."*

Recruiting the "Sergeants"

To obtain the fifty CIP "sergeants" authorized, Colonel Van Deman called in the heads of the three largest and most important detective agencies in the United States to give him the names of men who would fill the personal, character, language, civilian skill and military qualifications desired. Describing the conference many years later, after his retirement, General Van Deman wrote, "The results were not promising; in fact, Mr. Pinkerton, the old gentleman with one eye, said, when told the qualifications required, 'There ain't no such animal.'"**

So the recruiting problem was turned over to a Lieutenant Vella with instructions to get the fifty men in about as many days.*** Since men with police experience could not be obtained, Vella concentrated on language. During a month at New Orleans and then three weeks at New York, he inserted advertisements in the newspapers which stated that men who could speak French were needed for intelligence work to go overseas quickly. Unfortunately, the statement that it was "intelligence work" and promised a trip overseas attracted a number of men of questionable backgrounds, and resulted in the recruitment of a miniature French Foreign Legion. None had experience in police work, but one had a police record.

** Van Deman, 8 April 1949, Vol. I, Preface, p. 2.

*** Gilbert Elliot, History of a Portion of the Corps of Intelligence Police in France, CIP Basic Data File, CIC Historical Project Files, p. 1. Written for MID by this former agent in August 1919. File #10309C-211. (Hereafter this reference will be referred to as "Elliot.")

One was mentally unbalanced. One was a French deserter. One was suspected of German sympathies; several were just morons.* Colonel Williamson describes them as " a delegation of 'Cajuns' from Louisana, a sprinkling of French Canadians, a number of Europeans, a coterie of Harvard men; and their professional antecedents ran the gamut of occupations. If there were any 'Secret Service' men among . . . well, I didn't meet them. And I knew each and everyone of them."**

Several Belgians were included among this motley crew of adventurers. Since at that time Belgians and those Belgium-connected were not considered trustworthy unless they had been "examined", they consequently were not accepted when the unit reported to the AEF.*** Notes of the Recruiting Officer reveal some of the characteristics of these men. One was "in building construction" and "hot tempered." Another was a "sharp Creole." One "at times exaggerates situations." Comments on other men included "needs democratization," "Hebrew, very shrewd " "needs pep," "Englishman with all characteristics appended," "bears watching," "peculiar psychology," "good mechanic," "average," "business man, understands supplies".****

Forecasting the future, a suspected communist was among the group. Shortly after the group was assembled at Fort Jay, New York, in early October, Lieutenant Williamson learned of the suspicions. It was rumored in the detachment that this man had served time in Blackwell's Island penitentiary for Red demonstrations against the property of John D. Rockefeller at Tarrytown, New York.

Lieutenant Williamson has stated that he reported the allegation to the War College Division at Washington, and to Headquarters, Fort Jay, but started no investigation of his own. From the results it appears that no one at Fort Jay knew what to do. So the Commanding Officer of Fort Jay appointed a board of officers from the 22d Infantry to investigate. Williamson states that all this board did was to meet and call in the accused to answer the charges, which he quite obviously did as the board reported five days before the unit sailed that "no reason had been found why said person was in any way disqualified for service overseas." However, just before sailing, the Intelligence Officer at Fort Jay ordered that the man be left behind. Presumably, word had come from the MIS at Washington.*****

---

*Williamson, p. 1.

**CIP Records, Ltr fr Williamson to Deputy Chief of CIC, 24 June 53, filed with Williamson memoirs.

***Van Deman, Vol. I, Preface 2.

****Williamson, p. 15.

*****Ibid., p. 15.

Obviously this first CIP unit consisted mainly of "bodies" to fill spaces, a situation again disasterously repeated following World War II. It is remarkable that so many of these men made outstanding records. The requirements of investigative experience and French fluency were ignored. Any kind of French went--Cajun, Canadian, or French with any foreign accent. All the Recruiting Lieutenant did was to ask a few simple questions in French. References were required but apparently these references were not called upon in most cases. There was only one firm requirement--passing an Army physical examination. Even for that, minor physical defects that would not interfere with duties as intelligence police were waived.*

While these men were being assembled at Fort Jay, Lieutenant Williamson was completing his thirty day course at the Military Intelligence Section of the War College. Included in the instructions was orientation on the "Suspect" Files at MIS where thousands of cards were set up on tables in the hall opposite the War College Library. These cards, Williamson said, named people whose loyalty should not have been disputed. He continued, "Their implication was an index of what hysteria can possess a public under the bane of war, but to see this served to impress us with how judgment should be joined with discernment if one is to be a competent intelligence officer."**

Most of the course consisted of lectures by Major Charles H. Mason of the War College Staff, but occasionally intelligence economic research problems were given. Little material was available on any of them. Williamson's topic was, "What are the resources of the Central Powers in raw materials?" Visits to many government agencies including the Geological Survey, the Agriculture, Commerce, and Interior Departments, failed to turn up any valuable information. There was none***

First CIP Unit Organized

Williamson's course ended on 8 October 1917. The next day he reported to Colonel John C. F. Tillson at Fort Jay and took over the CIP unit which was under canvas in the Overseas Casual Camp Area, shivering in its summer clothes at the "brisk mid-autumn wind" whipping across New York harbor.****

---

* CIP Records, Document #123; Elliot, p. 1; Williamson, p. 10.
** Williamson, p. 5.
*** Ibid., p. 6.
**** Ibid., p. 9.

Here again the future was forecast as supply problems were frequently CIC headaches. In a few days Williamson solved this supply shortage, and the men had all their infantry equipment including overcoats, extra blankets, and three-chevron grade patches. The .45 Colt automatic was issued in lieu of the rifle and bayonet. On the campaign hat of each man was the green cord which had been authorized for the Corps. "With all this new gear," wrote Colonel Williamson years later, "the organization was soon making a showing on parade."*

During the month before the unit sailed there was no intelligence training, but Colonel Williamson stated, "Our paper work was efficiently and punctually accomplished.... Colonel Tillson was a soldier of the old school, the type of exacting disciplinarian it was a privilege to have served under....Any doubt that the Corps of Intelligence Police was anything but infantry while under Col Tillson's authority and would be trained strictly as a military unit was dispelled by the drill schedules posted at his headquarters." The CIP schedule included daily calisthenics, close order drill, school of the soldier, camp policing and instruction in interior guard duty, and similar subjects.**

On mid-afternoon of 12 October, the CIP sailed for Europe on the S.S. Powhattan, formerly the S.S. Hamburg of the Hamburg-American Lines, saying "good bye" to America and their civilian clothing which they had been told to leave behind.*** During the thirteen day trip to Saint Nazaire, the CIP unit took its part in the usual ships chores, and in addition, while Williamson and his supply sergeant, Sabin J. Dalferes of New Orleans, interviewed each member of the unit to complete their personal records, Sergeant Gabriel Martin, whose mother lived in Rouen, France, taught French to the casual officers.****

Troubles began on arrival at St. Nazaire. Waiting were orders sending one-third of the force to a duty assignment elsewhere and the remaining two-thirds were to go to AEF General Headquarters at Chaumont.***** While Lieutenant Williamson was straightening out this problem and getting orders for all to go to Chaumont, the unit had debarked and been mistakenly arrested by the Marines.******

****** Elliot, P. 2.

Released, the group left for Paris en route to Chaumont, but found no billets available at Paris. They were quartered at various hotels for the four days it took Williamson to arrange their fiscal matters with the US Military Control unit. At the Hotel Quai d'Orsay, where several of these enlisted men were billeted, a high French officer nervously inquired if it was a custom of the American Army to billet its enlisted men in hotels.*

On 5 December, the Corps left for Chaumont-en-Bassigny, Department de la Haute-Marne, and late in the evening formed ranks beside the deserted station to march under a cold winter moon to an unfinished barracks-without shutters, flooring, or heat.

In the morning, Lieutenant Williamson reported to Major Moreno, Chief of G-2-b, the Secret Service Division at GHQ. Meanwhile the CIP unit was kept busy digging latrine foundations behind the GHQ.** Shortly the Corps was settled into place with the other troop units. Here the Corps had the first of its rivalries with the military police. Its green hat cords served to provoke, now and then, hostile demonstrations. "What prompted such rivalry," wrote Williamson, "whether it was design or native antipathy of some 'orangemen' for the color was never revealed."***

Major Moreno's section was under Colonel William O. Reed, Chief of the Service of Security of G-2, AEF. Major Nicholas Campernole was Chief of G-2-a, the Information Division, which handled order of battle and economic intelligence as well as interrogation of prisoners of war, enemy artillery locations, radio monitoring and codes.****

The Secret Service Division, G-2-b, included diversified sections, of which tactical zone activities was the first, dissemination of ciphers and handling "accounts" the second, and the Counter Espionage Section the third. The Counter Espionage Section not only included a counterespionage personnel subsection, but included files, civilian controls, passes, censorship, liaison, dissemination, and "invisible inks" subsections.*****

[redacted]

Division G-2-c was Topography, and Division G-2-d, Censorship; Division G-2-e, Intelligence Personnel was the administrative division for the personnel handled operationally by G-2-b.3.*

When Colonel Cabot Ward became G-2 of the SOS and organized his headquarters at Paris in January 1918, his first order defined the mission of that command into two functions, "Prevention" and "Detection."**

Intelligence Training started for the CIP unit under the supervision of Commandant Walter of the French Surete, commencing with orientation on the civil system of the French State.

At the same time, Commandant Walter conducted a screening of the Corps with particular reference to the antecedents of the European-born members who included Englishmen, Frenchmen, Swiss, Belgians, Spaniards, Yugoslavs and Turks. Several French members were jailed as a result of this screening as they were suspected of having evaded conscription with their own forces.***

Overseas Training

Following this screening, ten CIP men were selected for training with the British at Le Havre under the command of Captain Arthur Campbell-Turner, an American officer who had previously been a Lieutenant in British Intelligence, with station at Le Havre, and recently transferred into the AEF.**** Captain Priestly, the British Intelligence Officer or "IO" at Le Havre, had prepared the text, a "Syllabus for Instruction of Intelligence Police," which covered twenty-one major topics including such items as "Recognition of the boundary between Military Police and Intelligence Police work" and "the use of tact" in dealing with French officials.***** About seventy-five men were trained at Le Havre including members of the original CIP unit and men transferred to the Corps from other branches of the AEF during the following months. Intelligence training had become so important by mid-1918 that plans had been made for a four-week intelligence school at Bourdeaux which was scheduled to have opened on 12 November 1918.******. However, on-the-job training was started at Bordeaux in addition to the training being given at Le Havre.

[redacted]

As the war progressed, the replacements and additions to the CIP, selected in a probationary status from units of the AEF, were sent to Le Havre for a four to six weeks course. Because of the British and French officials' requirement that American personnel be in civilian clothes to train with them, the first step was application for the civilian clothing allowance. While waiting approval and issue, candidates went out in uniform on "Morale" surveys of arriving troop units to obtain facts for the basis of counter propaganda programs. This only took a few days and then the men were each assigned for ten days to the three types of travel control: Cross Channel Ship, Railway, and Merchant Seamen. Graduates of the course were then transferred to the CIP with the rank of sergeant.*

On-the-job training with both the British and French and including the Military Police and French Morale Police was interrupted by a great deal of typing and indexing as the young Corps started building its card file or fitche as the French called it. Names and data from British intelligence circulars and summaries was copied. Names were checked at the French fitche at the Hotel de Ville (city hall) and at the British Consulate where visas for passports were issued.** Training continued in other types of travel and communications control such as "Garnis Control," the registration of guests and lodgers in hotels and other rooming places; Civilian Labor Control by registration; Frontier and Road Control; and Censorship of Telegraph, Telephone, Mail and Press.***

Cross Channel Ship Control consisted of checking passengers of the morning and evening Southampton Packet, the only civilian travel route between England and France. Although CIP agents solemnly declared that enemy submarines never sank the packet for fear of drowning valuable agents,**** Colonel Ward stated after the war, "It is doubtful if any genuine spies presented themselves unless they were provided with very carefully prepared papers." However, Colonel Ward said that occasionally suspicious papers were seized from travellers, and that the control kept track of the movements of "an enormous number of people who were considered suspect or undesirable."*****

[redacted]

Control of Merchant Seamen was the most difficult assignment since Le Havre was a huge port with scores of fishing, passenger, and cargo ships as well as many army personnel and supply ships all spread out over several miles of docks. While shore passes could be refused suspects on "black lists," Major Ward reported, "In practice, it was almost impossible to prevent landing or communications with persons on shore....The best method of supplementing this control was by having the most intelligent of the Intelligence Police personnel frequent the water-side cafes and seaman's resorts."*

Le Havre continued to be the instructional and replacement base for all G-2, SOS personnel until the end of the war, and in that connection Major Ward wrote, "It is impossible to overestimate the assistance the British Intelligence Service afforded, G-2 not only through their records and the information they communicated, but also in lending the benefit of the experience which they had gained previous to America's entry into the war and which was indispensable as a basis for the establishment of the American Service...."**

Principles for the conduct of the Corps of Intelligence Police which were prepared for training purposes in mid-1918 remained essentially the same through the period of peace and two wars that followed. The primary mission of the Corps was providing "a force of specially trained men to be employed in Counter-Espionage work. This means detecting enemy agents and preventing them from communicating to their superiors any information obtained. It also contemplated the surveillance of suspects and undesirables who may be enemy agents, engaged in collecting information concerning our troops, prospective military operations, locations of camps, ammunition depots, relief of troops from first line trenches, etc., and other information of military importance...."***

Travel control was the basis for checking activities of suspected persons. The Instructions stated, "It is difficult to charge a person with espionage and deal with him as a spy but even if he be clever enough to operate so as not to commit any overt act which would render him open to arrest, his movements while circulating can be controlled so as to render impossible further espionage on his part. In this manner the enemy has one agent less and, therefore, the same result is attained as would have been the case had he been convicted of espionage and faced the firing squad."****

[redacted]

CIP agents were to determine if a suspect had the right to travel, if the particular trip was legitimate, and whether the person really was the person named on the pass. CIP agents were required to thoroughly understand the pass system in use in France. "It is the duty of the members of the Intelligence Police to detect enemy agents by systematic, painstaking, and energetic effort and to prevent their operation."*

With this end in view, agents were told to cultivate the friendship of reliable citizens and "persons of affluence," as in many cases "enemy agents seek just this class of society for the purpose of operating unmolested."**

Continual liaison with the French authorities was mandatory. Except in cases of American military personnel and militarized civilians, Intelligence Police had no power to arrest or to search private premises. Arrests or searches, except in cases of urgent military necessity, had to be made with the assistance of a member of the Surete Generale, an NCO of the Gendarmerie or the village garde-champetre.***

Continual cooperation with the Military Police also was ordered. The Military Police was an absolutely independent organization and "unless specially directed, the Intelligence Police were not to make inquiries respecting larcenies or desertions and the MP's were to report to the Intelligence Police the movements of all doubtful or undesirable persons. Intelligence Police were not to concern themselves with supervision of cafes, sale of liquor to troops, watching houses of prostitution or violation of regulations by military personnel. Military Police were to report incidents of intelligence interest. "When the urgency of the case demands arrest, the Military Police is the proper agency to receive the report and take action."****

CIP personnel were told, "It is not the part of the Intelligence Police to administer the regulations for the control of the military or civil population...." "It should be borne in mind continually that executive power in France is vested in the French military and civil authorities." CIP was reminded that "the Maires and other officials should be informed that you ask only for information or assistance and do not give instructions...When making a joint investigation with a French agent, and satisfactory results are obtained, give him the fullest praise in your report...."*****

[redacted]

The members of the Intelligence Police, owing to the nature of their duties, were not always under the supervision of an officer. So self-discipline became essential. CIP personnel, the instructions stated, "...enjoy greater freedom of action than other soldiers and it is very important that their conduct and demeanor be worthy of the confidence placed in them. Any violation of confidence or breaches of trust on the part of an Intelligence Police will receive summary treatment and will be considered sufficient grounds for removal from the service."*

Agents were never to lose their tempers, "no matter how great the provocation or how just the cause for indignation...avoid the use of slang and profanity...also tobacco should not be used while on duty, especially in the presence of ladies....The greatest care must be used in selecting associates. Although it will be necessary to keep in touch with undesirable people in the course of duty, association with prostitutes or women of immoral character on other occasions is dangerous. It is part of the duty of the Intelligence Police to try and prevent American soldiers from associating with persons of this character who are under suspicion....The work devolving upon Intelligence Police will leave no time to take part in social life. Therefore private associates should not be cultivated. Your entire time will be occupied with your duties. Except on duty requiring it, do not frequent military messes or canteens. In this way you will not be susceptible to attempts to interrogate you as to your duties....Attend strictly to business."** "...A great deal of the work of the Intelligence Police will of necessity be of a routine nature. This routine is essential as preventative measures; but initiative, constructive work and departure from routine in order to obtain definite information as to the enemy agent and to convict him as such.."***.

Intelligence Police assigned to duty with the SOS were ordered attired, usually, in civilian clothing, but were to wear the uniform while serving with armies. The instructions added, "Although all Intelligence Police have the rank of Sergeants of Infantry, in many cases the absence of chevrons or other insignia of this rank will facilitate the work of obtaining information, especially when on duty with troops, as soldiers will not discuss matters with the same freedom with non-commissioned officers as they will with a soldier of their own rank."****

The Magnitude of the Job

By the time the first fifty members of the CIP had arrived in early December 1917, the Intelligence Section of the AEF had gained some concept of the magnitude of the job ahead. The execution of Mati Hari, the Dutch dancer and spy, by the French in September had dramatically called the attention of the world to the ever-present German espionage and sabotage workers, but G-2 AEF was concerned with the less spectacular and more deadly German "army" of low level espionage agents infiltrated into every section of France. One German organization, which was ostensibly a mutual benefit employment association for hotel employees such as managers, waiters, interpreters, porters, cashiers, etc., had some fifteen hundred agents in France, and this was only one of several German "front" organizations.* In Madrid, German agents were recruiting Spanish laborers who were being imported to France to work on the construction of dozens of American depots. French and British intelligence were regularly reporting on Belgian and Dutch citizens suspected of working for the Germans.** Another danger not then recognized had come into being at this same time. Lenin and his Bolsheviks had just taken over Russia. But "Instructions for the Corps of Intelligence Police," published in 1918, was concerned only with the Germans. It stated that, "It is necessary to bear in mind constantly that the enemy has a very highly organized espionage service, as a result of years of preparation by experienced managers and that their agents undergo most careful training."***

The nature of the enemy had been officially recognized almost as soon as the first contingent of the AEF arrived in France. General Order Number 10, dated Paris, 9 July 1917 and signed by Lieutenant General James G. Harbord, Chief of Staff, opened with the words, "It is no secret but we are prone to forget that in this war the United States is pitted against an enemy with a splendid spy system..." This order stated flatly that no military personnel would discuss orally or in writing any military matters except in line of duty. It was directed that the order be read in every unit.****

***CIP Records, "Instructions for the Corps of Intelligence Police," 1918, Documents 26-41.

****History G-2 SOS, Exhibit #13.

By late January it was obvious that the original authorization for fifty CIP agents would be only a cadre for the organization required, and on 24 January 1918, by cable number 513, General Pershing requested authority to increase his CIP to 750 men. With the high percentage of unsuitables of the original group in mind, authority was asked for local recruiting from units overseas, on a gradual basis of need. Although this request was approved, the CIP, AEF, never reached its quota. By the time of the Armistice, it had 418 agents, and 34 men on probation to make a total of 452.* On 1 January 1919, it totaled 405.** Of these agents, approximately one-third were in the Front Zone, and two-thirds in G-2, SOS.

Gradually as the scope of the problem emerged, the counterintelligence organization of the CIP and the Intelligence Officers assigned to lead them evolved as follows:

1. Front Zone, under Col L. A. Sigaud, territory contiguous to the 400 mile fighting front, 100 miles of which the United States was to become responsible for, and, in addition, including about 400 miles of Swiss frontier with two "key" frontier control centers. This Front CIP Zone kept its headquarters with the GHQ of the AEF at Chaumont, and had a branch with the First Army. Another branch opened a few weeks before the war ended at Second Army Headquarters at Toul. CIP men under Col Willey Howell of the First Army, were sent to many of the thirty combat divisions of the AEF before the war ended.***

2. Rear Zone, under Major (later Colonel) Cabot Ward, of New York City, with headquarters at Paris, and a sub-headquarters at Tours under Capt Frederick Henrotin at the headquarters of the SOS, was established to handle only counterintelligence work,**** and finally a sub-headquarters at London for England, Wales, Scotland, and Ireland.*****

This zone had four major missions--port, frontier, depot, and recreational area security. There were fourteen major ports in France, England, and Scotland. There was more than 400 miles of frontier of Spain and Italy, and thirty-one French cities where there were American supply, service or training depots in the immediate vicinity. This counterintelligence coverage was spread out over some 80,000 square miles of Northwestern France. Finally, there was the security at seven important leave centers.******

****** Ibid.

3. Special Projects were handled by GHQ. They included the assignment of Sgt Charles C. Crosby, of New York City as the first CIP for VIP work. He was assigned to General Pershing's private train. Other CIP agents became specialist supervisors of various technical phases of counterintelligence, and were consulted by everyone regardless of rank.*

Among the officer specialists were 1st Lt John Hoar who specialized in Relief Society cases and 2d Lt Robert S. Cauvin, AG, of Nashville, Tennessee, who specialized in labor, socialism and Bolshevism cases.**

At Bordeaux, Sgt Harold A. Purcell became an expert on counterespionage aspects of civilian labor, and set up a control system with ten sub-offices. Civilian security control was a tremendous task. The Army employed more than 7,000 American civilians; the Relief Societies nearly 6,000 Americans; and there were more than 8,000 Americans working or living in France and not connected directly with the AEF. Laborers hired by contractors to work on Army construction including French, Belgian, Spanish, Greek, Russian, Portuguese and Chinese workers totaled in the tens of thousands. German espionage agents were infiltrating these groups. They were known to have 200 stolen French labor authorization cards carte verts, of which only 96 were ever located.***

There were a number of other CIP specialists. One of the original group was Sgt Philip Paleri of New York City, who became an expert on German-Spanish espionage modus operandi. Sgts Beaulieu, Bocher and the Ward brothers (no relation to the Colonel) became experts in surveillance, as did Sgt Percival W. Whittlesey of Middletown, Connecticut, another of the original group. Several became specialists in undercover. Sgt Jesus F. Loren, who was born in Tallers, Spain, was trained for a special job on arrival, but available records give no other details. Sgt Pedro Padilla was recommended for the Distinguished Service Medal for his undercover work.**** At the Paris G-2 SOS Headquarters, Walter J. Goedeke of Baltimore, Maryland, an expert on passports and files, was borrowed from the State Department, and commissioned a First Lieutenant to handle the organization for the Paris office.*****

In the Front Zone

In the Front Zone, Colonel Sigaud had three missions for his approximately 150 men. First, he supplied such CIP personnel as was needed at G-2, GHQ, at Chaumont and at First Army Headquarters. Secondly, he supplied personnel for Frontier Security on the Swiss border with two offices--one at Pontartier on the Western end and one at Belford on the Eastern end. Remaining personnel were available for combat counterintelligence among the combat divisions on the fighting lines.*

The Swiss border was a special problem as it flanked the fighting front, and Johnson quotes an allied authority of 1917 as saying, "There is hardly a single place on the Swiss frontier from Basel to the extreme southeastern shore of Lake Constance which has not been occupied and organized by the Germans for espionage purposes."** A practice which was still in operation thirty-five years later was advertising in newspapers of neutral countries for agents under the guise of interesting work, travel, etc. During World War I, the German espionage service advertised in the Neue Zeitung of Zurich for "ladies and gentlemen for practice in French conversation."***

While most of the CIP work was at Belfort and Pontaliers, other agents were stationed at Anne-masse and Evian-les-Baines.**** Belfort, headquarters for the frontier service, had less counterintelligence interest, but Anne-masse just east of Geneva was the station through which all the Repatries came from Germany into France. General Van Deman noted that "a great deal of information is gotten from the 'Repatries' which is freely interchanged among all three services. Also the Boche frequently attempted to get his agents through in this way and has to be checked."***** When Van Deman arrived in Bern, Switzerland, he found it so "loaded with German, Austro-Hungarian and Turkish spies it was thought best that I keep as quiet as possible."******

This Franco-Swiss border control was considered of vital counterintelligence importance. General Foch stated that he felt its work was mainly responsible for the fact that the Germans had not been able to even get a hint of the Franco-American offensive in July.*******

*******Ibid., Vol II, Appendix C-2.

By the time the Corps of Intelligence Police began working with the combat troops, a serious misuse of intelligence personnel had been corrected. At the start of American participation in combat, intelligence personnel had suffered heavy losses, particularly at battalion level. Investigation revealed that commanders were making up their raiding parties almost exclusively of intelligence personnel. This resulted in an order limiting intelligence personnel in any raiding party to not more than two men.*

First to work with the combat troops was Sgt Eugene Sieffert of the original group of CIP's, who was sent to the First Division at Toul where it had just completed its overseas move on the 22d of December. Already two of its earlier arrivals had been killed in action--among the first American soldiers to be killed in World War I, and a grim forecast of its future in which it suffered 22,320 casualties out of an average strength of some 25,000. Sergeant Seiffert was not killed, but may have been among the several unidentified CIP agents wounded during the war.**

This first American sector north of Toul facing St. Mihiel salient was near enough to German Lorraine to have a mixed civil population, speaking both French and German, and with equally mixed loyalties. Crossing "No Man's Land" was rather safe since the country was wooded and rough and the front quiet. Consequently spy stories were common in the division,*** and the first work of the CIP agent was to make certain that the system of travel controls resulted in every person not properly identified being brought in for questioning. This meant screening scores of refugees and line crossers.

This screening reached gigantic proportions just before the St. Mihiel drive started on 12 September 1918, and continued until the start of the Meuse-Argonne campaign on 26 September when thirty American divisions massed for the final offensive that terminated in the Armistice on 11 November. To "clean" these areas of suspects, all the CIP's of the front zone were massed, and the SOS area drained of all possible CIP agents. Colonel Lester has stated, "This was done so effectively that the movement of the troops was unknown to the enemy until it was too late."****

*Van Deman, Vol II, p. 62.
**Elliot, p. 2.
***Johnson, p. 98.
****Lester, p. 3.

German agents in American uniforms provided problems from the time the 2d and 28th Divisions entered the lines at Verdun. There is an unverified story that in the Argonne Forest the Germans established a stay-behind agent in an American uniform hidden in an underground dugout, and connected by secret telephone to a listener behind the German lines.*

In all events, there was ample CIP work to be done. For example, a tactical security problem resulted from the delivery of packages to soldiers in the front lines. As often happened, when the wind blew the discarded outer wrappers into the German lines, the German Intelligence officers had handed to them from the soldier's address, his company, battalion, regiment and division.**

Instructions for the Corps of Intelligence Police, issued in late 1918, included duties when accompanying advance troops, duties which remained essentially the same during World War II and the Korean Conflict.*** Agents were given "Black" and "White" lists. Upon entering evacuated or recaptured cities or towns, suspects on the "Black" list were to "be sent under escort for examination to the Surete, who will be established in one or more posts..." Reliable people of the "White" lists were given questionnaires to fill out. For security reasons names of both suspects and reliables were furnished on one list without identification of status, and CIP agents were ordered not to make any notations thereon. A duplicate list was deposited with the Assistant Provost Marshal, but the instructions specifically stated that this list was not to be furnished to the Military Police.**** Records do no reveal how an agent was to distinguish "Black" from "White" on this unmarked list.

Prior to entering a city or town, CIP agents were instructed to find the former residents of the place who were now within our lines and from them select guides to the districts known to them. These guides, who were to advance with the first line of troops, were then available to help check on reliable and unreliable persons who remained in the place. CIP agents were ordered to replace the Maire (Mayor) should he be suspect. All inhabitants were to be examined and crossexamined for any enemy order of battle information. Proprietors of cafes which continued in business during the time of occupation by the enemy were to be carefully examined, and the building searched, in conjunction with the French since the CIP did not have search authority.*****

*Johnson, p. 101.
**History G-2 SOS, p. 122.
***CIP Records, Documents #26, 41.
****Ibid., (39)
*****Ibid., #(40), (37).

The chief function of the Intelligence Police with Armies was "control of the civil population and the detection and prevention of espionage...in conjunction with the French authorities...." CIP agents were ordered to have a thorough knowledge of the local topography, and of the passes used in travel control, and to establish such control immediately. A population census was to be made, and regular checkups of all hotel registration and railway control lists conducted.*

CIP agents were ordered to become familiar with the reputation and history of the persons residing in that area, with no class of society omitted. CIP agents working discreetly with reliable sources, were able to identify enemy collaborators, and, if advisable, make arrangements with the French gendamerie or other officials for their arrest. Search was to be made for any possible signalling apparatus, and any hidden wire taps until their source was located.

Laundry employees were to be kept under careful observation because of the information they could easily acquire from clothing that they handled. In addition, agents were to watch laundry laid out on the grass as a signal to aeroplanes. Special attention was directed to gypsies and "other persons of this character." Their travel was to be limited to specified hours and prescribed areas. They were to be required to report to the authorities at specified times and places.**

First Soviet Conflicts.

On 6 July 1918, World War I was extended to two Russian fronts when President Wilson, against the recommendations of his Secretary of War and Army Chief of Staff, yielded to British and French pressure for a joint Allied Northern Russia Military Expedition, which was not finally terminated until 31 March 1920 when the AEF, Siberia evacuated Vladivostok.***

For details of this "Russian Adventure" which reflect several vital intelligence problems, and America's first real encounter with the subversion tactics of the communists, readers are referred to Col Bruce Bidwell's "History of the Military Intelligence Division," previously cited.

*CIP Records, Document # (37).
**Ibid., (38).
***History MID, Ch IX-1, 28.

[redacted]

Maj. Gen. W. S. Graves, Commanding General of the AEF, Siberia, received his original troops from the Philippines, and landed at Vladivostok on 16 August 1918. Of his eventual force of about 9,000, there was an Intelligence Section of 34 persons, of which four officers and four clerks handled counterintelligence. Unfortunately, General Graves and Major D. P. Barrows, his G2, clashed, and as a result Barrows was forbidden direct communication with the Military Intelligence Division or the Intelligence Division at Peking.*

In spite of the G2 Commander, conflict in AEF, Siberia, counterintelligence measures were successful, and the final report stated, "Attempts on the part of the Russians to spread Bolshevik propaganda among our troops were promptly discovered. At no time were the Americans found to be influenced by Bolshevism. There were a few cases of desertion to the Russian partisan or Bolshevik forces, but in every case the soldiers were found to be Russians who had apparently enlisted in the United States for that purpose."**

The AEF, Northern Russia, was organized from troops that were in England and assigned to the AEF, France. This force was not an independent command, but operated under the British Army. It arrived at Archangel on 4 September 1918. In March 1919, Maj. Gen. W. P. Richardson took command of the United States contingent which consisted of about 5,000 men.*** "The Intelligence Section of this AEF unit, the American Military Mission to Russia at Archangel, and the American Embassy there merged into one GHQ Intelligence section which handled the counterintelligence organization, although it was financed by British funds."****

In Northern Russia the British were actually fighting the Bolsheviks in support of the White Russian government of Admiral Kolchak; so the American troops were committed with them, and consequently were subjected to an intensive barrage of Soviet-inspired revolutionary propaganda of every conceivable type. This penetrated into fertile fields of mental response, conditioned by a number of adverse factors. Young American draftees wanted to go home just as their companions did who were in France when the war ended. They could not see that the Bolsheviks were just as much their enemies as the Germans. They did not like the isolation, or the severe arctic conditions, or the normal friction engendered by close association with unfamiliar nationalities of British, French, Poles, Serbians, Finns, Karelians, Lithuanians, and anti-Bolshevik Russians. They especially disliked the British because of being under their command.*****

Thirteen mutinous incidents occurred among the British, French, Russian, and American units. The most serious American incident involved a company of the 339th Infantry. On 30 March 1919, the entire company refused to pack sleds for a movement order. Investigation revealed that this was instigated principally by a disaffected agitator working for the Soviets. Questions by the mutinous men to their officers were identical with the questions suggested by the Soviet propaganda. The Soviet policy of treating Allied prisoners well, and trying to persuade them to enter their propaganda schools in the hope that these PW's could be sent back through the lines to assist in the further breakdown of troop morale had apparently paid off.

The final unfortunate aspect of this Russian adventure took place when the American troops returned home, and the American attache at Tokyo requested authority to retain the branch intelligence service at Vladivostok under 2d Lt John R. Northrup, who was particularly well qualified linguistically "to secure correct information." As soon as Secretary of War Baker heard of this proposal, he cabled, "Secretary of War prohibits intelligence personnel from operating in Siberia or Vladivostok...Relieve them at once!"*

Colonel Van Deman was quick to see the importance of counterintelligence measures to control the influx of Bolsheviks and other undesirables into the US through Port Security offices in the areas of origin. On 4 September 1918, only two weeks after the arrival of the American forces at Vladivostok, he wrote the Chief of the Military Intelligence Branch in Washington, "Now the Western and North-western situation needs looking after. If we had proper control at Vladivostok and the Chinese ports, it would not make the situation quite so bad. But, barring a British Port Control officer at Yokahama and one at Shanghai and Hong Kong, we have no control at Asiatic Ports. The British have only recently put in their man at Yokohama, and did so with a good deal of fear and trembling as to what the Japanese would say. As a matter of fact, it pleased the Japs to death. Now if we can get one of our own men at Yokohama working with the British and one of our own at Nagasaki, Vladivostok, Chin-kiang-tao and Tientsin (or Tang-Ku) I think we could stop this influx...These port control officers might be created as I suggested for men of the consular offices in the various cities... take Reserve or National Army Officers and have the Secretary of State give them a commission as a vice-consul or consular agent and put them into the Consular offices as cover..."** The record does not show what happened to this proposal.

THE INCEPTION OF THE COUNTER INTELLIGENCE CORPS

WORLD WAR I, 1917-1918

II. G-2, Service of Supply, AEF

G-2, SOS Headquarters

On 26 December, Major Cabot Ward was instructed to open the Headquarters from G-2, SOS at Paris, and by the first of the year 1918, the staff was functioning on the fourth floor of the old Hotel St. Anne. By the time of the Armistice, the G-2, SOS numbered 58 officers, 305 enlisted men, 14 field clerks, and 54 civilians. These field clerks were the forerunners of warrant officers. A few weeks after this Paris office was opened Captain Campbell-Turner was transferred from the Le Havre training school to handle operations.*

Liaison was immediately established with the Surete Generale, the French civilian secret service of the Ministry of the Interior; and the Bureau Central des Renseignements of the Ministry of War, the French Military Intelligence; and the Intelligence Service, Line of Communications of the British Expeditionary Force in France.** Through frequent conferences with these experts, the organization of the service was worked out.***

Liaison with M.I. 5b, the British counterintelligence service, was not difficult since there was much in common in the problems of operation on the line of communications of an expeditionary force in a foreign country. Even though the British War Department was only a day away, it was still away. The French, of course, were operating in their own country, and consequently had law enforcement agencies at many levels of government and in many departments. Colonel Ward reported in October 1918 that while the Surete Generale was supposed to handle all counterespionage, there were actually six different French agencies handling it, and all were acting independently.****

Liaison with American military units frequently posed problems. In February 1918, G-2, SOS, was ordered to investigate and recommend action to AEF GHQ in the case of any undesirable civilian subject to deportation. In May 1918, Colonel Ward reported that Army Provost Marshals and some Commanding Officers had handled cases without consulting the G-2, SOS. Deportees had arrived in the United States with no accompanying papers, and authorities there had not known what to do with them. Consequently, the Judge Advocate General's Office at Washington had written JAG, SOS to the effect that if there was not enough evidence to try the case in France, at least the existing information should be sent forward as an aid to the receiving officials.*****

***** Ibid., Exhibit #10.

It was soon evident that to accomplish its mission, the CIP would have to be assigned out of the Paris area. CIP agent Gilbert Elliott stated, "It evolved like a large concern with many branch houses which reported to and received instructions from the home office in Paris. The Police (CIP's) were the agents of this concern, the salesmen, the drummers, the officers, the office managers. They (CIP's) were attached to each office in numbers varying from 60 at Bordeaux (part of whom were new men in training) to three or four in places like Calais, Hendaye or Cerbere (on the Spanish frontier). The success of the work depended almost entirely on them (the CIP's) as the officers could do little more than direct, and the success or failure of the case at hand depended largely on their initiative and presence of mind at the moment--the officer could not be at hand to instruct them what to do. In these circumstances the men took hold to the best of their ability and developed all sorts of expedients for getting results and overcoming difficulties."*

Major Ward, in his critique, mentioned a fear, which he did not share, on the part of some American authorities that too much weight would be given British Intelligence because of their training our men. Ward pointed out, however, that after training by the British officers, men were generally sent to areas not covered in any way by British Intelligence, which only covered about one quarter of France. Ward also added that he insisted on opening American offices in places of need, and rejected the theory of some high British officers that the American intelligence should not enter any territory covered by the British. He also rejected a British counter-proposal which suggested that if an American office was opened, the British should handle all our contacts with the French. The British argued that if the two services operated separately, the French might withdraw some of the privileges which it had taken British Intelligence so long to get. Ward said that, in spite of this difference of opinion, relations remained friendly. In practice, it worked out in many cases that the Americans were able to establish even closer relations with the French than the British had, so all profited.**

Elliott, as an enlisted agent, agrees with this conclusion, and in his account states, "Many conditions arose in other parts of France which the British had not had to meet at all in their portion of the country, and new methods were evolved to meet these...(CIP agents) became isolated post men and took care of large districts, traveling about on bicycles or motorcycles, many miles from their officers."***

*Elliott, p. 5.
**History G-2 SOS, p. 96.
***Elliott, p. 5.

Port Security

In this Rear Zone, called by the British the Line of Communications, the first CIP problem solved was port security. Germany had declared unrestricted warfare. Two or three transport convoys of the First Division of the AEF had been attacked off the coast of France. Germans were using the island coves of Western France to aid their submarines with signals from the coast.* The problem of policing this Atlantic coast was further complicated by uncontrolled fishing fleets.**

The first CIP office, with 2d Lt Howard M. Robertson, of Folkstone, England as officer-in-charge, was functioning at Le Havre by the time the first group of the CIP had graduated from the British training there. This office continued to grow until by the end of the war it had about forty agents.*** Shortly after this office opened, conferences with Lt Charles A. Munn, the American Naval Intelligence Officer at Nantes, disclosed that an acute need for surveillance existed in the many small towns and villages in the Nantes vicinity and along the Loire River mouth to St. Nazaire and vicinity. By February 1918 offices were functioning in both ports. Road controls and mail and telegraph censorship were in operation. Lt Robertson was transferred from Le Havre to head the Nantes office, and 2d Lt William H. Brevoort, of New York City, was placed in charge of the St. Nazaire office.**** One of the important cases of this office resulted in the conviction of three men for three to ten year terms for making disloyal remarks.*****

On 18 March 1918, 1st Lt Henry S. Otto opened the Bourdeaux office, which, because of the transfer of all transatlantic shipping there, became the largest CIP branch office, and in addition, handled some of the CIP training. Bordeaux also operated Resident Agencies at Biarrity, Bayonne, and La Rochelle. In April, an office was opened at Calais. Finally offices at Brest and at Marseille completed the chain of port security in France.

In May, Captain A. Campbell-Turner was sent to England to open a district office to supervise port offices at Southampton, Liverpool, London, and Cardiff. The London office had supervision of counterintelligence activity at twelve American camps in the United Kingdom and five troop docks at London. Plans for offices at Glasgow and Edinburgh had not been completed by the time of the Armistice.

There was night and day work at these various CIP port offices. The Liverpool office ran interrogations on sixty-eight seamen in addition to its other work. In all, the English CIP port offices refused permission for 189 undesirables to land in England.*

At Bordeaux, twelve agents were required to handle "controls," later known as "ship panelling," for arrivals and departures of transatlantic passenger steamers.** The work on port controls at Le Havre has already been described.

Counterespionage work in a combat division was supposed to be coordinated with the SOS intelligence branches while the division was in the line of communications, and part of the port security work consisted of attempting to keep track of all arrivals. Unfortunately, no standard operating procedure had been worked out, and contacts were frequently missed. As a result of the war experience, it was recommended that while the division was en route, and its headquarters often difficult to locate, it should be the responsibility of the divisional intelligence personnel to get in touch with the SOS office, which was in a fixed place.***

One of the early port problems, according to Colonel Ward, was an "immense confusion and duplication of efforts resulting from a lack of coordination of the various United States Intelligence services which were in a half-hearted and ill-directed way attempting to cover the field. For example, at the Base Ports, the Navy maintained an intelligence service which frequently at such a point seemed to be serving no useful purpose on strictly intelligence lines but on the contrary prevented the I.O. of G-2 SOS, from extending his activity into maritime matters which we were able to handle, and later handled exclusively, because of our intimate relations with the French."****

An important phase of port security was guarding against sabotage, of which there were no major incidents, and only a relatively small number of minor incidents. A timely tip from Army intelligence in the United States averted disaster by causing an intensive search of certain vessels at their arrival at the French base ports, and further examination of their cargoes when loaded for shipment by rail. Explosives were found cleverly concealed in the bulky cargoes.***** Unfortunately, the record does not reveal how intelligence cracked this case. Significantly, however, it was about this time that Dr. Walter T. Von Scheele, who had been one of Germany's pre-war spies in America, and

---

***** Ibid., p.112.

had worked with German Agent Franz Von Rintelen in placing incendiary devices on Allied ships, was apprehended in Cuba, and extradited through the efforts of our Military Attache there, Captain Thomas F. Van Natta.*

In his eager attempts to secure immunity from a death sentence, Scheele freely betrayed German secret formulas for poison gas, incendiary bombs, liquid air bombs, high explosives, and dye stuffs.

Scheele stated that the bribed dock hands in New York had placed on the ships only about 25 percent of the incendiary bombs he had made. Those bombs, he said, had destroyed $10,000,000 in cargo in thirty-six ships. Scheele also described how he managed to smuggle oil out of the United States by solidifying it with magnesium carbonate, and impregnating it with fertilizer. In this form it was then shipped to Denmark where the oil was extracted, and reshipped to Germany.** Denmark was already on the suspect list of biased neutrals because of intelligence reports from US Military Attache Col O. N. Solbert, who had discovered that while the Danes were proclaiming to the world that they were starving, they were actually engaged in a brisk trade with Germany.***

Colonel Van Deman states that Scheele was placed in a small laboratory near Washington, and required to produce the same sort of incendiary bombs he had made for use against Allied ships. In one of his experiments an explosion injured him rather severely, but he recovered. Scheele was never tried--"for what reason is not known"--but he was kept a prisoner of the Department of Justice until months later when he died of pneumonia.**** G-2, SOS, encountered few other sabotage attempts except at one port where sand was placed in the gear boxes of several locomotives.*****

CIP agents were told in their Letter of Instructions that a spy, "wants to tell his General Staff the strength of our troops opposing them. This is the object of all identification obtained in trench raids, aeroplane observations and all spying...information as to troop movements renders it possible to ascertain where the line is being reinforced and where it is being weakened...."****** This assumption that the German Intelligence service was primarily interested in Order of Battle data had a sound foundation. Germany had collected a comprehensive amount of strategic intelligence prior to the war, not only through the hotel "association" previously mentioned, but by many other means. Among these was an ostensible commercial statistical firm with world wide branches that collected data on production and industrial potentials, including the financial, economic, and military resources of various countries.*******

0434

Safeguarding Order of Battle information required much CIP time. Measures had to be taken to counter the large amounts of indiscreet talking by members of the AEF. Regiments had to be stopped from parading through Base ports to their rest camps with regimental colors flying, and with all their equipment from vehicles to big bass drums bearing the regimental numbers.*

For more than a year, Intelligence called attention to the markings on railroad cars bound for the front. On each car loaded at a port was tacked a label showing its point of origin and its destination--the latter usually some regulating station behind the front. Generally, this was Is-sur-Tille, a major railway junction about ten miles north of Dijon and forty miles south of GHQ at Chaumont.**

This "key" distribution point was a major intelligence headache. It was established and operating for a long time before any intelligence protection was authorized. Colonel Ward reported that even when an officer was sent, "his work was rendered most difficult by lack of cooperation from the officers in charge of the plant. These defects were eliminated toward the closing months before the Armistice, but the large body of alien laborers concentrated there was a serious danger during the months before any intelligence control was effected."***

The unresolved security problem at Is-sur-Tille was that the railroad cars were carded anew, and clearly marked with the name of the railhead destination. Since these railheads were only ten kilometers (seven miles) behind the actual front lines, any one walking past the cars in the loading area or en route could easily determine the destination. As a result, Colonel Ward stated, "For a period of at least four or five weeks before the American attack at St. Mihiel, it was common talk through France, both among the American AEF and the civilian population, that the American Army was concentrating or about to concentrate a large army at St. Mihiel to cut off the salient which the Germans had occupied so long." Colonel Ward concluded, "We may be certain that the Germans were not ignorant of this fact and equally certain it was in a large part due to this method of railroad car markings."**** Apparently, however, as Colonel Lester was previously quoted, "The movement of the troops was not known to the enemy until it was too late." The counterintelligence controls against conveying information were more effective than Colonel Ward realized, and this is further substantiated by Johnson's research conclusion that the Germans lacked definite and detailed information about either blow (St. Mihiel and Meuse-Argonne). Johnson further quotes the German General von Gallwitz as saying that the Meuse-Argonne offensive was at least a partial surprise.***** Colonel Ward's final comment in his critique was, "The British Army was at first guilty of such careless practice, but this was pointed out by their Intelligence Service which in cooperation with the Transportation organization

---

***** Johnson, p. 101.

0435

worked out a simple system for labeling rolling stock of all kinds."* But it was not until World War II that America applied this lesson.

CIP agents were instructed in detail on the various means used by espionage agents for conveying information. Invisible inks and where to look for them were explained as were telegraphic codes. "Information has been discovered," said the Instructions, "written on the inside of envelopes, underneath a photograph, underneath a postage stamp and on the gummed edges of envelopes...instances are known where messages have been written on the back of a woman in invisible ink." This last had been discovered by British Intelligence at Gravesend, England. Hiding places for papers included "double collars or ties, hollow heels...hollow buttons and shoe laces....Information has been discovered in the hollow stem of an artificial flower placed in the middle of a bouquet of real flowers or in a woman's hat...."**

Other hiding places, agents were warned, included messages "...rolled up very small and carried in a gelatine sheath in the mouth or other parts of the body, in newspapers by marking certain words with a pinhole, written on parcels or boxes and the label pasted over the messages, written on bandages, indicated by stitches in embroidery or in a hem, enclosed in coins which are sawed in half, hollowed out and soldered together again with the message inside...."***

Agents were instructed to "observe closely all foreigners, repatries, persons in French uniform in American areas, or persons in American uniform in French areas, and those generally supposed to be half-witted. All persons claiming the following occupations should also be closely observed: Horse-dealers, commercial travellers, wine merchants, caravan traders, fruit and other peddlers, owners of canal boats and barges. All prostitutes are potential suspects...."**** Instructions directed that when a person was suspected he or she should be watched and added, "Successfully shadowing a suspect is very difficult." Nearly one-eighth of the sixteen pages of instructions was devoted to details on how to shadow.

Frontier Security

Frontier security involved special problems, and agents were warned to watch for signals such as flashing lights, intermittent smoke, windmills, church clock faces, devices in haystacks or corn shocks, hidden wires or radios of any kind, movements of cattle, sheep or stray dogs and pigeons. Agents were to watch commercial vehicles, railroads, and automobiles on scheduled border crossings where messages could be hidden by pre-arrangement.

CIP agents of G-2, SOS, were responsible for the security of about 400 miles of frontier along the Spanish and Italian borders. Offices were opened on 13 August 1918 at Hendaye on the Atlantic side of the Franco-Spanish border and at Cerbere on the Mediterranian side, but it was not until the fall of 1918 that permission was received to open an office at Modane on the Franco-Italian

* History G-2 SOS, p. 122.
** CIP Records, Document #32.
*** Ibid., Document #32.
**** Ibid., Document #36.

0436

border. Tens of thousands of border crossers were screened at the Spanish offices. The Cerbere office screened some 3,000 laborers a month. At Modane more than 3,000 were examined in six months.* Control of the Swiss frontier by G-2, GHQ has already been described. "In this work," said Colonel Ward, "cooperation of the French and British authorities was of the greatest assistance."**

Commenting on the Franco-Spanish border control, Colonel Van Deman wrote MID in Washington in September 1918, "Of course the situation is not particularly good in connection with travel to and from Spain. Just how that is being handled I don't know, but if undesirables are allowed to get to Spain by sea, the possibility of getting into France across the Franco-Spanish frontier is pretty good, due to the laxity of the French control. This is something which we and the British are up against all the time, and it is necessary to back up the French in their control of circulation, not only on the Frontiers but within the SOS areas as well. We have lately put our own officers at four points along the Franco-Spanish frontier, working with the French, and things ought to be better shortly. If we can get it tied up as tightly as the Franco-Swiss frontier, I feel we will be in pretty good shape. However, an efficient control at U. S. ports over people going to Spain would help enormously....While we are on the subject, don't forget the control of passengers sailing direct to France. While we have Port Control officers working with the French ports, control at U. S. ports would help...."***

Border control brought out the differences between the British and French concepts of intelligence security. The British believed firmly in prevention; that is, if fixed controls were efficient, no espionage agents could operate. The French had no faith in this concept. Their border controls were perfunctory and often lax. They believed in detection; in "secret service" methods, and they had the execution certificates of twenty German saboteurs to prove their efficiency in this type of operation.**** They agreed with Colonel Nicolai, chief of the German Army Intelligence Service, who after vainly trying to seal off the Belgian border concluded, "Everything therefore went to show there are no means of effectively sealing a land frontier in any enemy country."*****

American counterintelligence followed both British and French methods. The four-fold official mission given G-2, SOS, was preventing enemy agents from entering France, preventing them from circulating, preventing them from transmitting their information, and finally detecting those who had entered.******

During World War I the G-2, SOS checked 10,388 passports, and refused visas for 323.******* Frontier travel control was facilitated by limiting the

******* Ibid., Exhibit #86.

points of travel to a few railroad stations and roads. "The value of this type of control," Colonel Ward stated, "is that it is an excellent method of picking up persons who have been signalled from other points....But a genuine spy would never attempt to go through a regularly established and known frontier railroad control unless provided with carefully prepared papers."*

To improve frontier control and apprehend well documented enemy agents, Colonel Van Deman proposed to revise American passport and visa controls in the neutral countries, and thus eliminate a lack of coordination between the Army and the State Department. In October 1918, he wrote Leland Harrison of the State Department security service, giving a detailed analysis of the problem. He said, in part, "To allow unrestricted travel of enemy agents is to aid the enemy in the prosecution of the war and therefore to add to the number of killed and wounded of our forces, and to the prolongation of the war. The control of travel is, therefore, imposed as a military necessity...."

Of the Passport Control office authorized by the State Department in France, Colonel Van Deman said, "In this office the Military representative is an officer detailed from the counterespionage service of the Services of Supply of the A.E.F., and the duties of the Military Attache in this connection pass to him although the Military Attache is in close liaison with the office...The establishment of this office has facilitated very much indeed the passport control work."

"After studying the question personally in France, England, Switzerland, and Holland, and talking at length to both civil and military officers from several other countries, I have come to the conclusion that the safest, quickest, and best way to handle this question is to establish a Passport Control office in each country on lines similar to the one established in Paris. The office should not be located at the Embassy or Legation. I believe it should be in a separate building not too distant from the offices of the Military and Naval Attaches.."** Colonel Van Deman recommended such offices in all the countries of Europe, and also in Cuba, Greece, China, Japan, and Siberia.

Need for Neutral Coverage

Colonel Ward pointed out that Spain posed a critical counterintelligence problem. The American Expeditionary Forces needed a large number of civilian workers to build the scores of depots to supply its two million soldiers. French labor had already been conscripted, and Spain was the nearest available source of supply. American officers of the Labor Bureau of the General Purchasing Board of the AEF spent months in Spain attempting to secure laborers, ***but German agents in Spain sabotaged this recruiting so successfully that the AEF never received as many laborers as was hoped for or needed. Many potential espionage cases came to the notice of the CIP in connection with Spanish laborers "actually in the employ of the AEF who had come from Spain without passing through any control, and there were at many points on the Spanish frontier guides willing to show any person across the frontier for a small fee."****

* History G-2 SOS, p. 63.
** Van Deman, Appendix I, p. 3.
*** History G-2 SOS, p. 128.
**** Ibid., p. 63.

0438

The most effective means of apprehending illegal border crossers was having undercover personnel in the villages adjoining the frontier, men who could mingle freely and undetected with the local civilian population. Colonel Ward stated, "Despite the lack of sufficient personnel our Spanish border control was notably successful in intercepting those who sought to cross the frontier in the vicinity of posts."*

Detecting German agents after they had left the border became a difficult undercover job for a number of CIP in the Interior Security areas. Much of this difficulty could have been eliminated had Major Nolan's repeated requests for undercover agents to work in neutral countries been approved. While the American Military Attache went about his business in Madrid, 300 miles to the northeast; in Barcelona, and 250 miles to the northwest in San Sebastian, German intelligence units operated with impunity.** Others operated elsewhere in Northern Spain. They not only slowed down American labor recruiting, but they sabotaged American-Spanish war purchases. They raised prices to prohibitive figures; they stirred up strikes in Spanish factories; they put ground glass in canned goods; and they poisoned a number of mules Americans had purchased?*** In one instance they were believed to have poisoned a group of Portuguese laborers of which one died, and twenty-five were hospitalized.****

CIP agents watched over the border while their superiors argued for permission for them to cross and uncover the evidence that would halt this threat in the American rear. Not only were CIP agents denied permission to cross, but they were also denied permission to recruit any indigenous agents for this work which thirty-five years later was known as aggressive counterintelligence. SOS Headquarters was in daily and intimate contact with American business concerns with head offices in Paris and agencies in many cities and small towns of Northern Spain. Through officers of the Purchasing Board, contact could be made with many Barcelona agencies. All Americans, civilian and military, proceeding from France to Spain cleared through SOS, Paris, but G-2, SOS, was "limited to obtaining information from them upon their return, and this was purely a matter of chance, as they were not compelled to check with G-2 upon return."*****

The Military Attache in Madrid had no contact with any of these agencies as he confirmed during a visit with G-2, SOS, officers at Paris. As a result, G-2, SOS, requested that it be authorized to serve as an agency for the Attache

---

***** Ibid., pp. 130, 31.

in Northern Spain with all information submitted through the Attache.

The disastrous consequences of divided and uncoordinated handling of a counterintelligence operation were grimly illustrated in the failure of a "double" agent operation which offered a high degree of probability of trapping a number of German submarines into unexpected encounters with Allied destroyers. This was the unfortunate Soto case.**

Jamie Soto was a tried and tested French "double" agent who had proved his loyalty to France again and again; yet he was so trusted by the Germans that they selected him for assignment in the United States.

While apparently collecting information on troop ships, Soto could be given dates and routes that would bring the German submarines to an area where Allies destroyers were waiting. The French immediately got in touch with the American Military Attache at Madrid, Major John W. Lang, who enthusiastically endorsed the plan and made the covert arrangements that enabled Soto to book passage from Spain to the United States via Cuba.

Soto sailed in May. The next word Major Lang heard was in October when the French Military Attache asked him to explain Soto's arrest in New York and advised Lang that Soto's family was taking the matter up with the Spanish government. When Major Lang cabled MID he was merely told Soto was being held at Governor's Island by the Department of Justice.

Soto had been promised protection by the Military Attache provided he did not double-cross the American authorities. In Havana, he dutifully

* History G2 SOS, Exhibits, 90 82.
** Ibid., p. 131; Exhibits 81, 83.

reported to the Military Attache there and on 20 June 1918 arrived at Washington, D.C. where he reported to the Military Attache section of the Military Intelligence Division. The next day he was turned over to Lieutenant Vella of the New York Intelligence Office, and Major Biddle, chief of that office was "put in possession of all the facts." Vella was the lieutenant who had recruited the first CIP agents.

In New York, Soto, according to all evidence, lived up to his agreement. He contacted German agents and arranged meetings so that Lieutenant Vella could monitor the conversations. He consulted with MID in furnishing misleading information; he reported his contacts and telephone calls.

But Soto was a mystery to the New York officials. He was a physician by profession, well bred and well educated; yet Major Biddle, who was the scion of a prominent society family, reported that Soto's life and habits in New York were "thoroughly disreputable and immoral and a source of constant expense."* Lt. Vella mistrusted Soto from the start and, although it was the Department of Justice that actually arrested Soto and wrecked the case, the record shows that as Soto's handling agent Vella could have prevented the arrest if he had so desired.

Since American counterintelligence agents were not in this era familiar with European "double agents" and their methods of operation, particularly the many low type contacts they made, Soto would have had a better chance of success if the more worldly-wise M.I.5 Section of the Military Intelligence Division had furnished its own handling agent to protect its agreement with Soto. Unfortunately, this section was the one which Colonel Bidwell, in the History of the Military Intelligence Division stated, "It...started existence under the pronounced handicap of a badly jumbled functional assignment and after material alterations ended up in the same unsatisfactory state...." This section was originally given the assignment of conducting counterespionage among the civil population abroad, but just about the time Soto left for the United States, this system had broken down completely due to many serious difficulties which kept emerging in respect to the achievement of prompt and adequate coordination between counter-intelligence operations of the American Military Attaches and those conducted in the United States by M.I.4, section (Negative Branch) Counter Espionage Among the Civilian Population..."** Soto's case was proof of this.

** History of MID, Ch VII-21.

0441

The record reveals that Soto was brought to the attention of the Department of Justice by a letter report furnished it by the New York office of MID and that Major Biddle concurred in the plan of the Department of Justice to arrest Soto although he had been informed by MID that the Military Attache had promised protection and that it had been "impossible to fasten any enemy alien activity" on Soto.

Soto was arrested on 23 August. The next day the Military Attache section at Washington telephoned Major Biddle and informed him that the French Commission did not want Soto arrested. Major Biddle said he would arrange to have Soto let out shortly.

Eight weeks later Soto was still in detention at Ellis Island, and it was not until 24 October that Soto was released and allowed to sail back to France. Biddle was now a colonel and Vella a captain. Their last act of the case was to report Soto to the French intelligence liaison officer at New York as some one who should be put under surveillance as soon as he reached France. Only the pressure of the French Military Attache and the threat of action by the Spanish government appears to have precipitated Soto's release. The New York office of MID went smugly on its way blaming the Department of Justice so, as it reported to MID Washington, "...our skirts will be clean in regard to any arrangements made by the Military Attache."*

While September and October were going by, some 100,000 American soldiers in six divisions sailed through the U-boat infested waters, with no decoy information to lead these subs to destruction.

Soto landed at Bourdeaux on 7 November and on 9 November 1918, two days before the Armistice, he was at the American Counterintelligence office at Hendaye on the Franco-Spanish border. While completing his papers for re-entry into Spain, Soto poured out his hate and rage to the Officer-in-Charge, First Lieutenant Leo J. Careaga of Annapolis, Maryland. Careaga immediately realized that if Soto crossed into Spain feeling as he did that he might expose the entire operation to the Germans and the Spanish.

How Lieutenant Careaga pacified Soto the record does not show, but he had the support of 1st Lt. S. P. Robineau of Miami, Florida, Officer-in-Charge at the time in Bourdeaux, who reported the case to Colonel Ward at G2, SOS. Robineau labeled the American handling of the affair "puerile and amateurish." Soto's story was reconfirmed, but by that time the war was over. To show that there were no hard feelings, Soto was then hired by G2, SOS, and used on several successful missions.*

* History MID, Exhibit 31, 88.

Depot Security

The Corps of Intelligence Police had a number of cases besides the Soto affair that "illustrated the unfortunate results of the complete divorce between G-2, SOS, and all Intelligence work in enemy and neutral countries." Another such instance told by Colonel Ward was the Diaz case, which like many others arose out of Depot Security measures. "The CIP Sergeant who ran down Diaz and his friends was urged by Diaz to go to Spain and to put himself in touch with the agents of German espionage there, to whom Diaz gave our man letters of introduction. It would have been a simple matter for our Sergeant, who was born an Italian, had lived for a long time in South America and spoke Spanish and Portuguese fluently, to have proceeded to Spain and put himself in touch with these German agents, to have gone to the German Barcelona Headquarters, to have found out what they were trying to do and thus to have rendered immensely valuable services. Permission to do this was specifically requested and was not approved by GHQ."*

This case had started at Beaune (Cote D'Or) about twenty-five miles south of Dijon where several hundred laborers were employed constructing barracks for an American Army hospital. Among these laborers were two Spaniards, Alvaro Carlos Diaz and Pedro G. Ochoa, and a Frenchman, [redacted] whose identity papers were in order, and whose employment was approved by the French Commissaire de Police prior to the institution of our labor control at this point. The men were good workmen, but an intelligence informant reported that they were conducting an active defeatist propaganda program in favor of the enemy.**

When this report reached 1st Lt Ernest Angell, of Cleveland, Ohio, Intelligence Officer at Dijon, he consulted with 2d Lt Robert S. Cauvin, the G-2, SOS, specialist on socialism, labor and bolshevism. They selected [redacted] of the CIP to go undercover to Beaune posing as a civilian interpreter since he spoke five languages. He carried a letter of recommendation from the Red Cross identifying him as a civilian interpreter and by secret arrangement with a Captain of the Engineers, he was hired. In this manner he came in contact with Diaz, Ochoa and [redacted] and over a period of weeks gained their confidence, and discovered that they were attempting to obtain information for German secret service agents in Spain.

Before the CIP agent had completely won the confidence of Diaz, and been introduced to his companions, Diaz proposed a scheme that could have cost the agent his life. To establish friendship with Diaz, the undercover agent had

---

* History G-2 SOS, p. 131.

** Ibid., Exhibit #55.

0443

hinted he would like to go to Spain and contact German espionage agents. Diaz had then offered to give his birth certificate and labor permit as a means of identification to cross the border. learned afterward that had he accepted, he would undoubtedly have been arrested and shot since Diaz was wanted for prison break after a death sentence for revolutionary activities in Cuba. Diaz then would have been legally dead, and free to start a new life.

Diaz abandoned this idea as the undercover agent won the confidence of all three conspirators with his skill and the five francs a week "entertainment" funds authorized by G-2. Not only did succeed in obtaining important information regarding the enemy's organization among the foreign laborers working in American camps in France, but he "so ingratiated himself with his 'pals' that they enlisted his aid in an attempt to send important military information they had gathered..." to the German consul, "Senator Fraudenthal," at Zaragoza, Spain, who was operating a photographic studio as a cover. Diaz boasted that the Germans would pay them from 1,500 to 2,000 francs a month for information.*

The official report states that "displayed unusual qualities of resourcefulness, initiative and quick-thinking under circumstances of great personal danger." This included taking an oath in blood to "death to the Americans."** Diaz described codes and secret inks used by the Germans. However, as time went on, the undercover agent came to the conclusion that Ochoa, whom he identified as a Spanish deserter, gambler and cheat, was the real leader of the three.

Shortly, it was necessary to take the French counterintelligence service into confidence as its agents were beginning to suspect It was also concluded that the sources had been milked dry; so Diaz, Ochoa and were arrested and tried before a French Conseil de Guerre, and convicted of attempted intelligence with the enemy. They were sentenced to long terms at hard labor.***

For this signal service, was recommended for the Distinguished Service Medal. Author Johnson states that while never got the medal, he did get a reward as a result of the mission. He fell in love, and married the daughter of the owner of the cafe where he ate his meals while on the job.****

Similar types of suspected espionage were under investigation at many intelligence offices in the interior of France where scores of American replacement depots, hospitals and supply depots were being constructed. These bases were natural espionage targets and, once across the border, agents headed for

---

them like bees after nectar. This is why in his critique, Colonel Ward argued that all the frontiers should have been under one command, and not split as "there were no adequate reasons for the arbitrary division of territory at the imaginary line between the Intermediate Section of the SOS and the Zone of the Armies."*

In contrast, Colonel Ward pointed out that "the British Intelligence Service of the Line of Communications operated as a unified service right up to the actual fighting front and handled all civilian cases whether at base ports or in the areas immediately behind the trenches."**

During August 1918, CIP intelligence offices were opened at a number of French cities including Toulouse, Limoges, and Tours. Other offices were opened at Dijon, Nevers, Orleans, Gievres, Lyons, Angers, Vieszon, Soumer, Macon, Blois, Caetguidaux and Le Mans. Resident agencies were opened at Melur, Bourges, and Is-sur-Tille.*** The district office was opened in London on 1 July 1918. Almost immediately there was a serious counterespionage case involving a code clerk in the American Military Attache's London office.**** Among other cases, this office handled eighteen "disloyal sentiments" convictions and twenty-one cases of persons having contact with enemy aliens.*****

Great difficulty was experienced in setting up the scheduled offices in England because of the limited number of intelligence officers available, and the trouble experienced in securing suitable men for the CIP. Through the Recruiting Officer in London, names of a number of Americans living in England were obtained, and as a result Gilbert Miller was contacted and commissioned a First Lieutenant and placed in charge of the London office.****** Later, counterespionage officers were stationed at aviation camps in England and in Ireland.******* In September 1918, Captain Turner informed all aviation camps that the branch office in London was functioning.********

Personnel were always in short supply all over the SOS, and only three or four men were available for most offices, which covered vast areas. Some idea of the size of supply bases that had to be covered is shown by a partial list of munitions bought from the French, which included five million cannon shells, three million bombs, two million mortar shells, 40,000 automatic rifles, nearly 10,000 machine guns, nearly 5,000 cannon, 514 tanks, and 135,000 horses and

mules. From the British were purchased more than 3,000 mortars, 21,000 horses and mules and 334 heavy cannon. From Spain 18,000 horses and mules were obtained.*

Bases included supply depots, refrigerator plants, storehouses, remount stations, prison camps, hospitals, convalescent camps, training centers, replacement depots, casual camps, quartermaster depots, repair depots, railway depots and tank depots, the latter important because of the foreign labor required, no American-made tanks being used on the Western Front. Field Artillery schools presented the same problems since no American-made cannon or shell was used by the American First Army during World War I.**

Civilian labor control was one of the most important controls, and subcontrol offices were established at Bourdeaux, Beau-Desert, Bassens, St. Sulpice, LeCorneau, Limoges, Perigneaux, Bayonne, and Sourges. In the AEF every civilian was presumed to be examined or the name at least submitted to the Intelligence Section, but as "the importance of this procedure was not generally appreciated and no adequate provision was made and enforced by General Orders, the success of the control depended to an undue degree upon the influence which local Intelligence Officers were able to exert over the local commanding officers."***

Inspectors in charge of the labor control offices were members of the Corps of Intelligence Police, "in civilian clothes and known merely as the joint representative of the Army agencies employing laborers at that point; their connection with intelligence being carefully concealed. Owing to the unsatisfactory nature of the 'carte vert' system [the French labor security clearance] and the impossibility of successfully establishing the identity and reliability of many workmen, particularly the foreigners, the work of the Labor Control Offices had to be supplemented by other members of the Intelligence Police acting in close, though unknown connection, in the guise of interpreters, foremen and even laborers."****

The Diaz case was one example of this undercover work. A similar case occurred at Selles-sur-Cher near Gievres where the AEF was building one of the largest refrigerator plants in the world. First Lieutenant Joseph R. Shriver, working at Gievres, had learned through an informant that there was something wrong at the Spanish laborers' camp. CIP agent Pedro Padilla volunteered for assignment to an undercover position after being warned it

would be tough and dangerous. He had lived in Madrid in the Calle Zorrilla section for seven years as a boy, and his Spanish was native. With the recommendations furnished to support his cover story, he had no trouble in becoming hired as a laborer, but on arrival at the camp a glaring defect quickly aroused suspicion. Padilla's tender hands belonged to anyone but a laborer. Quickly, he complained loudly that he was no day laborer, and had been told that there was painting to be done. But the suspicions were not allayed. That night two of the Spaniards took him to a cellar for an interrogation Padilla never forgot, consisting of questions concerning intimate details of his section of Madrid which only someone who had lived there could possibly know. Fortunately, Padilla's childhood memories were good. He was accepted and taken into the confidence of the gang. From the leads he supplied, several espionage routes were neutralized, and agents jailed.*

Control by "Reserved" Zones

An important means of Interior Control was the use of "Special Reserved" zones, which later became known as "Restricted" areas. The most important one in the AEF was at Tours, headquarters of SOS, AEF where Captain Frederick Henrotin, Deputy AC of S, G-2, SOS, on 26 August 1918, persuaded the French Commanding General of the Area to make the city a "Reserved Zone." The results obtained during the first few months more than justified the precautions taken to protect the area in question. Almost daily, suspects were stopped by the control stations. On several occasions the vigilance of the control brought about the expulsion of undesirable persons or resulted in such a careful watching of subjects that "they were probably defeated in the purpose of their visit."**

Sgt Isadore J. Naccarri, of New Orleans, one of the original fifty CIP men, organized and directed the Franco-American police bureau at Tours which conducted an effective travel control of the SOS headquarters area. An important part of travel control at these interior points in France was Garnis control, or registration of all visitors at hotels, pensions, etc., as a check on any persons missed at docks, rail stations or road blocks or who had entered by any uncontrolled means.***

However, Garnis control was started at the ports. At Le Havre, two CIP agents were assigned to work with the two French Garnis inspectors. Initially, the assignment required much tact because the habit of the French inspectors had been to accept drinks and bribes and make no report of irregularities. Control was simplified at Le Havre because the French required all

* Johnson, p. 119

** History G-2 SOS, pp. 28, 32.

*** Elliot, p. 5; History G-2 SOS, Exhibit 7.

neutrals to report at the City Hall, and by stationing a CIP agent there, many examinations could be made. Two agents were required for file checks, and another for inquiries at these transient residences. While a report late in the war stated that the presence of spies in Le Havre for any length of time was "thought very doubtful," Lieutenant Clancy, in charge of this CIP operation, felt that seven more CIP agents were needed. Five would be assigned to ride bicycle patrols with the municipal police of five towns adjacent to Le Havre and two others assigned to handle their file checks. Garnis control at Marseilles was a different problem since there were some 150 to 200 arrivals a day compared to 20 to 50 at Le Havre, but the French did not feel that the "convocation of neutrals" was necessary there, so instead of being able to examine many arrivals at the Hotel de Ville, it was necessary to have several pairs of French and CIP agents inspecting lodgings in various parts of the city. The report modestly stated, "The probability is that spies can be found at Marseilles."*

While scores of undesirable individuals were refused employment, or discharged, and their reemployment prohibited, the system of classification of positions according to degree of sensitivity was recommended but was not adopted except in the Tours area. However, this recommendation from the AEF days did not become accepted practice until after World War II.**

Control of the military was not such a problem, and was effectively handled by the Military Police. No enemy agents were detected in the SOS in American uniform, but numerous cases of enemy agents posing as officers or men of the British or French Armies were brought to light. In France the principal problem in connection with control of the military concerned the use of civilian mail after its use had been prohibited. Those using the French post were automatically suspect, but the intelligence problem was complicated by the fact that many perfectly loyal military personnel used the civilian post in violation of regulations merely because it was faster. Thus it was important to intelligence that army mail censorship and the postal services be operated to compete in speed with the civilian post.***

Letters mailed through the French post led to the internment of an Austrian enemy alien who had enlisted under a false name with false papers, claiming his parents, who actually lived in Budapest, Hungary, were Norwegian. Ten hours of interrogation at the District of Paris CIP office, of which 1st Lt C. G. Paulding was in charge, resulted in a confession. The soldier was sent back to the States for internment.****

** Ibid., p. 61.
*** Ibid., p. 67.
**** Ibid., Exhibit #8.

Depot Security, which concerned the military, almost inevitably involved civilians. The most obvious espionage suspects were persons deliberately cultivating the friendship of officers and men. In most cases these persons were prostitutes, gamblers, and black-marketeers, known in that era as smugglers or bootleggers. The counterintelligence problem was to distinguish between those using these criminal activities as a cover and those who were purely of Military Police interest.

"G-2 Circular #15," reporting information from the Intelligence Office at Nevers, France, illustrates the problem. One of the cities in its area was Vichy, a popular attraction for officers and men. One suspect was "Bertha" a refined, attractive and very intelligent woman, who made the acquaintance of many American officers, but refused to accept any money from them, saying that she was "liberally supplied with cash by a young man at Marseilles."

Two men were on the Vichy suspect list. One was a former professional boxer who was a "pal" of a professional gambler at Vichy, and the other was an American of Alsatian birth with no visible means of support.

Wanda, who signed herself in letters as "Contesse," was another prostitute on the espionage suspect list. She was noted for attempting to establish relations, recherche des amants, with Allied officers. The report stated that she was operating an opium den, and "making good use of it." She was well known in Germany, and had been deported from Paris some months before. She was reported as "expensive," and as having charged "1500 francs for a single night."

Intelligence of interest to other offices was reported also. A Belgian was reported as en route to England from Holland. He had been condemned by the Germans in 1916 to ten years in prison for espionage, and was released on condition that he "double." A Spaniard at Barcelona was suspected of working for the German Secret Service. His dossier reported him as having given a dancing exhibition in Paris in 1917, as having the drug habit, and as living by gambling.*

Rest Area Security

Rest Area Security at hospitals, convalescent camps, and leave areas was primarily concerned with "loose talk." A variety of posters, placards, and reminders were issued, and "vigorous action was taken" in many areas, which resulted in "a better appreciation of military necessity of preventing the operation of enemy agents along these lines." The same was equally true as to the unjustified, and therefore dangerous criticism of the efforts of the

* History G-2 SOS, Exhibit #8.

Army which often led to misleading rumors, harmful to our relations with our allies.*

CIP agents working out of intelligence offices in the vicinity of these rest areas discovered that loose talk warnings were not enough. Special efforts had to be made, and as a result branch intelligence offices were established at Nice and Clermont-Ferrand, with resident agencies at Chambrey, Aux-Les Bains, Chally Les Eaux, Veumille and La Courtune, the principal hospital and leave centers.** From these offices, such leave areas as Savoie, Dauphine and Auvergne were covered. Brittany, Gironde and Pyrenees areas were handled directly from the Brest and Bourdeaux offices.***

CIP agents found that it was easier to control loose talk in hospital areas than in leave areas by screening hospital personnel and visitors, and then confining a soldier from the front to the hospital for three days so that any information of military value which he might unintentionally disclose would be outdated.****

In leave areas the problem revolved around the inability to impose a sufficiently rigid system of control on the civilian population. Hotels, casinos, and amusement places, and the entertainment troupes that traveled these circuits provided special opportunities for espionage agents. This was fertile ground for the agents of the German's "hotel mutual benefit association." "Counter-espionage work in leave areas," said Colonel Ward, "is not so much a matter of controls as of continuous observation and following up small bits of information and leads gathered in every possible way from many different sources."*****

Many cases evidenced the fact that loose talk was not confined to any area. Taisez-Vous, "shut your mouth," posters were printed and distributed by the thousands, and several varieties developed before the war ended. But loose talk continued. At Le Havre, acting on a complaint of the British base commander, officers and Corps of Intelligence Police, in civilian clothes, posed as insurance agents, and traveled about the port area. Their report stated that they "...had not the slightest difficulty in procuring practically all the information that transient officers have at their disposal--convoy routes and even ships' names."******

Air Service CIP Missions

In April 1918, the American Air Service had three squadrons at the front; less than six months later this had grown to forty-five squadrons with 740 planes operating, of which twelve squadrons had American built planes equipped with the famed Liberty motors. At aviation camps at Issoudun, Romorantin, Chateauroux, Avord, Pruniers and St. Maixent, a thoroughly and absolutely secret counterespionage organization was established, chiefly to guard against sabotage.*

Damage to aeroplane motors and delicate parts of machines, which had at one time occurred with disturbing frequency, stopped, but not before a number of cases had been found where the struts had been almost completely sawed through. No great disasters occurred anywhere.**

Although the CIP consistently fought all attempts to divert its activities into criminal investigative fields, the close tie-in between criminal activities and intelligence was revealed by enemy efforts to sabotage American aviators through drug addiction. Colonel Watkins has reported that there was "an 'Untouchable' international ring known as the 'Dope' ring which was at the bottom of the stealing of American supplies and much incidental espionage."***

While the ring may have been "untouchable" to the French authorities working alone, it was attacked by Allied teamwork. The Surete Nationale asked the CIP to determine whether there was a deliberate attempt to spread the use of cocaine among American soldiers. Details of what must have been highly dangerous undercover assignments are lacking, but after several weeks, evidence of such an organized attempt at a number of aviation centers was produced and handed over to the French, who then could act because of the actual evidence furnished by the Americans. The result was the arrest and conviction of a notorious band of cocaine dealers.****

Fires and explosions are always border-line problems between crime and intelligence. There is always, in wartime, a presumption of sabotage in any fire or explosion until proven otherwise. The CIP investigated the few explosions in AEF plants and investigated several incendiary fires. Colonel Ward stated that in investigating the early fires, they were so successful in tracing the culprits "that it is believed the few cases of this kind in later months was due to a great extent to prompt action by G-2. Furthermore, the results of each case enabled us to suggest new restrictions."***** Significantly,

[redacted]

an almost identical conclusion was reached on the work of CIC agents with the Air Corps during World War II.*

Growth of the Paris Office

The phenomenal growth of G-2 in the provinces involved corresponding developments in the Central Office at Paris where liaison was maintained with the American Embassy and Consulate General, the American Passport Bureau, the French Ministry of War, the Surete General and the Prefecture de Police in Paris, the French Naval Intelligence Service, the British Intelligence Section, L of C, the British Mission Paris, and the Belgian and the Portuguese Intelligence Services.** The title of the section became for a brief period "Intelligence Section, Service of the Rear," but for obvious reasons it was renamed G-2, SOS.

Separation of the administrative functions from operations soon became necessary, and Captain Dudley M. Cooper took over the duties of adjutant, leaving matters of direct intelligence interest to the operations officer. Captain A. Campbell-Turner served as operations officer until he was succeeded by Lieutenant Robertson on 27 May 1918. Captain Campbell-Turner then took over the English branch of G-2, SOS.***

Cooper relieved the Operations officer personnel from all questions of Army organization and procedure, and took over responsibility for the automobile and courier service, assignment of security guards and orderlies, and the operation of the personnel, funds, filing, and photographic sections.****

Possibly the most important feature of the Paris office was its Central Files which had grown steadily from the time Lieutenant Goedeke had taken over on 18 January 1918. A card index of 160,900 names had been assembled; over 3,500 dossiers had been opened on persons and subjects. Some 7,800 American, British and French lists were filed, and completely coordinated with nearly 22,000 names in the American Registry Bureau which listed 7,221 Army civilians, 2,800 Red Cross workers, 2,700 YMCA workers, 175 Knights of Columbus and 104 Salvation Army workers. In addition there were 8,400 Americans in France not connected with the Army. There were many problems in connection with these Americans in addition to loyalty cases of which 3,760 were investigated. One problem was that 7,560 of these Americans were of draft age, and the Bureau serviced the Provost Marshal who was interested in the reasons for their exemptions or deferments. This registry

* (Cross reference later)
** History G-2 SOS, p. 19.
*** Ibid., p. 20.
**** Ibid., Exhibit #4.

with its up-to-date listing of names and addresses, was one of the factors that gave many outsiders the impression that the G-2, SOS, office was also a public information bureau.*

At the outset, it was realized that intelligence filing in the headquarters, and the district offices should be standardized. By the end of the war, plans were being made to file all records at Paris, and to issue lists of names and file numbers to all the offices. These offices would cut the lists apart, and paste them on cards, which would then be filed alphabetically. When a name came to the attention of a local office, and a file check revealed a card of that name, the case would automatically be further investigated until data was obtained from Paris.**

The Paris file section classified intelligence information under 20 major divisions and 108 subdivisions. It not only indexed and filed all documents, papers and reports, but it was responsible for the proper follow-up on all counterespionage cases, and attended typing and mailing of all correspondence. Colonel Ward has said, "These records have been invaluable in enabling this service to keep in touch with the movements and actions of all undesirables and others who might seek to gain information concerning the activities of the American Army in France."***

Comparative office statistics between a week in June 1918, and at the end of the war in November 1918 give some indication of the workload:****

ITEM	JUNE 1918	NOVEMBER 1918
New dossiers made	64	67
Dossiers worked	354	270
New File cards	2,966	6,040
File checks	341	940
Correspondence mailed	833	2,437

As finally organized, the Operations Division, G-2, SOS included a Circulation Section with a Passport Bureau, the American Registry Bureau, and Relief Society Control as subsections. This Circulation Section supervised arrivals and departures of civilians in France, the Postal and Telegraphic censorship services, and Information service to all offices. The Labor Bureau, Visitors' Bureau, and Civilian Investigations were separate sections.*****

* History MID, p. 22; History G-2 SOS, Exhibit #9.
** History G-2, SOS, Exhibit #5.
*** Ibid., p. 21.
**** Ibid., Exhibit #7.
***** Ibid., pp 19, 21.

When Headquarters, SOS, AEF was established at Tours it was proposed that G-2, SOS, at Paris, be moved to Tours, but that Major Ward be left at Paris to handle counterespionage. Colonel John C. Gilmore at Tours was named G-2, SOS, on 20 February 1918, and Ward was named Deputy. This arrangement, however, lasted less than three weeks, until Colonel Gilmore was relieved, and Capt Frederick Henrotin, who had been sent by Major Ward from Paris to assist Colonel Gilmore was named Officer-in-charge of the Tours District and G-2, SOS liaison officer to GHQ, SOS.*

The necessity of keeping G-2 headquarters at the French capital where the heads of all the Allied services as well as the French national authorities were located was recognized as being of vital importance. "...Much of the work of the central offices at Paris consisted of establishing and maintaining these relations...."**

By March the office had grown so large that it had to move to more suitable quarters at No. 11 Avenue Montaigne, Paris. This move was heralded by a large explosion as an eight-inch shell from the German's "Big Bertha," seventy-two miles away, landed in the street outside, but fortunately did no damage to the office.*** This was probably an accident, but some suspicion that it might not have been arose after the war when Colonel Nicolai, chief of the German Intelligence Service, boasted how his service directed the firing of this gun by reporting within twenty-four hours the exact location of each hit.**** Incidentally, American Intelligence was not surprised by this long-range gun. They had learned of it months before, and had dispatched agents to the Krupp works at Essen, Germany to obtain a description of it.*****

CIP, AEF Achievements

World War I ended before the overseas counterespionage service had opened all its scheduled offices; before it had established adequate informant nets; and before it had secured many of the trained and skilled personnel it would have required to adequately perform its mission.

Statistically, the 363 counterintelligence officers and agents of G-2, SOS, AEF made an excellent security record during the ten months of war operations. Out of 3,706 cases handled, enough legal evidence was secured to permanently neutralize 229 suspects. Of these, three were convicted of

---

* History G-2 SOS, pp 12, 27.
** Ibid., pp. 77, 78.
*** History G-2 SOS, Exhibit #4.
**** Nicolai, 181.
***** Johnson, 211.

espionage, 107 interned, and 119 expelled from the SOS.* Referring to these statistics, Colonel Ward stated, "The impression should not be gained that the total value of these efforts can be measured by statistics, as no one will ever know how many enemy agents were turned back, nor to what extent we succeeded in preventing the leakage of information, the dissemination and influence of propaganda and similar enemy activities."** Johnson stated that enough enemy agents were apprehended in critical positions to have kept the German Secret Service completely informed.***

One match is all that is needed to wreck a powder magazine. The 229 permanently neutralized suspects represented an entire box of matches. Moreover as the Witzke case**** in the United States proved, apprehension of one espionage agent will neutralize many more, and frequently merely the suspicion that counterintelligence is investigating will neutralize an agent, his contacts, and his associates for many months. Add to these, those turned back or deterred by effective circulation controls, and the value of G-2, SOS is evident. And, the ultimate value was demonstrated by the fact that after the war the Germans admitted that, in spite of their extensive espionage system, they were surprised not once, but several times, and their sabotage in areas under jurisdiction of G-2, SOS was negligible, particularly in contrast to their sabotage successes in Spain where G-2, SOS could not touch them.

Agent Elliot summed up CIP's overseas achievements: "It happened that just at that time[the Armistice] also the German money began to run out so that one might say the Intelligence Police never had a real chance at the enemy such as their British and French brothers had had in the first three years of the war. What chances they had, however, they utilized to the utmost with the facilities they had, and I am convinced that nobody in the AEF ever remained and worked more loyally in the face of real grievances or accomplished more in the face of great handicaps."*****

Major General Johnson Hagood, writing of the CIP twelve years later and opposing the maintenance of a Corps of Intelligence Police in the United States during time of peace, added however, "As Chief of the Services of Supply in France, the whole organization of counter espionage in the back areas came under my immediate jurisdiction, and I fully realize the importance of this service in time of war and in a country like France."****** This was only one of many indications that the Counter Intelligence service had won its place with the American Army overseas in time of war.

THE INCEPTION OF THE COUNTER INTELLIGENCE CORPS

WORLD WAR I, 1917-1918

III. CIP in the United States

III. CIP IN THE UNITED STATES

Organization For CIP Work

In any study of the development of the Counter Intelligence Corps, it is soon obvious that until World War II when the Corps had its own officers authorized, the majority of the Intelligence Officers of the Military Intelligence Division were an integral part of counterintelligence work. They directed and supervised all the work of the Corps of Intelligence Police agents and performed many of the most important counter investigations themselves. They were, in fact, Corps of Intelligence Police officers, except in name. In August 1918 a guidance circular was issued by MID for "all officers in command of Corps of Intelligence Police Detachments. " *

However, since they were Intelligence Officers (or I.O's as commonly referred to) their work went far beyond strictly counterintelligence concepts. They directed the CIP agents and frequently gave these agents non-CIP duties. In view of this situation, it is remarkable that the CIP history of this period revealed so little misuse of CIP agents.

One reason may have been that there were less than 700 CIP agents on duty during World War I; of these, 450 were overseas leaving only about 250 agents for use in some 500 Military Intelligence Offices in the United States. Commanding these offices, and offices overseas and at the various headquarters in Washington, Paris and Chaumont were close to 1,000 officers. **

When Major Van Deman started organization of Army Military Intelligence he felt the principal problem was counterintelligence. There was a large body of German-Americans in the United States openly hostile to the nation's war aims and constituting a potential source of subversion. There was ample evidence that the enemy had many agents in operation throughout the country. Consequently, counterintelligence expanded and developed, until in the opinion of Colonel Bruce Bidwell, author of the History of the Military Intelligence Division, "it began to overshadow many other normal intelligence activities which were soon badly neglected. This proved to be especially true in regard to intelligence training responsibilities." ***

This is shown clearly in the growth of the Military Intelligence Division Headquarters in Washington. By the end of the war its original seven assignments had

---

*** History MID, X-5.

developed into forty-eight sections and subsections of which only six were under the Positive Branch and forty-two were under the Negative or Counterintelligence Branch. In this branch 60% of the sections were concerned with counterintelligence investigative work and only 40% with censorship. * Of the six sections assigned to the Positive Branch, half of them performed large numbers of negative branch activities. The Corps of Interpreters, which was established 4 July 1917 with 130 officers and men, ** participated in many counterintelligence activities.

At MID headquarters this growth was essentially a Reserve Officer and specialized civilian one as the division grew from three officers and two civilians in April 1917 to a force of 282 officers and 1,159 civilians by the time of the Armistice. Of the total officers, General Van Deman stated that there were never at any one time more than six officers of the Regular Army assigned to MID during the entire World War I period. *** More regular officers were requested, again and again, but their release from other duties was never approved.

Some CIP agents were at the headquarters. For example, in 1918, M.I.3 (Counterespionage in the Military Service) had thirty-four CIP agents on duty. **** However, it was in the field that most of the CIP entlisted personnel were stationed. At the New York Branch Intelligence Office at the time of the Armistice there were fifty-two CIP agents on duty or about one-fifth of the total strength of CIP in the US. About two dozen CIP agents were at the District of Columbia Intelligence Field Office; another dozen in Chicago and some one hundred other enlisted agents were scattered among the more important twenty-eight of the 500 intelligence units in the Army's six geographical departments.*****

Civilian agents made a large number of the counterintelligence investigations in the United States during World War I. From the start of the War until 28 November 1917, a matter of some seven months, together with the Intelligence Officers, they handled all "CI" work. With the authorization on 28 November of 200 CIP agents for use in United States, many of these civilians were enlisted but large numbers of other civilians remained. In the New York office, for example, of the 103 investigators fifty-one were civilian. A number

***** CIP Records, Documents, #36-44; History MID, V-31, & VIII-12.

of civilians remained among the forty-one agents at the District of Columbia office at the end of the war.*

Economy was the primary factor for the authorization of Corps of Intelligence Police for use in the United States. In his request to the Chief of Staff on 15 November 1917, the acting Chief of the War College Division stated that it was becoming difficult to get competent civilian agents at the rate of only $4 a day and expenses. Detailing qualified enlisted men to CIP duties was not satisfactory because after the expense of training they were subject to removal with their outfits. The Memorandum stated it was believed that a large number of these investigations "could be successfully made by enlisted men at a fraction of the cost required if made by civilians."**

Back of the desire for military personnel was another feeling besides economy which was summarized by Brigadier General Marlborough Churchill, who succeeded Colonel Van Deman as G2 in August 1918. Writing after the war, General Churchill said, "...although the idea of any investigation of individuals in the military service is repugnant to most military men, I am sure they all agree that if a state of war makes such investigations necessary we want it done by agencies under our control and not by unsympathetic civilian bureaus."***

The request to increase the CIP from fifty to 300 men with the additional 250 men "for duty under the direction of the Chief of the War College Division," was approved on 20 November 1917 and published as GO 149 eight days later. By September 1918, 210 of these men had been obtained, but the needs were growing faster than the personnel and an increase of 250 Corps of Intelligence Police for service in the United States was requested. On 4 September, the Adjutant General approved this request.****

Neither the Chief of the Military Intelligence Branch, which was then part of the Executive Division of the General Staff, nor the Adjutant General recalled that in January they had authorized 750 CIP personnel for the AEF and so this September request was approved for an authorized strength of 550 with only fifty for the AEF. Actually, it made the total authorized strength of the CIP 1,250 men of which about half had been obtained at the time of the Armistice.

In the original request for CIP personnel to work in the United States it was stated that they were to replace civilians in the Intelligence Section at Washington and at Intelligence offices in Washington, New York, Boston, Charleston, S. C.,

Chicago, Pittsburgh, San Antonio, San Francisco and other offices as opened. In November an office was opened at Philadelphia; in January at St. Louis; in February at Seattle; and in July 1918 at New Orleans.*

Agents were not only needed for various district offices but for many specialized units. A small branch office was established in San Juan, Puerto Rico, in June 1918. Port of Embarkation units were stationed at Hoboken, N.J., and Newport News, Va.** Special Counterintelligence units were furnished the Signal Corps, the Aviation Corps, the Chemical Warfare Service and the Medical, Dental and Veterinary Corps.*** In September 1918 a special subsection was formed to handle counterespionage in the Quartermaster Corps, the Corps of Engineers, the Ordnance Department, the Motor Transport Corps, the Adjutant General's Office, the Judge Advocate General's Office and the General Staff. This applied not only to the staff sections in the War Department, but included personnel in field units not under the jurisdiction of I. O.'s at the divisional cantonments of geographical Army departments.****

Many agents were needed for liaison. From the beginning of its activities, the Military Intelligence Division cooperated with all of the various investigative agencies of the government and particularly with the Bureau of Investigation of the Department of Justice under A. Bruce Bielaski. This Bureau, later to be known as the FBI, was under Attorney General Thomas Gregory. One of his young law clerks was J. Edgar Hoover.*****

Much of the work of the Bureau during World War I was enforcing prohibition and apprehending draft evaders, but in the arrest and internment of potentially subversive civilians the Bureau worked closely with the MID. Immediately following the declaration of war, sixty-three German sympathizers were arrested, and within the next two and a half months, two hundred ninety-five more were interned.******

MID also worked with the secret service section of the State Department"... although," Colonel Van Deman later wrote, "the Department has always denied that it possessed any such section."******* It worked closely with its Naval counterpart, the Domestic Branch of the Office of Naval Intelligence, which was activated on 3 May 1917 at the same time MID was authorized.********

Intelligence Officers in the various Port Control organizations worked side by side with Immigration and Customs Bureau agents. * In all, MID maintained regular liaison with seventeen War Department agencies and thirty-three outside agencies many of which had several important subdivisions. The full time services of twenty-one officers of MID were required for this work. **

The only investigative organization of the government which did not cooperate was the United States Secret Service which was specifically forbidden to take part in any such activity, "much to the chagrin of the then head of this service." ***

First Counterespionage Cases

The Military Intelligence Section of the War Department was authorized on 3 May 1917, and before the Washington, D.C. field office could be opened a month later, the section was involved with a number of local counterintelligence cases. Colonel Van Deman discovered that the demands on the new service "in many instances had really nothing to do with military intelligence matters. However, they were matters which needed immediate and serious attention, and there seemed to be no other organization in the War Department to handle them. The first of these questions to come up was the subject of guarding various offices of the War Department.... 'It would seem that this situation was one which would have appealed to the authorities of the Army as needing correction, but this was far from the case. It required considerable pressure from the highest authorities in the Army to accomplish this objective...." ****

Meanwhile, the first wartime espionage case occurred. A young man disguised as a Captain, U. S. Ordnance Department, asked at an Ordnance Department office in the War Department for its records of locations and amounts of high explosives in Western United States. When the civilian refused to give the information until he had called the Colonel in charge, the officer left the office. When called, the colonel said there was no one of the name or description of the young man in the Ordnance Department and further he had not authorized anyone (as the "Captain" had claimed) to get this information. The colonel called the Intelligence section and with the aid of the Army and Washington police a cordon was placed about the city, but no one resembling the young man's description was ever located. Colonel Van Deman said, "There is little doubt but that this young man was an enemy agent." *****

The information this young man wanted was probably intended for use of Germany's saboteurs who had fled to Mexico at the declaration of war and were

waiting for orders to return. At the same time, the German Secret Service was making efforts to furnish them supplies.

While the Danes were not averse to doing business with Germany as mentioned previously, they had no desire to see the United States sabotaged. In the early summer of 1918, they forwarded to the United States a large number of objects they had discovered in shipments en route to the United States. These objects consisted of imitations of lumps of coal, dispatch cases, field glass cases, fountain pens and other such objects all loaded with TNT and ready to go except that the Danes had defused them. There was also carborundum in the shape of crayons for putting axles and engines of vehicles out of commission. *

The disguised "American Captain" may have been one of the German agents obtained by the "blackmail" recruiting technique. One of these cases was disclosed about this same time when a young American reported to the U. S. Embassy at Copenhagen. He said he was enroute to the United States under orders of the German Secret Service, and suspected he was under surveillance by another German agent. He explained that he had been caught in Germany by the declaration of war and that his mother was still in Europe. He said that when he asked to leave Germany he was refused permission until, finally, he was told he could go if he would furnish reports. He was given handkerchiefs and shoe strings impregnated with a secret ink.

American officials at Copenhagen forwarded the handkerchief to the Military Intelligence and notified New York Customs that the young man was enroute. At New York, he was turned over to the Bureau of Investigation of the Department of Justice, who in turn released him to the Military Intelligence Section, where he produced the shoe strings and handkerchiefs. An attempt was made to analyze the secret ink but the college chemical laboratory which had volunteered its services to MID reported that the fluid was only pure water and a few grains of starch. Later Colonel Van Deman learned that a sample sent the British had been analyzed and its true chemistry determined. The British called it the German's best ink, and it figured prominently in the case of a very noted German agent later executed in the Tower of London. **

The attempted espionage in the Ordnance Department should have been enough to convince Army authorities of the necessity of adequate security measures, but it took another "incident" before guard systems were established over War Department Offices. Two carefully selected officers of the Intelligence Branch spent one night searching various War Department offices for classified information not properly safeguarded. Next morning they had scores of documents,

---

* Van Deman, P-50.

** Ibid., Vol I, P-47-50.

including many from safes they had opened from combinations written on cards and left in unlocked desks. * This type of surprise search was conducted by the Corps of Intelligence Police at the start of World War II with similiar results.

Early in the war, Counterintelligence personnel discovered that certain suspected persons were using the "Army List and Directory" as a source of information for Central Powers espionage. This monthly directory listed by name, rank and address every officer and gave considerable information on the locations and duties of various army organizations. Colonel Van Deman states it was finally suspended for the duration of the war, but not before "very determined opposition on the part of the Adjutant General" was overcome. **

Enemy agents were shipping overseas fancy Thanksgiving, Christmas and New Years menus of various Army organizations. Counterintelligence soon discovered why. These menus, in many instances, carried complete rosters and in some cases photographs of all the officers and non-commissioned officers. When the Military Intelligence Division recommended that publication be stopped, it was found large sums of money were involved, and the matter settled by allowing preparation of the menus but withholding distribution until the unit was safely in Europe. ***

Specialized CIP Missions

One of the first zone of the interior counterintelligence problems was port security. On 2 July 1917, General Pershing lodged a strong protest against the careless methods being followed by the War Department in the transmission of secret data covering ship sailings to and from France. **** One of the first cases of the New York Branch Intelligence Office after it was opened in 1917 was the investigation of a small Brooklyn exporter who was sending business telegrams to Amsterdam which, upon analysis, revealed that the dates and quantities of goods corresponded with amazing accuracy to various transport sailings. ***** The exporter was "imported" to an internment compound in the mid-west. The initial problem at ports was one of jurisdiction. Not until May 1918 was the State Department given adequate control of passports and visas for American citizens.

Port control was of deep concern to Colonel Van Deman. Even when he had been assigned to Intelligence with the A.E.F. in Europe, he continued to urge

* Van Deman, P-43.
** Ibid., P-45.
*** Ibid., Vol. I, P-45.
**** History MID, VIII-2.
***** Johnson, P-24.

improvements in the United States. His pleas for better control of persons destined for France and Spain has been mentioned previously. In September 1918 he wrote Colonel Churchill, Chief of the Military Intelligence Branch at Washington, "The weakest link in the whole chain now is the U. S. - Canadian situation. The British tell me that they have never been able to get the Canadians to establish anything like an effective control because they said that until the U.S. did so, it was useless to attempt it, which of course is true. What is happening now is that people are coming to Canada from the U.S. and then sailing to England without any sort of control. Of course the British can send them back, but a proper control would be much more satisfactory from every point of view." *

With the State Department in control, the problem became one of coordination and liaison. This passport control by the State Department was in direct contrast to the system in force in France and England whereby the military authorities held full power to exercise any restraints on civilian travel they felt advisable, and up to the end of the war Military Intelligence Officers were advocating such military authority. As it was, MID merely furnished a liaison officer and file checks and investigations as requested. However, Intelligence Officers were detailed to various ports to examine incoming and outgoing passengers and establish the rudiments of what in World War II was known as ship panelling. By November 1918, M.I. 11 (Passports and Port Control) was checking 9,500 names a month for the State Department. **

Counterintelligence work for the Staff Corps units started in early 1918. Prior to 15 January 1918, the Signal Corps had always insisted on maintaining its own intelligence service because of the peculiar opportunities for enemy agents to secure valuable information from such a highly technical organization. On that date, however, it was abolished and MID took jurisdiction. This action apparently resulted from an independent investigation of the Photographic Division of the Signal Corps which had revealed four officers of pro-German sympathies, two of whom had been previously connected with the Hamburg-American line and had engaged in the dissemination of German propaganda prior to the entrance of the United States into the war. All four officers were promptly separated from the service. ***

Aircraft production was covered as part of the network of the Plant Protection Service and through its contacts, the CIP agents received a steady stream of suspects. Some 4,500 cases were handled by MID up to the signing of the Armistice.****

Washington Field Office

As the necessity for undercover investigations of individuals and organizations grew, particularly in the Washington, D.C., area, it became evident that an organization composed of men who were experts in this sort of work should be set up. To meet this need a number of men whose work in civil life was along these lines, the majority of them selected from the Metropolitan Police Department in New York City, were brought to Washington and quartered in a private dwelling in Southeast Washington. These men wore civilian clothing and every precaution was taken to see that their presence in Washington was unknown. The only members of the Military Intelligence Branch who knew of their existance was the officer in charge of the Branch, the executive officer, and the officer who handled the finances of the branch.*

Colonel Van Deman states, "This was probably the beginning of the organization later known as the Counter Intelligence Corps." However, it was not until November, when members of the Corps of Intelligence Police were authorized for work in the United States, that investigators of this unit were established.**

The first of the Military Intelligence Field Offices, quite naturally, worked closely with the MI headquarters and in December 1917, it was made a subsection of the division and titled M.I. 3C (District of Columbia). However, when Captain Henry A. Taylor arrived in June 1917 to establish it, he had with him only two agents who had been associated with him in the New York Police Department, Detective Bureau.***

Taylor, who later in the war became the Intelligence Officer for the Newport News Port of Embarkation, established a "blind" office at 310 "E" Street, NW, in Washington under the name "Personnel Improvement Bureau." Originally, the personnel "improved" were civilian employees of the War Department, but this mission was extended to military personnel and then to applicants for service.**** Eventually, it functioned as a large scale detective bureau including graft and fraud cases among its investigations.

James E. Henry, Sr., a former agent, has furnished an account of the Washington, D. C. office which at the height of the war had some eighty-five persons mainly CIP but including a number of civilian investigators, who either were not physically qualified or who did not desire to accept the opportunity

---

to become CIP Sergeants at $50 a month and a $30 allowance, which is what Henry recalls they were paid. Later, when Henry bought his own automobile to save riding street cars, he was paid for his gasoline and auto expense and his car was used when automobile surveillances were necessary.*

Henry's qualifications for the work consisted of volunteering for intelligence and graduating from Harvard thus answering the prevailing requirement of Intelligence for "young college men."** On arrival in Washington in May 1918, Henry was told he was to work as a civilian with the CIP until his army papers were processed. This took six weeks.

At the "Personnel Improvement Bureau", Henry discovered that the experienced portion of the unit consisted of former associates of Captain Taylor of the New York Police Department. The first Sergeant was the old "regular" type. "How he happened to get into the organization in the first place," said Henry, "I do not know." There were some older civilian agents and a score of CIP agents. There was one group of prominent New England socialites from an old-line Boston concern. "Apparently," Henry reports, "the wool business was nil on account of the war...None of these men had any training for intelligence work, as far as I know, yet Blake and Crimmins received commissions..."*** American Intelligence Officers were in agreement with their counterparts in the German Intelligence Service as its Chief Colonel Wilhem Nicolai wrote after the war, "The Intelligence Service is a service for gentlemen. It inevitably breaks down where ever it is placed in the hands of other persons..."****

There was one woman agent in the office, Miss Anna W. Keichline of Bellefonte, Pa., an architect by profession, and there were also two regular army enlisted men, one about fifty years old and the other about thirty-five. Henry states, "How they happened to be transferred to the C.I.P., I don't know. I believe they acted as front-door guards at the main office of the Military Intelligence Division in the Hooe Building at 1330 F St., NW., where it had moved after being three months at the Monroe Courts Building, 15th and "M" Streets, NW.*****

"Except for the members from the New York Police and two or three others who had done some investigative work, we were all without experience or special training for the work we were doing," Henry said. "My first job was to read over what seemed endless piles of applications for civilian employment in Government Offices. I was to try to spot any that would be...now called 'a poor security risk'. I thought then, and still think, that anyone trying to get into

0466

Government employment, for nefarious ends would not put any information in an application that might defeat this true purpose."*

From screening reports, Henry was assigned to file checks and spent considerable time in the Adjutant General's office looking up service records of people being investigated.

This "training" was interrupted on 9 July for Henry's induction into the service which included issuance of a full uniform as Sergeant of Infantry, which he wore only on the one occasion he was required to take target practice with his .38 caliber revolver. The important thing was that he was issued his Intelligence pass to gain access to places where his normal government civilian employee pass was not honored. The target practice completed his formal training except for one occasion later when a "judo" expert was sent to the unit to teach the "fine points" of mayhem. Henry said he never recalled any of the agents using it.**

Jurisdiction of this office was generally limited to Washington and vicinity, although Henry stated that he remembers agents being sent as far as the Aberdeen Proving Ground, Maryland. Daily typewritten progress reports were required and final reports were written in regulation "Subject, To, From" form. On surveillances no matter how late a subject went to bed, agents had to go back to the office and type their reports in either triplicate or quadruplicate of which one copy was kept for the agent's personal reference file.

All agents had a turn as Night Duty Agent which included watching the janitor collect and burn the classified waste. The files were locked and then guarded by a home made burglar alarm that accidently went off one night and brought the duty agent and the janitor face to face across loaded revolvers, which fortunately they didn't shoot.*** Presumably, foreign agents of a crude sort did appear on the scene in the summer of 1918, when three Japanese men were observed loitering openly across the street from the office part of the time for two or three days. Henry states the agents were forbidden to take any notice of their activities "for fear of causing international complications." Although the CIP agents were never certain, Henry says, "the assumption was that they were spying on our headquarters."****

---

* Henry, P-3, History MID, V-19.
** Henry, Ibid., P-5.
*** Ibid., P-7.
**** Ibid., P-8.

0467

As part of his induction, Henry was ordered to Ford's Theatre, where some of the Adjutant General's files were located, to be fingerprinted. Henry adds that he does not recall ever having any experience while in the CIP with fingerprinting or fingerprints in any of the cases on which he worked. The unit did, however, develop some specialists. One agent had stenographic experience that enabled him to record microphone conversations while another agent demonstrated skill in "planting" hidden microphones.

Surveillances were the common duties of the agents. One case involved a man with a German name who worked as a salesman for a big steel company and made many calls at Army Ordnance Department offices. This man had "two Mercer sport cars, a lame colored chauffeur and an attractive girl with whom he spent considerable time." He also rented two apartments some distance apart, in one of which a covert search revealed forty-six cases of liquor which was always welcome in "dry" Washington, boxes of ladies' silk stockings, white kid gloves and other items. It was suspected that he was bribing ordnance officials and a "mike" was planted in one of the suspect's apartments. Just as the case became interesting Henry was transferred to another case and suffered the usual fate of agents in never learning of the outcome. In another "mike" case, however, Lieutenant Robert Dawson, the "mike" technician, Sgt Thomas Cummings, the shorthand expert, and Henry exposed a leather salesman involved in graft in connection with the Quartermaster Corps. As Henry recalls a dishonest serviceman was mixed up in the case.

Tracing down malicious rumors was part of the job, and on one occasion Henry was assigned to locate the source of a rumor supposedly started by pro-Germans that colored people had tails like monkeys and were always put in the front battle lines. Henry found colored people who had heard the story but its source remained undetected.

After the Armistice, the District Office continued on until early 1919 handling for the most part fraud and graft cases; in all, some 6,500 cases were processed. The only job of importance Henry remembers in that period was on a very cold night when he was detailed with another CIP sergeant to guard two or three truckloads of documents that President Wilson was having sent to France.

The New York Branch

A month after the establishment of the Washington, D.C. office, the branch Intelligence Office was opened in New York, at 302 Broadway, and Mr. Nicholas Biddle, a deputy police commissioner, was chosen by Colonel Van Deman to head it. Biddle was eventually commissioned as a Major on an authorization which Colonel Van Deman borrowed from the Signal Corps, but only after the commission had been disapproved by the Secretary of War who could not see how Biddle was a qualified Signal man and after Van Deman, by enlisting the help of his close friend Felix Frankfurter, (who was on duty in the Secretary's office at the time) had explained how Intelligence had to beg, borrow or steal its officer spaces.*

The New York office was located in the hub of material war effort with many of the most urgent plant and port counterintelligence problems centered there. From 1914, when the war started in Europe, until nearly three years later, when we entered the war and either deported or interned some of the most notorious of the German agents, the city was the center of German espionage and sabotage.

In his book, "Throttled," Inspector Thomas J. Tunney of the New York Police Bomb Squad, lists twenty-three members of his squad who became CIP agents in a group on 14 December 1917, and continued their anti-sabotage investigations, many of which had started months before, such as the Hindu bomb plot investigation which had been started in February 1917 on a tip from Scotland Yard. This eventually became one of the big cases of the New York Office, and the plot was completely neutralized. West Coast Intelligence offices also dealt with ramifications of Hindu subversion.**

By the time of the Armistice, the New York Office had twenty-five officers, fifty-two CIP agents, fifty-one civilian inspectors and thirty-six clerical personnel. At this office was located the New York District Office of the Plant Protection Service under the management of Patrick Curry. J. A. Kilpatrick was resident agent at Albany.***

In addition to espionage and sabotage cases, the New York office, with its heavy police element, covered a wide variety of cases ranging from arrests for thefts, smuggling, burglary, misuse of Allied uniforms, desertions from

0469

United States, British and French forces, and draftdodgers to violations of the Immigration, Enemy Alien and Postal Censorship Laws. One of the most important espionage cases of the office was that of Mme Maria de Victoria, which culminated in her arrest on a presidentalwarrant in April 1918 while she was living at the Hotel Nassau at Long Beach, Long Island. Madame de Victoria, who was also known as Marie de Vussiere, came under suspicion in 1917 when her husband, Manuel, an Argentine citizen, was arrested by the French. Soon the New York Intelligence office learned that both the French and the British were interested in the woman who had been called "the beautiful blonde of Antwerp."

Surveillance resulted in securing a number of letters addressed to Madame de Victoria which were forwarded to the Military Intelligence laboratory which was in the process of being organized under Lieutenant Herbert O. Yardley at Washington. Messages in invisible ink were found under various "cover names" and the codes were broken and read. A federal grand jury indicted Marie de Victoria for conspiring in espionage in time of war, but more than two years afterward she died in prison without ever having been brought to trial.

Some 500 arrests were made between 14 December 1917 and 11 November 1918 by the CIP agents of the New York office. Impersonation cases required much work. Among the impersonators was Fritz Joubert Duquesne alias Frederick Fredericks, who had escaped from life imprisonment at Bermuda where he had been sentenced by the British for espionage in the Boer War. In New York, Duquesne was posing as Captain Claude Stoughton of the Light Horse Brigade of the British Army. When arrested as an imposter by the CIP agents, Duquesne's readiness to plead guilty to minor charges led to further investigation disclosing that he was wanted by the British for an explosion on a ship which had killed three British sailors. *

In the spring of 1918, CIP agents arrested a larcenist who was posing as a Captain in the Medical Corps and who claimed his facial scars were from shrapnel wounds. The agents discovered the scars came from cuts by a beer bottle in a barroom brawl. Among the deserters caught was a Sergeant Major of the Canadian Army and an Army Lieutenant who was posing as a Captain. The largest "haul" of deserters, thirty-five in all, was gathered when three CIP agents broke up a seven man gang that was obtaining sweaters and comfort outfits from the Red Cross by having the deserters apply for them to the Red Cross, using fake orders.

Five enlisted men were apprehended stealing ordnance supplies and six civilians in another gang were apprehended for stealing sugar. Sgt. Valentine Corell of the CIP broke a highly difficult case involving two York Germans who were smuggling rubber to the enemy. An official of a local draft board was apprehended by Sgt Randolph of the CIP for shaking down registrants on the promise of getting

* Records of the New York Office of the MID by 1st Lt W.L.Moffat, 21 Jan 1919.

them safe and easy details. Investigation revealed this "official" had been arrested many times before but released each time. This time, he got two years in the penitentiary. *

Frequently, the office proved that an apparent sabotage act was not enemy-inspired as in the case of the two million dollar explosion on 26 March 1918 at the Jarvis Warehouse in Jersey City. CIP Sgts. Jenkins, Barth and Cavanagh following an all night investigation, arrested a checker in charge of a gang working in the vicinity of a large quantity of chlorate of potash and at 5 A.M., brought him to the New York Intelligence Office where he was interrogated by Colonel Biddle and finally confessed that he had accidentally caused the explosion by means of a lighted cigarette after being repeatedly warned not to smoke. **

America's leading "Reds" provided one of the most important cases of the New York office. Following the conviction of Emma Goldman and Alexander Berkmann, anarchist leaders, a number of seditious circulars were issued from time to time identified only by the words "Underground Press", printed at the bottom and distributed by being thrown in handfuls from upper windows of buildings in sections inhabited largely by the foreign born. On 23 August 1918, early in the morning a particularly vicious circular was distributed, violently denouncing the government, called upon citizens not to support the Liberty loans and vituperated the President. It was printed both in English and in Yiddish. Three boys passing a loft building at Lafayette and Houston Streets saw the circulars floating down. Because of the violent wording of the circulars the boys took them at once to Police headquarters. The police immediately notified the New York Intelligence Office. There Major Fuller Potter, assistant to Colonel Biddle, who had been disturbed by the number of times these circulars had been successfully distributed, was ready for action. In a matter of minutes, CIP Sergeants Barth and Jenkins were on the case, and within an hour they had arrested one of the anarchists and obtained a confession that implicated six others. With the aid of six additional CIP agents, Sergeants Barth and Jenkins apprehended these other six anarchists that night.

The "Underground Press" printing plant was located at 1582 Madison Avenue, and the evidence obtained resulted in the conviction of five of the seven. Corps of Intelligence Police encountered in this case the typical communist "smear" tactic when one of the anarchists died of pneumonia during the trial. Harry Weinberger, attorney for the anarchists, charged that his client had been killed as a result of third degree methods used by the Sergeants who effected the arrests.

Weinberger claimed that he could prove this, but all the evidence contradicted him, and CIP agents Barth, Jenkins, Meagher, Hastings, Santaniello, Murphy,

Caddell and Dillon received written commendations from Judge Henry Clayton and District Attorney Francis Caffey. *

Before the Bolshevik Revolution in November 1917, the Russian Czarist Government had purchased a number of rifles and bayonets which her agents had attempted to ship to Russia. This was well known, but the place of storage was not. After the revolution every effort was made to discover what had become of these rifles and bayonets. So intensive was the search that Colonel Van Deman concluded that it was improbable that they were shipped out of the New York. He added that it was possible that a Soviet agent got them out of the city and shipped them through another port.

After war was declared, investigation was made in New York for a German arms cache. A search of the building in which "The German Club" was located, revealed that a considerable number of packing cases had been stored in the basement, but had been removed. There was certain evidence that these packing cases had contained arms. Whatever became of these rifles was not known, although it was rumored that they had been shipped to the Middle West and hidden there. ** This cache may have been connected later with the Witzke case of the Western Department, although the connection was never revealed.

Other District and Divisional Units

Corps of Intelligence Police activities in other district offices were similar in many ways to those of the New York District Office with the nationalities and motivations involved varying according to the sections of the country along the "case" divisions as established "Geographic Departments" of M.I. 4B.

Personnel procurement differed from office to office, but "except for the New York office where the Corps was largely recruited from the Detective Bureau of the City Police Department, it was not customary to enlist the services of former policemen or detectives...." However, most of the offices were built around a cadre of experienced investigators from various civilian occupations. In the Chicago office, one CIP sergeant had been in the Intelligence Service of the British Army; another a Deputy Sheriff of King County, Washington; and two had been successful lawyers. College graduates included alumni from Harvard, Yale, Michigan, London University and private schools in Rome and Florence. All had had military training and were transferred from other branches of the service because they possessed special qualifications for intelligence work. The work of

* CIP Records, 21 Jan 1919, New York Office.
** Van Deman, Vol. II, p. 2.

the Chicago office was primarily concerned with subversion cases arising out of the huge German-American population centered in that area. In addition, the mid-west mills had attracted many radical labor organizations that provided many problems. * The day after war was declared the Socialist Party in convention at Chicago passed resolutions against participation in the War. In July 1917 two persons were killed in race riots in St. Louis. In June 1918 Eugene V. Debs was arrested in Cleveland on a charge of interfering with recruiting. In August 1918, at Chicago, one hundred International Worker of the World leaders were found guilty of conspiracy against prosecution of the War. All these cases involved work for the Midwest CIP agents.

Although the New York and Boston areas were centers of Irish agitation, during the entire war, certain Irishmen in all parts of the United States engaged in operations which they hoped would hurt Great Britain. Interception of a secret ink letter describing plans to sabotage one of the largest copper mines in the Western part of the United States led to a nation-wide counterintelligence search for the leader of the plot, who was head of one of the Irish organizations of the country. He was arrested in Buffalo just as he was boarding a train. This was the same type of secret ink that figured in the German-inspired Irish attempted revolution which ended with Sir Roger Casement's execution at the Tower of London. **

In the Southern Department, which handled problems of border control along the Texas-Mexico frontier, a woman was picked up in early 1917 attempting to cross into the United States. It was strongly suspected, as a result of counterintelligence investigation, that she was attempting to get in touch with the German Secret Service. A search revealed a blank sheet of paper in the heel of her shoe. When forwarded to Military Intelligence at Washington, the message was brought out by simple heat treatment. This suggested to Lt. Yardley the necessity of having a detection laboratory available, and it was this organization that paid off in the Madame Victoria case. ***

In connection with negro subversion and "political demagoguery," problems of the Southern Department, the first two negro intelligence agents were recruited after careful selection and investigation. It was evident that agents of the Central Powers were using word of mouth propaganda to encourage subversion. One of these rumors spread in Washington was mentioned previously. Counter propaganda was required. These agents traveled from community to community, investigating the local situation and, through informal conversations and public addresses, exposing the enemy's propaganda. They traveled alone and during the war covered most of the United States. It was soon evident that their principal work lay in the North and not the South. ****

Racial problems were not confined to negroes. When the United States entered World War I it had a population of a little over one hundred million persons of which twenty-eight and a half million were either foreign born or American children of foreign born parents. More than a million enemy aliens registered in the draft, but for every alien there were several times as many persons who, although they were Americans by birth or naturalization, had family ties with the enemy nations. Out of the millions of Germans who had immigrated to the United States, there were only 159,000 who were still aliens of draft age when registration was required. * Many of these naturalized citizens, however, felt a "dual" loyalty to their old country.

For the Intelligence Officers with the 42 Army Divisions organized in the United States during World War I, ** the sentiments of some of these foreign born and foreign connected draftees resulted in many cases of suspected disloyalty and a number of cases of actual disloyalty. The problem was further complicated by the fact that the 752,000 Austrian-Hungarians who registered for the draft were not declared enemy aliens until six months after the war started and that it was not until 24 October 1918 that the State Department completed a lengthy investigation of the status of Turkish and Bulgarian aliens and decided they were enemy aliens. By that time about 102,000 of them had registered and many had been drafted. ***

Most of the potentially disloyal cases were discovered in the United States since more than half of the two million soldiers of the AEF did not arrive overseas until less than four months before the war ended, and more than half the AEF divisions trained from ten months to fourteen months at sixteen camps in the United States before shipment. **** Files of the 31st Division which trained at Camp Wheeler, Georgia, from October 1917 until it went overseas in September 1918 reveal a large number of these disloyalty investigations. *****

Among the new Army camps established during World War I was a Motor Transport Depot on 153 acres of land at Colgate, Maryland, and activated in December 1917 as Camp Holabird. ******

CIP in the Western Department

In the Army's Western Department, counterespionage in the "neutral" countries was put into practice. At the Nogales, Arizona office, under Captain Joel A. Lipscomb, Special Agent Byron S. Butcher was authorized to recruit an informant (A-1) to report on espionage activities in Mexico, where German agents in the United States had fled when war was declared and were being organized under the German Minister to Mexico, von Eckhardt. *

Mexican border activities had been of particular counterintelligence interest since early 1916 when British Intelligence decoded a top secret proposal of German Secretary of State Zimmerman to President Carranza of Mexico that Mexico join the Central Powers and declare war against the United States. At that time, American Immigration Officials at Nogales, Arizona, arrested two men and a woman trying to enter the United States and found coded messages sewn into their garments which, when deciphered, confirmed the British interception. Moreover, it was learned that President Carranza not only received the message but knew of the attempt to get it into the United States. **

The case that resulted from the important decision to work in a neutral country is reported here in detail for several reasons. First, the amount of evidence obtained by this method was so conclusive that the German agent apprehended was the only one condemned to death in the United States during World War I. *** Secondly, because this German agent was considered one of the first and one of the most effective enemy saboteurs, his "modus operandi" deserves study by counterintelligence personnel. Finally, because the selection of the informant and the entire handling of this case by the CIP Special Agent represents exceptionally skillful counterintelligence work, it is worthy of emulation by future agents. Particularly significant is the fact that the counterespionage informant in the neutral country was able, over a period of time and wine, to obtain derogatory admissions to which the suspect would never confess after apprehension even when he realized that the evidence against him was conclusive.

Butcher chose his informant well. Dr. Paul Bernardo Altendorf, a 42 year old Pole and soldier of fortune, at the time was a Colonel in the Mexican Army on the staff of General Calles, Military Governor of Sonora, who was as pro-German as Altendorf was anti-German. Altendorf had studied medicine and surgery at the University of Cracow and was called "Dr." He was an

* Landau, p. 112.
** Van Deman, Vol. I, p. 62.
*** Landau p.114.

accomplished linguist speaking English, Spanish, German and Polish fluently. Of a roving disposition, he had traveled extensively in South America and in the British colonies, before settling in Mexico. When Butcher sent him to Mexico City it took little time for him to become enrolled in the German Secret Service. *

Cooperating with this MID informant was a negro undercover agent of British Naval Intelligence and an undercover agent of the Department of Justice Investigation Unit in Texas. One of their first contacts was Kurt A. Jahnke, who, with Lothar Witzke, had been a saboteur under Franz von Bopp, German Consul General in San Francisco. Jahnke was a naturalized American citizen and had served some time in the United States Marines. **

While in the United States, Jahnke had established cover for himself by becoming a member of the Morse Patrol, a night watchman agency in San Francisco (later identified as a pro-German organization). To display his patriotism and divert suspicion, he had boldly walked into the office of the Secret Service in San Francisco in February 1916 and reported he had overheard a plot to blow up the Navy Yard at Mare Island. Since he claimed the source of his information was a conversation he had overheard between two alleged German agents, whereabouts and identities presently unknown, the authorities paid little attention to his warning until shortly afterwards when a magazine at the yard did blow up. By then Jahnke had disappeared. ***

With Jahnke in Mexico City was his saboteur companion, Witzke. These two, Captain Henry Landau, formerly of British Intelligence, termed in 1937, "the most deadly sabotage team in history." **** Witzke was a German Naval Lieutenant who was interned in Valparaiso when the German Cruiser Dresden was captured and sunk off Chile. Witzke, with his fondness for wine, women and song, did not like internment and soon escaped and as a seaman reached San Francisco under the first of many aliases and reported to von Bopp for duty in early 1916. *****

Jahnke and Witzke had been two of the saboteurs in the fourteen million dollar Black Tom Island explosion in New York Harbor on 30 July 1916. Two

***** Ibid., p. 34.

million pounds of munitions blew up in a series of explosions, some of which were heard in Philadelphia and Camden. * Jahnke had been linked with the seventeen million dollar Kingsland, New Jersey, sabotage on 11 January 1917, in which a four hour detonation of half a million three-inch high explosive shells completely wrecked the plant. **

An informant report from Mexico City early in 1918 stated "...the present task of promoting a mutiny in the U.S. Army has been entrusted by Berlin to one of their star agents, one K. A. Jahnke of Mexico City. This event is scheduled for Autumn. Jahnke also has taken under his wing the general supervision of sabotage in the U.S., the Panama Canal and American possessions generally, including especially sabotage of ships transporting war material and material for ship construction. His program covering the foregoing ambitions has been approved by the German Government with available credit of 100,000 marks per month and an additional large commission on results accomplished... He has already had some experience in control of German agitators, defeatists and International Workers of the World agitators in this country and is regarded as the ideal man for the job. Jahnke's official appointment seems to be that of sole naval confidential agent in Mexico... Intelligence Officers will probably never have the pleasure of meeting Mr. Jahnke personally, but it is not unlikely that he will give them something to think about. Hence this note in advance." ***

The accuracy of this informant report was revealed during the postwar investigations of the Black Tom and Kingsland explosions when Admiral W. R. Hall, wartime chief of British Naval Intelligence, made available to the investigators copies of 10,000 German cables, radio messages and letters which the British had intercepted and decoded. **** A German General Staff radio message dated 29 April 1918, sent from Berlin via Madrid to Mexico, stated, "Jahnke has been made sole Naval Confidential Agent in Mexico." Also found in this file was a Berlin telegraph to Madrid, dated 8 December, instructing Madrid Intelligence to transmit to its Mexico courier orders for Jahnke to send an agent from Mexico to U.S.A. The messenger was ordered to take a wireless-telegraph code as well as Spanish covering addresses for letters to Jahnke. Directly after this, Jahnke sent Witzke on the trip to the United States which was to culminate in his arrest. *****

* Landau p.117.
** Ibid., p. 87
*** Ibid., p. 141.
**** Ibid., p. 166.
***** Ibid., p. 174, 171-2.

Meanwhile, Witzke had made several trips across the border to the United States, but the trip on 16 January 1918 was the vital one. It was less than six months since Altendorf, MID's A-1, had arrived in Mexico City, but he had completely won the confidence of Jahnke. Consequently Jahnke asked Altendorf to accompany Witzke and introduce him to General Calles at Sonora. Witzke was to ask Calles to forward any coded telegrams he would send from the United States or elsewhere and to supply him with a revolver and a permit to carry it in Mexico. *

During the trip Witzke started drinking and, growing confidential. He told Altendorf (as A-1 reported it to Special Agent Butcher), "There is something terrible going to happen on the other side of the border when I get there...I will have saved Germany...you will see it in the papers...I do not know whether I will come back alive from this trip or not, as I may be killed..." **

Earlier Witzke, who was using the alias of Pablo Waberski and traveling on a Russian passport, had told A-1 that he was going to Nogales to kill someone. Efforts to secure more definite information failed except that A-1 was led to believe that an American officer at Nogales, Arizona, was booked to be assassinated, because the German said that this American through influence with Mexican officials had seriously injured German plans in Mexico. ***

Witzke told A-1 that he had blown up a black powder magazine of 250,000 pounds near San Francisco one morning about five o'clock and that sixteen lives had been lost, including six children. He asserted he was working for the American Government as a mechanic on the "Island" at the time of the explosion and laid wires to accomplish his designs. Obviously, this was the Mare Island explosion Jahnke had warned U. S. Secret Service about. Witzke said he had started fires in Oregon logging camps the previous fall.

Witzke continued, "...I also did work in New Jersey with Yenky (Jahnke) when the munitions barges were blown up and the piers wrecked... The German Ambassador and Yenky think very highly of me for my work and I am proud to have done it...I have many lives on my conscience and I have killed many people and will now kill more." ****

At Mazalan en route where Witzke stopped at a bawdy house, Altendorf had a chance for a covert contact with the American Consul, through whom he sent

---

* Landau p.116, 119.
** Ibid., p. 117.
*** Ibid., p. 117.
**** Ibid., p. 117.

a message to Special Agent Butcher that he was en route to Hemosillo with two German agents, one (whose name was garbled in the coded transmission and may have been someone else) was called "Nuding," and would stay there one day. He asked to have another American informant (M-2) meet him there at the Cohen Hotel. In the message as sent by Consul Chapman, A-1 said, "Both (agents) are plotting assassination of some officials in Nogales...catch Nuding if possible. Use care he is dangerous..." Chapman added his own comment at the end of the message. He said, "I have corroborated evidence as to the danger of Nuding..." *

While traveling to Hermosillo, Witzke told Altendorf that he had six men going North with him and that the work was moving "splendidly." One of these men was later identified by the British informant as Dietz, a German agent who intended crossing the border to the New Mexico coal fields, where the Germans had a large following among miners who belonged to the International Workers of the World. At Hermosillo, Altendorf introduced Witzke to General Calles, who appeared to be expecting him and quickly complied with all the requests. At this point Altendorf had to appear to stay behind to avoid suspicion. The British informant, who had been sent on the trip with Witzke from Mexico City supposedly to work up a revolt among American soldiers on the border, left for Nogales with Witzke. The following night Altendorf arrived in Nogales secretly by freight train. Meanwhile at the Central Hotel, Nogales, M-2 had located Witzke and from then on kept a close surveillance until his arrest.

CIP in a Neutral Country

Meanwhile, Special Agent Butcher had crossed into Nogales, Mexico, and was posing as an official of the American Consulate the following morning when Witzke came in and, as Paul Waberski, presented Russian passport #435. On his questionnaire he stated that he was "22 years of age, mechanic and automobile engineer, resident of New York City and San Francisco for the last seventeen years, returning to the United States." In his "Declaration" he stated he was born in Russia but had lived in San Francisco from January 1905 to November 1917 and in Mexico City since then. His references included the Russian Consul General at Mexico City. He said he would probably go to San Francisco. **

All Russian-type passports were regarded with suspicion, and "Waberski's" story was unlikely but Agent Butcher requested the Immigration Office to "pass" him and that day Witzke made two trips across the border. Butcher states, "In view of the fact that he left his baggage on the Mexican side, I did not molest him, awaiting the opportunity to secure his baggage and him together." ***

* Landau p. 118.
** Ibid., p. 119.
*** Ibid., p. 119.

When Altendorf arrived at American headquarters that night he reported to Butcher that Witzke always carried his papers on his person; so when M-2 reported that Witzke expected to cross to the American side the next morning to do some banking business, Butcher set the trap.

On 1 February 1918, Witzke stepped over the border into the United States and into the muzzles of revolvers of Special Agent Butcher and Captain Lipscomb. He was handcuffed, bundled into an auto and taken to camp and searched. Approximately $1,000 in American currency and Mexican gold was found on him as was a "Selective Draft" registration card issued at San Francisco 9 June 1917; an "Able Seaman" certificate issued in San Francisco 27 June 1917 to Pablo Waberski; a motor car operator's license issued at San Francisco to Paul Waberski on 17 October 1917. A memorandum book showed travel expenses; the names of several girls in towns along the way; and an amorous letter addressed to one of his conquests in Berkely, California. Witzke's U.S. alien Head tax receipt, which Altendorf had seen on route, was not found on him. This had shown Witzke's destination (when he arrived at Laredo, Texas, on 5 June 1917) as Portland, Oregon, the forest fire area.

The most important find on him was a second passport -- Mexican passport #396 issued at Laredo, Texas, on 15 November 1917. This was in the name of Pablo Waberski, Russian, age 22, en route to Mexico. He was described as a bachelor but "accompanied by his wife," an entry representing either Mexican inefficiency or sense of humor.

The biggest find was still to come. That afternoon, Captain Lipscomb and Agent Butcher crossed the border into Nogales, Sonora, and with a little bluffing and "greasing of palms" managed to take possession of Witzke's baggage in which was found a letter in code and a cipher table of words and phrases for sending telegrams. But unfortunately the cipher did not apply to the letter code and the coded letter was sent to the Military Intelligence Division.

Meanwhile, the negro British informant discovered that Witzke and Altendorf had mysteriously disappeared and after a couple of days in desperation he got in touch with the American Consul at Nogales, Sonora, and was put in touch with Special Agent Butcher. His story confirmed all of Altendorf's reports and, in addition, explained presumably the terrible things that Witzke said were going to happen. They were to meet delegates of the International Workers of the World from New Mexico, Arizona, and California and make plans whereby "Hell would break loose in the United States" sometime in April or May with strikes and blowing up of mines, factories, railroads, bridges, telegraph and telephone systems.*

* Landau p. 122.

The British informant said that the six other German agents who had accompanied Witzke to the border had left in the direction of Naco with the intention of crossing into the United States at some point on the Arizona line. Since all track of them was lost, it is quite possible that with the disappearance of Witzke they abandoned their plans. One thing is certain -- none of the planned sabotage occurred. This was an excellent example of the fact that the apprehension of one espionage agent usually neutralizes several others -- in this case, at least six others.

Witzke was imprisoned at Fort Sam Houston, Texas. In the several months before his trial he was repeatedly interrogated by MID under the direction of Major Robert L. Barnes but even the knowledge that his coded letter had been decoded and that he was positively identified as a German agent did not shake him, and he would not talk. He once remarked, "You know all the details all right and I think that it was Dr. Altendorf who told you, as I told him a lot of things in conversation." *

Many years after the war was over, General Van Deman became acquainted with the pre-war German assistant Military Attache to the United States, who by that time was an American citizen and whose son had become a reserve lieutenant in the United States Army. This ex-German official confirmed the suspicious that had existed that Germany was planning an uprising in the United States, to be handled through German agents and organizations in the United States. It was this suspicion which led to the search for hidden arms which disappeared into the mid-West as previously mentioned. ** Witzke's drunken boasts to Altendorf that "something terrible is going to happen" had a strong basis in fact.

When, on 16 August 1918, Lothar Witzke was tried before a Military Commission, the surprise witness was Captain John M. Manley of the Cryptographic Bureau of MID. Captain Manley described how he solved the transposition cipher which was written in German and then the letters mixed up by a prearranged diagram, and then read the decoded message:

"15-1-18. To the Imperial Consular Authorities in the Republic of Mexico. Strictly Secret! The bearer of this is a subject of the Empire who travels as a Russian under the name of Pablo Waberski. He is a German secret agent. Please furnish him on request protection and assistance, also advance him on demand up to one thousand pesos Mexican gold and send his code telegrams to this Embassy as official Consular dispatches." ***

---

* Landau p. 123.

** Van Deman, Vol. II, p. 2.

*** Ibid., p. 125.

Witzke was the only defense witness. He was prepared with the trained espionage technique of the story-within-a-story, stating that he was born in Russia but had lived in the United States as a child, and then went to sea. He had become a member of a Mexican bandit group, fled to San Francisco where he had registered for the draft and then on being robbed returned to Mexico. He said he had refused efforts to work for German agents, but had gone to Sonora to spy on Mexican rebels there and had been given the coded letter and a code as part of the work. En route North he had decided to go to San Francisco as he did not want to be posted as a deserter. Also en route he had met Altendorf who was down and out and as a result Altendorf and a hotel man with whom he had left $2,000 in gold in Mexico City had had him framed.

The Commission sentenced Witzke to be hanged and he was returned to his cell at Fort Sam Houston waiting its review. Twice he attempted escape and once got out but was caught the same day emerging from a Mexican shack. Upon return, a razor blade was found in his cell, and, since suicide was feared, his top clothes were removed. On 2 November 1918 his sentence was approved by the Department Commander. On 27 May 1920, President Wilson commuted it to life and Witzke went to Leavenworth Prison. Meanwhile German officials were exerting every possible pressure to have him released. On 30 April 1923, the German Ambassador asked for his release on the grounds that other countries, including Germany, had since released all their prisoners of war including those sentenced for espionage. At the same time a prison report showed Witzke had performed an act of heroism and had prevented a disaster by entering a prison boiler room after an explosion. * On the basis of the above, Witzke was released on 26 September 1923. Back in Germany, Naval Lieutenant Witzke was decorated with the Iron Cross, First and Second Class. Six years later, when Investigators for Mixed Claims Commission on the Black Tom and Kingsland explosions, interviewed Witzke, he firmly told them that he fully believed in the code of honor of the German Army and Naval officers of the old regime and intended to stick by it. He spoke in the greatest contempt of those witnesses who, as he termed it, had "squealed" on Germany. His only regret was that once when he had had Altendorf at the point of a pistol he had not pulled the trigger. **

Thus, although a dangerous German agent could never be made to confess, the Intelligence Police neutralized his activities for nearly half of World War I and prevented the accomplishment of a major sabotage mission, all by crossing a border and carrying on counterespionage activities in a neutral country. The importance of this is further emphasized by the fact that the transmission route of German Intelligence was through "neutral" Spain to "neutral" Mexico to agents working in the United States.

THE INCEPTION OF THE COUNTER INTELLIGENCE CORPS

WORLD WAR I, 1917-1918

IV. Problems and Lessons of World War I

0483

IV. PROBLEMS AND LESSONS OF WORLD WAR I

CIP MID Organization

In World War I there was no separate Counter Intelligence Corps Center or its equivalent. There was no one Counterintelligence branch of the Military Intelligence Division, and policy, planning and processing of Corps of Intelligence Police activities in the field were handled by two major sections of the Negative Branch of the Military Intelligence Division and their assorted subsections.

Intelligence Officers working on counterintelligence activities were frequently referred to as "counter espionage officers", * although no such title was officially authorized. For work in the Office, Chief, Military Intelligence Branch, Executive Division, General Staff during World War I, a request stated, "Sergeants of the Corps of Intelligence Police are considered most desirable. . . ." ** CIP agents were assigned to numerous branches, sections and subsections where CIP work from the field was processed. There were 34 CIP agents in one section; two dozen in another.

During World War I, a number of activities which later came to be considered part of the Counter Intelligence Corps mission were performed by other organizations, such as the civilian plant protection service, although both CIP and investigators of the Plant Protection Service apparently worked interchangeably on occasion.* ** Consequently, to understand the development of the Counter Intelligence Corps it is necessary to trace the history of many of its functions through the "M.I." organization of World War I under other names or under the jurisdiction of personnel of other units where CIP administration and operations were intermingled.

M.I.3 (Counter Espionage in the Military Service) had a phenomenal growth from 3 officers to 279 persons, including 69 officers, 12 "volunteers", 18 civilian agents, 34 Intelligence Police and 146 clerks. For Colonel K.C. Masteller, M.I.3 was the "key" element of his Negative Branch. In the M.I.3 section, three subsections were of particular interest to CIP agents because of their direct dealings with the field. They were M.I.3A (Executive)*** M.I.3B (Line Troops) and M.I.3H (Investigation of Personnel). In the M.I.4 section, CIP agents were concerned with the M.I.4B (Geographical Departments), M.I.4E (Propaganda), and M.I.4F (Foreign Countries). M.I.4 may have had two other subsections of particular interest to CIP. These were M.I.4D and M.I.4K which, if ever organized, were so "hush-hush" that research of several historians has failed to reveal any record of them.* ****

***** Ibid., VIII-30, 34.

M.I.3A (Executive) subsection was established in March 1918 and prepared the official instructional material concerning counterespionage for use by Intelligence Officers (I.O.'s) in the field. Eleven manuals were published, progressing from a few simple procedures issued in July 1917 to the "Instructions and Maintenance of the Counter Espionage Service Within Military Units" which was issued as of August 1918 but by the time the manual was distributed to the field it was too late for any value in the war. Recognition of specialized problems was shown by the issuance in October 1918 of "Supplementary Instructions for Air Flying Fields." The importance of proper orientation and guidance was shown by the publication in November 1918 of "Notes On the German Spy System in Europe." By the time it reached the CIP agents in Europe, the system had collapsed.*

Of the three periodicals published by this subsection, the important one as far as the CIP was concerned was the "Weekly Bulletin for I.O.'s" with an over-all classification of "Secret" and much of the information intended for the eyes of the I.O. only.**

M.I.3A also supervised special operations not sufficiently developed to require activating a special subsection. These operations included cases of food sabotage, propagandists working as chaplains, lecturers, conscientious objectors, negro subversion and antisabotage measures for army construction projects.***

M.I.3B (Line Troops), which was formed in March 1918, became the largest element of M.I.3, and collected and disseminated counterintelligence information to all the field, operating as a "case control" office for investigations of suspects and taking action on suspects returned from overseas because of possible disloyalty. Actions consisted of continuing surveillance, internment, courtmartial, or early discharge except for regular Army officers who were to be assigned to "posts where their opportunities for mischief might be reduced to a minimum." This subsection processed approximately 10,000 cases during the war.****

M.I.3H (Investigation of Personnel), which was formed in May 1918 for checking the loyalty of applicants for Army commissions, increased in scope until it included "key" enlisted and civilian employees of the War Department. This subsection directed the first of the counterintelligence participation in Immigration and Naturalization investigations after Congress authorized "naturalization of all aliens, including enemy aliens, in the military service provided they could produce satisfactory evidence of loyalty." The six officers, two "volunteers", and

---

* History MID, VIII-8, 9.

*** Ibid., VIII-7.
**** Ibid., VIII-11.

twenty-three (23) clerks processed nearly 10,000 personnel security investigations and some 4,000 naturalization cases by the end of the war. Essentially, this was a "case control" office sending out leads for CIP agents in Field Offices to investigate. *

M.I.4A (Executive) was concerned with policy and the selection of personnel. Major Ernest Parsons, his executive officer, Major Henry T. Hunt, and a small group of officers with him were pioneers in civilian counterintelligence work and, consequently, had the additional duty of liaison for the section. **

One important step in the control of Corps of Intelligence Police was achieved for this section on 14 August 1918 when Major General Frank McIntyre, Executive Assistant to the Chief of Staff, signed a Memorandum for the Adjutant General as follows:

"1. The Secretary of War directs that the Commanding Generals of All Territorial Departments be informed that transfers to or from the Corps of Intelligence Police will be made only when authorized by the Adjutant General of the Army."

"2. The Secretary of War further directs that the Adjutant General of the Army authorize such transfers only upon recommendation of the Chief, Military Intelligence Branch, Executive Division, General Staff." ***

M.I.4B (Geographic Departments) which was the civilian counterpart of M.I.3B served as a case control "in all matters of civilian counterespionage dealing with the field through the six geographical departments, with twelve (12) officers directing the flow of reports from Intelligence Officers in the field and coordinating them with reports from nine other government investigative and record agencies and with information from volunteer individuals and organizations. This subsection was not only the largest in personnel assigned but was the primary element of the section.****

This subsection introduced the modern CIC "case" officer who specialized in counterintelligence activities both in areas and by categories. The six departments were consolidated into five groups as follows:

Eastern and Northeastern Departments -- Foreign racial groups and enemy aliens.

Southeastern Department -- Negro subversion and political demagoguery.

---

* History MID, VIII-17, 18.
** Ibid, VIII-28.
*** CIP Records, Documents, 115-118.
**** History MID, VIII-28, 29.

Central Department -- Pro-Germanism and various radical organizations.

Southern Department -- Border Control and the Mexican racial problems.

Western Department -- Labor unrest (I.W.W.) and Hindu and Japanese racial problems. *

M.I.4E (Propaganda) processed what came to be called in World War II, "Political Intelligence" and was called in the Occupation Era in Europe "Counter Subversion". This subsection, which was headed by Major J.E.Spingarn, compiled reports on patriotic societies used as "fronts", German-American and other potentially subversive racial groups, Luthern Church propaganda, the International Workers of the World, and Russian Bolshevism. **

M.I.4F (Foreign Countries) was intended to supervise counterintelligence activities conducted in foreign countries. This authority had been repeatedly requested during World War I by Intelligence Officers of the American Expeditionary Forces in France. Their requests were unheeded, however, and the Military Attaches had complete jurisdiction over all intelligence activities in the neutral countries exclusively to themselves, and this subsection, which consisted of three officers, fifteen specialized civilians, and fourteen clerical personnel was confined to securing what information it could from existing sources, and processing it for use by other government agencies to assist in "preventing undesirable individuals from entering the United States." ***

Civilian Agents and Informants

For the most part during World War I, plant protection was a civilian responsibility which originated in July 1917 when the Signal Corps received a large appropriation to speed up American aircraft production. At the suggestion of the Chief Signal Officer, a plant protection service was organized among the civilian employees in various factories with Edmund Leigh in charge. Mr. Leigh divided the United States into fifteen territorial districts for convenient grouping of the 5,000 plants engaged in war production. In addition some 30,000 other plants were circularized to encourage security measures. By 1 July 1918, the Plant Protection Service was so large its supervision was incorporated into MID as a special section. ****

By August 1918, Military Intelligence Plant Protection had fifteen district agents and five resident agents, and in addition had special investigative units at New York, Philadelphia, Buffalo, Boston, Detroit, Los Angeles, Fort Worth and Portland, Oregon, and a total operative force of three-hundred-seventy-two (372) persons. This was

* History MID, VIII-29.
** Ibid., VIII-30.
*** Ibid., Ch. VIII, p. 31.
**** Ibid., VIII-63.

CONFIDENTIAL

a truly undercover intelligence organization with secret agents in every plant quite apart from the security guards who were furnished by the plants themselves. *

Another big civilian problem concerned the auxiliary organizations of the Army including the Red Cross, the YMCA and half a dozen smaller organizations, with tens of thousands of members which, without adequate security protection, provided an exceptional opportunity for infiltrating enemy agents into army activities. Both the Red Cross and the YMCA established special bureaus to investigate their own personnel but by May 1918, M.I.3I of MID was organized to handle these investigations -- both complaint cases and loyalty investigations, of all such personnel of this category going overseas except Army nurses. **

During World War I, the embryonic counterintelligence service had the assistance of a number of well organized informant networks. Those in the industrial plants and auxiliary services have already been mentioned. The initial intelligence organization had provided for a system among the military, and for other civilians there was the American Protective League -- the APL. This was a voluntary association of patriotic citizens acting through local branches established in cities and counties all over the country. It was formed on 22 March 1917 and designated an auxiliary of the Bureau of Investigation of the Department of Justice, which later became the FBI. Actually, the APL worked closely with Army Counterintelligence and in November 1917, the headquarters was moved to Washington. Charles Daniel Frey, who with its founder, Mr. A.M. Briggs, served as one of its national directors, was commissioned a Captain and handled liaison between the League and the Division. The League was officially dissolved 1 February 1919. ***

In the official "C.E. Instructions" for the military counterespionage service issued on 31 August 1918, Intelligence Officers were told that the American Protective League was ". . . a body made up of three hundred thousand citizens covering every locality in the United States who have volunteered to make local investigations for Military Intelligence. Intelligence Officers will do well to get in touch through D.J. (Department of Justice) with the local representative of the League, if such there be, and make use of his organization in cooperation with D.J. for local investigations not requiring finesse." ****

** History MID, VIII-19.

*** Ibid., VIII-24, 27.

**** Confidential Instructions for the Organization and Maintenance of the Counter Espionage Service Within Military Units, War Department, August 31, 1918. (M.I.D. 9104-92) p-35. (Van Deman Vol. 1, p-51 states that the League only had 65,000 members.)

Overseas, counterintelligence officers were expected to be familiar at all times with the general attitudes, sympathies and antipathies of the civilian population, of propaganda by enemy agents and agencies, and the relations between the American Expeditionary Forces and the French population and of the position of the civilian population towards Bolshevism and radical socialism which might be a source of danger to the ultimate success of the Allies.* A good civilian informant net was needed for this work. However, up to the last few months before the Armistice, the Intelligence Service of SOS lacked a sufficient number of informants to work among the civilian population. In the military ranks a volunteer system was organized and provided a number of leads. Paid informants, called in World War I "civilian agents", were needed for civilian areas, although Colonel Ward stated that the need "was not clearly recognized by the central office until April 1918". Even then Colonel Ward did not believe it was safe or wise to embark green personnel too extensively on a wide spread system of such "agents". It was only a month before the Armistice that Colonel Ward felt local Intelligence Officers had "enough preliminary and control work thoroughly established as to direct them to go extensively into the agent phase. Therefore the relatively small numbers of local civilian agents carried by each field office was not so much due to a failure to realize their value in a well developed system as to the necessity of the local Intelligence Officers devoting their efforts during the early months to establishing and maintaining the primary controls and beginning to cover the entire field entrusted to them."**

These informants would have contributed to the ability of the CIP to provide espionage agents. Colonel Ward summarized it as follows: "G2, SOS, covering a large area and central points, was naturally coming in contact with all kinds of agents and potential agents from day to day. This included constantly meeting agents of the Allied Services. We had, therefore, a much more extensive field to draw from in the matter of finding that 'rare bird', a good spy agent, than was the case with G.H.Q., which was far removed from centers where such agents could be picked up and equally far removed from the sources from which they could be investigated and checked up before being finally chosen for their difficult missions. Even after choosing, a closer contact would be most beneficial since a study of German methods in France, contact with counterespionage officers of G2, SOS, and their methods of dealing with their agents would have been most helpful in many cases for the training of spies. Counterespionage brings one in touch with a large number of persons....Very frequently a suspect of an important character, who has been decided to be a spy, can be handled with great success by telling him he is liable to be shot, but if he will do this or that, his life may be spared and a lighter sentence imposed after he has performed what he agrees to do.

---

* History G2, SOS, p. 115

** Ibid., p. 118

This method has been used by some of the Intelligence Services of our Allies with great effect, but it can only be used to full advantage where there is little or no distinction and no 'air-tight compartment' theory in practice as regards espionage and counterespionage." *

The espionage service should be so closely coordinated with the counterintelligence service that while the actual agents of one service frequently should be quite unknown to those of another, these espionage agents ". . . will be assumed to discover much about what the enemy are attempting to find out concerning our own activities. This information should in many cases be the starting point for the so-called negative purposes of counterespionage agents. . . ." **

Crime and CIP Missions

Civilian informants inevitably reported many criminal offenses as well as purely intelligence matters. In "C.E. Principles", which was published in May 1918, and which the War Department said, taken with "C.E. Instructions", "constituted a working library for the Negative Intelligence Officer", the relationship of counter-espionage work to military offenses and civil crimes is clearly defined. The Instructions stated that offenses and crimes "are of interest to Intelligence Officers only when possibly connected with enemy activity . . . avoid the dissipation of energy in following cases of vice, liquor selling, fraud, draft evasion and desertion unless these are traceable to enemy activity. Important police information often is obtained by the C.E. service as an incident of its investigations. This will be promptly communicated to the proper authorities as a reciprocal courtesy for the assistance constantly afforded to Intelligence Officers by police and provost officers. But this practice must not lead to extended operations which usurp the functions of provost authorities and interfere with the proper performance of strictly Intelligence duty. The fact that the C.E. Service functions secretly, and the further fact of its close cooperation with D.J., which is interested in criminal cases as well as cases of counter espionage, has tended to confuse the issue in some minds and therefore it must be emphasized that the Military Intelligence Service is not a police force. The tendency to refer to the Intelligence Service matters which should be handled by the Military Police or other office of equivalent duty, is contrary to the best interests of the service." ***

These instructions while clear in theory were otherwise in practice. In wartime there is a presumption of sabotage in nearly any crime that affects the Army as, for example, the cocaine selling to aviators, or the theft of such huge quantities of army

* History G2, SOS, p. 126, 7.
** Ibid., p. 139
*** Principles of Counter Espionage Organization and Control Within the Military Establishment, War Department, May 1918 (M. I. B., ED 9104-92 M. I. 3) P-5.

supplies that operations are handicapped. Crime has been frequently used as a "cover" for espionage and sabotage and to finance enemy agents. To avoid conflicts between MP's and CIP's at working levels, a directive establishing primary jurisdictions was needed. To many a conscientious Military Police Investigator there seemed to be no logic in the sudden surges of interest of the CIP agents in what appeared to be purely criminal affairs.

Further, Military Intelligence seemed unable to stay out of criminal investigations. While the "C. E. Principles" was being written in the Spring of 1918, CIP agents in France were called upon time and again to assist in criminal work and this continued right up to the end of their stay in Europe. In the first three months of 1919, the CIP agents at Le Havre rounded up a gang that was said to be stealing supplies valued at about $50,000 a month between wharves and railroad terminal warehouses a mile away. From this experience, Colonel Watkins, who was there, said he was convinced that "criminal investigation and intelligence work can never be mixed." * Colonel Ward in his critique stated, "Particularly during the early months of the service we were called upon, in fact all too frequently, to help the A.M.P. in running down crimes by the Americans committed upon the civil population, in investigating drinking places and low-class hotels." **

The Military Intelligence Division in the United States assigned an officer in the Spring of 1918 to the Quartermaster Corps to form a Graft and Fraud investigative unit, but after three months the officer reported that a unit could not be formed because of a lack of Quartermaster funds and a lack of available qualified personnel. At this point, the director of Military Intelligence, the Chief, War Plans Division, the Inspector General, and the Adjutant General all concurred on having M.I.D. operate such a unit, and on 6 August 1918, Section M.I.3 had "Graft and Fraud" investigations as an added responsibility. This soon grew to a separate section (M.I.13) as of 23 September. ***

Colonel Bidwell in his historical summary states, "The excuse presented in support of this unprecedented functional expansion was to the effect that the departmental military intelligence agency at that particular time happened to be the only staff organization having the personnel and funds required for their successful conduct." **** This was only the first of a number of instances in the three decades following in which Counter Intelligence Corps personnel were recognized as highly capable fact-finders and consequently were diverted to non-counterintelligence

**** Ibid., X-14

tasks. Unfortunately, there were few situations in which, until proven otherwise, some remote connection between crime and counterintelligence did not exist. Captain-Lieutenant Franz von Rintelen, Germany's principal American saboteur director had left for the United States after boasting, "I'll buy up what I can and blow up what I can't".* So it was obvious that any fraud in American supplies assisted the German sabotage plans and could have presumably been encouraged by the Kaiser's agents.

There seems to have been even some justification for investigating graft. Colonel Van Deman has related how, before the German Ambassador and his entourage were put out of the United States at the beginning of World War I, informant was able to extract a few cards of a German file on American Army officers. These cards contained a fairly full personal and military history of the officers and a brief history of the married officers' wives and families. The informant could only "borrow" a dozen or so cards at a time, but he assured the Colonel that there were many more which covered at least all the officers of the grades of captain and above who were in the regular Army of the United States at that time. Included on each card was a notation by the reporting agent on whether he believed the officer could be bribed.**

The bulk of the Graft and Fraud cases were handled out of the District of Columbia field office. From 1 August 1918 until June 1919, this section, which from the record must have started five days before it was authorized, handled 1,128 graft and fraud cases which resulted in 617 arrests and 206 convictions. It recovered material or arranged for restitution for nearly half a million dollars worth of property.***

Operational Problems

Securing trained personnel was an operational problem throughout the war. Seven months elapsed before a two week divisional I.O.'s course was started at the War College. In December, the AEF cabled, "Trained Intelligence officers are an absolute necessity for each organized Division and Corps. Opportunity for technical instruction of these officers does not exist in the United States. Recommend that intelligence officers of each organized division be sent here to learn duties and await arrival of his division." So I.O.'s were dispatched three months in advance. The special training consisted of a brief visit to the front and attendance at the AEF General Staff College at Langres, France. This system deprived the divisions of their I.O.s just

---

** Van Deman, Vol. II, p. 4.

*** History of the MID, Chapter VIII-58.

at the time when they should have been occupied in developing their own intelligence sections and becoming efficient members of a divisional general staff team. To straighten out this adverse situation, Colonel F.L.Dengler was returned from France in June 1918 to establish a training section (M.I.9) and act as a general liaison officer between MID and G-2, AEF.*

This brought to a head the conflict between the War Plans Division and the Military Intelligence Division on training jurisdiction. Brigadier General Lytle Brown informed MID that it could act only in an advisory capacity, and on 13 August 1918, Colonel Dengler was attached to the Training Branch, War Plans Division so that MID could be kept informed.** However, Colonel Dengler continued to direct MI 9 which had been organized on 29 July 1918 to handle "Field Intelligence" which was part of the Positive Branch and actually combat intelligence. Colonel Dengler's first act had been to tour the eleven divisional training camps in operation in the United States and this, too, became part of the conflict with War Plans as General Brown claimed that it was his responsibility not only to train but also to inspect and to see it was properly done. This conflict continued throughout the war.***

Enlisted men interviewing officers was another operational problem. Gilbert Elliot, one of the original CIP agents, wrote, "men found it very difficult sometimes to do the work they were required to do properly with the rank of a sergeant. They were often forced to question officers of as high rank as that of colonel about various matters and were very often dealt with very shortly and unable to get the information they required. This led to the custom of interviewing all officers whatever in civilian attire which seemed to inspire a certain amount of politeness and awe. The matter was, however, a big hinderance to the very end.****

Operating in and out of civilian clothing created security problems. "Lieutenant Colonel Ward might well order that it must not be generally known among our officers and men that we are conducting a counter-espionage service but how could this be prevented if, in order to collect our pay, draw our clothing, travel, investigate etc., we were constantly obliged to reveal our identity to Quartermaster, R.T.O. men etc....on arrival they were usually greeted by R.T.O. men with 'What outfit you in buddy, Secret Service?'"*****

---

* History MID, V-36.
** Ibid., VI-38.
*** Ibid., VII-56.
**** Elliott, p. 6.
***** Elliott, p. 7.

In his memoirs, Colonel Watkins wrote, "One thing was abundantly clear from the Le Havre experience and that is that for purposes of concealment of identity an agent cannot be in uniform one day and mufti the next, at least in the same community, neither can men in uniform and mufti eat and live in the same place and remain incognito...."*

The need for civilian clothing created an initial problem. The original CIP group was refused a suggestion that it should bring civilian clothing to Europe. When the British refused to train American agents in uniform, weeks went by while men were securing permission to buy them. ** Finally, an allowance of $40 and a $5 monthly maintenance was obtained, but even this was inadequate at French wartime prices and Elliott reports, "Men who could not augment the allowance soon took on the appearance of tramps, cheerfully of course, for the sake of their country. ***

Colonel Cabot Ward who was G-2, SOS, AEF, in his postwar critique states it not so cheerfully, "The clothing allowance of Frs. 250.00 at the outset and Frs. 28.50 per month for repairs was likewise found to be in the long run grossly inadequate. The initial allowance of Frs. 250.00 was generally sufficient to purchase the required clothes but the monthly sum was necessarily consumed in laundry expenses and repairs. At the end of six months the I.P., therefore, found himself badly in need of additional clothes especially if the type of work to which he was assigned and was fitted to carry out required him to mingle with well-dressed people. Winter came on and there was no money to buy overcoats. This latter difficulty was finally overcome but only after interminable dealings with the Chief Quartermaster which resulted in such a delay that many of the men were actually suffering from cold and inadequately equipped for the performance of their special duties or were compelled to buy overcoats out of their own money...." **** The same held true for agents in the United States who were authorized up to $8.00 a month for clothing maintenance, but lacked sufficient initial allowance. *****

This was not the only financial burden of the CIP agent, who as a Sergeant had a base pay of $38 a month. With allowances the agent got about $100 a month. Allowances in the United States in July 1918 were $15 quarters; $38.75 rations; and $4.72 light and heat. ****** However, agents stationed in Paris and other large French cities found that the overseas commutation

** Elliott, p. 5.
*** Ibid. p. 5.
**** History, G-2, SOS, p. 104.
***** CIP Records: Circular, "Corps of Intelligence Police, August 17, 1918 By order of Colonel Churchill Documents 115-118."
****** Ibid.

of quarters allowance of Frs. 75.00 per month even with the small addition for light and heat was not adequate. Wartime prices soon made the special allowance of $2.00 a day (Frs. 12.00) highly inadequate "unless the I.P. made weekly boarding arrangements which confined him to a single eating place and even then it was practically impossible to feed himself upon this allowance." "An I.P., however," Colonel Ward continued, "should not be confined to a single eating place but should have sufficient money to be able to eat in any place where it seems likely he will pick up information of value. Furthermore, if he is compelled to eat at the same place continually he tends to become known and his identity is thus more easily disclosed."*

Transportation was another problem that beset the CIP. Because of the war, traveling by French railways was a matter of exasperating slowness and delay, and often 24 hours would be required for a trip that was only a few hours by automobile. "Increasing difficulties were experienced in obtaining the necessary automobile transportation notwithstanding the fact that local Intelligence Officers had such large areas to cover...It was equally difficult to obtain bicycles for the use of the I.P.s who frequently had to go to nearby towns and villages not served by any railway or who for want of any transportation had to spend many hours every week walking to and from remote parts of large camps when their time might have been otherwise far more profitably employed. Intelligence funds could not be used for the purchase of civilian bicycles as these were theoretically supposed to be furnished on demand by the Q.M.C. The result was that the I.P. went without a bicycle or purchased one out of his own pocket or if he did get an army bicycle it revealed to every casual observer the fact that he had some connection with the army because he was riding one of the peculiarly shaped and painted bicycles which the Q.M.C. saw fit to provide..."**

Officers were not given the enlisted men's freedom in wearing civilian clothes. It was not until June 1918 that they were even permitted to wear mufti.*** Colonel Ward wrote, "In the British and French Intelligence Services, Intelligence officers wore civilian clothes freely in the exercise of their own judgment as the circumstances required. In the American Intelligence Service in the AEF, however, Officers were permitted to wear civilian clothes only in cases of absolute necessity and were then submitted to the requirement that they must report monthly on every occasion upon which they wore civilian clothing stating the case upon which they were working and why such a necessity was considered to have arisen. It should be realized that plain clothes are valuable not merely for working upon a case already inauguarated but even more so as a means of

---

* History, G-2, SOS, p. 103.
** Ibid., p. 120.
*** Ibid., Exhibit 69.

mingling freely with the civilian population and with the real military status of the wearer thus concealed, acquiring information and overhearing conversations which could never be done if the officer must always appear in uniform.." *

While passes were provided all officers and men, Colonel Ward said experience showed they were deficient in that on many occasions CIP agents were not allowed to interrogate officers and frequently the passes were not recognized as authority to travel without specific orders. Colonel Ward recommended that in the future such authority should be specifically stated on the Intelligence pass. **

Private telegraph codes, exclusively for Counterintelligence proved "exceedingly valuable." Instead of having to refer analytical investigations to outside photographic and chemical laboratories, Colonel Ward recommended that G2 have its own in the future and make early plans since "they could not be installed overnight". ***

In Europe, Intelligence Officers were not actually staff officers under the Instructions issued to the Commanding General of the SOS for setting up his G2. The order stated, "These officers are to be regarded as Staff Officers of the Commanding Officer of the Base to which assigned.. You will issue instructions to have a touring car assigned to the Chief of the Intelligence Section...and to have a light car placed at the disposal of Intelligence Officers in ports or interior bases..." ****

One G2, SOS problem Colonel Ward said was to find out what happened to a suspect after the case report had been sent forward for action. However, at G2 AEF, GHQ Sigaud wrote after the War that he had personally handled practically all the suspects referred to G2, AEF by G2 SOS and had always informed G2 SOS "as soon as we had any data to give them." On the other hand, Sigaud said he recalled that an appreciable portion of his time was spent writing G2, SOS for progress reports on cases assigned by G2,AEF. *****

While many American commanders knew little about the Corps of Intelligence Police, its numerous military requirements, particularly those that necessitated going in and out of uniform, made it relatively easy for an enemy agent to identify any CIP agent. The importance of continuity was recognized by Intelligence executives, and efforts were made to keep agents working in the

---

same areas as long as possible; yet all agreed that no agent could keep his military status a secret in one area for any length of time. And when the agent was moved to another area it was a mathematical certainty that sooner or later some one from the former area would arrive and recognize him and reveal his identity to unfriendly persons.

Lack of Rank in CIP

Lack of rank was a general handicap to officers. The great number of local intelligence officers were First and Second Lieutenants. "Every British intelligence post of any importance was in charge of a Captain, a member of the General Staff... The corresponding French officers in charge of Military Intelligence activities or important controls were always a Major or a Captain. The G-2 Staff head of an American combat or SOS division was in every case a Major or Lieutenant Colonel of the General Staff. Our Intelligence Officer, therefore, found himself outranked on every side. As his dealings within AEF were for the most part with general officers or those nearly always of the rank of colonel, he found himself at a marked disadvantage and under a very serious handicap." *

Second Lieutenant Howard Robertson wrote Colonel Ward that at Tours the British had a Colonel and at Nantes, a Captain. The French, he said, consider the chief of a service as outranking in protocol officers of higher rank but subordinate positions. Thus on one occasion, Robertson found himself seated next to the Chief of Staff (a Colonel) at a dinner attended by many other officers who outranked him. On another occasion, he had to decline an invitation for a dinner because it was for Captains and above and he was invited only because of his position. If he had done otherwise, there might have arisen jealousies which would have handicapped his work. **

Colonel Ward recommended that "in the future the Intelligence Officers should be given adequate rank at the outset or that promotions be readily accorded as recommendations are made." Colonel Ward also pointed out the problem of utilization of ability when a junior officer was much better fitted for a postion but an officer senior to him was in the same detail. In such cases, he said, "The British system of giving officers, with special duties of importance requiring rank, an acting rank sufficient for the purpose would have been extremely useful..." ***

0497

Most serious was the lack of promotions that would have provided some of the needed rank. Up to late in 1918, promotions in the Corps were extremely few, and morale suffered accordingly since members of the CIP felt that their services, even though highly meritorious, were going unrecognized. They saw their fellows in the line being promoted for no longer or better service and naturally considered themselves out of luck. Comment on this condition was made by several of the Department and Special Intelligence Officers who were not backward in calling attention to the excellent work of their agents and recommending them for commissions. *

Agent Elliott has written, "Another difficulty which arose almost immediately was the question of promotions. The British had Sergeant-Majors of Intelligence Police and occasionally these men were commissioned. Our men naturally expected similar treatment, but as the months rolled by and all new posts continued to be filled by green men either transferred from some other branch of the service or more frequently commissioned directly from civil life in France, to whom veterans of many months service were ordered to report and teach them their duties, a very sullen spirit developed which naturally was not in the best interests of the service. When it later appeared that for some occult reasons there were to be no sergeant-majors either, matters only became worse and a flood of applications for transfer began to flow in, all of which were refused." **

When the CIP was inaugurated, an enlisted man was taken in with the rank of Sergeant--a rank he had not fairly won and one to which he might never be entitled from the quality of service he rendered. This was quickly cured by creating a probationary period of six weeks with the rank of 1st Class Private and only awarding the sergeancy if the man passed his probation. ***

But promotion above sergeancy was considered impossible because the order that created the Corps only authorized the rank and pay of sergeants. Colonel Ward states, "This was both unfair to the man and unfair to the service. Every man, no matter how high an ideal of duty and service he may entertain, looks forward in varying degree to the possibility of obtaining recognition of faithful and useful service by promotion and the fact that no promotions were possible in the CIP inevitably tended to affect adversely the work of many I.P.'s. The best and worst

** Elliott, p. 6.

*** History, G-2, SOS, p. 100.

held the same grade. For administrative purposes men were informally appointed acting sergeant-majors but this was all that could be done. All grades of non-commissioned officers should be provided in the future from 1st Class Private to Regimental Sergeant Major and the number of higher grades in the CIP should not be too strictly limited as many I.P.'s are often called upon to perform work which is quite as important as that done by the average First and Second Lieutenant in numerous other branches of the Army. The number of commissions granted to the I.P.'s in the intelligence service is felt strongly to have been wholly disproportionate to the value of the services rendered by many of them and to the needs of the service. Much more valuable work could often be done by a man who had been through a period of successful training and work in the field as an I.P. and promoted to a Lieutenancy than by getting in a Lieutenant or Captain from some other organization who had no such practical experience." *

Similarly the CIP's in the United States felt this discrimination. The Intelligence Officer of the Western Department in writing the history of his office stated, "The sergeants, CIP, have for the most part been men of unusual ability, who in the line would have been commissioned but only three commissions were given to these sergeants in this department. I believe the latter was partly owing to the rule requiring six months service before commissioning which unquestionably worked an injustice and partly to difficulty in getting papers through Washington. There is a widespread feeling in this department and a similar feeling is found among officers in Intelligence work in the field that a detail to Intelligence work is a serious obstacle in the way of recognition and advancement. It is believed that in another emergency more careful attention will need be given to the personal interests of men in Intelligence Service." **

This lack of consideration is difficult to understand in view of the strict standards of character, devotion to duty and high intelligence required of intelligence personnel, and the dangers of disaffection in work about which no less an authority than Colonel Wilhelm Nicolai, chief of the German Army Intelligence Service in World War I, stated, "in the secret service there are serious dangers for anyone who comes into contact with it. They lie in the uncontrollable nature of the work and the information received and also the temptation which money offers." ***

Command Problems

Unfortunate decisions at many command levels mark the history of the Counter Intelligence Service. All army organizations realize that adverse command decisions are an inevitable part of military endeavor but, in the case of counterintelligence, there are a number of reasons why it is more likely to incur an above average number of adverse decisions.

First and foremost is the inherent dislike of Americans for any type of "police" organization, and this feeling was strong among military officers in World War I.* This feeling was easily rationalized by the opinion that security threats in the Army were being exaggerated and that no serious need for a counterintelligence service existed. Because of the secrecy of the Service, there was little outward evidence of accomplishment and no means of proving how many enemy agents or potential subversives had been neutralized by security controls or frightened away because of investigating activities before they were detected. Instead, to many, CIP appeared to be "empire" building.

Secondly, ignorance was an important factor. For nearly a decade before the war, there had been no intelligence service. There had been no staff studies; no planning and no training. Neither regular army officers nor reserve officers had had any opportunity of learning why a counterintelligence organization was necessary or what its mission should be.

After World War I started there was no time to learn. An intelligence unit was only one of several services which commanders were told they needed and since it was intangible it seemed far less important than personnel, training and logistics problems. Intelligence officers were too busy attempting to organize and operate at the same time to be able to devote any sizeable amount of time to orientation of commanders and staff officers. With the publication in May 1918 of "Principles of Counter Espionage Organization and Control Within the Military Establishment," and effort was made for the "information and government of the Army...."** Unfortunately, this manual, which was supposed to give commanders and key staff members a sound understanding in regard to various counterintelligence methods, was almost entirely concerned with procedures to be followed by Intelligence Officers in setting up secret informant networks and only contributed to the confusion of commanders.

Wartime haste resulted in a number of instances of procurement of personnel unsuited for the work. Little time for training was provided. Scant organization and published doctrine prevailed when there was time. While Intelligence Officers

** History MID, VIII 8, 9, and the actual manual located in CIC Historical Project files.

at policy levels were convinced of the necessity for counterintelligence, they were far from agreed on the scope of its mission or the procedures of accomplishment. At lower levels, the lack of desire among officers for intelligence assignments has been previously mentioned. When this resulted in inept Intelligence Officers, commanders felt they had evidence at hand that Intelligence did little to justify its existence.

Many other new wartime services of the Army suffered from haste and ignorance but the practice that aroused the most resentment by commanders was the continual demand of Intelligence for exceptions from command jurisdiction. Intelligence demanded direct communications outside command channels; Intelligence wanted to train its own men; Intelligence wanted control of personnel assignments; Intelligence wanted operational control of its personnel; Intelligence wanted special privileges for its men for uniforms, pay and passes.

Direct communication outside command channels was particularly resented. This was true not only in the lower echelons but in SOS itself. At the organization of G-2, SOS, the Commanding General required that all intelligence communications go through command channels and it was some time before the AC of S, G-2, could convince him that he should rescind this order. * This contributed to the "deep-footed feeling in some quarters that this organization, since it was operated secretly, might be reporting on the doings and inefficiency of some particular army unit and its officer in charge." **

Frequently enough to give this feeling a basis in fact, the Corps of Intelligence Police did concern itself with the doings and inefficiency of a unit when "operations were hampered or paralyzed."*** Commanders did not always realize the importance of security. "The frequency with which intelligence reports were not treated as confidential by officers of higher positions in their dealings with the Intelligence service was astonishing... There were many instances of the kind where higher authority and general officers, despite all warnings, would forward confidential reports direct to those involved and thus paralyze, in the locality affected, much of our work besides engendering dislike of this service and unpopularity of the G-2 Officers making the original report..." ****

Intelligence Officers at local levels were well aware of the problems that arose because of their dual responsibilities to the local commander and the G-2, SOS. G-2, SOS had the same dual responsibility to G-2, GHQ, AEF, and the

---

*** Ibid..
**** Ibid., pp 85-86.

commanding general, SOS. * Commanders could not see why they should grant special favors to CIP agents when top level commanders required these agents to travel in uniform, stand in military pay lines and comply with many other army administrative regulations. The result was, Colonel Ward said, "..that it required superhuman efforts and endless waste of time to procure any facilities..." ** As a result of these delays, the United States had been at war nine months and some 175,000 American troops had landed in France before the counter-espionage service was able to establish an effective "protective screen". ***

Security controls of necessity slow down operations and produce some friction within a command that adds to a commander's problems. On top of all this was the request by Intelligence for some of the best of the commander's men, obtaining the "consent, forced or otherwise..."****

All too often resentful commanders felt that with all their "freedom", CIP personnel needed to be reminded they were in the army. It was not difficult for a commander to convince himself that these secretive men were not catching any enemy agents and might be better employed handling "police" work as their name implied. Busy at that, he would know what they were doing and no embarrassing types of investigations would be carried on. In view of all the temptations, it is to the credit of commanders that they generally accept Intelligence on pure "faith" and let it operate.

Not all commanders, however, recognized the need for confining CIP units to strictly counterintelligence work. Colonel Ward said that in the early months they were called upon "too frequently...A certain amount of this assistance was gladly given both to gain and preserve the good will of the commanding officer and in the general interest of the good will of the service, but it became increasingly necessary to establish a firm line beyond which I.O.s could not in justice to the Intelligence service expend their efforts... It is believed that in the future this line of demarcation should be established even more clearly by official action..." *****

The Police Experience Problem

Corps of Intelligence Police personnel procurement was at first confused because of a police experience concept. The prerequisites of civilian experience for CIP work were debated during World War I as a result of this original concept. The New York branch Intelligence Office was predominantly police. While it ran up an amazing number of convictions, the cases it cited in its history as outstanding were primarily criminal rather than counterespionage or sabotage.

---

*** Ibid., p. 5.
**** Ibid., p. 87.
***** Ibid., p. 82.

A "Resume of the Records of Corps of Intelligence Police," compiled for use by the Army War College in January 1926, stated, "It was found that lawyers, newspapermen, and business men with wide experience were the most successful agents. Newspapermen, in particular, whose professional training had given them a nose for news, were apt at following up leads and at employing the ruses necessary to get evidence. Men who had been conducting confidential investigations for insurance companies and other large corporations were, of course, well qualified. Except in the New York office, where the corps was largely recruited from the Detective Bureau (Bomb Squad) of the City Police Department, it was not customary to enlist the services of former policemen or detectives. A police detective, while useful for obtaining legal evidence leading to a conviction in a criminal court, is inclined to disregard all other kinds of information as irrelevant, although from an intelligence point of view such information might be of the utmost value." *

In a request to the Chief of Staff for more men, the Military Intelligence Division, in September 1918, said a number of young college men were wanted for the headquarters office as assistants to the officers on duty. "It is not desired to use commissioned officers for this work. Sergeants of the Corps of Intelligence Police are considered most desirable for work of this nature." **

There were exceptional men, of course, among agents with former police experience. Several made brilliant records. However, overseas the adverse factors were as evident as in the United States.

Commenting on the value in Europe of this police experience for CIP agents, Agent Elliott wrote, "No attempt was, I understand, made to recruit professional detectives. In my opinion this was wise. Lt. Hornblow, for a number of months intelligence officer at Brest, wrote several memorandums on the advisability of trying to recruit men from professional ranks, but I remember seeing a paper in which Major Lamb, one of the heads of the British service, stated that he had secured very poor results from British professionals and thought it better not to try them. In view of the fact that he had a better class of personnel than we had, I think his opinion should have considerable weight. Also, I remember a certain ex-Burns Agency man who was transferred to the Corps and attached to Tours for a time. He could not speak French and was found of very little use anyway, so was transferred out again." ***

[redacted]

Lt. Col. John B. Watkins, who was with the Corps of Intelligence Police at Le Havre toward the close of World War I, wrote afterward concerning men who had come from police positions in civilian life, "Invariably, they had great difficulty in adjusting themselves to the intelligence complex. They always wanted to 'get somebody' or stage spectacular raids -- or in some instances developed the phobia that some one was trying to 'get them.' Victims of this phobia had to be sent home sooner or later. To 'get somebody' an overt act must first be committed, and the good intelligence agent, overseas at any rate, is there to see that no overt act is committed." *

By 31 August 1918, the Military Intelligence policy for the selection of personnel had adopted this view and in the "C.E. Instructions" for Intelligence Officers it was stated, "The selection of personnel is the most difficult part of the task of organizing the Counter Espionage Service. The system stands or falls on the ability of its individual executives and operatives. Since each executive is to be charged with the organization of the echelon of which he is to be in control, the greatest care must be exercised in selecting the executives. They must be officers of ability, common sense and, above all, of unquestionable loyalty. Former experience as organizers and directors of organized activities is a valuable asset; officers of political experience have been found especially apt. In selecting operatives, the personal attributes of the man are more important than his former experience. In fact, former employment as a policeman or detective may actually render a man undesirable as an operative since he is likely to be suspected by his fellows. Moreover, police methods of handling criminals are quite out of place in the C.E. Service and he may sacrifice transmitting information quickly to a desire to secure evidence sufficient to convict. Operatives, it must be remembered, are informants--not private police. No man is more essentially out of place in Intelligence Service than the one who fancies he is a born Sherlock Holmes or 'gum-shoe' artist. He at once lays himself open to suspicion by his pussy-foot manner and is always tempted to make a case at the expense of the service...." **

CIP Selection and Status

Colonel Ward was deeply concerned with the inexperience and lack of quality of his intelligence personnel. "Reserve officers and men," he said, "who were sent over from Washington after several weeks of 'Intelligence' training were, in general, found not to be of the desired type, nor had the 'Intelligence Courses' they had received at Washington had any relation to the

* Watkins, p. 5.
** CIP Records, "C.E. Instructions," p. 12.

[redacted]

needs of the situation in France... It was, therefore, necessary to find officers and men of the type and qualifications required in other organizations of the AEF.. Any other course would have been suicidal for, as has been said, one serious blunder on the part of an Intelligence Officer might at any time have ended the usefulness for the time being of the whole organization. *

"Selection," Colonel Ward went on to say, "had to be done by taking the men one by one and in every case it was necessary to obtain the consent, forced or otherwise, of the particular commanding officer of the individual in question. As men were only picked because they seemed to be gifted with special qualifications, it was but natural that their commanding officers should strenuously oppose the desired transfer. This opposition was in part due to the very general misconception of the importance and functions of the Intelligence Service... It will be almost necessary on another occasion to prepare and publish at the outset a general order authorizing the transfer of any desired officer and man to the Intelligence Service, giving the head of the Intelligence Section absolute right to take anyone by merely showing that he has that all too rare combination of qualities, languages, business experience, etc., required.

"The Intelligence Officer must be able not merely to speak the language of the country in which he is operating but should have a real familiarity with the customs and national temperament and it is greatly to be desired that he should have some practical experience and ability in handling considerable masses of detail work, with all that this requires in the way of office management. So far as possible the Intelligence Officers should not be of the line as, if so, the Service is apt to be continually called upon for transfer of its officers to combat units. G-2, SOS, lost some excellent and well trained officers in this way... Continuity of service is absolutely essential in Intelligence work as such a large proportion of results depend upon the personal relations formed, relations which cannot be handed on wholly to a successor. It follows that not only should the entire personnel be maintained in continuous service throughout the period of the emergency but that transfers from one office to another should be effected as little as possible.

"As the overwhelming majority of the AEF were very young, both as to officers and enlisted men, it was almost unavoidable that the great majority of the Intelligence Section personnel should have likewise been young. This, of course, has its advantages in that the young man generally adapts himself more easily to new conditions and is full of activity and ability to learn things quickly. But so much of the results of Intelligence work depends upon the personal relations which are established by the local Intelligence Officer-in-charge, that older men of wide experience in dealing with their fellows are greatly to be

* History, G-2, SOS, p. 87.

desired. The average officer in charge of the local post in the British Intelligence Service was ten years older than his American confrere...."*

Two regulations enforced at the outset handicapped the procurement of CIP personnel. To obtain the right kind of agent it was soon necessary to create vacancies by eliminating unsuited personnel. At the start, it was not authorized to transfer an unsuitable CIP sergeant to another organization or even back to his former organization. He had to be sent home for discharge. This loss of manpower was soon stopped.**

The other regulation was equally serious. All CIP men were required to be native born citizens of the United States. Colonel Ward's conclusion was that, "The very exigencies of the Service required that this rule be abrogated as it was rare to find a native-born American citizen who could mingle freely with the mixed civilian and foreign population, particularly among the foreign civilian laborers, and apparently be one of them. Much of the best work of the CIP was done by foreign-born soldiers who spoke French, Italian, Spanish, etc., exactly as did the people with whom they were to mingle. These initial mistakes were, of course, a handicap to the Service in its early months, and it is to be hoped that they will not be repeated under similar circumstances."*** Unfortunately this problem with foreign-born personnel came up again in World War II.

The fact that many civilians preferred to remain with the Corps as civilians and not convert to the CIP when the opportunity was offered, has been previously mentioned. In his critical analysis of G-2, SOS, AEF, Colonel Ward wrote, "The military status of the non-commissioned personnel of the American Intelligence Force, doing counter-espionage work, is a question on which the opinion of the ablest officers attached to this section has greatly differed."****

Colonel Ward said that while he had never had an opportunity to give sufficient study to the matter, he was of the opinion that "the present use of enlisted men, and hence the Sergeant of Intelligence Police, is the most satisfactory basis for an intelligence organization. However," he added, this implies that conditions of service of such an intelligence force should be modified so that certain portions of the military routine be simplified for the special needs of this service and certain military requirements be done away with."***** Ward concluded, "In reality, the Intelligence Service stands midway between civilian and military status, and such military character as it should have must

---

* History G-2, SOS, pp. 88, 89.
** Ibid., p. 107.
*** Ibid., p. 101.
**** Ibid., p. 106.
***** Ibid., p. 106.

not be regarded as an end in itself, but merely a means to the performance of its functions. Where these functions are not served by military status and military regulations, no a priori principle of absolute consistence should be allowed to stand in the way of practical results. On the other hand, the military principle and status is equally important, useful, and necessary since this is a definite and important branch of any modern Army...."*

"The men doing this service should have all the advantages that accrue to them as regular soldiers and non-commissioned officers. They can better in this way have an esprit de corps so essential to our work; they can be more easily disciplined and better permeated with a high sense of responsibility in their work. This is all the more important, for a member of the Intelligence Police is obliged in his work to be given a good deal of individual discretion and therefore it is all the more important that he be well knit into an organization which, being military in its purpose and ends, should be thoroughly military in its fundamental purpose and organization."**

Colonel Ward's former agent, Gilbert Elliott, in his history of the CIP, wrote that to "conduct a secret service of maximum efficiency, the military laws and rules must be relaxed still more in the case of Intelligence. One has only to turn to the elaborate methods employed by the German Service to make their system leakproof to realize this ...."*** Elliott felt that perhaps some latitude could be arranged for the CIP "without forcing them to retain a civilian status."

Elliott, in his histroy, quotes Lieutenant Chalmers Clifton, whom he terms one of the brightest and most intelligent officers in the service, as not agreeing with having the men remain soldiers under modified rules. He says Clifton believed that the agents should be neither officer nor civilian but militarized-civilians under contract. These agents should be paid by mail from some central point and get enough money to buy their own civilian clothes. They should be furnished with all the uniforms, insignia, and passes they need.****

In his report Colonel Ward recognized the differences of opinion on this question and summarized the views of Captain Ernest Angell, whom he labeled one of the most efficient officers of G-2, SOS. Ward quotes Angell, "While Intelligence Officers should clearly, in the future, continue to be commissioned officers of the Army, the non-commissioned personnel should be divided into two branches,

---

* History G-2, SOS, p. 89.
** Ibid., G-2, SOS.
*** Elliott, p. 7.
**** Ibid., p. 7.

(a) enlisted men, and (b) militarized civilians. This latter class should take the place of the present Intelligence Police Sergeants. Every Intelligence Officer needs a certain number of enlisted men for office work and the simpler type of controls. It is believed, however, that the great bulk of the real work of any Intelligence office could be far better performed by individuals who are subject to all restrictions of a soldier's life. The chief reason for this conclusion is the necessity of concealing the real identity and Army connections of the Intelligence personnel, whom it is assumed are to be employed in the more responsible type of work. This demands unlimited freedom, subject, of course, to the proper restricting influence and necessary disciplinary control of the local Intelligence officer. It is my experience that it is impossible to preserve the apparent civilian character of Intelligence personnel if they are enlisted men. Wearing civilian clothes and eating about town are not sufficient for this purpose. A Sergeant of the Corps of Intelligence Police, even though he always be in civilian clothes, nevertheless, is still a soldier and should be, and has been, required to perform many acts which unavoidably reveal the fact that he is an American soldier."

Captain Angell then cited the requirements of Finance, Quartermaster, Medical, Rail Transportation, and Personnel sections that necessitated revealing his true identity which, because of the "glamor that surrounds the Intelligence Service," becomes rapidly known to various office personnel. Receipts for clothing required that the name and rank be placed on them by the merchants. He continued, "It is extremely difficult to continue to conceal military status over a period of months in the same place; yet continuity of service in the same place is exceedingly important, and continued concealment of military status is vitally necessary...." *

Elliott's comment on the status of agents was that if the men were to remain soldiers, commissioned grades should be provided for the proficient without losing their civilian clothing rights, which enable them to do police work. As was mentioned previously, in the United States, Intelligence Officers felt that more CIP sergeants should have been commissioned. **

Three months before the end of World War I, all recruiting of CIP agents was suspended for men less than forty-five years old. Waivers were required for recruiting those over forty-five years old, and CIP agents obtained by induction

---

* History G-2, SOS, p. 109.

** Elliott, p. 7.

were restricted to those classified for limited or special service. To prevent the procurement of unsuitable CIP men by transfer, prior approval of MID, War Department was required. *

It is not surprising that under these conditions the CIP, AEF ended the war 40 percent below its authorized strength.

Proposed Counter Intelligence Corps Organization

Many questions regarding the mission of the CIP arose during World War I. The fundamental question was whether it was to be solely the secret investigative service as first anticipated or was to have an equally important role as an agency supervising our security controls. By the end of World War I, Colonel Ward believed that there should be a definite division of a major counterintelligence organization into five branches. The first branch would be security control or "Circulation" control as it was then known. The second branch would be labeled, "Secret Service;" the third, "Information"; the fourth, "Army Morale"; and the fifth, "Administrative." **

In the first branch there would be no concealment of military status, as these personnel would operate openly under local Intelligence Officers as inspectors, and be "...chiefly engaged in examining papers and asking questions." Colonel Ward believed that this branch should include circulation control of the entire military, and that this function should be taken from the Provost Marshal, and returned to Intelligence where it "properly belongs."

The Secret Service branch, Colonel Ward said, would be occupied solely with investigations, and all its personnel would be in plain clothes. "Concealment of identity is the fundamental requisite, and in certain cases and places it is advisable that the Inspectors of the 'Circulation Control' and the agents of the 'Secret Service' should be unknown to each other...." ***

The Secret Service branch, Colonel Ward proposed, would have three types of detachments -- fixed, mobile and foreign. The fixed detachments would be stationed at Ports, Frontiers and other centers, Ward continued, "It is merely a matter of convenience and administrative detail whether each local office be supplied with a sufficient number of 'Secret Service' agents so that when the

* CIP Records, Documents #115-118.
** History G-2, SOS, p. 155; Exhibit #84.
*** Ibid., p. 156, Exhibit #84.

necessity arises one or more can be detached immediately for travel purposes to any other point or whether there be constituted a separate so-called 'mobile detachment in a few of the most important centers....' "

"The agents of the mobile detachments would, as the necessity arose, be in touch with those of the third subdivision of this branch of the Service, i.e., those located in the principal centers of the neutral countries. The necessity for the establishment and maintenance of foreign detachments has already been demonstrated...."

Colonel Ward's recommendation for the mobile unit was based upon the results of a small mobile unit of experienced Intelligence Officers that he formed late in the war, to "go to points where cases of special importance and difficulty were being handled, to advise the less-experienced Intelligence Officer on them, as well as to cooperate in the cases themselves. At the same time they could give advice and particularly instruct the local Intelligence Officer regarding the difficult matter of securing and operating his agents (Informants). This was a feature of great value and would have been further developed if the war had continued longer." *

The third branch, "Information," would furnish the Secret Service branch with many leads and recorded data just as it did in World War I through censorship of electronic communications, postal, press, and supervising visitor control. It would supervise dissemination of intelligence through reports and liaison, including material for propaganda. Army morale including civilian relations and War Relief Societies would constitute the fourth branch, and the fifth branch, "Administration," would handle as much administration as possible on Colonel Ward's premise, that "The local Intelligence officer has no time and should not be expected to devote his efforts to purely administrative matters but should have all this paraphernalia of his work furnished him in practical form from the central administrative office." **

Administration would include records, personnel and accounts. Of accounts Colonel Ward wrote, "The system of accounts officially prescribed for the handling of the special funds which were supplied to local Intelligence Officers was found to be a cause of great wasting of valuable time, which otherwise could have been spent on Intelligence duties. It was rare that an Intelligence office had sufficient personnel for anyone in the office to be specially detailed to devote himself for several days each month to making up accounts and familiarizing himself with the frequent changes in the system directed from GHQ except at the expense of his regular duties."

---

* History, G-2, SOS, p. 144.

** Ibid., p. 160.

This Counter Intelligence Service was based on Colonel Ward's firm conviction that counterespionage activities behind our own lines and in neutral or enemy countries should be directed by one head, although in order to keep the "Inspectors" and "Agents" apart "it would be necessary for the Intelligence Officer, who has both Circulation Control and Secret Service branches under him to maintain two offices, one of which would be entirely unknown as such. It might be necessary to camouflage this office as a news agency or commercial house or it might be more desirable to have the Secret Service agents report to the Intelligence Officer at night at his quarters. This will depend entirely on local conditions and it is useless to attempt to do more than outline the general principle."*

Colonel Ward stressed that Intelligence and Counterintelligence should be closely related. "Some of the Allies therefore had separate counter espionage and secret service buildings in the same city although working in reality under the same chief in closest harmony.... In any case each service should act as a feeder to the other and the information which is gathered by one should be quickly and readily available to the other...." **

"Intelligence personnel should be allowed wide scope and given full responsibility for the performance of their duties and the administration of their offices, that they should not be subjected unduly to red-tape. At the same time they should be held to strict accountability for any abuse of their wide privileges." ***

To insure non-abuse of privileges, Colonel Ward believed that frequent inspections should be made by the central office of all local and branch offices. Moreover, Colonel Ward advocated that the central office organization "provide one or more officers whose chief duty shall be to travel almost continuously from one local office to another, familiarizing themselves with the work which is there being done and at the same time keeping in touch with the new material which flows in constantly to the central office from scores of points in the field. Letters and circulars are exceedingly helpful, but such a traveling inspector, who studies the actual problems at the point where they arise, can give suggestions of much more specific value than can the overworked officers of the central office who have no time or opportunity to become familiar with the local problems at first hand." ****

Pointing out that advance preparations would solve many of the counterintelligence problems of the future, Colonel Ward concluded, "The protective screen should be built up concurrently with the commencement of military activities in the country to which our troops are sent. The first detachments of the military to be sent abroad should include a half dozen Intelligence Officers and the necessary

---

** Ibid., p. 137.
*** Ibid., pp. 110-111.
**** Ibid., p. 161.

0511

personnel to make a beginning and these to be followed rapidly by an increasing number of Intelligence Officers and Intelligence personnel so that the Intelligence Service may be always kept ahead of the rapidly growing number of troops and manifold activities which follow in their wake...".*

"It is strongly recommended that plans be prepared in advance, in view of another possible similar emergency for the recruitment of adequate Intelligence personnel... It is also felt that the Service could have been much improved could its chief have obtained the authority to bring certain officers from the United States who had special qualifications to France in order to increase the effective force. The general rule against sending for officers by name was no doubt wise and necessary, but an exception should have been made for this Intelligence section in view of the few having necessary qualifications and the small amount of material available...".**

"There developed at certain times a lack of appreciation in the other services of the need of advance information on the part of the Intelligence Section. For example, G-2 should have always had advance information as to the new bases it was proposed to open so as to have taken up at a sufficiently early date the questions of arranging for all the Intelligence functions to be carried on at the new base...." ***

Finally, Colonel Ward said, it was essential that we establish "early and close cooperation with all Services of our future Allies which can possibly furnish our Intelligence Service with the information already available and can thus put our Service into immediate touch with the local problems and local authorities..." ****

In discussing the local level situation, Colonel John B. Watkins summarized his conclusions that CIP agents should learn the peculiarities of local populations to help identify unusual activities and "secure all the information possible from your allies." But, said Watkins, "give sparingly and get your ally to arrest and try the enemy agent if you can." *****

Summary of Lessons Learned

In the gay celebration of 11 November 1918, there was a natural feeling that it was not merely an "armistice" but that the "war-to-end-all-wars" had

---

* History G-2 SOS, p.162.

***** Watkins, p. 7.

been fought. Nearly four decades and another World War later, it was evident that 11 November 1918 had been truly an Armistice and that the weapons and organizations of World War II had been spawned in World War I -- the armed forces; the air forces; the chemical forces and even the long range artillery. Research reveals that the Counter Intelligence Corps was no exception and that the lessons provided in its 15 months as CIP in World War I had vital significance 35 years later.

The outstanding counterintelligence lesson of World War I is obviously that any counterintelligence organization must be as flexible as the sources of the intelligence it is countering. This lesson was recognized, in principle, 33 years later when SR 380-320-10 was published, and Paragraph 32 stated in reference to command consent agreements that: "These agreements should be sufficiently flexible to insure that the investigative work in the field is not hampered by lines of jurisdiction which are binding on Army personnel but invisible to the enemy agent..."

Practical application of this principle would have solved many of the problems of the Corps of Intelligence Police during World War I, but as Colonel Bruce Bidwell concluded following his analysis of intelligence training in World War I, "Theoretically this difficult problem might be worked out in a satisfactory manner on the basis of intimate staff coordination and collaboration by all concerned. In reality, however, this particular solution has consistently failed to satisfy indicated needs. A decided improvement could possibly be secured by means of a determined educational campaign aimed at assuring that all key commanders and staff officers were made fully aware of the vital importance of adequate intelligence training to the success of the all-inclusive military effort. Some practical solution to the problem must be found, however, particularly since history has demonstrated that ignorance and misunderstanding on the part of both sides have contributed regularly to many important military intelligence training failures observed." *

Prerequisite to realizing the importance of training is recognition of the importance of the mission and its accomplishment. As far as counterintelligence is concerned, it is evident that its operations cannot depend upon individual interpretation in each command area and at each command level. Flexibility of operations must be insured at top level to prevent arbitrary regulations on scope and method of operations from defeating the mission of the Corps. Following World War II, the army was to a large extent decentralized to various Army Commands but in 1954, after seven years trial, the Army went back to a centralized Continental Command.

An equally important lesson of World War I was the impossibility, as a practical working arrangement, of separating all intelligence into positive and

* History MID, VII-60.

negative branches. Efforts to enforce this arbitrary division deprived both branches of valuable information and assistance. Nearly two score years later, the concept of "aggressive" counterintelligence was recognized, and in 1954 the creation of the Army Intelligence Center embracing both intelligence and counter-intelligence paved the way for practical and effective coordination.

The Corps of Intelligence Police suffered many of its problems of World War I merely because of its inappropriate title. It was a "Corps" that was not a "Corps." It was a "Counterintelligence" organization but called an "Intelligence" organization and it was called "Police" when it had no interest in crime, as such, and had no police powers. Nearly a decade after World War II it was still not a Corps.

Had the Corps of Intelligence Police been a "Corps," many of its personnel procurement, training, assignment and control problems would have been eliminated. It would not have had to "beg, borrow and steal" its rank and commission spaces. It could have better attained its prerequisites of maturity, education, ability and character.

Had the Treasury not claimed the title "Secret Service" exclusively, both Colonel Van Deman and Major Nolan would have obtained the name they requested for the service and the European term "Intelligence" would not have confused the meaning. Many later problems between the investigative and the security services of the work would not have arisen. There were still questions on the scope of the CIC mission three decades later.

Had the word "Police" not been used, much of the confusion that resulted in misuse of the CIP on purely criminal matters might have been eliminated. After it was evident that former police experience was less desirable for "fact-finding" counterintelligence agents than several other types of civilian experience, the CIP would not have been so frequently referred to as "militarized detectives." * Air Force and Naval counterintelligence gave up the crime vs. intelligence conflict in the years that followed and consolidated forces as "fact-finders," but Army counterintelligence retained its independence despite much confusion.

No conclusions could be drawn from the CIP wartime experiences relative to the most desirable status and rank of Counter Intelligence Corps agents, and this remained one of the most widely discussed problems of the service.

Peacetime Status To Be Won

To the French and British, American Army Intelligence, and particularly counterintelligence, owes a lasting debt of gratitude. From them, Corps of Intelligence Police agents learned many lessons that would otherwise have been acquired only through costly and time-consuming experience. Colonel Watkins says they learned everything from the fact that "an intelligence agent is never off duty" and "any conversation may contain bits of useful information" to "Cherchez la femme (sometimes)." However, World War I experiences taught most CIP agents that "femmes" were a very incidental part of effective counter-intelligence activities, and that it was hard, unglamorous and painstaking work that earned for the Corps of Intelligence Police a permanent and honored place in all the future wartime plans of the United States Army.

As World War I ended with the armistice so many thought was peace, the Corps of Intelligence Police could be justly proud of its record. Its achievements were remarkable from the number of outstanding agents in the first hastily recruited and ill-trained little group to the smooth functioning organization attained by the time of the armistice.

Its status in peace had yet to be won. This status was already recognized by its able opponent, Colonel Nicolai, wartime chief of the German Army Intelligence Service. In 1923, he wrote, "The war freed military I.S. (Intelligence Service) in the competition of the various nations.... The war took counter-espionage from the hands of the police and remitted it into those of the highest state authority. The future will put it in the hands of a whole people. But only a nation with sound national sentiments is capable of this self-defense, and only those governments which sustain these sentiments in the people will be doing their duty and will achieve success in the fight against the secret service... But when today certain circles still put their faith in reconciliation as the way on which to go, they should see to it that this road is illuminated by a good intelligence service, even at the risk of losing their own illusions... Never before was the time more favorable for its work. This particularly concerns England and the United States. The structure of the British Empire and the immigration and race problems in North America call for the use of the arts of the intelligence service. Far greater than in the past and the present will the secret power of this service be in the future." *

With this bit of honest advice to his former enemies, Colonel Nicolai proceeded to rebuild the German intelligence and counterintelligence service which later gave Hitler the necessary knowledge to make his bloodless conquests of

* Nicolai .

the Rhineland, Austria and Czechoslovakia. In the same era, the Communists created their high-level nets of espionage and subversion in the Americas. And at the same time the United States placed its faith in reconciliation and disarmament, with its army intelligence service virtually out of business and its army counterintelligence service down to sixteen (16) men. The lessons and the conclusions were there -- gathering dust on the shelves of history.

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers; there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

MILITARY GOVERNMENT IN KOREA

The sudden collapse of the Japanese Empire presented many problems to the Allied powers who were to occupy the far flung realms of the "land of the rising sun." Not the least of these problems was the fate of Korea, the densely populated peninsula that had been the most important Japanese territory beyond the home islands. On VJ Day, the only comprehensive plan for Korea was contained in a single sentence from the Cairo Declaration of 1942: "The aforesaid three great powers (Great Britian, Russia, and the United States), mindful of the enslavement of the people of Korea, are determined that in due course Korea shall become free and independent."

When the XXIV Corps, part of the TENTH Army on Okinawa, was designated the Occupation Force for Korea, it had no directives, no plans, no trained military government personnel, and less than a month to prepare for the accomplishment of its mission. Shortly before embarking for Korea, the XXIV Corps military government officers did receive instructions that were to prove more confusing than helpful. These orders placed the XXIV Corps in Korea in the same position as the SIXTH and EIGHTH Armies in Japan by instructing the XXIV Corps to "supervise the functioning of those agencies of the Japanese Imperial Government within the areas of their commands." These instructions proved useless when the XXIV Corps, upon arrival in Korea, found few if any functioning Japanese government agencies.*

USSR Gets The Jump

The American Army was charged with liberating the area of Korea south of the now renowned 38th Parallel of latitude. This operation began on 8 September 1945, about two weeks after forces of the Soviet Union had moved into the area north of the 38th Parallel. Since this arbitrary geographical line had been established merely to facilitate the original liberation of the peninsula, the Americans tended to take it for granted that soon after liberation, the dividing line would disappear in favor of a unified military government.

During the first two months, CIC agents, like the remainder of the occupation forces, were engaged in disarming the Japanese Troops; assembling all Japanese Nationals preparatory to their repatriation; and maintaining law and order. Soon a directive from Washington outlined the basic mission of the MG in Korea: Korea was to be completely separated from Japan, and MG was to pave the way for the earliestpossible establishment of an independent Korean

* American Experiences in Military Government in World War II, by Carl J. Friedrich and Associates, Rinehart and Co., NYC, 1948, pp. 356-8, Chapter XVI, Military Government Experience in Korea, by Philip H. Taylor.

government.* Although no one suspected it at the time, the first of these objectives proved to be relatively simple while the second became and remained a problem of world-wide importance for more than a decade of turmoil.

Capable Korean Leaders Lacking

The Japanese were moved out of Korea without incident. No sooner had the Japanese left than the first big obstacle to Korean independence became painfully obvious. During the years of Japanese occupation, the Japanese, without exception, had held all positions of responsibility in government and industry. After the American liberation, Korean hatred for all Japanese prevented keeping of the ablest of the Japanese in responsible positions. Thus, when the last of the Japanese left Korea, the last Oriental with any administrative background also had departed.

As an example of the degree to which the Japanese had assumed all positions of responsibility, engineers on all railroad trains were Japanese; there was not a Korean capable of operating a locomotive.**

This lack of skilled and trained Korean personnel was actually a secondary obstacle in the way of Korean independence. The 38th Parallel solidified into a permanent border and the Russians quickly set up a Communist-dominated state in North Korea. That the North Koreans and their Russian masters intended to settle for nothing less than Communist control of all Korea may not have been apparent to most MG officials in 1945, although it soon became evident to CIC. These intentions formed a far greater obstacle to an independent Korea than the lack of native Korean administrators.

MG and Tactical Units Separated

Because CIC's work in Korea was so closely related to Military Government, MG's organization was of vital concern to CIC. For the first few months, Military Government teams like CIC Detachments were attached to the tactical on the local level. The lengthy channels of communication created by this set-up led to the establishment of the United States Army Military Government in Korea (USAMGIK) which took over control of the MG units while the tactical troops including CIC were placed under the United States Army Forces in Korea (USAFIK). This step immediately increased the authority and enlarged the position of Military Government in Korea, and at the same time,

---

* American Experiences in Military Government in World War II, By Carl J. Friedrich and Associates, Rinehart and Co., NYC, 1948, p. 359, Chapter XVI, Military Government Experience in Korea, by Philip H. Taylor.

** Interviews with CWO John R. Dilworth, 17 September 1954, Fort Holabird and Captain Theodore E. Griemann, 10 December 1954, Fort Holabird.

provided for much closer coordination between MG units as a result of the shortened channels of communication.*

USAMGIK was under the authority of the Military Governor whose responsibilities gradually increased throughout the years that American forces were in Korea. Major General Arthur Lerch and later Major General William Dean held this position. The Commanding General of USAFIK and the XXIV Corps throughout the occupation was Lieutenant General John R. Hodge. Although Hodge's relation to USAMGIK was never clearly stated, his rank made him virtual commander of both USAMGIK and USAFIK.

This use of direct military government in Korea, in contrast to the indirect control established in Japan, led to an efficiently functioning military government organization once the problems that resulted from the lack of preliminary planning had been solved.**

The separation of the tactical troops and the Military Government units created, however, an unfortunate rivalry. Each province had an MG unit and a tactical unit of about a battalion in strength. The ill feeling between the two in some provinces was so intense that separate women's clubs and separate Sunday worship services had to be instituted to keep an air of peace on the social scene.***

The American occupation of Korea officially ended on 15 August 1948 when the Republic of Korea, with Syngman Rhee as president, became recognized as the Government of South Korea.

American officials did not desire to remove troops from Korea immediately, and leave the new government and its small army exposed to stronger forces from the north. It was only when the Russian announcement that they would be out of North Korea by 1 January 1949 forced America's hand, that U.S. forces began to leave. The Russians could (and did) pull their forces back to the Manchurian border, state that they were out of North Korea, and shout that America should get out too. American forces had no nearby Manchuria. Thus, when U. S. forces left, the South Korean government had to be left to fend for itself.

Pressure from South Korean Nationalists, budget-cutting officials in Washington, and just plain GI's, whose morale was slumping badly, encouraged the withdrawal of U. S. forces. By 29 June 1949 the last of the American forces had left the peninsula.****

Section 2

ORGANIZATION OF CIC

On 9 September 1945, the first agents of the 224th CIC Detachment, many of them veterans of the campaigns of Leyte and Okinawa, arrived in Inchon, Korea, on the USS Chilton.* The Commanding Officer during these first few weeks was Lt. Col. Byron M. Meurlott.

The 224th CIC Detachment was attached to Headquarters, XXIV Corps, located in the capital city of Seoul, a city of nearly a million persons. This detachment coordinated the activity of a long list of other combat unit detachments, metropolitan units and area units.** The 85th and 86th Metropolitan Units operated out of Seoul with the latter on temporary duty in the area of Kunsan.*** The 78th Area Unit also operated out of Seoul with suboffices in Kaesong,**** Inchon,***** and Chongju.****** The 84th Metropolitan Unit was located in Pusan******* along with the 77th Area Unit, which had suboffices at Taegu,******** Masan********* and Chinju.********** The 58th Area Unit was located at Taejon*********** and the 59th Area Unit at Kunsan. All metropolitan and area units were attached to Headquarters, XXIV Corps.

The 7th CIC Detachment was attached to Headquarters, 7th Infantry Division and located at Seoul. The 40th CIC Detachment, with offices in Pusan, was attached to the 40th Infantry Division, and the 6th CIC Detachment, attached to the 6th Infantry Division, was located in Chonju.************

---

* 224th CIC Detachment Historical Data Card, Unclassified.

** The organization and significance of metropolitan and area units in Korea is not documented.

*** Kunsan is on the West coast of Korea, 110 miles south of Seoul.

**** Kaesong is located just south of the 38th Parallel, 35 miles northwest of Seoul.

***** Inchon, the major port city on the west coast of Korea, is 20 miles southwest of Seoul.

****** Chongju is 80 miles south of Seoul.

******* Pusan is the major port city on the east coast of Korea, 220 miles southwest of Seoul.

******** Taegu is 155 miles southeast of Seoul.

********* Masan is 190 miles southeast of Seoul.

********** Chinju is 180 miles south of Seoul.

*********** Taejon is 100 miles south of Seoul.

************ Chonju is 130 miles south of Seoul.

Hqs USAFIK, Hq XXIV Corps, 224th CIC Det, Subject: CIC Detachments in Korea, To: Director of Counterintelligence, Hqs USAFIK, 21 October 1945, (Confidential), (Kansas City Depot, BX 25099) (41)

Administration of all these units was under the jurisdiction of the 441st CIC Detachment in Tokyo, Japan.

This confusing organizational set-up was further complicated by numerous personnel changes in these early months. The 441st which sent agents to the 224th was just as likely to take them away. Many of the agents were due to be separated from the service and others were long overdue for a stateside assignment. Actually few of the men who originally came to Korea with the 224th stayed for any length of time. Meurlott was soon returned to Tokyo and replaced by Captain William R. Gordon, who was replaced later by Captain Van C. Holmes.

On 13 February 1946, CIC in Korea was reorganized in an attempt to simplify the situation. The 224th remained in Seoul and kept control over all operations. The 6th, 7th, and 40th remained attached to their combat units and were located in Pusan, Seoul, and Taegu respectively. New units were set up as follows: 1034th in Taejon, 1035th in Songdo,* 1036 in Inchon, 1110th in Kwangju** and the 1111th in Chonju.*** At this time there were 57 CIC agents in Korea.****

971st CIC Detachment Organized

On 1 April 1946 all the above units were replaced by the 971st CIC Detachment with Major Jack B. Reed, who had been sent from the Philippines, as Commanding Officer.*****

The 971st operated under the G2 Section, XXIV Corps, with some degree of administrative jurisdiction still resting with the 441st. Personnel were to come from the 441st, and the 971st was to channel all reports headed for the United States through the 441st.

Immediately under the Commanding Officer were the Operations, Administrative and Liaison Officers. The Operations Officer was responsible for the following sections: Espionage, Sabotage, and Miscellaneous; Political; Reports and Analysis; and Security. Administration was divided into the

**** Hqs, XXIV Corps, 224th CIC Det, Subject: CIC Monthly Administration Report, To: Chief, Counter Intelligence Corps Branch, Intelligence Division, Army Service Forces, Washington 25, D.C., 11 March 1946, /s/ Maurice D. Sergeant, Captain, CAC, Adjutant (for the Commanding Officer), Unclassified, (Kansas City Depot BX 25103) (58).

***** Hqs, XXIV Corps, General Order #58, Activation of the 971st CIC Det, 30 March 1946, (Secret), (Kansas City Depot, BX 25099). (41)

following sections: Confidential Funds and Informants; Translators and Interpreters; Billets; Motor Pool; Supply; and Detachment Administration.

The original plan specified that the Liaison Officer was to travel as field representative of the Commanding Officer among the following District Offices: Seoul, Songdo, Inchon, Kangnung,* Taejon, Pusan, Kwangju, Chonju, and Taegu. Three District Offices has suboffices as follows: Kangnung in Chunchon,** Taejon in Chongju, and Pusan in Chinju.

The total authorized strength of the Detachment was 126, but the 971st never reached its full T/O. Total actual strength in September 1946, when the above organization was in effect, was 89.*** Although the T/O called for a Lieutenant Colonel as Commanding Officer, it was not until February 1948 that an officer of this rank was assigned.

Shortage of personnel and the fact that CIC had come to Korea without much preparation and with little idea of what to expect, made frequent organizational changes necessary. This was particularly true in the Operations Sections and subsections. It was not until 29 March 1947 that a permanent SOP for the organization could be drawn up. 1st Lt. Harry H. Dow, one of the handful of men who had come to Korea with the 224th and remained with the 971st, was responsible for this SOP. Lieutenant Dow was Operations Officer of the 971st until leaving Korea in mid-1947. His work in adapting CIC organization and operations to the peculiar situation in Korea earned for him an Oak Leaf Cluster on the Army Commendation Ribbon and a Letter of Commendation from Lieutenant General John R. Hodge, Commanding General, XXIV Corps.****

The provisions of the SOP made the Commanding Officer responsible to the ACofS, G2, USAFIK, for "the administration and operations of CIC in Korea and for the employment of personnel to insure the maximum Counter Intelligence Coverage for Korea."

The Executive Officer acted "in the stead of the Commanding Officer to supervise and be responsible for all administrative matters including the

preparation of the Monthly Administrative Report...."*

Major Reed was the Commanding Officer of the 971st until February 1948. When Major Reed left Korea, Maj. Theodore J. Roberts served as interim Commanding Officer until the arrival of Lt. Col. Joseph Huckins late in March 1948. The 971st was without an Executive Officer until early 1948, after which Capt. Marion R. Panell and Major Roberts held the position.**

The Operations Officer was responsible for the training and proficiency of all agents, procurement of personnel, supervision of the seven sections under Operations, planning necessary CI coverage, and dissemination of information.***

Lieutenant Dow served as Operations Officer until April 1947 when he was replaced by 1st Lt. James K. Patchell. In June 1947, Captain Orlando A. Molina, a former OSS man, assumed the position and held it until late 1948 when he was relieved by Captain George I. Hessevick.****

The duties of the first five of the seven sections under the Operations Officer will be outlined in full in the later sections devoted to their operations. It need only be mentioned in passing that two of these sections dealt with matters usually outside the mission of CIC. The Political Section acted as a reporter of all political activity in South Korea, and the Information Section gathered positive intelligence on the situation in North Korea.

The Liaison Section was responsible for maintaining liaison with Military Government, tactical units and Provost Marshal units for collection of information and with CIC District Offices for administrative matters.*****

The overall shortage of CIC personnel in Korea forced the Liaison Section to exist only on paper. Around the middle of 1947, Headquarters, 971st CIC Detachment, created the position of Detachment Supervisor, best described as a "traveling representative" of the Commanding Officer to facilitate contact between Headquarters and the District Offices. The position

was first held by Captain Panell and later by Capt. Arthur Biestel.* In no way, however, did the creation of this position take the place of the ideal Liaison Section outlined in the SOP. That the Liaison Section never existed is unfortunate especially since CIC badly needed an officer specifically charged with maintaining liaison with Military Government units.

The Reports and Analysis Section usually consisted of only one officer who was responsible for preparing the Monthly Information Report for the Director of Intelligence in the Pentagon, the semi-monthly situation report required by the 441st CIC Detachment, and the daily periodic report required by the ACofS, G2, USAFIK. The District Offices were required to submit a daily summary of all investigative activity from which the daily periodic reports for the G2 were compiled.**

Later this section also prepared the Weekly Information Bulletin which was sent to all District Offices and suboffices in an attempt to keep CIC's far-flung agents aware of the overall situation in Korea.

The five men who held the position of Officer-in-Charge, Reports and Analysis Section, were 2d Lt. Albert R. Moses, Capt. Ellis A. Ream, 1st Lt. Kenneth E. MacDougall, 1st Lt. A.B. Cassidy, and Capt. George I. Hessivick.***

971st Provides Wide Coverage

No other intelligence agency in Korea could claim more complete coverage of Korea than CIC. Changes were made in the location of District Offices and suboffices as dictated by shifts in the current situation. By the end of 1948, District Offices were in operation in the following thirteen towns: Seoul, Inchon, Kangnung, Taejon, Pusan, Kwangju, Chanju, Taegu, Kaesong, Ongjin,**** Chunchon, Chongju and Cheju Do.***** These District Offices controlled the following suboffices: Seoul in Uijongbu,****** Kangnung in Samchok,******* Pusan in Masan, Kwangju in Mokpo,******** Chonju in Kunsan and Taeju in

Pohang.* The greatest coverage was reached during 1948 when CIC maintained 21 field offices. At this time the Criminal Investigation of the Provost Marshal operated offices only in Seoul, Pusan, and Inchon.** CIC's mission of covering the ever-changing political situation in Korea made such a widespread network an absolute necessity.

The District Offices performed investigations in their areas for the various sections at Headquarters. The results of these investigations were reported to the proper section and Daily Periodic Reports and Semi-monthly Situation Reports were submitted to the Reports and Analysis Section.***

The Seoul District Office, located adjacent to the Headquarters building, was the largest with an average of 20 military personnel assigned, in addition to 8 to 10 Korean civilian interpreters and three Korean typists. Much of the work of political reporting fell to this District Office because the important political leaders spent most of their time in the Seoul area. There were usually several agents specifically charged with interviewing key Korean political leaders, while several others specialized in covering political meetings and rallies in the area. Still other specialists worked almost exclusively on background checks of American personnel. Since the majority of the Department of the Army civilians were stationed in Seoul, these agents handled a large number of cases.

Near the end of the occupation, three officers and three enlisted men were assigned exclusively to attend social functions and places of entertainment in Seoul in order to check the comments and activities of the guests.

Operations in the Seoul District Office were on a larger scale than in other areas because more significant developments took place in Seoul. The Officers-in-Charge were, in turn, Capt. Jay Harbin, Capt. Elbert Eller, 1st Lt. Carl Eberlein, 1st Lt. Kenneth E. MacDougall, and Capt. Ellis A. Steiner.****

Those District Offices which were in areas without CID***** representatives drew many assignments which technically fell within the mission of the CID.

**** Interview with Lieutenant Colonel Elbert H. Eller, 20 October 1954, Washington.

***** CID is now known as MPCI - Military Police Criminal Investigations.

For instance, the Chonju District Office handled many violations of regulations concerning Military Government's petroleum distribution program. CIC also investigated several cases of opium smuggling that should have been handled by CID.* In one instance, the Taejon District Office did the preliminary investigative work on the murder of an American soldier on guard at the Taejon railway yards.** As a result of this particular case, two CID agents were placed on duty in Taejon for several months. These men worked in close cooperation with CIC and even utilized CIC offices, billets, and mess facilities. For the moment CIC offices in the central area of South Korea were relieved of many investigative duties which should not have been theirs in the first place.***

Because of the extensive network of District Offices, CIC came in contact with more people who knew about the situation in North Korea than any other military agency in Korea, a fact which influenced heavily the decision to give the 971st the added mission of collecting positive intelligence.****

The broad coverage of South Korea through District Offices made good communications an essential of CIC organization. As noted in this section, the District Offices all reported daily to Headquarters; and, beginning in March 1947, Headquarters sent out a Weekly Information Bulletin to the District Offices. The Weekly Information Bulletin grew out of the Weekly Political News, a periodical prepared by 1st Lt. James K. Patchell, OIC of the Political Section that was designed to orient the District Offices on the Korean parties and politics.***** The Weekly Information Bulletin not only dealt with political developments but included reports from all the sections of the 971st. These reports outlined important cases, discussed specific problems and operational weakpoints, backed up important orders, and commended particular agents or District Offices for good work. It proved the best means of keeping each District Office briefed on activities of all segments of the 971st. In May 1948, the Weekly Information Bulletin became the CIC Monthly Bulletin, but no changes, other than the frequency of publication, were made.

The District Offices were able to contact Headquarters in a number of ways. Civilian telephone, police telephone and Army radio were used for the routine reports; more important messages were hand-carried by agents; and air travel was available for matters requiring immediate action. Many District Offices ran a daily Korean courier to Seoul. All reports were stored at

4014

Headquarters with the District Offices keeping only skeleton files. All file-checks were made at Headquarters.*

The 971st also developed special communication channels through the use of "traveling agents," who were highly mobile trouble shooters, drawing special assignments in out-of-the-way areas and reporting directly to Headquarters. The most noted of these was Special Agent Harold Hummel whose biggest case was the investigation of sabotage in the Yongwol-Machari coal mine in March and April 1948. Later during the Korean War, Hummel's extensive knowledge of the terrain around Kwangju saved his life when he found himself in enemy territory unable to traverse main routes to safety.**

The outstanding feature of CIC organization in Korea was the cumulative, largely unpremeditated, growth of the 971st Detachment. Sections and positions were created as needs arose. The men who originally came to Korea with the 224th had little or no idea what to expect. No precedents for CIC from previous occupations were available as guides for action. Consequently, organization was in a state of flux for a long time. As CIC acquired special missions and unusual situations developed, the organization of the 971st was changed to meet the new conditions. Due largely to Lieutenant Dow's early work and the SOP of 29 March 1947, the 971st had a firm organizational base on which to make the necessary changes.

Language Barrier Poses Major Problem

The greatest problem CIC faced during the Korean occupation can be stated in a single word: language. Because the 971st never had more than a handful of Korean-speaking agents, far too much reliance had to be placed on native Korean interpreters and translators. Many of these men were motivated by strictly mercenary impulses and could not be trusted to any great extent. Since procurement and supervision of indigenous personnel was the responsibility of the Special Squad, the problem will be fully discussed when that section's activities are considered.

Obviously those agents who could speak Korean were of extreme value. S. Sgt., later 2d Lt. Gordon W. Avison, Jr., and T. Sgt. Donald P. Whitaker, who continued to serve the 971st as a civilian after his discharge, were the only non-Orientals who spoke Korean fluently. Avison was the son of a missionary in Korea before World War II and had spent most of his life on the peninsula.***

** Interview with Master Sergeant Donald O. Shirley, 12 October 1954, Fort Holabird.

*** Interview with Captain Kenneth E. MacDougall, 5 October 1954, Fort Holabird.

4015

CIC also had about twelve Korean Nisei agents, most of whom were from Hawaii.* Francis Tanka worked in the Political Section of the 971st and Yukinobu Fujioka, known to everyone as "Roy," was in charge of the 971st's files. Harry Ahn, a WOJG, worked out of the Seoul District Office; he later served as an agent for the 441st in Osaka, returning to Korea and the 705th CIC Detachment in 1953. Lee Yong Soon (or Y. Lee and hence Anglicized "Wylie") was born in Korea, but had spent twenty years of his life in New York City. Wylie came to Korea with the 224th after serving with OSS during World War II. Wylie was a particularly valuable operative, since he was related to the Korean royal family and could gain access to many "closed circles." Other well-remembered Nisei with the 971st included Stephan Yang, Cho Kee Nam, Daniel Pang and Peter Kang. Kang was allegedly the judo champion of one of the provinces.**

Unfortunately, the dialect of the greater number of the Nisei was unintelligible to many South Koreans. When Korean failed, it was often possible to conduct discussions in Japanese, since many native Koreans had learned the language during the Japanese occupation.***

The Nisei were sufficiently valuable to CIC to lead to the recommendation in April 1948 that the 971st T/O include forty Nisei personnel, the absolute minimum required to maintain a check on Korean personnel and keep up liaison with Korean agencies.****

Every operation under the 971st had, as its first and major problem, overcoming of the language barrier. A CIC operation was stymied unless an interpreter or translator could be found. Too often, the linguist who was found proved to be a man of questionable motives.

4016

Supplies: Never Enough

As much as the language problem plagued the personnel of the 971st, it was not their only woe. CIC, like all military organizations in Korea, was at the tailend of the USAFFE supply line. The 971st was the unhappy recipient of much wornout equipment that should have been tagged for the salvage-heap.*

The jeeps used by the 971st were scarred veterans of the Pacific fighting, rescued from scrapping operations on Okinawa. According to agents with the 971st, much of the credit for keeping the 971st on the road should go to the Motor Sergeant, Sgt. Dalton Clark, who searched diligently for parts to keep these jeeps running.**

Supplies of all sorts were scanty. Paper, an essential for any intelligence agency, was particularly scarce. The USAFIK supply people did not seem to understand why a CIC District Office needed more paper than the orderly room of an infantry company.*** In early 1948 for a short period there was no .38 caliber ammunition available in South Korea, and the 971st had to dispatch 1st Lt. Wilbur T. Measley to Japan to beg some from the 441st.**** Every conceivable supply item was short the greater percentage of the time.

T/O Never Filled During Occupation

The 971st suffered continuously from a shortage of personnel. The actual strength of the organization in September 1946 was 89 men, 37 less than the T/O. Later the T/O was raised to 182,***** but usually there were about 100 men assigned to the 971st and the organization never achieved full strength. The 971st, unable to get agents trained at the CIC Center, had to develop a system of procuring agents from local military units. Virtually no agents were forthcoming from Camp Holabird until 1948 when operations in Korea were nearing completion. At that time, the CIC Center was having difficulty in obtaining men qualified to meet CIC standards, and the 971st found that some of the school-trained agents were simply not satisfactory. CWO John R. Dilworth recalls that one of the newly-trained agents admitted to him that he was only fifteen years old. This young man proved to be excellent at washing jeeps.

***** Monthly Report of CIC Activities for April 1948, dated 1 May 1948.

The system of local procurement by the 971st in Korea brought many men into CIC who remained with the organization after their assignment in Korea was completed. These men since have received the benefit of formal counterintelligence schooling, but in Korea their training came from actual experience in the field. Dilworth, one of the locally procured agents, recalls that he spent several days reading various documents, received a brief orientation from Capt. Jay Harbin, Officer-in-Charge of the Seoul District Office, and then received his first assignment in the field.*

The normal Army pipeline for obtaining CIC agents in Korea went through the 441st Detachment in Japan. This was hardly a satisfactory arrangement. The 441st usually faced a critical shortage of personnel itself, and was understandably reluctant further to deplete its forces by sending agents to Korea. Nevertheless, the T/O for the 441st was 970 agents as compared to the 182 agents allotted the 971st.** This great disparity reflected what those in Korea felt was the all too prevalent belief of the military planners in the United States that operations in Korea were relatively unimportant in the world-wide scheme of things.

The severe lack of personnel in the 971st clearly hampered the activities and operations of the Detachment.*** Case priorities took on added significance, and general security checks which carried the last of five priority ratings had to be neglected.****

The 971st also suffered from a lack of personnel trained in the many investigative specialties. Particularly needed was an agent who could operate and fully understand a radio. When a Communist operator was captured, it was impossible to double him back on the North Koreans because of the lack of a trained radioman to supervise the operation.***** DAME and DASE specialists were non-existent and specialists in investigative photography were scarce. Practically nothing in the way of investigative equipment ever reached the 971st.******

Agents of the 971st were required to work long hours to achieve their excellent coverage of the situation in Korea. A tremendous unit spirit and a deep interest in their work saw the agents through their long working hours.*

G2 And General Hodge Appreciate CIC

The obstacles that CIC had to overcome or bypass in the Korean occupation were multifold. But there were some compensations. The 971st was fortunate that the two men who served as XXIV Corps G2, Col. John N. Robinson,and Col. Thomas M. Watlington, understood the problems and recognized the value of CIC.

The degree to which the XXIV Corps G2, in this case Colonel Robinson, appreciated the performance of CIC was shown by his statement: "The 971st CIC Detachment serves as a valuable contact between this headquarters and various political factions in South Korea. Political studies prepared by this unit have been well done and are of great value to the Commanding General, USAFIK, as well as to the American members of the Joint Commission presently meeting in Seoul. In accordance with its basic mission as a security agency, the 971st is following a vigorous security campaign to reduce to a minimum the number of security violations at a time when leakage of information or cases of actual espionage could seriously effect the occupation."**

Praise for the work of the 971st was also found at the top of the USAFIK chain of command. Lt. Gen. John R. Hodge's high opinion of CIC throughout the occupation was mirrored in a letter of appreciation that he wrote after a year of operations in Korea: "I wish to take this opportunity to express to the Counter Intelligence Corps Detachment in Korea my thanks and appreciation for the splenddd work it has done. The task of the CIC has been as difficult as it has been important. The missions of our army of occupation have brought new concepts of counter intelligence operations. The CIC in Korea has met each new problem with an open mind with a perception of the requirements of the occasion. All of this has been accomplished under the additional handicaps of reduced strength and rapid turnover of personnel. The fact that much of the work of the CIC unit must remain obscure because

of its confidential nature, in no way lessens its importance. Timely information is just as important in making sound decisions during the occupational phase as it was during combat. The contributions of your organization to a proper understanding of the political situation, the supression of espionage, subversive activity, and illegal organizations, have been major factors in the establishment of an orderly and peaceful administration for South Korea. Please pass this on to each member of the CIC in Korea."*

General Hodge took a personal interest in the operations of CIC in Korea. It was probably CIC's coverage of the political situation in South Korea that the General valued most, since these political reports were often the only source he had to use as a basis for important decisions.**

Poor Liaison With Provost Marshal

Unfortunately CIC liaison with other areas of the command, particularly the Provost Marshal's office, was far from what it should have been. From early 1946 on, CIC had all the prerogatives of a police agency, including search and arrest. Consequently there were increased opportunities to tangle with the Provost Marshal's office over matters of jurisdiction. A considerable amount of jealously grew up on both sides of the fence and the situation was greatly worsened by the personal differences between Major Reed and Col. John E. Baird, XXIV Corps Provost Marshal.

According to Maj. Marion R. Panell, liaison at the Headquarters level between CIC and the Provost Marshal's office was the poorest he has ever known anywhere.*** However, in Pusan, far away from the squabbles at higher levels, the two organizations were able to establish the liaison essential to their individual missions.****

Liaison with the Provost Marshal in Seoul was hindered by the Military Police's refusal to honor CIC Credentials which should have allowed agents

into areas out of bounds to soldiers. A special Provost Marshal pass was required to enter any off-limits area.*

Other military units and individuals in Korea failed to understand CIC and its mission. Some officers, rather than helping CIC, did their best to steer clear of the organization for fear that their own black market operations would be investigated. Liaison with other units was somewhat improved when Lt Col Joseph Huckins, the Commanding Officer after March 1948, adopted a policy of periodic visits to various local commanders.**

There was also considerable friction between CIC and Military Government officials. Military Government was touchy about allowing CIC to investigate its personnel, and not particularly interested in maintaining tight security, claiming that they disliked such "police state" activity. Often their fears led them to thwart necessary counterintelligence activity. Agents who were in Korea at the time have expressed the opinion that if USAFIK had been able to maintain a tighter control over Military Government, this lack of interest in security matters could have been overridden and CIC's work made easier.

A typical instance of Military Government's obstinacy was the denial to CIC of a boat to patrol port areas in an attempt to cut down smuggling and prevent entrance of espionage agents through the harbor. In spite of General Hodge's approval of CIC's activity in this matter, Military Government felt it smacked of "police state" methods.***

The Danger of Compromise

It is the feeling of many of the men formerly with the 971st that the organization operated too much in the open. Part of this problem stemmed from the regulation that kept agents in OD uniforms without any insignia at all.**** At first CID wore the same uniform, but soon CID received permission to go into civilian clothes. Since CIC was outfitting its men in a uniform worn by no other organization, agents were open to compromise on all occasions.

---

* Interview with Master Sergeant Donald O. Shirley, 12 October 1954, Fort Holabird.

** Interview with Captain Kenneth E. MacDougall, 5 October 1954, Fort Holabird.

**** USAFIK, CIC, Subject: Operational Policy and Procedure, To: All CIC Personnel in Korea, 25 June 1946, (Confidential), (Staff and Faculty Library).

A few specially selected agents, who were investigating Military Government and Army personnel, were allowed civilian clothes. Attempts to get all agents into "civies" were hampered by the misconduct of the first few agents allowed the privilege.*

The distinctive uniform of CIC agents in Korea was only one factor contributing to the unsought notice given to CIC operations in Korea. The police prerogatives and functions given CIC endowed the organization with power never intended for a confidential investigative organization. Some of the members of the organization have described the 971st as a rough and ready outfit that probably interpreted this unusual power too liberally,** and have stated that, especially early in the occupation, operations were too "high, wide, and handsome".***

The failure of some of the agents to recognize the unusual position of responsibility of their Detachment was noted by CIC officers in Korea. In the Monthly Information Report of January 1947, a special recommendation to the CIC Center stated: "Agents should be indoctrinated in the responsibility of Counter Intelligence Corps personnel. Since CIC is a powerful organ in occupied countries; since because of political activity in such countries, agents and confidential informants are imperative; and further, since CIC has almost unlimited powers of arrest, searches and seizures, CIC is too frequently in the public eye. Many individuals in an occupied country like Korea look upon CIC as the one agency to bring them relief from their many grievances. It is therefore essential that each member of the Corps be fully aware of his responsible position, and of the fact that any untoward act that he commits will be known by the populace, reaching those persons upon whom he must depend for valuable information."****

Command Weaknesses

Some agents who served in Korea have noted that the 971st suffered from a lack of leadership during the early period of the occupation. They

**** USAFIK, CIC, Subject: Monthly Report of Information, To: Director of Intelligence, WDGS, The Pentagon, 20 January 1947, /s/ Jack B. Reed, Major, CAC, Commanding, (Confidential), (Staff and Faculty Library).

have described the Commanding Officer from April 1946 to January 1948, as a man of insufficient intelligence experience for this important post. Generally it was his policy to let subordinates take care of all operations. However, because of men like Lieutenant Dow, who was responsible for organizing the Detachment and virtually commanded it from his position as Operations Officer, the inactivity of the CO was not fatal to the organization. It was when the 971st needed someone of high rank to perform liaison functions at upper levels that the Commanding Officer's inexperience was most detrimental.*

Inspections Show Neglect

In the early years of the occupation, the housekeeping and administration of the 971st were not up to military standards. With the arrival of Colonel Huckins, steps were taken to correct the situation.** During March and April 1948, Colonel Huckins personally visited the District Offices to discuss operational problems and inspect local facilities.*** Throughout the remainder of the year, the offices were frequently inspected and rated on condition of buildings and grounds, fire prevention measures, mess management, operational security, condition of unit files, liaison, management of confidential funds and vehicle and motor maintenance.**** That numerous discrepancies were uncovered is hardly surprising in the light of earlier neglect.

The District Offices, because of the personnel shortage, were never completely caught up in their investigative operations. Consequently there had been an almost universal neglect of the housekeeping and administrative matters on which the inspection team from Headquarters rated the local offices.

Section 3

ESPIONAGE IN KOREA

In many respects, the armed conflict that broke out in Korea in June 1950 was simply a new phase of a war that had been going on silently, insidiously, for five years. In its earlier phases, this war made few headlines and drew little attention. But CIC agents in the Korean occupation had known the quiet struggle. It was a war of espionage.

The Communists in Korea tapped two sources of personnel for their espionage activities: reliable sympathizers in the south and ardent followers in the north. The numerous members of the South Korean Labor Party and other Communist organizations in South Korea were already well-placed for clandestine operations, and a group of agents from North Korea were easily smuggled into the US Zone. Although many individuals performed espionage missions on behalf of the Communists, their activities were always controlled by agencies in the Russian Zone.

For initial penetration and continual communication, the Communists exploited the difficult-to-guard, rugged terrain along the 38th Parallel and the lax security in the port areas in South Korea. Agents and messengers found it easy to slip into the American zone on foot or to travel on the numerous small boats that toured the waters near the boundary.

Once the espionage agent was in South Korea, access to information valuable to the Communists could be gained with ease. Espionage could be perpetrated by Koreans hired to work on United States installations as interpreters, boiler men, kitchen help, laundry help and houseboys. The Korean Constabulary and Coast Guard were heavily infiltrated by the Communists, and both organizations were somewhat slow to conduct investigations to rid themselves of these undesirable elements. The Korean Police, in spite of heavily rightist leanings, was also infiltrated with some success. It was not until 1947 that steps were taken, with the constant aid of CIC, to free these organizations of their Red members.

Pass systems at military installations were lenient and were, therefore, exploited by Communist agents. At one time there was a rash of counterfeit passes to military establishments sold through the black market.*

---

* 1947 Annual Progress Report, 971st CIC Detachment, pp. 22-32, (Secret), and 1948 Annual Progress Report, 971st CIC Detachment, pp. 18-22, (Secret), (Staff and Faculty Library).

Many espionage agents did not attempt to penetrate the Military Government of South Korea organizations, but merely wandered throughout the peninsula keeping their eyes and ears open. There were practically no travel restrictions to hinder their movement. Camps, billets and headquarters buildings were in full view and basic order of battle information was relatively easy to gather. For example, on 24 April 1947, CIC agents arrested a fourteen year old boy who had in his possession a detailed sketch of an Army installation which he had drawn himself within easy view of military authorities.* It was also a simple matter to gain information through friendly conversations with American soldiers.

Soviet Officers Brief North Korean Agents

In most cases the agents who came from North Korea were briefed on their missions by Soviet officers. Although there is definite evidence that the North Korean Communists sent a flood of low level agents to South Korea, the bulk of information was gathered by an estimated one hundred highly trained individuals operating directly for the Soviets.** Many of the low level agents, especially the "wandering" type, were capable of collecting rudimentary Order of Battle intelligence, but could not be given a mission to furnish information about political occurrences, industrial and economic conditions, and highly technical matters.*** Experience proved that many of these Koreans turned in reports that were biased, vague and generally incomplete; and much of their work was of slight value.

The ready and willing supply of potential espionage agents in the various Communist organizations south of the 38th Parallel complemented the efforts of the agents from the North. Through diverse means of communication, the information that these men gathered was sent to the Soviets and North Korean Reds. The trading companies in South Korea in contact with the government-controlled North Korean trading companies were almost certainly utilized for transmission of positive intelligence. CIC had valid reasons to suspect groups in the Russian Consulate and the Russian Orthodox Church in Seoul of serving as contacts and messengers. The activity of these probable Soviet operatives was not confined to espionage; their subversive role in South Korea is discussed in Section 5.

*** Interview with William J. McTigue, 23 November 1954, Washington.

Espionage Schools Operated By Communists

Communist efforts to train espionage agents excelled any American attempts to train agents to work in North Korea. The Communist espionage schools were not permanent installations, but appeared in different places at different times. At these schools the students went through a period of indoctrination in Communism, and those who demonstrated a strong feeling for the cause qualified for missions.* Generally all schools required that applicants gain the recommendation of some party leader and possess definite pro-Communist leanings. Educational requirements were usually high.

The courses generally lasted six months, although some were as short as four weeks. In most schools, enrollment was between three hundred and six hundred students, but CIC learned of one school in Pyongyang that enrolled fifteen hundred.**

Reports received by CIC indicated that the major espionage schools were located in Manchuria and operated under strict supervision of the Russians. The curriculum of the school at Tunghua, Manchuria, included Korean language, political science, social science, philosophy, military training, Russian history, communism, materialism, and the world situation, with special training in agitation, terrorism and propagandizing.*** This curriculum was as extensive as any uncovered by CIC. Generally, political science, communism, and techniques of agitation formed the basic courses of the schools.

The impermanence of these espionage schools was remarkable. As soon as one class had finished, a school was likely to be closed and never to be heard about again.

CIC had to search continually for information on these schools to keep abreast of the current situation. All espionage agents picked up and interrogated were questioned at length concerning their training and schooling under the Communists.

An indication of the mobility of the Communist espionage schools may be gained from that fact that the big school at Tunghua, Manchuria, split into two groups when Chinese Nationalist forces began to threaten its existence.

At some of the schools, graduates were given enough identification to allow them to pass through the North Korean border patrols without trouble. The school at Hyesanjin, North Korea, tattooed their agents with small blue dots on the left buttocks and inside the left forearm for this purpose. When CIC learned of these distinguishing marks, this particular identification system obviously became a hindrance to successful operations for the Communist agent.*

Espionage, Sabotage and Miscellaneous Section Handles Counterespionage

Counterespionage was the responsibility of the Espionage, Sabotage and Miscellaneous Section.** Until March 1947, 1st Lt. Wallace K. Wittwer served as Officer-in-Charge of the Section. When Wittwer took charge of the Information Section, his assistant, William J. McTigue, a Department of the Army Civilian, became chief of ES&M. 1st Lt. Thomas R. Carmen served as McTigue's assistant. In addition to the Officer-in-Charge and his assistant, two clerks were assigned to the section. The Espionage, Sabotage and Miscellaneous Section controlled and coordinated cases which were investigated by agents out of the various District Offices.

The first step in counterespionage normally would have been some sort of movement control within South Korea, but Military Government officials considered such control measures to be "police state" methods and prohibited their use.***

However, movement into South Korea was denied to all persons without passports or special permission by USAMGIK Ordinance #49. This ordinance was interpreted to prohibit entry into South Korea by members of the North Korean Police, Constabulary, Coast Guard, and other People's Committee-sponsored groups.****

**** USAFIK, CIC, Subject: Legal Opinion, Unauthorized Movement into Korea To: All District Offices, CIC-Korea, 28 January 1947, (Secret), (Staff and Faculty Library).

In spite of these legal restrictions, it was virtually impossible to stop all entry into South Korea from North Korea; because the rugged terrain along the 38th Parallel could never be guarded adequately.

Border Offices Screen Refugees

CIC agents from the District Offices of Ongjin, Kaesong, Chunchon and Kangnung, all on the border, were allowed to screen persons at refugee centers in order to weed out possible espionage agents. In the ideal situation, the screening consisted of obtaining all important personal information on the subject through rapid interrogation. Usually the information obtained was not checked upon immediately. Except in cases of extremely suspicious persons, the subject's word had to be accepted as truth since there was no evidence available to contradict him. All information was written up in a Summary of Information and forwarded to Headquarters and from there to the District Office nearest the destination of the refugee. Here a check could be made on the activities of the subject, his name submitted to local police to be placed on their watch list, and checks made to verify the statements made in the original interrogation.*

All persons deemed suspicious in their original interrogation were sent to the Seoul District Office for a detailed interrogation.**

A shortage of CIC personnel meant that native Korean detectives, supervised by CIC, often had to handle the routine preliminary screenings. The Espionage, Sabotage and Miscellaneous Section eventually compiled a personal history form for the refugees to fill out, a device which speeded up the operation considerably.***

Travel by boat was a convenient means of entering South Korea, and the District Offices in Inchon and Pusan were instructed to screen, in the same manner as the border offices, all people who came in through these ports. This difficult task could have been performed more thoroughly had CIC been authorized a PT boat to intercept vessels coming in from North Korea. General

Hodge, at one time, approved CIC's request for a PT boat, but Military Government refused to allow CIC permission for this extra harbor control measure.*

Koreans Useful In Counterespionage

CIC could not perform its counterespionage mission alone, partly because of the language barrier and partly because of the scarcity of qualified agents. Of particular value to CIC were the members of the North West Young Men's Association, NWYMA, a youth organization composed of men who had fled from North Korea. All members had to have suffered personally at the hands of the Communists. Unfortunately this organization was heavily inclined toward brutality in its attempts to even the score with its enemies; but the members knew enough about the top North Korean Reds to make it imperative that they be utilized in counterespionage operations under strict CIC supervision. Often investigations would be initiated when an NWYMA member would spot a man he recognized as a North Korean Red on the streets of South Korea.**

CIC District Offices were ordered to divide their cities into sections and assign trusted members of the NWYMA, other rightist youth groups or local police to patrol the areas. As these men became acquainted with the activities of almost every individual in their areas, they soon were able to spot strange persons. In this manner CIC maintained an informal check on travel within South Korea.*** CIC also had informants in all the many refugee organizations on the lookout for suspicious persons.

When the report of a suspected espionage agent was received by CIC, the usual investigative procedures were followed with the exception that Korean personnel were used for surveillance.****

Liaison With National Police Important

Liaison, especially in a strange country like Korea, forms an important part of any counterespionage system. CIC's most valuable contact was the

Korean National Police, who had been given autonomy by Military Government with only advisory powers left to the Americans.* Early in the occupation when CIC investigative duties tended to awe all Koreans, good liaison with the police was almost a matter of course, and all cases of suspected espionage were turned over to CIC immediately. Later, the rising tide of nationalistic feeling brought a degree of opposition to all Americans and liaison with the police inevitably suffered somewhat as the months wore on. But throughout the occupation they remained generally cooperative.**

A major block to complete cooperation was the police awareness that CIC was constantly checking their activities in order to assure the command that justice was being done. Occasionally they tried to avoid CIC supervision and balked at the necessity of cooperation. In this respect, the police were unwittingly protected by the American Police Advisors, who, without a full understanding of the situation, assumed a protective attitude toward the Korean police.***

In view of the fact that CIC was investigating the police, it seemed perfectly reasonable to the Koreans that they should begin to investigate American activities in turn. On several occasions the Korean Police were discovered in the process of collecting positive intelligence on the American forces.**** One particular instance occurred in the Chunchon area where the local US Army unit reported that the Korean police were gathering all available information on American troops and installations. When questioned about this activity, the police claimed that there had been a serious misunderstanding of an order and that overzealous policemen had extended their duties too far.*****

At times, the police also became over enthusiastic in their treatment of leftist espionage agents. It was not rare for the police to turn over to CIC men who had confessed under physical duress. One such case came up in February 1948, when investigation revealed that the Yohyondong police had beaten confessions of espionage out of two men who had recently crossed the 38th Parallel.

***** USAFIK, CIC, Subject: Weekly Information Bulletin #34, To: All District Offices, CIC-Korea, 11 December 1947, (Secret), (Staff and Faculty Library).

It was established that these two men were simply refugees seeking to live with relatives in Kaesong.* Although such strong arm tactics by Korean Police hindered CIC's counterespionage activities, the fine cooperation of the National Police in bringing innumerable espionage agents to the attention of CIC more than balanced their occasional excesses.

Although the information that units of the Constabulary, the South Korean military force, could supply CIC pertained to strictly local matters, liaison with this organization was a necessity. The Constabulary itself was a prime target for infiltration by espionage agents. Eventually, with the aid of CIC, some of the Communist elements in the organization were eliminated. However, the great number of leftists in the Constabulary and a conflict over jurisdiction between the police and the Constabulary hindered CIC attempts to establish a working liaison with both organizations at the time.** The Weekly Information Bulletin of 10 July 1947 lists seven instances where the police had deliberately given CIC false reports concerning subversion within the Constabulary. District offices were urged to trace all reports on the police and the Constabulary to their sources and to be on the alert for signs that the rivalry was becoming more intense. There was at this time some concern over the possibility of open conflict between the two organizations, and CIC had to tread a narrow path in trying to maintain important liaisons even while investigating the unhealthy rivalry of the two Korean agencies.***

The problems of liaison with local agencies were not restricted to CIC's counterespionage campaign. But it was in this effort and the detection of subversion that liaison paid off its dividends.

A significant weapon against the Communist espionage moves proved to be the relative economic abundance of South Korea. Well-indoctrinated agents from the north often did not get a decent meal until they arrived in South Korea. Some North Korean agents came south with every intention of spying, but after sizing up the situation, chose to use their funds to get a long-sought vacation or set themselves up in business.****

Some Offices Slow To Establish Networks

A major problem for the men who worked at Headquarters was the fact that, in several instances, District Offices were laggard in establishing effective counterespionage systems.* Some District Offices merely relied upon the information volunteered by their informants and failed to set up a counterespionage network using rightist youth groups, including the NWYMA.** At the other end of the scale, the District Office foremost in "catching spies" was the Kangnung District Office, with Capt. Donald H. Egan as officer-in-charge. An extremely efficient counterespionage network coupled with an advantageous location for trapping spies just south of the 38th Parallel on the east coast of Korea, made the Kangnung office a leader in counterespionage. The majority of the agents picked up by the Kangnung office were not professional spies, but were persons engaged in other businesses whose travels between North and South Korea enabled them to pick up information of value. Of course, such espionage was considered potentially as dangerous as that performed by professionals.***

The problems that CIC faced in its counterespionage operations were numerous and varied. Some of the principal difficulties were listed in the document, "Soviet-Communist Inspired Espionage: language barriers; the hostility of the populace toward the occupation; the confused political situation; insufficient confidential funds;**** freedom of movement across borders; the police-Constabulary rivalry; the shortage of American personnel; and the rapid turnover of Occupation personnel.*****

During 1947, the only year for which statistics are available, 339 espionage agents were reported by name to CIC. Of the 149 apprehended, thirty five were cleared, thirty were proved guilty, forty three were pending further development, and the investigation of forty one carried over to 1948.******

To illustrate Communist espionage techniques in Korea and CIC's counter-espionage activities a number of specific cases are outlined in detail here. In passing, it should be noted that several of the cases presented in the Section on subversive activity also involved espionage as well.

* A detailed account of the work for CIC is not available.

** "Specific Case No. 8" , From USAFIK, CIC, SUBJECT: Soviet Espionage Agent, 29 February 1948, (Secret), (Staff and Faculty Library). This document was prepared in Korea and sent to the CIC Center in compliance with a request for informal summaries of interesting and important cases.

Has Unusual Motive

A majority of espionage cases in Korea involved low-level agents sent into South Korea with vague and general assignments. The motives of these agents covered the full-range of human feeling and were frequently somewhat bizarre. motive for espionage was, at the least, unusual.

*Monthly Report of CIC Activities, To: Chief, CIC, Holabird Signal Depot, Baltimore 19, Md., 1 June 1948, from the 971st CIC Detachment, /s/ Joseph Huckins, Lt Col, QMC, Commanding, (Secret), (Staff and Faculty Library), and USAFIK, CIC, Inchon District Office, "Memorandum For The Officer In Charge", 14 May 1948, Subject: _ Interrogation of, (Confidential), Log Number 00001523, CICCF Document number 1463584.

On 7 April 1948, a policeman, who had been befriended by CIC agents, picked up a border crosser named Kim Sung Ki. In Kim's possession was a document written by one Shizui Kato in Seoul to the North Korean People's Committee Information Section concerning the disposition of United States troops in South Korea. The policeman notified the Seoul District Office and Shizui Kato, an attractive Japanese housemaid in the home of a South Korean government official, was arrested on charges of espionage and turned over to CIC for questioning. The investigation was handled by S/A James G. Villyard.

When arrested, Shizui carried a letter with her addressed to a young man in Seoul with whom she had apparently consorted. In part the letter read: "Anyway, I shall never feel ill toward you.... I know too well that a man's temporal passion is always too strong to control. Nothing follows it. I am wandering around uncertainly, looking for the ideal husband and happiness. Even if I am a pitiable woman, I cannot throw away my beautiful ideas. Indeed real happiness in this world comes only when a man and a woman are one."

Shizui was not the least bit interested in telling CIC of her espionage activities, preferring to dwell on a sentimental account of her past lovers. She had been married to a poor Japanese who had died in the war, leaving her two children to support. Shizui, then living in North Korea, had to obtain North Korean citizenship before she could go to work. She had no interest in returning to Japan "to live in a defeated country." The North Korea People's Committee Information Section promised Shizui North Korean citizenship, a good job, and a good husband if she could first prove herself by spying in South Korea. This offer from the Communists was enough to set Shizui in motion. She crossed the 38th Parallel in March 1948 and soon obtained employment in the household of Chi Chul Keun, Head of the Fisheries Section of the Department of Commerce and Industry. Her general mission was to gather information on American Intelligence agencies.

She often met her contact man in Seoul's Pagoda Park. After the encounter, they would go to a nearby Chinese resturant where she passed on her information and received further instructions. The contact man was never located by CIC.

Shizui knew surprisingly little about her employers. Her instructions and methods of contact were not unusual, but her attitude toward her spying activities forced the interrogation to last two days. Shizui cried when she signed her confession, realizing that she was twenty-six and another attempt to get a husband had failed miserably.*

4037

Kim Su Min And His Mission

Recognizing that knowledge of the enemy's prime intelligence targets is always a sound basis for establishing security measures, CIC agents in Korea made certain that captured enemy agents were interrogated at length concerning their specific missions.

Particularly valuable in this respect was an interrogation of Kim Su Min in January 1947. Kim was an eighteen year old agent whose mission had covered such an extensive range of intelligence targets that it was used as an example by the Espionage, Sabotage and Miscellaneous Section of what the North Koreans considered important.

Kim Su Min confessed that he was to seek information on the following subjects:

(1) The organization of the United States Military Government.

(2) The people's opinion of the Military Government.

(3) Details concerning employees of the Military Government.

(4) Location of Military Government warehouses.

(5) Location of United States Army units.

(6) Information on military equipment, especially electric cars, rapid fire guns, and airplanes.

(7) Markings on United States Army trucks.

(8) Kinds and number of weapons being imported from the United States.

(9) Sea and land transportation.

(10) Whether food was being shipped from South Korea to foreign countries.

(11) System of food distribution and its result.

(12) List of manufactured products and conditions of the factories.

(13) Capacity for producing important products.

(14) Popularity of Communism in South Korea.

(15) Activities and working conditions of anti-Communists who escaped from North Korea.

(16) Articles printed in newspapers concerning the situation in North Korea.

(17) Addresses of high political officials.

(18) Whether or not there were any political parties for the organization and education of young men.

(19) Information concerning the children's education system.

(20) Whether Koreans coming south were smuggling any Soviet Army material such as arms, etc.

(21) Whether any passport was required for travel.

(22) Whether spies had been sent to North Korea; if so, their number and political affiliation.

(23) Information concerning any conditions that were different from those in North Korea.

Kim Su Min believed this information was to be collected for the time that the north and the south would fight, although he said this subject was never talked of by officials in North Korea. Rumors, Kim stated, were current that the presence of South Korean spies in the north prevented official mention of the coming war.

The Life And Travels Of A Communist Spy

Kim Su Min had six years of primary school education from 1937 to 1943. He attended a Communist political school in Hakoso, North Korea, in December 1945 and upon graduation joined the Democratic Young Men's Association. Soon he was recommended for espionage work and briefed in a group which contained eight other young men, all of whom received targets identical to Kim Su Min's. The young men were to explain that they had come from North Korea because conditions in the south were better; to try to get jobs; and to make friends with Military Government employees.

After crossing the 38th Parallel together, the group split up, with Kim heading for Seoul where he arrived on 18 August 1946. During his subsequent travels, Kim covered the length and breadth of South Korea. He had trouble finding employment, his longest job being in November 1946 when he worked about a month in a leather factory in Seoul.

It was during this time that Kim decided to forget his mission and not return to North Korea, at least until he had earned some money. During December 1946, he continued his vagrant ways until he was finally apprehended at the railroad station in Chonan on 15 January 1947 by a policeman who thought him suspicious looking and, upon searching him, found a travel map of South Korea.

The case of Kim Su Min has been selected primarily to illustrate the intelligence targets of the North Koreans that were included in the typical agent's mission. But the account of Kim's travels is highly significant since it demonstrates the ease with which people could and did circulate in South Korea. The lack of adequate travel control was a serious defect in the American counter-espionage system; in Kim's case, it ironically proved a boon. The freedom allowed in the South and the hope of economic success had encouraged this agent to forget his espionage task. Kim had apparently made up his mind to stay.*

Comes By Sea

The Communists in dispatching agents to South Korea were little concerned with the mode of transportation their operatives selected. What did matter was that the agents arrived safely. Most of the agents crossed the 38th Parallel on foot, a few came by sea.

A typical case of a sea-faring agent began on 12 April 1947 when a confidential informant of the Mokpo Sub-office brought information that a ship recently arrived from Dairen, Manchuria, was hiding in a cove along the coast near Mokpo. CIC discovered the ship exactly where it was reported, took it to Mokpo harbor and arrested the six crew members. Investigation revealed that of these six only one man, , was actually engaged in espionage activities. The remaining members of the crew were Chinese who spoke little if any Korean. gave CIC a list of seven other Koreans, who like himself, were agents working directly for the Soviet NKVD.

It is interesting to note that several months later, on 20 October 1947, CIC agents from the Mokpo Sub-office arrested two espionage agents who had

*"Memorandum For The Officer In Charge," From USAFIK, CIC, 7 February 1947, Taejon District Office, Subject: Kim Su Min, 540 Wal Kun Tae Ri, Hakoso Myun, Puk Chung Gun, Ham Kyung Namdo, (Confidential), file number 4-130, and "Memorandum" from USAFIK, CIC, 28 July 1947, Subject: Soviet Communist Inspired Espionage, (Secret), file number 14-00, (both documents from Staff and Faculty Library.)

recently been smuggled in aboard a boat from Manchuria. These two men were suspected of working for the Soviet Naval Intelligence Office.*

In Section 5 (Subversive Activity in Korea) there is a discussion of illegal Communist trading activities. The smuggling in of espionage agents by sea was closely linked with the trading companies in North Korea and their leftist contacts in the American zone.

South Korean Communists Involved In Espionage

Up to this point the specific cases outlined have involved espionage agents from North Korea. Espionage was also conducted on a large scale by the various Communist organizations in South Korea, whose work eventually was relayed to Soviet agencies in the north. CIC had strong reason to believe that the major contacts between the Soviets in the north and the Communist organizations of the south were the Russian Consulate and the Russian Orthodox Church both located in Seoul, and the South Korean companies involved in trade with North Korea.

A major case of espionage conducted by South Korean Communists began to unravel in August 1946 when four Koreans, including two lieutenants of the South Korean Constabulary, were apprehended as they attempted to cross the 38th Parallel into North Korea with charts containing much information on the Constabulary in South Korea. When subsequent investigation disclosed the name of Kim Sei Young, head of the political affairs section of the People's Party, CIC raided this individual's house ostensibly searching for concealed weapons. The raid uncovered five pistols, but more important were the numerous documents picked up. Kim had gathered lengthy but not too reliable information on United States Army installations and units; and detailed information on the Constabulary and Coast Guard, Military Government and the police.

The home of Lee Kang Kook, a member of the general standing committee of the Communist Party, was also raided on a similar pretext. This raid uncovered a map of harbor and naval installations in South Korea, reportedly prepared by an official of the Korean Coast Guard. This finding led, in turn, to a raid on the Communist party headquarters where more evidence of espionage work was found. CIC had been unable to apprehend either Kim Sei Young or Lee Kang Kook during the raids, but on 8 September 1946 warrants were published for their arrest as well as the arrest of Pak Heun Young, the head of the South Korean Communists. All indications were that this espionage ring

* "Memorandum" from USAFIK, CIC, Subject: South Korea, Actual and Suspected Espionage Agents in, 27 March 1948, File number 14-00-L-1, (Confidential), (Staff and Faculty Library.)

was reporting to Kim Il Sung, the Soviet's puppet ruler of the North Korea People's Government.

Evidence that South Korea Communists had heavily infiltrated the Constabulary quickly became "old hat" to CIC. Perhaps the most positive indication was obtained in Pusan on 8 September 1946, when captured documents revealed that the Communist Party had a fairly complete list of Constabulary members, many of whom were indicated as Communist party members.

In May 1947 seven members of the 3rd Regiment of the Constabulary were convicted for divulging classified information to an unauthorized source and also on the charge of forming a secret Communist cell within their regiment.* Cases of this sort were numerous.

Some Frustrating Experiences

The romance with which story-tellers surround espionage is lacking in the vast majority of actual cases. In the specific cases already outlined here the drudgery of interrogating often reluctant individuals tended to dull the interesting story that the suspects eventually got around to telling. But not every lead pointed to an espionage agent; not all people interrogated were spies; sufficient proof was often lacking to convict persons suspected of spying; and enemy agents often managed to escape before CIC could apprehend them. A few of these frustrating experiences appear below.

The MP's of the 1st Battalion, 17th Infantry, on 16 October 1947, arrested Pak Ro Sun and Shin Hyun Jung of Onyang when they uncovered some classified documents during a routine search for stolen American equipment. The documents apparently had been taken from a trash pile in the vicinity of the American billets. Investigation revealed no evidence of intentional espionage on the part of the two Koreans.

CIC also spent considerable time investigating Lee Yung Chun who had been arrested on 7 June 1947 for using a forged pass. While suspicious of anyone in possession of a forged pass, CIC could prove nothing in regard to espionage activity in this instance.

---

* "Memorandum" from USAFIK, CIC, Subject: Soviet Communist Inspired Espionage, 28 July 1947, File number 14-00, (Secret), (Staff and Faculty Library.) This study was prepared by the Special Squad, 971st CIC Detachment.

Koreans were naturally curious people and questions by bonafide espionage agents were not readily discernible from friendly questions about troop disposition.

Kang Mong Kwi of Yosu was arrested on 6 August 1947 for asking a guard of the 2d Battalion, 20th Infantry Regiment, how many guards there were on the post. CIC investigation failed to disprove Kang Mong Kwi's statement that he was conversing with the guard to improve his English.

In the same vein, on 21 August 1947, Chung Yung Chai was apprehended as he was taking pictures of road construction equipment belonging to the 2d Engineer Construction Battalion. There was nothing to contradict his story that he was taking a picture of a rock-crusher to test a new camera.

In a more humorous light, on 4 December 1947, Yoon Chong Tam, an employee of the mess hall at Kimpo Air Base, was arrested by police for singing the "Red Flag Song" while at work. Interrogation brought to light the fact that Yoon Chong Tam was singing the "Red Flag Song" because he liked the tune, but had no real sympathies with the words that had been put to the melody.*

CIC files became full of complaints concerning people who could not be located or were known to have escaped. Many complaints turned out to have no foundation other than a personal grudge. While CIC apprehended many espionage agents in Korea, there remained the unanswerable questions: "Who got away with how much?" and "Of what value was it?" Any conclusions here would be mere conjecture.

Section 4

SABOTAGE IN KOREA

During the Korean occupation, CIC never had to contend with an active and intensive sabotage campaign, established with long range objectives. The sabotage which occurred was on a local level and little more than an accompaniment to leftist uprisings, demonstrations, and protests. As such, it could be considered merely one phase of the Communists' subversive activity. The overall history of the Korean occupation clearly shows that outbreaks of subversion and sabotage usually occurred at about the same times and in similar proportions.

In some cases, sabotage attempts seemed designed to show strength and gain support rather than to cause great destruction. This modified sabotage effort had strange consequences. In one case, a railroad track was no sooner damaged than the saboteurs reported the deed to the authorities. The actual damage had been a secondary consideration.*

The One Major Sabotage Plan

Insufficient planning and a shortage of sabotage materials made Communist thoughts of serious destruction impractical. No large scale schemes progressed beyond the theoretical stage, and the one major plan for organized sabotage uncovered by CIC was never put in operation. This program of organized sabotage was to have been one of the activities of the People's Liberation Army, an underground group that CIC squelched before it had taken shape.

According to the plans, orders for sabotage would have been initiated at the headquarters of the People's Liberation Army. The aim was to inflict damage at different times on certain sensitive areas greatly removed from one another, so that the sabotage acts would not seem to be the work of a closely-knit group. Immediately after completing his mission of destruction, each saboteur was to make his escape to North Korea along previously mapped routes. When all the saboteurs had completed an assignment, the first would have then returned and the cycle would be completed. Such a procedure would have made it difficult for any investigating agency to tie all the acts together and lay suspicion on the army.**

** USAFIK, CIC, "The People's Liberation Army", Specific Case #6, 28 February 1948, (Secret), (Staff and Faculty Library).

[redacted]

The People's Liberation Army was uncovered by CIC long before they could begin such operations. CIC was never able to detect any organization using plans similar to these proposed waves of sabotage.

Sabotage of Communications Most Successful

The major targets for sabotage by the Communists were communications, bridges, power, rail lines, locomotives and roads. Sabotage of industry, usually a prime consideration, was not essential to the Communist cause. Since most of the power plants were located in North Korea, the Communists could easily put a damper on South Korean industry without resorting to explosives.*

On the whole, sabotage of communications proved to be the most successful of the Communists' efforts. Numerous telephone and telegraph lines were cut or poles supporting these wires were sawed down. CIC experienced considerable difficulty with investigations of sabotage of telephone lines. Korean people, without any intent to sabotage, frequently stole the poles, a ready source of firewood, and lengths of wire, which they could use as a substitute for rope. When a wire was cut, sabotage was a safe conclusion; but when considerable yardage was cut away, there was always the possibility of theft.**

Sabotage of bridges was confined to small structures that were located in rural areas and was accomplished by sawing supporting timbers or setting fire to the bridge. The action was usually perpetrated by mobs.

In a few instances, roads were sabotaged by digging ditches or large holes or by placing obstructions over them, but most such attempts were ineffective.

In an effort to disrupt power, arson attempts, mostly unsuccessful, were made at transformer stations. Occasionally sabotage of switches caused power to go off for a few hours.

Most railroad sabotage was accomplished by loosening spikes and disjoining rails. In one instance, during the Yosu Rebellion in late 1948, a train was derailed by this method.*** On 1 March 1947, a train was derailed

[redacted]

in Okku Gun when it struck a concrete block that had been placed on the track.*

In February 1947, a railroad worker found a rock wedged in a signal switchbox near Taegu, in such a position that the switch would neither open nor close, a malfunction which caused a clear green signal to flash to all trains on the track. Fortunately the switchman removed the obstruction before any damage resulted. The CIC agent who investigated the case reported that this could only have been the work of an experienced saboteur who was familiar with railroad signals. On 27 July 1947, a railroad switch in Inchon was surreptitiously opened and a train crossing the unaligned tracks was wrecked. The saboteur was never apprehended.**

In a pre-election disturbance on 8 May 1948, a band of North Korean-directed Communists completely destroyed two locomotives by deliberately driving them together in the Taejon Railroad Yard.*** Other attempts to sabotage locomotives were generally amateurish and highly ineffective. In most cases, small, essential parts were removed, but the parts could easily be replaced and the locomotives quickly put back in operation. Sabotage methods included the mixing of foreign matter with the oil used in the locomotives to cause engine wear and stoppage.****

CIC Investigates Faulty Workmanship

Faulty construction and poor operation and maintenance by Korean employees of Military Government may have been in some cases deliberate sabotage. An interview with Lt. Col. Hans J. Waller, Director of Post Engineers, USAMGIK, on 28 December 1946, disclosed that long-range, minor acts of sabotage were being committed through faulty boiler installation, and that boilermen probably were being paid for causing breakdowns. He also thought that contractors were being bribed by subversives to construct weak and dangerous buildings for the U. S. Army. No proof of sabotage existed, but there were many instances of barracks fires that resulted from imperfect

acceptance of the presence of these subversive groups has added greatly to the work of this office. Add to this the fact that at any time, so as to further their own ends, groups not usually considered subversive have employed a bit of sabotage (of the occupation mission) in order to obtain some desired effect, you will account for the added burden on this office. *"

Like everything else in Korea, sabotage had at all times an important political aspect. The Political Section's reports brought into focus areas of future riots and terrorism; acts that were likely to be accompanied by attempts at sabotage. Often Korean informants were able to brief CIC on possible problem areas.

Gasoline and Cigarettes Don't Mix

CIC investigated any disaster which had the slightest appearance of being the work of saboteurs. Of all the disasters that CIC investigated, only about twenty per cent were clearly cases of sabotage, but the pseudo-sabotage incidents required as thorough consideration as the small percentage that actually were premeditated sabotage. **

One case where a CIC investigation led agents to a "reasons other than sabotage" conclusion occurred in September 1947 in Pusan. In the search for the causes of an explosion and burning of a gasoline lugger in Pusan harbor, agents of the Pusan District Office learned that, while fuel drums from the boat were being unloaded, the captain of the ship had tossed a cigarette overboard. Some of the drums had been leaking gasoline, and the fumes were suddenly ignited by the cigarette, causing the explosion. *** At least this case reached a conclusion. Many others were inconclusive and frustrating, since sabotage often could neither be proved or disproved.

Other cases reached conclusions that were discouraging to the investigating agents. In October 1947 at the Post Engineers on Camp Sobinggo in Seoul, a truck was put out of commission when someone slipped sugar into the gas tank, an occurance which could hardly be accidental. This investigation turned up the fact that the sabotage was the work of a neighboring outfit with considerable dislike for the engineers. ****

CIC Checks Production Slowdowns

All sabotage investigations, however, did not involve physical disasters. Major strikes were always investigated as symptoms of "psychological sabotage." When production rates in an industry dropped to a great extent, CIC was often called in to investigate the possibility of deliberate slowdowns by the workers. One particular case was initiated as a result of a personal request from the American advisor of the Korean Electric Power Company who wanted to know the reasons why the Yongwol-Machari coal mine was suddenly not producing enough coal to operate the electric power plant near the mine.

S/A Harold Hummel, the 971st's traveling trouble shooter, was sent to investigate on 27 February 1948. His inquiries were not completed until early April. There were numerous reasons for the slowdown, and interference by subversive elements was only one cause. Hummel found dissension between the mine superintendant and his assistant, low wages and other typical worker complaints, lack of equipment, interference from the National Police, and either a lack of supervision or interest on the part of the American advisors to be equally important causes for the production lag.*

The Koreans, with years of experience in sabotaging the Japanese, were able to conduct a considerable number of minor sabotage efforts which apparently were isolated rather than the work of a special organization. CIC had to remain alert to keep acts of saboteurs and vandals at a minimum. At the same time, the 971st main concern was to prevent any organized sabotage program from gaining solid footing in South Korea. The four year record of CIC operations in Korea indicates that this aim was realized.

Section 5

SUBVERSIVE ACTIVITY IN KOREA

Investigation of subversive activity in Korea was primarily the responsibility of the Espionage, Sabotage and Miscellaneous (ES&M) Section. The domain of this section spread over the wide range of "acts inimical to the Command or to American aims in Korea." Only one major category of investigations for subversive activity was not completely within the jurisdiction of the ES&M Section; some cases that involved US Military and civilian personnel suspected of subversion were handled by the Security Section.

The 971st's investigations of subversive activity centered around attempts to discover the Communist plans and operations designed to lead eventually to Red domination of all Korea. CIC was particularly interested in uncovering the South Korean Communists' connection to the "World revolution."

South Korean Reds Linked to Cominform

Investigation of the Cominform and the overall Communist design for Asia was initiated as a result of reports from the 441st CIC Detachment in Japan. Attempts were made to connect Communist activities in Korea with the party's operations in all Asia.

During May 1947 a meeting of the top Communist party members of the various races and small nations of Eastern Asia was held in Harbin, Manchuria. South Korean representatives were present at this parley and the 971st CIC Detachment spent considerable time looking into the results. The following quote from a CIC report, written a year later in May 1948, serves to point up Korean Communist connections with Moscow: "Korean Communists have welcomed the formation of the Asiatic Cominform and are impressed by its decentralization of power. Representatives of the South Korean Labor Party and the North Korean Labor Party attended the Cominform meeting in Harbin. Several members of the Korean Communist party have been sent to Moscow for liaison duty. A liaison section has been established between North Korea and South Korea by Pak Heun Young.* As a result of the Harbin meeting, the best tactics to be used to further the influence of the Communist Party of the Far East were formulated. It was also decided to enlarge and reinforce the Communist intelligence service throughout the world. Closer coordination between the Communist Parties of

* Pak Heun Young was at this time in exile in North Korea, having escaped in 1946 to avoid arrest by CIC.

the Far East with regard to collection of reports and the exchange of viewpoints has been established. The SKLP has established an intelligence service in South Korea as a result of the Harbin Conference."*

Although tangible evidence of the Korean Communist Party's participation in the Cominform was notably scarce, CIC was able to piece together a Cominform policy for Korea that seemed to possess the following six components:

(1) In view of the insufficiency of training and discipline of Korean Communists, retraining and stricter discipline is called for.

(2) In order to dissuade the Korean people from the anti-Soviet feelings instilled under the education system of the Japanese, an extensive education program will be launched.

(3) With a view to replacing revolutionary intellectuals, who constitute the core of the Korean Communist Party with class-conscious laborers and farmers, every effort will be made to imbue the working class with class-consciousness.

(4) The Korean Communists will be indoctrinated with the Marx-Lenin teachings in order to discourage the tendency toward factional strife.

(5) In order to promote mutual defense, military alliances between Korea and other Communist dominated countries in the Orient will be encouraged.

(6) A Communist economic bloc will be established by fostering closer economic cooperation among the Communist dominated countries of the Cominform.**

There were indications by 1948 that some of the Korean Communists had come to feel that Korean independence should precede world revolution. These men tended to disapprove of the Cominform, feeling that it interfered too strongly with domestic affairs. This minority also apparently looked with fear on the eventuality of Korea becoming a Russian republic should the Cominform be given too much control over KCP operations.***

CIC Uncovers "Master Plan"

The Communist master plan called for ultimate domination of all Korea. Early in the occupation, in one of their most important discoveries of the whole occupation, * CIC acquired the sketchy outlines of this master plan. The source considered as "reliable," was a Korean undercover operator in a leftist organization with connections that included the top Red leaders. CIC, in the report dated 29 June 1946, evaluated the information as "possibly true."

In North Korea within a period of two and not more than three years, a minimum of 500,000 Koreans were to be given thorough military training. This was to be done not only in the various "armies," but also in police organizations. As many as possible of these trainees were to be infiltrated into various government agencies and the National Police in South Korea. The Communists in South Korea were to build up membership and achieve a tight organization. Then small groups planned to publicly dissociate themselves from the party and go underground. The general Korean public and the Americans were to learn of various Communist party factions. The party was to seem to be losing strength, thus making the Americans willing to compromise and leave South Korea confident that all was well. Once the Americans had left, the Reds were to revolt and soon take over the government. **

This master plan was frequently referred to by the ES&M Section during the occupation and it is the feeling of William J. McTigue, chief of the section, that it was fully carried out as intended. *** If true, the faction of the KCP that stood against the Comintern was "smoke" to deceive the Americans.

Whatever the actual inner workings of the Communist party may have been, the war that eventually came to Korea was not a surprise to the CIC agents who had been stationed there. Captain Kenneth E. MacDougall stated that a conservative estimate among the agents in Korea during the occupation was that six months after the Americans left, the north would invade the south. All during the occupation there were border skirmishes of a minor nature. Reports that the Reds were

4052

going to attack were frequent. U. S. intelligence had all the information on the North Korean army except their planned date of attack which the Communists themselves did not know. This information went back to the United States in periodic reports from General MacArthur's G2.*

CIC Investigates Activities of Russian and Foreign Nationals

Indications were so strong that the Soviet Consulate in Seoul was a contact point between the Russians and the South Korean Reds that the agents of the Seoul District Office, under case control of the ES&M Section, conducted a full time surveillance of the Russian Consulate. This surveillance, headed by First Lieutenant William Walter, kept a "tail" on the Russian officers serving at the Consulate and members of the Soviet delegation to the US-USSR Joint Commission.**

One tangible result of Surveillance of the Russian Consulate (SRC) was the removal of a Soviet liaison officer, Major Forma Fillipovich Korneshev, in July 1947 because of his persistent attempts to gain classified information. Korneshev was caught taking photographs of the 1st Constabulary Training area, which led to his recall from Seoul.***

On another occasion SRC revealed that Anatole Ivanovich Shobshin, a member of the Soviet Delegation of the US-USSR Joint Commission and allegedly the Soviet "expert" on Korea, was a liaison man between the Political Headquarters of the Soviet Armed Forces in North Korea and the leaders of the South Korea Labor Party, The Democratic People's Front and the Laboring People's Party, all Communist front organizations. This expose resulted in the sudden departure of Shobshin for North Korea.****

Another prime suspect was Sergei Zudin, the caretaker of the Consulate compound, suspected of work similar to Shobshin's.*****

A Russian Colonel Visits CIC Headquarters

One of the more unusual incidents of the occupation occurred in connection with SRC investigations. On 21 September 1947, the surveillance team picked up a USSR jeep leaving the Consulate with three occupants, a Russian soldier and two Koreans. At several points during their journey, the jeep stopped and the Russian driver lifted the hood of the vehicle, apparently to make repairs. Meanwhile his two Korean friends got out and wandered into the woods where they made contact with Koreans who had been loitering in the area. Each time they concluded their business quickly, rejoined the Russian, and continued the journey. When the two Koreans left the jeep after its return to town, the CIC agents apprehended them and took them to Headquarters. The two Koreans, Pak Gerasimovich and Yan Ke Hen, claimed to be interpreters for the Soviet Delegation to the Joint Commission, but a Russian-speaking Korean in the employ of CIC claimed that Pak was actually a Captain in the Russian Army. After the two had been interrogated, they were taken to the Soviet Consulate to verify their claim of being interpreters. Immediate attempts were made to arrest the CIC agents, but cooler heads prevailed and the Russian Colonel who had ordered the arrest decided to take the matter up at the "police station" where he insisted that his men had been "brutally beaten." The agents sped back to Headquarters, arriving about a minute and a half ahead of the Russian Colonel. Quickly the Headquarters was darkened. Lieutenant Walter stationed himself by the door, loaded to the teeth with a variety of weapons. Several other agents stood behind a one-way glass where they could see the impending scene but not be seen themselves.

The Russian Colonel was told that he could not enter the building; after a lengthy argument, he gave up his attempt to see the inside of CIC Headquarters. The Colonel warned that he would tell his General who would be sure to see that justice was done.

The Russians, flushed with the success that they had previously experienced in entering American military installations, had apparently seen an excellent opportunity to gain access to the CIC building by using verbal intimidation.*

Orthodox Church Also Under Surveillance

Concurrent with SRC CIC investigated the activities of the small Russian colony which lived near the Russian Orthodox Church and the Consulate building

4054

in Seoul. Nominal head of the colony was Archimandrite Policarp (Kondrativitch Georgi Primax), who was not actually an ordained priest and who never possessed a united congregation. Policarp, however, was dominated by his mother, Evfimia Primax, and a well-educated high-born woman named Madame Anna Pavlovna Yakovlov. The latter was especially instrumental in keeping him installed in his position in spite of much opposition from church members. This colony was first brought to the serious attention of CIC during an investigation of the disaffection of an American soldier who had close contacts among the Russians.* It developed that the church colony was probably serving as a contact and coordinator of activities for Communists in the south and their masters in Pyongyang and Moscow.**

Policarp was eventually arrested by South Korean authorities in 1948,*** and Madame Yakovlov was declared "persona non grata" by Seoul authorities in October 1949 and forced to leave for North Korea.****

Counterfeiting Case Hurts Communists

The first major indication of the truly vicious nature of the Communists in Korea came in May 1946 when police and CIC agents broke the Chung Pan Sa counterfeiting case.* For financing party activities, the Communists had resorted to counterfeiting Bank of Chosen notes. The currency was printed in the building that housed the Communist headquarters and on plates from a Communist controlled shop, the Chosen Chung Pan Sa. Investigation by CIC implicated Lee Kwan Sool, head of the Finance Department of the Communist Party, and Kwan Oh Jik, editor of a Communist newspaper.** CIC investigation of the counterfeiting case did not cover its purely illegal aspects. CIC's interest stemmed from the fact that the operation was financing Communist subversion.

The Communist Party received much adverse publicity when the results of the case were made known. They lost a sizable number of valuable sympathizers, and found themselves not trusted by MG from that time on.*** In the face of these harmful effects, the Communist denial of guilt could be expected to be strong. One document claimed that the counterfeit case had been "composed... for the purpose of having the Communist Party lose its prestige," and the subsequent trial was labeled "black and unfair."**** The Communists were right about one thing. The exposure of the case did result in a considerable loss of public prestige.

Continued investigation indicated that the South Korean Communists had given up their counterfeiting as a result of the adverse publicity. A logical conclusion, especially since new counterfeit currency continued to appear on occasion, was that the Communists had transferred their operations to North Korea with the bills being shipped into South Korea.*****

***** 1947 Annual Progress Report, 971st CIC Detachment, (Secret), Staff & Faculty Library.

This case which pointed up the unscrupulous nature of Communists operations in South Korea led to the verbal request of the G2, USAFIK, on 22 July 1946, for a complete chronological listing of all illegal and destructive activities of the Communist Party in South Korea since the beginning of the occupation.* In bringing to the attention of everyone the fact that the Reds would not stop at illegal acts to further their ends, the exposure of the counterfeit activities served as a catalyst in formulating a powerful case against the Communist party.

Currency Smuggled Into South Korea

While counterfeiting was basically a problem of the early years of the occupation, CIC, in the later years, found itself concerned with cases involving smuggling of currency. When the government in North Korea instituted a currency conversion, the Communist party acquired a wealth of Bank of Chosen notes, no longer legal tender in the north, but still perfectly acceptable in South Korea. The North Koreans hoped to finance some of their operations in the south with this currency and consequently began a large scale smuggling operation.**

The following case will serve as an example of CIC findings concerning currency smuggling. On 6 February 1948, investigation was initiated by the Songdo District Office upon information received by the Chunchon city police that North Korean leftists were attempting to smuggle 1,000,000 yen to Chunchon from North Korea. The Chunchon city police had recovered the money and five men involved in the case were being held for further investigation.

CIC interrogations of the five men revealed that the money was sent from North Korea by a former member of the Democratic Peoples' Front who had left South Korea two jumps ahead of an arrest order in March 1946. The money was smuggled across the border in a knapsack by Kim Jung Lim, former chief of the Propaganda Section of the Farmers' Association, who had evacuated to North Korea in August 1947 when CIC and local police were rounding up trouble makers to forestall riots during the annual independence celebration.

The money brought by Kim was transferred to an ox cart loaded with wood and delivered to the Democratic Peoples' Front representative in Chunchon.

4057

Part of the money was to be used to get merchandise in the south which could not be purchased in the north and the rest was earmarked for propaganda purposes in South Korea.*

Currency outdated in the north but legal tender in South Korea was also smuggled through the major ports. CIC's breaking up of one such attempt in Kunsan netted over 1,500,000 yen.**

The smuggling of money became one of CIC's biggest problems in Korea. Money from North Korea in the hands of Communists in South Korea was used to further espionage, subversion, propaganda, and other disturbances inimical to the occupation. Much CIC activity was directed toward eliminating the source of funds of the leftists in the south. Obviously if their funds could be cut off, the leftists would face a serious handicap in their operations.

Dangers of Trade with Communist Zones Exposed

Early in 1947, as a result of leads obtained in several espionage cases, CIC began to investigate for subversion the South Korean companies engaged in trade with North Korea and Communist North China. Informants were quickly placed in the suspect companies and in the crews of ships sailing between North and South Korea. A force of Korean detectives was hired to gather information on the executives of these companies and their business contacts. These Korean informants and investigators compiled an astonishing volume of evidence to prove the initial suspicions.***

The North East Enterprise Company and the North Korean Enterprise Company were the major firms exposed as subversive organizations by this investigation. These two organizations were found to be supplying capital for both the North Korea Labor Party and the South Korea Labor Party, smuggling goods from South Korea for the North Korea Labor Party, and supplying North Korea with information on South Korea.

Through cooperation with the Army Criminal Investigation Division, The Korean Coast Guard and the USAMGIK Bureau of Customs, it was possible

4058

to prosecute and jail many of the executives and employees of these organizations.*

MG Encourages Trade with North Korea

Military Government encouraged trade for South Korea with North Korea and North China as a means of supplementing the economy of the American zone. Any company engaging in trade with these areas was merely required to submit applications for a license with Military Government and agree to abide by regulations governing controlled commodities and customs tax and other miscellaneous regulations.

Trading companies were strictly private concerns in the south, but in the area north of the 38th Parallel, harsh government control was exercised over all commercial activity. With such a grip on commercial ventures, the northern government set about to trade with the south. The next step was to set up in the south trading companies which could be directed by the Communist-dominated political groups of South Korea, giving the North Korean government indirect control. Rightist businessmen were frozen out and those politically noncommittal were never able to trade to any considerable degree.

In most cases the leftist businessmen in South Korea trading with the north tried to appear uninterested in politics and were especially careful not to connect themselves publicly with any leftist movement. Investigation was further made difficult by the fact that branch offices of the companies in South Korea used different names in every province.

Communists Gain On Both Sides Of The Parallel

The Communist-controlled trading companies in the south marketed in South Korea goods they had purchased from the North Korean Communists. The profits from these sales in South Korea were channelled into the coffers of the South Korea Labor Party. A report dated 9 September 1947 stated that, of the twenty-five million yen needed to run the South Korean Labor Party for one month, ten million yen came from trade profits.

The value of these trading activities to the North Korean Communists may be seen from a report dated 29 August 1947 which stated that up to that time

* USAFIK, CIC, Memorandum, Subject: Trade Between South Korea and Communist Dominated States, 4 December 1947, (Secret), Staff & Faculty Library.

approximately thirty million Bank of Chosen notes had been delivered to North Korea in payment for goods sent south since November 1946.

The growth of Communism in Korea was substantially aided and abetted by the financial outcome of these trade agreements. However, monetary gains were only one aspect of the trade set-up. Within some companies espionage agents were detected and apprehended and entire companies were, in other instances, found to be engaged in intelligence collection.

In the section on espionage, the ease of entry by sea into South Korea was noted. In a report dated 30 July 1947, a captured espionage agent stated that on every boat coming into South Korea there was at least one espionage agent. In addition, he admitted that individual sailors on these vessels made it their business to collect intelligence information. Many merchants and sailors served as contact men and couriers in addition to their espionage activities.

Smuggling of embargoed products, narcotics running, and trafficking of Korean and foreign nationals were among the other illegal activities engaged in by the North Korean trading companies. CIC was not concerned with whether these operations were legal or illegal in themselves. If these activities aided the growth of Communism, they were considered subversive, and hence within the jurisdiction of CIC.

Among the goods that CIC discovered had been shipped to North Korea against customs regulations were railroad equipment, military shoes, gasoline, light motor oil, tires, coke, arms and flour. A report dated 6 October 1947 revealed that a leftist trading company in Cheju Do had shipped seventy million yen worth of fuel to North China. Another representative instance appeared in a report dated 19 September 1947 which stated that one thousand pairs of military shoes manufactured in Seoul were on their way to North Korea for use by the Constabulary there.*

From Humble Beginnings....

One of the most revealing of the trading company investigations began 1 December 1947 with an informant's tip that Ko Ryo Enterprise Company in Seoul was smuggling embargoed goods to North Korea. A check of the company's

* USAFIK, CIC, Memorandum, Subject: Trade Between South Korea and Communist Dominated States, 4 December 1947; (Secret); Staff & Faculty Library and 1947 Annual Progress Report, 971st CIC Detachment, pp. 65-68, (Secret) Staff & Faculty Library.

accounts and transactions and a discreet surveillance of its officials led to the apprehension for interrogation of the firm's major officials.*

In December 1945, an apparently legitimate organization, the Seoul Free Market, was set up by Lee Yong Sam and Pak Kil Yong. In April 1946, Lim Joong Kil bought storage space in the Seoul Free Market warehouse for goods from North Korea. Shortly afterward, Lim invested rather heavily in the Seoul Free Market.

With Lim's promise that it would be possible to bring down more goods from North Korea, a sister organization to the Seoul Free Market, The Ko Ryo Enterprise Company, was set up to deal with North Korean goods. Lim returned from one of his periodic journeys north with the necessary capital for this new company. Around August 1946, Lim brought Kwun Young Kyu in to meet his two partners. Kwan was introduced as a prominent merchant from Hamhung, North Korea, with innumerable business contacts. Lim spoke at length of the possibility of bringing down to South Korea approximately five million yen worth of produce from North Korea.

Kwan Young Kyu soon became a financial backer of the Ko Ryo Enterprise Company with the responsibility of bringing goods to and from North Korea. Lim took on the responsibility of disposing of the goods once they got to South Korea. The two original partners were to receive a five percent commission merely for arranging to ship the goods after their arrival in South Korea. Kwan Young Kyu was president of this new organization and Lim Joong Kil served as manager.

So with the more or less respected name of the Seoul Free Market behind it, the Ko Ryo Enterprise Company began trading operations with the North East Enterprise Company. Lim, during a later CIC interrogation, admitted that both the Seoul Free Market and the Ko Ryo Enterprise Company were in fact subsidiaries of the North East Enterprise Company.

Ninety percent of all proceeds from sales of goods in South Korea were remitted to the North East Enterprise Company and undoubtedly channelled into Communist coffers from there. During the operations, some sixty million yen in Bank of Chosen currency were smuggled to the North East offices in Hungman, North Korea. The money had been concealed in rice bags and taken on board ships outbound from South Korean ports with cargos of both legal and illegal

---

merchandise. One hundred drums of American diesel oil, among other contraband, were admittedly smuggled to North Korea by the Ko Ryo Enterprise Company. *

Much evidence was uncovered to indicate that the Ko Ryo officials had been transporting propaganda literature and orders for subversive activity into South Korea for the Communists, and in turn collecting information of intelligence value for the Reds in the north. Proof that the firm was doing liaison work for the Communists was inconclusive, however, and the Ko Ryo Enterprise Company officials were tried on a charge of illegal currency exportation. **

CIC Breaks Up A Communist Underground Army

Generally, the leftist parties of the South operated in the open, exposing the identity of their hierarchy, although frequently keeping certain of their members covert. However, CIC did find several organizations of considerable size whose entire operations were clandestine.

The discovery of this most extensive of the South Korean underground groups, The People's Liberation Army, was made by CIC on 5 November 1947 after the daring assassination of a detective of the Pusan City Police on the main street of Pusan in broad daylight. Fired on by one of his four assailants without warning, the detective lived long enough to return a shot that brought down one of the fleeing men. Upon receiving news of the assassination, the CIC District Office in Pusan dispatched an agent to the police station to investigate the killing for political ramifications and possible subversive intent against the American Military Government. The agent managed to interview the assassin who had been shot and was then dying in the hospital. With a mixture of pride and guilt, he answered rather willingly all the agents questions.

The weakened condition of the dying man made a long interview impossible, but the assassin did confess to Communist party membership. The murder of the detective had been committed to get his weapon for use in a Communist underground army, newly organized and greatly in need of equipment and arms. The orders for the assassination had come from Chang Sei Moo, one of the leaders of the subversive group.

CIC Raids Chang's Home

Through informants, some of them working covertly among the Communists, CIC learned the location of Chang Sei Moo's home. The night following the

** USAFIK, CIC, Specific Case No. 7, Subject: Trade Between South Korea and Communist North Korea and China, (Secret), Staff & Faculty Library.

assassination, three CIC agents visited the home, awoke Chang and his family and searched the premises. Documents which seemed to be of considerable importance were confiscated, and Chang Sei Moo was held for interrogation.

Subsequent translation of the confiscated documents showed that they were reports on South Korean police, Constabulary and Coast Guard and drawings indicating the location of American installations and warehouses around the Pusan and Agasaki port areas. Much more important, however, were organizational charts of the People's Liberation Army, a subversive group previously unknown to CIC. Confronted with these revealing documents, Chang Sei Moo began to talk.

Chang Sei Moo related that the People's Liberation Army was a Communist underground army of which he was vice provincial commander, and Kim Kap Soo was provincial commander. Kim Kap Soo was arrested on 15 November 1947, but refused to commit himself until Chang Sei Moo convinced him that it would be to his advantage to cooperate with the CIC. Both men from that time on willingly answered all questions concerning the Army, and offered to assist in the location and arrest of Han In Sik of Seoul whom they named as the Commander-in-Chief.

CIC learned that the Army was instituted to create an effective intelligence system, to instigate acts of sabotage, and to work in conjunction with the North Korea invasion Army when the Communist military thrust came.

Intelligence gathering was, at this stage, the Army's prime mission. As yet it was not operating in the majority of the provinces, but plans were afoot for a complete expansion throughout South Korea. Those branches of the organization in operation were proving to be quite effective.

Information was gathered from well placed sources and turned over to Han In Sik in Seoul. Han then entrusted the material to delegated subordinates who hand-carried the information to North Korea. Intelligence reports pertaining to the social, economic and political conditions in South Korea, the strength, disposition and equipment of the National Police, Constabulary and United States forces, with particular emphasis on the latter, were gathered. Since the Police, Constabulary and Military Government were infiltrated by Communists many of the reports resulted from first-hand observations.

The People's Liberation Army's intelligence men were told to give special attention to CIC; the number of persons employed, their names and personalities, their vulnerabilities, and the ways in which they could be imposed upon.

The importance of the espionage work of the Peoples' Liberation Army could not be underrated, for many of the confiscated documents were intelligence reports which would have been of great value to the North Koreans.

4063

The Peoples' Liberation Army had apparently formulated extensive schemes for the future overthrow of the South Korean government. When the time was ripe for conquest, the travel routes, then being mapped for the use of escaping saboteurs, would be used for the entrance into South Korea by the North Korean invading force.

CIC obtained detailed organizational plans for the Peoples' Liberation Army. These drafts were based upon the U. S. Army TOE with full strength regiments, battalions, companies and platoons. Included at headquarters were G1, G2, G3 and G4 Sections handling duties similar to those in the U. S. Army divisions and higher echelons.

Numerous arrests in other parts of South Korea indicated that the Army was at least on the way to achieving workable organization. The exposure of the group around Pusan, the most advanced according to all indications, prevented further expansion.

Seek Contact Man

Once the aims and personalities of the PLA were disclosed, CIC turned its efforts to the apprehension of the Army's contact man. When questioned about the chain of command, Chang Sei Moo and Kim Kap Soo mentioned that they had heard of orders coming from the Russian Political Section in North Korea, but that they had not seen any of these orders. It was their claim that Han received the orders verbally and in turn passed them on to the lower echelons in the south. But the two talkative captives could not divulge more extensive information about the tie between the Army and the Soviet Union, and the necessity of locating Han In Sik became even greater.

Kim and Chang offered to go to Seoul and "finger" Han In Sik for agents of CIC. Both men were released in Seoul, accompanied by trusted detectives, in an attempt to locate Han at many of his old haunts. Although this procedure was continued for a week, the results were negative. Kim and Chang cooperated to the fullest, but Han had made good his escape to North Korea. Apparently he had learned of the round-up and had taken advantage of the travel routes that his men had so carefully selected for successful saboteurs and invading armies.

Thus the major Communist underground organization that came to CIC's attention was smashed before it had a chance to function to its full effectiveness. This clandestine army with control in North Korea was an integral part of the extensive Communist aims and plans for Korea.*

Illegal Possession of Weapons a Constant Threat

The possession of firearms, under the Japanese regime, had been expressly forbidden by law. When the occupation forces of the U. S. Army assumed the reigns of government, this law was retained as essential for successful government, and ownership of weapons and explosives by Koreans was considered an action inimical to the command. As such it fell in the category of subversive activity and the investigation of illegal possession of weapons became a task of the ES&M Section.

The crackdown on illegally owned weapons was, in one respect, a step toward the day-to-day maintenance of law and order, a measure designed to lessen the terrorism that accompanied all Korean political activities. From a long range viewpoint, the measure was aimed to lessen the possibilities of the Communists organizing an effective underground Army in South Korea. *

A major violation of the law against weapon possession occurred during the large scale riots of October 1946. In the course of these riots, an estimated two thousand weapons fell into the hands of the rioters. Most of these firearms were stolen from the Police. ** CIC and the Police had just completed the nationwide roundup of weapons, and consequently the operation had to begin all over again.

There was always the danger that the Communists could smuggle in weapons from North Korea to arm leftists in the south. CIC put into operation all the precautions that MG's insufficient security system would permit.

CIC's efforts to counter the circulation of firearms within Korea often bore fruit. In October 1947 at Inchon harbor, six weapons were found. The weapons were covered by permits issued by the Chinese police, but possession was still a violation of the MG law against bringing weapons into the port area. CIC recommended that regulations be drawn up so that the Korean police could take custody of weapons licensed by foreign governments during the period that the owners of the weapons were in South Korea. Otherwise it was feared that licenses from foreign governments could easily be used to mask gun-running operations. ***

Sometimes CIC or Korean Police raids turned up violations of the weapons law. One of the largest caches of weapons and explosives was uncovered by the police during a raid on the home of Song Kyu Whan, a member of the leftist but

not wholly Communist, Social Democratic Party. Buried near his home were six pistols, sixty-four hand grenades, five Japanese rifles, thirty-seven hundred rounds of ammunition, twenty-one Japanese swords, seven officer swords and twenty-three bayonets. Examination of the weapons by CIC agents revealed that they were rusty and long beyond use. The owner claimed that he had intended to turn in the weapons when the Americans first began collecting them, but had procrastinated. Fearing that if he turned them in late, he would be looked on with suspicion, Song decided to bury them. In view of the condition of the weapons when CIC recovered them it was more than likely that the Korean was telling the truth.*

Border Incidents Frequent

CIC offices periodically received reports of a North Korean invasion. The numerous small incidents that did occur along the 38th Parallel demanded CIC investigation for fear that they might be forerunners of an all-out war. Both the Russians and Americans ran frequent border patrols, and since the actual boundary was not precisely defined in many localities, trouble was inevitable. Later on in the occupation, the Russians substituted the North Korean Constabulary for their units and the Americans in turn left border patrolling to the South Korean Constabulary. CIC investigated all border incidents to attempt to determine their true nature, causes, and the persons responsible. In most cases, investigation revealed that the North Korean Constabulary was responsible for provoking the incidents. Often the incidents involving the opposing Constabulary units turned into minor battles which lasted for several hours.**

For example, on 19 October 1947, fifty North Korean Constabulary men and several Russians crossed the 38th Parallel and attacked a South Korean outpost near Chunchon. They killed one man and wounded another before hurrying back over the border.***

Especially in the Ongjin area, Russian and North Korean sorties bent on robbery and terrorism were frequent occurrences. American forces around Ongjin lost considerable face because of their unwillingness to drive these raiding parties off.****

For most Americans stationed in South Korea these minor skirmishes along the border were daily reminders of the ever-present possibility of a North Korean invasion.

Subversion Against the Army Rarely Violent

The Korean leftists were intelligent enough not to use terrorism and violence against United States Army installations; they relied mainly on subtlety and underhandedness. Nevertheless, rumors and reports of possible violence against the Army occasionally cropped up, requiring CIC investigation.

Such a case began in December 1947 when Headquarters, 971st CIC Detachment initiated an investigation of a raid believed to be impending on the 111th Signal Company near the town of Whayangni during the holiday season. Since the activities of the Signal Company were highly classified, the case took on a high priority.

The investigation began when agents interviewed the Company's First Cook who had reported rumors of the impending raid to his Commanding Officer. The cook had received his information from Lee Tuk Chun who had told him that a great number of leftists had been imported to take part in the raid. Subsequent interviews around the Signal unit implicated the Company's barber, a native Korean, who was alleged to have offered money to soldiers for information on guard reliefs and the location of supplies. But the agents sent to interview the barber discovered that he spoke no English whatever, and therefore would not have been likely to approach American soldiers for the information.

After considerable inquiry there were indications that Lee Tuk Chun had been guilty of spreading rumors which had no basis in fact. Christmas and New Year's came and went without event. CIC came to regard the story as a device of Lee Tuk Chun's to hide his probable black market activities, although no absolute proof could be obtained along these lines.*

Investigations often are stymied before all the loose ends can be gathered, and the inconclusive results of this case were not unusual, but the Monthly Report of CIC Activities added this heartening note to the brief report of the case: "Noteworthy is the fact that much valuable experience was afforded the investigating Agent."**

Leftist propaganda directed toward the American soldiers was a more frequent and probably more successful type of subversion than the use of violence. The following excerpts from a handbill written in English and found in a CIC vehicle will illustrate the most common themes of this propaganda.

---

* USAFIK, CIC, Memorandum For The Officer In Charge, 8 January 1948, Subject: Possible Impending Raid on 111th Signal Company, (Confidential), Staff & Faculty Library.

** 971st CIC Detachment, Monthly Report of CIC Activities for January 1948, 31 January 1948, To: Chief, CIC, Fort Holabird, (Secret), s/ Jack B. Reed, Major, CAC, Commanding, Staff & Faculty Library.

"MG does not want you to meet with Koreans and become friendly with them. One of the questions that the CIC asks when it investigates a soldier is 'Does he have Korean friends?' Why is that? It is because if you went among Koreans and saw how they lived and heard their stories, you would soon begin to doubt the shiny words of your officers. You would begin to wonder. Does the Army keep me here to help the Korean people or oppress them? Does the Army keep me here to guard against the Russians or attack them? Does the Army keep me here to open a market for Freedom and Democracy or for Ford cars and DuPont munitions?

"American soldier: In your home sweet home, your wife or sweetheart, your brothers and sisters, and your parents are waiting for you day and night! That your occupation here is not good for the benefits of your people and mankind so long as General Hodge pursues his present reactionary policies, please appeal to your country. And tell the workers, farmers and students of the United States that your Korean people are also one of the people who love peace and prosperity, and that we wish to be real friends with the American people. Then our future generations will remember you as glorious liberators who made Korea free forever."*

CIC Investigates

The two major cases of subversion within the Military establishment centered around personnel of the Information & Education Section. The first case concerned a group which maintained close contact with the members of the Russian colony, military and civilian, in Seoul, and whose main spokesman was a corporal who was an [redacted] The other case involved a long-time Communist organizer whose many contacts with the Reds in the United States left him open to great suspicion.

Headquarters, 971st CIC Detachment, initiated an investigation of the corporal "to substantiate or disprove allegations that the subject was pro-Russian and disaffected toward the United States."**

[redacted] The allegations were that he attempted to lead the discussions to a conclusion that favored the Russians and was often able to accomplish his purpose. The corporal was described by his associates as a good speaker with a compelling personality.***

*** Ibid., 12 June 1947.

From this slim beginning, CIC developed a case that uncovered a number of suspects. It was soon discovered that the soldier was close to most of the Russian nationals mentioned earlier in this section. This group included Major Korneshev, the Russian liaison officer, and Madame Yakovlov and Primax Policarp, leading members of the colony functioning within the Russian Orthodox Church. It developed that the corporal was giving Major Korneshev lessons in English and was attending many parties given by members of the Russian colony.*

According to the testimony of the men who lived with him in the barracks, the corporal made many remarks that had a definite pro-Russian slant. When called a Communist, the corporal usually replied to the effect that he was proud of it. The corporal and his roommate often quarreled over the former's Russian contacts and the two men had been forced to set up a line dividing their room in half. They called it their 38th Parallel and each man's activities was limited to his own zone.**

Further investigation revealed that this soldier had served with the Abraham Lincoln Brigade in the Spanish Loyalist Army for ten months, had worked as an organizer for the Communist Party in the United States (CPUSA) for over five years and spent a year on the staff of the "Daily Worker." He was in contact with many Communists in South Korea, and a mail cover disclosed that he was writing frequently to Pak Heun Young, the leading South Korean Communist.

On 7 March 1946, under the guise of a shakedown weapons inspection, CIC searched the barracks and the personal belongings of the suspect. Proof was obtained that he was transmitting information on the occupation to the CPUSA, and was distributing Communist publications to the Korean Communist Party through Pak Heun Young.

Other information indicated that the soldier was supplying information to the "Korean Independence," a Communist publication which was published and distributed from Los Angeles. This publication had the main aim of discrediting the American Military Government in Korea.*

The Company He Keeps

The soldier was sent to the zone of the interior on 26 March 1946, but before he left Korea he was interrogated and searched by William Ward Chief of the 971st's Security Section, along with Agents John Anderson and Charles Weatherholt. The soldier admitted that most of the findings of the investigation were true but he would not concede to any subversive activity in Korea. However, a letter to him from Pak Young was found among his belongings. This document which spoke for itself, reads as follows:

"On your departure from Korea, we are deeply grateful to you for your activities as a sincere and enthusiastic comrade during your stay in Korea.

"Especially we express our wholehearted greetings and gratitude for your activities in offering important literature and information to us.

"Moreover, we value highly your persistent investigation on the Korean situation.

"We wish you play an active role when you return to the U.S.A., informing the present situation of Korea and our party in detail to the CP of the U.S.A.

USAFIK, CIC, Specific Case No. 3, 25 February 1948, Subject: [redacted], (Secret); Staff & Faculty Library.

"We send our best revolutionary greetings through you to all the comrades of the CP of the U.S.A."*

The soldier was permitted to continue home. Shortly after his arrival in the United States, an inflammatory article appeared in the Los Angeles Daily News, dated 10 May 1946, written by one Vern Partlow, which demonstrated that the soldier and several of his Communist comrades had acquired information while in Korea for use against Military Government.**

The article was headlined: "Vets Say U.S. Backs Collaborators; Feudal Groups To Rule Over Koreans." The article was definitely pitched toward the Korean colony in Los Angeles and the main charge seemed to be that the United States was backing quislings and Japanese collaborators in Korea.***

This Communist's time in Korea was well spent. There was evidence that he had organized a Communist cell within the XXIV Corps to insure a continuous flow of information on MG and USAFIK to the CPUSA and to assist the Korean Communists in discrediting the American Military Government.

On 22 April 1946, the soldier was discharged at Camp Beale, California, and the case was turned over to the FBI.****

On 14 August 1953, this man was arrested in Boston, Massachusetts and held on seventy-five thousand dollar bail on charges of conspiring to overthrow the United States government.*****

At the time this new informant made his penetration, the SKLP was extremely active. Monthly raids on police boxes were resulting in the deaths of many Korean policemen, and riots and disturbances were all too frequent. So successful was the informant in gaining the confidence of the SKLP, that he was soon head of the Organization Bureau for the whole province, and was able to attend the clandestine planning meetings held for the party higher-ups in the rice paddies outside of town. It was during these meetings that the SKLP made its plans for raids and disturbances.

On evenings when a meeting was scheduled, the informant would pass in front of the CIC office on his way and give a pre-arranged signal to indicate that he would be in later that night. After his meeting, the informant would slip into the darkened CIC offices and leave the detailed plans of the SKLP -- plans which had been formulated only a short time previous. Most often the information was written in minute script on onion skin paper and rolled into a ball which the informant hid in the spring of his flashlight. After receiving this information, CIC would rush the informant to the outskirts of town in a covered jeep to allow him to return on foot and thus avert suspicion.

Immediately calls were put through to Seoul. Most often Captain Ulibarri spoke to Orlando Molina, the Operations Officer, and relayed the information in Spanish. If it was felt that the information was too highly classified to be sent over the phone, Ulibarri took a plane or made the long drive to Seoul in a jeep.

Attempt to Confuse Communists

When the SKLP came to realize that there was an informant in their ranks, measures had to be taken to see that they did not put the finger on the right man. Local Koreans, sympathetic to the occupation, were used to spread false reports. The usual procedure was for one of these men to drink heavily with a local member of the SKLP and after the evening progressed, to tip the Communist off that so-and-so was an informant for CIC. This innocent man would be kicked out of the party and for awhile the SKLP would be content that they had plugged the leak.

*** Interview with Major Marion R. Panell, 18 Oct 54 at Fort Holabird, Md.

**** Interview with Captain Kenneth E. MacDougall, 5 Oct 54 at Fort Holabird.

CONFIDENTIAL

CIC's political coverage was termed extremely thorough and complete, and most agents who served during the Korean occupation felt, in retrospect, that little happened of which CIC was not aware.

503 Parties to Cover

In 1947, when the US-USSR Joint Commission required all political parties in Korea to register, there were 503 organizations of various political stripe that announced their desire to have a hand in governing the peninsula. These organizations had to claim at least ten thousand members to merit the consideration of the Joint Commission. That many of the parties faked the necessary ten thousand is reflected by the fact that the total claimed membership of all the 503 parties was seventy million while the Korean population was only 21,000,000. Despite all this confusion, the Political Section persisted in its mission of keeping current information on every party on General Hodge's desk. In this light, the fact that the Political Section turned in the greater bulk of CIC reports was not surprising.*

The political situation that CIC faced was not hopelessly tangled. Generally in Korea the middle of the road parties wanted land reform, free elections, and top-notch leadership, but were otherwise neutral. Off the middle there were varying degrees to the right and to the left with extreme parties on either side. It was these extreme ends of both right and left that were the most dangerous, for they would usually not allow bloodshed to prevent them from accomplishing their purposes.

Attempts For Coalition Fail

If CIC felt prior to their arrival in Korea that their main concern would be operations against the remaining vestiges of the Japanese occupation, they soon found that they were wrong. Original agreements had called for the Soviet Union to accept the Japanese surrender in the north and the United States to do likewise in the south, with the dividing line being the now-famous 38th Parallel. The Russians arrived about two weeks earlier than the Americans and by the time the American Military Government arrived, the north was fairly solidly in the hands of the Communists. Gradually the lines hardened until the 38th Parallel, intended only as a convenient division for the early days of the occupation, became a most significant border of our era.

Original agreements called for a US-USSR trusteeship of Korea to last for five years. To the Americans, this meant supervising a Korean government, but the Koreans interpreted trusteeship as something akin to the

* Interview with Major Marion R. Panell, 18 October 1954 and with Captain Kenneth E. MacDougall, 5 October 1954 at Fort Holabird, Md.

CONFIDENTIAL

Japanese occupation. At first all parties were against trusteeship with equal vigor, but the Soviets quickly informed the Korean Communists that they should be for trusteeship. This set the "Party Line" on the issue.

Soviet-American conferences in 1946, attempting to set up a joint trusteeship for Korea and to thus reunite the country, all ended in stalemates. Soviet delegates took the stand that all Koreans opposed to the trusteeship should be excluded from any administration that would be set up, thus assuring that only the Communists would be eligible, since the rightists all over the nation were still campaigning against trusteeship.

The trenchant rightist opposition to trusteeship might seem unreasonable, since the Communists proved so willing to come to some agreement, but North Korea was already in the iron grip of the Reds and no opposition was tolerated. In South Korea, the Communists were greatly in the minority and any "coalition" government would be a move in their favor.

Actually the American Military Government was working toward setting up a coalition government designed to include representatives of all the stronger parties. Overall American policy at that time precluded mention of Communism as either an enemy or a potential enemy. Ways and means were to be devised to reconcile differences with the Russians and Communists everywhere. Human nature, and certainly Korean stubbornness, probably would have made such a coalition government a total fiasco. The rightists were strong enough to resist the MG attempts at coalition. In the general elections in South Korea in May 1948, the rightists took over the government in the south with the Communists excluded.

Violence Accompanies Korean Politics

CIC learned that Koreans took their politics very seriously. A man and his brother, perfectly friendly in every way, would split into fighting animosity if they disagreed politically. Violence and terrorism on the part of political groups was an accepted technique of getting things done. Any political party which lacked a strong-arm youth group, fiercely loyal to the cause, to do its "dirty work" really could not be expected to worry any other political organization. These youth groups were hardly akin to the Boy Scouts, since a youth in Korea could be close to forty, such were the demands of the old custom of extreme reverence for the elder men. The case of Kim Doo Whan, reported at the end of this section, will provide an excellent illustration of typical antics of Korean youth groups.*

* This statement of the Political Situation in Korea is drawn from The Annual Progress Reports of 1947 and 1948, 971st CIC Detachment and interviews with Major Panell, 18 October 1954, Captain Measley, 30 September 1954 and Captain MacDougall, 5 October 1954 at Fort Holabird, Maryland and with William J. McTigue, 23 November 1954, Washington, D.C.

It All Began With the "Tuesday Meeting"

The Korean Communist Party (Chosen Kong San Dang) was organized underground and operated throughout the period of the Japanese occupation. In the early 1920's, Pak Heun Young and Lee Tan Ya, who stayed in Siberia during the years American forces occupied Korea, and a few others formed an organization called, fancifully enough, "The Tuesday Meeting." It was this organization that later became the Korean Communist Party. During these early years, Pak Heun Young was alleged to have made a trip to Russia where he was officially recognized as the leader of the Communists in Korea by Betchinsky, the head of the Far East Division of the Comintern. At the time of the American occupation, Pak's serious rival for the position was Kim Chul Soo, who was reportedly not as extremely fanatic as Pak.*

During the year 1946, there was considerable opposition to Pak in the ranks of the party. Although he controlled the Central Executive Committee, Pak was severely criticized by his opponents who said that he and his followers were too self-righteous to accept opinions from others. The opposition was also unhappy with the oft-repeated idea that Pak was the only leader recognized by the Comintern.** Matters became serious enough for a faction to approach rightists for funds for propaganda to help overthrow Pak.*** Pak took quick action by indefinitely suspending Kim Chul Soo and his other important opponents from the party.**** Although shortly afterward he was forced by a CIC arrest warrant to flee for North Korea, Pak successfully weathered the storm and continued to head South Korean Communists.

During the period from August 1945 to late 1946, the Korean Communist Party operated openly, but after this year of activity it was publicly dissolved. On 23 November 1946, at an inaugural meeting in Seoul, the South Korean Labor Party was set up, and Communists living south of the 38th Parallel were funnelled into it. Although not all members of the SKLP were Communists, the Reds organized and controlled the party to such an extent that it was logically considered to be the successor of the Korean Communist Party.*****

Long-range Communist planning, according to the "Master Plan" uncovered by CIC, called for the appearance of seeming factions and the public dissolution of the party in an attempt to pretend great weakness internally and to make opponents overconfident. CIC considered that the organization of SKLP was part of this long-range plan, and there is a great possibility that the growth of the anti-Pak faction was also. *

The SKLP was thoroughly Communist dominated with Pak and his sidekick, Huh Hun, in the top positions.** Rules of the SKLP were merely a translation of the rules of the old Korean Communist Party.***

Pak, who was always the number one target personality for CIC, became even more important when the extent of the SKLP espionage became evident in August 1946. When CIC got a tip as to Pak's whereabouts, a large scale raid was planned for 6 September 1946. Unfortunately, the raid was made about an hour later than scheduled, and Pak had managed to escape although several other target personalities were apprehended. On 8 September 1946, CIC put out a warrant for the open arrest of Pak.

Pak went to North Korea and never returned, as far as CIC knew, although rumors that he was in the south cropped up periodically. Several times CIC tried to lure Pak into the area south of the 38th Parallel, but these operations were unsuccessful.****

The South Korean Labor Party was not the only Communist-dominated organization in South Korea, although it certainly was the most important. Other left wing groups fostered by the Communists which had to be observed by CIC included the Democratic Peoples' Front, The All Korean Farmers General Union, The Korean Peoples' Republic Party, The South Korea Women's Democratic Union, and the Democratic Young Men's Association. Seemingly non-political organizations including cultural, business, refugee and propaganda groups were found to be excellent targets for infiltration with design to eventually subvert them into Communist fronts.*****

Communist-Inspired Terrorism Hits Peak in October 1946

Communist-inspired riots, disturbances and strikes were closely connected to the day-to-day political situation. These acts of terrorism were also considered inimical to the command and as such fell under the investigative jurisdiction of the ES&M Section.

Most of the Communist inspired violence during the first year of the occupation was sporadic and isolated, but during October 1946, a wave of terrorism, later known as the October Riots, spread throughout the peninsula.

The major disturbance began at 2400 hours on 22 September 1946 when eight thousand employees of the railroad system in Pusan declared a total strike in that area, voicing opposition to the daily wage system, demanding wage raises, improved food distribution, and a reinstatement of the government food rationing system. In short order, the other large rail centers, Taegu, Seoul and Inchon, followed the example of Pusan. Indications of a strike at the large Seoul Electric Company were noted and printers' unions ceased work in many areas. Some factories went on strike in sympathy with the rail workers. Additional demands were made, including the release from jail of certain political figures and strike agitators.

At this stage, CIC and MG felt that the strikes were for purely economic reasons without any political significance. This belief was dispelled when the strongly leftist Chung Pyung Labor Union members were cited as the agitators and evidence piled up to the effect that the Communists were behind the disturbances. The presence of right wing youth groups at the scene aiding police in quelling the disturbances and riots further placed the strike on political grounds.

As certain groups of the strikers saw that no economic gains were forthcoming from their strike, they began to realize that they were being used as tools by the Chung Pyung and other Leftist and Communist groups. By October, the locomotives had begun to run again and the first phase of the disturbance was at an end.

The Communists turned to another plan. They inspired the unusually excitable Korean populace to stir up riots and attacks on the police. The police methods in Korea were frequently brutal, and the Korean people, seeing the police in action during the strike-breaking, fell easy prey to Communist troublemakers.

Rioting Heaviest in Taegu

On 1 October 1946, a crowd of about 4,000 strikers from factories and railroad yards stormed a police box near the Taegu railroad yards, shouting that

they were starving and that the police were trying to kill them. In the subsequent disturbance, one police lieutenant and at least one striker were killed. The following morning, the body of the dead striker was carried through the streets of Taegu by a mob estimated at two thousand by CIC agents on the scene. Eventually the police station was overwhelmed, and the rioters were not dispelled until three U.S. Army tanks advanced on the station. Thirteen rioters were killed and many more were injured.

The situation became worse in Taegu until eventually martial law was declared. By 8 October, the disturbances had spread to the neighboring provinces. By this time, the strikes were subordinated to a general desire to get even with the police.

During the trouble in the southern provinces, there were almost no anti-American feeling demonstrated. Minor incidents such as the detention of a U.S. Army patrol at a roadblock were reported, but no violence was directed at American personnel.

Things calmed down a bit when the U.S. Army and many right-wing groups came to the aid of the harassed police. Nevertheless, raids on police boxes and homes of prominent rightists continued.

Communists Responsible for Riots

The strikes had been prompted by left-wing labor unions with the Chung Pyung most in evidence. However, it came to the front that the violence against the police had been initiated by the In Min Dang (People's Party) and the Min Chung (Democratic Young Men's Association). Both of these organizations were closely allied with the Communist Party and were probably taking orders from the Communists.*

Translations of leftist documents received from the District Office in Seoul and Pusan tended to show that the strikes were planned by leftists with the hope that they would lead to general disorder and eventually leftist control of the South Korean government.

The following are excerpts from a translation of a typical Communist Party propaganda leaflet taken by CIC agents from a courier in Chunchon. The document was titled "An Order from the Central Propaganda Department of the Communist Party" and dated 29 September 1946.

"TO WORKERS OF THE SEOUL ELECTRIC COMPANY:

"Those who are the bravest fighters for our country and democracy are the laborers. The present railroad strike shows their heroic love for our country!

* USAFIK, CIC, Monthly Information Report, 17 Jan. 1947, s/Jack B. Reed, Major, CAC, Commanding, (Confidential), Staff and Faculty Library.

"All workers of the Seoul Electric Company!

"You should be mobilized with the fighters!

"You must fight for our country!

"Compromise means failure only!

"TO POLICEMEN

"After liberation the reactionary policeman became the leeches of American imperialism by arresting the true patriots and putting them in prison.

"Policemen! You must fight the battle! You must support the fight of the laborers, farmers, citizens and students with all your heart.

"Stop armed interference in the strike fights!

"Stop unlawful arrests and cross-examinations!

"Hurrah for the democratic police."*

Riots against the police continued to spread north, and by the end of the month had reached Seoul. On 31 October 1946, about five hundred people, eighty per cent of the students, gathered outside the Capitol singing leftist songs and waving Red flags.** There was much open criticism of the American occupation during the demonstration. It was determined that the Democratic Young Men's Association, the well-schooled youth organization of the leftists, had sponsored the demonstration.***

Meanwhile, disturbances continued to flare up in the south. Gradually, however, the rioting ran its course, and by the middle of November, a comparative calm replaced the riots throughout South Korea.

4085

Occasionally during the October Riots, CIC was called upon to help dispel the rioters, but generally CIC's prime function was that of reporting the location of the riots and other pertinent data. Attempts were made continuously to link the responsibility for the disturbances to the proper individuals and organizations.*

The Chung Pan Sa counterfeiting case discussed in the previous section and later the October Riots clearly implicated the Communists as organized opponents of the Americans in South Korea. But United States attempts to reach a compromise and set up a coalition government continued for nearly a year. As mentioned before, U.S. foreign policy at that time refused to consider the Communists as enemies or potential enemies. U.S. policy everywhere was reconciliation and cooperation, and the Russians were willing to play along with the game as long as it suited their purposes.

A further burden fell on CIC because of the failure of MG officials to interpret accurately the local situation. Terroristic methods were customary in all Korean politics, with the rightists as well as the leftists prone to use violence. Many MG officials failed to recognize the fact that the leftist-inspired violence was part of a large revolutionary scheme with implications on a world wide scale, while the violence of the right took on an immediate and isolated aspect.

Communist disturbances and terroristic activities continued, although at a lesser rate, after 1946. Informants kept CIC aware of possible trouble spots, and quick action, applied at the right time, kept the fever pitch of the October Riots from being reached again.

On 22 March 1947, a one-day strike throughout Korea inspired by the South Korea Labor Party and the Chun Pyang, was generally believed to have had the dual purpose of gaining pay increases and of testing the power of leftist labor. There were scattered acts of violence against the police mostly in Cholla Pukto province.**

CIC Raids Nip Impending Violence

CIC received many and varied reports of expected trouble from leftist elements on 15 August 1947, the day that was to be observed as the second

* USAFIK, CIC, Monthly Information Report, 17 January 1947, /s/Jack B. Reed, Major, Commanding, (Confidential), Staff and Faculty Lib.

** USAFIK, CIC, Monthly Information Report for March 1947, 1 April 1947, To: Director of Intelligence, WDGS, (Secret), Staff and Faculty Library.

anniversary of Korean independence. These disturbances were to be staged on this date to take advantage of the confusion that would result from the mass gatherings during the celebration.

On 5 August 1947, Headquarters, 971st CIC Detachment, fearful of a recurrence of the October Riots, sent a letter to all District Offices and Sub-Offices directing these units to execute raids on all leading leftist headquarters on 12 August 1947, and to arrest twenty-one key leftist leaders.

Although only a few leftist leaders were arrested by CIC, a great bulk of documents were seized and eventually translated. Apparently the SKLP and other Communist-controlled groups were impressed that CIC meant business, since there was no trouble during the independence celebration.*

It should be noted that shortly before these raids, the US-USSR Joint Commission had ended its meetings without being able to set up a coalition government for all of Korea. The August raids therefore were the outright, formal recognition of the Communists as enemies and the failure of the Commission to set up a workable coalition.**

The mass CIC raids of August 1947 did not totally crush the SKLP. Most of the party higher-ups escaped, and although many documents had been captured, the SKLP was still very much alive.

With the arrival of the United Nations Temporary Commission on Korea (UNTCOK) and the announcement from North Korea that the "People's Republic" would boycott a general election for the country, the SKLP initiated a reign of terror directed at sabotaging the American efforts in South Korea. Between 7 and 13 February 1948, Communist violence, accompanied by a renewed propaganda campaign against the Americans, shook South Korea. Transportation and communication facilities were attacked and sabotaged. Police and rightists were attacked, property was destroyed and a fresh set of handbills and posters was disseminated to the public. The reaction of the general public against this display greatly aided UNTCOK in deciding to run an election for South Korea. Throughout April, leftist propaganda flowed against the election, but attempts to disrupt the election met with failure. After the election, the SKLP had to depend more and more on direction from North Korea, because their failure had resulted in a mild party split. By the end of the year, it was apparent that all operations of the SKLP were initiated and controlled from the north.***

Constabulary Revolts

Shortly after the South Korean government was organized, but before the Americans had left the peninsula, there occurred another major disturbance. Officially CIC did nothing more than observe the events that are recounted in the next few paragraphs.

The South Korean Constabulary had long been a prime target for Communist infiltration. Some estimates placed Communist membership as high as forty per cent of the forces. In October 1948, the 14th Constabulary Regiment was assigned to duty on Cheju Do Island and were in the port of Yosu waiting to embark. With passes in their hands, the men set out for a night on the town. When they had had their fill of sake and had been prodded by local Communists and the Communists within their ranks, the soldiers mutinied against their officers and killed most of them. The port of Yosu was completely taken over by the Constabulary enlisted men, who then proceeded north to Sunchon where their terroristic activities seemed to increase in intensity. Soon they were able to locate the arms and ammunition being shipped to Yosu for their use on Cheju Do. It was not long before most of Cholla Namdo Province was in the hands of the Communist rebels. The brutality of the rebels rose unabated and scores of rightists were publicly executed.

Meanwhile, in Taejon, countermoves were being organized, and a Constabulary brigade was sent to meet the rebels. Several times the rebels were surrounded only to slip easily through Constabulary lines weakened by the heavy infiltration of men in sympathy with the cause of the rebels.

The rebels with plenty of arms and ammunition then broke into small groups, never over three hundred men, and scattered to work as guerrillas. They headed for the Chiri Mountain range located along the border of Cholla Pukto and Cholla Namdo provinces. Their future operations were based from this impenetrable range of mountains.*

The estimated number of fatalities included 138 men of the Constabulary, 286 from the National Police, 672 civilian rightists and 228 rebels.

Politically the Yosu Rebellion had the effect of uniting the officials of the newly-organized Republic of Korea. The Rhee cabinet and the National Assembly, previously at odds, put aside many of their petty differences to form a solid

* Interviews with Major Prudencio D. Ulibarri, 9 October 1954 and Captain Theodore E. Griemann, 10 December 1954 at Fort Holabird.

block of opposition to the menace of Communism. The rebellion also started a movement of greater cooperation between the National Police and the Constabulary, long rivals in spite of their common interests.*

It was also significant that the Yosu Rebellion brought the great masses of people closer to the rightist government. The rough techniques of the National Police had alienated many people who consequently were tempted to turn to organizations that spoke strongly against the police. If the Communists had not been even more brutal than the police, they might have won great favor with large segments of the public. As it turned out, the Reds merely showed to one and all their true character, and managed to lose much prestige.**

And In The Other Corner

The greater portion of South Koreans were basically rightist in their political sympathies. However, the right wing was never able to present a truly unified front against Communism, mainly because political attachments tended to polarize around various leaders who disagreed among themselves, the basis of the disagreement being personal as often as it was doctrinal.

Syngman Rhee, absent from Korea from 1919 to 1945 and extremely "Westernized," was eventually chosen to be President of the Republic of Korea in the general elections of May 1948. Rhee's road to the presidency, however, was a rocky one. His principal opponent was Kim Koo, who had weathered the Japanese occupation in Chunking, China, where he was boss of a gang of professional thugs and somewhat of a follower of Syngman Rhee. Gradually the frictions that develop among a group in hiding split the exiles into two factions, the followers of Rhee and the followers of Kim Koo. Coming back in small groups after World War II, these elements made up the extreme right wing, with the older people, more settled in their way, tending to follow Rhee, and the young men, often terrorists and youth group leaders, falling in line behind Kim Koo.*** For purposes known best to himself, Kim Koo was reported to be training his own army in Manchuria.****

Right-wing policy generally held against trusteeship through thick and thin, although Kim Koo never actually committed himself, preferring to let

Rhee do all the talking.* The less extreme among the rightists, like Kim Kyu Sik and Ahn Jai Hong, shifted during 1947 in favor of trusteeship and thereby aligned themselves with the Middle-of-the-roaders. The reconvening of the US-USSR Joint Commission on 20 May 1947 brought forth considerable propaganda from Rhee.** Rhee was quoted in CIC reports as saying that "more good can come to Korea if the Joint Commission breaks down than if it comes to an agreement."*** Rhee was often quoted as saying that anyone expecting harmony between the United States and the USSR is dreaming.**** It was at this time that Rhee first made his demands for a general election for South Korea, a plan which was in direct opposition to the MG proposal of a coalition government for all of Korea.

However, right-wingers, motivated by a desire to keep Korea intact, continued to show some interest in the efforts of the Joint Commission, and Rhee, at least according to CIC observers, reached a low point of popularity.***** To CIC it appeared that Rhee was about to lose the support of all the right-wing parties and drop out of the picture completely. Rhee's big anti-trusteeship demonstration in Seoul on 23 June 1947 drew only three to four thousand people after a great amount of advance publicity.****** Rhee began to argue his case in a series of letters to General Hodge a few weeks later.*******

But Rhee Continues Strong

Yet in spite of their refusal to take part in his demonstrations and a conflicting desire to keep the nation intact, the major rightist parties apparently continued to support Rhee. It was the opinion of Kim Seung Soo, Chairman of the Korean Democratic Party and a leading rightist, that a free election at this time for all of Korea would have resulted in the election of Rhee. Kim added that it was for this reason that the rightists desired no part of any coalition program that would involve part of the power going to the left.********

The Joint Commission could never unravel all the problems inherent in the Korean political situation. The Russians finally put the axe to the Commission by continuing to demand that those rightist leaders opposing the principle of coalition government be excluded from the new administration. The Russians and Americans had failed to set up a coalition government.* The coordinated CIC raids on leftist headquarters on 12 August 1947 was an act of formal recognition of the Communists as MG opponents and a sign that there was no longer hope for a coalition.**

By the end of July, CIC reports indicated that Rhee was once again considered to be the top rightist.*** Rhee continued to insist upon a South Korean election, but Kim Koo surprisingly enough turned in favor of a national election to unify the country. During the latter part of November 1947, the Korean Independence Party, headed by Kim Koo, sponsored a Unification Conference with members from seventeen political parties sending representatives. However the Korean Independence Party and the Chosen Democratic Party, made of North Korean refugees and headed by Cho Man Sik who had long been in Russian custody, were the only rightist parties participating in the movement. All the other parties at the conference were either leftists or middle-of-the-roaders. This group favored the Russian proposal for a joint withdrawal of the occupation forces from Korea and a unified general election. The conference failed to reach its objectives, partly because the Korean Independence Party walked out. But the issue was far from dead.****

Two Kims Go North

On 25 March 1948, Radio Pyongyang announced plans for a North-South conference of political leaders. The North Korean proposal met immediate favor with the Communists and moderates in the south. The North Koreans also ventured to send an invitation to Kim Koo and the Korean Independence Party. Kim Koo left in early April and a few days later, the most important moderate, Dr. Kim Kyu Sik, also headed for the north. This was great fuel

4091

for the Communists who stepped up their anti-Rhee campaign, for now they could claim that rightists and moderates also wanted a unified Korea and were opposed to the "sell Korea to the Americans" plan of Rhee. But the Communists were playing a losing game. The Communists had counted on public lethargy, so essential to their operations, and this lethargy just was not present. When a month-long Communist campaign against the elections proved more than futile, ninety percent of the South Koreans cast their ballots in the special South Korean elections for the National Assembly. The National Assembly met in May and elected Syngman Rhee as president.

Kim Koo's game of "footsie" with the Communists was partly a result of his sincere desire to unite Korea. He probably also saw a chance to stop Rhee, who had become increasingly popular since the total failure of the Joint Commission.

At any rate, on 6 August 1948, Rhee notified UNTCOK of the formation of the government of the Republic of Korea. Rhee took a great risk when, in picking his cabinet, he chose men who met his personal favor rather than the favor of other rightists, and for a while, there was rather severe factionalism within the right-wing ranks. After the Constabulary rebellion in the south, the tendency was for the rightists to set aside petty differences and form a solid front of opposition to the Communist menace.*

And The Winner

Syngman Rhee, the eventual president, had survived a period of opposition to MG policy to gain political ascendency in Korea in 1948. Always a prime point of interest in CIC's political reports, Rhee remained long after the occupation a controversial figure.

Rhee, born in 1875, was educated in the Chinese classical tradition, but sought also Western education in the Pai Jai Mission School. In the nineties, he became a leader of the democratic forces in Korea. He was founder and editor of the first newspaper published in Korea. When the Japanese murdered the great Korean Queen Min in 1895, Rhee declared personal war against them. Two years later, the Japanese arrested the young rebel and for the next seven years, Rhee was in the Kamoksu prison in Seoul. Upon release from prison, Rhee decided to carry on his fight for Korean independence from outside the country. His intermittent returns to Korea after this time ended in 1919; and from that date until the American liberation, Rhee did not visit his native

* 1948 Annual Progress Report, 971st CIC Detachment, pp. 57-64, (Secret), Staff and Faculty Library.

4092

country. Many times in the intervening years, Rhee wrote and spoke for Korean independence.*

In Washington, Rhee had a considerable number of connections that helped work in his favor during the crucial occupation years. This "Rhee Lobby" worked for Rhee in the inner circles of the State Department and attempted to mold a good press opinion of Rhee in America. Louise Yim, Ben C. Limb and Robert T. Oliver were the major leaders of the "Rhee Lobby." Rhee often worked to discredit General Hodge in official Washington circles during the period that he opposed the MG policy.**

During a CIC interview in September 1947, Rhee outlined the history of his dispute with General Hodge. Rhee stated that he had blindly supported Hodge for a year and a half, but decided to go his own way when "it became evident that Hodge was following a suicidal policy." Rhee was quoted as saying: "There will be a clash between Hodge and the Korean people. Hodge thinks that because he has an army he can do what he wants. He has something else coming. If he only knew." Rhee conceded that he did not blame the General completely for the situation in Korea. He said that he was aware that "experts on the Far East" in Washington were dictating the policy. "This policy," said Rhee, "must be fought with every ounce of energy, and even with blood itself, if necessary."***

More slanderous against General Hodge, however, was Mrs. Rhee, an Austrian-born woman. Many shrill denouncements of General Hodge and MG policy were, CIC discovered, written on her typewriter. At least if she did not compose these pieces, she accepted their contents.****

CIC maintained a close check on Rhee as it did all top political leaders in Korea. Naturally the agents involved came to have their own opinions of Rhee. The opinions were diverse enough to indicate Rhee as one of the more controversial men of the time.

One CIC agent felt that although Rhee was an extremist in his approach to all his political opponents, MG would have done well to listen to him from

---

**** Interview with Major Marion R. Panell, 18 October 1954, Fort Holabird, Maryland.

the start. This man felt that MG and the State Department were naive in their belief that a working coalition could be set up in Korea, particularly in the light of the Koreans' inclination never to compromise.

Another agent felt that Rhee was an opportunist who brought to bear all the energy he could muster on a favorable situation to further his own ends.

Still another felt Rhee was both arrogant and treacherous. Rhee once told this man that if given the Korean government, he could wipe out the nation-wide black market activities first by issuing a proclamation and then by executing several thousand black marketeers as examples. Rhee was quoted as saying that this might not be the techniques of an American-type democracy, but that it was the democracy that Korea would need to have.*

Rhee was not unusual among Korean political leaders in his complete unwillingness to compromise. Nor was he above the use of youth groups and mass demonstrations to help put a point across. CIC agents agreed that although Rhee would have been considered a trouble maker by American standards, by Korean standards he was merely a normal politician.

In the Middle

In between the right wing and the left wing were a sizable number of moderates ranging from those with rightist inclinations to Socialists. The aged intellectual, Dr. Kim Kyu Sik, the leading middle-of-the roader, was seen by many in MG as the eventual leader of the hoped for coalition. Kim Kyu Sik had wide popularity but not enough real support to compare with that of Rhee.**

Dr. Kim, a graduate of Roanoke College in Virginia, headed the Korean Independence Federation which worked for an independent and unified government to be arranged by meetings of northern and southern political leaders.*** The Federation was founded in October 1947 from 18 middle-of-the-road parties and fifty-one cultural organizations.****

4094

Eventually Dr. Kim was able to swing Kim Koo to his opinion and the two went to the meetings in Pyongyang in April 1948. When these conferences failed and separate governments were set up for North Korea and South Korea, the Korean Independence Federation remained neutral and supported neither government. Finally on 6 October 1948, Dr. Kim announced that the Korean Independence Federation would officially support the South Korean government, but planned to work through legal means to supplant it.

Another essentially moderate party was the Laboring Peoples' Party, headed by its organizer, Lyuh Woon Heun. Formed in the spring of 1947, this party was composed of rightists, coalitionists, and Communists. The dissension, characteristic of such conglomerate organizations, was kept under control by the dynamic personality of the party leader. The assassination of Lyuh in the summer of 1947 left the party to wend a chaotic path through the rest of the occupation. The leftists elements began to gain control of policy with encouragement from the North Korea Labor Party and eventually party policy fell under control of the Soviets in Pyongyang. Later, the conservatives evicted the Communists, but the party was never able to provide a leader who achieved the stature of Rhee.*

CIC reported the rumor of an attempt on Lyuh Woon Heun's life several weeks before the killing took place, but so frequently were informants relaying news of other people's plots, that the report went virtually unheeded. There were several red faces when Lyuh was assassinated in mid-July 1947.** The assassin climbed on the bumper of Lyuh's slow-moving car and fired three shots which instantly killed Lyuh and with him the effectiveness of his party. Investigation disclosed that Lyuh, a man with scores of enemies, had never been given the slightist protection from the police although there had been several abortive attempts on his life previously.*** On 27 September 1947 Han Chi Keun, a man of right-wing sympathies, was tried and pleaded guilty to assassinating Lyuh.****

To supplement the account of political activity in Korea, two detailed examples of CIC investigative work in the political field will be presented. The

first is a report of one of the more interesting of the periodic interviews with prominent Korean political figures. The second case is a prime illustration of a wild Korean youth group in action.

CIC Interviews Kim Seung Soo

The CIC interviews of every important political figure in Korea were part of an effort to keep posted on the ever-changing political situation. In early July 1947, S/A R.W.Hatch of the Seoul District Office interviewed Kim Seung Soo, chairman of the Korean Democratic Party and an important rightist. Kim warned that in North Korea the Communists had formed a strong administration with intentions of eventually controlling all of Korea. He stated that the Russians were busy preparing for war, and North Korean factories were producing weapons for the Russians. Meanwhile, in South Korea, he noted that the Americans were doing nothing to stave off the Communist threat to the whole peninsula. Kim regretted the lack of a strong rightist army and felt that the longer the United States waited to recognize officially the Communist threat in Korea, the harder it would be to combat this movement. He questioned whether the American hatred of war was an asset or a detriment to the world, since he felt that Russia and the United States had reached a situation where a war to decide whether the world would be democratic or communistic was inevitable.

Returning to the local situation, Kim stated that most of the people were opposed to the Joint Commission because they did not want to trust Russia with a hand in an election. Any coalition government, he said, would be unable to function because of basic disagreements among the officials. Kim expressed a feeling of indebtedness to the Americans for liberating Korea, but at the same time expressed the desire that neither the United States nor Russia would actively participate in the nation's government. However, Kim did not want American forces to leave the peninsula until a sufficient South Korean army had been established.

Kim felt that a national election at that time would easily give the presidency to Syngman Rhee.

This statement of opinion by a prominent political figure was fairly representative of the thought of the less extreme right-wingers in Korea.*

My Old Friend Chung

Frequently cited as the most difficult and prolonged case investigated by CIC was that of Kim Doo Whan and his powerful right-wing youth group, The

* USAFIK, CIC, Weekly Information Bulletin #12, To: All District Offices, CIC-Korea, 10 July 1947, (Secret), Staff and Faculty Library.

Dia Han Min Chung (The Great Korea Democratic Young Men's Alliance). The importance of the case lay in the fact that it showed to the Koreans that the American Military Government sought justice even for its political opponents. In this instance, CIC took great pains to secure the punishment of men who had committed a crime while fighting an enemy that also was the American's rival, Communism.

Kim Doo Whan's story went back to the days of the Japanese occupation of Korea. Kim' father was sent out of the country for killing a Japanese, and Kim was subsequently left to grow up on the streets of Seoul. Kim's best friend was another young thug named Chung Chin Yung who joined him in giving the Japanese authorities a tough time until they were hired by the Japanese to organize and run the Police Assistance Association. From then on, Kim and Chung were legal terrorists and informants for the Japanese. When they saw their position dissolve with the end of the war, they became unemployed thugs, and consequently gathered up their youth groups and hired out as strong arms on short notice for political parties. The only trouble was that Chung took his Chosen Chun Wi Dai (Korean Advance Guard) to work for the South Korea Labor Party and Kim hired out to the party of the rightist, Chang Duk Soo. It was then that Kim began to speak of "my old friend, Chung." Unfortunately for Chung, Kim was the hand and foot fighting champion of all Korea. The first time out, Kim beat up Chung and two of Chung's cohorts right in the streets of Seoul. Another time, Chung drew a pistol on Kim who proved equal to the occasion by taking the pistol away and shooting Chung in the knee.*

In April 1947, while right wing Koreans were eagerly awaiting the arrival of Syngman Rhee, considered by many of them to be the future father of their country, the left-wingers were making their plans also. Chung Chin Yong and his thugs had been called upon to distribute pamphlets denouncing Rhee as a grafter and self-interested politician.**

On 20 April, Kim sent out some of his men to pick up the men distributing the anti-Rhee literature, since he had decided that this was as good a time as any to bring his old friend back into the fold. Kim's boys roamed the theater and market district of Seoul, picking up Chung's men singly or in pairs. Within three hours, they had rounded up thirteen leftists, including Chung, and the day's outdoor activity was brought to a close. Chung and his men were lined up in a kneeling position and bound. Kim and his boys began a ceremonial beating of these men in the hope that they might see the error of their ways. The beatings were administered with long, stout sticks of Japanese maple.

* Interview with M/Sgt Donald O. Shirley, 12 October 1954, Fort Holabird, Maryland.

** USAFIK, CIC, Specific Case #4, 27 February 1948, Subject: Kim Doo Whan and the Dia Han Min Chung (CIC Political Case), (Confidential), Staff and Faculty Library.

Chung boasted that his orders came from Huh Hun, chairman of the SKLP in the absence of Pak Heun Young, and that he obeyed all orders coming from Communist leaders. He further called Syngman Rhee a traitor. At this point, Kim lost his temper and kicked Chung in the chest. He asked his old friend to recant, but Chung refused. Kim administered another blow which apparently started an internal hemorhage, and soon Chung was dead.

CIC Spoils the Fun

During the beatings, one of the leftists had been knocked unconscious and put into the back room to recover. When he regained his senses, he escaped and made his way to a CIC informant who subsequently notified the Seoul District Offices of the disturbances.

Fifteen minutes later, a full scale raid was organized which caught Kim in the act of further carnage. In a small room just off the large central room of the rightist's headquarters, the body of Chung Chin Yong was found. While medical assistance was being secured for the injured followers of Chung, CIC took custody of Kim and his assistant, Shin Yong Kyun.*

The actual on-the-spot investigation of the case presented no serious obstacles to the agents. An autopsy of the murdered leader was made and the doctor's report taken as evidence. Signal Corps photographers took pictures of the victims, the rightists, and the rightist headquarters. The weapons were taken as evidence.** S/A Richard Killin, in charge of the 971st Special Squad, was responsible for the collection and custody of the evidence.***

Because they firmly believed in the righteousness of their actions Kim Doo Whan and his followers readily admitted their part in the murder. In turn, the surviving victims identified the individuals who had beaten them.**** Kim stated that he would gladly commit the same act again for his actions had assured Rhee a safe homecoming.***** Confessions of the beatings were

obtained from Kim and the men under him. The evidence was more than sufficient to convict Kim and his men of first degree murder.*

On 26 June 1947 the members of the Dia Han Min Chung were brought to trial in the Seoul District Court. Apparently it had become obvious to the Koreans that the Americans meant business and would be more likely to hand out death sentences than medals. Witnesses claimed that Kim had had nothing to do with the beatings; the ill health of Chung Chin Yong was stressed; and on repeated occasions, the judge and the jury were reminded that the accused were pro-Rhee while the beaten men were leftists and trouble makers of the worst sort.**

Completely ignoring the statements of the victims and the previous confessions of the defendants, the judge and jury maintained that there was insufficient evidence of murder.*** Kim Doo Whan was fined the equivalent of two cartons of cigarettes on the black market.**** Kim Young Tai, one of the lesser Dia Han Min Chung members, openly claimed responsibility for the murder to protect his more important bosses and took a seven-year sentence for his sacrifice.***** The incident pointed up the fact that with the right political backing, in Korea one could get away with almost anything.

It is interesting to note that during the interrogation of Kim and his men, CIC had quite a problem with their interpreters, who were all of rightist sympathies. Interpreters had to be cajoled, promised protection, and severely reprimanded before they would refrain from twisting the truth in favor of Kim. One interpreter quit rather than be a part of what he felt was an unjust investigation. Some of the other Korean employees kept themselves out of sight during the whole series of interrogations. The feeling seemed to be that as long as Kim was a rightist, CIC should let him go without investigation.

MG Orders Retrial

Shortly after the first trial, the Military Governor ordered a retrial, feeling that justice had been kicked around rather liberally by the Korean Court. The trial never was held because the Police, in a weaker moment, had somehow "misplaced" the physical evidence. General Hodge then ordered a retrial before a Military Commission, and CID was given the job of preparing what evidence they could and reinterrogating the principles. The two men put in charge of the interrogations were novices, and shortly before their work was to be completed, it developed that the interpreters were shading the testimony to protect Kim. The interrogations had to be conducted all over again.

The trial ran for the whole month of March 1948; and when the smoke had cleared away, Kim was given a death sentence which was later commuted to life imprisonment by General MacArthur. Early in April 1948, a year after his crime, Kim Doo Whan was sent to prison.

The National Elections were held in May, and by 15 August 1948, Korea was a sovereign nation under the Rhee government. Shortly afterward, Kim was freed.

Kim Doo Whan had never had a chance to acquire the benefit of an education and was illiterate to the extent that he was not exactly sure of the spelling of his own name. Upon his release from prison by the Rhee government, Kim was taken under the wing of a wealthy Korean woman who educated him in the Korean classics and Korean chivalry. After the Korean War, Kim Doo Whan became the Chief of the Investigation Section of the Korean Youth Corps and the personal body guard of Syngman Rhee.*

Section 7

CIC AND POSITIVE INTELLIGENCE

On 12 March 1947, CIC officially took on the added mission of collecting positive intelligence concerning North Korea. One week later, a letter from the 971st Headquarters was forwarded to all District Offices outlining the reasons and necessity for the special CIC operations.

Command Relies on CIC For Positive Intelligence

This letter to the District Offices mentioned that CIC had been formerly forbidden to engage in positive intelligence collection. But it was noted, the Commanding General had come to rely on CIC not only to confirm the information furnished by other agencies but also to actively seek positive intelligence. As a result of joint conferences of intelligence agencies in January 1947, CIC was specifically assigned positive intelligence missions. The letter formally created the Information Section as the unit to handle the new mission.*

Prior to the official designation of the 971st as a positive intelligence collection agency, scraps of positive intelligence picked up in the course of normal duties had been reported to the G2, XXIV Corps. CIC had participated in the field of positive intelligence as early as November 1945, when information was received concerning the removal of equipment from North Korea by the Russians. Reports were processed by the Espionage, Sabotage and Miscellaneous Section at this time.

1st Lt. Wallace K. Wittwer, a recent graduate of West Point, was placed in charge of the newly formed Information Section. S/A Donald P. Whitaker, a civilian formerly in the Army, who had considerable intelligence experience, acted unofficially as co-chief. Both men had been in Korea for over a year at the time the Information Section was organized. Wittwer had originally been with the 1036th CIC Detachment, while Whitaker, then a T/Sgt, had been with the 224th.**

Whitaker was extremely valuable because of his Chinese and Korean linguistic ability. He usually began an interrogation with an interpreter, pretending not to

4101

know Korean. At the right moment he would ask the subject questions in Korean and the shock often led to the "breaking" of a person with valuable information.*

Wittwer, as OIC, performed all the necessary administrative functions of the section and processed reports for forwarding to higher headquarters.

OIC Visits District Offices

Soon after the Section was set up, the OIC made a visit to several of the District Offices to explain the work and mission of the section, and to request that one agent specifically be assigned to positive intelligence. This agent had to be thoroughly briefed on the Information Section's EEI and the general situation in North Korea, since it was realized that it would be impossible for every agent to acquire the necessary background on the situation in North Korea.

It was soon discovered, however, that the CIC agents in the field, without access to Central files, could not acquire the full background that members of the Information Section at headquarters were able to develop. As a result, the interrogations held at headquarters were proving to be more fruitful.

Agents were encouraged to pay frequent visits to Headquarters to read the Periodic Summaries of Intelligence and other reports, and through these visits, a few agents became reasonably well versed in the North Korean situation. But all too frequently agents in the field would be transferred or discharged just as they were beginning to produce high quality, useful reports. This rapid turnover of personnel made necessary a procedure whereby agents in the field were used mainly to screen individuals and to send on to Headquarters those who had important information.

In September 1947, permission was obtained from the G2 to send the Periodic Summaries of Intelligence to those District Offices properly equipped to safeguard them. At the same time, another policy was initiated which brought the agents in the field to Seoul for four days of special instruction. In many cases, these classes encouraged a new interest in the collection of positive intelligence in the field.**

At the completion of the first six months of operations, a progress report issued by the Information Section indicated that Seoul, with three agents and the OIC, had

* Interview with Captain Theodore E. Griemann, 10 December 1954, Fort Holabird.

** 1947 Annual Progress Report, 971st CIC Detachment, pp. 1-15, (Secret), (Staff and Faculty Library.)

completed fifty-three percent of the total reports rated average and seventy-two percent of the reports rated superior in addition to having performed the processing and administrative functions.

The report also particularly lauded the work of the Taejon District Office and its suboffice at Chongju, although these offices were inland and consequently did not have the abundant opportunities for intelligence gathering that were presented to offices near points of entry into South Korea. 1st Lt. Kenneth MacDougall, OIC in Taejon, and Agents John W. Anderson and Theodore E. Griemann were commended for their excellent work. Frequent trips had been made to Headquarters to look at the Periodic Summaries of Intelligence and other reports, and this procedure seemed to be the key to success at Taejon.* The Taejon Office had also set up a special positive intelligence interrogation room with numerous North Korean maps on the wall for ready use.**

The most frequent failures in reports during the period stemmed from a lack of background information on the part of the interrogator, a failure to use maps during the interrogation, a failure to properly identify troops and equipment by name and description, and a failure to obtain the Chinese characters for names reported.

The attempts to encourage and improve the collection of positive intelligence by the District Offices continued throughout the occupation. The 971st's wide network of field offices was a necessity to successful positive intelligence collection. Since no other intelligence agency had nearly the number of offices that CIC did, it was imperative that CIC utilize its network of offices to the greatest advantage.***

CIC Sends Korean Agents North

For some time the main body of positive intelligence information was obtained from refugees coming from North Korea into the south. The refugees had often seen a great deal in the north, but it was rare when one of them knew much about

the military and political organizations in North Korea. Aware of the shortcomings of their information and sources, the Information Section gradually began to assign specific positive information missions to Korean agents. Usually an agent was briefed and dispatched to obtain information concerning one particular matter. By fitting individual reports together, CIC was able to get the overall military and political picture in North Korea.

After supervising the activities of these Korean operatives for several months, the Information Section noted that the efficiency of the paid agent tended to flag following his first few missions. These agents were usually men who had just recently entered South Korea and knew their way around in North Korea. When first dispatched, the agents willingly carried out their assigned mission. As they grew accustomed to living in South Korea, they became more and more reluctant to head north. Soon they began to hire others to enter North Korea for them and to talk with recent refugees from North Korea. This procedure enabled them to compile enough information to feel confident that they could sell it to the Americans. In some cases, these frauds were uncovered and the persons involved were forced to return the funds paid to them. Because the frauds occurred with frequency, agents seldom were employed for more than one or two missions into North Korea.

Another type of Korean agent was hired solely for the purpose of traveling along the border and contacting other persons who were making their way into South Korea. These recent arrivals were screened and the most important ones were sent to Headquarters for interrogation. The number of agents used to pick up recent arrivals was kept to a minimum by the reluctance of the National Police to honor the passes of these men near the area of the 38th Parallel.

Agents were also used to go into North Korea to contact and arrange for the escape of valuable persons known to be disaffected with the conditions in North Korea.

When it was learned that certain rightist political organizations had formed their own network of agents and their own intelligence section for the purposes of fighting Communism, the Information Section established liaison with them to obtain their collected information. These organizations were useful in finding individuals who had recently escaped from North Korea and in contacting persons who desired to escape. The most important of these rightist groups was the North West Young Men's Association, composed of men who had themselves escaped North Korea. Because of their first-hand experience with Communism, these men were extremely anti-Communist and would go to great lengths to work against the Reds.

Through interrogation of refugees, the use of paid agents of various sorts, and through liaison with rightist political organizations, the Information Section was able to keep posted on happenings north of the 38th Parallel.* At the conclusion of operations in 1948, the Section had turned out more than four thousand reports, about half of which had emanated from Headquarters in Seoul. The peak month was October 1947 when 297 reports were written.**

CIC Takes A Trip To Pyongyang

In one instance travel to the north was not limited to Koreans. In July 1947, the Information Section was able to send eight CIC agents with the American Delegation to Pyongyang for the Joint US-USSR Commission meeting to be held there. The agents went undercover as drivers for the American delegates. This dodge was expected to fool no one, but it proved sufficient to give the agents a chance to see with their own eyes the conditions that prevailed in the police state and made them better able to comprehend the reports of CIC's Korean agents and refugees from the north.

The agents discovered that the Communist domain was full of fear, hunger and hopelessness. Guards, police and army personnel flooded the streets, controlling every move of the civilians. Forced demonstrations greeted the delegates of the Joint Commission. A few brave souls dared to cheer the Americans and their flag, but they were hushed up or hauled off to jail in waiting trucks. It was apparent that the people were subjected to the terrors of a secret police and Communist brutality, and that they were virtually ignorant about the world around them. It was also evident that those who expressed a feeling of doubt about the Communists and their ideas were removed from the local scene in haste.

The CIC agents also noted considerable detail. Korean soldiers were equipped with Soviet weapons and the Korean army was using American-made trucks, probably given to Russia under lend-lease. Great amounts of equipment were piled up everywhere, but there was a desperate lack of food in the stores. The vast majority of the buildings were dilapidated and the back streets were filthy. Most North Koreans appeared tired and bitter.

The agents managed to take about a thousand general photographs of Pyongyang. A picture of the Headquarters of the North Korea Labor Party showed a large

* 1947 Annual Progress Report, 971st CIC Detachment, pp. 1-15, (Secret), (Staff and Faculty Library.)

** Above reference and 1948 Annual Progress Report, 971st CIC Detachment, p. 5-15, (Secret), (Staff and Faculty Library.)

picture of Stalin hanging over the main entrance. Another photograph showed at least twelve American-made two-and-one-half ton trucks with Soviet Army markings being loaded at the Pyongyang railroad station.

While taking these photographs, the agents were trailed at all times by a convoy of Soviet and Korean Intelligence men. While sometimes bothersome, most often the "tail" furnished the agents and onlooking Koreans with a source of amusement. The condition of the Soviet vehicles was poor and their drivers worse; so the Americans, without deliberate intention, usually lost their surveillants. On foot, it was often necessary for the Americans to retrace their steps and politely tap the detectives following them on the shoulder so that they would not become separated. At no time was a CIC agent left to his own devices by either the Korean plainclothesmen, Soviet officers and enlisted men, or teams composed of both Koreans and Russians. The bland unconcern of the Americans confused their surveillants and the presence of the Soviet agents did not materially interfere with the American observations.*

Section Covers Many Subjects

The complete coverage of the North Korean situation by the Information Section can be indicated by noting several fields in which positive intelligence operations were most successful.

The Section was able to keep track of Soviet forces in North Korea, including unit development, personnel, TOE, uniforms, insignia, and training plans. Descriptions and pictures of weapons were obtained and eventually examples of the weapons themselves. In general, CIC was aware of the Order of Battle of Soviet and North Korean forces at all times as well as changes in governmental organization and personalities. To cover the economic situation, CIC collected information concerning food and commodity distribution, industry, mining, and transportation.**

* USAFIK, CIC, Subject: Weekly Information Bulletin #12, To: All District Offices, CIC-K, 10 July 1947, (Secret), (Staff and Faculty Library) and USAFIK, CIC, Special Report of the North Korea Trip, 27 July 1947, (Secret), (Staff and Faculty Library), and Interview with CWO John R. Dilworth, 16 October 1954, Fort Holabird.

** 1947 Annual Progress Report, 971st CIC Detachment, pp. 1-15, (Secret), and 1948 Annual Progress Report, 971st CIC Detachment, pp. 5-15, (Secret), (Staff and Faculty Library.)

The Section diligently sought information on the North Korean press and the people who exercised control over it. Investigations showed that complete Communist control of the press had begun almost the minute the Soviets had arrived. Even two newspapers which had no political connections were immediately closed with the statement that newspapers bearing no relation to the Communist Party would not be allowed.*

General Wedemeyer Receives CIC Report

One of the most comprehensive positive intelligence reports was written by Donald P. Whitaker for General Albert C. Wedemeyer, who was on an important trip to the Far East to report on Communist activities and intentions. In the report, dated 28 August 1947, and consequently written after only half a year of operations by the Information Section, Whitaker concluded that: "the aim of the Soviet Forces in North Korea is to establish a Communist government for the whole of Korea, that they will not agree to any government for all Korea that will not result in the establishment of a Communist state, and that there will be no united, free and democratic (in the Western sense) government for the whole of Korea until such time as the present Communist Soviet Government in the USSR is destroyed, either by internal revolution, or through the action of outside, liberating forces." The report went on to summarize concisely events in North Korea since the Russians had taken over.

History of The Soviet Occupation

When the Russian troops had first entered Pyongyang on 27 August 1945, they found already established the National Reconstructing Preparatory Peoples' Committee, composed primarily of Christians, business men, and educators. The head of the committee was Cho Man Sik, a Presbyterian minister.

The Communists set up a committee to govern North Korea and included fifteen members of the Communist Party and fifteen followers of Cho Man Sik. During the latter months of 1945, Cho and his followers, encouraged by the Russians, organized a political party, the Chosen Democratic Party, in opposition to the Communists.

On 28 December 1945, the plan for a trusteeship for all Korea was announced. Immediately Cho Man Sik and his party expressed opposition while the Communists, instructed by the Russians, came out in favor of the plan. Eventually Cho Man Sik and most of his followers resigned from the government.

*USAFIK, CIC, Memorandum for the Officer in Charge, Subject: North Korean Newspapers and Their Control, 2 September 1947, (Confidential), (Staff and Faculty Library.)

4107

On 5 January 1946, Cho Man Sik was placed in protective custody by the Russians. His party was taken over by the Russian-appointed Choi Yong Keun and completely subverted by the Communists. All the major followers of Cho Man Sik were eliminated. The Chosen Democratic Party unwittingly had served the purpose of bringing together all the leading rightists so that the Russians could easily put them out of the picture. From this time on, there could be no word of opposition to the Russians.

And A Forecast

The CIC report included a brief estimate of the current situation in North Korea and went on to predict the eventual outcome resulting from the Soviet influence: "It is the intention of the North Korea Labor Party (the Communists) to set up a government for Korea composed entirely of Communists, or, if this is not feasible, one completely under Communist control. Further, the North Korea Labor Party and the Peoples' Committee are controlled by a small group of Korean returnees from the USSR and from Yenan, China, who work hand-in-glove with the Soviet Political Committee headed by Major General Romanyenko, Military Governor of North Korea. This small group, aided and abetted by the Russians, is determined to force upon the Korean people its own conception of government, regardless of the opinions of the majority...."

The report turned to the armed security force under the thumb of this small group. This force consisted of armed police, railroad guards, coast guards and the Peoples' Army, the latter Soviet trained and equipped and numbering 125,000 to 150,000 men. It was prepared to do the bidding of this inner circle of Communists.

The subject of North Korean Communist cooperation and interdependence with the Communists in other Far East nations was next considered and several instances outlined fully. The report ended by quoting a propaganda slogan which stated what was undoubtedly the real aim of the North Korean and other Asian Communists: "Let us build up a new Manchuria, a new China, and a new Korea in accordance with the principles of STALIN, the same principles by which our great fatherland, Soviet Russia, was built."*

The CIC report, viewed in the light of future events, had laid the cards on the table. The plans of the North Korean Communists and their Russian masters

* USAFIK, CIC, Memorandum for General Wedemeyer, Subject: North Korea, Manchuria, and the USSR, (Confidential), 28 August 1947, (Staff and Faculty Library.)

were known to American intelligence people long before the start of the Korean war. General Wedemeyer's report, made when he returned to the United States, reflected the information and predictions of this and similar reports from other areas in the Far East.

All CIC men in Korea felt that the Communists would forcefully enter Korea some time soon after the Americans left. It was an unavoidable conclusion to those in close contact with the situation.

Section 8

THE SECURITY SECTION

The Security Section of the 971st CIC Detachment was charged with an extensive and varied mission in the Standing Operating Procedure of 29 March 1947. The section's duties included investigations of violations of AR 380-5, initiation of security surveys, some of the investigations of subversion in the military, investigation of disaffection within the military, investigation of all personnel requiring clearance, and all activities involved in maintaining the security of CIC in Korea.*

The Security Section at headquarters had three men specifically assigned to it, the Officer in Charge, his assistant and an administrative agent.** William Ward, a civilian, 1st Lieutenant John M. Fergeson, 1st Lieutenant Wilbur T. Measley, and Captain Elbert H. Eller served, in turn, as OIC of the section.***

The heavy workload of the Security Section in all its fields of operation was attested to by the tallies in the Report for 1948. During the year the section handled 5,484 travel clearances, 1,790 local agency checks, 493 general agency checks and partial background investigations, 41 background investigations for cryptographic clearances, 34 disaffection investigations, 3 cases of subversive activity, 3 investigations of persons impersonating CIC agents, 7 investigations of persons desiring admittance into CIC, 22 violations of AR 380-5, 167 security inspections,and 8 investigations of a miscellaneous nature.****

Section Investigates Chronic Complainer

Disaffection has been called the embryonic stage of subversion and CIC in Korea had to investigate all alleged instances of wavering loyalty in its effort to prevent subversion. One striking case of disaffection which was handled by the Security Section involved an American Department of the Army civilian who had been a U.S. Army Lieutenant. This man was brought to CIC's attention after he had written a letter to the Chief Advisor of the Korean Police complaining bitterly about the Military Government's policy regarding leftists. Investigation revealed that the

**** 1948 Annual Progress Report, 971st CIC Detachment, pp. 85-86, (Secret) Staff & Faculty Library.

subject met regularly with leftist Koreans and that the drift of his conversation was generally along Communist lines. Most of his associates, both American and Korean, had already been brought to the attention of CIC. In August 1947, the subject wrote another bitter letter, this time to General Hodge, denouncing the "unwarranted" arrest of a Korean friend. Several months later, he continued his complaints by forwarding a petition from a leftist cultural group to General Helmick, then Acting Military Governor, that appealed for an investigation into the right wing's terroristic activities against this cultural society. The subject left Korea in December 1947 under the watch of a CIC informant. His conversations and associations continued to reveal his leftist sympathies. The case was forwarded to the United States with recommendations that the subject be further observed as he returned to the area under FBI jurisdiction.*

Stateside Background Checks Incomplete

Background investigations designed to keep such disaffected people from sensitive positions posed a major problem for CIC in Korea. Department of the Army civilians coming to Korea for sensitive positions were scheduled for security checks by CIC in the United States, but as soon as these individuals sailed for Korea their cases were discontinued in the states, often with only a superficial records check having been made. Case control was transferred to the 971st where only the subjects' activities and associates could be investigated. Consequently, on the basis of a discontinued investigation, temporary clearances which were, in effect, permanent had to be given.** Only after overt actions in Korea brought an individual to the attention of the 971st was there further investigation.

The 971st CIC Detachment felt that higher priorities were given to investigations for other commands than for their own. The Monthly Information Report dated 29 July 1947 contained a recommendation that stateside background investigations on Department of the Army civilians headed for Korea be expedited.***

On the Interoffice Memorandum that he attached to this report, Brigadier General Keyser, Commanding General of the CIC Center, wrote: "after considering the practicability of expediting ZI investigations of WD employees in USAFIK,

I prefer that no IOM to Security Group be written. G2 in USAFIK knows the situation there and if it is too bad, he should have General Hodge write to ID. Stepping up this type of investigation would only slow up other more important types."*

Actually disaffection among civilians in Korea was a major concern to Colonel John N. Robinson, G2, USAFIK. His alarm was expressed in his last minute decision to change the mission of a group of fifteen CIC undercover agents to investigation of Department of Army civilians in Korea from their original mission of investigating Army enlisted personnel, an operation discussed in Section ten of this Chapter.**

Even if proper investigation of civilians had been completed in the United States, there would still have been a problem. So few people volunteered for work as DACs in Korea that Military Government offices in Korea welcomed those they could get and were usually reluctant to refuse clearances even in doubtful cases.***

In spite of these unfortunate complications, some background checks from the United States proved to be extremely important. In 1947, CIC headquarters received the report of a routine background check on a man to be employed as a _____ This report contained considerable derogatory information. From the first day of the local investigation, the case became one of great controversy. The subject was extremely likeable and made a favorable impression on all men who had contact with him. The special report from the United States indicated that the subject was currently using an alias and that, under his real name, he had been a member of the Communist Party and had been involved in much Communist activity. Before CIC could check his fingerprints with the FBI, the subject departed from Korea and the investigation in Korea was forwarded to other offices.****

Security Surveys Neglected

Security Surveys were part of the mission of the Security Section. The section set a tentative goal of one survey per week for each office, but Weekly Information

Bulletins indicate that this goal was not always attained. Surveys were frequently haphazard when they were conducted. The following remark in the Information Bulletin of 29 December 1947 was typical of the attempts to urge District Offices to increase the quality and quantity of Security Surveys. "The attention of all District Offices and Sub-offices is invited to the fact that in the past few months very few Security Surveys have been received by this Headquarters.... Security is a continuing thing and cannot be emphasized one week or one month and forgotten the next. Security surveys should be conducted continuously by each particular office, on the basis of one military installation per week, whether it be a Regimental Headquarters, a Company orderly room, a military barracks, a motor pool, a POL dump, a few warehouses or anything else. If it is military in nature, it should be surveyed for security. If a repetition of surveys becomes necessary, all the better. In such a case an opportunity is afforded to see that previous recommendations for improvement of security have been carried out.*

Agents were urged to be on the lookout for security hazards, even when assigned to other cases or off duty. Routine security surveys and inspections had such a low priority in Korea, that much that should have been done was neglected. But this neglect was not universal as the following quote from the Monthly Bulletin of 4 June 1948 indicated: "S/A Gillies of the Seoul District Office turned in two extremely commendable security surveys during this past month.... One survey that he worked on was of such unusual interest in pointing out defects in regard to fire hazards and lack of security-consciousness of personnel that this headquarters deemed it advisable to forward the original copy of the survey directly to the Commanding General, 7th Infantry.... Perhaps that one report will be as a 'lever' to cause to be instituted among all Seoul units of the Division a general drive for security and the reduction of careless fire hazards. If such occurs, then once again, CIC has been of value to the tactical command in a material way."**

In February 1948, the policy of one Security Survey a week per office was discontinued. Basic SOPs were sent to all offices, stating that surveys would not be initiated or conducted unless specifically requested by the Commanding Generals of the 6th Division, the 7th Division, or Korean Base Command for their particular units.***

Section Checks CIC Security Weaknesses

Although each agent was expected to be security conscious to the best of his ability, it was the job of the Security Section to ferret out leaks in the security of CIC and continually to remind the agents of areas where possible slips might occur. For instance, it was the Security Section's responsibility to halt the practice which developed in some sub-offices late in 1947 of including tactical units on distribution of investigation reports. All the offices responsible for such errors had to retrieve the misdirected reports and send a statement to this effect to the Security Section.*

It was also part of the Security Sections mission to prevent identification of CIC personnel in public. Once again, of course, the prime responsibility had to rest with the individual agent. One major source of disclosure was mention of agents names in Service publications when CIC personnel were transferred on orders.**

Often agents returning to the United States in uniform were compromised on shipboard. When the seriousness of this problem became apparent, Lieutenant Measley and WOJG Mark Huss received permission to travel home in civilian clothes to determine how effective such a procedure would be in cutting down compromise incidents. When Huss was compromised early in the trip, the two men agreed to ignore each other the rest of the way, and Measley was able to make the trip without being identified.

CIC ran background investigations on all agents who were locally procured. However, there was no rapid way to find out whether an individual under consideration had been rejected by or separated from CIC in another part of the world. Consequently, inefficient and dangerous personnel could worm their way into CIC in one area after rejection by another.

The Security Section suffered heavily from the extreme shortage of CIC personnel in Korea. The usual low priority on the section's work meant that many important duties were neglected in favor of more pressing matters from other sections.***

Section 9

THE SPECIAL SQUAD

The duties of the Special Squad were outlined in the SOP dated 29 March 1947 as follows: procurement, supervision and control of all Korean interpreters and translators used by CIC, the processing of all foreign language documents, supervision of "Special Projects" (reports involving extensive research in CIC files), and preparation and custody of evidence in cases requiring prosecution.*

The Special Squad was originally headed by S/A Richard C. Killin, a civilian, who had been among the first group of the 224th to arrive in Korea.** He had been separated from the service in April 1946 as a First Lieutenant, but had agreed to stay with CIC in a civilian capacity.*** When Killin returned to the United States, WOJG S. S. Browning, who, like Killin, had been a lawyer, took over the position.**** Two agents and a clerk typist were included on the Special Squad's roster.*****

Great Reliance Placed On Indigenous Koreans

The major problem for the Special Squad was the procurement and supervision of Korean interpreters and translators. Since only a few of the agents spoke any Korean at all, CIC had to rely heavily on indigenous Korean interpeters who were generally a mercenary lot, taking advantage of any situation favorable to them. Many were former employees of the Japanese, which left CIC open to charges of harboring Japanese collaborators. When it suited their purposes, the interpreters were able to twist their interpretations and keep CIC in the dark.******

Since reliable interpreters and translators were at such a premium, CIC was gratified to find some men who, time and again, demonstrated their loyalty. Shin

Jung Kyoon, originally recommended and procured by 1st Lt. Harry H. Dow, was the most trusted of the Koreans. Shin had been Korean representative for the Singer Sewing Machine Company and was unusually "Westernized." Shin and Killin worked to standardize the English spelling of Korean names for CIC reports. Without an SOP, agents had been using all the diverse spellings for anglicizing Korean names in their reports with the result that the Seoul files were in a chaotic state. To indicate the scale of the problem, the Korean name "Lee," one of the most common, could also be anglicized in about forty ways including the following: Rhee, Rhii, Ri, Li, Ree, Yi, Yee, E, Ee, and I. Although it was too late for the 971st to adopt Shin's standard spelling system completely, it was put to use by CIC in the Korean War.* Another valuable interpreter was Suh Sung Kyong, known to all as "Old Mr. Suh." This trusted old man and his whole family were publicly executed by the Communists in Seoul during the war.**

Among the unscrupulous linguists was Song Kong Sam, an interpreter for the Inchon District Office late in the occupation. Song defected after the invasion and later became a Communist guerrilla leader. Undoubtedly he was able to supply the Reds with considerable information concerning the operations of the 971st during the occupation.***

In addition to controlling interpreters and translators, the Special Squad was in charge of all Korean CIC personnel. Only about one in ten Koreans reporting for work could be accepted. A detailed interview at the time of application was made to ascertain the applicant's ability and fitness. If the Korean seemed desirable, he was given a Personal History Statement form to fill out. Later he appeared before the Operations Officer who thoroughly questioned him on his political beliefs and affiliations. If the applicant passed these screenings he was sent to be photographed and his Personal History Statement was turned over to the Security Section for a background investigation. If the clearance was granted, the applicant was put on a sixty-day trial basis, during which time his work and actions were carefully checked.

** Interview with Master Sergeant Donald O. Shirley, 12 October 1954, Fort Holabird.

*** Letter to Major John O. Garrison, Deputy Chief Of Staff, Hq AIC, Fort Holabird, Baltimore 19, Md., from Hq, US Army Forces Antilles and MD of Puerto Rico, in response to questions concerning 971st activities, 22 November 1954, /s/ Joseph Genovese, Captain, (Confidential.)

Dismissal as well as employment of Korean personnel was within the province of the Special Squad.*

In accord with the mission of processing all foreign language documents, the task of translating the great bulk of documents taken by CIC during the nationwide raids on all SKLP Headquarters on 12 August 1947 fell to the Special Squad. These documents included books, propaganda leaflets, party directives and party membership lists. Screening these documents was a three-month task. A list of titles and a rough outline of the contents of each document was sent to the G2, USAFIK, who then compiled a list of the individual documents that he wanted translated in detail.

A Helpful Young Man Enters The Scene

When WOJG Browning was in charge of the Special Squad, an informant came to him with the news that he could pick up some SKLP documents if Browning was interested. The Korean was given enthusiastic approval and went on his way. A few hours later he backed a truck up to the CIC offices and deposited two safes, still locked and full of documents, and an untold number of boxes of documents. The Korean had rounded up a group of strong-arm specialists from the North West Young Men's Association and barged into the SKLP Headquarters to seize the documents. Of course, the SKLP had much to say about American police tactics, but the documents and the safes were never returned.**

Section In Charge of Confidential Funds

Although the SOP did not mention that the Special Squad was in charge of the procurement and distribution of confidential funds, the Section was assigned the added responsibility. During 1947, confidential funds granted the 971st CIC Detachment were in the neighborhood of $3,000 a month, an amount increased during 1948 to $5,000 a month. However, an unrealistic exchange rate (50 hwan/1 dollar) prevented this "hard cash" from being enough to cover CIC's necessary commitments. The Special Squad purchased cigarettes and "incentive" goods, some of which were converted into Korean currency when such extra-legal action was an operational necessity. The remaining supplies were utilized for the direct payment of informants. Additional "incentive" supplies, particularly clothing, were obtained from various civilian relief agencies and utilized for confidential

** Interview with Master Sergeant Donald O. Shirley, 12 October 1954, Fort Holabird.

purposes. Contacts with medical channels resulted in the procurement of relatively large supplies of Sulfa drugs and antibiotics, unobtainable in the civilian economy.*

The "Special Projects" mentioned in the SOP were long range research reports on various features of CIC activity in Korea. Three of the more important of these reports were: "The Pro-Japanese Issue," "Sabotage Since 1945," and "Soviet-Communist Inspired Espionage."** Often, however, members of the Special Squad were too much engrossed in their daily assignments to devote sufficient time to these projects.*** Much of this work was absorbed by the Reports and Analysis Section.

The legal aspect of the Special Squad's mission was in experienced hands since both Killin and Browning were lawyers. The case that involved the most legal work was the case of Kim Doo Whan, covered in Section 6. Since CIC arrived at the scene of the crime when all the principals were still present, there was a large amount of evidence for this case. Procurement, preparation and custody of this evidence fell to Killin and the Special Squad in accord with its mission.****

Beginning in May 1948, the Special Squad was gradually dissolved. The varied duties were farmed out to other sections and a new unofficial section was created to handle the interpreters and translators with Donald O. Shirley the Agent-in-Charge.*****

Section 11

PHASING OUT

In July 1948, when it was known that CIC would soon withdraw from Korea, Syngman Rhee, Col. Thomas Watlington, G2, XXIV Corps, and Lt. Col. H. E. Erickson, American Advisor to the Korean National Police, after many conferences, decided that a South Korean organization modeled after CIC should be established. At the insistence of Rhee, the organization was to be actually composed of civilians.

CIC Aids Research Bureau

Colonel Huckins named Major Theodore Roberts and Captain Richard Fox from the 971st to procure, organize, and train the personnel to be assigned to this agency. The great majority of the men were drawn from the National Police and the Korean employees of CIC. A training school was established at the National Police Academy in Seoul and the first six-week course began in mid-July 1948.

The organization was named the Korean Research Bureau and the T/O set at 315 men. There were only sixty men in the first class which graduated in late August. Immediately thereafter, a class of 240 began training at the Kyonggi Middle School near the capitol building in Seoul. Some of the better students from the first class served as instructors to this second group.

The curriculum for the Research Bureau school included all aspects of counterintelligence: safeguarding information, report writing, security surveys, interrogations, counterespionage, surveillance, arrests and searches, undercover investigations, background investigations, informants, riot control, police laboratory methods, document examination, observation and description, and preservation of evidence.

When the second class graduated in early October, Research Bureau personnel were assigned to the CIC District Offices.

Because the National Assembly would not sanction the Research Bureau as an official government agency, it was necessary to establish an investigative agency within the Korean Constabulary called the Special Investigations Section. A group of selected officers of the Constabulary were ordered to Seoul for a month-long counterintelligence course. Upon returning to their units, these men were to set up detachments modeled after CIC.

When CIC left in December 1948, the two Korean counterintelligence organizations were left to fend for themselves. Shortly afterward the Korean Research

Bureau ceased to exist and all CIC functions were left to the Special Investigations Sections of the Constabulary.*

Skeleton Staff Left in Korea

Gradually, through the final months of 1948, CIC turned its functions over to the Korean Research Bureau. A majority of CIC's files were placed in the hands of this organization.**

On 31 December 1948, the largest remaining group of agents of the 971st left Korea. However, since a considerable segment of the XXIV Corps still remained in Korea, it was necessary to keep a skeleton staff of the 971st on the peninsula. Captain Harry W. Baker was left in charge of the following sixteen agents: Gene M. Eubank, Edward F. Marsh, George E. Brown, George Stroebel, Jr., Patrick C. Pisauro, Steve P. Kuhar, Donald S. Koonce, Vincent P. Smith, Elmer Smith, Joseph Genovese, Yukinobu Fukioka, Michael Nidositko, Charles F. Bruce, Chester E. Carpenter, Robert W. Kilpatrick, and Paul H. Roe.

Under Baker, Nidositko served as Operations Officer, Genovese as Chief of the Political Section, Carpenter as Chief of the North Korean Order of Battle Section (comparable to the former information section), and Bruce as Office in Charge of the Seoul District Office. Vincent Smith and Fukioka took care of administrative matters and Kilpatrick was Liaison Officer.

Basically the mission of this group was exactly the same as the mission of its predecessor. Due to the efforts of well-placed informants, the unit was able to keep higher headquarters posted on the political situation in Korea. Often CIC was able to predict the various alignments of the still numerous political parties and the various changes in the Rhee government. The collection of positive intelligence on North Korea was equally successful.

Among the significant cases investigated by this unit was a case of suspected espionage involving a stateless White Russian who had been recruited by the U. S. Army for deep sea diving. A CIC investigation linked him with the Communists, and he was denied a visa to enter the United States by the State Department on the strength of this investigation. This unit continued the earlier investigation of the Russian colony connected to the Seoul Orthodox Church. Another

4127

investigation by CIC brought to justice the Communists responsible for the murder of the wife of an American missionary in Korea.

There were many cases involving the smuggling of gasoline from South Korea to the Communists in China.

The majority of tactical troops left Korea in late May 1949. At this time the 971st was deactivated and the seventeen men who had performed CIC operations during the last months were placed on orders to leave Korea.*

Wong, Bing Y.	T/4
Yang, Stephan S. S.	Sgt

With the exception of the rosters dated 11 March 1946 and 23 December 1948, there is no listing of CIC personnel in Korea during the occupation. The preceding list was compiled from reports and correspondance of the 971st CIC Detachment and the 224th CIC Detachment, records of credentials issued and recalled from the 441st CIC Detachment, and the remembrance of former agents of the 971st. Among the latter, CWO John R. Dilworth and M/Sgt Donald O. Shirley were particularly helpful.

4. PERSONNEL IN POSITIONS

Commanding Officer, 224th CIC Det
- Lt Col Byron M. Meurlott
- Capt William R. Gordon
- Capt Van C. Holmes

Commanding Officer, 971st CIC Det
- Maj Jack B. Reed

APPENDIX 3

STANDARD OPERATING PROCEDURE OF THE 971ST CIC DETACHMENT

1. Standard Operating Procedure, dated 29 March 1947
2. Amendments to Standard Operating Procedure, dated 14 April 1947

[redacted]

UNITED STATES ARMY FORCES, KOREA
HEADQUARTERS
COUNTER INTELLIGENCE CORPS
APO 235

29 March 1947

SUBJECT: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea.

TO : All Counter Intelligence Corps Personnel, Korea.

SECTION I

General

1. Purpose

To standardize administrational and operational procedures for the Counter Intelligence Corps in Korea. To clarify the mission of the Counter Intelligence Corps and to provide for uniform reporting and compilation of records.

2. Mission

The mission of the Counter Intelligence Corps is governed by:

a. War Department letter AG 322, CIC (31 October 1944) OB-S-B-M dated 13 November 1944, Subject: Counter Intelligence Corps.

b. AFPAC regulations #100-10 dated 1 August 1945.

c. AFPAC letter AG 322 (22 March 1946), CI.

d. USAFIK letter AG 322 (TFGBI) dated 30 April 1946.

The basic mission of Counter Intelligence Corps is to assist in the maintenance of military security. The mission has now been enlarged to require special investigative activity in both the Positive Intelligence and Counter Intelligence fields involving political groups and social organizations and the collection of information relating to adjacent areas to insure the successful completion of the over-all mission of the U. S. Forces in Korea to set up a democratic form of government as outlined in Headquarters XXIV Corps letter TFOIE dated 15 January 1947.

This document regraded CONFIDENTIAL by Order Secretary of the Army per letter dtd 8 Apr 55 on file in G2, AIC; document on file in Historical Project, AIC

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

3. Organization and Equipment

a. The Counter Intelligence Corps, U. S. Forces, Korea, is organized under T/O&E 30-500 and constitutes one A4, six B2, four B3 and four B4 teams with a total enlisted strength of 88, Warrant Officer strength of 46 and Officer strength of 44.

b. The formation of District Offices with such Sub-offices as necessary is authorized for complete coverage of the U. S. zone in Korea. The centralized administration and operational control will be exercised by Counter Intelligence Corps Headquarters for Korea. The Headquarters located in Seoul is as follows:

(1) Office of the Commanding Officer
(2) Office of the Executive

(a) Adjutant
(b) Supply Section
(c) Billet and Office Section
(d) Motor Pool Section
(e) Mess Section
(f) Message Center

(3) Office of the Chief of Operations

(a) Espionage, Sabotage and Miscellaneous Section
(b) Political Section
(c) Security Section
(d) Special Squad
(e) Information Section
(f) Reports and Analysis Section
(g) Liaison Section
(h) Operational File Section

The District Offices are as follows:

(1) Seoul District (covering Seoul and environs)
(2) Inchon District (covering all of Kyonggi Do south of the Han River)
(3) Songdo District (covering Kyonggi Do north of the Han river and such portions of the provinces of Hwang Hae Do and Kang Won Do south of the 38th Parallel)

4145

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

(4) Taejon District (covering all of the provinces of Chung Chong Nam Do and Chung Chong Puk Do)
(5) Chonju District (covering all of Cholla Puk Do)
(6) Taegu District (covering all of Kyong Sang Puk Do)
(7) Kwangju District (covering all of Cholla Nam Do)
(8) Pusan District (covering all of Kyong Sang Nam Do)

c. Normal supply is issued under T/O&E 30-500. Special investigative equipment is issued in accordance with War Department letter AG 400 (27 November 1943) OB-S-SPDDL-M dated 29 November 1943.

d. Authorization for the District Offices to draw all classes of supply at the nearest available source in their respective operational areas is contained in letter of Headquarters XXIV Corps, AG 400.12 (TFGDS) dated 24 July 1946, Subject: Authorization for District Offices of 971st CIC Detachment to Draw Supplies.

SECTION II

Personnel

1. General

a. All personnel matters will be referred to and handled by the Adjutant at Headquarters for CIC, Korea.

b. Direct correspondence between District Offices and Headquarters CIC-K is authorized. Sub-offices of Districts will clear through District Offices.

c. Correspondence on personnel matters will be forwarded in quadruplicate and will bear the rank and serial number of the individual, omitting the designation "Special Agent".

2. Promotion

a. Recommendations for promotion will be forwarded to Headquarters not later than the 15th day of each month.

b. A separate letter of recommendation will be submitted for each individual.

c. Promotions will be made only to the next higher grade after a minimum of one month's service in grade subject to existing Army regulations and directives.

d. All recommendations will be classified confidential and forwarded in a sealed envelope, attention of the Commanding Officer.

e. Promotions of Officer personnel under existing regulations, with the exception of promotion from Second Lieutenant to the next higher grade, cannot be made.

3. Leaves, Furloughs and Passes

a. Request for leaves or furloughs, compassionate leaves or furloughs and request for emergency leaves or furloughs will be made through this Headquarters.

b. Passes not exceeding three days may be granted by the Commanding Officer or the Officer-in-Charge of a District Office.

4. Finance

a. Enlisted Personnel

(1) Monthly payrolls will be prepared by the Personnel Section of Headquarters for all enlisted personnel of CIC in Korea.
(2) Such payrolls will be sent to each District Office or Sub-office by courier for signature of the personnel concerned.
(3) Payment will be effected by a finance agent of this Headquarters as conveniently as possible after the first day of the month and the payroll will be returned to Headquarters and clearance obtained.
(4) TM 14-505 dated September, 1945 forbids the finance agent apportioning the payroll and only direct payment to personnel concerned may be made.

b. Officers

(1) Payment of Officer personnel will be the responsibility of each individual officer.

4147

CONFIDENTIAL

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

c. War Department Civilians

(1) Civilian personnel will have time sheets prepared for forwarding to the Civilian Personnel Section, Headquarters XXIV Corps and payment is the responsibility of each individual.

d. No Bank of Chosen notes will be acquired by CIC personnel except in accordance with Circular 2, Headquarters XXIV Corps dated 3 January 1947, with changes.

5. Credentials

a. Application for credentials will be made through Headquarters and be processed by the Security Section.

b. Credentials are obtained from the 441st CIC Detachment, GHQ, AFFE upon the request of the Adjutant, this Headquarters.

c. Loss of credentials or badge will be reported by the most expeditious means to this Headquarters and the Office of Record (441st CIC Det.) will be likewise immediately notified.

d. Generally only agent personnel are issued credentials and badge. Credentials and badge requested for clerks, mechanics and other non-agent CIC personnel will be requested only upon specific authority from the Commanding Officer.

e. The preparation, issue and accounting of badges and credentials is governed by War Department letter AG 200.2 (10 August 1944) OB-S-B-M dated 12 August 1944.

6. Strength Reports

a. Strength reports will be submitted by this Headquarters for all CIC personnel in Korea.

b. Any change in strength of a District Office or in the strength of Headquarters personnel will be reported immediately to the Adjutant for changes.

7. Casualty Reports

a. In the event of the death of any personnel a verbal report will be made immediately to the AG Section or the Duty Officer, Chief of Staff Section, XXIV Corps and will be followed by a written report within 24 hours. Further, letter Headquarters XXIV Corps, AG 600.913 (TFXAG) dated 26 November 1945 will be compiled with in reporting accidents, fire or destruction of property. This letter calls for telephonic report to the AG Section during day duty hours and to the Chief of Staff's office at night.

b. Casualty reports pertaining to persons subject to Military law will conform with Circular 13, GHQ, FEC, dated 31 January 1947.

c. Information Bulletin 67, Headquarters USAFIK, dated 6 May 1946 provides for reports of investigation in the case of deaths in accordance with AR 600-550 to be forwarded in triplicate to AFFE and such other copies as necessary by reasons of channels.

d. A written report of casualty will also be submitted to Headquarters CIC-K accompanied by detailed inventory of the individual's personal effects. In the preparation of the inventory, care will be exercised to be sufficiently descriptive of the items catalogued.

8. Claims Reports

a. Investigations of claims will be in accordance to letter, Headquarters, AG, XXIV Corps 150 (TFYJA) dated 25 November 1945. Special attention is invited to the fact that Claims Reports do not preclude the submission of the usual 24 hour Administrative Reports of accidents and similar matters.

b. Information Bulletin 67, Headquarters XXIV Corps, dated 6 May 1946, in connection with reports of investigations of deaths under AR 600-550 calls for three copies of the report to be forwarded to FEC. This bulletin also calls for the forwarding of two copies to FEC of reports of injuries investigated under AR 345-415.

c. For guidance in Claims Reports a check list will be used. Said check list is a part of letter Headquarters XXIV Corps, AG 333 (TFYJA) dated 10 May 1946.

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

d. In connection with claims investigations under AR 25-20, where military personnel or any civilian is injured or where there is property damage, no commitments will be made by the Unit Claims Officer. Persons desiring information will merely be advised that a record of the incident has been made and contact will be made at a future date.

e. Headquarters XXIV Corps Circular 18, dated 29 August 1946, will be followed in all claims investigations.

9. Personnel Locator Card

a. All personnel of the CIC in Korea will have maintained a personnel locator file at Headquarters.

b. Upon redeployment or transfer the personnel locator card will be placed in a "dead" file for future reference.

10. Personnel Section Sheet

a. The status of all personnel will be checked monthly against records maintained by the Adjutant.

b. Information copies of said Personnel Section Sheet will be forwarded to and be maintained by Headquarters for all CIC personnel in Korea.

c. Action will be taken to correct discrepancies existing.

11. Replacements

a. All newly arrived personnel will report to the Adjutant at Headquarters for assignment.

b. A Personal History Statement will be executed by each individual and be maintained in a permanent operational file after processing by the Security Section. This Personal History Statement will serve as a basis for the personnel locator card.

c. Personnel arriving from the U. S. will complete change of address cards and postal service forms and forward same to the proper addressee.

d. Personnel procured in this theater will be given complete loyalty checks initiated by and processed through Security Section of Headquarters.

e. Any personnel rejected for duty will be sent to Headquarters accompanied by a complete written report showing reasons for such rejection.

12. Redeployment

a. All personnel eligible for redeployment will report to Headquarters on date specified unless notified of change of status which has had prior approval.

b. All Officer personnel requesting upgrade of category statements will be made through this Headquarters under existing regulations.

c. Enlisted personnel may upgrade volunteer statements only under existing regulations through this Headquarters.

13. Uniform

a. Civilian type uniform will not be worn unless specifically directed by this Headquarters and in accordance with War Department letter AG 420 (26 August 1944) OB-S-B-M dated 29 August 1944.

b. Civilian clothing will only be worn when necessitated by a particular mission and only upon prior authorization of the Commanding Officer.

c. War Department Civilians will normally wear civilian clothing. Where a particular mission necessitates the wearing of Army uniform prior authorization must be obtained from this Headquarters.

d. The wearing of special insignia including U. S. insignia is specifically forbidden by Book Message TFGB 312 Headquarters XXIV Corps dated 23 June 1946.

e. The insignia of rank and branch of service will not be worn unless directed by this Headquarters. Officers will wear, when visiting Army installations, their insignia of rank and branch of service where existing directives require the wearing of rank.

14. Billet, Office and Mess

a. All CIC personnel will be furnished billets and mess at recognized CIC installations. Exceptions are such officers who are assigned to Headquarters in Seoul who will billet and mess at XXIV Corps Headquarters installations and such officers with dependents who maintain separate rations and quarters.

b. No agent will be permitted to maintain separate billet or mess except for operational purposes under authority of Paragraph 12, War Department letter AG 322, CIC (31 October 1944) OB-S-B-M.

c. Quarters and rations away from a recognized CIC installation, if investigation requires, will be secured by the agent from the most convenient military unit in the area.

d. No female personnel will be entertained in any CIC installation except during prearranged, planned social gatherings or upon authorization by the Commanding Officer for operational purposes. Circular 27, 1947, Headquarters XXIV Corps, forbidding females in the rooms of billets occupied by male personnel will be rigidly adhered to.

e. All CIC installations will conform with fire regulations as set forth in Circular 26, Headquarters USAFIK dated 1 October 1946.

f. CIC markings will not be permitted on any equipment or buildings. Complete obscurity will be maintained in accordance to letter this Headquarters dated 25 June 1946, Subject: Operational Policy and Procedure.

15. Charge of Quarters

a. The official office hours of all CIC installations will be from 0830 to 1730 on week days and from 0830 to 1200 on Saturdays.

b. A Charge-of-Quarters and a Duty Officer will be provided at all CIC installations at all times.

c. A set of instructions for such duties to cover security of the installation, security of weapons and ammunition, the maintaining of a telephone log and the proper burning and disposal of waste paper.

SECTION III

Supply

1. General

a. The Commanding Officer's property accountability and responsibility will be handled by the Supply Section of this Headquarters.

b. All correspondence and directives relating to supply will be kept in files separate and distinct from operational and other administrative orders, directives and documents. Each District Office and their respective Sub-offices will initiate and maintain a set of property records which will reflect at all times the exact status of the property and a periodic check will be conducted of such records to assure their accuracy.

2. Initial Entry and Responsibility

a. The Commanding Officer is initially responsible and accountable for all investigative and organizational property of CIC in Korea. The issue of equipment as required by each District Office will be by memorandum receipt.

b. Records will be maintained at Headquarters to show such issue and balance of property and will be periodically inventoried by the Supply Section.

c. In the event personnel holding property on memorandum receipt is replaced or departs, a physical inventory will be made of all property as listed and his successor will assume the responsibility for such property by the execution of a new memorandum receipt.

3. Stock Record Book

a. A stock record book will list each item of investigative or organizational equipment and be maintained by the Supply Section of this Headquarters.

b. Each stock record sheet for items having serial numbers will contain a list of such numbers.

c. Expendable items will not be entered in the stock book. The original entry in the stock book may be made from an inventory. Every subsequent entry will be supported by a numbered credit or debit voucher and a new balance carried over to the appropriate column.

d. All credit and debit vouchers will be numbered and bound in a separate debit and/or credit voucher file and such vouchers will be initialed to show posting in the stock record book.

e. Items of investigative or organizational equipment required by individual agents and not entered on their Form 32's may be issued on a memorandum receipt. Such memorandum receipt will be prepared in duplicate and have entered thereon all of the detailed information signed by the agent and kept by the Officer-in-Charge of the District Offices or by the Supply Section of this Headquarters. Memorandum receipts will not be used as debit or credit vouchers to be posted against the balance in the stock record book.

f. Form 32's will be maintained by the Supply Section this Headquarters for all enlisted personnel based upon physical inventory properly initialed and signed. A physical showdown will be conducted for each newly arrived enlisted agent and checked against the items listed on Form 32 and articles missing will be accounted for by a statement of charges or a report of survey.

g. The serial number of all small arms will be recorded and a consolidated list will be submitted to the Provost Marshal, XXIV Corps in accordance with XXIV Corps letter AG 474 (TFYIG) dated 17 November 1945.

4. Reports of Survey

a. Reports of survey may be initiated at any District Office or this Headquarters on War Department Form 15 and will be prepared in accordance to AR 35-6640.

b. When originating at a District Office the report will be forwarded in five copies to this Headquarters.

c. All reports of survey must be witnessed by an officer authorized to administer oaths. If witnessed by a Summary Courts Officer the report must indicate the special "Order" or equivalent authorizing the title.

5. Billet Property

a. A system of property accounting will be maintained by all District Offices and the Billet, Supply and Mess Sections of this Headquarters will maintain similar accounting for CIC installations in Seoul.

b. A physical inventory will be taken and a signed and witnessed copy will be provided the local billeting officer where required.

c. The evacuation of a billet, mess or office will require a new physical inventory of all property and a clearance secured from the local billeting officer where required.

6. Ration and Mess Accountability

a. All CIC messes will be conducted in accordance with War Department Circulars No. 138 and 171, dated 2 April and 2 May 1944 respectively.

b. Rations will be drawn on an accurate head count basis utilizing QM Form No. 4.

c. Authorization for the drawing of supplies at the nearest available source is directed by Headquarters XXIV Corps under letter AG 400.12 (TFGDS) dated 24 July 1946.

d. A guest book will be maintained at each CIC mess for the signature of all persons not permanently attached to said mess.

e. All personnel employed in CIC messes will be inspected by an American medical officer and medical clearance obtained.

f. Spot checks will be made to show that rations received accurately reflect the number of rations authorized.

7. Physical Accountability

a. Each District Office and Headquarters will maintain rigid control of the fuel received and that withdrawn for the use of each vehicle in the unit.

9. Motor Vehicles

a. Headquarters will be responsible for the procuring and distributing of all motor vehicles within Korea.

b. Procurement

(1) Headquarters will procure and issue all Military vehicles to the District offices. No vehicles will be procured on a loan basis.

(2) Only vehicles authorized by existing T/O&E or added spec ial list of equipment will be operated by CIC personnel.

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

(3) Accountability will be established and maintained for all vehicles issued by the CIC in Korea.

c. Maintenance

(1) Proper maintenance of motor vehicles will be in accordance with AR 850-15, 1 August 1945, TM 37-250 and TM 37-2810 and is the responsibility of the Officer-in-Charge of each District.

(2) The driver regularly assigned to each vehicle will be responsible for first echelon maintenance.

(3) The Officer-in-Charge of each District is responsible for second echelon maintenance.

(4) Local authorized ordinance and tactical unit maintenance facilities will be used whenever practicable.

(5) Higher echelon maintenance will be performed by establishments designated by the major commands.

d. Maintenance Records

(1) A separate record will be kept for each vehicle showing type and serial numbers and indicating mileage when received and condition and date and nature of repairs.

(2) Preventative maintenance records will be kept to show the dates of weekly, monthly and semi-annual inspections and major repairs and periods of "dead line".

(3) Where Korean mechanics are employed for vehicle maintenance and repair work, it shall be the responsibility of the Officer-in-Charge of the Districts to inspect the work accomplished and to maintain all records thereto.

(4) Headquarters XXIV Corps letter AG 319.1 ( ) dated 24 October 1945 requires an Automotive Disability Report to be made when a vehicle becomes unsafe to drive or is unfit for the service intended.

4157

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

e. Headquarters Motor Pool at Seoul

(1) All vehicle maintenance and records for CIC vehicles in Seoul will be performed by this section.

(2) All vehicles from District Offices, while in Seoul, will be given maintenance by this section.

f. Vehicle Documents

(1) Notwithstanding directives "honoring" CIC credentials, each vehicle will carry a daily trip ticket showing routine use, giving the organization as G-2, XXIV Corps and at no time revealing that the vehicle is used by the CIC.

(2) The standard accident report Form 26A and the statement of witness form will be carried in all vehicles at all times. These forms will be filled out completely in the event of accident and used in a report to the nearest Military Police Detachment.

(3) Permanent trip tickets will not be used.

(4) All personnel will possess authorized motor vehicle operator's permits.

(5) All Officers will have, in addition to the operator's permit, authorization from the Provost Marshal to operate motor vehicles in accordance with Information Bulletin No. 7, Headquarters, USAFIK dated 4 October 1945.

g. Vehicle Markings

(1) All vehicles will be marked on the front and rear bumpers using contrasting white or light colored paint only in the following manner:

(Left)	(Right)
"XXIV"	"HQ" and number as assigned below:

(2) The following blocks of numbers are assigned to each District Office (vehicles used by Headquarters are considered assigned to the Seoul District Office.)

Seoul	District	Office	Assigned Numbers	100-130
Pusan	"	"	" "	131-140
Taegu	"	"	" "	141-150
Chonju	"	"	" "	151-160
Taejon	"	"	" "	161-170
Inchon	"	"	" "	171-180
Kwangju	"	"	" "	181-190
Songdo	"	"	" "	191-200

(3) In the event more vehicles are assigned to a District than numbers allocated, the numbers will be repeated adding an "X" (Example: 101X).

(4) The Officer-in-Charge of each District Office will notify the Motor Section of this Headquarters of vehicles serial numbers and corresponding assigned numbers used. Any change will likewise be immediately brought to the attention of the Motor Section.

h. Privately Owned Vehicles

(1) CIC personnel may procure privately owned vehicles under the same authorization granted to the U. S. personnel in Korea.

(2) Privately owned vehicles will not be maintained at Government expense even though such vehicles may be on occasion used for official purposes by the owner. Mechanics employed by the U. S. may work on privately owned vehicles on their own time at the expense of the vehicle owner. The use of Government owned lubricants, fuel and parts is specifically prohibited.

i. Violations Involving Vehicles

(1) Traffic violations may be punished by a Summary Courts Martial in areas of the major echelons as a command responsibility irrespective of the organization of the person committing the violation. Officers will report all violations observed. Said provisions are in accordance to letter of Headquarters, XXIV Corps AG 101.8 (TYFSG) dated 30 October 1945.

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

(2) Traffic accidents will be reported by telephone to the nearest Military Police unit or to the Provost Marshal of the major echelon where the accident occurred. This is required in addition to the administrative telephone and written reports involving accidents. Said provisions are required under Information Bulletin 86, Headquarters XXIV Corps dated 17 June 1946.

(3) Effective as of 23 September 1946, in traffic violations where human life has been endangered, the violator apprehended may have his vehicle empounded. The vehicle is released only to an officer of the organization of the violator and where the organization is located beyond 25 miles of the place of the incident, the Commanding Officer will be notified and the driver will be directed to return to his organization. Said provisions are in accordance to letter of Headquarters XXIV Corps AG 250.7 (TFYMP) dated 16 September 1946.

SECTION IV

Operations

1. General

a. The Commanding Officer is responsible to the A.C. of S., G-2, USAFIK, for the administration and operations of the CIC in Korea and for the employment of personnel to insure the maximum Counter Intelligence coverage for Korea.

b. The Executive Officer will act in the stead of the Commanding Officer and supervise and be responsible for all administrative matters, including the preparation of the Monthly Administrative Report required by the War Department under Memorandum No. 380-44 dated 5 October 1944.

c. The Chief of Operations will be responsible for:

(1) The maintenance of the training and proficiency of all agents in accordance with War Department Memorandum 350-44 dated 7 September 1944. Providing for the training of all agent personnel procured in this theater and directing a training school for such purposes.

(2) Planning and drawing up the Counter Intelligence Annex to Field orders.

(3) Procuring CIC personnel in this theater in accordance with War Department Circular 379 dated 19 September 1944.

(4) Planning in detail the necessary Counter Intelligence coverage based on information furnished by A.C. of S., G-2, USAFIK.

(5) The supervision of:

(a) Espionage, Sabotage and Miscellaneous Sections.
(b) Political Section
(c) Security Section
(d) Special Squad
(e) Information Section
(f) Liaison Section
(g) Reports and Analysis Section
(h) Operational Phases of all District Offices
(i) Operational Files Section

(6) For the dissemination to the proper agencies of all Intelligence and Counter Intelligence information.

(7) For the approval of and signature on all CI-R1 reports prepared by this Headquarters.

d. The Espionage, Sabotage and Miscellaneous Section will:

(1) Initiate investigations on all matters pertaining to espionage, sabotage, treason and sedition, control and coordinate such investigations, and process all reports pertaining thereto.

(2) Initiate investigations in all cases involving subversive activity on the part of the U.S. military and civilian personnel and coordinate and control and process reports pertaining thereto. The following directives will control cases involving subversive activity on the part of U. S military and civilian personnel:

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

(a) War Department letter AGO 14.311 (31 January 1944) OB-S-B-M dated 5 February 1944, Subject: Disposition of Subversive and Disaffected Military Personnel.

(b) War Department letter AG 104.311 (14 October 1944) OB-S-B-M Subject: Disposition of Subversive and Disaffected Military Personnel.

(c) War Department letter AG 014.311 (28 December 1944) OB-S-B-M dated 30 December 1944, Subject: Disposition of Subversive and Disaffected Military Personnel.

(d) War Department letter MID 918.3 dated 9 August 1946, Subject: Disposition of Subversive and Disaffected Personnel.

(e) Interrogation of suspects in a manner to avoid compromise of sources of information in connection with the investigation of subversion or disaffection will be made in accordance to War Department letter AG 350.09 (9 June 1944), Subject: Interrogation of Suspects.

(3) Initiate, control and coordinate investigations in all other operational matters not specifically delegated to the other operational sections.

(4) Prepare summary or covering CI-R1 case reports on all investigations requiring this type of report.

e. The Political Section will:

(1) Initiate investigations on all known political, social and other organizations to determine their objectives and activities and control and coordinate such investigations and process reports thereto.

(2) Initiate investigations on all underground and secret organizations to insure that their activities are not inimical to Military Government and control and coordinate such investigations and process all reports pertaining thereto.

(3) Collect and compile all information of a political nature and about political personalities.

(4) Arrange for the contact and the gaining of the confidence of influential local persons whose cooperation will be helpful.

(5) Make political analysis and prepare reports of political trends.

(6) Initiate investigations on all Koreans or other foreign nationals of a political nature involving subversive activities and control and coordinate such investigation and process reports pertaining thereto. Proclamations of the Supreme Command for the Allied Powers and Ordinances of USAMGIK will be used as a guide in connection with the investigation of persons involved in subversive activities other than U. S. military and civilian personnel.

(7) Perform all such other duties as the command authority shall determine that are within the CIC mission.

(8) Conform with operations policy and procedure letter No. 1 of this Headquarters dated 2 December 1945 and letter of this Headquarters dated 20 September 1946, Subject: Political Party Investigations.

(9) Prepare summary or covering CI-R1 case reports of all investigations requiring this type of report.

f. The Security Section will:

(1) Initiate investigations on all requests for loyalty checks on U. S. military and civilian personnel and such Korean and other non-American personnel, control and coordinate the investigation, process the reports and clear or reject such personnel as the case may be. Loyalty investigations of U. S. military and civilian personnel will be in accordance to the following:

(a) War Department letter AG 250.1 (29 January 1946) OB-S-B-M dated 5 February 1946, Subject: Loyalty Investigation of Military Personnel.

(b) War Department letter AG 250.1 loyalty (22 January 1944) OB-S-B-M dated 26 January 1944, Subject: Loyalty Investigation of Military Personnel.

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

(c) Letter GHQ SCAP AG 230, 27 November 1945 CIS, Subject: Security Clearance and Employment Restrictions of Civilian Personnel.

(d) Incoming message from Washington (OB-3) to CINC AFPAC dated 19 September 1946.

(e) War Department letter AGO 230.82 dated 30 January 1946, Subject: Discharge of Subversive Civil Service Personnel.

(f) Headquarters USAFIK letter TFGBI dated 20 September 1945, Subject: Safeguard of Military Information and Security Checks.

(g) AFPAC Circular No. 83 dated 18 September 1946, entitled Recruitment of Civilian Personnel from within the Occupation Area.

(2) Initiate investigations on all requests for cryptographic clearance of military or civilian personnel and process such reports for clearance or rejection as the case may be. The investigation of cryptographic cases will be governed by the following:

(a) War Department letter AG 311.5 (8 July 1946) dated 11 July 1946, Subject: Qualifications, Investigations and Clearance of Persons having access to Classified Cryptographic Aids or Devices.

(b) War Department letter AG 311.5 (12 March 1945) OB-I-B-M dated 21 March 1945, Subject: Clearance of Personnel for Cryptographic Duties.

(c) CINCAFPAC radio dated 25 September 1946.

(3) Initiate investigations in all cases where the determination of U. S. citizenship is the issue and process all reports pertaining thereto. Circulars 34 and 56 GHQ AFPAC dated 2 and 28 August 1945 respectfully governing the naturalization of non-citizen members of the Armed Forces will be used as guides in connection with investigations involving U. S. citizenship. Letter Headquarters XXIV Corps AG 014.32 (TFGAP) dated 7 June 1946 is likewise applicable.

(4) Initiate investigations on all personnel procured for CIC in this theater, control and coordinate all such investigations, have l all the necessary photographs taken and process the reports pertaining thereto and prepare the correspondence relating to such personnel to be forwarded to the War Department. In the procurement and investigation of CIC personnel the following will be complied with:

(a) Section 1, Counter Intelligence Personnel of War Department Circular No. 379 dated 19 September 1944.

(b) War Department letter AG 250.1 (17 May 1945) OB-S-B-M dated 19 May 1945, Subject: Procedure Pertaining to Investigation of Prospective CIC Personnel.

(c) GHQ AFPAC letter AG 210.31 (22 January 1946) GA, Subject: Procurement of CIC Personnel.

(d) War Department letter AGAO-S-A-M 210.31 (24 September 1946) dated 30 September 1946, Subject: Counter Intelligence Corps.

(e) War Department memorandum No. 600-750-4 dated 8 November 1946, Subject: Enlistment in the CIC.

(f) GHQ AFPAC letter AG 342 (13 May 1946) AG-PR, Subject: Direct Enlistment for CIC.

(g) War Department letter AGAO-S 322 CIC (21 January 1947) B-M dated 24 January 1947, Subject: CIC Personnel Transfer Procedure.

(5) Initiate investigation in all cases involving disaffection, control and coordinate such investigations and process the reports pertaining thereto. The directives enumerated at d (2) above are applicable in the investigation of cases involving subversive activity and will herein be used as guides in connection with the investigation of disaffection cases.

(6) Initiate investigations pertaining to violation of AR 380-5, control and coordinate such investigations and process the reports pertaining thereto.

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

(7) Initiate security surveys of vital civil and military installations for the purpose of discovering security violations and for corrective action and recommendations and control and coordinate such surveys and process all reports pertaining thereto.

(8) Initiate investigations on all matters pertaining to the Counter Intelligence mission not specifically assigned other Sections and not falling within any of the preceding categories.

(9) Prepare summary or covering CI-R1 reports of investigations in all cases requiring this type of report.

g. The Special Squad will:

(1) Procure, supervise and control and be responsible for the pay of all Korean translators, interpreters and other operators of this Headquarters.

(2) Supervise, control and carry out all "Special Projects" assigned.

(3) Process all foreign language documents, arrange for the translation and compilation of such documents where it is of importance.

(4) Initiate investigations in all cases pertaining to the good conduct and reputation of the CIC and control and coordinate such investigations and process reports pertaining thereto.

(5) In all cases investigated by CIC requiring prosecution, to prepare the evidence and draw up specifications and charges or other legal documents or advise in the preparation of such matters.

(6) Prepare summary or covering CI-R1 case reports in all investigations requiring this type of report.

h. Information Section will:

(1) Organize, "vet" and brief informants and operators for the purpose of obtaining information of a counter-intelligence and positive intelligence nature covering both the American occupied area of Korea and adjacent areas outside of that controlled by the U. S. armed forces. Prepare and collate reports of this type of information.

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

(2) Maintain a file marked "Secret" to provide a key to all informants' identities used by CIC in Korea.

(3) Process all reports from adjacent areas so that information of a given locality or type will be consolidated under one title readily accessable.

(4) Coordinate the activities of the section with the KIG Section of the Office of the A.C. of S., G-2, USAFIK with particular care that the activities of neither section will be compromised.

(5) Prepare studies and analysis of trends of both positive and counter intelligence information.

(6) Prepare for dissemination Essential Elements of Information (EEI) based on analysis and studies.

(7) Prepare summary and covering CI-R1 case reports on all matters requiring this type of report.

i. The Liaison Section will:

(1) Maintain liaison with all Military Government and Tactical Units likely to possess information of a Counter Intelligence nature and receive such information and report same in writing to this Headquarters.

(2) Maintain contact with all Provost Marshal and Military Police units in the Seoul area and receive information of a Counter Intelligence interest and report same in writing to this Headquarters.

(3) Maintain liaison with the District Offices for administrative matters and such emergency operational matterss that may arise.

(4) Obtain maximum compliance to the directives set forth in Headquarters USAFIK Circular No. 19 dated 6 September 1946 pertaining to Responsibility of Military Personnel in Collection and Dissemination of Information.

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

j. The Reports and Analysis Section will:

(1) Prepare the Monthly Information Report required of this Headquarters by the War Department Memorandum No. 380-44 dated 5 October 1944.

(2) Prepare the semi-monthly situation report required by the 441st CIC Detachment, GHQ, FEC.

(3) Prepare daily periodic reports required by the A.C. of S., G-2, USAFIK.

(4) Analyze and study all reports received by and disseminated from this Headquarters for use in the preparation of the above reports.

k. District Offices will:

(1) Carry out all necessary local administrative duties not handled by Headquarters.

(2) Perform all the applicable operational duties as outlined for the various sections above within the area covered by the given District Office.

(3) Submit local Daily Periodic Reports to the Reports and Analysis Section this Headquarters for the compilation of the over-all Daily Periodic Report.

(4) Submit Semi-Monthly Situation Reports to the Reports and Analysis Section in accordance with the form prescribed.

(5) Initiate all investigations originating in the area covered by the given District Office and forward reports to Headquarters.

(6) Disseminate all information requiring immediate attention to the local agencies interested. USAFIK letter AG 322 (TFGBI) dated 30 April 1946 will be complied with.

l. The Operational Files Section will:

(1) Maintain files and indices of all matters of an operational nature.

(2) Properly label and store all exhibits and evidence.

(3) Maintain references and publications of interest to the CIC in Korea.

(4) Index all matters as indicated by the varous Sections or the Chief of Operations.

m. Special Agents with Korean linguistic ability will be dispersed through the various District Offices for maximum efficient use and will not be assigned as office staff personnel except for Special Squad activities.

n. Korean civilian personnel will not be used in any operational or administrative capacity except upon specific authorization by this Headquarters. Extreme caution will be exercised to insure that all Korean personnel used by CIC do not have access to any classified information.

o. Korean civilian personnel used as interpreters or "detectives" are strictly forbidden to act as free lance agents or to wear U. S. army insignia or uniform. Care will be exercised to insure that such personnel do not have access to written classified information.

p. Special Agents in the field may be granted permission by the Officer-in-Charge of a District Office to assume a false rank for operational expediency for a period of no longer than three days. Any longer period will require the approval of this Headquarters.

q. Local Police agencies will be checked daily for all matters of Counter Intelligence interest.

r. Personnel assigned to one District will not conduct investigations in the area of another District unless clearance has been granted by this Headquarters or by the Officer-in-Charge of the District in whose area the investigation is being conducted. Maximum latitude for lateral communications between Districts is authorized by this Headquarters to maintain operational efficiency. Information copy of any lateral communication made will be forwarded this Headquarters as early as practicable.

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

2. Records and Files

a. Each District Office will maintain files and records of all activities and investigations made within the area.

b. Each District Office will maintain files of G-2 periodic and weekly summary reports for reference.

c. Each District Office will compile such local information as is necessary for efficient operation. Information copies will be forwarded this Headquarters.

d. Headquarters will maintain a duo decimal file system with the following control numbers:

(1) Sabotage
(2) Treason
(3) Sedition
(4) Subversive Activity
(5) Disaffection
(6) Security
(7) Atrocity
(8) Miscellaneous
(9) Informants
(10) Contacts
(11) Administration
(12) Censorship
(13) Loyalty
(14) Espionage
(15) Public Relations
(16) Other detention cases
(17) Interrogations
(18) Cryptographic
(19) Parole
(20) Citizenship
(21) Publications
(22) CIC Applicants

The second number will designate the case file under the control number; reports filed in a given case will be given a serial number and the entire number will be reflected in the index.

e. The File Section at Headquarters will maintain files of publications of Counter Intelligence agencies of other theaters, of intercepts of the Civil Censorship Intelligence Group - Korea and such other agencies of interest to CIC in Korea.

f. Headquarters File Section will index all personalities and other pertinent information of all reports and make such cross reference index as is required.

4170

3. Maps

a. All CIC District Offices and Headquarters will maintain the following maps:

(1) Korea 1:250,000 AMS/L551
(2) Korea 1: 50,000 AMS/L751

b. The gazetteer Korea 1/250,000 AMS/L551 will be used in conjunction thereto.

4. Personality Files

a. Alphabetized master file of personalities, whether suspect, informant or otherwise, encountered in the course of investigations will be maintained at Headquarters. Such personalities will be indexed and a check against this master file will be made by the CIC personnel in Korea in connection with investigations.

b. A similar file of personalities will be maintained by the District Offices for their given area.

5. References

a. Headquarters and all District Offices will include in their references complete files of G-2, USAFIK Periodic Reports and Weekly Summary reports.

b. Headquarters will maintain files of all publications of Counter Intelligence interest including texts, periodicals, intelligence summaries and bulletins, atlases, maps and dictionaries under the control number 21 used for publications.

6. Correspondence

a. All operational correspondence originating in the Field will be directed to this Headquarters throughcchannels regardless of final destination.

b. Operational correspondence will be forwarded this headquarters addressed to the Commanding Officer, attention of the Operations Officer or the Officer-in-Charge of a particular section.

4171

c. Correspondence will be on approved letterhead and will bear Headquarters, District Office or Sub-District Office designation.

d. Civilian postal channels will not be used.

e. Basic letter endorsements will conform with regulations pertaining to Military correspondence.

f. All correspondence will be appropriately classified and provisions will be made for the receipt of secret and top secret documents.

7. Suspense Date

a. This Headquarters and each District Office will utilize the suspense date letterhead in all matters where the prevention of oversight or unnecessary delay is of importance. Priorities will also be indicated in all such matters.

b. Where the suspense date is used a separate file for suspense date correspondence will be maintained to insure that replies are received and/or forwarded within the specified time period.

8. Directive Folders

a. All operational directives will be worded according to classification and be maintained in separate folders from other directives and be bound chronologically in a set.

b. Each folder will bear a sheet listing the date, issuing agency and the subject of each directive.

9. Dissemination of Information to the Field

a. The Chief of Operations of this Headquarters will disseminate all investigative leads and operational instructions to the District Offices.

b. The Chief of Operations will be responsible for the issuance, amendment, change, recession and dissemination of operational memoranda and the Officer-in-Charge of the District Offices will prepare and issue operational procedure memoranda as required locally on matters not covered by operational memoranda issued by Headquarters. Copy of local memoranda will be furnished this Headquarters.

c. All Field Officers will be required to contact Headquarters by telephone on all matters of importance. A report will be made on all doubtful matters.

d. Headquarters will provide a telephone directory together with the auxiliary means of contacting each CIC installation, listing the address and telephone number and disseminate same to all CIC Officers in Korea.

e. Headquarters will maintain a directory of all agents, listing by name their address in the Field, address of separate billet, if any, and telephone number and agent's number.

f. A bulletin board will be maintained at Headquarters and at each District or Sub-District office for the posting of unclassified information of a general nature.

10. Arrests

a. Authority for arrests by CIC under Paragraph 20b of War Department letter AG 322 CIC (31 October 1944) OB-S-B-M permits the arrest or detention of any person who violates military security or whose detention is otherwise deemed necessary for the accomplishment of the Counter Intelligence mission. In all arrests, care will be used so that this authority is not exceeded and that in every case the arrest is justified. Under the principles of "arrest" the ensuing search will be methodically and meticulously carried out.

b. No spectacular or over-dramatized arrest will be effected by any personnel under this command unless necessitated by a specific operational order.

c. All arrestees will be permitted to contact their families or kin within 24 hours after arrest except in such cases where such notice would endanger the security of the U. S. forces or compromise the investigation.

d. The Officer-in-Charge of the District Offices will be responsible for the collection of prisoners and their detention at appropriate places of internment.

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

e. The Officer-in-Charge of the District Offices will be responsible for the checking of the arrest rosters daily for the expeditious handling of arrests effected.

11. Handling of Classified Material

a. All incoming or outgoing correspondence of a secret or a top secret classification will be logged in a separate standard log sheet columned to show classification, log number, receipt number, incoming or outgoing, number of copies, copy number, date of document and title of document. All matters that require action, appropriate entry will be made on the log sheet to insure that action is taken within a reasonable time.

b. Headquarters and District Offices will comply strictly with the provisions of AR 380-5 regarding classified material.

c. Security in telephone conversations will be adhered to except in extreme emergencies. Letter Headquarters XXIV Corps AG 312.1 dated 4 April 1946 directs the use of other means of communications in the event that classified information over telephone may become compromised.

12. Wanted and Watch Lists

a. Headquarters will maintain a "Wanted" and a "Watch" list for all persons wanted or under technical surveillance by CIC in Korea. Such lists will be disseminated periodically to all District Offices for information and guidance. All persons wanted or under technical surveillance in a given area will be reported to Headquarters periodically for inclusion in the master list.

b. Separate file folders will be prepared for the lists.

c. All persons wanted or watched will be carded and cross indexed in the master files of this Headquarters.

13. Investigations

a. Care will be taken that no unfavorable publicity will result from CIC investigations. All CIC personnel will protect from publicity all CIC information and activities.

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea. 29 March 1947 (cont'd)

b. All CIC personnel are subject to the provisions of Circular 3, 18 October 1945, Headquarters XXIV Corps and are forbidden entry into all "off limits" areas. Where specific operations requires the entry to such areas, prior permission, except in emergencies, will be obtained from this Headquarters or the Officer-in-Charge of the District Offices. Letter Headquarters XXIV Corps, AG 250 (TFXAG) dated 28 May 1946 precludes AW 104 for persons apprehended in prostitution area unless first offenders and due to youth and inexperience. Persons over the grade of private are held and may not be punished under AW 104.

c. The transportation of Koreans for operational purposes is permitted under USAFIK letter AG 322 (TFGBI) dated 30 April 1946. Other transportation of Koreans is prohibited.

d. Investigations requiring the coverage of Korean mail and telecommunication will be made in accordance with Memorandum 35 of the 441st CIC Detachment, GHQ, dated 14 December 1945. All District Offices will forward requests for "watch listing" to this Headquarters which, in turn, will submit same to the Civil Censorship Officer for Korea.

e. All investigations of subversive activities or subversive potentialities will be developed through "informants" rather than open investigations to prevent needless alienation of persons investigated or the possibility of driving them underground.

f. In cases where facts indicate non-CIC jurisdiction the matter will be referred to the appropriate agency through liaison. In an emergency, in cases where another agency has primary jurisdiction, CIC District Offices will take such action as may be immediately necessary, turning the matter over to the appropriate agency by the most expeditious means, as early as practicable.

g. Policy regarding police matters will be governed by letter 1 November 1946, this Headquarters, subject: Police Methods CIC Policy regarding. CIC personnel will make no public utterances that may be construed as censure of police actions and in no way interfere with police activities.

h. Full use of scientific and technical facilities of the Crime Laboratory and the Fingerprinting Section of the Detective Bureau of the Department of National Police will be utilized in all cases where necessary. Letter this Headquarters dated 19 November 1946, subject: Facilities Available to CIC, enumerates the various types of scientific and technical aids available.

i. Ordinance No. 20, USAMGIK provides for the assisting and co-operating with the CIC when requested in the investigation and apprehension of criminals by the Detective Bureau of the Department of National Police. Full use of this assistance and co-operation will be utilized in connection with CIC investigations.

j. In all investigations personnel will govern themselves in accordance to Headquarters XXIV Corps letters AG 230.741 (TFYAG) dated 17 November 1945, AGO 14.13 (TFYAG) 23 February 1946 and TFGBI dated 6 February 1947. Actions of military personnel toward Koreans is controlled by this letter and no CIC personnel will behave in a manner reflecting discredit upon the Armed Forces of the U. S. No gifts, favors or entertainment will be accepted from Koreans, however, free social friendly relations or operational necessity is not discouraged.

k. In investigations where narcotics are confiscated same will be released to Military Government after having served the purposes of CIC, in accordance to Headquarters XXIV Corps letter AG 443 (TFYSG) dated 30 October 1945.

l. In the carrying out of the CIC mission in investigations, in undercover, or in the cultivation of informants, no Korean liquor will be consumed. Acceptance of liquor as a gift will be considered a violation. This prohibition is governed by Headquarters XXIV Corps message TFYSG 24 dated 28 October 1945 and Ordinance 23 of USAMGIK.

m. Investigations involving violations of directives pertaining to mail is covered by Headquarters XXIV Corps letter AG 311.1 (TFAPO) dated 14 December 1945; Information Bulletin 73 dated 16 May 1946; and AFPAC Circular No. 89 dated 25 September 1946. No person in or attached to the Military service and entitled to use APO facilities will act as intermediaries.

n. Investigations involving the search of baggage and effects may be made under Headquarters XXIV Corps letter AG 720.4 (TFYSG) dated 24 October 1945, subject: Foreign Quarantine Regulations.

o. Civilians in this theater are amenable to Headquarters XXIV Corps Circulars 73 and 92, dated 14 September and 26 November 1946 respectively. All civilians over the age of twelve are subject to regulation and control and must carry identification cards obtained from the Provost Marshal and may not carry firearms unless specifically authorized.

p. Koreans, other than Police or persons acting in a police capacity, are not permitted to carry firearms. Persons carrying firearms must have a permit duly authenticated in both English and Korean.

q. Secret Message, Headquarters XXIV Corps, TFGBI 239 dated 25 March 1946 will be complied with. The presence of Russian Military or Civilian personnel, other than White Russians outside of the Seoul area will be reported to Headquarters; such personnel will be surveilled without the fact becoming known.

14. CIC Periodic and Flash Reports

a. A consolidated Semi-Monthly Periodic Report will be submitted by all District Offices, except the Seoul District Office, to reach Headquarters for the compilation of the over-all Semi-Monthly Report no later than two days after the close of the period and in the form required by the Reports and Analysis Section.

b. The Semi-Monthly Report will be classified confidential and matters of a higher classification will be submitted as an annex. Two copies of the report are required by this Headquarters.

c. Daily Periodic Reports will be submitted in the form required by the Reports and Analysis Section immediately upon close of the period by the most expeditious means.

d. In all reports where Korean proper names appear, a space in parenthesis after such name shall be provided and the Chinese characters for such name shall be written in. This applies to both names of persons and place names.

e. All geographical localities will be further identified by coordinates as indicated in the official maps used by CIC in Korea and the English spelling of all place names shall be those appearing in the official gazetteer. Place names not appearing in the gazetteer will be further identified by the giving of its proximity to a larger town or city mentioned in the gazetteer.

f. Memorandum No. 38 with changes 1, 2 and 3 of the 441st CIC Detachment, GHQ FEC will be used as a guide. Special attention is invited to the short form of memorandum report permitted for cryptographic cases.

16. Progress Reports

a. A Progress Report will be submitted in all pending cases under investigation for every 30 day period that such case remains open. Two copies of such progress report will be forwarded to this Headquarters.

17. Letters of Transmittal

a. The standard buck slip in two copies may be used as a letter of transmittal in forwarding documents to Headquarters.

b. Where pertinent and for the purpose of giving information, making comments or recommendations pertaining to the material forwarded, the usual letter of transmittal in five paragraphs will accompany same in two copies.

c. Letters of transmittal from this Headquarters to higher Headquarters will be in sufficient copies to provide for extraction at each point in the channels.

18. Summary of Information

a. The standard Summary of Information will be prepared in as many copies as practicable and forwarded to this Headquarters.

b. Summaries of Information will not be misused and the informant will not be revealed in the content thereof. The informant's name and other data will be hand written on a copy specifically designated "CIC-K File Copy" together with the name of the agent compiling or receiving the information.

c. All Proper names appearing in Summaries of Information will include further elucidation as indicated for Memorandum Reports.

19. CIC Arrest Report

a. In all cases of arrest by CIC in Korea a report in two copies will be made to Headquarters containing all pertinent dates including place of confinement.

b. In all arrests not charged and held for trial within ten days, a subsequent report will be submitted to Headquarters explaining the reasons therefor.

c. USAMGIK appointment Number 36, dated 19 November 1945, provides for the petition and release of prisioners held over thirty days. In all arrests held over thirty days a report will be submitted to this Headquarters with sufficient facts to justify the detention and to oppose the petition for release.

d. Each District Office will keep an arrest log and all reports made to this Headquarters will indicate the number applicable to the given arrest appearing on the log of a District Office.

HARRY H. DOW

UNITED STATES ARMY FORCES, KOREA
HEADQUARTERS
COUNTER INTELLIGENCE CORPS
APO 235

14 April 1947

SUBJECT: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea, amendments to.

TO : All Counter Intelligence Corps Personnel, Korea.

Refer Section IV, 9, b, Amendments of Standard Operating Procedure.

The following additions are made to Section IV, 6, Correspondence:

In order to clearly understand that correct procedures concerning the use of "Assignment Sheets," the following Standard Operating Procedure is prepared for the use of all concerned. The use of such "Assignment Sheets" will be in full conformity to the outline as shown below.

Within the Seoul District Office a system of "Assignment Sheets" has been effected. All other detachments are given assignments or leads on appropriate sheets, similar to those used in the Seoul District Office. An "Assignment Sheet," a "Letter Form," and an "Action Letter" are attached to this report.

1. The following procedure will govern the use of "Assignment Sheets:"

   a. When used - To initiate investigations, to continue investigations, to initiate file checks, to give further leads of cases initiated.

   b. Why used - To give the agent investigating the case a full background upon the case, so that he can fully investigate, knowing what leads to follow, how to proceed, and what to obtain.

   c. Where used - Seoul District Office only.

   d. Who uses - The following list, subject to change, will govern the use of such sheets:

      OIC Operations, OIC Political Section, OIC Security Section, OIC Information Section, OIC ES&M Section.

      Note: Cases initiated through Killin, Whitaker, Ferguson, or other officers and agents will be filed through one of the above and be made a part of that section's records.

[redacted]

e. How used - The following rules will govern the use of such a form:

(1) Two copies will be made of each sheet. The original will be forwarded to Commanding Officer, Seoul District Office. The duplicate copy will be maintained within the section in chronological order of case initiation.

(2) Each separate investigation will be placed upon a single "Assignment Sheet." In case several cases are closely associated it will be the responsibility of the Section Head to see that such investigations are coordinated.

(3) Each Section Head will put full details of investigations to be made, methods to be used, and special notes of importance. At the present time agents are not fully schooled in carrying varying cases from espionage to disaffection, so that it is the responsibility of the section heads to see that each agent knows the complete facts of the case, knows what to investigate, and how to proceed. Under the 'remarks:' column on the sheets adequate space is provided to fully cover the case at hand.

(4) In no case will copies destined for the files be attached to an "Assignment Sheet." This information will be copied on the "Assignment Sheet," with reference of the file copies which include such information.

(5) In no case will buckslips, or inter-office-routing-slips be attached. In most cases these must be returned and should be maintained within the respective section until investigations are completed.

(6) Full information will be typed upon each sheet showing the date, file number, the section to which assigned, the subject of investigation, the addressee, information of leads, and initials of the respective section heads. The blanks at the bottom of the sheets are for use of the Seoul District Office only.

(7) On the 1st and 15th of each month, each Section Head will check with the OIC of the Seoul District Office to determine the progress of investigations, the assignments, and the future dispositions.

(8) Priorities will follow the pattern shown below:

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea, amendments to. 14 April 1947 (cont'd)

A Priority — Cases involving immediate action, the reports being awaited by the CG, G-2, or other agencies. Cases involving life, death, if not initiated immediately (Reports of riots, strikes, etc.)

B Priority — Cases of importance which require detailed investigation, and which must be completed by a specific time.

C Priority — Cases involving important, but not immediate investigations. Loyalty checks and Cryptographic clearances, plus travel clearances of immediate import.

D Priority — Cases which must be accomplished at some future date, but involving investigations, which cannot be dropped. (S/I's of doubtful evaluation will fall into this category.)

E Priority — Cases involving checks which can be made if agents and time are not involved. (Investigations of political organizations, general security checks, investigations for other organizations as a means of battering liaison). Most cases falling under this classification will not be cases specifically requested by some higher authority or agency.

2. The following procedure will govern the use of "Letter Forms."

a. When used - See 1a above. Only when a report has been previously submitted by that detachment.

b. Why used - to give leads to detachments, not to agents of Seoul District Office, continue investigations, showing leads to be followed, correction, etc.

c. Where used - All detachments except Seoul District Office.

d. Who uses - See 1d above.

e. How used - The following rules will govern the use of such a form.

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea, amendments to. 14 April 1947 (cont'd)

(1) Two copies will be made of each sheet. The original will be returned to the district office. The duplicate copy will be maintained within the section. Remember, these are to be used only when a field office has forwarded a report to this headquarters.

(2) Comments on a particular report will be forwarded on this form, the original being sent to the district office and the duplicate sent to the files, with the file copies of the report in concern.

(3) Full details of investigation desired and references to original report should be included.

(4) In no case will the original reports, destined for the files, be returned attached. All such information will be extracted and typed on this sheet under the "Remarks" column.

(5) These "Letter Forms" will be retained by the District Offices and not used as a lead sheet, but will become a part of the District Office case files. The information for use in further investigations will be copied from this sheet by agents of the district offices.

(6) On the 1st of each month, each Section Head will check, by letter, with the Commanding Officer of each district office concerned to determine the progress of investigations, the assignments, and future dispositions. These will be done as shown in "Action Letter," see paragraph 3 below.

3. The following procedure will govern the use of "Action Letters."

a. When used - See 1a above. Only when a report has not been previously submitted by the district office concerned.

b. Why used - To give initiations of cases to district offices, when no reports have been received by district offices concerning the case at hand. This should include the details for investigation in the detachment.

c. Where used - All detachments except Seoul District Office.

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea, amendments to. 14 April 1947 (cont'd)

d. Who uses - See 1d above.

e. How used - The following rules will govern the use of the "Action Letter." Note: Since no such forms exist at the present time, these will be typed by Section Heads, following closely the form, as shown in attachment "C."

(1) Three copies will be made of each letter. The original and duplicate will be forwarded to the district office concerned. The triplicate copy will be made a part of the records of the section concerned. In the detachments, the original will be returned with first indorsement upon completion of the case or assignment. If leads prove negative, this will be returned with proper notation in the first indorsement. The second copy will be retained in the files of the detachment.

(2) Full details of leads and background will be forwarded to the detachments.

(3) Agents of the district offices will not carry this letter as an information letter, as it will be retained in the files of the district offices or forwarded to this headquarters with an indorsement (See 3 (a) (1) above.)

(4) On the 1st of each month, each Section Head will check, by letter, with the Commanding Officer of each district office concerned to determine the progress of investigations, the assignments and future dispositions of such cases. This will be done by another "Action Letter."

4. All "Assignment Sheets," "Letter Forms," "Action Letters," and other miscellaneous forms and correspondence will be routed through Operations.

5. All Section Heads and Commanding Officers of District Offices will be responsible to see that correspondence concerning cases and special forms concerning these cases are filed with these cases, when closed.

SUBJ: Standard Operating Procedure for Counter Intelligence Corps, U. S. Army Forces, Korea, amendments to. 14 April 1947 (cont'd)

6. Such forms as these, which are in existence in CIC in Korea, are not always legitimate for forwarding to higher headquarters.

APPENDIX 4

THE KOREAN RESEARCH BUREAU

1. Early History of Korean CIC
2. Research Bureau Training Schedule
3. Appropriation From The Military Governor
4. Table of Organization
5. Authorization For Korean On-the-Job Training With CIC
6. Pay and Allowance Rates For Research Bureau Personnel
7. Roster of Class #1, 27 September-30 October 1948

[redacted]

[redacted]L

EARLY HISTORY OF KOREAN CIC

In July 1948, when it was known that American CIC would withdraw from Korea later that same year, Dr. Rhee Syngman, President of the Republic of Korea, Col Thomas Wattington, G2, XXIV Corps, and Lt Col H. F. Erickson, American advisor tc the Korean National Police, after many conferences, decided that a South Korean organization, modeled after the United States Army 971st CIC Detachment, should be established. The organization, at the insistence of Dr. Rhee, must be an all-civilian agency.

The commanding officer of the 971st CIC Detachment selected Maj Theodore Roberts and Capt Richard A. Fox from the detachment to procure, organize, train, and assign personnel for this civilian counterintelligence corps. The officers were informed that the Korean personnel would be trained and in the field by the end of September 1948.

In order to procure potential agents, a recruiting campaign was initiated in the ranks of the National Police and among Koreans employed by American CIC. Lt Col Erickson handled procurement from the National Police while the American advisors, in direct liaison with the several CIC district field offices in the provinces of South Korea, scoured the indigenous ranks of the 971st CIC Detachment.

The training school was established at the National Police Academy in Seoul, and a six week's course organized (Incl 1). The two American advisors, utilizing interpreters and personnel from various government positions, instructed the first class of 60 students which convened in mid-July 1948.

While the first class was in session, much remained to be accomplished to ready the organization to assume American CIC duties. Conferences among Dr. Rhee, the National Police advisor, and the American CIC advisors produced the following results:

a. Organization would be known as the Korean Research Bureau.

b. Appropriation, by executive order, of W 203,000,000 for the fiscal year 1948-49 (Incl 2).

c. Table of organization approved (Incl 3).

d. Letters from Headquarters, 971st CIC Detachment, informed commanding officers of the CIC district offices that Korean Research Bureau personnel would assume the duties of American CIC (Incl 4).

Incl 1

4191

[redacted]

[redacted]

Dr. Rhee also made several unsuccessful attempts before the National Assembly to have the Korean Research Bureau recognized as a legal government entity.

Before the first class graduated in late August 1948, the American advisors decided to continue recruiting in order to bring the bureau up to its 315 men T/O strength.

Immediately following the graduation of the first class, a second group of 240 students commenced training. Because the National Police Academy's facilities were inadequate, larger quarters must be found. Kyonggi Middle School, on the side of North Mountain in the rear of the capitol building, was the chosen site. Instructors were key personnel from the first class plus some of the original teachers.

During the closing weeks of the second class, a Korean Research Bureau headquarters building was procured in Seoul, and plans were made for the reception of Korean personnel at the CIC district offices.

In the meantime, Dr. Rhee continued his efforts to have the National Assembly recognize the Research Bureau. However, because the majority of the assemblymen felt that the bureau was an organization whose purpose was to ferret out Dr. Rhee's political adversaries, his attempts were in vain.

During the second class, the following were accomplished:

a. With Kyonggi Middle School as a base of operations, headquarters was established, and the various departments commenced to function.

b. Office supplies and investigative equipment were purchased.

c. Fiscal and accounting procedures were adopted.

d. Pay Scale was adopted and effected (Incl 5).

When the second class graduated in early October 1948, Research Bureau personnel were assigned to the CIC district field offices. The National Police advisor and the American CIC advisors selected Min Jung Sik to be the first director of the bureau.

Because it was obvious that the National Assembly would not sanction the Korean Research Bureau, G2, XXIV Corps, decided that a military CIC

[redacted]

should be established within the Korean constabulary forces. In September 1948, a group of Korean Army and Navy officers and cadets (Incl 6) were ordered to Seoul for a one month's CIC course. The American CIC advisors organized the "Special Investigations Section" school and set up a classroom in a former Japanese shrine in the "Gold Coast" section of Seoul. The students were told that upon conclusion of the course they would return to their units and organize CIC detachments; the details of organization were their responsibility. It is believed that the G2 advisor to the Korean Military Advisory Group exerted some influence in the formulation of CIC within the Korean constabulary.

When the personnel of the 971st CIC Detachment departed Korea in December 1948, the American CIC advisors were relieved of their duties. Subsequent reports revealed that the Korean Research Bureau ceased to exist, and the Special Investigations Section within the armed forces performed CIC functions.

SOUTH KOREAN INTERIM GOVERNMENT
Seoul, Korea

26 July 1948

SUBJECT: Department of Police Supplemental Appropriation FY 1948/1949

TO: Advisor and Director, Department of Police

1. A supplemental appropriation in the amount of 203,400,000 is hereby approved for the Research Bureau, Department of Police, to be allocated on a monthly basis effective 1 July 1948.

2. It is hereby directed that funds in the total amount of 14,175,000 be transferred from object class 01, salaries, divisions 01 and 03, of the current approved budget for the Department of Police, to object class 01, salaries, Research Bureau, Department of Police. This amount to be allocated on a monthly basis effective 1 July 1948.

3. The detailed supplemental appropriation by object class and limitation within division, together with the transfer of funds, is to be allocated monthly as follows:

06	Research Bureau		
	112 Food and Clothing		3,000,000
	09		
	115 Intelligence		
	02 Wages		8,000,000
	124 Office Expense		
	01 Salaries	1,575,000	
	03 Travel	5,000,000	
	06 Rent & Utilities	1,000,000	
	08 Other contractual Services	1,000,000	
	09 Supplies	1,600,000	
	10 Equipment	2,000,000	12,175,000
	175 Contingency Funds		1,000,000
	TOTAL MONTHLY ALLOCATION		24,175,000

Incl #2

4. It is further directed that all unobligated funds remaining at the end of each month will automatically be withdrawn, and will not be available for obligation during the succeeding month.

5. No funds will be obligated that are not absolutely necessary, and all vouchers for expenditures will be approved by the Principal Advisor, Department of Police.

W. F. DEAN
Major General, United States Army
Military Governor

HEADQUARTERS
971st CIC DETACHMENT
APO 235, c/o PM
SAN FRANCISCO, CALIFORNIA

SUBJECT: Korean On-the-Job Training

TO: Officers in Charge

1. In accordance with present plans to train Korean personnel to assume the duties and responsibilities of this organization, at a date to be announced later, the procedures as herein set forth are established.

2. It is anticipated that Korean personnel, who have received a basic course in Counter Intelligence methods and operations, will eventually maintain and operate the headquarters and district offices which are presently operated by this organization. In order to further qualify the Korean personnel to assume their responsibilities an on-the-job training period will commence on or about 15 September 1948.

3. The designated Korean officer in charge is respon sible for the administration, supply, messing, billeting and discipline of the Koreans attached with him, and is himself responsible only to his own higher headquarters. In the event of any disagreements which cannot be satisfactorily settled between you and the Korean OIC, the matter will be referred to this headquarters for determination.

4. You are authorized to make available to these attached personnel, files and information pertaining to Korean incident and complaint type cases. In addition to being given on-the-job training the attached personnel will be used in furthering the mission of your office by working together with you in the production of intelligence and counter intelligence.

5. It is imperative that wholehearted cooperation be accorded these men during the ensuing transition period. Their mission requires knowledge and understanding and their success depends in large measure upon your guidance during the embryonic stages.

JOSEPH HUCKINS

MISSION OF THE COUNTER-INTELLIGENCE CORPS

"The mission of the Counter Intelligence Corps is to contribute to the operations of the Army Establishment through the detection of treason, sedition, subversive activity, and disaffection, and the detection, prevention, or neutralization of espionage and sabotage within or directed against the Army Establishment and the areas of its jurisdiction.":

Auth: AR 381-100

HEADQUARTERS
U. S. ARMY INTELLIGENCE CENTER

FORT HOLABIRD, BALTIMORE 19, MARYLAND

ACSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

OCCUPATION ERA OVERSEAS

Communist Problem Recognized

Two days after the 1918 Armistice, Col. Ralph H. Van Deman, War Department Military Intelligence observer attached to G2, American Expeditionary Force, at Chaumont, France, cabled his chief in Washington:

> In view of the evident attempt of the Bolsheviks and affiliated elements to bring about widespread trouble, consider it most important that passport control is strictly maintained. Suggest you keep in close touch with the Department of Justice and urge on them the importance of watching this matter in the United States and keeping you informed. Vital that we here be kept informed of any developments of this kind in the United States and names of Americans now in Europe identified with revolutionary movements and of departures of such persons for Europe. Whole matter should be kept as quiet as possible.[1]

Colonel Van Deman's concern arose from the fact that almost simultaneously with the cease fire of 11 November, reports of Communist disturbances in many parts of Europe began arriving at G2, Army Expeditionary Forces. In Switzerland Communist railway workers refused to transport troops. In Brussels, the Red Flag was raised as soldiers and workers took over the government. Northern Italy was reported "ready to blow up;" Austria-Hungary, "practically gone to pieces;" Holland and Sweden were "honeycombed." Communist conditions in France, Poland, Germany and Russia were well known.[2]

Colonel Van Deman followed his cable with a letter to Brig. Gen. Marborough Churchill, Chief of the Military Intelligence Division, in which he said:

> "There is no use telling you what this movement means or what its object is--a world-wide social and political revolution. In other words, the fullfilment of the dream of the Internationalist. If they are able to carry out their plans, we all know what will happen.

[redacted]

"From our standpoint (Intelligence) the first thing to be done is to ascertain how far this propaganda has permeated our troops and next to take any measures possible to eradicate what exists and counteract future efforts of the Bolshevik-Internationalist group. This we have started to do by means of our troop Counter Intelligence organization... To maintain discipline in our forces over here during that demobilization period is going to be a most difficult task. It would be under the most favorable conditions, but with this revolutionary business on, there is no telling what may happen...it looks as if we might be entering on a period of even greater danger to the civilization of the world than the one through which we have just passed...the closest watch must be kept on all the well known agents of these people both here and in the U.S....

"It seems to me that the intelligence services of all of us should take this work over, in close liaison with the civil services of the various governments. It is perhaps hardly a 'war activity' but if an attempt to spread anarchy and revolution over the world is to be made, it seems to me we must use every means at our disposal to fight it. Don't think I am an alarmist. But I cannot help thinking that things look most dangerous for the future..."[3]

Colonel Van Deman's warnings of demobilization problems were subsequently justified. The mutiny of American troops with the Army Expeditionary Forces, Northern Russia, has been described in the previous chapter. In France, just after the Armistice, a serious morale problem between temporary and Regular Army officers arose. Col's. William (Wild Bill) Donovan and Theodore Roosevelt discussed with Colonel Van Deman the possibility of forming an American Veterans organization as a diversion, but the trouble died down before the Bolsheviks could exploit it. The veterans association plan was shelved and subsequently these plans matured when the American Legion was formed in the United States.[4] Colonel Van Deman's stress on the importance of keeping track of American Communists abroad was justified by difficulties with Occupation troops which will be discussed later.

As Colonel Van Deman had anticipated, total demobilization took more than a year. Within five months, half of the Army's four million men had been discharged, but it took six months more to return another million and a half to civilian life.[5] Even then the Army was still cutting back to the 325,000 men it had been authorized

3 Van Deman, Vol 3, App G.
4 Van Deman, Vol 3, pp 10, 12, 14.
5 Army Almanac, 1950, p 655.

on 11 July 1919.[6] In Europe, however, a speed-up was attained, and within a month after the Armistice, first units were back in the United States. Of the two million troops that had been in Europe during World War I, there remained nine months later only a 6,800-man Occupation Force in Germany.[7] However, demobilization of the Corps of Intelligence Police in Europe was delayed six months because of security requirements for the Peace Conference and service with the initial occupation force in the period between the Armistice and the signing of the Treaty of Versailles on 28 June 1919. Only those men in training and on probation were returned to their units, and the Corps in Europe had a strength of 405 in January 1919.

G2: SOS After the Armistice

Following the Armistice of November 11, 1918, the general duties of G2, SOS, continued to be performed. Carding of suspects continued at an accelerated pace. New problems included: the investigation of possible enemy activities designed to create dissension among the Allies; inquiry into the possible peacetime aims of certain radical, Socialist and Bolshevik elements; obtaining information on political, social and labor conditions; studying the effect of demobilization in France and England; and observing activities of various groups and committees in Paris representing small nations seeking recognition at the Peace Conference.[8]

Colonel Ward reported that after the Armistice, work of many Intelligence Service branches was increased and intensified. Efforts could not be relaxed "to prevent the entry into areas occupied by American troops of propagandists sent through enemy influences." Another task was to provide intelligence service for officers of the Army Expeditionary Forces in control of the Negative Intelligence of the American Commission to Negotiate Peace. To carry out orders received, it was necessary to open new bureaus, and G2 activities were extended to Army Expeditionary Force bases at Antwerp and Rotterdam. In addition, passport activities of the Intelligence Service were greatly increased, and assistance of the Intelligence Police was officially requested by the United States Secret Service in connection with the arrival of President Wilson for the Peace Conference at Paris.[9]

A portion of the Corps' work with regard to the President's arrival centered at the Port of Brest, where it was rumored that French radicals, financed by

9 History G2, SOS, pp 35, 360, 154.

Bolshevik funds, were planning an uprising the day President Wilson arrived. It was further rumored that the President would be Number 1 target for a bomb. All available Intelligence Police were sent to Brest to work with French agents. Posing as American salesmen and journalists with Red sympathies, they became acquainted with the Communist leaders, and before the arrival of the President, convinced the leaders that President Wilson did not know their problems, but since American labor was well treated, the President might turn out to be their best friend. As a result, when the President arrived, he was greeted by a petition instead of a bomb.[10]

At the LeHavre CIP office, morale surveys ended with the Armistice and consequent stoppage of troop arrivals, and the CIP trainee school was discontinued about this time.

In December, the office took over some of the more complex CID cases since the local Provost Marshal had no investigators available. Among the cases handled was one involving the hijacking of about $50,000 worth of American supplies a month at a point between the docks and the railheads. During this three-month investigation, according to one officer, agents learned of an "...untouchable international dope ring which was at the bottom of stealing American supplies and much incidental espionage..." Early in 1918, the 40-man force was split in half to provide a unit for the Paris Peace Conference.[11]

G2, SOS, continued its operations until 15 May 1919, and was then demobilized, although the Peace Treaty had not been signed, and Colonel Van Deman had urged that the Paris and Brest officers be continued in operations. The most unfortunate aspect of this demobilization was that all files were shipped to the United States, and there was no means of supplying information which French and British Intelligence Services felt necessary to assist the Peace delegation. Colonel Van Deman had urged that these files be left with the American Military Attache in Paris, but General Nolan had objected because he felt they would not be kept strictly confidential.[12]

Paris Peace Conference

Corps of Intelligence Police agents served as interpreters, translators and security guards for the President and the American Commission, and maintained

security at the Hotel Murat while President Wilson was there.[13] Prior to the President's arrival, the residence and its surroundings were carefully examined, and inhabitants of near-by buildings were investigated. The building was examined from garret to cellar to check for concealed explosives. Telephone and telegraph wires were inspected as a safeguard against wire tapping, and the neighboring streets were guarded by plain-clothes men.

Colonel Ward stated that when the premises were turned over to the jurisdiction of the United States Secret Service on arrival of the President, the Chief forwarded a written commendation on the preparations made.

Secret Service secured Intelligence Police, who could speak French, to work with French Inspectors at the entrance to the Peace Conference chambers at the Palais d'Orsay. The task of these agents was to prevent unauthorized persons from entering. Confidential information was requested and furnished a number of United States plenipotentiaries, including representatives at the War Council at Versailles. Surveillance of various ministries along with overt and covert coverage of various committees and reunions was maintained, and surveillance of Bolshevik activities was facilitated by dividing Paris into CIP districts.[14]

Colonel Van Deman had been notified on 22 November 1918 that he would be in charge of "counterespionage" at the Peace Conference. By 1 December, he had established his office at #4 Place de la Concorde in the building which had been rented for the American section of the Peace Conference, and established his quarters with other American delegates at the Hotel Crillon. Two Corps of Intelligence Police agents, Sgts. W. W. McKinnon and L. F. Hensel, and a messenger were assigned Colonel Van Deman from G2, SOS.[15]

Herbert Hoover was in charge of providing food and relief for certain devastated sections in Europe, and Colonel Van Deman proposed that intelligence agents familiar with the country be sent with relief workers. Mr. Hoover, Colonel Van Deman said, "violently" objected. However, "Certain intelligence agents were sent on some of these missions and they reported conditions upon their return."[16] The opposition of Hoover to covert intelligence activities was to handicap the service again in 1929.[17]

On 4 December, Capt. Ogden Mills reported as Colonel Van Deman's assistant, and together they worked on various security procedures for passes, mail distribution and telephone security. At the Hotel Crillon, the telephone

cable was enclosed in lead; American girls chosen as operators were carefully screened, and a part of the exchange arranged to allow intelligence personnel to check on calls for security violations.[18]

Because of its unsavory reputation, Maxim's Restaurant was placed off limits for all American Armed Forces personnel in Paris. Shortly after his arrival, Colonel Van Deman discovered that a trap door led from one of the Commission offices at #4 Place de la Concorde to the second floor above the restaurant. Van Deman had the door padlocked and gave the key to one of his sergeants who was vouched for as entirely reliable. Two weeks later the door was discovered open. This time it was repadlocked "but," said Colonel Van Deman, "the sergeant no longer kept the keys."[19]

In addition to other duties at the conference, Van Deman was detailed as a member of the "Dresel" Committee on Current Diplomatic and Political Correspondence of the American Section. With E. L. Dresel of the State Department as chairman, members included the two Dulles brothers, Adolph Berle, Maj. Roal Tyler and Maj. Delancey Kountze. The principal function of this committee was to receive and examine the credentials of various couriers as they reported from different sectors of Europe before they had made reports to the Commissioners. The committee met every morning.[20]

During this period Colonel Van Deman had innumerable conferences with prominent American, British and French intelligence officials regarding various problems. Among these was a conference with Leland Harrison, head of the Secret Service of the United States State Department, and Mr. Joseph Grew, on the collection of positive intelligence. On other occasions he conferred with Dr. Edward Benes of Czechoslovakia, Lawrence of Arabia, and Sir Basil Thompson of Scotland Yard. Van Deman also received an intelligence report from Col. Sherman Miles who had completed a Balkan tour. When Nelly Bly, well-known newspaper woman, arrived in Paris after spending the war in Austria, it was felt she knew a considerable amount about the Bolshevik organization and activities there; efforts to get her to talk about them failed.[21]

Van Deman's Report

In his official report, Colonel Van Deman said that the work of the "Negative Intelligence Department" for the American section of the Peace Conference was to prevent interference with the operation of the Commission by outside agencies

18 Van Deman, Vol 3, pp 4 and 10.
19 Ibid, p 7.
20 Ibid, p 5.
21 Ibid, p 13.

through three specific steps: (1) safeguarding records, (2) protecting personnel, and (3) counterespionage measures.[22]

Colonel Van Deman said:

> To accomplish these objects it was, of course, imperative that the personnel employed by the Commission should be trustworthy, that persons known to hold disloyal sentiments and those of anarchist or terrorist tendencies should be denied admission to the buildings, that constant and close supervision should be kept on all persons entering the buildings whose sentiments and affiliations were not known, and that all orderlies, messengers, telephone operators, hotel employees, clerks, typists, laborers, etc., had to be carefully investigated before being employed. It also meant that we must know what persons were permitted to the buildings, where they went in those buildings and when they left...that no evil-intentioned persons were allowed to loaf about the entrances of buildings. To accomplish this a system of passes had to be established... Press passes were issued only upon a written request from the "Press Bureau" with a statement that the Executive Committee of Correspondents had considered the individuals named and were convinced a pass should be issued...watch was kept on all offices and living quarters to see that important and confidential papers were not left lying about when rooms were unoccupied... Intelligence Police sergeants were stationed as guards in the Records and the Map Room at all hours...contents of the waste paper baskets were burned daily under the direct supervision of an Intelligence Police sergeant.

Much of Colonel Van Deman's security supervision required great tact and diplomacy. CIP sergeants were detailed to circulate throughout the conference building on a 24-hour basis to check on any one acting in a suspicious manner. While everyone except the general officers of the Army and high officials of the Allied Governments were required to have a pass, discretion had to be used in requests to examine these credentials. Colonel Van Deman stated, "As the Central powers maintained espionage personnel in France and particularly in Paris, it was necessary to make sure that uninformed members of the Commission personnel were warned when they were approached by individuals who were definitely 'suspect.' This was done by myself personally and in the most quiet and confidential way possible."[23]

In addition to regular "counter" intelligence work, Colonel Van Deman, at the request of the Secretary General, took up the subject of "Bolshevism" and its allied activities. All cables, reports and interview notes were routed to his

22 Van Deman, Vol 3, p 30.
23 Ibid, p 31.

Negative Intelligence Department, and military attaches were directed by the Military Intelligence Division of the General Staff to send Colonel Van Deman direct all information obtained by them in this connection. Beginning 12 December 1918, a daily resume on "Bolshevism" and kindred activities was issued, and each month conditions in every country in the world in which Bolshevist activities were disclosed were summarized.[24]

Coverage of Bolshevist activities was one of the principal counterintelligence functions of the Peace Conference. Early in 1919 there were false rumors that the Allies were going to send an expedition to Russia to supplement the Siberian Forces and force out the Communists. British intelligence officials urged that American intelligence cooperate with them in a plan to keep track of Soviet supporters in all parts of the world. From Berlin came reports that the Germans were in a "blue funk" about Bolshevism, and many firsthand accounts of Communist activities were received. Among them was the report of the widow of Mr. Proctor of Proctor and Gamble who had "escaped" after serving with the Russian Red Cross, and the report of William Treadwell who had been imprisoned by the Bolsheviks.[25]

Some of the 100 newspaper correspondents accredited to the Peace Conference had records that were "not too good." One such person was Robert Minor, the prominent American Communist, whose case will be reported later. Colonel Van Deman arranged for discreet surveillance, and for this assignment, received the help of an exceptional volunteer, ...

In February, volunteered to go to Germany in connection with the Minor case, and while in Berlin sent in firsthand accounts of the Bolshevik uprising in June.[26]

The Bullitt Case

The Bullitt Case was the most outstanding intelligence incident of the Peace Conference. In February 1919, William C. Bullitt, Chief of the Confidential Records Section of the American Commission, made a trip without authorization of the Peace Commissioners to Russia with Lincoln Steffins, the writer. On his return in March, Bullitt submitted "an extremely rosy" report to the Commissioners regarding Bolshevik accomplishments in Russia. Since Colonel Van Deman was collecting all available facts on the subject, he was directed by the Secretary of the American delegation to prepare a rebuttal to the obvious inaccuracies in Bullitt's report, such as the statement that only a small number of people were

24 Van Deman, Vol 3, p 32.
25 Ibid, pp 9, 12, 15, 16, and 17.
26 Ibid, pp 7, 8, and 24.

0529

killed in the Russian Revolution. Colonel Van Deman, in his reply to Bullitt's report dated 1 April 1919, commented, "...documents in this office indicate that compared to the Russian Revolution, the French was a tame affair..."[27]

Ignoring Colonel Van Deman's documented evidence, Bullitt appeared before the Dresel Committee 10 days later and "told members there would be a revolution in Europe and that nothing they could do would stop it." On 21 May, Bullitt resigned, following disapproval by the Commissioners of his unauthorized trip and his "propaganda" report. In June, Bullitt was in London where it was reported he was consorting with radical elements.

In his report to the Chief, MID, Colonel Van Deman wrote, "... I am afraid that he is going to develop into a dangerous man. Personally, I like Bullitt, but he is an extreme radical and has become more so by his stay in Europe. He is also a disappointed and disgruntled man, and such a chap is always likely to be dangerous if he is smart, and Bullitt is that."[28]

On 25 June, Colonel Van Deman was informed by a State Department representative that a cable, stolen from Bullitt's safe in Paris, had turned up in Chicago. This safe had contained all confidential records of the American Section of the Peace Conference and its communications with Washington. The results of this investigation are not known.[29]

Bullitt continued his high opinion of the Soviets for 14 years. When John Reed, one of the original American Communists, died disillusioned in Russia in 1923, Bullitt married his widow and continued to champion the Bolsheviks to such an extent that when the Soviet government was recognized by President Roosevelt in 1933, Bullitt was appointed as first U.S. Ambassador and served in Moscow for three years.[30]

The rosy pictures developed during his few weeks in 1919 dissolved in reality as his Moscow tenure rolled by, and Bullitt returned from Russia completely disillusioned. In 1946, he wrote a book called The Great Globe Itself, in which, among other indictments of the Soviets, he paralleled their violations of international agreements with crimes of the Nazis. Without direct reference to his previous infatuation, Bullitt wrote, "...All Americans wanted to believe that the Soviet Union was what we wished it to be. Our hopeful wishes predisposed us to accept any laudatory lie and to discount every refractory fact."[31] Bullitt was subsequently a highly active opponent of communism.

31 Bullitt, W.C., The Great Globe Itself, N.Y., 1946, Scribners Sons, p 22.

But to Van Deman in 1919, Bullitt was a living example of the warning given two days after the Armistice that "we might be entering on a period of even greater danger to the civilization of the world than the one through which we have just passed..."[32]

While Bolshevism was the principal counterintelligence problem of the conference, Van Deman had several other reports of more than routine interest. From London, Capt. Bronson Cutting, the assistant military attache, reported that a letter Van Deman had sent him marked "personal and confidential" had been opened by a secretary who was a former code clerk of the London Embassy. The girl claimed she opened the letter by error but previously, in the summer of 1918, the girl had been under suspicion in connection with the suspected espionage case at the London military attache office, reported in the chapter on the CIP in World War I. Colonel Van Deman wrote, "Bronson Cutting endeavored to investigate this matter, but no definite results were ever obtained."[33]

In July 1919, Colonel Van Deman received a report that forecast a war then more than a decade away. From a Britisher connected with the biggest firm of metal merchants in Europe, who had been an officer in the British Intelligence Service during World War I, Van Deman learned that Japan had sold a large quantity of copper in England in the spring and was now buying it back at an advanced price. The informant added that Japan was buying all the land in Australia she could get, and getting in a considerable stock of mercury and antimony.[34]

During the same spring, Colonel Van Deman was asked to give one of the Presidential advisors his ideas on how military intelligence should be handled by the League of Nations, but in June Van Deman wrote to General Churchill at Washington that he had talked with several people on the subject:

> ...so far as I can gather, no one seems impressed with the necessity for having such a service as part of the League of Nations. How under the sun they expect to function without it, I can't imagine and am sure they will have to come to it in the end. Just now they seem to have exceedingly vague ideas of what the organization of the League is going to be and also seem to have a feeling that they are not going to let military people have anything to do with it.[35]

To handle work at the conference, Van Deman's original force was increased to three officers (Lieutenants Colwell, Brevoot and Hornblow) and 35 sergeants.

---

32 Van Deman, Vol 3, App G.
33 Ibid, p 9.
34 Ibid, p 26.
35 Ibid, pp 29, 30.

0531

This staff was gradually increased to a peak of seven officers and 60 Intelligence Police with Major Cooper as unit commander. At the termination of the conference, the force consisted of six officers, two army field clerks, and 35 Intelligence Police sergeants. When G2, SOS, was terminated on 15 May 1919, the men remaining with Van Deman were placed under the command of G2, GHQ, American Expeditionary Forces, Chaumont.[36] One of the personal problems facing these CIP agents in Paris was that food costs had doubled while their allowance remained at 11 francs a day, with 7.50 francs a day allowed for room; this put the men on very short rations.[37]

With the Occupation Forces

Shortly after the Armistice, Maj. Gen. George H. Harris went to Berlin as chief of the American Section of the Inter-Allied Prisoner of War Commission. Some of the officers attached to this section and living with General Harris at the Hotel Adlon had duties in addition to getting prisoners cared for and shipped out of Germany. G2, GHQ, American Expeditionary Forces, remained at Chaumont with General Nolan in charge, but an advanced GHQ was established at Trier on the border of the German Rhineland. Here Major Henrotin, who had handled the Tours district of G2, SOS, during World War I, headed the Counter Intelligence Service. Soon Henrotin placed an Intelligence Police sergeant under cover in a Bolshevik organization in Berlin where the sergeant posed as an American deserter.[38]

The American Third Army was designated the Army of Occupation. It consisted originally of nine divisions, totaling about 200,000 men, and included a CIP contingent. On 7 November, it started for the Rhine and four days later reached Luxemburg. By 23 November, it had reached the German border and halted for a week while the British and French forces flanking it assembled. On 9 December, leading elements reached the Rhine at Coblenz; four days later III Corps crossed the river and established its bridgehead with impressive Fortress Erhenbreitstein as its headquarters. By a coincidence of fate, one division crossed the Rhine at Remagen where 27 years later another division of III Corps was to cross in the next World War. Meanwhile, two divisions of the Second Army occupied Luxemburg.[39]

38 Van Deman, Vol 3, p 15; and Johnson, p 225.

39 Army Almanac, 1950, p 441.

CIP agents in Luxemburg made a timely discovery of French plans to annex the little Grand Duchy. General Pershing was ready when French troops marched in; he ordered American troops to remain and protect the little kingdom. Two CIP agents, posing as newspaper correspondents, penetrated the parliament of Luxemburg and met members of all parties and heard various debates; they were even presented to the Grand Duchess. Several stay-behind agents of the Germans were discovered in Luxemburg and turned over to the French.[40]

At Third Army headquarters at Coblenz, Col R. H. Williams was chief of Intelligence and under him was established the first "Political Section" of G2, with Col. Newbold Morris, noted journalist, in charge. After World War II, political reporting was to become an important part of CIC work with the Occupation of Germany. Some 20 CIP agents were on duty at Coblenz.[41]

German intelligence sent a number of agents to Coblenz. Intelligence Police spotted many on arrival and steered suspects to a residence at the Riesenfuerstenhof, a hotel thoroughly covered by American counterintelligence. When one of these spies posing as a prosperous butter and egg merchant, was spotted, a German-American CIP agent bluffed his way into his confidence and worked with him until he was about to leave for Berlin. At that time the spy and his papers were picked up.[42]

Historian Johnson states that two German foreign office officials disguised as working men were picked up by American Intelligence agents at Coblenz when their forged papers were detected. An American CIP agent penetrated a huge black market ring which was rigging bidding on the purchase of American Army surplus stocks of goods; a resultant raid bagged 200 prisoners. Since several prominent Germans were involved and the peace negotiations were in a delicate state, higher authority ordered the prisoners released, but not until they had been paraded through Coblenz so that everyone could get a good look at them.[43]

The Minor Case

Among the most important work of the Occupation counterintelligence group was neutralization of Bolshevik efforts to cause dissatisfaction and mutiny among the Allied troops. Outstanding in this connection was the Robert Minor case. In January 1919, American Army Intelligence agents discovered that circulars were being distributed to both the American and British forces on the Rhine. These circulars were open invitations for mutiny, and informants reported they were

40 Johnson, pp 281-282; and Elliott, p 7.
41 Johnson, pp 255 and 287.
42 Ibid, pp 283-284.

being prepared by a Bolshevik group centered at nearby Dusseldorf, in the Ruhr, where even the Chief of Police was said to be working with them.[44]

The writer of the circulars was Robert Minor, native American, Texas-born, of Virginia blood and son of a Democratic politician and Federal judge. Benjamin Gitlow, former Communist and associate, has described Minor as, "...the most important figure in American Communism, for he has done more than any other American Communist, living or dead, to transform the American Communist movement into a real Bolshevik movement..." Minor first went to Russia in 1918 as a correspondent for the New York World, the Philadelphia Public Ledger and Max Estman's Liberator. He spent nine months there and had the confidence of Lenin who spent many hours talking with him.[45]

From Russia, Minor went to Paris in February 1919, where he became an accredited correspondent and cartoonist of the Paris Peace Conference. He obtained passports and special government passes entitling him to travel all over Europe and he disappeared from Paris. In Berlin he obtained more special passes from General Harris. In Berlin, Minor told German Communists that the time was "ripe to spread the doctrines of Lenin and Trotsky among the American soldiers," and a Corps of Intelligence Police agent, who had infiltrated this group of Communists, learned that Minor was in charge of the manufacture of propaganda for the Communist "Spartacus" group which planned an armed uprising. Shortly afterward, Minor turned up at Dusseldorf writing seditious pamphlets.[46]

At Coblenz an Intelligence Police sergeant was sent across the border, posing as a deserter. He verified the fact that Minor was preparing the circulars. He was ordered to entice Minor, under some pretext, to go into American-controlled territory at the bridgehead where he might be picked up, but this he was unable to do.[47]

When Colonel Van Deman learned of this problem, who was in his office reporting on surveillance of news correspondents, immediately volunteered to go to Germany and entice Minor to the border.

Arrangements for arrest were made quickly and Minor was apprehended.[48]

[redacted]

Colonel Van Deman had planned to have Minor court martialed, but the rotation of his capable assistant, Capt. Ogden Mills, prior to Minor's apprehension saved the Communist. Van Deman had been waiting four months for this pickup, but by a coincidence of fate, the arrest occurred during the only four days Colonel Van Deman was absent in the four-month period, and just 10 days after Captain Mills had left. Since Colonel Van Deman knew nothing of the background or discretion of the young captain who had been assigned to him as Mills' replacement, he had not informed the captain of the pickup plan because he was to be gone for such a short time.[49]

The young captain, not knowing what to do when the intelligence officer at Coblenz told him he had Minor, called the American Embassy at Paris which immediately demanded that Minor be turned over to its custody. By the time Colonel Van Deman returned, Lincoln Steffins knew of Minor's arrest and demanded of Van Deman the names of "liberal minded" Army officers to defend Minor.[50]

The Embassy had informed other Americans. Colonel House, who had given Minor a long private interview just before he left Paris, urged Minor's release, but General Liggett at Coblenz refused. Judge Minor wired his son from San Antonio not to spare any expense in arranging for his defense, and the case suddenly assumed such international and domestic importance that jurisdiction was taken away from the Occupation Forces and turned over to American Expeditionary Force General Headquarters. Pressure resulted in Minor being treated in prison more like a "VIP" than a traitor. American newspaper circles, Gitlow states, were astounded by the extent to which men of high official standing in the government were trying to quash the case. The trial was postponed and, finally, without warning, General Pershing ordered Minor released. Colonel Williams, G2 of the Occupation Forces, took the evidence against Minor to Washington, and there was talk of a Senatorial investigation. Gitlow and Johnson both report that research has failed to reveal any satisfactory answer as to why nothing came of this investigation. Minor continued on to become an editor of the Daily Worker and one of the top officials of the American Communist Party, helping to carry out its treasonable activities for another 30 years. This last opportunity illustrated the result of lack of continuity in counterintelligence assignments.[51]

On 24 January 1923, the American flag was lowered on Fortress Erhenhreitstein, and the last American troops left for home. Intelligence and counterintelligence in that area reverted to the military attaches, who were also being curtailed

Section 2

IN THE U.S.A. AND POSSESSIONS

Demobilization in the United States

Demobilization in the United States was rapid. Within three months after the Armistice, the Corps of Intelligence Police had been reduced to 128 men, nearly half its wartime strength.[53] Nine months after the Armistice, the entire CIP world-wide was reduced to 42 men. By September 1919, it was down to 28 men; by November, to 21 and in January 1920, to 18. On 20 August 1920, the Corps reached a low of six men, all of whom were eligible for discharge.[54] Meanwhile, the Military Intelligence Division of the War Department was being curtailed. From November 1918 to July 1919, it was reduced from 1,259 persons to 274.[55]

Radical activities in the United States were increasing, however. By January 1919, the Soviets had at least one active espionage agent in the United States.[56] From a total of less than half a million persons before World War I, left-wing supporters had increased to an estimated three million at the time the Communists struck out for power in August 1919.[57] When the National Guard was called out in September 1919 to suppress riots during the Boston Police strike and the aid of Federal troops was offered Massachusetts, the Corps of Intelligence Police was losing more of its 28 remaining agents.[58] The CIP was virtually out of existence by 1920 when Federal troops were sent to West Virginia to restore order during the coal strikes.[59]

For the remaining CIP agents during 1919 and early 1920, there was little time for coverage of radical activities. Graft and fraud investigations required practically all available manpower. Before this CIP mission was terminated in

[redacted]

June 1920, the Corps had handled more than 1,100 cases and still had a number of incomplete investigations to turn over to the Army Inspector General and the Department of Justice.[60]

In addition, CIP agents were frequently required to work on Army phases of investigations controlled by the Department of Justice, which had uncovered such cases as a 25 million dollar airplane fraud.[61]

By 1920, Corps of Intelligence Police agents were aware that subversion of the Armed Forces was a primary mission of Communists in the United States. Army Intelligence files contained ample evidence to prove these Communist intentions. Instructions from the Comintern to the Communist Party in the United States stated, "...one of the most important aims at present is the organization of Communist 'nuclei' among soldiers and sailors..." This was to result in "the fanatical persecution of officers." Another intelligence report stated "...General Summerall is fully alive to the great danger of the Bolshevik element planting men in the various organizations to undermine and destroy their present very high morale. He was sure that there was a great deal of Bolshevik activity among wounded soldiers in the general hospitals."[62]

Although nearly half the field agents of the Bureau of Investigation of the Department of Justice were working on radical cases, the Army's counterintelligence force, now down to 18 men, was kept out of this field. At the conference of Army Department and Division Commanders in January 1920, the Director of Military Intelligence made it plain that the War Department had no desire to become involved, to any degree, in the field of investigations relating to the political beliefs or other private opinions held by military personnel.[63]

Brig. Gen. Marlborough Churchill, who was finishing out his term as wartime director of MID, was in full accord with the views of the Secretary of War on the matter of investigating individuals in the military service. Writing for a military publication in early 1920, he characterized the idea as "repugnant" but added, "...if a state of war makes such investigation necessary, we want it done by agencies under our own control, and not by unsympathetic civilian bureaus."[64]

Solution by "Detail"

In January 1920, it was evident, also, that by normal attrition, the Corps of Intelligence Police would cease to exist even before the wartime authority which had made it possible terminated in June. Obviously, the time had come either to disband or to reorganize on a peacetime basis.

Yet public aversion to investigations of Americans continued to grow. Secretary of War Baker incorporated this feeling into an Army directive three years later with the explanation, "It is very obvious that the American people are very sensitive with regard to any military interference in their affairs. Harmless and even readily justifiable inquiries arouse suspicion, and opponents of the Army are very apt to quote such acts as forms of Russian or Prussian military supervision..."[65]

A solution was found in a proposal to make the work a "detail." This would preserve the Corps in a sense, and yet because "details" were essentially temporary affairs, the plan would avoid the controversy that a proposal for a permanent peacetime organization seemed certain to arouse. A staff study for an admittedly temporary plan was prepared by Col. A. B. Coxe, Chief of the Negative Branch, and presented by General Churchill to the Chief of Staff on 3 February 1920.[66]

The Military Intelligence Division Staff Study said:

> "The organization of the Army is now being made to conform to the National Defense Act, in force before the war. No provisions are made in this act for Intelligence Police; therefore, in a short time there will be no existing authority for any such Police Corps. Small bodies of men are absolutely necessary in New York City, Washington and in the Western and Southern Departments for purposes of investigations and guard duties of a strictly confidential nature."

Authority was requested "to have not to exceed 24 sergeants of the duly authorized organizations of the Army and whose services may not be indispensable to same, detailed on special duty for Intelligence Service..." Six men each were to serve under the Commanding Generals of the Eastern, Southern and

0539

Western Departments, and six others under command of the Director of Intelligence. The study stated that ten of the remaining CIP agents on duty were in the Eastern Department, four in the District of Columbia and two each in the Southern and Western Departments.[67]

This first peacetime proposal had three serious weaknesses. First, no survey had been made to determine actual needs. Second, it made no provision for CIP agents in the Army departments overseas in United States territories where actually a large part of counterintelligence work was to be done between the two World Wars. Third, and most serious, it proposed to man the Corps with men who were dispensable to their own organizations--a system proven in World War I to provide far from the best type of man. This plan ignored that lesson and entailed all the difficulties that had arisen when efforts were made to transfer good men to CIP from other units.[68]

First Postwar Plan

On 6 February 1920, the Secretary of War approved the detailing of 24 sergeants from line organizations, with distribution as Military Intelligence Division had requested. As approved, however, the directive provided for the complete elimination of the Corps of Intelligence Police. It authorized the Adjutant General, at the request of the Director of Military Intelligence, to direct any department commander to assign any CIP sergeants then on duty to a line organization and from there to detail the sergeant back on special duty as a member of the Intelligence Police.[69]

Apparently the Chief of Staff recognized that unit commanders might be reluctant to have sergeants assigned or attached to their organizations detailed for special duty with the Intelligence Police. The order as published directed that department commanders, after consultation with the Director of Military Intelligence, would issue the orders necessary to insure the detail.[70]

When this directive reached G-2 sections in the various Army departments, CIP agents were encouraged by the evidence that the Army planned to continue CIP work in peacetime, even if only by "detail." Agents eligible for discharge saw an incentive to re-enlist, provided they were assured that the line organization for which they enlisted would be required to release them for an Intelligence Police detail.

67 CIP Corres #107, dated 3 Feb 1920.
68 CIC Hist, CIP in WW I, Sec IV (8).
69 CIP Corres #102, dated 6 Feb 1920.
70 Ibid, #101, dated 13 Feb 1920.

This important proviso was stressed in a letter written by Maj. R. B. Woodruff, Assistant Chief of Staff, G2, Southern Department, at Fort Sam Houston, Texas, in February 1920. He pointed out that the directive explained what could be done with the remaining CIP members, but did not specify what must be done. Further, he wanted to know if the two agents of long experience in his command did re-enlist in a line organization, could he get them detailed back over the protest of their new organization commander?[71]

In reply Colonel Coxe stated: "The Corps of Intelligence Police, as such, must cease to exist on or before June 30, 1920. At the same time it is realized that the duties performed by members of this corps will continue to be necessary. Therefore, it is essential that arrangements be made in advance... Any sergeants, not to exceed six in number, whom you desire to have on Intelligence Police duty, must, by June 30th, therefore, be regularly assigned to some organization authorized by the National Defense Act and detailed on special duty by the department commander."

Colonel Coxe said it was "the understanding of this office" that the Adjutant General would make the assignment and detail over the protest of the organization commander, if necessary. However, he said, such procedure was not in accord with the customs of the service or the intent of the General Order which placed troops under the department commander. It was believed that ordinarily the department commander had the authority necessary to settle such matters within his department. Colonel Coxe added, "...the Director (Military Intelligence Division) would not make such requests except where the interests of the service manifestly demanded such action..."[72]

Under these conditions, department G2's and CIP agents were not reassured. Although many agents took their discharges, others hung on, as they were hoping that something would come out of the Army Reorganization Bill before Congress prior to the 30 June deadline.

Their hopes were rewarded on 16 June. The Operations Department of the General Staff informed the Military Intelligence Division that the Army Reorganization Bill did not affect the status of the Corps of Intelligence Police; that the Overman Act (the President's emergency wartime powers) had not been repealed; and that the Corps could continue to function for the period of the emergency. Military Intelligence Division was advised, however, that all temporary organizations should be eliminated as soon as possible, and it was recommended that the Military Intelligence Division get special authorization for the necessary personnel to carry on the work needed for a permanent establishment.[73]

---

71 CIP Corres #101, dated 13 Feb 1920.
72 Ibid #98, dtd 24 Feb 1920.
73 Ibid #96, dtd 16 Jun 1920.

In June 1920 the Army Reorganization Bill was passed, and the authorized strength for the Army represented a reduction of 27,000 men. At the same time the "DEML" or "Detached Enlisted Men's List" was created to cover all organizations of enlisted men not covered by the new bill. Military Intelligence Division was advised by the Adjutant General that if a permanent CIP was wanted, the time had come to request authority for it.[74]

There was another urgent reason for action at this time. The Corps was down to six men, all of whom were eligible for discharge. The plan to create a Corps by "detail" had not worked out. Agents had been reluctant to transfer or to re-enlist in line organizations without positive assurance that they would be detailed back to CIP. Military Intelligence Division had provided no help in procurement. In fact, in January 1920, when the detailed plan was being worked out, Military Intelligence Division had written to area G2's: "...It is not the intention of the Military Intelligence Division to furnish men to the Corps areas or departments for assignment to the Corps of Intelligence Police..." The letter had stated that since CIP agents should have "the full confidence" of local G2's, the G2's should select men only after personal investigation. While Military Intelligence Division said it had no facilities for obtaining CIP agents, it reminded G2's that Military Intelligence Division approval was required for any man selected.[75]

First Request for Permanent CIP

A staff study entitled "Corps of Intelligence Police as Part of the Permanent Military Establishment" was prepared in August 1920 and submitted to the War Plans Division by Col. A. B. Coxe, Acting Director of Military Intelligence Division. One reason for taking this action in the absence of General Churchill may have been the vast number of attempted military subversion cases in Military Intelligence Division files from which a number of illustrative reports were taken for inclusion in the study. In its recommendation for 50 intelligence police, the study incorporated the request for three grades -- one master sergeant for Military Intelligence Division Headquarters, nine staff sergeants to provide one each at the nine Corps headquarters, and 40 sergeants to be distributed as needs required.[76] Once again the number requested was not based on any survey of area requirements.

At this time the Army was in the process of reorganization with the six territorial departments being converted to nine corps areas.[77]

74 CIP Corres #82, dated 10 Aug 1920.
75 CIP Corres #108, dtd 7 Jan 1920.
76 CIP Corres #78 and #81, dtd 20 Aug 1920.
77 Hist of Military Intell Div, Vol 3, p 51, (Secret).

There is no record of any action on this proposal, but five days after it was submitted, Brig. Gen. Dennis E. Nolan, Pershing's G2 of the American Expeditionary Forces, replaced General Churchill as Director of the Military Intelligence Division. General Nolan proceeded to reorganize the Military Intelligence Division, but it was not until 1 October 1920, after the War Plans Division had suggested it, that another CIP staff study was submitted.[78] One item which may have contributed to a lack of desire to act on the August proposal was a "sensational" article entitled "The Political Spy System in the United States" which appeared in the New York Call on 16 August 1920.[79]

On 8 October 1920, General Nolan submitted a staff study in which he stated that, "the Corps of Intelligence Police which consisted of several hundred men has been demobilized since the Armistice." He omitted from the study examples of subversive activity, but repeated essentially the justification given in the previous staff study: "Small bodies of highly trained men are absolutely necessary for the purpose of combatting the activities of Mexican agents on the Southern border and the persistent efforts of various radical groups operating for the express purpose of destroying the morale of the personnel of the Military Establishment by spreading propaganda, advocating and encouraging mutiny, unions of soldiers and sailors, and disobedience of authority among enlisted men of the Army, generally, as shown by the files of the Military Intelligence Division."[80]

In the accompanying memorandum, General Nolan cited his authority as:

> Under the provisions of Sections 4b, 4c and Section 25 of the Act of Congress approved June 3, 1916 (as amended by the Act of Congress approved June 4, 1920) the following allotment of grades for enlisted men for duty as Intelligence Police is authorized: Sergeants...45. The above mentioned sergeants will be charged against the item "Detachments for Headquarters at Nine Corps Area and Headquarters of the General of the Army" -- 240, which appears in Section II, General Orders Number 54, War Department, 1920, covering the allotment of the Detached Enlisted Men's List.

The quota was to be obtained by enlistment or transfer, subject in each case to the approval of the Director of Intelligence who was also to instruct the Adjutant General on where the men were to be assigned.[81]

Permanent CIP Approved

This proposal was approved, and on 23 October 1920, by General Order Number 64, a permanent peacetime force of Intelligence Police was authorized.[82] No available evidence exists as to why this second staff study omitted the word "Corps" as well as any proposal for grades above those of "Fourth Sergeant." The necessity for a "Corps" status and for opportunities for promotion were two obvious lessons of World War I. Possibly, these requests were deliberately omitted to avoid the fate of the August study, since the quoted statutory authority for these police was now the same as the authority for the DEML itself.[83]

Although there was no legal authority, the term "Corps of Intelligence Police" remained in general use during the entire peacetime period and was even used in official correspondence. However, on 16 March 1921, by War Department Circular 72, enlisted men were prohibited from wearing the special CIP insignia.[84] Lack of promotional opportunities immediately handicapped the rebuilding of the "Corps," and by 1924, morale was so low that some higher grades had to be provided. Restrictions on promotions continued to be a problem throughout the peacetime era.[85]

While approval for a permanent Corps was pending, Maj. Gen. Henry Jervey, Operations Division, requested G2 to furnish him with information as to how many CIP agents were in Washington, what the minimum number required would be, and what their duties were.[86] This resulted in the ordering of a general survey of needs. On 22 October, letters and cables to all Corps Areas and departments were sent asking how many agents were on duty and how many were desired.[87]

When this survey was completed in mid-November, it revealed that there were still two CIP agents not transferred to line organizations, and 11 men were "detailed" to CIP. In addition, the First Corps Area at Boston reported having one civilian agent. Requests for agents by the Corps Areas and department totaled 105 men. This added to the mystery of what the basis had been for requesting only 45 men.[88]

On 9 December 1920, General Nolan forwarded a memorandum to the Adjutant General stating that the Secretary of War had directed that a letter be sent all Corps Area and department commanders allocating quotas. Either by accident

or intention, this letter carried the subject "Corps of Intelligence Police" and in its text stated "...the following are the quotas of the Corps of Intelligence Police allotted..." This was published on 14 December 1920, by the Adjutant General, unchanged except that the Military Intelligence Division file number was changed to 322.999 -- "Corps of Intelligence Police (Miscellaneous Division) CHA/ANT 158," and officially contributed to the confusion on the status of the "Corps."[89]

Allocations to the nine corps areas, the three departments, and the Military Intelligence Division were as follows: two each to the I Corps Area at Boston, Mass.; the II Corps at Baltimore, Md.; the VII Corps at Fort Crook, Neb.; and to the Panama Department. Three spaces were allocated to the Hawaiian Department and four spaces each to the II Corps Area at New York and the VI Corps at Fort Sheridan, Ill. Five spaces each were allocated to the IX Corps Area at San Francisco, the Philippine Department, and to Military Intelligence Division Headquarters in the District of Columbia. Finally, seven spaces were allotted to the VIII Corps, Fort Sam Houston, Texas, which covered the Mexican border.

In allocating the quotas, G2's were told, "In addition to the other qualifications, men selected for appointments must possess the ability to speak, read and write one or more foreign language, and the possession of this qualification must be shown in forwarding applications for appointment.[90]

About this time, the appointment of an Assistant Chief of Staff for Military Intelligence in each Corps Area and Department had just been ordered by the War Department, and consequently questions arose almost as soon as the directive reached various Corps Areas and Departments. Replying to a request for two agents from the II Corps Area, Maj. J. Lawton Collins, Executive Officer of Military Intelligence Division, stated, "The intention is that these men will be personally selected by the Assistant Chiefs of Staff for Military Intelligence." The paragraph of a January 1920 Military Intelligence Division letter was repeated: "Military Intelligence Division has no facilities for obtaining men for Corps of Intelligence Police."[91]

Problems of the 1921 Era

In January 1921, Corps Areas and Departments were busy filling their quotas and submitting names of men selected for approval by Military Intelligence Division. IX Corps Area was reminded that the "detail" plan of February 1920 had been a temporary measure "...providing the necessary men for this duty until such time as a definite policy had been adopted regarding the Intelligence Police and provisions made for the necessary personnel." It was pointed out that this had been

89 CIP Corres #103 and #101 (101 is dated 14 Dec 1920).
90 Ibid, #101, dtd 14 Dec 1920.

[redacted]

ıccomplished in December and it was "...desired to relieve the men detailed as Intelligence Police...as soon as their services can be spared, after you have obtained men to fill your quota of Intelligence Police..."[92]

In March 1921, the G2 in the Panama Department cabled, "In view of the Panama-Costa Rica situation, recommend that the two Corps of Intelligence Police (agents) authorized in this department be selected by the Intelligence Division and ordered to this department as soon as possible. Spanish must be spoken by these men."[93] Available correspondence files of this period do not show what action was taken on the request, but when the next survey of men actually on duty was taken as of 28 August 1923, the Panama Department still had no agents.[94]

Local procurement in the territorial departments involved new problems. In April 1921, General Nolan disapproved two selections by the Philippine Department and stated, "It was his policy that no Filipinos would be detailed as a member of the Corps of Intelligence Police."[95] Maj. John C. H. Lee, G2 of the Philippine Department, had available the advice of the most experienced intelligence officer in the Army, Col. R. H. Van Deman, who, following the Paris Peace Conference, had been assigned to troop duty as commanding officer of the 21st Infantry at Manila. In June, Major Lee asked for reconsideration of the men he had selected because it was "...feared that conditions here are not understood. The garrison ow is largely composed of native troops, a Filipino mobile division in addition to the coast defense garrison. For use among such native troops, white Intelligence Police personnel will be of very little value. Native agents are expensive and much less reliable than old scout soldiers of established character still serving under the discipline of the Army..."[96]

By midsummer 1921, shortly before he was replaced by Lt. Col. Stuart Heintzelman as G2, General Nolan reached the conclusion that it would be better if the appointments of Intelligence Police were made "without reference to the Director of Military Intelligence Division." He prepared a staff study requesting that this requirement of General Order #64, 1920, be rescinded. This request was approved by the Chief of Staff on 19 August 1921, and published as General Order #44 on 29 August 1921. However, it was not until November that the Philippine Department learned it could recruit the agents it desired.[97]

Part II: CIP Organization for Peace

Section 1

PEACETIME CIP POLICY

First Instructions Issued

In January 1921, an agreement between Maj. W. W. Hicks, Military Intelligence 4, and J. Edgar Hoover, Special Assistant to the Attorney General, was reached providing that the Department of Justice would furnish 11 copies of its General Intelligence Bulletins for G2's in Corps Areas and Departments. Local Army G2's were authorized to see local Department of Justice field reports provided they came to Department of Justice divisional offices to see them and did not remove them from the offices. In turn, Military Intelligence Division agreed to furnish copies of its G2 Weekly Situation Survey for Department of Justice's nine divisional superintendents.[98] This same month, Department of Justice evidence resulted in the deportation of Ludgwig Martens, labeled by the House Un-American Activities Committee in a 1952 report, as the first known Soviet espionage agent in the United States.[99]

On 4 March 1921, Secretary of War Baker completed his term, and John W. Weeks succeeded him. At this time, the AC of S, G-2 for Sixth Corps Area at Fort Sheridan, asked Military Intelligence Division at Washington for information on the "Method of Employment of Corps of Intelligence Police." Manus McCloskey wrote, "No instructions can be found in this office. If approved by the Director, Military Intelligence Division, it is intended to provide Corps of Intelligence Police with civilian clothing and have them obtain employment and live in industrial centers, submitting reports from time to time as to their activities."[100]

McCloskey was informed:

> "No instructions have been issued by this Division in reference to the employment of Intelligence Police. Since different conditions existed in the various Corps Areas and Departments, it was thought desirable to leave this matter for the time being to the decision of the Corps Area commanders. Thus the scope of the CIP was extended to enable their use to assist the Assistant Chief of Staff for Military Intelligence of Corps Areas and Departments in intelligence work."[101]

[redacted]

McClosky was sent by G2, War Department, a rough draft of instructions for Military Intelligence which was "subject to further changes before being issued." He was told to return the copy after consulting its pertinent paragraphs.[102] Subsequently, hastily revised copies of these "Provisional Instructions for the Operations of the Military Intelligence Service in the Corps Areas and Departments," which were originally issued in 1918 to assist field intelligence officers forming divisional intelligence services, were sent to the Corps Areas and Departments.[103]

For CIP, the pertinent part of these instructions was contained in Part III: "Information Relative to Hostile or Potentially Hostile Elements." Information was to be collected relative to:

a. "RADICAL ACTIVITIES. Propaganda or activities, the object or tendency of which is the ultimate overthrow of the Government of the United States or of all governments or the ultimate overthrow of the existing economic system through force or violence... Information as to the particular groups which constitute the political and industrial classes enumerated above will be furnished from time to time in special letters of instruction...

b. "LABOR UNREST. Strikes, unemployment, discontent and any other conditions tending to render labor susceptible to subversion by radicals or lead to interference with governmental functions...

c. "ANTI-AMERICAN RACIAL GROUPS. Ethnic activities, the aim or tendency of which is the formation of groups hostile to the United States Government or the promotion of internationalism as against Americanization or the propaganda of class hatred...

d. "SUBVERSIVE ACTIVITIES. Any organization whose avowed purpose is the destruction of the morale of the army by means of propaganda advocating mutiny among troops. The formation of soviets of of soldiers and sailors and encouragement of disobedience of authority among enlisted men of the army generally...

e. "FOREIGN MILITARY ACTIVITIES IN THE UNITED STATES. The military activities of the agencies of other nations within our continental limits or within the limits of our colonial possessions...

---

102 CIP Corres #61, dated 3 Mar 1921.

103 Hist Mil Intell Div, Vol 3, p 52, (Secret).

[redacted]

f. "MISCELLANEOUS. Any activity or condition of whatever nature, which is designed or likely to produce a situation of general disorder or lawlessness with the consequent possibility of the intervention of the federal forces..."

The instructions under "Collection" stated:

"For the detection of radical influences within Military Establishment, organization officers should be relied upon. As a means of combating radicalism, unit commanders should explain to their non-commissioned officers that radical organizations are openly advocating a violent overthrow of the Government of the United States. Copies of 'Red Radicalism," a pamphlet issued by the Department of Justice, have been forwarded...for the purpose of assisting officers in understanding and explaining the situation...

"...Revised Tables of Organization provide that in each unit of the army, down to and including a battalion, an officer will be assigned to intelligence duty. It is moreover, considered essential that a suitable officer, in addition to his other duties when necessary, be detailed as Intelligence Officer at each post, camp or station and with every field detachment larger than a company where provision is not made for such detail in existing Tables of Organization..."[104]

The Deleted Paragraphs

In the revision of these instructions three paragraphs were deleted. These had required that (1) "Great care should be exercised in the detailing and instruction of Intelligence Officers; (2) Commanding officers should be kept fully informed on all Intelligence matters; (3) If an Intelligence officer failed in the performance of his Intelligence work because of other duties, steps should be taken to remedy the situation."

Corps Area G2's were placed in charge of intelligence training, including the National Guard and Organized Reserve, and charged with the preparation of suitable courses of instruction in Military Intelligence in accordance with instructions to be issued from time to time by the War Department. There is no record of any such instructions being issued during the time the pamphlet was in force, and a G2 was presumably to train himself and all officers detailed under his jurisdiction.[105]

104 Hist of the CIC, 1907-1913, War Dept Doc #62-82, 1921, Wash, D.C., CIC School File #016141, 9 Oct 51, (Staff & Faculty Library) (Uncl).

105 Ibid.

One of the problems confronting these Corps Area G2's resulted from the National Defense Act of 1920, which authorized a Military Intelligence Reserve, to be officially activated on 4 August 1921. This organization was largely the effort of General Nolan, who insisted that a separate "branch" was necessary to insure suitable Military Intelligence specialists in case of war. In its initial stage, the MI-Reserve consisted of 286 officers out of a total of 66,905 reserve officers.[106]

In May 1919, Colonel Van Deman had urged General Churchill to adopt a system for registering and keeping track of the officers and enlisted men who had worked with G2 in the American Expeditionary Force and in the United States. Unfortunately, General Van Deman later wrote, this was not done and, "as a consequence we lost touch with men who would have been of great assistance to Military Intelligence both during and in preparation for the Second World War."[107]

Instead, while other branches were granting commissions to their demobilized personnel, the Director of Military Intelligence had to make hasty arrangements with the Quartermaster Corps to issue commissions to a selected group of Reserve officers. Records of these men were supposed to be marked "for Intelligence duty" and they were to be transferred to the MI-Reserve upon its activation. Instead, the entries were either improperly made or ignored and these officers found themselves subject to Quartermaster mobilization assignments and active duty in the Quartermaster Corps instead of Military Intelligence. Bidwell, the G2 Historian, reports that when they complained, "no ready solution" could be found and many of them lost interest in their Reserve status. Finally, on 2 April 1921, the Director of Military Intelligence was given official authority "to act in the capacity of a branch chief" but since there was no Intelligence Corps as such to put men in, assignments still had to be made by detail.[108]

Officers continued to be "detailed" for CIP and CIC type work for the next quarter century, although it was only after July 1942 that CIC was authorized officer spaces. It was not until the eve of the Korean conflict that "CIC Specialization" was authorized as an appendix to the basic branch when officers were detailed to the Corps.

Comparing provisional instructions issued in 1921 with the general operating responsibilities and restrictions of Counter Intelligence Corps following World War II, there is to be seen a surprising similarity, despite a time lapse of 25 years. G2's were ordered to exercise due care that "they did not in any wise

106 Hist Mil Intell Div, Vol 3, pp 84, 85, (Secret).

108 Hist Mil Intell Div, Vol 3, p 86, (Secret).

CONFIDENTIAL

ncroach upon the jurisdiction or sphere of action of other investigative agencies of government."[109] They were told that:

> "In the majority of Corps Areas the principal and most practical source of information on radical activities will be the offices of the Department of Justice... Generally speaking all complaints of criminal activity in whatsoever form should be turned over to the Department of Justice or its accredited agents for such investigation and action as the known facts may warrant in the judgment of the Department..."

Limitations of Authority

Limitations of authority and jurisdiction were stressed again and again:

> "It is of the greatest important that the Military Intelligence personnel should not be employed as a general investigative body, interesting itself in the private relations of people or duplicating or interfering with the interests and activities of other agencies of the government. Intelligence officers were forbidden under any condition to assume any of the duties or initiate any investigations which normally pertain to the office of a Provost Marshal... The investigating function of Military Intelligence personnel is limited to inquiry into allegations of misconduct involving disloyalty and sedition...it does not include questions of a personal or disciplinary character which are in the province of the Inspector General's Department Personnel...it should always be borne in mind that it is not the proper function of the Military Intelligence Division activity to investigate the commission of crimes, civil or military.
>
> "Intelligence officers have no authority to put civilians under arrest or to make searches and seizures of private property without the assistance of civil authorities acting pursuant to a search warrant duly issued by a Court of competent jurisdiction... In obtaining information...care must be taken not to excite antagonism or apprehension nor generally to acquaint persons with the interest of the Military Intelligence Division in the subjects at issue. It is proper to collect literature and to converse with well-informed persons but not to interrogate in a summary of inquisitorial manner, nor to institute searches or seizures..."[110]

Intelligence personnel were told that their function could be described as one of "observation" and that with proper working arrangements and close personal contact with local Department of Justice officials:

---

109 Hist of the CIC, 1907-1913, War Dept Doc #62-82, 1921, Wash, D.C., CIC School File #016141, 9 Oct 51, (Staff & Faculty Lib), (Uncl).

110 Ibid.

"...it should be possible to obtain the greater part of the valuable and important information relating to subjects under military consideration... The political beliefs of officers and men, unless they be of a nature advocating the overthrow of the Government of the United States...their moral conduct, their discipline or attitude may be affected by disloyalty to the Government, sedition or radical propaganda, are not matters to be taken cognizance of by Military Intelligence."

When such information was disclosed, it was to be referred to the department involved or forwarded to Military Intelligence Division, Washington, and "...no further investigation or inquiry with regard thereto will be undertaken by Intelligence officers beyond what is necessary to the full development of all matters within the legitimate scope of Military Intelligence."

However, intelligence officers were required to collect large quantities of detailed information. They were to maintain a "Situation Monograph" with specific information on more than half a hundred topics concerning all radical parties, anarchists, revolutionary socialists, antiradical groups and other radical groups of "politico-military significance." From this data, "estimates of the situation" were to be prepared following another detailed form.

A "Weekly Situation Survey" was to be prepared and sent to Military Intelligence Division in Washington. This survey was a four-section intelligence report: I--Radical Activities; II--Labor Unrest; III--Moderate and Conservative Tendencies (Counter-Radical); and VI--Conditions Within the Military Establishment. Among the 10 subheadings under Section I was one requiring information on special radical meetings -- place, time, speakers, subjects, attendance, information on organizations to show changes in membership strength; policy, affiliations and "immediate plans."[111] Another section listed in detail specific information desired in reporting strikes, such as:

"...The Military Intelligence has a legitimate interest in any organized movement for the overthrow of the Government by force and arms because of the military aspect of such a movement. It is interested for the same reason in the activities of individual agitators or radical leaders who commit, incite, procure or aid or abet acts of violence in the furtherance of such movements..."

CIP Press Coverage

Intelligence officers were told to obtain and carefully scrutinize the press, "both conservative and radical," as well as radical periodicals and literature. In addition, other suggested sources of information were: state, county and

111 Ibid.

municipal officials; civic bodies such as chambers of commerce or trade associations; former members of the American Protective League; and reports of radical meetings and demonstrations.' To meet the requirements it was obviously necessary for agents to attend such meetings or demonstrations. Special or spot reports were required.

Corps Area commanders were authorized direct communication with officers in charge of recruiting districts to enlist the aid of these officers for intelligence coverage, provided it did not interfere with their recruiting duties. The officer-in-charge of a General Recruiting District was authorized general intelligence supervision over any of his subordinates so engaged, and was further charged with insuring that any investigations were "conducted in a confidential manner..." However, Corps Area commanders were warned, "This source of information should not be used except in special cases and then only with great caution..."

Of the 21 pages in the Instructions, 15 were devoted to these counterintelligence requirements. One and one-half pages were devoted to mapping requirements, which included terrain studies. This later became a major intelligence mission in the Eighth Corps Area which covered the Mexican border.[112] Preparation of War Plans occupied a page and a half of the instructions. Finally, two one-sentence paragraphs outlined the responsibilities for combat intelligence training and responsibility for code security.[113]

The preparation of War Plans involved civilian area investigations. The plan was intended to include detailed descriptions of public buildings and their troop capacity; local railroad data showing capacity for loading, unloading and storage; critical buildings such as telegraph offices, banks, water works, garages and filling stations, police stations, factories, street railway facilities, and camp sites. A traffic plan for entrance and egress of the city was required.[114]

In August 1921, Col. Mathew C. Smith, Chief of the Negative Branch of Military Intelligence Division, learned that an Intelligence Police private in the Fourth Corps Area at Fort McPherson, Georgia, had gone undercover and joined the International Workers of the World (IWW). Colonel Smith called this to the attention of the Executive Officer, MID, and stated, "In my opinion it would be very dangerous to allow members of the Intelligence Police to join the I.W.W. or any other organization... I think it would be well to write all G2's in reference to this matter..." Colonel Smith proposed that G2's be told "...it is not desired that members of the Intelligence Police be permitted or allowed to join radical or other organizations for the purpose of obtaining information."[115]

114 Ibid.
115 CIP Corres #53, dated 12 Aug 1921.

It was at this time that the Department of Justice started curtailment of its more obvious antiradical activities in response to public pressure. Seventy sedition bills had failed in Congress as the Communists made effective use of their "civil rights" propaganda.[116] This may have been the reason for Colonel Smith's proposal. At all events, G2 gave a quick answer. Colonel Smith's note was returned with the penciled notation, "The Director believes all such matters should be left to the discretion of the Corps Area G2."[117]

The Pershing Reorganization

Actually, Military Intelligence along with the rest of the Army, was still in process of reorganizing under the peacetime provisions of the National Defense Act of 1920. On 1 July 1921, Gen. John J. Pershing replaced Maj. Gen. Peyton C. March as Chief of Staff and began implementing this reorganization along the lines of his successful American Expeditionary Force staff. On 1 September, he established five main General Staff divisions consisting of a G1, 2, 3, 4, and a War Plans Division (WPD).[118]

Under the law, a general officer of the line was authorized for only four divisions of the War Department General Staff; a colonel had to be placed in charge of one of the divisions. In anticipation of this change, Col. Stuart Heintzelman had replaced Brigadier General Nolan as G2 on 23 August 1921.[119]

Colonel Bidwell, G2 Historian, has written,

> "When the Military Intelligence Division was selected for this dubious distinction, it soon became in a very important sense merely a junior partner within the framework of the General Staff system. This not only proved to be a matter of continuous embarrassment to the officials of that agency during their subsequent dealings with members of the other staff elements but also was often seriously restrictive in the proper fulfillment of their basic military intelligence responsibilities. Additionally, the example set by the War Department in this original instance was promptly copied into the Tables of Organization for the Army at large and thus turned out to be an even greater calamity in respect to the overall military intelligence effort.[120]

118 Hist Mil Intell Div, Vol 3, p 22, (Secret).
119 Ibid, p 25.
120 Ibid.

General Van Deman has observed that many of the higher officers of the Army, during the period between World War I and World War II, knew nothing about the intelligence service. They did not know how impossible it was to carry on a war without the necessary information concerning the enemy organization, nor did they see the need for an efficient service for the discovery and elimination of spies and saboteurs within our own country and armed forces.[121]

This attitude was observed by the British historian, Chester Wilmot, who, in his "The Struggle For Europe," commented on the American lack of attention to the enemy point of view.

> "...Such an approach is foreign to the American Army which tends to concentrate on the development of its own strength and unlike the British Army does not normally seek victory by playing upon its opponents' weaknesses..."[122]

In the 1920 Defense Act there was no specific mention of Military Intelligence in connection with the over-all duties assigned to the War Department General Staff. In the first reorganization of Military Intelligence Division in August 1920, General Churchill made no mention of negative intelligence in the listed responsibilities of the Army's G2. In November 1920, when General Nolan reorganized after taking over as G2, a Negative Branch was reestablished. However, when Colonel Heintzelman took over in 1921, the Negative Branch disappeared again.[123]

These were not the only losses. General Churchill's 1920 Military Intelligence Division reorganization had eliminated Military Intelligence Division training supervision except for attaches, observers and foreign language students; Military Intelligence Division was not authorized direct communication with lower echelon Military Intelligence Division units; its "economic situation" coverage also was eliminated.[124]

The 1921-23 curtailment was even more drastic. Seven attache posts were eliminated. The entire duty of coding, decoding, distributing and filing War Department cables and telegrams was transferred from Military Intelligence Division to the Adjutant General.

The Military Intelligence Division's 1921-22 budget had been reduced by $75,000, and personnel was cut to 44 officers and 107 civilians. In 1922-23

124 Ibid, p 13.

there was another reduction in Military Intelligence Division's appropriation by $60,000, and 20 officers and 41 civilians were dropped. Only mapping continued as a major activity.[125]

While intelligence personnel were being curtailed, an almost dormant Military Intelligence Division responsibility was growing rapidly. Public information had always been a responsibility of the division, but during World War I, the early establishment of the Creel Committee on Public Information had made it possible for this work to be supervised by a small group of G2 personnel as part of the Negative Branch.[126]

Bidwell reported bitterly:

> "The 'war to end war' had been brought to a successful conclusion and the world was now safe for democracy. Isolationist and pacifist sentiments were gaining an ascendency throughout the nation, while idealists were clamoring loudly for international disarmament. There was a persistent demand for governmental economy, and whenever the national budget had to be balanced the military establishment suffered disproportionately."[127]

Communists Encourage Economy

Encouraging this situation was the Communist underground which had its beginnings in 1921, and the full ramifications of its effort were not disclosed even a quarter of a century later. Through this underground, said former Communist Benjamin Gitlow, the Soviet government built up an American Fifth Column by taking advantage of the freedoms prevailing in the United States.[128]

To combat the effects of this Communist activity, the Army Press Relations group grew rapidly. By February 1922 it became a section of Military Intelligence Division, and by August 1926 it was a branch.[129] This growth was of particular significance to the Intelligence Police who in addition to scanning various publications for radical intelligence soon found themselves assigned to collect publicity clippings, and perform other clerical work in relation to the public information service.[130]

Colonel Bidwell's research revealed that incidents of an extremely embarrassing nature arose in the field during this period where many G2's were still engaged in undercover activities based primarily upon guidance they had derived from the "Provisional" instructions. Since these activities were causing a considerable amount of adverse comment to be directed against the United States Army, in June 1922, the instructions were rescinded and all copies of the pamphlet ordered returned to Washington. At the same time Corps Area Commanders were instructed: "...In general, except for the supervision of all activities concerning Military Topographical Surveys and Maps, the collection of information pertaining to our own territory is a function of staff sections or branches other than G2."[131]

Bidwell states that as a result of this "notably vague" letter, questionable practices continued, particularly since all Army tactical units were required to maintain "Emergency Plan White" for the possible use of troops in local disturbances. Moreover, intelligence officers at posts, camps and stations and MI-Reserve officers continued to conduct semi-private investigations relative to radical groups in the United States.[132]

The Oregon Incident

In the fall of 1922, 1st Lt. W. D. Long, Post Intelligence Officer at Vancouver Barracks, Washington, sent a letter to all County Sheriffs of the State of Oregon without the knowledge or sanction of his commanding officer. Long told these officials that the primary purpose of Military Intelligence Division was the surveillance of all organizations hostile or potentially hostile to the government. In addition to the commonly recognized radical groups, Long included the "...World War Veterans, Socialists, Non-Partisan League, Big Four Brotherhoods and the American Federation of Labor..."[133]

The Nation, The Labor Herald and other publications gave this letter national publicity. Editorial comment spread through the country. President Harding and Secretary of War Weeks were deluged with letters of protest, many of them signed by influential political leaders. Lieutenant Long was immediately relieved of his military intelligence duties and authority for appointment of Military Intelligence officers outside existing Tables of Organization was rescinded.[134]

In December 1922, the Secretary of War issued a letter of instructions which effectively put investigation of domestic subversive organizations or persons off limits. The opening paragraph of the letter stated:

131 Hist Mil Intell Div, Vol 3, p 59, (Secret).
132 Ibid, p 61.
133 Ibid, p 62.
134 Ibid, p 63.

0558

"The Secretary of War is much concerned at reports from time to time of the activities of intelligence officers in the United States... During the war it became necessary to investigate individuals, groups and corporations... All investigations ceased shortly after the Armistice but the general idea was kept alive by the seeking of information preparatory to the drafting of the various local War Plans White. The result is that in the minds of the civilians and those of many officers as well, the word intelligence is associated with the investigations and inquiries mentioned above."[135]

The Corps of Intelligence Police was specifically restricted:

"...Appreciating the responsibility of a Corps Area Commander for his readiness to meet all demands that may be made upon him in case of domestic disturbance, the Secretary of War does not desire unduly to restrict him as to his methods or means of obtaining such information as he believes to be necessary for adequate preparation. The importance of the matter, however, requires that it be not left to subordinates but that the judgment of the Corps Area Commander be exercised. Therefore, the Secretary of War directs that the making of inquiries for the above purpose be limited to Corps Area Commanders, their staffs and to officers who are especially selected for their judgment and discretion; and that in these inquiries should as a rule be through the proper civil authorities and by scrutiny of the public press; that this last restriction particularly applies to the employment of sergeants of the Corps of Intelligence Police; and furthermore that without the specific approval of the War Department in each individual case, officers of the Reserve Corps on inactive status will not be used in work of this character."[136]

Several efforts to modify these restrictions met with rebuffs. As a warning to MI-Reserve officers, a circular letter was issued in March 1923, and sent to each individual officer. The letter stated that appointment to the MI-Reserve did not authorize an individual to engage in any military investigations except when duly authorized by the War Department.

Section 2

POST-WAR CURTAILMENTS

Propose Cut to 30 Men

Although 45 Intelligence Police had been authorized in December 1920, only 27 were actually on duty by 7 February 1922 when the Army G3 asked Colonel Heintzelman, G2, War Department, why so many CIP personnel were needed. Since only the Hawaiian Department had requested an additional agent over current strength, and practically all the Corps Areas had unfilled spaces, obviously the full quota was not being utilized, Colonel Heintzelman replied that CIP authorized strength could be reduced by 15 spaces and only 30 need be retained.[137]

In justification for retaining the 30 spaces, the G2 said, "their services are actually needed on the Mexican border and in connection with Japanese questions, and in the overseas possessions; that is, in the Eighth and Ninth Corps Areas and at Panama, Hawaii, and the Philippine Islands. To meet the possible employment of Federal troops and to act as watchmen for certain of the secret records of the Military Intelligence Division, a few men are required here in Washington. It is understood that Second Corps Area has one (agent) in Puerto Rico." Colonel Heintzelman felt that the reduction could be accomplished by relieving all Corps quotas excluding, however, the 8th and 9th Corps Areas.[138]

A reduction was indicated since the Army, already down to 150,000 men, was being reduced another 25,000. Reduction became a certainty in June 1922, when first restrictions on the activities of CIP agents in domestic Corps Areas became effective.

During the next six months, before the cut was ordered, some effort was made to determine needs. In February, the G2, Hawaii, said he needed his assigned three agents. In May, the G2 of the 6th Corps Area at Chicago said he needed his four men and added:

> "Chicago is the field headquarters of the I.W.W., the Communist Party and other lesser radical organizations. There are also many labor organizations with radical leanings. In addition, there are the many 'pink' and 'parlor Bolshevist' societies such as the 'Bug Club,' the 'Dill Pickle Club' and others whose meetings must be attended... It is believed that the work accomplished, compared with the cost, justifies the retention of four sergeants of police..."[139]

137 CIP Corres #42, dated 7 Feb 1922.
138 Ibid.
139 Ibid, #38, dtd 12 May 1922.

The G2, New York, said that he could eliminate one agent but that the three remaining were an absolute minimum. One man was on duty at the G2 office and two were out in the field. The agent who could be spared was actually working in Puerto Rico.[140]

In June 1922, MI-4 (Foreign Influence Section of the Negative Branch) proposed to reduce by two agents each, spaces allotted to Corps Areas at Washington, New York and Chicago and to reduce the San Francisco allotment by three agents. Panama was to have two more agents, Hawaii three more and the Philippines four more under the plan. The memorandum stated that the redistribution was the "result of the instructions which have been sent out by The Adjutant General relative to G2 activities in Corps Areas...and to place them where their services are most needed."[141]

In his proposal, Maj. W. H. Cowles, Chief of MI-4, admitted that only the 6th and 2d Corps had been consulted on the proposal.[142] Before acting on the plan, Colonel Heintzelman suggested that the Departments be asked whether they wanted the additional agents.[143]

Panama Department, which had sought 10 agents in October 1920,[144] said its two authorized spaces were enough. Hawaiian Department said it would like three more men[145] and Eighth Corps, on the Mexican border, said it needed at least one more agent. The Philippine Department felt it could utilize an additional three agents, primarily to make available the services lost when three agents were assigned to China -- one with the Expedition and two in the China Far Eastern Republic. The Philippine reply was not received, however, until after CIP had been ordered reduced to 30 men.[146]

In August Colonel Heintzelman ordered his Chief of MI-4 to send letters to the Corps Areas similar to those distributed in July which had requested Departments to inform Military Intelligence Division of the number of CIP agents they recommended as necessary and the reasons therefore, Unfortunately, neither Colonel Heintzelman nor his executive, Lt. Col. M. E. Locke, processed this letter for distribution. It went out merely as a survey requesting data on the number of men on duty, the number of vacancies and the date of expiration of enlistments.[147]

---

140 CIP Corres #36, dated 23 May 1922.
141 Ibid, #126, dated 28 June 1922.

146 Ibid, #95, dtd 21 Aug 1922.
147 Ibid, #12, dtd 7 Aug 1922.

0561

On 14 August 1922, when the survey was tabulated, it revealed that 37 of the 45 men authorized were on duty. The Fourth, Fifth and Ninth Corps and the Panama Department had one vacancy each. The Eighth Corps, which wanted another space authorized, had four vacancies. However, the Fourth Corps Area had reported that it did not plan to fill its vacancy in the near future, and made that space available to the Eighth Corps Area.[148]

Reduction is Ordered

By the time Capt. J. V. McConville, then Acting Chief of MI-4, had compiled the survey, G.O. 33, War Department, dated 28 July 1922, reduced the CIP to a strength of 30 men. This meant that all plans for filling the eight vacancies had to be cancelled, and, in addition, seven agents on duty had to be dropped. Coincident with this reduction, plans were made to increase the Eight Corps Area allotment from seven to eight agents and the Hawaiian Department from three to four. Panama would not lose its vacancy, but would continue to be allotted two spaces. The Philippine Department would retain its allotment of five men.

In effect, only one of the existing vacancies would actually be cancelled and 14 of the 25 agents remaining in Corps Areas would have to be dropped or transferred to the Departments or Branches. Since the Hawaiian Department had Japanese problems and Eighth Corps Areas had Mexican problems, specialized types of agents were required. Consequently, transfers of purely 21 agents were not possible.

The reduction to 30 spaces was effective as of 1 January 1923, and it was argued that the reduction could be achieved through expiration of enlistments without having to declare experienced CIP sergeants as surplus and transferring them to other organizations. Unfortunately, however, few of the agents qualified for this "happy" solution. In a few cases early discharges were arranged but in most instances transfer to a line outfit was the only solution. With all personnel frozen in the grade of sergeant fourth class (line sergeant) the future was not too bright for those remaining. Colonel Bidwell, in his history of G2, states, "...the general morale and efficiency of the entire group reached an exceedingly low ebb..."[149]

On 11 September 1922, all Corps Areas and Departments were officially informed of the distribution for Intelligence Police which provided one agent each in Corps Areas One through Seven and None, and gave the Eighth Corps Area and Department increases as proposed.[150]

0562

G2, Second Corps Area, New York, reported to Military Intelligence Division that he had two excellent agents available for transfer. One of them spoke, read and wrote Polish, Russian and German and had four years experience.[151] Military Intelligence Division wrote back that there were "no vacancies to which these men can be transferred."[152]

G2, Sixth Corps Area, Chicago, protested the loss of one of his two CIP agents. He said the agent had been his chief clerk and file and record clerk for 18 months and that it was "essential that some one person, at least, have familiarity with the files and records which comes only with permanent handling of the same." The other sergeant, prior to the cutback had processed all newspapers, periodicals, etc., subscribed to by this office, and after clipping them compiled a weekly summary. He also did most of the G2 office typing. G2 McCloskey added that both sergeants had attended radical and socialist meetings usually on Saturday or Sunday afternoon or evening, and reports of these meetings had been incorporated in the Sixth Corps Area's information summary.[153]

Contrasted with the fact that more than 200 CIC agents operated out of this headquarters 20 years later, the request seems pitifully small. By 1922 standards, however, two men were unnecessary and the G2 of Sixth Corps Area was ordered to curtail his CIP force to one agent because "...the duties that have been assigned to the Departments and the Eighth Corps Area are particularly incumbent on this Division." McCloskey was reminded that attendance of CIP agents at radical and socialistic meetings was not in conformity with the restrictions imposed in June, and that his workload could be eased by using the services of the clerks allotted to the various corps headquarters and confining the CIP agent to normal duties of his position.

G2, Military Intelligence Division, in comments to his Chief, MI-4, stated, "that sole dependance should be put upon them for the filing and record system I do not think is correct." Nowhere in the correspondence is there any recognition of the fact that intelligence files are not comparable to ordinary correspondence files and must be handled differently.[154]

Although the Hawaiian Department was pleading for an additional CIP agent and was authorized the man under the September redistribution effective October 1922, G2, Military Intelligence Division, informed the Hawaiian Department that it could not have its man until the CIP had been reduced to 29 men by normal discharges, retirements, and transfers. Need did not matter.[155]

The Philippine Department was informed that it would not get the three additional agents it had requested because on 1 April 1923 the American forces in China would become a separate command and the three CIP agents working in China would be returned to the Philippines.[156] Eighth Corps was told that it would not be authorized its additional agent until 1 January 1923.[157]

Years of Neglect Start

By the time Col. William K. Nayler succeeded Colonel Heintzelman as Director of Military Intelligence Division on 27 November 1922, Military Intelligence Division, Washington, had been reduced to virtual inactivity. In March 1922, for economy reasons, Military Intelligence Division was delegated responsibility for the collection, evaluation and dissemination of military information in the three vital overseas territories transferred to the respective Department commanders. This included the preparation of the Military Monographs from which all security plans were derived. For a period of three years, until 27 November 1925, intelligence files compiled at overseas bases remained there and were not forwarded to MHitary Intelligence, Washington.[158] As a result, except for the Eighth Corps Area on the Mexican border, the principal counterintelligence activities of the Army for the next 17 years were carried on in Hawaii, Panama and the Philippines.

From 1922 until 1939, Military Intelligence Division, Washington, had seven different directors and, at one time, for a period of three months, had only an acting director. Only twice in this period was Military Intelligence Division headed by a general officer. In 1933, Col. Alfred T. Smith was promoted to brigadier general and served his final two year term with Military Intelligence Division in that rank. For the nine months following, Brig. Gen. Harry E. Knight was director. During the other 15 years, Military Intelligence Division was commanded by colonels. Administration of CIP consisted primarily in answering inquiries from the field and was handled by the G2 executive officer.

Instructions issued by the War Department in December 1922, which ordered post and station intelligence officers to confine their work solely to training personnel for combat intelligence duties, continued in force. Even this "training" was neglected.

In February 1920, a Troop Sub-Section of Military Intelligence Division was organized and assigned the mission of preparing tables of organization and operational instructions. It was so inadequately staffed, however, that three years later its chief reported officially that "...nothing in the way of supervision

156 CIP Corres, dtd 1 Nov 1922.

CONFIDE

of combat training in the Army has been accomplished..." The only accomplishment of the four-year period was issuance in 1924 of the first edition of TR 210-5, "Combat Intelligence Regulations." Training in the field was still lagging.[159]

Soviet Military Espionage

Although the 1923 removal by the United States of trade barriers against the Soviets provided legitimate cover for espionage against the United States, activities had started, in fact, four years before. In 1919, Arthur Alexandrovich Adams, then listed as a technical advisor for the USSR, began espionage activities against the United States which continued for the next 26 years and were interrupted only by intermittant trips to his native Russia. The next year a Yugoslav named Steve Nelson entered the United States on an illegal passport and began Soviet espionage operations which continued for more than 30 years.

The Intelligence Department of the Red Army, originally known as the Fourth Department, was established in 1921 and operated separately from the Soviet political intelligence organization. Both intelligence organizations operated under-cover firms and, in 1924 formed the Amtorg Trading Corporation in New York City through a merger of Products Exchange and Acros-American, Inc. Amtorg provided for the first time legitimate cover to both Soviet political and military intelligence bureaus.[160]

The mission and organization of the political intelligence agency known as the OGPU from 1922 to 1934 when it became the NKVD was described by its Chief in his annual report to the Soviet Government in 1924:

> "The OGPU not only works energetically by paralyzing the espionage of foreign citizens in the U.S.S.R. but it has also succeeded in creating a network of information intelligence agencies in all other large centers of Europe and North America. Responsible workers of the OGPU are detailed to all the diplomatic and trade missions of the U.S.S.R. abroad. The total strength of the Foreign Department of the OGPU is 1,300... The OGPU has reportedly rendered service to the Commissariat of Foreign Affairs and the staff of the Red Army in supplying secret information both of a political and military nature."[161]

By 1924 the United States had but few means for keeping tab on Communist espionage activities. The Navy closed its CIC equivalent, the Domestic Bureau, in 1921. The Secretary of War's directive of 1922 barred subversive investigations by the Corps of Intelligence Police, and in 1924, when Harlen F. Stone

159 Hist Mil Intell Div, Vol 3, p 195, (Secret).

161 Ibid, p 5.

0565

became Attorney General, he announced, "The Bureau of Investigation is not concerned with political or other opinions of individuals. It is concerned only with their conduct as is forbidden by the laws of the United States."[162]

Espionage laws were highly inadequate as the House Un-American Activities Committee reported more than a quarter of a century later. Moreover enforcement of what laws there were was often blocked by administrative decisions. After 26 years of espionage against the United States, Adams easily escaped from New York City while the government was trying to work out a plan for his arrest.[163]

Even if appropriate laws had been enacted, the 30 CIP men and 440 FBI agents available who had to cover all the United States and several possessions would have found themselves outnumbered by their enemies. The FBI had more than 100 Federal criminal laws to enforce during the lawless Prohibition Era apprehending major hoodlums such as Dillinger, Karpis, Barker, Floyd and Touhy.[164]

Fortunately for the United States, officials of these intelligence agencies did not let the lack of congressional authority for enforcement prevent them from continuing some surveillance, although it was extremely discreet and highly curtailed. Navy Intelligence personnel supplied decoy information to a Soviet agent.[165] More than a quarter of a century later, when anti-subversive laws were enacted, trials of various Communists revealed that the FBI had been observing them for years through undercover informants.

Army counterintelligence maintained what it could of anti-subversive coverage in the late 1920's by placing Capt. John J. Maurer, MI-Reserve, who was on duty as a master sergeant of Intelligence Police, in direct charge of all Military Intelligende Division matters pertaining to Communist activities and subversion of Army personnel. Maurer continued this type of work until retired for physical disability in 1943. His duties were considered so ultra-secret that many members of his own Military Intelligence Division had no clear idea as to who he was or what he was supposed to be doing.[166] But it was one man against the many!

Mobilization Plan Problems

In April 1925, Col. James H. Reeves, G2, came to the conclusion that Military Intelligence Division was not receiving sufficient domestic information

under the current system to fulfill duly assigned responsibilities in support of the War Department General Mobilization Plan. He requested that restrictions be slightly modified so that Corps Areas would be again required to forward periodic reports to the War Department "relative to groups and organizations which might be involved in internal disorders or aiding the enemy." When this request was submitted to the Chief of Staff for approval it was Maj. Gen. Dennis Nolan, then Deputy Chief of Staff, who had the unfortunate responsibility of disapproving it.[167]

In January 1926, the Corps of Intelligence Police was given its first approved Mobilization Plan. The plan placed CIP "under a subsection" of the Secret Service Section of G2, War Department, with G2, 5b, 3a charged with administration and G2, 5b, 3b charged with policies and training. Initially, strength was to be 250 men assigned as follows:

G2, War Department	20
Corps Areas	160
District of Washington	10
Overseas Departments	30
Puerto Rico and Alaska	10
GHQ (later)	20
Total	250

As mobilization might progress, each Army and Corps headquarters would be assigned 10 CIP agents. Of the initial strength, not more than 20 percent were to be sergeants and 40 percent corporals.

The functions of the CIP, the plan stated,

> "...are purely of special investigative nature and do not include the duties of guarding, preserving order, apprehension or similar 'police' duties. Intelligence Police are practically militarized detectives whose duties are to detect and forestall the secret activities of enemy agents other than his armed forces. Their investigational duties with respect to our own personnel are confined to Acts of Treason and Disloyalty.
>
> "In time of peace in the United States, except the 8th (Mexican Border) Corps Area, their duties are practically restricted to work in connection with confidential and secret intelligence papers."

Peacetime Mission Debated

The peacetime mission of the Corps of Intelligence Police had not been clearly defined and was the subject of conflicting opinion among higher commanders. The justification for CIP existence in 1920 had been to fight subversion, but two years later this mission was so circumscribed that by 1930 Maj. Gen. Dennis E. Nolan, father of CIP, who now commanded the Fifth Corps Area wrote, "...The restrictions on subversive coverage placed on CIP in December 1922 make it unnecessary to assign members of the CIP to Corps Areas."[168]

On 3 April 1926, when CIP was arbitrarily cut from 30 to 28 men,[169] one space was taken from the Eighth Corps Area and the other from the Philippine Department. At that time the Philippine G2 explained the mission of his CIP's as he protested the cut.[170]

Maj. Gen. Fred W. Sladen, commanding the Philippines, wrote:

> "...numerous demands for assistance have been made and are still being made upon the Office of the Assistant Chief of Staff G2 by the various post commanders and chiefs of bureaus in their attempts to rid themselves of dishonest and thieving elements. Such a class of work, although not contemplated among the duties of intelligence agents, must necessarily be done by them since no Federal Department of Justice agents are available in the Philippine Islands. Constabulary and police agents have proven unreliable - the former by disinclination and the latter by inability and unsuitability for work in military commands..."

General Sladen went on to describe how a ring stealing airplane cloth was broken at Camp Nichols. Three soldiers got prison terms and nine civilians were indicted. In other cases cited, thefts totaling thousands of dollars were stopped and two soldiers sentenced to prison while 11 civilians were apprehended.

In connection with the 1929 personnel survey, the actual mission performed was discussed in papers originating in several Corps Areas. Sixth Corps Area wrote:

> "...The present Assistant Chief of Staff, G2, being Corps Area Athletic and Recreation Officer in addition to his other duties, the Staff Sergeant's duties also include a small amount of clerical work in connection with these activities. The Intelligence Section has been burdened

[redacted]

with considerable research and special War Plan work in fields only remotely pertaining to intelligence matters... The present Intelligence personnel of these headquarters is utterly inadequate for the performance of more than routine intelligence duties despite the reduction of paper work to a minimum. Whenever special duties arise of an Intelligence or other nature all but the most urgent routine must be neglected until the completion of the former.

"Attention is invited to the fact that the term 'Corps of Intelligence Police' is a misnomer which, when applied to present enlisted personnel of the Military Intelligence Division, tends to create misunderstanding upon the part of those not familiar with the situation. Although originally designed for secret service duties it is believed that the present trend toward maintenance of a corps of enlisted specialists, qualified in other intelligence duties as well as secret service, dictates a change of name to 'Intelligence Corps'."[171]

A similar suggestion was made by Col. W. K. Naylor, in connection with the 1930 personnel survey. Naylor, then G2 at New York, wrote:

"While it may be true that the presence at any headquarters in time of peace of members of a corps whose proper functions limit their local duty assignments tends to create an administrative problem; yet it is nevertheless true that many such are required as for example Ordnance, Chemical Warfare, Air Corps, etc., etc.

"The proper performance of Intelligence duty requires specialists in Military Intelligence work, irrespective of the name by which they are known. Efficiency requires adaptability of the personnel to the work and long training with a full sense of responsibility. Consequently, the personnel placed on such work should have ample rank and emoluments to cause the maintenance of a high standard of self respect. Further efficiency requires that such personnel be continued on the work without constant change.

"It is recommended that personnel with adequate rank and emoluments continue to be made available for the work performed by Corps of Intelligence Police even though the name of the group be changed to Military Intelligence Specialists or some similar title."[172]

Although an Intelligence Corps was not achieved, a quarter of a century later the Counter Intelligence Corps Center had become the Army Intelligence Center.

171 CIP Corres #14-15, dated 19 Feb 1929.
172 Ibid, #78-79, dtd 13 Aug 1930.

In suggesting the 1929 personnel survey, Lt. Col. W. K. Wilson, Chief of the War Plans and Training Branch, War Department, wrote Colonel Ford, War Department, G2:

"...The Corps of Intelligence Police in France were used for investigations in connection with counterespionage. In the United States they were also used for counterespionage work and later in connection with fraud and graft cases. It is believed that much of their work in the United States was made necessary by the failure of the Department of Justice to expand sufficiently to handle the situation.

"The Corps of Intelligence Police can be used in a legitimate way to discover cases of disloyalty among military personnel and to counteract efforts of radical organizations to promote disloyalty in the Army itself. The work of the Corps of Intelligence Police in Panama, Hawaii, the Philippine Islands and Eighth Corps Area has been very useful and has been in accordance with the purpose for which the Corps of Intelligence Police was created.

"In the remaining eight Corps Areas, the work of the Corps of Intelligence Police has depended largely upon the Assistant Chief of Staff, G2, at Corps Area headquarters. There is but one staff sergeant assigned to each Corps Area. In the Fourth and Seventh Corps Areas the Staff Sergeant has been loaned to the Adjutant General. In all other Corps Areas it is believed that the Staff Sergeant has performed duties useful to the G2, although only a small percentage of his time has been devoted to the principal mission of the Corps of Intelligence Police.

"With the exception of the Fourth and Seventh Corps Areas, it is believed that the Office of the Assistant Chief of Staff, G2, has operated more efficiently on account of the presence of the Corps of Intelligence Police. Should the Corps of Intelligence Police be withdrawn, the Assistant Chief of Staff, G2, would be forced to get the necessary clerical help from the Corps Area Commander. In some Corps Areas, this would probably result in the Assistant Chief of Staff, G2, receiving very little clerical help."

Colonel Wilson discussed various other solutions for the future of the Corps. One was another reduction in personnel which he opposed: "...any further reduction would limit their (CIP) usefulness to G2 at the outbreak of war."

Finally, he gave consideration to the possibility of abolishing the Corps. No necessity for the Corps was seen in peacetime but Colonel Wilson believed it inadvisable to abolish it, "in view of the difficulty which was experienced in getting

authorization for the Corps of Intelligence Police in 1917 and in view of the necessity for having a nucleus of this Corps available at the outbreak of war."[173]

That CIP had an important place in peacetime was shown in a letter from Maj. Gen. William Lassiter, commanding the Eighth Corps Area. In May 1929, he wrote the War Department that an increase in his CIP allotment was "deemed absolutely necessary. The operations of the Military Intelligence Section of the staff of this Corps Area during recent disturbances in Mexico, have served as a test of the qualifications and sufficiency of the personnel of the Corps of Intelligence Police allotted to this Corps..."[174]

Opposition to Peacetime CIP

Maj. Gen. Johnson Hagood, commanding Seventh Corps, wrote:

> "As Chief of Staff of the Services of Supply in France, the whole organization of counterespionage in the back areas came under my immediate jurisdiction and I fully realize the importance of this service in time of war, and in a country like France. But in my opinion in time of peace in America, radicalism, communism, and efforts to overturn the existing form of government are political questions with which the Army should in no wise concern itself, either directly or indirectly, any more than it should concern itself in questions of religion or party politics. I do not believe that the Army has the right, the knowledge or the facilities for determining what individuals or organizations in America stand for good government and what stand for bad government. The President of the United States is the Commander In Chief for the Army. Under him it must not only support the national government but the local government. And if enough laborites, radicals, anarchists or what not get together to elect him and other public officials in accordance with the laws and the constitution of the United States, it is the duty of the Army to support them. The Army cannot condemn individual citizens or groups of citizens because of their political views so long as they come within the provisions of the laws which the army itself is required to enforce... The contrary confirms the sentiment 'Standing armies are a menace to free peoples! Some branch of the government must undoubtedly look after these matters but not the Army."[175]

173 CIP Corres #10-12, dated 11 Feb 1929.
174 Ibid, #109, dtd 2 May 1930.
175 Ibid, #65-66, dtd 18 Aug 1930.

Maj. Gen. G. LeR. Irwin, commanding the Panama Canal Department, urged that CIP be modified to allow increased grades to insure retaining the type of man necessary for the work.[176]

After 1922, CIP agents in the 8th Corps worked on secret mapping assignments. Brig. Gen. Halstead Dorey, commanding, wrote:

> "In this Corps Area, the members of the Corps of Intelligence Police perform very important missions. The G2 missions performed by these soldiers could not be accomplished other than by veteran informants of the highest character... It is impracticable and would be inimical to the public service to replace members of the Corps of Intelligence Police in Corps Area by competent clerks."[177]

The survey letter to all Corps Areas and Departments was sent out on 6 August 1930 and the last reply from the far away Philippines was received on 22 October. Of the 12 Areas and Departments, nine said the assigned allotment of CIP agents was required and adequate. The Sixth and Eighth Corps each said an additional agent was required.

Only five G2's felt that CIP agents could be replaced by clerks. Of these, four felt that the replacement should be a military clerk and only one felt a civilian clerk would be better. Ten of the 12 reported their CIP agent handling clerk-typist work for the G2 and half of the 12 reported the CIP agent was handling public relations work assigned to the G2's. In the Third Corps Area, the CIP agent was working for the War Plans Officer and assisting G1 and G4 as well as the G2. In the Eighth Corps Area and in the Departments CIP agents were doing CIP work for the most part, but in the Philippines, since there was no Department of Justice unit, CIP agents were also investigating fraud cases.[178]

Results of the survey gave Colonel Ford no assistance in efforts to get more men. First Corps Area said all it needed was a man for publicity duties. Second Corps said its agent was needed to handle publicity and correspondence and records of extension school work for 200 Military Intelligence Reserve officers. Third, Sixth and Fourth and Ninth Corps admitted CIP agents were not performing many CIP duties, but argued that the agents should be kept in case of sudden domestic disturbances or mobilization.

From the time of the one-third reduction in July 1922, CIP correspondence files are filled with scores of letters from Corps Areas and Departments fighting for one additional man or protesting bitterly when ordered not to fill a vacancy so

176 CIP Corres #50-51, dated 26 Aug 1930.

178 Ibid, #59b, dated 22 Oct 1930.

0572

as to provide a needed space elsewhere. Commanders have seldom pleaded for line reinforcements with more vigor. While these were eloquent tributes to the value of CIP in peacetime, their eloquence produced no additional funds to provide manpower.

Eighth Corps protested in 1927 when it lost an allotted space to provide a CIP agent for the Military Attache in Peking, China. The Eighth Corps G2 described what was left of his capable CIP force of three years before: One had TB and was hospitalized. One was to retire in a month and another in six months. A fourth was "nothing extra." Only two were capable and one of those could not be recommended for foreign service.[179] In February 1928, the China Military Attache tried to get another CIP agent but was turned down.

In the survey conducted in February 1929, the First and Seventh Corps Areas and the Panama Department had reported their respective CIP allotments could be reduced one space. However, when G2 attempted to transfer these allocations, First and Seventh Corps protested and an increase for the Eighth Corps was taken from Panama.[180] After two years the Panama G2 reported he was "swamped" with work and needed another man. The harassed War Department G2 reviewed his 28 man roster and concluded that the only solution was to take away the CIP agent working with the Military Attache in China and replace him with a clerk.[181]

The Chief of the Operations Branch, Military Intelligence Division, saw no hope for obtaining an additional man. In a memorandum to the G2 executive officer, Col. W. H. Wilson stated, "The strength of the CIP is determined by the President and belongs under the Detached Enlisted Mens List. Increases and decreases are usually arranged between G2 and G3, and G3 has been and is opposed to any CIP as such, and continually seeks to get G2 to say it can spare all of them."[182]

For seven years, from April 1926 until October 1933, G2 held off attempts to further reduce the Corps. But on 9 October 1933, the bomb dropped.

Penciled at the bottom of an Interoffice Memo to the G2 was, "The Deputy Chief of Staff desires your views and solution to proposal for reduction in strength of the Corps of Intelligence Police to not more than 15."[183]

Anticipating a final fight for survival, the G2 queried all Corps Area and Department G2's as to whether their CIP could be replaced by military or civilian personnel. If this was not possible, he asked how many additional CIP's they

179 CIP Corres #86, dated May 1927.
180 Ibid, #102, dated 17 May 1929.
181 Ibid, #38-39, dated 25 Feb 1931.
182 Ibid, #39, dated 25 Feb 1931.
183 Ibid, #63a, dated 9 Oct 1933.

could justify by specific reasons. On 14 November 1933, the results of this survey were submitted to the Chief of Staff in a staff study which revealed that no Corps Area or Department felt CIP agents could be eliminated and actually, seven more were urgently needed.[184]

In support of this need, the G2, Brig. Gen. Alfred T. Smith, reported,

> "The increase in radical activity in all Corps Areas and Departments and the prospects of still greater unrest this winter has thrown added work on all G2 sections and has greatly increased the importance of their having trained and thoroughly reliable personnel. Civilian personnel cannot be used satisfactorily for outside contact work; a reduction in personnel can not be efficiently made unless there is a reduction in work to be accomplished."

General Smith added,

> "The work is highly specialized and quite technical. The organization of radical groups is so complex and involved that a considerable period of time is necessary before a man can be trained to a point where he is of value in dealing with them.
>
> "The work now being carried on by the Corps of Intelligence Police cannot be discontinued without detriment to the service. To continue the work by other means that the present Corps of Intelligence Police will necessitate the use of the very highest type of enlisted man and in some cases, where enlisted personnel would not be qualified for clerical duties, of both enlisted and civilian personnel. This would result in no saving to the government, would take from other organizations much needed personnel, and would reduce the efficiency of G2 divisions until the new personnel could be trained. Should enlisted men be detailed for duty the last condition would recur periodically with the changes in detail."

Since the Deputy Chief of Staff had asked for a solution to the proposal to reduce to 15 men, General Smith proposed that if the cut had to be made, all CIP agents in Corps Areas, except the Eighth should be eliminated. The Eighth Corps contingent would be reduced from seven to three agents and department strength and three agents with G2, War Department, would remain static. General Smith also made an attempt to get rid of the allocation of a CIP agent to the China Military Attache, which change had been recommended since 1931.[185]

184 CIP Corres #56-59, dated 14 Nov 1933.

CONFIDENTIAL

Reduction to 15 Agents

G3 was waiting for the study and in a memorandum dated 5 December 1933, Brig. Gen. John H. Hughes said,

> "The Operations and Training Division does not concur in the action recommended (by G2) on the proposed reduction in the strength of the Corps of Intelligence Police for the following reasons:
>
> "These men are used on purely clerical duties -- or they should be in all Corps Areas except the Eighth and our foreign Departments.
>
> "Attendance at radical meetings of a public nature enumerated among their duties is, in the opinion of this division, a function of the Department of Justice.
>
> "In general, members of the Corps of Intelligence Police have rank greater than the needs of their positions and their cost to the government in pay and allowances, including money allowed them for civilian clothes, which it is presumed is still allowed, is more than the amount for which efficient civilian clerks could be had.
>
> "In the opinion of this Division, the Corps of Intelligence Police should be reduced as proposed in the memorandum of the Deputy Chief of Staff."[186]

It was only four days after this comment that Maj. Gen. H. A. Drum, Deputy Chief of Staff, endorsed the G2 staff study: "The Corps of Intelligence Police will be reduced to fifteen (15) by June 1, 1934. The reduction will be accomplished by transfer in grade to combat units, grades of combat units being increased accordingly. G2, G3 to handle details."

On 21 December 1933, G3 concurred in the details of G2's proposal to reduce the Corps to 15 men prior to 1 June 1934, by transferring in grade to combat units one technical sergeant, seven staff sergeants and five sergeants. This proposal prohibited reductions or promotions by Corps Areas in order to retain desired personnel. Except in the Eighth Corps Area on the Mexican border, CIP in the United States was going out of business.[187]

At this same time, the Russian espionage system in the U.S. was growing. On 17 November 1933, the United States and the U.S.S.R. resumed full diplomatic

186 CIP Corres #55, dated 5 Dec 1933.
187 Ibid, #26-24, dated 16-21 Dec 1933.

relations on conditions which included a pledge to "refrain from propaganda against the policies or social order of the United States." Ex-Communist Gitlow has stated:

> "American Communism owes its rise to prominence to the election of Roosevelt as President in 1932; to the Committee on Industrial Organization in 1935 and to the recognition of the Soviet Union by the United States in 1933."[188]

Soviet Espionage in High Gear

While the Communist Party drew renewed vigor from the recognition of Russia by the U.S. in 1933, Soviet espionage in the United States had been operating with increasing intensity for 10 years, most in large part undetected.

Other nations were more alert. Two women espionage agents who had operated safely in the United States were in prison soon after they were sent to Finland. An American couple engaged in Soviet espionage in the United States went undetected for three years but were arrested within three months when they were transferred to France.

Even when detected, the inadequate espionage laws of the U.S. hampered convictions. A Soviet agent active in this era operated for 12 years before he was convicted; even then the only charge established was passport fraud. Another agent, who had operated in the United States for three years was arrested in 1933 and found to have on his person $28,700 in cash, along with espionage credentials. On the only charge that could be brought against him, passport fraud, he was convicted, fined $1,000 and given probation.

In 1926 a defected Soviet diplomat at Paris stated that the Comintern had two agents in the United States charged with directing the activities of the American Communist Party. This defector said that the chief of Soviet espionage had told him there were two illegal organizations operating in the United States, centering in New York and maintaining contact with the U.S.S.R. through Amtorg.[189]

In 1927, a British Intelligence raid of a Soviet "front" firm produced names of certain undercover addresses in the United States.

By 1928, Soviet Army Intelligence was operating on a big scale, under the personal direction of a Soviet Intelligence officer specifically assigned to head activities in the U.S.A. Seaman couriers delivered funds through the office of a

188 Gitlow, p 254.
189 House Rpt #1229.

New York dentist. A woman agent collected technical and similar books which another agent forwarded to mail drops in the scandinavian countries. Yet another agent operated a photographic studio for a cover. The House Report states,

> "Their work must have been quite voluminous because the Soviet Military Intelligence organization purchased a large photostating machine which was installed in a back room of the photo shop. One agent told another said that he had spent an entire night photographing secret plans for the British warship Royal Oak intercepted en route from Canada to Washington, D.C."

In 1928, Arthur Adams, who had begun espionage work in 1919, was back in the United States, ostensibly representing a Russian automobile concern but in reality in contact with a New York woman who was one of his major agents. In 1932, he returned again as a member of the Soviet Purchasing Commission buying airplanes.

The year 1932 also saw the entry of a young Hungarian, probably named Alexander Goldberger, into the United States. During the next 20 years, before he left voluntarily to escape deportation, he attained notority under the alias of "J. Peters." His organization is believed to have been the original Soviet espionage net within the United States government.

In 1929, a Soviet Military Intelligence agent was sent to the United States, where other agents assisted him in establishing an American background preparatory to an assignment in France. There he was to establish a business as a cover for activities of Soviet Military Intelligence.

In 1931, an employee of a firm producing fire control and other confidential mechanisms for the Navy reported to American Naval Intelligence that he had been offered $1,200 to $2,000 a year to furnish information to a man he suspected of being a foreign agent. Under intelligence guidance, the worker furnished decoy information and the contact man was identified as a Soviet agent.[190]

This same Soviet agent recruited an assistant about this time and trained him as an expert photographer. During 1931-32 the latter photographed numerous United States military reports that had been secured by members of the Soviet espionage ring. Ex-Communist Gitlow reports that the agents had little trouble getting the best photographic equipment since in 1927 an aerial photographer of the United States Army joined the Communist Party and selected and bought all the latest equipment for his new masters.

190 House Rpt #1229, p 11.

The year 1931 was an important one for American Intelligence, although there was no way of knowing this until 17 years later. Whittaker Chambers, a senior editor of Time magazine, testified before the House Un-American Activities Committee in 1948 that he had become a Communist espionage courier in 1931, and had continued this activity for eight years.

There were many other Soviet espionage activities during this era. One was the theft of certain Army emergency plans from the Panama Canal Zone which will be related in the account of the Panama Canal Department in another section. But the interest of the United States Corps of Intelligence Police in these matters was summed up in the annual reports for 1927, 1928 and 1929 of G2, War Department: "The collection of information by G2 regarding the radical situation in the United States is confined to that which appears in the public press.... G2 takes no active part in combatting the activities of pacifists or radicals."[191]

Radical Restrictions Continue

The restriction on CIP radical coverage continued for a decade after 1922, and after temporary relaxation of the restriction in 1932, was resumed and continued until the eve of World War II. The temporary break was occasioned by the arrival of the "Bonus" Army of unemployed at Washington, D.C., in June and July 1932.

G2 had anticipated the need for more authorized coverage of subversion the year before, as the growing depression increased the ranks of the radicals. In February 1931, a detailed study was submitted to Gen. Douglas MacArthur, the Chief of Staff, in which it was strongly recommended that restrictions on surveillance of subversive radical activities by Corps Area commanders and unit intelligence officers be lifted. Although G1, G3, G4 and the War Plans Division all concurred, General MacArthur disapproved with the statement "it is not believed advisable at this time to initiate this procedure."[192]

In August, the G2 tried again and obtained temporary permission, for Corps Area commanders to forward to the War Department a monthly report covering subversive activities within their respective commands.

As the bonus groups began the march on Washington in May 1932, Col. Alfred T. Smith, G2, was authorized to provide more coverage and secretly instructed Corps Areas G2s to investigate and report regularly on bonus demonstrations by veterans.[193] Since at that time all Corps Areas except the Eighth

191 Hist Mil Intell Div, Vol 3, p 67.
192 Ibid, p 70.
193 Ibid, p 72, (Secret).

had only one CIP agent, coverage was either extremely limited or provided by amateurs. A daily report was furnished the Chief of Staff on the bonus marchers situation in Washington proper.

Soon G2 found itself functioning in the role of an operational intelligence center with Master Sergeant Maurer in charge. G2 processed the reports of enlisted men assigned to G2 who proved capable of "furnishing information which was obtainable in no other way, because of their ability to associate with the veterans on terms of equality."[194] These observations were supplemented by interviews with cooperative bonus marchers, Metropolitan police, Washington press reports, and some special reconnaissances by U.S. Army troop elements in Washington.

However, when the Second Corps Area queried the Department of Justice on bonus marchers activity, it was reported, "the Department of Justice has no jurisdiction over communistic or radical activities and could not engage in any inquiry concerning same."[195]

It was soon evident that an impressive number of Communist agitators were operating in the ranks of the marchers. Even after the marchers were peacefully evicted by the Army on 28 July 1932, new threats of similar marches developed and radical elements were discovered to be making a serious attempt to organize subversive units in the Civilian Conservation Corps then in process of formation. In addition to the anti-military discontent stirred up by Communists in the CCC, a similar subversive program was being conducted in the National Guard.[196]

The New York G2 wrote in 1933, just as he was losing his one CIP agent, that he needed two agents because:

> "Practically all radical agencies within the United States have headquarters in New York City, and public meetings of Communist and pacifist organizations are increasing in number and attendance.
>
> "The importance of observing meetings in the metropolitan area is emphasized by the increasing number and force of the anti-Army programs. Careful observation of the activities of those interested in subverting the national defense agencies, by extending influences outside the Army is important in order that measures to counteract the entry of dangerous influences into the Army may be instituted. It is very desirable to be able to identify and observe the more vicious activities of subversive agencies before they become too strongly intrenched in our military organizations.

194 Hist Mil Intell Div, Vol 3, p 73. (Secret)
195 Ibid, p 74.
196 Ibid, p 75.

"...New York is peculiarly different from all other cities in the vicinity of Corps Area headquarters in that it is the center of not only practically all radical activities but also the base of intriging revolutionary elements of various Latin-American countries.

"...There is a large amount of work of this character and its difficulty is increasing at the present time by virtue of the continual changes in personnel assigned to this office... The undesirability of using temporary personnel in the handling of secret and confidential information is emphasized. The danger of leakage is thereby greatly increased. It is believed that it would be preferable to discontinue observation of subversive activities rather than to operate with any uncertainty as to the reliability or discretion of personnel."[197]

From Chicago, the G2 requested an additional agent just as, he too, was losing his only CIP man. He wrote,

"Chicago is an important industrial center. In the Corps Area is also Detroit which is also an important area; both areas are seriously affected by Communist influences. In view of the present situation in this country a careful watch should be kept on radical activities."[198]

G2 Historian Bidwell has written of this period,

"The United States Army obviously stood in great need of an effective counterintelligence organization...but it was not long before the previous adverse influences tending to restrict activities of this special nature again became controlling. In March 1934, therefore; 'in order to relieve Corps Areas G2s of the burden of preparing monthly subversive reports' this requirement was officially discontinued. The importance of this information was recognized by responsible counterintelligence officials and an informal practice gradually grew up where in the Corps Area G2s still managed to forward to Military Intelligence Division a series of monthly 'Notes on the Subversive Situation'."[199]

Military Intelligence Division personality files also had some current information.

Section 1

ACTIVITIES IN THE DEPARTMENTS

The Panama and Hawaiian Areas

In 1920, Lenin told Communist leaders that one of their "practical" tasks was to "incite" the United States and Japan against each other.[200] In the next decade and a half, events such as the United States enactment of the Japanese Exclusion Act, and the Japanese invasion of Manchuria and Shanghai provide ample opportunity for Soviet incitement. By 1933, when the Soviets were recognized by the United States, the Japanese had walked out of the League of Nations and were preparing for war.

Most Japanese counterintelligence problems centered in the three Departments: Panama, Hawaii and the Philippines; but the California coast of the Ninth Corps Area was another potentially dangerous area. Japanese espionage efforts were first disclosed by the Army Military Intelligence service within a decade of its inception in 1885. In 1902, the famed Japanese Captain Tanaka was discreetly expelled from Manila because of suspected espionage activities. A few days later the Military Information Division's undercover agents discovered and expelled another Japanese officer in Manila who had posed as the agent of a boat building firm.[201]

The danger of sabotage to the Panama Canal had always existed. The Panama-Costa Rica situation in 1921 caused some concern,[202] and in 1926, the Panama G2 warned the War Department that it was "most probable that any emergency confronting the Panama Canal Department will come suddenly and will have to be met by the forces already in the Canal Zone."[203]

In 1933, Cpl. Robert Osman of the Panama Department was arrested when he attempted to transmit to Soviet agents a copy of the highly secret "White Plan" which set forth U.S. Army operations in event of riot or revolution. Osman's conviction was set aside by a review court, but he was discharged from the Army.

202 CIP Corres #59, dated 3 Mar 1921.

203 Ibid, #4, dated 23 Aug 1926.

NOTE: All references "CONFIDENTIAL" unless otherwise indicated.

After he was immune from further prosecution, Osman revealed that a Soviet courier had visited him in 1932 and 1933 and had paid him $400. Osman said he was given the name of a physician in New York City to use as a confidential mail drop.[204]

Early in 1934, both President Roosevelt and Secretary of War George H. Dern received a considerable number of anonymous and signed letters claiming the Panama Canal to be in serious danger of sabotage. This resulted in a high level conference of War, Navy and State Department officials and the commanding general of the Panama Department was directed that "no effort be spared to maintain the safety of the Canal from any type of sabotage."[205]

This was the opportunity for which G2 of the Canal Zone was waiting. Panama had asked for 10 CIP agents in its 1920 initial peacetime request and that, in addition, civilian agents be provided for Japanese investigations unless competent enlisted agents from elsewhere could be provided.[206] However, only two agents were authorized and even these were not provided in spite of a special request from the Department in 1921 for two CIPs who spoke Spanish.[207] Panama had to fill its own vacancies and this resulted in many difficulties.

Finally, in 1927, a highly capable Military Intelligence Reserve lieutenant, versed in four languages, was obtained and became a staff sergeant CIP. Six years later he was still a staff sergeant although his G2 reported he was a man of "most unusual experience and ability; quiet, discreet and intelligent," and performing "several men's work."

In addition, he was an able draftsman, cartographer, translator (proved by work done for the commanding general), an area specialist (shown in preparation of an area handbook), and editor of the bi-weekly intelligence summary.

In the same letter, the Panama G2 pointed out that although Sergeant Reinhart had on several occasions declined a civilian position at twice the pay, while he had remained unpromoted, privates on the Detached Enlisted Men's List had advanced to master sergeant.[208] In reply, Military Intelligence Division said that under

0503

the Single Promotion List, there were no immediate prospects of promotion but in the three years past, the sergeant had been advanced from fourth to third on the promotion list![209]

Consequently, the G2 welcomed a directive in March 1934 to "spare no effort." When counterintelligence funds and a counterintelligence specialist to coordinate activities and advise the Panama Canal Governor were requested, both the FBI and the Secret Service declined the request of G2 to recommend such a specialist. Maj. Harry A. Taylor, who had headed the CIP Washington Field Office in World War I, and after demobilization had retired as a New York City Police captain, was recalled to active duty in August 1935, for the task. As a result, an Interdepartmental Intelligence Liaison Board was created and counter-intelligence activities with the Panama Canal area were "markedly" improved.[210]

Maj. Gen. H. B. Fiske, commanding, urged in 1935 that a secret morning report be authorized to protect the identity of one agent who lived as a civilian in Panama City. Wrote General Fiske,

> "Due to the proximity of the cities of Panama and Colon to the Canal Zone, personnel residing in the Canal Zone are in almost constant daily contact with large numbers of persons residing in those cities. As a result, citizens of the Republic of Panama, as well as interested aliens residing therein find it a comparatively easy matter, by discreet inquiry among third parties, to learn the identity of any person about whom they may be curious."[211]

The use of a supplemental morning report for CIP agents at Panama was authorized.[212]

From this period on until the end of World War II, sabotage intelligence was the number one priority of CIP agents in the area and espionage a close second. No CIP agent had any doubt why the German liner "Bremen" was scheduled for a cruise in the late "30's" that took her through the Panama Canal.

The Hawaiian G2 had asked for a minimum of 30 agents when the peacetime CIP was authorized in 1920. He was given three agents immediately and finally another in 1922.[213]

213 Ibid, #57, dated 25 Oct 1920; and #38, dated 11 Sep 22.

In Hawaii, the counterintelligence problem was acute since in excess of 42 percent of the population was Japanese. A large number of Chinese-Filipinos and Koreans further complicated the problem and the loyalties of many Hawaiian-born Japanese were questionable. In a 1922 report, the G2 said that Japanese were constantly arriving and changing their residence. Ship panelling, directed at screening potentially subversive Japanese organizations and collecting Japanese statistical data along with surveillance of certain Japanese individuals imposed a tremendous counterintelligence mission. Additional work included investigation of potential officers for the Hawaiian National Guard and coverage of radical labor organizations such as the United Workers.[214]

The Hawaii G2 reported in 1933, "If the supervision of the Japanese press and the translations into English of Japanese articles could be done by someone not a member of the Corps of Intelligence Police, it would release one member for more effective work in the Japanese community."[215] For its work Hawaii had four agents. One was hospitalized with TB.

The Far East and Philippines

Soviet interest in the Far East was revealed in many ways. When World War II started, British investigation of the Far Eastern Fur Trading Company in London, which had been operated by two Austrians, was found to be a Soviet espionage cover firm, as was the "Anonymous Society for the Importation or Dried Beans," in Paris, France. Both were associated with the firm of Wostwag in Berlin, Germany, the principal cover firm for Soviet espionage in Europe, which had as a director an American dentist, who later fled the U.S.[216]

In 1933, when negotiations were pending for the recognition of the U.S.S.R. by the United States, espionage activities by the Soviets were temporarily curtailed to prevent unfavorable incidents. One of the most active Soviet agents in America was sent to China at this time to establish a business cover for Soviet Military Intelligence activities in that country and in Japan. Another American Soviet was sent to Shanghai in 1933.

Three years before, Dr. Richard Sorge, the German Communist, who had become an ace agent of Soviet Military Intelligence, had started his own China net in Shanghai. Working closely with Sorge was Agnes Smedley, American Soviet spy, who remained in Asia after 1932 when Sorge went back to Moscow to make plans for establishing his net in Japan.

215 Ibid, #86-90, dated 12 Oct 1933.
216 House Rpt #1229, (Uncl).

As far as the United States was concerned, the Military Attache in China in 1937 still retained his one CIP agent he had been ordered to replace in 1931 but his hope of obtaining an additional one had died after repeated turndowns.

Meanwhile, the American-Soviet agent sent in 1933 was given $10,000 to establish a business. At Tientsin, in the British concession, he made arrangements to represent the American Radio Corporation in China and established the Amasia Sales Co. For four years he was occupied solely with the running of the business in order to make satisfactory cover for Soviet Military Intelligence activities. In 1937 the American was relieved by an Austrian and returned to Moscow to report.

He was then ordered to establish a similar cover in the Philippine Islands. During a trip to New York, where he made arrangements to represent a motion picture equipment corporation in the Philippines, he was met by a Soviet agent and given $8,000. The difficulties of setting up a business in Manila were greater than expected, and the agent ran out of funds. He returned to Moscow in 1939 where he was initially ordered back to China, but when he said it would take $100,000 to set up or acquire a representative business concern at that time, he was sent back to the United States. Here his luck failed: he was arrested for passport fraud and after serving a one year sentence defected to the West.[217]

In the Philippines, Japanese agents continued operations and encouraged Filipino subversion when problems developed in connection with negotiations to obtain independence from America. The situation was further complicated in 1922 by a reduction in the ratio of American to Filipino personnel in the Philippine Department. The reduction plan contemplated making the Corregidor garrison mainly Filipino.[218]

The Philippine Department had three agents on duty when it asked for 15 agents as a peacetime requirement in 1920, and further requested discretionary authority to increase the number in case of a war or rumors thereof.[219] It was authorized five spaces. In 1923, two spaces were filled from the United States.[220] Military Intelligence Division was unable to locate Japanese-speaking agents as requested; one was selected because Maj. P. N. Bagly, Chief of MI-4, G2, War Department, had seen him around headquarters at the War Department. While Bagly admitted he was taking a chance, he said the man "seemed intelligent and to have common sense as well."[221]

---

217 House Rpt #1229, pp 9 and 10, (Uncl).
218 CIP Corres #95, dated 21 Aug 1922.
219 Ibid; #58, dated 25 Oct 1920.
220 Ibid, #58, dated 24 Jun 1923.
221 Ibid, #55, dated 18 Jul 1923.

At the time, the Philippine G2 wrote Military Intelligence Division that its prompt assistance in procuring men had "...materially strengthened the position of this office..."[222] But the result of this ad hoc procurement policy was reported by the new Philippine G2 a year later. He wrote,

> "Two men in particular, a Filipino and an American are flat failures ...the American is a burden. I can use him no where -- he has no clerical ability. One other Filipino Intelligence policeman works in the office as a clerk... However, he too is a flat failure as a secret operative. There is only one man in the office who was of any value. This man is a civilian. The sergeants of Intelligence Police were of no value to me during the critical period of the mutiny (of Philippine Scouts at Fort McKinley). If some means can be found to let me have approximately the cost of these men to the government in money, available for hire of operatives and the buying of secret information in Manila, I can greatly increase the value of this office..."[223]

Six months later, the Adjutant General of the Philippine Department, still seeking action, wrote the Adjutant General at Washington:

> "A Secret Service man to be of any real value in the Philippine Islands must have a background furnished by intimate knowledge of the natives close contact with the social and political conditions. In addition he must like the work and have the ability and courage to carry it out. These facts are emphasized by the inefficiency of the force now employed on this duty in the G2 office. Of the five sergeants on this duty only one gives any promise of being a useful man in the capacity for which he is paid by the United States. This man has just arrived and is apparently fitted for the work by race, intelligence and disposition. He is a Puerto Rican, speaks Spanish, looks like a Spanish mestizo and likes his work. Under the present system upon the expiration of his foreign service tour at the end of two years he will be a valuable man in his work if he continues his interest. Of the remaining sergeants of Intelligence Police one is a Pole, well fitted for ferreting Red activities among white men. He is out of place here. He might fit well in places like San Francisco, Chicago and New York. Another sergeant is an American unfitted by temperament for the work, inefficient and useless, even dangerous to this office. Two Filipinos make up the remainder of this group. One has no stomach for the risk attendant upon the duty and is used as a clerk inside the office, while the other is stupid and useless in any capacity and is likewise a danger to the office. If I were paying these

222 CIP Corres #34, dated 21 Aug 1923, (Conf).
223 Ibid, #1, dated 4 Sep 1924.

CONFIDENTIAL

in a commercial firm I would discharge all except the Puerto Rican and would hold him on probation. At present, as a body, they are contributing nothing to the efficiency of the G2 office..."

The power to replace these men with civilians was repeated and an allotment of funds requested. In lieu of this proposal, the Philippine Department requested that five Detached Enlisted Men's List spaces be assigned to it by the War Department and that the Philippine Department be authorized to fill these spaces by local procurement of CIP agents.[224]

G2, Washington, did not concur with the request to substitute hired civilians for Corps of Intelligence Police agents, on the ground that no money was available for that purpose. However, Colonel Reeves concurred with the proposal for local procurement which actually had been authorized since 1921, even though the Philippines had never been given a quota.[225]

In January 1925, the Philippines solves part of the problem by sending "the Pole" back to the States on furlough. Before his return, arrangements were made to have him transferred to the Eighth Corps Area where his abilities were more suited than in foreign service.[226]

The American agent who had been selected by casual observation at Military Intelligence Division, was returned to the States when his tour of service expired and discharge for the convenience of the government, with the notation that there was no vacancy in the Corps of Intelligence Police to which he could be assigned.[227]

Thus, after two years, the ad hoc Military Intelligence Division procurement policy had not produced the Japanese agents desired and instead had demonstrated that a capable "stateside" agent was not necessarily qualified for foreign service. It also made clear that a man "who seemed intelligent" might not be fitted for any kind of CIP work.[228]

Subversion incidents continued to increase. From the Philippines in 1934, the report of the G2 summed up the problem,

"Japanese are supplanting Chinese as the retail merchants of the Philippine Islands. Six months ago this office came to the realization that the Japanese economic expansion in the Philippine Islands necessitated a realignment of the duties of the personnel of the Military Intelligence

224 CIP Corres #70, dated 30 Jan 1925.

Division with a view to greater concentration of effort in the Japanese field. This realignment of duties was accomplished at the expense of some other activities which should be followed by this office. . .

. Therefore, it will take considerable time and effort for our agents to build up their own group of contacts among the Japanese. To be of any value at all, these contacts must be absolutely reliable. . . time will be necessary to perfect this change."[229]

On the Mexican Border

Between World Wars I and II, the Eighth Corps Area, with headquarters at Fort Sam Houston, Texas, handled the largest volume of counterintelligence field operations.

There were only three CIP agents on duty in the area when the peacetime corps was authorized in 1920. At that time, 12 agents were requested but only eight were authorized.[230] From then on, various G2s constantly battled for more men while their force dwindled to seven in 1926,[231] to six in 1927,[232] and finally to three in 1934.[233] Actually, since one agent had tuberculosis and was hospitalized for a number of years and other agents had various handicaps, the actual force was reduced to limited effectiveness.

In 1924, at the time the United States Immigration Service established the Mexican border patrol, G2, Eighth Corps Area, was assigned several secret mapping missions which he, in turn, delegated to his Corps of Intelligence Police. His force included the men described below who at that time comprised more than 25 percent of the Army CIP force.

. had been a CIP agent since 1921 and had served as a clerk, draftsman and topographer. In 1924 he was assigned a section of the Border Liaison and Mapping area. He was rated a man of excellent judgment and discretion and produced a high quality of work until he contracted tuberculosis.[234]

234 Ibid, #158, dated 2 Oct 1924; and #16, dated 4 Jun 1924.

had been with CIP since 1920 and was on duty at Laredo, Texas, until when it became necessary to transfer him because of civilian opposition which when it began to pay made him too well known.[235]

He was rated an extremely valuable man.[236]

had 16 years of Army service when he was assigned to CIP in 1920 and began work in Border Liaison. In 1924, he was working on the local Mexican situation and revolutionary developments.[237]

was detailed to CIP in 1921. He held a commission as a first lieutenant in the Military Intelligence Reserve. He served with the U. S. Army for nine years before being detailed to CIP. He spoke, read and wrote eight languages including Japanese and was rated as of excellent judgment, common sense, and discretion.

had been in the Army since the Spanish-American War and had 18 years service when detailed to CIP duty. who spoke very good Spanish, used as a cover a civilian position he held for two years before reenlisting after World War I.

held two special letters of recommendation and a reserve commission as a major of Cavalry.[238]

who held a reserve commission as 1st lieutenant, Military Intelligence, had been in the Cavalry and Quartermaster Corps for eight years before World War I. In September 1917, he was assigned to counter-espionage work in the El Paso area where his investigations secured a number of convictions in Federal Court. From the Armistice until June 1920, he was engaged in graft and fraud investigations and recovered property valued at more than $500,000. His investigative specialties included radical and semi-radical activities, arms smuggling and certain types of agitators. For three years, starting in 1920, he was used extensively all over the Corps Area in procuring informants among agitator groups. spoke and read Spanish, Polish, Russian and German and understood Slav dialects.[239]

who had been in the CIP for only a year, was labeled a good man but in need of experience when he was made available for transfer to the Philippines in 1925 in exchange for . _ previously mentioned.

Camouflage Employment

Following this analysis of his CIP agents, Lt. Col. J. A. Moss, G2 of the Eighth Corps Area wrote Military Intelligence Division in 1924:

> "...sergeants of CIP of this Corps have been able to add little or nothing to their pay as a result of camouflage employment in civil pursuits -- men in this area are known to be financially embarrassed most of the time. It is found that sergeants, CIP, generally get married and from the results produced, the work of married men has generally been more reliable than work of a single man. No married men have had to be moved on account of conduct or low association...yet...the grade of sergeant is too low to permit the transport of dependents at government expense. It will be in the best interests of the service for the U.S. to take care of its intelligence personnel and enable them to perform their duties efficiently. The only feasible plan to help them seems to be an advancement in grade with the attendant increased pay. The principle of rewarding merit is generally recognized in business. To have one grade for CIP with no system of reward for efficient service is believed to be fundamentally wrong... As a matter of morale it is very disheartening for these men to come in contact with men of other branches, often with less service and ability, holding much higher grades and enjoying the privileges thereof while the CIP men however hard they work have no advancement to look forward to as a reward or for the purpose of retirement..."

Colonel Moss recommended that grades up to and including master sergeant be authorized.[240]

Four months before, Lt. Col. Edward R. Stone, the retiring Eighth Corps G2, had made a similar plea. He wrote,

> "these men are the first reserve for officers of the Military Intelligence Officers' Reserve Corps and would constitute a reservoir of highly trained men whose service would be invaluable in an emergency. It requires a man of superior ability and attainments to qualify for appointment -- the work these men do is of necessity, a thing lacking all

240 CIP Corres #156, dated 2 Oct 1924.

publicity and personal glory -- is in many cases not only dangerous but requires a considerable personal and financial sacrifice -- they are men who could go to any line organization and hold down a first class rating without any delay whatever. Most of the men we now have remain in their present grade and on their present work through love of the work, rather than because it is the best that they can do or have done..."[241]

The Eighth Corps intelligence workload appears to have remained at an even level; that is, consistently heavy. During the post-World War I era, secret border mapping requirements took up much of the time. In 1933, G2 reported that the full time of one CIP agent was required to maintain close liaison with "the Bureau of Investigation, Department of Justice, Immigration Service, U.S. Customs Service, U.S. Border Patrol and the U.S. Secret Service..." Four CIP agents provided coverage along the border and handled informants. Another headed the Latin-American section of the G2 office and managed Spanish translations and statistical reports. The seventh agent was essentially an administrative and confidential assistant to the G2, although he handled informants, as well.[242]

By 1935, Eighth Corps G2 had ceased to plead for additional men or protest losses. In April, he merely reported without comment:

"Under the new tables of organization no allowance is made for warrant officers in the Office of the Assistant Chief of Staff, G2. As surplus warrant officers in the Eighth Corps Area are being transferred to other Corps Areas, it is only a matter of time when this office will be deprived of the services of warrant officers now engaged in the performance of essential duties."[243]

In 1936, Eighth Corps made one final plea -- not for more men but to retain one. G2 wrote the War Department,

"I am in favor of a foreign service roster provided an exception could be made in the case of This man had made himself an expert in regard to Mexican affairs. It would take years of experience for any one else to get a background equal to that possessed by him. In an emergency his services as a confidential agent in Mexico would be invaluable. In other words this man is a specialist and he should be kept where his knowledge can be used to best advantage."[244]

To this plea available records show no reply.

Section 2

ENEMY GAINS AND CIP LOSSES

More Men Again Requested

From June 1934 until July 1940, the Corps of Intelligence Police made no progress either in gaining men or ratings. One exception was for the addition of a Filipino agent in 1935 at the request of the Philippine Department. It was justified by three reasons. First, the necessity of an additional man there was "...based upon the expectation that with the establishment of the Commonwealth Government certain of the present sources of information will disappear, necessitating increased activity on the part of the Military Intelligence Division of the Department Commander's staff..." Second, there was no Filipino member of the Corps of Intelligence Police who could be transferred to the Philippines; and finally, no CIP agent could be spared for transfer "without curtailing some essential function."[245] A sergeant, fourth grade, was authorized on 10 October 1935.[246]

Protests continued to be received from many of the Corps Areas and Departments at the drastic curtailment of 1934 which slashed the Detached Enlisted Men's List to provide personnel for the motorization of service companies of infantry.[247] No cuts were restored. Meanwhile, G2 was reduced to 22 officers, 48 civilians and a budget of only $26,650.[248]

For the next six years, G2 kept trying to get more men. In March 1935, Brig. Gen. H. E. Knight, who had just become G2, made his first attempt. He sought 32 as the minimum number, and pointed out that the proposed allotment of 46,250 additional enlisted men to the regular army would enable CIP to add 17 men without materially affecting the strength of any organization. Former members of CIP would be transferred back from combat outfits and additional men obtained by transfer of suitable men from Regular Army ranks.[249]

In justification, General Knight described the subversive situation of the past nine months:

> "Since June 1934, there has been a marked increase in the subversive activities directed against the military establishment. This has been especially noticeable in the Ninth Corps Area and in the Hawaiian Department.

245 CIP Corres #97, dated 25 Sep 1935, (Secret).
246 Ibid, #94, dated 10 Oct 1935.
247 Ibid, #4, dated 28 Jun 1934.
248 Hist Mil Intell Div Vol 3, p 29, (Secret)
249 CIP Corres #101-103, dated 22 Mar 1935, (Secret).

There has also been an increase in what is purported to be espionage activities in and adjacent to the Panama Canal Department. These conditions have necessitated material increases in the intelligence funds allotted to the Ninth Corps Area and the Panama Canal Department. The general situation is sufficiently serious to have caused Congress to initiate corrective legislation.

"Corps Area G2's on whom the burden falls to secure information on subversive activities within the military establishment in their respective areas, have been materially handicapped by the lack of proper enlisted personnel for confidential work. They are now dependent upon men detailed to them for limited periods. This is unsatisfactory and not productive of the results the seriousness of the situation demands and which can only be assured by the use of personnel specially trained and permanently employed on such duties. Even prior to 1934, the Commanding General, Panama Canal Department complained that there were an insufficient number of Intelligence Police assigned to his Department. The increased activities in the Department have accentuated that condition."[250]

G4 concurred with G2 but G1 joined G3 in nonconcurrence. Brig. Gen. John H. Hughes, G3, wrote,

"Even before the impending increase in the strength of the Army is obtained there is a shortage of grades and specialist ratings needed for new purposes resulting from the initiation of mechanization and motorization... The impending increase of strength is to be entirely in the seventh grade. This will result in an increased demand upon the noncommissioned officer strength..."[251]

On 8 May, General Knight, in an appeal to the Chief of Staff, attempted to override the opposition by proving that his recommended increase would actually take only six noncommissioned officer spaces. Since four Corps Areas had retained their CIP agent by "detail" back from the troops and three other Corps Areas and the Panama Department had "detailed" 11 men from troops to CIP work, the Corps actually had 30 men on duty. Moreover, said General Knight, he was asking for three less than the Corps Areas and Departments were seeking.

Although General Knight ended his plea with the statement, "It is considered that the purpose for which these men are requested is second to none in importance," one week later the request was returned stamped "Disapproved" - and signed "Douglas MacArthur, General, Chief of Staff."[252]

250 CIP Corres #101-3, dated 22 Mar 1935, (Secret).
251 Ibid, #15, dated 30 Mar 1935; and #14, dated 4 Apr 1935.
252 Ibid, #10-11, dated 8 May 1935; and #103, dated 22 Mar 1935.

In January and 12 months later in December 1936, G2 answered requests from the field for an additional agent with the statement that there was "...absolutely no chance of getting an increase in the number of Intelligence Police this year."[253]

In 1937, Congress tacked onto the Army Appropriation Bill for 1938, the proviso that except in the Philippine Scouts, there could be no enlistments or reenlistments of persons not citizens of the United States. In the Philippines, this hit three Filipinos who were members of the CIP. The G2 Philippines wrote,

> "Failure to permit these Filipinos to reenlist would be interpreted as a breach of faith and would have an adverse affect on the public. It is particularly desired to protect the interest of these Filipinos who have served so faithfully and so well."[254]

Although the G2 had stated that it would be "less economical and less efficient," the only solution found was to rehire the men as civilians as their enlistments expired and G2 radioed such authority early in August. A salary of $140 a month was authorized.[255]

In November 1927, when the Military Attache at Peiping, China, asked what regulations were for CIP agents, the War Department wrote back that none was published. The War Department authorized procurement of a man in the area for CIP, however, and inclosed was a check for $223.51 to provide an initial clothing allowance of $140 and a maintenance allowance of $83.51.[256] The man selected and trained as a CIP agent by the Military Attache was perhaps the subject of more correspondence in the next ten years than any other member of the Corps. In 1931, the Attache was ordered by G2 to replace the agent by a clerk at $1,500 a year as such duty was not consistent with CIP regulations.[257] In spite of this, four years later this agent was still carried as surplus and was not returned to the United States until 1940.[258]

Civilian Clothing Problems

In 1939, G2 was on the defensive this time with regard to CIP's clothing allowance. Col. Stanley H. Ford, then G2, said, "I do not want to do away with

253 CIP Corres #88, dated 16 Jan 1938; and #67, dated 10 Dec 38.

0595

the CIP nor their clothing allowance but I do not propose to be put in a weak defensive position."[259]

From December 1920, when the wearing of civilian clothing by CIP agents in peacetime was authorized and allowances provided, this expense had been eyed by economy-minded Army officials of other branches as needless. After 1922, when undercover activities were virtually prohibited in the United States, surveys revealed the majority of the agents were doing clerical work in G2 offices. Since in this era, all military personnel were allowed to wear civilian clothes for their daily work but received no such clothing allowance, normal jealousies arose.[260]

The original authorization provided a $130 initial allowance to be used as follows: overcoat, $35; raincoat, $15; two suits, $35 each; 2 hats, $5.00 each. There was an annual allowance of $10 for shoes and a semi-annual allowance of $13.50 for three shirts at $2.50 each; one necktie, $1.50; six pairs of socks, $3.00; and six collars, $1.50. For repairs, cleaning, pressing and laundry, a monthly allowance of $7.00 was authorized. During his first year, a CIP agent could receive up to $251, and $121 per annum thereafter.

In 1924, for reasons not explained, the initial allowance was increased to $140 and a semi-annual allowance of $58.83 established. This resulted in an increased initial allowance of $10 but reduced the annual maintenance by $3.17.[261] At the same time, G2 recommended agents to put in uniform where possible, to save funds.[262]

In 1927, a detailed explanation was required to justify the $4,284 clothing appropriation for Fiscal Year 1928. At this time the semi-annual allowance was $55.50. In February 1929, the Chief of the War Plans and Training Branch suggested "in order to relieve the embarrassment in connection with the appropriation for civilian clothes, civilian clothing should be authorized only in those cases where official duties required the wearing of civilian clothes. A certificate from the Assistant Chief of Staff, G2, stating that the duties required the wearing of civilian clothing could be used in connection with the vouchers."[263]

This suggestion was followed by a survey of Corps Areas and Department during February 1929. The First, Third, Fourth, Fifth, and Seventh Corps said civilian clothing was not required, but the other four Corps Areas and the three

Departments reported them necessary. Third Corps Area reported that it had discontinued the allowances on 9 December 1924 and First and Fifth Corps Areas reported they had returned the allowance since 1929.[264]

Only two Corps Areas argued for the retention of civilian clothing for CIP agents. The Sixth Corps Area at Chicago wrote,

> "...In view of the fact that the Corps of Intelligence Police is intended primarily for and would be of especial value in any emergency requiring their employment upon secret service duties, it is recommended that their value not be destroyed by any steps looking toward abolition of the allowance for civilian clothing..."

Eighth Corps, on the Mexican border, reported,

> "...The duties required of all members of the Corps of Intelligence Police in this Corps Area require the wearing of civilian clothing."[265]

All three Departments were emphatic in their statements that civilian clothes were required. Maj. Gen. Malin Craig at Panama wrote that they were required for "Making investigations in Panama of radical and anti-American activities; attending demonstrations with a view to getting advance information of disorders that might necessitate military intervention."[266]

> Hawaii wrote: "Some of the members of the Corps of Intelligence Police have been engaged in this work for a number of years and have been wearing civilian clothing habitually. Their connection with the Army is generally not known either to Army personnel or to civilians. It is particularly desirable that this connection be not disclosed..."[267]

> The Philippine Department wrote: "Without civilian clothing these men would not be able to operate. To be exposed as members of the Army would render them valueless, be embarrassing to this office, and be a positive danger to the individuals."[268]

Civilian clothing caused other problems necessitating special reports. In September 1930, The Adjutant General asked G2 if the recent inclusion of the Corps of Intelligence Police in Tables of Organization would not make CIP status

reports unnecessary. G2 explained that the report of actual service was necessary for basing funds for purchase of civilian clothing, but if the Adjutant General could furnish it the form, reports could be abolished.[269]

Promotion Problems

For the CIP the only consolation in the 1934 personnel reduction was that it provided some much deserved promotions. Promotions had been a problem for more than a dozen years, since the Corps was established on a peacetime basis with no provision for any rank but sergeant.

By 1924, the promotion problem had become acute. Col. James H. Reeves, who became G2, War Department, in July, discovered that the inability of commands to promote CIP agents had resulted in vacancies among even the few CIP spaces authorized. He submitted a staff study recommending the authorization of grades and spaces for one master sergeant, three technical sergeants and 16 staff sergeants for the Corps. Fortunately, Brig. Gen. Dennis E. Nolan, CIP's staunch supporter, was now Deputy Chief of Staff, and over the opposition of G3 and G4 approved the higher grades except for the master sergeancy which G3 had protested as "the duty required and performed is not commensurate with this grade."[270] G4 based its opposition on the increased cost of the higher grades which it said would cause an increased drain of $5,260.56 a year. This was the equivalent cost of 20 recruits and "would, therefore, result in an actual reduction of 20 in the total strength of the Army."[271]

G2's justification which overcame G4 opposition included excerpts from the plea of Eighth Service Command, previously related, and from two other Corps Areas. G2 of the First Corps Area was quoted:

> "There have recently been promotions in every branch of the Detached Enlisted Men's List on duty here except the Corps of Intelligence Police; some with comparatively short service have been promoted to the grade of staff sergeant. As the educational and moral qualifications for Corps of Intelligence Police are above average for enlisted men, length and character of service should be considered in connection with promotion..."[272]

An unidentified G2 in another Corps Area was quoted:

269 CIP Corres #49, dated 25 Sep 1930.
270 Ibid, #140, dated 15 Nov 1924.
271 Ibid, #122, dated 22 Nov 1924.

0598

CONFIDENTIAL

"It will be in the best interests of the service for the United States to take care of its intelligence personnel and enable them to perform their duties efficiently. The only feasible plan to help them seems to be an advancement in grade with attendant increased pay... As a matter of morale it is very disheartening for these men to come in contact with men of other branches often with less service and less ability holding much higher grades and enjoying the privileges thereof while the Corps of Intelligence Police men, however hard they may work, have no advancement to look forward to..."[273]

Promotions posed problems throughout this economy era. Apportionment of enlisted grades was fixed by the National Defense Act, and promotions for the Corps meant reductions elsewhere.[274] At the time of the 1929 survey, the Sixth Corps Area Commander commented on having only one CIP agent allotted to a Corps Area "and promotion accordingly being impossible." He wrote,

"This condition results in the initial assignment of Intelligence Police in grades higher than necessary or advisable and must ultimately result in loss to the Intelligence Service of the best of its trained men through their inability to secure promotion. If the Corps is to be continued and maintained at its highest efficiency, it is recommended that no specific allotment of grades be made to Corps Areas and that promotion be regulated by the Assistant Chief of Staff, G2, War Department... In view of the small numbers involved this should be proven entirely practicable and should result in a satisfactory technical development of the Corps as a nucleus for rapid expansion to a wartime status."[275]

In connection with the same survey, General Craig wrote,

"The nature of the duties devolving upon this noncommissioned officer are such that frequent changes in personnel are especially undesirable and there should, consequently, be offered the maximum available inducement to insure some degree of permanency."[276]

G3 Suggests More Promotions

By 1930, G2 was too discouraged from fighting for manpower to try for promotions and the suggestion to increase CIP ratings came amazingly enough from G3. This situation was the result of a personal appeal by Maj. Gen. William Lassiter, commander of the Panama Canal Department, who wrote The Adjutant General in May 1929,

273 CIP Corres #7, dated 25 Nov 1924.
274 Ibid, #150, dated 5 Nov 1924.
275 Ibid, #14-15, dated 19 Feb 1929, (Secret).
276 Ibid, #22, dated 2 Mar 1929.

"The operations of the Military Intelligence Section of the Staff of this Corps Area, during recent disturbances in Mexico, have served as a test of the field qualifications and sufficiency of the personnel of the Corps of Intelligence Police allotted to this Corps Area and revealed the need of revision of allotment... Advance in grade is deemed just, as compensation for services being rendered by the present incumbents and the absolute necessity to insure future replacement by men of corresponding qualifications. The master sergeancy is well merited by the present technical sergeant, chief of secret agents, a man of excellent character, long and efficient service and remarkable ability in Military Intelligence work... The increase in total number from six to seven is deemed absolutely necessary..."[277]

On 12 May 1930, Brig. Gen. Edward L. King, G3, War Department General Staff, forwarded a memorandum to Col. Stanley H. Ford, G2, in which he quoted part of a previous request from General Lassiter for increased grades. General King wrote,

"...It is probable that when the Intelligence Police were formed, these grades were appropriate for the age and experience of the personnel then assigned to the Intelligence Police. It is also probable that as time goes on, increasing demands will be made for the promotion of certain of these men who have by long service and ability earned promotion... It is suggested, in view of the above, that you consider the question of the grades now allotted to the Intelligence Police with a view to revising the allotment of these grades so as to permit of a limited promotion, from time to time, of this personnel. It is desirable that the revised allotment should not exceed the pay cost of the existing allotment although if deemed absolutely essential by you a very limited increase in such pay costs may be found to be possible."[278]

Colonel Ford, who was retiring as G2, ignored the suggestion to obtain increased ratings by elimination of personnel to keep the total cost the same. Instead he recommended:

"That the allotment of grades to the Intelligence Police be one master sergeant, four technical sergeants, fifteen staff sergeants and eight sergeants... The allotment now made is three technical sergeants, fifteen staff sergeants and ten sergeants. A majority of the men now assigned have more than twelve years' service. They are all excellent men, carefully selected and trained for the specialist work that they are required to perform. The responsibilities and duties assigned them

277 CIP Corres #113, dated 2 May 1929.
278 Ibid, #88-89, dated 12 May 1929.

0600

require a comprehensive knowledge of local conditions and make it essential that the men who have acquired this knowledge be retained in the service to perform these duties.

"Unless these men can have a reasonable assurance of promotion it will not be possible to retain them in the service. Many of them have now served from eight to ten years in their present grades and can see little or no prospect for advancement. Some excellent men have been lost because of this fact and several corps area commanders as well as the Panama Canal Department Commander have stated this condition in requesting promotion of the men assigned to them. The present unsatisfactory condition can be relieved only by an increase in the allotment in the higher grades..."[279]

Colonel Ford pointed out that since grades were already allotted to G2s and promotions were made locally, an increase in grades under this system would only afford temporary relief. "Promotion in the Corps of Intelligence Police can be made with fairness to all only by adopting a single promotion list." Promotions would then be made by The Adjutant General on recommendation of the G2, War Department General Staff.

Colonel Ford opposed a plan to have definite grades assigned each Corps Area and Department and recommended that tables of organization should only specify the numbers assigned. Otherwise, agents would frequently have to be transferred upon promotion and, said Colonel Ford, "...Due to the fact that a knowledge of local conditions is a prerequisite to the proper performance of their duties, the transfer of these men from one Corps Area or Department to another is not advisable."[280] Colonel Ford recommended that local commanders be authorized to fill any vacancies within their numerical quotas in the grade of sergeant with all future promotions determined by the single promotion list. These recommendations were approved on 11 July 1930 by Gen. Charles P. Summerall who was then Chief of Staff and a man well aware of Communist problems.[281]

The Single Promotion List was not published and distributed to Corps Areas and Departments and consequently the correspondence files for the next six years reflect efforts by field G2s to get their men promoted, even if only for purposes of retirement. Maj. Thomas T. Handy, who later became a full general, but G2 in Panama at this time, discovered that while the CIP had obtained a master sergeant rating, under the single list, it went to an agent in Eighth Corps Area.

279 CIP Corres #86, dated 27 May 1930.
280 Ibid, #86-7, dated 27 May 1930.
281 Ibid, #36, dated 11 Jul 1930.

CONFIDENTIAL

The CIP agent at Panama was ninth on the list. Three years later, he had moved up to eighth place and remained a sergeant at the time of his death in 1934.[282]

The Eighth Corps Area soon found that the Single List had not helped morale as much as anticipated. In 1931, the Corps G2 attempted to promote one of its sergeants so that he could retire after 29 years service as a master sergeant. The man was S/Sgt Pablo Lloveras, who had been 10 years with the CIP. The G2 wanted Lloveras to be retired so that a man could be put in the field.

wrote the G2, "is physically able and fully competent to perform field duties,

The G2 pointed out that Lloveras was married and could not afford retirement on a staff sergeant rating. However, the G2 said, his master sergeant agent would be willing to step down to permit Lloveras to retire, provided he had definite assurance he would be reappointed master sergeant when Lloveras retired.

The Executive Officer of G2, War Department, replied that he agreed. "Such action would be a just reward for his excellent service. Unfortunately, I have been unable to find any way in which this can be effected by the War Department..."[284] Under the Single Promotion List, if the Eighth Corps Area master sergeant stepped down the rating would have to go to another Corps Area.

Four months later, Eighth Corps Area was "surprised" when a CIP agent with two years experience less than one of its other agents was suddenly promoted. On inquiry, G2, War Department, wrote back that the Single List was prepared with primary consideration to "...total length of enlisted service; date of appointment to present grade; length of service in the Corps of Intelligence Police. Where these factors conflicted, an effort was made to insure justice and fairness to all concerned. ...All new appointments are made in grade of sergeant and the appointee is placed at the bottom of the promotion list regardless of his former grade or length of service."[285]

284 Ibid, #26, dated 10 Oct 1931.

285 Ibid, #22, dated 26 Feb 1932.

In 1935, Lt. Col. George S. Patton, Jr., G2 at Hawaii, attempted officially and unofficially to get a master sergeancy for one of his CIP agents. In a personal note to Lt. Col. C. K. Nulsen, Executive Officer of G2, War Department General Staff, Patton wrote,

> "Dear Charley: I am sending a letter to G2 War Department on the subject of getting Tec. Sgt. Luth promoted to Master Sgt. prior to his retirement a year from now. Luth is an exceptionally good man and has much more than pulled his weight since he has been in this office. It would be hard luck if owing to the fact that he is an M.I. man he could not get this step. The A.G. here says it is up to the War Department. If it is do your damdest. If you can't work it get the dope and write me what crooked work we can do here to put the deal over. Please give this matter your personal attention!!!!!."[286]

Agent Qualification Problems

When the Corps was established on a peacetime basis in December 1920, proficiency in a foreign language was a requirement. However, provision was made for waivers, and over the years the Corps acquired a number of agents in the United States who lacked linguistic ability. This created an administrative problem when the overseas roster was established. In March 1925, the problem was further complicated by an order from the War Department that all CIP agents in the Philippines who did not volunteer for longer service than their normal tour were to be reduced to the grade of private before returning to the USA.[287]

It was in this era that the disgusted commander of the Philippines Department in requisitioning two CIP replacements wrote in the Qualifications Column "No special qualifications."[288]

In 1933, a survey of qualifications was made and six areas reported on 13 CIP agents. Nine had some degree of proficiency in one or more foreign languages and four had no language qualifications.[289]

One of the basic qualification problems turned on the question of whether the peacetime mission of CIP agents was to act as confidential clerks for G2 or fill the role of secret service investigators. This problem was well outlined in 1935 when Col. J. C. Pegram became G2 of the Third Corps Area at Baltimore, Maryland. Colonel Pegram wrote G2, War Department,

---

286 CIP Corres #125, dated 24 Sep 1935.
287 Ibid, #74, dated 26 Mar 1925.
288 Ibid, #80, dated 5 Feb 1925.
289 Ibid, "Summary of," dated Sep 1933.

"First, for what are the Corps of Intelligence Police to be used. As clerks I don't want them, have not a damn bit of use for them. As operatives we are practically not allowed to use them. If you could get authority for one secretary-stenographer for each Corps Area G2, we would be six times better off and save considerable money besides. On the other hand, I could use two members of the Corps of Intelligence Police for investigating work and as plants in various outfits. Of course, if used this way these men would have to be changed around from time to time. This would also give us a nucleus on which to build in war and what is more to the point, will give us actual experience in handling operatives, which is something on which I believe we are rather shy at the present time. To sum up briefly, my experience with members of the Corps of Intelligence Police as clerks has been rather sad. I believe I can use two as operatives for strictly service activities."[290]

In October 1935, another G2 asked about the same question. From the Fourth Corps Area, Lt. Col. I. T. Wyche wrote, "So far from available regulations and literature on file at this headquarters, I have been unable to determine satisfactorily the contemplated employment of the Corps of Intelligence Police." Colonel Wyche asked for information on (a) the mission; (b) plan of procurement; (c) plan of training; and (d) assignment procedures.[291] Available records reveal no answer to this inquiry; probably because there was no answer.

Nowhere in the records is there any mention of age or educational requirements although a G2 report on an "excellent" CIP agent in the Third Corps Area stated the agent had an eighth grade education, and no linguistic qualification.[292]

Soviet Espionage Nets Grow

While attention was turning to threats of Japanese and German espionage, Communists continued their systematic infiltration and penetration of countless critical positions in industry and government -- many of which would not pay off for another five years or more.

An operational error in 1933 disclosed one Soviet espionage network. While other United States investigative agencies were nearly dormant as far as subversion cases were concerned, the United States Secret Service was still an effective force. The Soviets soon found this out when they brought counterfeit United States currency into part of their apparatus.

290 CIP Corres #20, dated 12 Apr 1935.
291 Ibid, #108, dated 28 Oct 1935.
292 Ibid, #10, dated 13 Oct 1933.

When a Russian in New York City attempted to pass a bogus $100 Federal Reserve note, he was taken in custody. Investigation of the case which led to Chicago, revealed the Russian to be a Soviet espionage agent with $100,000 in counterfeit bills. The Chief of Soviet Military Intelligence in Western Europe, who later defected to the West, said these counterfeits were printed on direct instructions from Moscow. Another defector said the counterfeits were printed to raise money to finance the establishment of a Soviet espionage cover firm, to operate in New York against Rumania.[293]

In 1934 the OGPU became the NKVD, but the change was only in internal organization and not in the espionage mission, which, if anything, was intensified. This was the year, Whitaker Chambers later testified, that he started a three year assignment of working with the Communist apparatus operating in the United States Government.

In 1936, Arthur Adams was back in the United States this time with his wife. Ostensibly, he was visiting his sister-in-law in New York City. But as shown by subsequent investigation, he was actually on another espionage mission. This same year a naturalized Russian, subsequently known to have passed information to the Soviet consulate in San Francisco, became a staff chemist in the radiation laboratories of the University of California at Berkeley, California. For three years during World War II, this same man was assigned to the Manhatten Engineering District's bomb project, and participated in some of its most important developments.

Gaik Ovakimian was a Soviet spymaster who operated one of the largest agents nets in the United States for nine years or more starting in 1932 and possibly before. Some 14 of his agents have been identified.

Ovakimian's net was unusual in that several of his agents operated in other countries simultaneously with activities in the United States. Among his agents was Fred Rose, Canadian Parliament member, later convicted in the atomic spy trials. Another agent had missions extending into Mexico as well as the U.S., while yet another operated a New York tourist agency as a cover. Two recruits operated a wholesale fradulent passport mill in Canada.

Most of these agents concentrated on economic and industrial espionage, but during 1937-38 an attorney with the Department of Justice was subverted in a manner not disclosed, and furnished information from FBI reports available to him. Another agent was subverted to the Soviet cause by a threat to kill his sister who was living in Russia.

---

293 House Rpt #1229, p 13. (Uncl)

In 1936, a Soviet employee of Amtorg in New York was transferred to California to take charge of the Los Angeles office of Intourists, which supervised foreigners traveling in the Soviet Union. There he made contact with a native Russian then a naturalized American citizen who was on leave of absence from the Berkeley California Police Department to the Office of Naval Intelligence. The Soviet eventually persuaded this man to furnish him information from Naval Intelligence files.

The first attempt at persuasion consisted of an implied threat, made through a letter from the Soviet vice-consul at Los Angeles telling the Russian-American that his relatives in the Soviet Union were all right. When this failed, either by accident or arrangement, the proposed agent had financial difficulties, and was persuaded to accept financial help. From then on, until the handling agent carelessly left a classified Naval document in a suit he sent to the cleaners, information was delivered regularly. In 1939, the naturalized citizen went to prison for four years, but his Russian spymaster received only a $10,000 fine and deportation.

In 1937, a Pole who had become a naturalized Canadian decided to join the Republican Army in Spain. On arrival at the International Brigade, he was relieved of his passport as were several others, on the pretext that the men should not risk losing them while in combat. When the time came to return to Canada the soldier was told that the truck containing the passports had been destroyed in action.

Actually, the passport had been turned over to Soviet Intelligence and given an agent who arrived in the United States in 1938. The agent enrolled as a student in the University of Southern California where he won a Phi Beta Kappa key for his excellent marks, and between studies attempted to line up persons for Soviet espionage. Normally, this fraudulent passport deal was nearly foolproof, for the Soviets had contacts in the Canadian passport offices who changed files on the switched passports to reflect the description of the person substituted. Normally, too, the Soviets ascertained that the true owners of passports were dead before they attempted to use them. In 1929, for example, the Soviets outfitted an agent with a passport obtained from a dead man by a deal with a Brooklyn undertaker. However, in the 1937 case, there was a slip up. Investigation revealed the real passport owner had returned to Canada and had peacefully resumed his farming.

In Spain in 1937, Soviet agent, Steve Nelson, who had operated in the United States since 1920, met and befriended a woman in Spain who had come to meet her husband and found he had been killed in the International Brigade. The woman returned to Berkeley, California, and married one of the leading physicists working on the atomic bomb.

In New York, Soviet agents in New York began making arrangements for penetration in Paris, France, of the Trotsky security organization in Mexico City. The efforts matured in assassination of Trotsky three years later.

These are only a few of the activities which were subsequently disclosed. There were innumerable others.

In 1934 the Communists obtained domination of the Institute of Pacific Relations and started a web that culminated in the Amerasia Case. A raid in the course of that case disclosed Soviet possession of more than one thousand classified documents of the United States government, including Military Intelligence reports.

Thus, the post-war years drew to a close. To counteract the vast amounts of military intelligence the Soviets were collecting, there was an equally vast task for an effective army counterintelligence organization. Instead, 16 CIP agents provided what little coverage they could on the Mexican border and in the overseas Departments, leaving the Zone of the Interior, as the United States was then called, as a free area for foreign espionage.

There was only one consolation for these dismal years of American security. The Office of Naval Intelligence reactivated its CIC equivalent, the Domestic Branch, in 1935, and in 1936 the number of FBI agents was nearly doubled and 614 men were available to cover the country. But the FBI still lacked the authority to halt Communists as it had halted major crime with 11,153 convictions in a period of three years.[294]

As Federal Judge Kaufman remarked after the atomic spy trials "every trial and investigation dealing with specific members of the underground has led to the conclusion that those members were linked to an infinite number of others still undetected."[295]

CIP in the Prewar Era 1938-39

Although World War II did not start in Europe until September 1939, and the United States was not involved until 27 months later, the prewar era of counterintelligence activity in the United States Army may be dated from 17 April 1938. It was at this time that increasing evidence of Japanese Intelligence agents

294 The Story of the FBI, by the Editors of Look, E.P. Dalton & Co, N.Y., (1947), pp 127 and 198. NOTE: Hereafter cited as "The Story of the FBI."

295 Burnham, James, The Web of Subversion, John Day Co, N.Y., (1954), p 213. NOTE: Hereafter cited as "Burnham." (Uncl)

operating both in the United States and overseas led to the establishment of a Counterintelligence Branch of the War Department Military Intelligence Division.[296]

Assigned as sections to the branch were censorship, counterespionage, domestic intelligence, safeguarding military information and "espionage functions" of the agency. For personnel, a colonel, a lieutenant colonel and a major were authorized.[297]

At this same time, G2, War Department, submitted a request to increase the Corps of Intelligence Police from 16 to 20 men. In his staff study, dated 23 April 1938, Colonel McCabe said,

> "Intelligence activities have shown a marked increase in the recent past, especially in the Orient and in the Second and Ninth Corps Areas. This division believes that an increase in intelligence personnel is necessary. Members of the Corps of Intelligence Police are utilized as confidential clerks or agents and perform services not readily obtainable in any other way at a like cost. Their maintenance and training in Corps Areas will facilitate the handling of intelligence matters and provide a nucleus for expansion on mobilization. Previous studies have indicated that a total of 32 would provide one for each Corps Area and a more adequate number in War Department overseas departments and the Second, Eighth and Ninth Corps Areas."

However, Colonel McCabe, concluded, while 32 could be efficiently employed, only four were being requested as the minimum essential requirements.[298]

G1, War Department General Staff, concurred, and said the necessary grades could be allotted from the War Department Reserve. G3 did not concur and Brig. Gen. R. M. Beck, Jr., wrote,

> "This division is still of the opinion as expressed in G3/32662 dated December 5, 1933, viz: In general, members of the Corps of Intelligence Police have rank greater than their needs of their positions and the cost to the government in pay and allowances including money for civilian clothes is more than the amount for which efficient clerks could be had. It is not desirable to have soldiers performing comparable work and receiving disproportionate pay. The extra allowance for clothing for members of the Corps of Intelligence Police is based on the assumption that they are put to extra expense by reason of the nature of their duties. When used on clerical duties side by side with other soldiers this disparity in expense does not exist."

0608

G3 concurred in a proposal of the G2, Philippine Department, that the Philippines be allotted funds to hire two Filipinos to replace a CIP agent who was not reenlisting.[299] G3 said that since the Philippines already received $2,900 in intelligence funds an increase of only $1,100 would provide the required $4,000. A penciled marginal note on the G3 file copy of this letter states, "Part of the $89,450 to G2 could be used for civilian clerks. G2 has the money, but doesn't want to spend."[300]

The end result of this opposition was no increase for the Corps and an allotment of an additional $700 in intelligence funds to the Philippines.[301]

Colonel McCabe's staff study did not detail the plea of the G2, Ninth Corps, who had written:

> "The work of this office in intelligence matters has more than doubled over that involved six months ago. Data on subversive elements including Japanese and Nazi activities here is being received in increasing amounts from legitimate sources authorized in War Department letter dated September 28, 1937. Espionage cases are increasing. As an example, five new cases possibly involving espionage were called to the attention of this office in one eighteen hour period recently..."

Ninth Corps Area urged that in as much as its clerical force would be filled by CIP members on M-Day, it be allocated two CIP spaces.[302]

Not only were increases in personnel rejected but intelligence funds were also sharply limited. In spite of the increased workload, intelligence fund allocations which had remained at $87,000 since 1936, were increased by only $2,450.00, and remained at this figure through 1939.[303] In 1938, Brig. Gen. George V. Strong, Chief of the Military Intelligence Division Intelligence Branch wrote that the satisfactory functioning of his branch had been "seriously handicapped due to a shortage of funds and a lack of adequate clerical and stenographic personnel."[304]

Until World War II, no provision was made for technical training of the chief of the new Counterintelligence Branch of G2 nor for the officers directing the highly specialized sections under his supervision. Even then, there was no

aining specially provided for the counterintelligence officer, and his qualifications consisted primarily of being available at a time when it was necessary to detail an officer to the position.

In May 1938, Lt. Col. J. H. Lindt, Chief of G2 Operations Branch, who had been in charge of CIP for the previous seven years, made another plea for additional agents. In a Memo to the G2 he said,

> "In view of the troubled conditions in Mexico and the activities of the Japanese on the West Coast, the constant study of related intelligence activities by personnel not subject to change in duties is a prime essential if domestic intelligence is to be given the attention it deserves. In New York, the increasing number of reports of activities of German individuals and groups is such as to result in a great amount of work."[305]

By August, interest in the CIP had reached such a low ebb that no volunteers could be obtained to replace a Hawaiian agent returning on rotation, and a mandatory foreign service roster had to be established. At the same time, a request from Hawaii that the replacement be sent in civilian clothes was disapproved; this resulted, however, in a study of the overseas undercover problem and the decision in November that replacement agents would be sent on civilian status by first class passage.[306]

Efforts to increase manpower were still unavailing. In November 1938, the Army Interdepartmental Pay Committee reported that no additional CIP personnel were required but in justifying the 16 CIP authorized, it stated,

> "Unsettled world conditions have brought about a marked increase in espionage and subversive activities. The value of the Corps of Intelligence Police is therefore greater than ever in peacetime. Members of the Corps of Intelligence Police are used on confidential missions and perform services not readily obtainable in any other way at like cost."[307]

In December 1938, a survey was completed by G2, War Department, of duties performed by the 16 CIP agents. Ten were essentially confidential clerks, handling files, messenger service, mimeographing, reception and library work. One was reported as unfit for any type of CIP work, and of the remaining five agents performing investigations, only four were qualified linguists.[308]

Soviet Espionage in High Gear

In 1938, Arthur Adams was returned to the United States on yet another Soviet espionage mission. This time he entered the country via Canada with a fraudulent birth certificate. For primary cover purposes, he and another Soviet agent established a business known as Technological Laboratories. Two other businesses were also used for cover; one, Electronics Corporation headed by an Adams associate, obtained six million dollars worth of contracts for exclusive production of highly secret items for use in radar installations. As a super-abundance of cover caution, Adams gave a business man with an office in Hollywood, California, enough money to mail to Adams' residence at a New York hotel each week, a check of $75. Adams represented himself to acquaintance in New York as a machine designer employed by the concern in California.

This same year, Elizabeth T. Bentley, who had been an official in various Communist activities in New York, became acquainted with a key Soviet agent. She became an executive of U.S. Service and Shipping, Inc., which was organized as an espionage cover. Soon she was courier and liaison official between her employer and two highly placed Soviet handling agents who operated espionage nets within the United States Government. In addition, she contacted nearly a dozen other highly placed government employees who furnished information on an individual basis.

These informants, Miss Bentley later testified, included Laughlin Currie, Administrative Assistant to President Franklin D. Roosevelt; a Department of Justice official; a State Department official; a Department of Commerce official; several Treasury officials, including Harry Dexter White, a top advisor to the Secretary of the Treasury. Other informants included five agents in Office of Strategic Services, including the legal advisor to its chief; and a dozen others, employed by the Board of Economic Warfare, Senate Subcommittee on War Mobilization, War Production Board, Bureau of Employment Security, the Chief of Analysis and Plans, Assistant Chief of Air Staff, Material and Services, Air Force, and the Commission handling the Roster of Scientific and Specialized personnel.

During this same period, several of the Soviet agents later involved in the atom bomb cases penetrated military installations. One was at the Navy Bureau of Ordnance in Washington, D.C.; one was with Army Signal Corps at Fort Monmouth, New Jersey; and another in Army Ordnance Research at Aberdeen, Maryland.

While Army counterintelligence had its troubles, it was not alone. The FBI, had only 851 agents to cover the 48 states and investigate complaints involving more than five score Federal Statutes, practically all of criminal nature. Prior

to 1938, the bureau averaged only about 35 espionage cases a year, but in 1938 the number jumped to 250 and every week the number increased. Yet this same year, budget limitations resulted in the Bureau having to place half its investigative force on compulsory leave during May and June. Consequently, investigation of civilian angles of military cases was equally handicapped.[309]

In early 1939, the seven Federal departments -- War, Navy, Justice, State, Treasury, Post Office, and Commerce had a substantial increase in the various national security investigations handled. By the end of 1939, Justice had handled 1,651 cases or an increase of 1,400 over the year before; the FBI reestablished a General Intelligence Division which it had closed down in 1924.[310]

With seven different Federal departments handling national security type investigations, duplication of effort, compromise of cases and jurisdictional disagreements often arose. To resolve certain conflicts, on 26 June 1939, Pres. Franklin D. Roosevelt addressed a confidential memorandum to the cabinet members concerned which stated:

> "It is my desire that the investigation of all espionage, counter-espionage and sabotage matters be controlled and handled by the Federal Bureau of Investigation of the Department of Justice, the Military Intelligence Division of the War Department and the Office of Naval Intelligence of the Navy Department. The directors of these three agencies are to function as a committee to coordinate their activities.
>
> "No investigation should be conducted by any investigative agency of the government into matters involving actually or potentially any espionage, counterespionage or sabotage except by the three agencies mentioned above.
>
> "I shall be glad if you will instruct the heads of all other investigative agencies than the three named to refer immediately to the nearest office of the Federal Bureau of Investigation any data, information or material which may come to their notice bearing directly or indirectly on espionage, counterespionage or sabotage."
>
> (Signed) Franklin D. Roosevelt.[311]

An Interdepartmental Intelligence Committee was formed by the three designated agencies. Since the memorandum did not differentiate between

overseas and domestic investigative responsibilities, the State Department which was concerned with overseas intelligence problems was asked to provide a representative without vote. Adolph A. Berle, Assistant Secretary of State was then designated.[312]

A working agreement was reached on 6 September 1939, just three days after ex-Communist courier Whitaker Chambers had spent an evening with Mr. Berle and outlined to him details of a Soviet espionage net which had infiltrated highest circles of the American government. Berle reported this conversation to President Roosevelt, but available intelligence records reveal no evidence of any further action and the information lay dormant. A decade later Berle's report was confirmed by wholesale convictions and resignations of Communist workers in high government positions.[313]

During this same eventful week, Hitler started World War II with the invasion of Poland; President Roosevelt proclaimed a limited emergency; and the Secretary of War, Harry H. Woodring, blocked a proposal of G2 which would have abolished the Army's Military Intelligence Reserve, providing instead for intelligence and counterintelligence obtaining its reserve officers as well as its regular officers by detail from the Arms and Services.[314]

The Corps of Intelligence Police fought on in vain for additional personnel. In April, the only means of filling an "urgent" need for a CIP agent in Panama was to obtain permission from the Chief of Staff to transfer a space from the Philippine Department; this was done over the protests of the later G2.[315]

To provide an urgently needed CIP agent in Puerto Rico, an allotment was taken from the Eighth Corps Area in November.[316]

But the strength and status of CIP was well concealed in one regard. In answer to a request for information, the Adjutant General wrote, "The Corps of Intelligence Police has no insignia of a regimental character. Moreover, as this organization operates in a more or less confidential capacity it is desired that no publicity be given it."[317]

An overseas G2 summed up the major problems of the era in a letter to Military Intelligence Division: "...in the past we have relied too much on

gratuitous information and we should now organize to go after it rather than receive it... Others pay for information and we cannot hope to compete adequately with untrained, unpaid people...little permanent and continuing value to the Department is possible with the ever changing personnel..."[318]

The Corps of Intelligence Police was not the only poverty portion of the national defense. In mid-1939, the United States Army totaled less than 200,000 men. Its three and a half divisions were at half strength, and scattered in 130 Army posts across the country. Training was virtually impossible on a five percent budget and without adequate motor transportation. The mighty United States possessed the peacetime Army of a third-rate military power.[319]

Part IV

CIP IN THE PRE-WORLD WAR II ERA

The CIP Revived

The year 1940 opened with the granting to the President of wartime powers. On all sides with one exception, prewar activities were accelerating. The exception was the CIP which during the first part of the year continued in an impoverished state.

On 30 April 1940, Colonel McCabe was succeeded as G2 by Brig. Gen. Sherman Miles, whose intelligence experience dated back to World War I. While General Miles could see no hope for increased CIP strength he did have funds available since the Military Intelligence Division budget, which had remained in the eighty thousands for the four previous years, was increased to $150,000.[320] Consequently, in May he was able to advise the Philippine Department that while there was no hope for obtaining two more CIP agents, the Department could detail two men on special duty, and funds would be supplied for the initial issue of clothing.[321] G2, Second Corps Area, was told the same thing and advised that funds were available for the employment of reserve officers.[322]

In June 1940, CIP received its most substantial assist when G2s were informed that as of the start of the Fiscal Year July 1, funds would be available for the employment of civilian clerical personnel. CIP agents could be freed of years of confidential clerical work for G2s, and assigned their anticipated mission.[323]

Meanwhile, World War II was approaching its full intensity. In April, the Germans took Norway and Denmark. In May, they took the Netherlands, Luxemburg and Belgium. Churchill, as prime minister of Britian, was warning of the "blood, sweat and tears" ahead, as the world soon realized from the disaster of Dunkerque. By June, France had surrendered and Russia had taken Lithuania, Latvia, Estonia and Bessarabia.

On 5 June 1940, one year after the President's memorandum, the Chiefs of Military Intelligence Division, Office of Naval Intelligence and the Federal Bureau

NOTE: All references in this section "CONFIDENTIAL" unless otherwise noted.

f Investigation signed a memorandum of "agreement of the definition of jurisdiction to be exercised by the agencies concerned..." commonly known as the "Delimitations Agreement." This agreement limited Military Intelligence ivision to the "investigation and disposal of all cases in these categories in the Military Establishment, including civilians employed on military reservations or under military control." In the Canal Zone, the Republic of Panama and the Philippine Islands, Military Intelligence Division was given jurisdiction over all civilians as well as military.[324]

Just before this agreement was signed, Mr. Berle, the State Department representative, telephoned President Roosevelt regarding the possibility of a unit for foreign intelligence work aside from the Army and the Navy. In an on-the-spot reply President Roosevelt stated that he desired the FBI to handle such work in the Western hemisphere "on request of the State Department and that the Army and Navy would cover the rest of the world as the necessity arose." The parties to the agreement felt, however, that the problem of foreign intelligence had not been adequately settled and further study was in progress when the United States entered the war.[325]

Corps Areas were feeling the increased work loads and appealing for more men by mid summer of 1940. Maj. A. R. Bolling, G2 of the First Service Command, wrote that he had one warrant officer, one clerk and two Military ntelligence Reserve officers detailed on six months active duty but he needed wo CIP agents as soon as possible.[326]

On 3 July 1940, General Miles submitted a staff study requesting an increase of 26 men to raise authorized CIP strength to 42. Justification was based on the fact existing personnel was inadequate for "the current limited emergency." General Miles cited the responsibilities of Military Intelligence Division under the Delimitations Agreement and the fact that there were no investigative personnel in eight of the Army's nine Corps Areas, although each had requested an average of two CIP agents each.[327]

In connection with the increase, General Miles recommended an increase in the higher grades to provide five master sergeancies instead of one and eight technical sergeancies instead of three. General Miles wrote, "...only enlisted men of the highest integrity can be entrusted to perform the duties required which involve access to classified documents and investigations demanding utmost discretion. Moreover the higher rate of pay commensurate with the grade is

327 Ibid, #131-34, dated 3 Jul 1940.

essential, as members of the Corps of Intelligence Police are, almost without exception, required to maintain themselves in large cities where living costs are greater."[328]

While the request was pending, G2 notified the Corps Areas and Departments that anticipated increases in strength would make CIP promotions possible. G2 asked the commanders to recommend those justified for promotion.

In the Eighth Corps Area, the G2's evaluation nearly cost him the services of the senior agent in the Corps -- Tech. Sgt. George Atwell, who had 16 years of CIP service. Because of his age and educational status, the G2 pointed out that Atwell was not qualified for extended duties but was doing a good job where he was. Return mail brought an "Immediate Action" letter from The Adjutant General to transfer Atwell to another organization. Whereupon, the surprised G2 countered with not only a recommendation that Atwell be retained but that he be promoted. When the study was approved, Atwell was promoted to master sergeant.[329]

By the time a personnel increase was approved on 17 July 1940, Corps Areas had been alerted to have qualified men tentatively selected for transfer. "...These enlisted men should be carefully investigated from every angle prior to actual transfer to the Corps of Intelligence Police..."[330]

The following month Maj. G. R. Carpenter, G2, Sixth Corps Area, who was later to become G2 of Army Ground Forces, wrote Military Intelligence Division asking what qualifications were required of CIP applicants.[331] In reply Military Intelligence Division reported, "...There is no record in this office of any instructions having been furnished you in regard to special qualifications required for personnel of the C.I.P. The qualifications demanded will vary depending on the nature of the work required. In any case only men of the highest integrity with a high school education or better should be selected."[332]

In December 1940, qualifications were more specifically defined and field G2s were informed that the qualifications for CIP agents were 22 to 33 years of age, high school education as a minimum, and basic military training. Desirable, but not required, was previous experience as an investigator in some government or law enforcement agency.[333]

[redacted]

Higher standards could be set by October 1940, since 17 million men had registered for selective service and manpower was becoming plentiful. In turn, the horde of inductees created new areas of counterintelligence responsibility. On 19 November, the G2 submitted a staff study in which he listed 51 Army installations where a military population of 5,000 or more was anticipated, and 26 important arsenals and depots. All of these areas would require counter-intelligence agents. The figures were conservative. In the case of Aberdeen Proving Ground, Maryland, 8,300 military personnel were anticipated yet more than 25,000 were stationed there at the height of World War II.[334]

General Miles estimated that the current authorized strength of 42 agents would be required to man overseas departments alone. To adequately man the Zone of the Interior, he estimated a need for three agents at each of the Corps Areas and their major installations, for a total of 246 men and a grand total of 288 men. Since many of the training camps would not be completed and manned for another seven months, the additional CIP agents were requested on a quarterly basis for approval on 15 January, 15 March and 15 June 1941, in quantities of 46, 100 and 100 respectively.[335]

Instead, on 26 December 1940, G2 was informed by the Adjutant General that both January and March quotas had been approved "effective at once," and the Corps was authorized 188 men.[336] After years of begging for one man, the CIP had reached a point where it was receiving more than it had asked for! The impoverished days were over.

Command Problems

Directly after taking over as G2, in April 1940, General Miles began to strengthen the Military Intelligence Division. Before the year ended, eight officers and three enlisted men were added to make a staff total of 80, which was still pitifully small compared to the cyclonic expansions ahead.[337]

Among the first new personnel arriving in May was Lt. Col. James C. Lester, who as G2 of the First Corps Area, had fought for additional CIP agents. Lester was named Chief of the Counterintelligence Branch and another new arrival, Maj. John T. Bissell, was appointed executive officer. After 23 years without designated control, a CIP section was established with Maj. W. S. Holbrook as chief.[338]

[redacted]

When Henry L. Stimson became Secretary of War in July 1939, one of his first acts was to summon Attorney John J. McCloy of New York to the War Department as personal advisor on counterintelligence work. McCloy was considered to have a wide knowledge of subversive methods as the result of years of legal work in connection with claims from the famed "Black Tom Explosion" caused by German saboteurs just prior to America's participation in World War I.

General Eisenhower summed up the situation in this period: "Within the War Department a shocking deficiency that impeded all constructive planning existed in the field of intelligence. The fault was partly within and partly without the Army. The American public has always viewed with repugnance everything that smacks of the spy; during the years between the two World Wars no funds were provided with which to establish the basic requirement of an intelligence system -- a far flung organization of fact finders."[339]

In July 1940, Military Intelligence Division established branch offices in New York, San Francisco and New Orleans; coordination problems appeared at the outset. The offices were supposed to obtain foreign intelligence through civilian sources returning from abroad, but the New York office encountered problems when Military Intelligence Division failed to establish a proper relationship between that office and the G2 of the Corps Area. In November 1940, the New York office was prohibited from handling any counterintelligence activities.[340]

In August 1940, G2 opened its Washington field office with Lt. Robert Curtiss as investigator and Lt. Garland Smith as his assistant. This office was solely for counterintelligence work and was manned by CIP agents. One of the first cases handled resulted in the discharge of a woman Communist agent in the War Department.[341]

In October 1940, the number of CIP agents had grown to the point where new credentials were needed; the silver and black Military Intelligence Division badge of World War I was supplemented by new Military Intelligence Division credentials of blue and white.

However, CIP agents could not be obtained fast enough to keep up with the growing number of cases and in October, the hiring of civilian agents was authorized. CIP case figures are not available but a hint of the tremendous increase in suspected espionage cases is revealed by FBI figures for the period. In 1938, the FBI had 35 such cases. During one day in May 1940, it received 2,871 complaints.[342]

342 The Story of the FBI, p 22, (Uncl).

One of the primary problems of the Counterintelligence Branch was an organizational plan for the Corps of Intelligence Police. On 2 December 1940, a memorandum was forwarded to General Miles over the signature of Colonel Bissell, who had replaced Colonel Lester as Chief, Counterintelligence Branch in September. The plan proposed:

"1. The Corps of Intelligence Police be organized under the direction of the A.C. of S., G2, War Department; personnel suballotted to Corps Areas.

"2. A Chief of CIP be appointed with a main office in Washington to be charged with training, preparation of manuals of instruction, recommendations for assignment, promotion and movement of CIP's, establishment of a school in which he is to act as commandant.

"3. Chiefs of CIP in each Corps Area to be appointed to operate under the direction of the G2, Corps Area: to receive reports of CIP's, review and transmit same to G2, issue instructions to CIP's to regulate and submit to G2's an account of expenses incurred in connection with CIP's and operatives. The Office of the Chief of CIP's normally to be removed from the Office of the A.C. of S., G2, Corps Area.

"4. School courses to cover essentials for investigators in order to provide uniform method throughout the service, with school established in Washington to start six weeks courses about February 1941 and 18 officers and 46 enlisted men.

"5. Funds for expenses incurred by CIP's to be paid from funds allotted to A.C. of S., G2, Corps Area except travel expenses from one Corps to another or to and from school. Funds for the establishment of schools to be determined."[343]

General Miles said that the basic principles seemed sound and that the details should be worked out more fully, particularly as to funds, school space, and selection of instructors and students. He questioned the necessity of a six-week course as compared to the FBI's one month course and suggested it be determined whether the FBI would share in the instruction.[344]

Available records do not show that the study was ever resubmitted, but within the next year all proposals were put in effect. On 27 January 1941,

343 Basic Hist of CIC - 1917-1943, 2 Dec 40, (Gen Rec Fac).
344 Ibid.

Maj. Garland Williams, reserve officer and Treasury agent, was appointed Chief of the Corps of Intelligence Police and commandant of the CIP Training School.[345]

Capt. H. G. Sheen and Lt. Hugh D. Wise, Jr., were selected in December 1940 and January 1941, respectively, to attend the regular FBI agent course, preparatory to the establishment of a CIP school in February. In the organization of the CIP school, the Commandant leaned heavily on other government investigative agencies to assemble a faculty. Both FBI and Treasury agents in the reserve were called to active duty and assigned as instructors. Pending their arrival, Sheen and Wise became instructors of the first CIP course "in addition to their other duties."[346]

The Status Problem

Unfortunately, the informal achievement of CIP aims failed to provide the CIP with official status as a Corps. Major Williams was verbally appointed Chief of CIP by Major Holbrook and available records show no formal order creating the position or giving it official sanction. Moreover, a valid question later arose as to whether a Chief, CIP, ever was authorized and whether the title was not actually Chief, Corps of Intelligence Police subsection, Counter Subversive Section, Counterintelligence Branch, Military Intelligence Division, Office of the AC of S, G2, War Department General Staff.[347]

Major Williams was well aware of the lack of authority for his position and in his final report of 9 July 1941, before transfer to the Infantry, he did not sign as Chief, CIP, but merely as "Major, General Staff." In his report, Major Williams recommended that the Secretary of War create "in the War Department, the Office of Chief, Corps of Intelligence Police, to work under the supervision of the Secretary of War." Williams recommended that the Corps be composed of officers and civilians as well as enlisted men and that the Chief, CIP should have the power to prescribe its regulations.[348]

Between the wars there had not been enough CIP agents to raise the problem of internal control, but with the Corps getting closer and closer to its World War I strength, the same problems of centralization or decentralization arose. At the outset of the pre-World War II period, G2, War Department, kept control of CIP agents: suballotting spaces to Corps Areas, controlling promotions on a single list, controlling transfers, and maintaining a foreign service list.

CONFIDENTIAL

In the November 1940 request for 246 more agents, General Miles asked, "that the Corps of Intelligence Police be set up as a group, to be assigned at the direction of this Division to Corps Areas and Departments."[349] The approval of 146 of the spaces requested on 26 December 1940, ignored this request,[350] although a letter sent the same day to G2s of Corps Areas and Departments from the Acting G2 of the War Department, stated that the anticipated increase in CIP would "be suballotted to Corps Areas and Departments to be used as investigators and undercover operatives."[351]

However, this suballotment of spaces failed to provide CIP headquarters with authority to secure from Corps Area G2s trained agents or experienced officers for transfer to other Corps Areas or Departments. In March 1941, requests from both Hawaii and Panama for trained CIP agents had to be denied because no Corps Area would release a single agent.[352]

CIP Gets a Chief

The year 1941 was a year of belated preparedness for the Corps of Intelligence Police. The Corps was assigned a chief and a training school, allocated ample funds and authorized to double its strength. The CIP Office Journal was opened on 27 January 1941, with Item #1 "Maj. Garland H. Williams, Infantry, reported for duty as Chief, Corps of Intelligence Police, and as Commandant, C.I.P. Training School."[353]

For the small headquarters staff, this rapid expansion imposed a heavy work load. The Office Journal states, "This was a period of tremendous activity, and the personnel assigned to the C.I.P. worked from the usual morning hours to almost midnight every night. An equal amount of work was done on weekends. The tremendous amount of work necessary to begin the school could not have been accomplished without the unusual cooperation given by all persons involved and this hard work could not have been performed if all the individuals concerned had not been imbued with a keen personal interest in the success of this new endeavor. During this same period a considerable amount of time was spent in connection with the organization work of the C.I.P...."[354]

Fortunately, in this period the CIP mission did not materially increase although General Holbrook later wrote,

"I realized that the ultimate objective in counterintelligence was combat counterintelligence, since eventually the FBI would be mainly charged with countersubversive investigations in the ZI. With this end in view our section worked out details regarding TO&Es for various combat units relative to counterintelligence..."[355]

While this planning was carried on at G2 level, the CIP staff faced the immediate problem of preparation for the possibility that plant security surveys, which had been a CIP responsibility in World War I, might again become a CIP mission. There were indications that the FBI which had handled such surveys after 1939 might ask to be relieved of its responsibility for making surveys of civilian establishments operating solely in the interests of the War Department, and that the CIP might have this work in addition to military camps, depots, arsenals and other establishments controlled by the War Department. There was a feeling at G2 level that it was improper and unnecessary for this work to be done by civilian agencies.[356]

More than offsetting any additional plant security work, however, was the reduction in workload occasioned by elimination of G2 responsibility for handling Army public relations. This task was assigned G2 in 1918, and by 1921, under General Pershing it became such an important function that it required much of the time of CIP agents in the field. In February 1941, the Bureau of Public Relations was organized and placed directly under the Chief of Staff, freeing the intelligence organization of a burden that was becoming increasingly heavy.[357]

Coverage requirements, however, continued to increase faster than personnel could be provided. The G2, Fourth Corps Area at Atlanta, reported CIP requirements at nine training camps with military populations ranging from 20,000 to 76,000 and at 25 airfields. An "urgent" need for a CIP agent was obvious at the Charleston Ordnance Depot, which handled the bulk of artillery ammunition in the area and had only four officers and one enlisted man supervising more than 1,000 employees, the majority recently hired. In the adjacent community there was only one civilian policeman for supervision.[358]

Authority for manpower became much easier to get than the manpower. In January, Corps Areas and Departments were notified of new CIP allotments in the Detached Enlisted Men's List. MID withheld 46 spaces for a reserve and assigned 142. Corps Areas, which had been depleted six months before, now had a minimum

358 CIP Corres #134, dated 7 Feb 1941.

f eight agents and Third Corps had 13 agents allotted. Overseas departments aried; an allotment of five more agents went to the Puerto Rican Department, while 16 were provided for the Philippines.[359]

On 20 February, four months ahead of schedule, an additional 100 spaces were allotted to CIP. The Corps then had 14 master sergeancies available; nearly as many men in this one grade as it had total authorized strength the year before.. In announcing the new quotas, which strengthened Corps Areas, but not Departments, MID reserved 104 spaces for future assignment.[360]

By May 1941, there was a backlog of 2,600 cases in the Corps Areas and it was evident that more manpower would be needed. A staff study asking for 225 additional spaces, cited the backlog and called attention to the fact that during World War I ... "It was necessary to have approximately 500 agents of the Corps of Intelligence Police with the A.E.F. alone." General Miles asked that all the spaces allotted be in the first three grades because "...The enlisted men of the Corps of Intelligence Police live outside military reservations and must maintain a scale of living commensurate with the specialized character of their assignment..." The request was approved one week later.[361]

Distribution of the 513 spaces was made on 23 June. Despite a survey two weeks before, distribution did not follow the requests of field units. Instead, ome Corps Areas and Departments were surprised for the first time in their istory to receive more men than they had requested, while other units were nonplussed when they received less than the number requested since this was the ay it had always been. Actually, mobilization was reaching a point where G2 knew from future plans far better than the units what the future workload would be. In this distribution was an allotment of two spaces to Panama to provide agents to Trinidad and St. Lucia; an allotment of nine spaces to Puerto Rico to provide agents at Antigua, Bahamas and Jamaica; and an allotment of six spaces to Ninth Corps Area to provide six agents for Alaska.[362]

Variations in workload produced temporary surpluses and shortages of CIP agents stationed in the lower echelons. In November 1941, this problem was resolved by an AG letter to the field which stated,

> "Information has been received by the War Department to the effect that in many instances some Corps Areas are temporarily in need of more members of the Corps of Intelligence Police than are locally assigned while, at the same time, other Corps Areas could function efficiently with fewer C.I.P. agents.

359 CIP Corres #87b, dated 2 Jan 1941.
360 Ibid, #83, dated 20 Feb 1941; and #4, dated 14 Mar 1941.
361 Ibid, #98, dated 20 May 1941; and #97, dated 27 May 1941.
362 Ibid, #53, dated 10 Jun 1941.

"In view of the fact that only the War Department is capable of determining the varying C.I.P. personnel needs of the several Corps Areas and Departments and, in order to provide an expeditious administrative method effecting the rapid movement of C.I.P. agents from places where their services can best be spared to points in other areas where unforeseen and dangerous developments have occurred, such temporary changes in station will hereafter be announced by written or telegraphic instructions issued by the Military Intelligence Division War Department."[363]

During the year, G2, War Department, also was growing rapidly. By Pearl Harbor, 172 officers and 599 civilians had been added to the division which by then totaled 848 persons. Its strength increased 10 times in 12 months. Its 1940 budget was more than doubled and totaled $360,000. It was a going concern when the war hit, but its cyclonic growth did not provide time for intelligent planning or the assimilation of personnel into smoothly operating teams.[364]

Organization and Manpower

In early 1941, the Military Intelligence Division, War Department was organized into five branches; among them was the Counterintelligence Branch. This branch was further developed into four sections, one of which was Domestic Intelligence, originally called Counter-Subversive. Domestic Intelligence had two sections directly concerning the Corps of Intelligence Police. The Investigating Subsection assigned cases to CIP detachments through various commands and received cases from the various areas. This subsection also acted as case control, and saw that leads were forwarded. In addition, it was operational and directly controlled the activities of all agents assigned to the Washington Field Office.

The other subsection was labeled Corps of Intelligence Police. It was purely administrative and directed the activities of the Office of the Chief of CIP. This office was "to keep abreast of the investigative needs of the Military Establishment" and, based on anticipated needs, to recommend allotments of personnel, grades and ratings pertaining to CIP in Corps Areas and Departments. In addition, it was to prepare courses of instruction for CIP Schools and formulate regulations and training for CIP.

By February 1941, the Investigating Subsection had grown from one officer and one clerk in 1940 to more than a hundred persons and a monthly case load of about 1,500. The CIP Subsection had 11 persons. An August survey of the Office,

363 CIP Corres #80, dated 12 Nov 1941.
364 Hist Mil Intell Div Vol 3, p 29, (Secret).

Chief, CIP, of authorized and actual CIP procurement showed after many months of effort a deficit of 34 percent in actual procurement.[365]

Corps Areas			Departments & Other		
Unit	Authorized	Had	Unit	Authorized	Had
First	22	15	Alaska	6	2
Second	40	40	Hawaii	19	13
Third	52	36	Philippines	32	19
Fourth	41	34	Panama	16	15
Fifth	24	22	Islands[366]	9	0
Sixth	29	17	Trinidad	8	1
Seventh	22	20	Iceland	12	0
Eighth	35	31	MID	25	28
Ninth	44	29	Reserve	50	
			TOTALS	513	338

This was in spite of repeated urging to bring the Corps up to strength at once.[367]

Problems involved both quality and quantity. When the January 1941, distribution of allotments reached the field, new problems arose, particularly in the Departments. Any unit not making efforts to fill its quotas lost them as Fourth Corps Area learned in August when its allotment, which by then was 59 agents, was cut back to 41 agents.[368]

The Philippine G2 said he could fill his 13 CIP vacancies locally except for two men. For those agents he needed "two former expatriates, American born Japanese with ROTC training, one of Italian and one of German backgrounds, education and training similar..."[369]

Efforts to meet this requirement drew blanks from the various Corps Areas and in late January, several post commanders where selectees were assembling were queried.[370] Finally Third Service Command submitted the names of two men but added "Both these men are being considered for CIP duty with this headquarters but neither was regarded as a first-rate prospect."[371] The fact was

371 CIP Corres #20, dated 30 Jan 1941.

that all areas were having such a hard time finding suitable men to fill their own vacancies that they had scant time or interest in the procurement problems of other areas.

In February 1941, the Philippine G2 was authorized direct communication with the Hawaiian G2 in the hope that his requirement could be met.[372]

The Panama G2 asked if high school graduation requirement could be waived for men "who have qualifications not gotten in high schools, which include good common sense and the ability to arrive at sound decisions."[373] Authority to waive both educational requirements and age limits was granted by MID for several Corps Areas and Departments.[374] By February, however, MID was becoming worried about the many waivers and General Miles informed Eighth Corps to tighten up requirements. If an area was unable to fill its allotment with suitable type, men could be procured from other areas.[375]

The reason that age men were being requested for CIP duty was explained in a letter from the G2, Fifth Corps Area, who rebutted MID's suggestion that personnel be found among the selectees:

> "...they are required to complete basic training for three months before becoming available...must serve four months at $21.00 despite being granted the grade of sergeant when appointed to CIP... Selectees are drawn into the Army to serve one year. Their military service would therefore terminate about the same time that their training and experience had ripened sufficiently to give them any value to the CIP... this office feels that the possibilities for suitable personnel among selectees are not encouraging..."[376]

Further problems in obtaining CIP agents were outlined by the G2, Ninth Corps Area who wrote MID, "One major difficulty encountered in finding suitable candidates for the CIP is that men who possess the desired qualifications and who have completed their basic training are the men who are now noncommissioned officers in key positions and with more favorable opportunity for future promotion than the CIP can offer..."[377]

Field G2s were filling quotas but were still short of personnel meeting the qualifications for specialized problems. In requesting an additional quthorization, the G2, Third Corps Area wrote MID that out of well over a hundred interviews by his officers, he had a few CIP prospects but still needed a man who could speak High German fluently.[378]

To ease his procurement problem, Lt. Col. M. S. Eddy, (later Lt. Gen.) G2 of the Third Service Command, contacted a number of leading casualty insurance companies to determine whether or not any of their salaried adjusters or investigators were going to be inducted. Soon Colonel Eddy not only had leads for his own area, but because of his contacts with nation-wide organizations was able to provide leads on prospective personnel to other areas.[379]

Shortage of Qualified Manpower

By mid-April 1941, the shortage of qualified prospects was being felt even by Colonel Eddy. The Third Corps Area reported that the shortage would become acute if more men were not assigned before the opening of the next CIP class in May.[380] MID replied that more spaces were anticipated and field G2s should institute necessary inquiries and investigations to locate suitable personnel.

MIDs said men of higher education than the high school graduate minimum were desired and that there should be included among Corps of Intelligence Police personnel some individuals whose education had been along mechanical, architectural or electrical engineering lines or individuals with college education who had been engaged in responsible positions in factories or industrial enterprises. Such men were desired in anticipation of plant survey requirements, although the field was not told this.[381]

MID stated that in as much as there were many individuals serving in the Army who had such high standards, it was entirely feasible to obtain them. Such people could be located by contacting civilian agencies and having them report where these men were now assigned. For such leads, MID recommended contacting:

> "Federal, State and Municipal police and investigative agencies; Bar Associations; Federal and District Attorney offices; Private Investigative Agencies; College Alumni Associations; Engineering Societies;

381 CIP Office Journal, Item #25, dated 17 Apr 1941.

Universities and Colleges; Industrial Enterprises; National Associations related to the work of the type performed by the Corps of Intelligence Police."[382]

Three policy decisions from the Office of the Chief, CIP, added to 1941 procurement problems. In March, it was decided that Negro CIPs would have to be employed if many dangerous areas were to be properly covered, particularly since the FBI could not hire them because of civil service regulations. In Pittsburgh, for example, CIP was enabled to furnish the FBI with reports it had long wanted.[383]

A second decision, made in April, slowed down procurement but provided essential security. The Chief ruled that a Personal History Statement (PHS) would be furnished for all personnel assigned to the Corps or considered for assignment.[384]

Finally, in May when the request to double the strength of the Corps was submitted to the Army Chief of Staff, MID approved the CIP headquarters recommendation to dispense with civilian investigators. It was believed that the Army had enough drafted manpower that trained investigative personnel could be found in its ranks or that young men of legal training or linguistic ability with potential ability as investigators could be easily developed as such.[385] Corps Areas were given three months to eliminate civilian investigators.[386]

In August to help ease the personnel situation, permission was obtained from the Adjutant General to enlist men for CIP from National Guard units.[387]

Of great importance during this period was the procurement of linguists. When screening of Replacement Training Centers failed to provide sufficient men, the CIP headquarters turned to the tactical units. The commanding generals of all four armies were ordered to forward lists of names and essential data on men who spoke Icelandic, Danish, Norwegian, Swedish, Russian, Portuguese, Japanese and Chinese. The degree of proficiency in speaking, reading and writing these languages was to be shown.[388]

The results of Replacement Training Center screening are shown by the Eighth Corps Area. The Infantry Replacement Center at Camp Wolters, Texas,

382 CIP Corres #101-2, dated 17 Apr 1941.

eported 10 soldiers who spoke German; four that spoke Norwegian and one that spoke Japanese. The Eighth Corps G2 at Fort Sam Houston was ordered to obtain Personal History Statements and investigate the suitability of likely appearing prospects. MID labeled this an "urgent" request as personnel with such language requirements were particularly desired and, if suitable, would be assigned to the Washington, D.C., Field Office.

The Eighth Corps' report of interviews revealed that only one of the 15 men had a high school education. One had a brother in the German Army; another was a "mental case and some action was being considered by the local authorities;" one was under surveillance because of pro-German contacts; another was a native of Poland and suspected of having relatives there; one could speak only poor English; one could speak German but could not read or write it; another had relatives in Germany and Austria. The roster read like a description of the first 50 CIP agents of 1917.

Out of the entire group there was only one whom the G2 felt he could recommend and this man did not fully meet the educational requirements. The G2 added that the men had been interviewed by an officer who was an experienced investigator and the G2 had complete confidence in his ability, judgment and rating on the above listed men.[389]

Efforts in other Corps Areas to find fluent German linguists encountered similar difficulties, as did efforts to find qualified Negro agents. In July 1941, Sixth Corps reported that after four months of searching only one suitable Negro agent was located.

In October 1941, when Negro Civil Service employees were authorized for the War Department the problem became critical.[390] As the year progressed it became evident that the requirements for linguists would only be met by training personnel, and in November 1941 the Army Language School was organized as part of the Fourth Army Intelligence School at San Francisco. Meanwhile, two other specialized problems had been recognized. In March 1941, cryptographic needs had resulted in the establishment of the Army Security School at Fort Monmouth, New Jersey, and in May the Troop Information and Education Branch had been activated to handle counterpropaganda.[391]

Promotional difficulties added to the recruiting problem since latrine gossip spread the word that while the Corps numerically had more grades because of its increased strength, it still suffered on the percentage scale in comparison to the opportunities for promotion existing in other sections of the various headquarters

389 CIP Corres #82, #84, dated 28 July 1941.

0630

to which CIP agents were assigned. In the First Corps Area at Boston, Lt. Col. A. R. Bolling, the G2 (G2 of the Army following World War II) wrote the War Department:

> "As I am unaware of the method of promotion within the CIP, other than by recommendation, this communication is forwarded with a view to placing my recommendations on file... I base my recommendations on personal observation of the soldiers concerned and feel that if they were in a line organization at this time they would have attained, without any difficulty whatever, at least the grades I have recommended."[392]

Two weeks later he again wrote:

> "A concrete promotion system would tend to create an incentive and improve morale."[393]

In the Third Corps Area at Baltimore, Lt. Col. M. S. Eddy, G2, wrote:

> "Duty sergeants of the Corps of Intelligence Police are now working on permanent assignments in the cities of Pittsburgh, Philadelphia and Baltimore, as well as other small communities in the Corps Areas. In the three cities named the cost of living is high, and going higher and a duty sergeant is likely to find it difficult to live and do his work properly on the $118 a month base pay and commutation of quarters given him... several of the men...are qualified investigators of considerable experience, who in civilian life were making an appreciably larger amount of money, and whose background is such as to justify a higher rating than sergeant..."[394]

MID acknowledged the problem of increased living expenses and maintenance and said efforts were being made to get a percentage of higher grades.[395]

An effort of the G2, Third Corps Area, to obtain a specialist rating for his CIP agents resulted in a letter from the Adjutant General dated 20 March 1941, stating curtly that there was no specialist allotment for the CIP.[396]

In July 1941, the CIP made its first effort to secure recognition of the military specialty "Investigator," when it submitted to the Adjutant General a definition of the term for use by classification officers.[397]

Centralization vs Decentralization

Procurement and promotion of CIP agents was completely decentralized to Corps Areas and Departments by an AG letter of 11 January 1941, which allotted both numbers and grades. The letter abolished the CIP single promotion list which had been in effect 11 years, since 11 July 1930, and the requirement of prior approval of MID for CIP selections. For statistical purposes, subordinate commands were to furnish special reports of each change of status. No special qualifications for personnel were required except that men "properly qualified" should be selected or promoted.

By March 1941, decentralization of selection and assignment of CIP agents had not worked out and Corps Areas and Departments were ordered by the Tentative Regulations for the CIP to "...submit recommendations to the War Department for the selection, transfer and promotion of qualified enlisted men in order to bring the CIP to present authorized strength." A previous warning was repeated: Under no circumstances will the prescribed allotment be exceeded.[398]

Less than two weeks later, this requirement was revoked for all overseas Departments.[399]

Less than two months later field protests resulted in a complete reversal of policy when on 28 May, selection, transfer and promotion of CIP personnel were decentralized to the various Corps Areas, but permission still had to be obtained of MID to waive qualification requirements.[400]

This second change was made over protests from the Office of the Chief, CIP, who pointed out that this made it impossible to organize an investigative agency on a national scale and would result in the creation of 14 distinct, localized investigative agencies with resulting inefficiency and lack of effectiveness.[401] Years afterward, it was evident that this was exactly what subversive personnel, who had infiltrated the administration, desired.

The reversal was precipitated by the issuance of TM 30-225 on 20 March 1941 and it was hoped that the manual would standardize CIP operations in the Corps Areas. To avoid the delays inherent in staffing the regulations through to an approved manual, they were issued as "Tentative" and remained so for the duration of World War II. It was distributed to the field with the notation that

401 CIP Office Journal, Item #50, dated 28 May 1941, p 8, (Cen Rec Fac).

comments and suggested changes were to be submitted by 15 September 1941.[402] Some Corps Areas did not wait long to protest.

Centralized control in the Office of the Chief was regained for another two years following Pearl Harbor, when Captain Sheen pointed out to Colonel Holbrook that during his tour of five Corps Areas the month before, he observed that under the decentralization policy the quality of personnel was not up to the CIP standard. Colonel Holbrook approved a return to centralized control and the transfer of substandard officers. Further, he directed that a letter be sent to all Corps Areas requesting a report on all members of the CIP who had not been properly investigated.[403]

On 16 December 1941, a confidential letter was sent the commanding generals of all Corps Areas by the Secretary of War directing that effective 22 December 1941, "assignments to the Corps of Intelligence Police and transfers thereto within the Corps Areas will be made only with the approval of The Adjutant General. Such approval will be given only upon the basis of a report of investigation with respect to the individual, furnished The Adjutant General at the time when the request for approval of assignment or transfer is made."[404]

This proviso lasted for two years, but not without protests. On 24 December, Brig. Gen. F. E. Uhl, head of Seventh Corps Area, wrote to The Adjutant General that this order was "...centralization to a degree that seriously interferes with the proper performance of the responsibilities assigned to the Corps Area commander..."[405] To this the Adjutant General replied on 6 January 1942:

> "The instructions contained in the basic communication were issued after decentralized procedure had been tried and found unsatisfactory. In a majority of cases soldiers were transferred into the Counter Intelligence Corps (formerly Corps of Intelligence Police) without having been investigated and, in few instances where an investigation was made all leads were not developed, the soldier's own statements being accepted without attempt at confirmation. ...The decentralized system served to introduce into the Counter Intelligence Corps a large percentage of agents whose character, education, adaptability and experience in no way qualified them for the duties which they would be required to perform..."[406]

0633

To centralize or decentralize? Some years later Col. Hugh D. Wise, Jr., CIP Executive Officer in this era, termed this question "The eternal conflict!"

Comments on other provisions of the Tentative Regulations for the CIP were solicited by G2 throughout the year. Second, Fifth and Seventh Corps Areas had no comments. Puerto Rico had none. Most had a few minor points. But in Ninth Corps, Lt. Col. John H. Wilson, G2, had plenty to say.

One of the first objections was to the age limitations of 24-34 years, since there were many qualified investigators both below and above this bracket. Both Hawaii and Ninth Corps argued for a reduction to 21 years but MID replied that 24 years was the minimum age necessary to obtain maturity. Ninth Corps argued the point again, five months later, stating in its September 1941 letter,

> "...The most suitable members of the CIP that have been obtained in this Corps Area have come from among the selectees. Now that the upper age limit for selectees is 28 years, the field of choice is considerably narrowed, especially since the best men that have been obtained are in their early thirties. It is becoming increasingly difficult to find the especially desired qualification of previous investigative experience among men under twenty-eight and it is becoming increasingly necessary to select men on a basis of education and character only. In order to widen the field of selection, the lower age limit should be reduced to twenty-one. In fact, it would be desirable to have authority to enlist men directly from civil life for the CIP. This would open a field not now open due to the low age limit of the draft..."[407]

First, Eighth and Ninth Corps objected to the requirement of putting men through basic training which prevented direct enlistments to the Corps. Lieutenant Colonel Bolling in First Corps at Boston, argued, "...While in training with other recruits, he becomes known as a member of the military service to soldiers who later will be assigned to units throughout the Corps Area. A member of the CIP does not require basic military training to further his future in the service..."[408]

Colonel Bolling recommended the establishment of a basic and advance CIC school so that all training, military and investigative, would be standardized and identity would not be compromised by having to attach agents to units within the Corps Areas.

---

407 Regulations CIC, 1941-1942, File #8, 8 Sep 41, (Cen Rec Fac).
408 Ibid.

In reply, MID wrote,

"...MID agrees with you that it is not essential that an investigator in the Corps of Intelligence Police specifically complete basic military training. In several instances this Division has extended waivers to individuals who have had some type of military training in the past... Primarily, we are concerned with securing operatives who can carry on investigative work... This type of ability is not necessarily connected with military experience or proficiency..."

MID felt the necessary training in small arms could be obtained through liaison with other law enforcement agencies and obtaining the use of their ranges and there was no need for a MID Basic Military School.[409]

In May 1941, at a conference between the Chief, CIP, and G2, the policy was established that to secure personnel promptly in the early organizational stages of CIP, basic training would not be considered essential for CIP personnel. Emphasis was to be placed on securing men with investigative experience.[410]

Two months later when Fifth Corps had lined up two investigators and asked for a waiver on basic training, General Miles disapproved the request and wrote, "It is deemed advisable for CIP investigators to complete basic military training in order that they may carry on their work with military personnel in the most efficacious manner."[411] This statement was reinforced by a letter from the Adjutant General on 2 August 1941, which included, "It is the policy of the War Department to send all men...for thirteen weeks' basic training."[412]

Case loads were piling up and Corps Areas G2s did not want to lose the services of a trained investigator for three months while he took basic military training. In reality, requirement was not rigidly enforced until the first untrained men were drafted from the Corps Areas for overseas combat work as preparations for the invasion of North Africa got under way a year later.

Administrative Problems of TM 30-225

There were protests from the field on the number of reports required by TM 30-225: spot, periodic progress on cases, monthly summary, quarter efficiency, morning reports and rosters both open and secret, reports of change and particularly the agent's daily activities which some agents claimed took them more time to fill out each day than it did to write up their reports. Ninth Corps

409 Regulations CIC, 1941-1942, File #8, (Cen Rec Fac).
410 CIP Office Journal, Item #30, dated 22 Apr 1941.
411 CIP Corres #204, dated 18 Jul 1941.
412 Ibid, #8, dated 2 Aug 1941.

Area felt that MID would be buried in a mass of paper if it forwarded copies of all its letters; reports on minor cases in progress or pending; agent status. In reply, MID said that the daily report of activities protected the agents, and instances had been encountered by investigators in which unfounded accusations were made and frequently disproved by records of daily activities. Progress reports were necessary to prevent cases from being put aside for long periods to await some outside action.[413]

TM 30-225 specified a procedure for maintaining counterintelligence files so that there would be a nation-wide uniformity of numbering, indexing, and assembly of dossiers. This was generally welcomed in the field.

However, Eighth Corps felt that all field files should be kept at a minimum and Sixth Corps felt that the entire section on file procedures should be deleted from the regulations.

There were comments on most other provisions of the regulations. Travel was one. The G2 at Hawaii repeated the request of his predecessor of three years before and asked that regulations be included to provide for passage by commercial vessel or on military transports, first class, for CIP agents to conceal their identity. Again, there is no record of any action. Such travel was finally authorized in July 1941.[414]

Publicity was another CIP problem in this period. Since activities were increasing so rapidly, it was virtually impossible to keep knowledge of all cases away from the newspapers. The regulations called for:

> "every proper effort to avoid publicity" and instructed that if a "representative of one of these publicity agencies is persistent he should be referred to the proper Assistant Chief of Staff G2 using the name only of the officer concerned. A verbal report should be immediately made to the officer whose name has been given."[415]

> The C.I.P. Subsection later reported that G2s had "been advised that there is no method of completely preventing publicity on cases involving local interest and the best solution generally arises from proper relationship between the Corps and the various newspapers. An out-and-out attitude of complete secrecy normally results in complete exposure of all information rather than properly supervised publicity."[416]

---

413 Regulations CIC, 1941-1942, File #8, (Cen Rec Fac).
414 Ibid.
415 Ibid.
416 Ibid.

The regulations made a welcome distinction between CIP investigators and civilian investigators, who were authorized only when they possessed "unusual or unique qualifications" which could not be "readily developed within the Corps itself or when necessary to the success of a particular investigation," and, only then for that particular job. They were to be designated "Special Employees."

The sections which required that personnel of the Corps of Intelligence Police wear civilian clothes unless otherwise specifically instructed drew protests. The regulations stated it is:

> "...Highly desirable that the identity of the personnel of the Corps of Intelligence Police be kept secret from the general public and military personnel in general...it is desirable that office space for detachments of the Corps of Intelligence Police not be located on military reservations or in buildings with other military units. Office space should be secured on private premises whenever possible. The office should be disguised by use of a name such as a nonexistent sales agency, canvassing firm, or similar business which would have men working in and out of the office."

In Ninth Corps Area, the G2 wrote MID:

> "In this Corps Area, the present eight members of the CIP are assigned to different Corps Area Service Command units, except two who are assigned to the unit at Fort MacArthur. Each man is carried on the records as a member of the 'Detached Enlisted Mens List' for his unit. He does not show as a member of the Corps of Intelligence Police; this information is in the confidential records of the unit.[417]

> "Some of these men drew commutation of rations and quarters, while others live with their units. None are prohibited from coming to the Intelligence Office and in all cases personnel records and pay rolls are prepared at their assigned stations."

Ninth Corps G2 admitted these procedures were different from that prescribed in the Corps of Intelligence Police Regulations but argued the procedure being followed was better for field conditions in Ninth Corps Area than that prescribed in TM 30-225.

The letter continued: "...While many investigations will have ramifications that lead to distant points, the majority of them will require extensive investigations in the vicinity of Army establishments. The

417 CIP Corres #160-163, dated 22 April 1941.

bulk of the troops in this Corps Area are concentrated in five general sections of the Corps Area; namely, the vicinities of Fort Lewis, Washington; Fort Ord, California; San Luis Obispo, California; San Diego, California and Riverside, California. None of these are in the vicinity of the Corps Area Headquarters, and because of the great distances involved it would be entirely impracticable to handle investigations through CIPs located at a central point. In addition, there are many important air fields at places other than the localities mentioned above to which CIPs should be assigned, since the importance of aircraft and their susceptibility to sabotage may be expected to give rise to an unusually large number of investigations.

"Practically all investigations will involve both Army reservations and the adjacent community. The CIP in uniform can move around on the Army post without attracting attention, and will have entree to installations to which he would not be admitted in civilian clothes without identification. It has always been the custom to have some enlisted clerical help in the Intelligence offices of the Corps Area and of the military posts. Hence, it will attract no undue attention to have the CIP work out of the intelligence office. On the contrary, it will facilitate greatly both investigations on the military reservation and the supervision of such investigations."

Ninth Corps G2 said, "Some of the more important new camps were not near towns of any appreciable size and a CIP living in an adjacent village would attract attention; whereas he would be unnoticed if in uniform on the military post."

"...Except in exceptional cases," the letter continued, "this office questions the advisability of obtaining offices for CIPs on private premises and attempting to disguise such offices by the use of a name, such as a nonexistent sales agency... Eventually, people of adjoining offices or residences will begin to suspect the office of illegal activities. The successful use of subterfuge over a long period of time is extremely doubtful, and a disclosure of such use, unnecessarily, would be damaging to the prestige of the Army.

"Morning reports and pay rolls should be made out by the Corps Area G2 only for the CIPs who are not assigned to posts. CIPs will be subject to sickness and other changes in status that require entries on Sick reports or Morning reports and these matters can be more conveniently handled at the stations where the man is physically located. If the pay rolls for all men are made out at Corps Area headquarters, payment will be delayed several days in reaching some CIPs. This is not fair to the enlisted man with his small pay."[418]

418 CIP Corres #160-163, dated 22 Apr 1941.

0638

Ninth Corps Area G2 said that he proposed to continue his own procedures unless ordered otherwise. In other Corps Areas, the problems outlined by Ninth Corps occurred. In Chicago, in Sixth Corps, where the CIP agents established a down town undercover office, the agents had a shock at Christmas time when in the window of an adjacent office appeared a sign "Merry Christmas Army!" In Third Corps Area, delays in getting pay checks to CIP agents from the headquarters at Baltimore to a post as near as Aberdeen Proving Ground, 30 miles away, were frequent occurrances.

No Reply to Ninth Corps

A reply was prepared by the Counter Intelligence Corps subsection but Colonel Lester vetoed it saying, "No reply is considered necessary to this letter from IX Corps. They do not want to follow Tentative Manual exactly and the Corps Area Commander concurs."[419]

However, the unsent letter represented the viewpoint of those preparing the manual on the much debated question of concealment of CIP identity. The letter said,

> "The assignment of Corps of Intelligence Police personnel to the Corps Area Service Command in a Detached Enlisted Mens' List status with no reference to the type of duty on which engaged generally excites the interest and curiosity of other military personnel, and it quickly becomes common knowledge as to the mysterious character of the assignment of work performed by the soldier, the result being that he is strongly believed to be engaged in Military Intelligence activities. Such records will not maintain the desired secrecy regarding the identity of Corps of Intelligence Police personnel."[420]
>
> "...all enlisted personnel of the Corps of Intelligence Police should draw commutation of rations and quarters and no personnel of the Corps of Intelligence Police should be regularly quartered or rationed with military units. As a practical matter it is not thought that there would never be an occasion when a Corps of Intelligence Police investigator visited the Military Intelligence Office on a post, but such visits should be unusual and should not result in his being identified by other headquarters personnel as a member of the Corps of Intelligence Police. The individual should call at the Intelligence Office in connection with official matters in the same manner that civilians or other persons wearing civilian clothing call at the office and confer with Intelligence Intelligence Officers. Such visits should be necessary only in

419 CIP Corres #16, dated 18 Jun 1941.
420 Ibid, #67, dated 3 Apr 1941.

exceptional circumstances and the officer in charge of the Corps of Intelligence Police for the Corps Area should confer with the investigators at points other than a military headquarters."[421]

The Chief, CIP, said, "...when personnel records of an enlisted man assigned to the Corps of Intelligence Police were maintained outside Military Intelligence Offices, it should be assumed that his identity would become generally known. However, if the regulations were carried into effect, the only record of a Corps of Intelligence Police operative in a Corps Area or Department would be located in the Office of the Assistant Chief of Staff, G2, in a Corps Area or Department headquarters. The only other record for such an individual would be maintained at the Office of The Adjutant General in the War Department. In the Corps Areas and Departments, The Adjutant General would have a record of the Corps of Intelligence Police only by total numbers and grades. The unsent letter continued:

"...decentralizing the control of investigative work is considered to be very sound. It is believed feasible to have one officer in Corps Area headquarters to handle the administrative work of the Corps of Intelligence Police personnel throughout the Corps Area and his office should be the sole Corps of Intelligence Police administrative headquarters. In each post, camp or station or area where Corps of Intelligence Police investigators are stationed, a specially qualified Intelligence Officer should be designated as officer in charge of the Corps of Intelligence Police and should actually supervise and direct investigative work under the general supervision of the Assistant Chief of Staff, G2 in Corps Area headquarters. The investigators should be stationed either temporarily or permanently in the area where their work is being performed. They should be kept extremely mobile in order that you may concentrate a larger number at any point where work shows an increase or strong protective measures are considered feasible...

"...it is contemplated that there will be many occasions when a Corps of Intelligence Police operative will wear a uniform in order to move around a military post easily and associate with military personnel. However, this will not necessitate his being permanently assigned to a unit on the post. A temporary assignment arranged for in a normal manner might be desired for the accomplishment of a specific purpose. It is especially desired by this Division that Corps of Intelligence Police Investigators not be utilized as clerks in Intelligence Offices. This Division cannot agree with you that it will attract no undue attention to have a Corps of Intelligence Police operative work out of the Intelligence

421 CIP Corres #160-2, dated 22 Apr 1941.

Office. It might appear that a person working in a Military Intelligence Office is attracting no undue attention and this is probably true of the large mass of soldiers who have nothing to conceal. On the other hand, it is believed we should assume that an enemy agent or saboteur or an individual engaged in subversive activities, would make a special point of identifying the persons who operate from a Military Intelligence Office.

"...it is believed that it is entirely feasible for an individual of the type now being selected for the Corps of Intelligence Police to live in a civilian community near an Army post and not come under the suspicion of the inhabitants. There are many assumed poses that such an officer could adopt.

"...it is entirely possible for an office to be operated in the manner provided for in the Regulations. It is suggested and it is entirely proper, and generally desirable, to move such offices periodically. In those situations where only one Corps of Intelligence Police investigator is stationed in an area, his 'office' will actually be his home or in his private quarters. Records kept in such places should be held to an absolute minimum or provision should be made for security commensurate with the security ordinarily maintained in a business office."[422]

In its September comments, Ninth Corps Area again criticized the provisions for case control at lower echelons. Said its G2,

"The division of responsibility for investigations on the basis of the boundaries of Post, Camp or Station is impracticable. Based on the experience of hundreds of cases, no case is known to this corps area that did not cross such a boundary at some time or other in the course of the investigation...the Corps Area G2 should have full control of all investigations and not merely have coordinating or supervising functions. This means that all post intelligence officers, in addition to their other duties, should be agents of the Corps Area Commander for military intelligence. The supervisory and coordinating functions now assigned to the Corps Area Commander are insufficient..."[423]

However, the principal MID problem was one of control at its level where demands for agents at overseas bases were growing. In July 1941, MID notified the Corps Areas, "It will be necessary in the future for trained personnel of the Corps of Intelligence Police to be transferred to the various base commands now being established, and at this time it is desired to transfer a small number of Spanish-speaking investigators."[424]

422 CIP Corres #160-2, dated 22 Apr 1941.
423 Regulations CIC, 1941-1942, File #8, (Cen Rec Fac).
424 CIP Corres #6, dated 31 Jul 1941.

In anticipation of growing procurement problems, MID had its Tentative Regulation requiring that an officer in charge be designated for each CIP unit in the field backed up by an Adjutant General's letter, "By Order of the Secretary of War" which stated,

> "1. In order to provide adequate assistance for Corps Area and Department Assistant Chiefs of Staff, G2, and with a view toward securing the utmost efficiency from the operation of local detachments of the Corps of Intelligence Police, it is desired that immediate action be taken to select a qualified commissioned officer for assignment to duty as Chief of the Corps Area or Department C.I.P. detachments.
>
> "2. The officer so selected and designated should be a thoroughly capable and experienced investigator possessing practical knowledge of current investigational methods, preferably a graduate of the Officers' Training School, C.I.P. or of the special course conducted by the Federal Bureau of Investigation. He should possess leadership and administrative ability qualifications...
>
> "3. The Chief of the C.I.P. detachment will function under the Corps Area or Department A.C. of S., G2, and will exercise active supervision over the work of all members of the detachment.
>
> "4. In consideration of the current requirements of the service necessitating the more or less frequent turnover of commissioned staff personnel, it is desired that the Chiefs of local C.I.P. detachments be selected with a view to their retention on such duty without permanent change in station, during the period of the emergency. Such personnel will not be transferred elsewhere or assigned other duties without approval of the War Department. No increase in allotments of personnel for this purpose is authorized."[425]

The letter required Corps Areas and Departments to reply showing their action on the letter. The G2, Second Corps Area at New York, complied with this order and secured an over-age in grade major for the position, only to have him selected nine months later as commander of the first CIC combat unit. (See North African invasion.)

Time for preparedness was running out fast in 1941. In April, Yugoslavia surrendered and Greece was all but conquered. In May nearly 1,500 persons were killed in one day's air raid on London. On 27 May, President Roosevelt proclaimed an unlimited emergency. In June, Hitler attacked Russia and the

425 CIP Corres #12, dated 12 Nov 1941.

Communists in the United States overnight changed from sabotage of the Capitalist war to down with the Fascists. All German consulates were ordered closed and their staffs withdrawn. In July the United States occupied bases in Iceland while the Nazis moved deep into the heart of European Russia. In September, President Roosevelt ordered the Navy to "Shoot first," any Axis raiders in U.S. zones, and pledged every effort to defeat Germany.

Selection of CIP Chief

In January 1941, Maj. Willard A. Holbrook, Jr., then Chief of the Domestic Intelligence Section, Counterintelligence Branch, MID, came in contact with Garland H. Williams, an Infantry Reserve major, who was a former customs agent, then assigned as a district supervisor at New York for the Bureau of Narcotics.[426]

Major Holbrook was impressed with Major Williams' investigative record; his good appearance; his educational background; and his energy. A commandant was needed to handle the innumerable details in connection with the opening of the first CIP Investigators' Training School at Washington, D.C., the next month. Holbrook has stated he offered and Williams accepted on 21 January his extended active duty orders were issued the 24th and he reported the 27th. But there is no mention of his position as Chief of CIP in his letter order which merely reads "...for duty with the Assistant Chief of Staff, G2..."[427]

Major Williams served as "Chief" until 5 August 1941, when he was assigned to the Infantry School Service Command. In January 1942, he was assigned to OSS. Meanwhile, Capt. Donald B. MacDonald was assigned to replace Major Williams but with the title "Chief of the CIP Subsection of MID," and not "Chief, CIP." When Maj. H. G. Sheen succeeded Captain MacDonald on 7 October 1941, he was referred to by Holbrook as having "succeeded Mr. Williams."

Sheen had an Army background. His father was an Army colonel who served in the first Occupation of Germany in 1918.

In January 1941 he was called back to active duty as a captain with MID, at the same time Williams was reporting.[428]

This was an era of organizational plans and nearly every one had one. Major Williams' comments on a plan by a were summed up in a final paragraph, "The whole plan is not considered sound and is an instance where

---

427 Ibid.

428 201 Sheen, Henry Gordon, (Conf) (Cen Rec Fac).

CONFIDENTIAL

One proposal of the period was to have CIP agents trained by the FBI including "on-the-job" training with FBI agents. Another would have set up a technical laboratory rivaling that of the FBI. Major Williams merely said that since the FBI laboratory was available to all law enforcement agencies, the CIP could avail itself of the same facilities that a country police force could.

Major Williams was particularly emphatic regarding a proposal to create a "Flying Squad." Said he,

> "This 'Flying Squad' idea is a period in the development of every executive in every investigative service. It sounds good and we have all tried it at least once. Without exception it always fails. Investigation must be decentralized and the local agents, if properly selected originally can always do a better job than strange agents who do not know local conditions or have local contacts. On inter-district or inter-area cases you can send selected men into other districts but they must operate under the local supervisory officials. These 'Special Squads' under a higher headquarters seldom produce effective results and always destroy the morale of the service. I strongly oppose this plan."[429]

In July 1941, Major Williams reviewed his six month tenure of office and the state of the CIP under its decentralized control. His report stated both the problems and recommended solutions. Major Williams said he felt that the investigative jurisdiction of the CIP would "be materially increased in the future."[430]

Williams said these increases would result from Army overseas operations; creation of theaters of operation within U.S. territories; the failure of civilian investigative agencies to carry out their mission; and the necessity for the Army to exercise a more efficacious control over additional categories of civilians whose activities may endanger the military effort. The Chief, CIP, continued:

> "The prevention of espionage, sabotage and subversive activity which in any way affect the possibility of the success of military operations is a direct and entirely proper responsibility of the War Department and such responsibility should not be shifted to civilian agencies who may possess only an elementary conception of military needs. This is a difficult mission and its successful accomplishments will necessitate the creation of a powerful investigative force..."

---

429 201 Williams, Garland Hubbard, X896, 9554, (Conf) (Cen Rec Fac).
430 CIP Corres #19-22, dated 9 July 1941.

In this final report to the AC of S, G2, Major Williams said:

"In approaching the solution of the problem presented by this assumption of nation-wide investigative responsibility, the War Department has elected to proceed on the basis of developing 14 different investigative groups, each of which has been placed under the supervision of an existing office. Such existing offices were not designed for carrying on such difficult and extensive investigative work and were, in general, operated by officers either entirely inexperienced or very slightly experienced in the conduct of, or the supervision of, modern investigative work. Each of these 14 officers have different ideas of their investigative mission and the result is that inevitably there will be 14 different policies, 14 different practices, 14 different methods of work and, in general, 14 separate and distinct units with very little cohesion and no basis for unity of action. No central control agency has been created for handling this problem (which is national in scope) on a nation-wide scale. The result will be that the local problems will be variously handled in accordance with the varying ability of the local personnel, but the important cases, all of which will extend over a large part of the nation, will not be fully exploited. This condition generally results in developing cases against local figures of minor importance, but provides an almost automatic means of escape from apprehension by the major operators or the directing and financing heads who work behind the scenes. A situation similar to this is the well-known impossibility of having local police departments successfully handle the investigation of crimes on which the participants are able to cross city boundary lines and this condition has given rise to the creation of state police forces and national investigative agencies in this country and in other countries as well. Another possible similar situation would have been for the President, instead of giving the civilian investigative job to the experienced and centrally-led Federal Bureau of Investigation, to have given the responsibility for investigating espionage, sabotage and subversive activities to the States' Attorney Generals in the 48 states and the several possessions, and such Attorney Generals to work under the authority of their respective governors. The ineffectiveness and absolute error of such a procedure is easily apparent, and no thinking person would have taken such action."

Referring to World War I, the Chief of CIC said,

"In the United States the Corps of Intelligence Police was composed of many well-meaning but inexperienced officers, enlisted men and civilians and their unorganized efforts accomplished practically nothing. It is said that the organization in the United States may have caught one spy. From a study of the records and from interviews with persons

CONFIDENTIAL

involved, it would appear that the same type of investigative organization that is now being created was the type of organization that was utilized during the World War.

"There must be now created within the military service an investigative group that is organized along the same lines that successful Federal investigative agencies are organized. There must be a carefully selected field force and these men must be carefully "backed up" by a strong central directing head, who possesses full power and is given full responsibility. The individual investigators must either be experienced in investigative work or meet rigid requirements as to special qualifications. Supervisory personnel must have had extensive investigative experience of a suitable type. All personnel must be selected by the Chief of the Service and he alone must be responsible for the complete administration of the Corps. The Chief of the Corps must be an individual of wide experience in the supervision of investigative forces. He should bring with him the ability to secure the willing cooperation of the maximum number of Federal, State and Municipal police and investigative forces. It must be expected that the Corps will be conducted in accordance with proven civilian practices and not in accordance with strict principles of military organization and control. It is only through this type of investigative organization that the Army will be able to show tangible results in its counter-espionage and related work."[431]

Major Williams recommended that the Corps of Intelligence Police consist of a headquarters and a field force with one chief and such other commissioned officers, warrant officers, enlisted men and civilian employees as might be necessary for the execution of the functions imposed on the Corps. This chief would have the power to prescribe such regulations as he deemed necessary, subject to the approval of the Secretary of War.

Although Major Holbrook referred to him as "Chief," Williams was not fooled and he signed his report as "Major, General Staff." Moreover, he included in his recommendations:

"That the Secretary of War be requested to direct that: 1. There is hereby created in the War Department the Office of the Chief, Corps of Intelligence Police, who, under the supervision of the Secretary of War, shall be charged with the duty of detecting and investigating all matter pertaining to espionage, counterespionage, sabotage, countersabotage, subversive and countersubversive activities, and related

431 CIP Corres #19-22, dated 9 Jul 1941. NOTE: See Hist of the Counter Intelligence Corps World War I, Sec I, p 15, for Gen Van Deman's views.

matters, among all military personnel and among all persons whose activities affect the military effort..."[432]

There is no record of any action on these recommendations except that three weeks later Major Williams was transferred to the Infantry School at Fort Benning.

To the staff study Major Williams had attached a proposed organization chart for CIP showing both functions and personnel requirements. This provided for a Chief, an executive, an administrative assistant and an operations assistant. The chief would be a lieutenant colonel and the assistants, majors. Under them would be nine groups: Liaison, Special Investigations, Review, Legal, Training, Personnel, Supply, Fiscal and Files.[433]

The plan called for increasing the headquarters to 65 persons and the field force, authorized at 513, to 1,523 persons. A large percentage of the headquarters personnel could be obtained from personnel assigned to similar duties in the various offices of MID. Several hundred of the 1,000 men recommended for the field would be obtained from personnel on duty with area G2s as assistants, clerks, etc.[434] The plan called for a major to command area CIP detachments with a captain as assistant. There would be 60 subordinate offices under lieutenants, and 52 lieutenants assigned as special investigators. The plan also called for 240 stenographers and clerks.

Espionage School Planned

Espionage was considered in this final report. Major Williams pointed out as a possible future contingency, the necessity for "The organization, training and direction of specially selected units and individuals for espionage, sabotage and subversive activity in foreign countries including hostile nations." Here Major Williams was recommending the same step he had suggested in February and which had faded into War Department oblivion, much to the disappointment of Colonel Lester, Chief, G2 Counterintelligence Branch, who had also sponsored it. A plan for an Espionage School was submitted less than two weeks after Major Williams became chief of the Corps of Intelligence Police and before the opening of the CIP School. It was intended to operate the schools concurrently and have them supplement each other as the Chief of SOS in World War I had recommended.[435]

Williams prepared a staff study on the necessity for establishing a "Training School for Military Intelligence Agents." Had the plan been adopted, the Army

0647

would have had its own positive field intelligence agency and would not have had the problems that resulted when the Communist-infiltrated OSS was forced upon it; further, the Corps would not have been delayed another decade before beginning to assume a task which was rightfully its own.

The study cited for justification essentially the same reasons that had been stated by Col. Cabot Ward, following World War I. Ward had argued the importance of a foreign detachment of "secret service" to work beyond our own lines in neutral and enemy countries. He had pointed out that Military Attaches were limited by protocol and the fact that they were naturally suspected and under constant surveillance. Moreover, without other agents there was no means of confirming such reports.[436]

Major Williams also repeated the belief of Colonel Ward that a "...Foreign Espionage Service may be considered basically as an element of counterintelligence extended to the source of hostile espionage." Further, Major Williams argued that military authorities should have control of the source material of plans for which the Army was responsible. He felt that civilian agencies could not be expected to secure, properly evaluate or even report fully and specifically what the military might require.

In making the request, which was signed by General Miles as G2, the study said:

> "The present international situation and the possibility of an adverse change make it imperative that this nation (crossed out in pencil and the words 'the Army' substituted) develop an efficient espionage service that can function independently of any other nation. The plans should be predicated on the assumption that there is a possibility that the Americas may stand alone in a world of hostile and predatory nations and movements. These same plans should contemplate the possibility that the United States may be entirely isolated and dependent solely on its own resources for protective information."[437]

Major Williams recommended establishing additional "controls" with official agencies in the international field, and the use of a similar type private agency. He also recommended the creation and operation of a completely secret espionage service, and the establishment of a 90 day secret training school for foreign espionage agents.[438]

0648

For some reason, presumably orally communicated since there is no official "paper" on the subject in the files, General Miles held up action and the paper bears the notation "Never submitted to the Chief of Staff." In July, OSS was created and the opportunity had passed. Intelligence jurisdiction conflicts in the New York Area continued until 19 March 1941, when President Roosevelt, without consulting either MID or FBI, appointed Commdr. Vincent Astor, USNR, Area Controller to establish intelligence jurisdictions and priorities. Astor was not called to active duty and consequently served as a civilian director.[439]

In May 1941 a meeting was held by G2, War Department to discuss the desirability of establishing a Joint Intelligence committee. In addition to State, Navy and Treasury, representatives of the Administrator of Export Control, the Director General of the Office of Production Management, the Chairman of the Maritime Commission, the National Defense Research Council, and the Office of Emergency Management attended. But before this group reached an organizational basis, President Roosevelt directed on 11 July 1941, that the Office of Coordinator of Information for the United States Government be created. One year later this became the Office of Strategic Services (OSS) under Brig. Gen. William ("Wild Bill") Donovan.[440]

This Coordinator was to analyze, correlate and disseminate to the President or his designees, information collected from existing agencies and, when requested by the President, to produce security information not otherwise available. The office was specifically instructed not to interfere with or impair the duties of the regular military and naval advisors of the President. Within two years it was clashing with CIC.

In spite of restrictions, G2 Historian Bruce Bidwell states,

> "The Coordinator...lost no time in attempting to assume centralized control over all American overseas intelligence activities. In this endeavor, he was vociferously championed by a politically influential group of supporters who not only favored the establishment of a single Central Intelligence agency for the United States but also displayed decided ignorance of the subject by naively asserting that now there would only be one intelligence agency instead of eight."[441]

Unfortunately, this hastily formed organization recruited among its thousands of personnel, a number of Communist agents; one penetrated the office of Col. William J. Donovan, the Director.[442]

442 Burnham, p 119, (Uncl).

Meanwhile MID and ONI were fighting for recognition with the Army-Navy Joint Planning Committee and by the time of the Pearl Harbor attack nearly had a Joint Intelligence Committee organized.

Responsibility for defense plant surveys had been assumed by the FBI on 3 October 1939 when the FBI informed the Army G2 that it would handle plant inspections and surveillance. However, in December 1941, a Plant and Utilities Section was added to the Counterintelligence Branch. G2 expressed continuing dissatisfaction with FBI progress in this field which was handled by G2 in World War I with the assistance of Justice Department informants. One report made after the FBI had held control for more than a year revealed only 646 inspections out of 1,345 requested by the Army had been made.[443]

Another source of jurisdictional conflict between the Army counterintelligence and the FBI concerned the gathering of data for the "Counter Fifth Column Plan" which required all Army Area Commanders to anticipate civil disorder in their areas and be prepared to handle it. Logically, the plan required advance information regarding potentially or actually subversive persons and organizations in an area. Since such persons and organizations were almost entirely civilian, it was agreed at a conference in August 1941, that the Army would do the advance planning but would rely upon information furnished by FBI sources.[444]

Administrative Problems

Administrative problems increased so rapidly that on 8 May 1941, an office staff organization was deemed necessary at headquarters. Major Williams appointed Lt. Hugh D. Wise, Jr., as personnel officer and Lt. E. Russell Kennedy as supply officer. Personnel records were organized and Kennedy began making arrangements to purchase approximately $25,000 worth of investigative equipment. This required contacting many manufacturing concerns, examining sample equipment, making tests and handling the details of securing bids and making purchases.[445] In August, Kennedy was succeeded by Lt. Theodore J. Walker.[446]

Shortly after Kennedy's appointment, all Corps Areas and Departments were advised that the Office of the Chief, CIP, would procure, through centralized purchasing, the necessary technical and investigative equipment for CIP. Field G2s were instructed to provide an inventory of equipment on hand and the unexpended balances of equipment funds.[447]

---

443 Hist, MID, Vol 3, p 244, (Secret).
444 Ibid.
445 CIP Office Journal, Item #35, dated 8 May 1941, (Secret).
446 Ibid, Item #127, dated 21 Aug 1941.
447 Ibid, Item 45, dated 20 May 1941.

Funds were in ample supply, and the War Department Finance Officer was consulted frequently and cooperated generously. The last day of 1941, CIP received purchase authority for an additional $46,000 worth of equipment. Just prior to that time CIP was asked to submit a list of its needs in connection with increased personnel.[448]

In July the first shipment of investigative equipment was made to Corps Areas and Departments. It consisted of Minox cameras, Cine Kodaks, Smith portable typewriters, fingerprinting cameras, latent fingerprint kits and films.[449] Before the month was out, it was necessary to purchase approximately $3,000 worth of revolvers, holsters, blackjacks and portable typewriters for Iceland and British Guiana.[450]

In November, 300,000 rounds of .38 caliber revolver ammunition were obtained and 10 days after Pearl Harbor another 120,000 were obtained from Ordnance.[451] Procurement of 11 revolvers caused complications on one occasion when CIP attempted to get a priority certificate for a back-dated purchase.[452] Many hours were put in at equipment demonstrations. Personnel were called from other duties to go to local hotels where visiting suppliers set up demonstrations.[453]

Clothing funds presented problems. In January 1941, CIP had no trouble in securing an additional $40,845.00 to care for its increased strength. The increase provided for 246 initial allowances at $140 each or a total of $34,440.00 and 226 semi-annual allowances based on actual procurement of manpower anticipated for the next six months. This totaled $6,405.00.[454]

The purchase of clothing often involved compromise of identity, particularly at overseas bases, since funds were handled by the Quartermaster and there was no means of keeping transactions confidential. In September, conferences were held with the Finance Department and arrangements were made for the purchase of civilian clothing out of G2 confidential funds with a voucher notation to charge the amount later to Quartermaster funds, in bulk, without identification of personnel.[455]

Identity was protected and the government was saved the necessity of buying large numbers of official automobiles in May 1941, when the Finance Department approved the payment of 5¢ a mile to investigative personnel when operating privately owned vehicles. "The mileage rate was made sufficiently large to encourage investigators to purchase and operate privately owned cars in performing official duties."[456]

Badges and credentials created an early problem. In July 1941, as the result of many conferences it was decided that with 167 MI badges lost and unaccounted for, the badge had been compromised and its use might be dangerous. New badges of a "shield" type were decided upon and new credentials designed. Separate types for active personnel of the Corps of Intelligence Police and officers assigned to or engaged upon Military Intelligence Investigations were ordered. CIP credentials did not carry any military identification while MI credentials showed rank and organization. Corps Areas and Departments were ordered to recall and forward to MID all outstanding badges. When these were received in August, new badges were issued.[457]

Issuance of these new badges and credentials was proceeding under centralized control when in October 1941, Colonel Holbrook instructed that all the remaining badges and credentials be shipped out by blocks to all Corps Areas and Departments for issuance by the G2s thereof. Moreover, the matter was so imperative that the supply officer was not to leave the building until the shipment was accomplished. Said the Office Journal, "Personal ideas pass. Orders of Colonel Holbrook will be followed." Commented Captain MacDonald (in the Journal) "This is an entire reversal of former policy in this matter; and again presents the possibility of recurrance of the unsatisfactory situation during the World War, i.e., issuance of badges to friends and associates regardless of the type of work they undertake..."[458]

Masses of forms were required, particularly to make the Tentative Regulations effective. Instructions detailing preparation of Confidential Rosters and forms for "Statement of Travel by Motor Vehicle" were mailed.[459] This method of maintaining records to safeguard CIP identities was the result of many conferences with G1 and the Adjutant General.[460] In May, all field units were furnished copies of the "Daily Report of Activities" designed to provide a

permanent record of the activities and work performed by individual CIP investigators.[461] In June, Corps were calling for more of these forms. Ninth Corps wanted 5,000 copies and got them. Fourth Corps wanted 10,000 and got 5,000.[462] Efficiency Reports, intended to be used semi-annually, were shipped out in June,[463] but the CIP regulation requiring quarterly submission was not changed until November.[464] In September, revision of the report writing manual set out procedure for making up the "fourteen point" outline of the Counterintelligence Report (CIR) 1 form.[465]

Personnel in the Office of the Chief, CIP, put in a great deal of time during 1941 in securing funds, equipment and instructors for the CIP School. The School was opened on 24 February 1941, and permanent location of the institution provided an immediate and continuing problem. The site was moved about Washington and the adjacent area was surveyed for likely locations. In November, the School was settled in what was hoped would be a permanent location in Chicago, Illinois.

Aside from the problems and requirements of the physical plant, the securing of quotas for the 30-day course provided recurrently arising issues. This facet of the problem is covered in a separate section.[466]

In April 1941, the first case of a disciplinary breach by a CIP agent was reported. An agent of the Fourth Corps Area at Atlanta, Georgia, stationed at Tampa, Florida, attended an electrical contractors and dealers state convention, accompanied by a young woman of questionable appearance. According to witnesses the agent was drunk and attended the sessions for the purpose of "mooching liquor" utilizing the whisper technique that he was an "FBI" or "Intelligence" man. Evidence indicated that no military information was divulged. Upon identification and investigation, the G2, Fourth Corps Area asked MID for authority to reduce the agent to the grade of private and discharge him from the Corps.[467]

On 9 May, permission was granted but only over the protest of the Office of the Chief, CIP, which recommended that disciplinary action for CIP personnel "be based on a policy of corrective action instead of punitive action, such action to consist, in general, of reprimands on the first occasion, punishment that 'hurts' on the second instance and separation from the CIP on the third instance."

[redacted]

"This recommendation," said the CIP Office Journal, "is based on the experiences with investigators and frequently results in developing better men instead of losing all men who commit indiscretions. However, the policy was adopted of allowing Corps Area and Department G2s to 'bust' their men and transfer them from C.I.P. without the necessity of submitting the facts to this office or explaining their action."[468]

Both headquarters and the Corps Area agreed with action transferring out of the Corps a CIP agent who made a false statement as to his marital status on a CIP application.[469]

There was a continual stream of administrative problems throughout the year.

Should a man who failed to secure a certificate of satisfactory completion of the Corps of Intelligence Police Training School be transferred from the Corps? The Chief, CIP, replied that he did not consider this sufficient reason, but such failure would make it necessary for the individual concerned to show an unusual proficiency in the performance of his work in order to merit retention or future promotion. For the CIP agent who married without prior approval of his superior officer, the Chief recommended transfer from the Corps.[470]

In October 1941, all CIP agents were ordered to spend not less than three hours a week on physical fitness as MID anticipated the day when many of them would be required for combat duty.[471]

In June 1941, MID changed its filing plan and the decimal system was adopted. MID file 10389-A-1 for CIP became "MID 322.999 CIP."[472]

Overseas Problems

American overseas Departments and bases created many problems for CIP. Operations were complicated by training difficulties and the calling back to active duty of agents who held reserve commissions. In Hawaii, where the CIP faced "the most critical period of its history," four of its eight CIP agents were reserve officers and only one could be retained in CIP work as commanding officer of the detachments. The Hawaiian G2 proposed that four graduates of the CIP School be sent to the Islands and, in exchange, four CIP agents there on duty would be returned to the mainland for reassignment. With the four men earmarked to

0654

replace the officers, G2 proposed they be sent two at a time so that experienced agents would not be too far depleted. The Hawaiian G2, commenting on the possibilities of local schooling, said that suitable facilities did not exist in the Islands to conduct with any degree of secrecy a course comparable to the CIP course being conducted at the Army War College. He recommended that Hawaiian agents be trained in the United States.[473]

In March 1941, the G2, Philippines reported on his organization and training. Of authorized 16 CIP agents, 11 were on duty at Manila and two enroute from Hawaii. Arrangements were being made for the enlistment of a Philippine Scout soldier for one vacancy; and the other two spaces were scheduled to be filled shortly.

In addition, the G2 had 39 agents throughout the Philippines and planned to acquire 10 more civilian agents for work in the Provinces.

The commanding officer of the detachment was Capt. N. W. Raymond, M.I. (a Regular Army warrant officer). Captain Raymond had had many years of G2 experience including a detail in Hawaii in connection with the CIP. All new CIP men had a background of legal training or investigative experience or both. They were picked from twice as many candidates and were "exceptionally high type of men, and have already demonstrated an unusual aptitude for the work."

The G2 said that even before a copy of the Washington school schedule was received, a school had been organized. The program included the essential subjects incorporated in the Washington school program. "Of course, in view of the small size of the organization and the volume of work to be done, it is not possible to conduct a full-time training school, but it is believed that the instruction being given several hours a week in the evening, plus the actual experience gained in their daily work, is accomplishing the satisfactory training of our detachment...we are well underway with a force which will be able to handle the situation here."[474]

One year later, a CIP agent was able to accompany General MacArthur when he left the Philippines, and the rest were facing the critical weeks before the surrender of Bataan.

The S2 at the Trinidad Base Command wrote in September that there was strong feeling between American Negros and local Negros. A Negro agent was necessary to cover this situation.

---

473 CIP Corres #109, dated 20 Mar 1941.
474 Ibid, #79-80, dated 28 Mar 1941.

0655

Another problem was coverage of French circles as there were many old French families in the area and in the neighboring British West Indies (Martinique and Guadeloupe). The S2, Maj. George Avery Chester, said that an agent was needed "who possesses special qualifications as to meeting and impressing the ladies. In other words, he should be good-looking and have 'it'." Another agent was needed with French background and language ability. Major Chester suggested by name officers who might fill these positions--two of them on duty with the CIP Washington Field Office. To his request MID replied with a curt statement of unavailability.

In November, Chester asked for two undercover agents for assignment at Fort Read, Trinidad.[475] The S2 reported that deliberate injury to expensive machinery was suspected and it was desired that one agent be placed in the power shovel and heavy machinery section as a grease monkey while the second agent be assigned to the motor repair shop.

In September the S2 at Newfoundland requested two agents. He reported that an extensive building program was in progress using citizens of the United States, Canada and Newfoundland and that headquarters inspectors had commented upon the lack of surveillance over possible fifth-column activities in that area.[476] Because of the loss of 90 agents to the Provost Marshal General in December, which will be discussed later, it was necessary to take men from the Washington Field Office to fill the quota.[477]

One problem in filling requests of overseas departments and bases until war was declared was that in spite of Public Law #96, instructions to the Adjutant General were that no selectee or reserve officer could be ordered out of the continental limits of the United States or its possessions without the consent of the soldier concerned.[478]

In the Office of the Chief, CIP, there were special operational missions that required much time in 1941 and eventually resulted in the establishment of an operations section for headquarters. In connection with supplying highly qualified agents for the most sensitive and delicate jobs, the Office of the Chief often had to arrange with various civilian organizations for individual background "cover" for Special Agents with plausible occupation and background stories; the necessary "cover" credentials; a plausible draft status; and authentic civilian passports.[479]

478 CIP Office Journal, Item #89, dated 5 Aug 1941.

479 Special Text on CIC, Subcourse 30-2, p 30, (Cen Rec Fac).

One such rush assignment occurred on 10 July 1941, when German consular officers were deported to Lisbon on the U.S. Army Transport West Point. Three agents were needed; one to be a waiter, one a deck steward and one a room steward. Major Williams recommended arrangements to get the men into their respective positions prior to arrival of passengers.

Although CIP was short of skilled agents, the situation was steadily improving, and Major Williams was able to supply three agents whose education and experience made them acceptable. A card index of agent abilities which had been set up by Lieutenant Wise, the Personnel Officer, paid off; two suitable men were found in the CIP School at Washington and one in the Second Corps Area at New York.

The latter man was CIP S/Sgt. Alfred Krebs, who spoke German, French, Spanish and Italian fluently and had traveled extensively in Europe. He was, in civilian life, assistant to the famed Oscar of the Hotel Waldorf-Astoria, and had years of experience as a waiter, dining room manager and hotel manager.

In the CIP School were Sgts. Lucian L. Picard and Charles F. Berlitz. Picard spoke German, French, Spanish, Italian and Swiss and had traveled throughout Europe. He had been an assistant U.S. Treasury representative in various European capitals and had extensive investigative experience. Berlitz, was of the Berlitz language school family, spoke German, French, Spanish, Italian, Portuguese and several other languages. He had traveled in Europe, South America and Asia.[480] Available records do not show the results of this assignment but numberous calls for other specially qualified agents quickly followed, and would indicate that G2, War Department, was pleased with results. For further details on many of these requirements, the section of this history entitled "CIC With the Base Commands" should be read.

Although the Office of the Chief, CIP, was organized as an administrative unit, operational intelligence information gravitated to it. In December 1941, Captain Sheen, then chief of CIP, forwarded information to the G2 Investigations subsection on a Nazi working for the Production Management Board. Another report concerned a "Baroness" at Annapolis, who had been the mistress of a high ranking Marine officer and was now cultivating the acquaintance of many Naval officers. The officer's visits to her apartment alternated with visits from the German Military Attache. Her brother was reported to be a courier for a Nazi espionage net working out of a cover firm in New York City.[481] So complete was the control by the G2 Investigative subsection that it was not until August that the Office of the Chief, CIP (OCCIP) was provided with copies of corresponsence regarding prospective members of the Corps.[482]

480 CIP Corres #51-52, dated 10 July 1941.
481 201 Sheen, Henry Gordon, (Conf) (Cen Rec Fac).
482 CIP Office Journal, Item #123, dated 20 Aug 1941.

The Provost Marshal "Raid"

Handling of cases, particularly background investigations of prospective CIP applicants, by the Investigative Subsection of the Domestic Intelligence Section, G2, under Maj. Nicholas Beckett, led to a conflict with OCCIP. Captain MacDonald, then Chief, complained to Colonel Bissell that the Washington Field Office of CIP had become " 'a three-headed monster', with the Third Corps Area handling it for purposes of promotion and reduction; with Major Beckett attempting to control it for investigations in the District and OCCIP attempting to build it into a specially qualified mobile force to be used wherever needed in and outside the United States as deemed necessary by the CIP headquarters."[483]

This situation may have been part of the reason for Colonel Holbrook's statement to Captain MacDonald, "They have been taking authority away from the CIP headquarters for a long time. I want you to attempt to gradually expand the authority of this headquarters. Do it in a diplomatic way."[484]

"Build up the Washington Detachment. If it gets too large, loan or attach some of these men as needed to other Corps Areas or Departments with the clear understanding that they may be ordered elsewhere at any time as deemed necessary by the C.I.P. headquarters." At this same time Colonel Holbrook curtailed the jurisdiction of the Investigative Subsection by ordering that when OCCIP requested an investigation of a CIP prospect, it would not be required to submit a Personal History Statement with the request.[485]

Another jurisdictional problem involved MID and the Third Corps Area. The District of Columbia was within the area of responsibility of the Third Corps Area and Third Corps had first operated a CIP office in the District. In May 1941, MID decided that it was impractical to attempt to conceal the identity of CIP agents in the Washington office as long as they were attached administratively to the Washington Headquarters Company. A decision was reached that all CIP personnel stationed in Washington would be transferred to Headquarters, Third Corps Area, for administrative purposes only. It was planned that Third Corps Area would decentralize administrative control to the officer placed in charge of the CIP detachment in Washington and the office would operate independently of all Corps Area matters and engage in investigative work solely for MID.[486]

However, later in the month Third Corps Area asked specifically what this transfer meant and General Miles replied that the personnel were "part of the DEML, CIP detachment, Third Corps Area and their administrative control is the

486 Ibid, Item #38, dated 10 May 1941.

responsibility of Headquarters, Third Corps Area..." General Miles said investigative work would be carried on under the sole direction of the Assistant Chief of Staff, G2, War Department.[487] Moreover, OCCIP was told that Colonel Eddy's OK was required to move CIP personnel of the field office.[488]

Since this reply said nothing about decentralization of administrative responsibility to MID, the result was that Third Corps Area assumed that responsibility. The situation was further confused in August by plans to merge the two Washington CIP offices in the interest of economy and have the MID detachment "execute instructions and missions normally performed by Third Corps Area."[489]

Colonel Bissell, chief of the Counterintelligence Branch, G2, agreed that the local detachment should be under control of the OCCIP so that agents could be sent to any place at any time. He said he was "going to take this matter up with the front office (General Miles)..." The following day, it was decided that requests for investigation of prospective members of CIP, Washington Detachment, would be written by OCCIP for the signature of Colonel Bissell, and a carbon of the letter furnished Major Beckett, Chief of the Investigative Subsection. Maj. David G. Erskine, Chief of the Domestic Intelligence Section, would actually sign the letters.[490]

In October, General Miles ordered the Chief, CIP to visit all Corps Areas and consult with them on the CIP expansion program.[491] Meanwhile, opposition to CIP expansion was growing. In August, by Presidential Executive order, the Office of Provost Marshal General and the Military Police Corps were recreated. Shortly thereafter, agitation was started to transfer CIC functions in the United States to the jurisdiction of the Provost Marshal. This pressure did not let up until such a transfer was accomplished in February 1944.

This agitation had encouragement even within G2, as some officers believed that the CIP should be divorced from G2, and that G2, as a policy unit, should not operate any organization. This idea was furthered by Military Police officials charged with organization of the PMG School; they claimed there was a possibility that Military Police and the CIP would be combined.[492] When this was reported to Colonel Holbrook, Executive Officer of the Counterintelligence Branch, G2, he informed OCCIP that there was "no assurance whatever" that CIP will be merged with the Military Police under the Provost Marshal General; he planned and personally hoped that MID would be able to organize its own intelligence

operating outfit.[493] The Military Police did not stop trying. In October 1941, they proposed that the CIP School be operated at the Arlington Cantonment, Arlington, Virginia, at the same location as the proposed Military Police School. This was vetoed by G2 on the ground it would entail $250,000 in construction expense.[494]

Meanwhile, the Provost Marshal had another proposition which had been advanced in September when the Chief of Staff of the Army had desired to reduce the number of personnel spaces directly chargeable against the War Department General Staff. At that time it was reasoned if seven specific MID functions were transferred to the Provost Marshal General, there could be a reduction in MID personnel. Although G2 recommended strongly that this not be done, the Chief of Staff, Gen. George C. Marshall, approved the plan as of 29 October 1941.[495]

Functions taken from CIP included investigation of applicants for employment in the Military Establishment; of employees scheduled for sensitive duties; of Civilian Conservation Corps cases; of scientists for the National Defense Committee; and of sources for data for the Counter Fifth Column Plan. It also took away from MID, operation of the Visa and Passport Section and issuance of credentials to visitors to plants and arsenals engaged in classified work. Both of the latter named activities often had important connections with CIP cases.

Since under the Delimitations Agreement, MID was the only War Department agency officially authorized to contact the FBI in connection with Army security matters, this transfer confused and complicated liaison problems. Of this jurisdictional transfer G2 Historian Bidwell has written,

> "Heretofore there always had been a sharp line of demarkation existing between the various counterintelligence activities of MID and the duties concurrently assigned to the Provost Marshal General which included only those pertaining to criminal investigation and police responsibility for the United States Army. Although under the new circumstances MID still continued to assume prompt control over all investigative cases showing any evidence of subversion or disloyalty, the fine distinction which had been traditionally drawn between the operational functions of the two agencies no longer could remain in force.[496]

In November, when CIP Chief Sheen made his inspection of five Corps Areas, he discovered that representatives of other departments of the Government, notably members of the FBI, indicated that much confusion had been created by

493 CIP Office Journal, Item #178, dated 12 Sep 1941.
494 Ibid, Item #239, dated 24 Oct 1941.

the existence of numerous and apparently unrelated investigative organizations within the Army. Critics named the Air Corps Plant Protection setup, the Ordnance Department Plant Protection Establishment; the Quartermaster General's Office, the Military Intelligence Division and now the newly created Provost Marshal General's Office. These gentlemen definitely stated that they preferred to deal with the Military Intelligence Division and were completely befogged by ignorance of prescribed fields of jurisdiction of the various agencies mentioned above.

On 13 November 1941, OCCIP learned that not only had it lost a number of its important functions but it was to lose more than 20 percent of its total CIP to the Provost Marshal General to carry on the CIP functions which the Provost Marshal General was assuming.[497]

Not only were 90 agents being taken, but with them were being transferred 90 appropriate grades. OCCIP was not consulted when these quotas were determined.

No matter where the men were drawn, operations would suffer but after consideration of all angles, OCCIP recommended to G2 that no agents be taken from Department, bases, the Alaska Defense Command or the Washington Field Office which had an authorized strength of 55 men. OCCIP proposed that the CIP agents of this latter office be considered "a pool available for temporary assignment where particular need is emphasized."[498]

In connection with this request, OCCIP provided an example of the difference between authorized and effective manpower. The Washington office was authorized 55 agents but actually had 23 men to do the work. It had 15 vacancies, nine of which were due to legislation which released all selectees who were 28 years of age or more when inducted. Eight men were on special duty either with MID or as linguists. Six were trainees awaiting schooling; one was alerted for overseas assignment, another for Officer Candidate School and one was in the hospital.[499]

On 1 December 1941, with war only a week away, Captain Sheen contemplated the reduction in force and forwarded to G2 his conclusions on other problems of the Corps which came to light during his two week inspection tour of the Fourth through Eighth Corps Area.

The Chief's Recommendations

Corps Area G2s, Captain Sheen said, were administering CIP Confidential Funds in a restrictive and circumscribed manner. "Agents engaged in the investigation of an active case should not be restricted in the accomplishment of their mission by being required to engage in extensive fiscal accounting. I am definitely of the opinion that the matter of disbursing M.I.D. funds to C.I.P. agents is entirely too arbitrary and that this procedure is partly responsible for such low morale and improperly conducted investigations as may exist at the present time..." He recommended that a policy letter be issued emphasizing common sense in the handling of these funds.

Captain Sheen felt that there was a tendency on the part of many commissioned officers having supervision over members of the CIP to administer such agents in exactly the same manner as peace-time enlisted men in garrison. "They overlook the fact that a large majority of the agents of the C.I.P. are college graduates, of good birth and breeding, and exceptionally fine background, and that in most instances these men have had considerable investigative experience in long established Federal agencies and other professional bodies, and, in having been investigated and accepted, should be considered reliable and trustworthy, and not looked upon with suspicion or contempt..."[500]

Captain Sheen voiced the same criticism that Colonel Ward had voiced in World War I, i.e., that officers having supervision of CIP agents did not inform the agents of the final results of the work performed by these men. "One of the ways," said Captain Sheen, "in which we can maintain high morale among the members of the C.I.P. is to keep them informed as to the results of their investigations. When the suspect is eventually dismissed from the service or otherwise disposed of, the agent responsible for the initial action should be so informed and commended..." However, experience later in the war revealed that this morale problem was created at higher levels. Immediate supervisors were well aware of the importance of relaying this information and usually could convince their immediate superiors in the next echelons. But somewhere above that the system failed.[501]

Captain Sheen said that in every Corps Area he visited, he learned that the majority of post, camp and stations intelligence officers were being assigned additional duties having no bearing upon intelligence functions. This was especially true at many exempt stations. "In the Sixth Corps Area," said

---

500 CIP Corres #11, dated 15 Nov 1941.

501 Interview with Lt Col Franklin E. Jordan, M.I., USAR, who supervised CIC agents during World War II at the Army's Ordnance Research Center, Aberdeen, Md, where he was chief investigating officer.

Captain Sheen, "one intelligence officer has been assigned some six additional duties, including those of post exchange officer, welfare and recreation officer, etc..."

Captain Sheen reported general agreement on the importance of bringing CIP out from under cover and on changing the name to de-emphasize the word "police." Captain Sheen said the "shroud of anonymity with which we have endeavored to cloak the C.I.P. is actually the greatest obstacle we have in the accomplishment of our mission."

Captain Sheen found that the need for additional Civil Service stenographer and typist personnel was general and the OCCIP policy of recommending one typist for each three CIP agents was inadequate. "It is believed the lack of sufficient clerical personnel is one of the reasons for the backlog of cases existing in most Corps Areas and also interferes with the investigating functions of agents inasmuch as these men are now required to type up their own reports after the day's work is done." He recommended action to see that all quotas for stenographer typists were filled.

Finally, Captain Sheen recommended that CIP district offices be established in Houston, Texas; Denver, Colorado; Kansas City and St. Louis, Missouri; Minneapolis-St. Paul, Minnesota; Detroit and Lansing, Michigan; Rock Island, Rockford and Springfield, Illinois; Milwaukee and Madison, Wisconsin; Cleveland, Ohio; Louisville, Kentucky; and Indianapolis, Indiana. In addition, there were offices to be considered for the four Corps Areas not included in the inspection. A chart was prepared and submitted to General Miles.[502]

On 24 November, General Miles agreed to the establishment of 22 district offices and Major Erskine was directed to draw up the necessary staff study to complete the project.[503] At this time OCCIP received information to prepare a flexible plan for organization of a sizeable CIC detachment for duty at headquarters of any theater of operations the United States might be forced to create.[504]

Meanwhile, Army structure was evolving. In February 1941, the Alaskan Defense Command and the Caribbean Defense Command were activated. In March the Iceland Command was created; in May the Southern Defense Command and in June the Eastern Command.

By November 1941, the Army was one million, four hundred thousand stronger than it had been two years before. It had 36 partly equipped divisions out of more than 90 that would be needed. Some large scale training maneuvers had been held,

502 CIP Office Journal, Item #279, dated 22 Nov 1941.

504 Ibid, Item #311, dated 28 Nov 1941.

0663

but equipment was still critically short. The Army had only 2,000 of the 96,000 tanks the war would require and small arms ammunition stores totaled less than the amount used in two months by the Infantry alone after the invasion of France. Only 600 of the 61,500 105mm howitzers and 60 of the 7,800 155mm guns used during the war were received by the Army in 1941. Only seven divisions could be equipped for immediate dispatch to battle zones and had all the divisions been ready, only a fraction of the shipping required was available.[505] Compared with future requirements, the Corps of Intelligence Police was in the same state.

Previous sections of this chapter have shown the effectiveness of what G2 Historian Bidwell terms "...the adverse influences tending to restrict activities" whenever efforts were made to attain an active and efficient counterintelligence organization.[506] Author James Burnham in "The Web of Subversion" has described the era starting in 1933 as the great growth period of Communist subversion in Government. Whittaker Chambers described much of it to Adolph Berle of the State Department in 1939.[507]

In 1941, Congressman Martin Dies, summed up four years of investigation by the House Un-American Activities Committee with a report to the President. Dies subsequently wrote, "Now in 1941, I submitted to the Executive a list of about 2,000 Communists on the federal payroll including Alger Hiss, Harry Dexter White, Harold Glasser and others and asked that they be discharged."

Dies said that in spite of his efforts, the Communists remained in office for more than a decade after that time. He said that President Roosevelt had stated, in effect, that he did not want communism investigated and that the President did not see communism was any threat to the United States, but did feel that it was essential that the United States and the Soviet Union work together to win the war.[508]

Historian Chester Wilmot says that Roosevelt also believed that since Russia would dominate Europe on defeat of the Axis, it was essential to develop and maintain the most friendly relations with her.[509]

When the CIP investigated War Department Communists in 1940, Mrs. Roosevelt revealed an interest according to Brig. Gen. W. A. Holbrook, Retired, who at that time was Major Holbrook, Officer-in-Charge of the Corps of Intelligence Police for the Army G2. General Holbrook wrote, "This became a test

case, inasmuch as Mrs. Roosevelt showed personal interest in it. However, the employee was not reinstated...our activities with Communists had to be carried on very carefully because of the sympathetic attitude of the White House."[510]

This was the atmosphere in which CIC started its war time growth, with the "adverse influences" as Bidwell had termed them, urging that CIC's functions be transferred to other agencies and that its true role was in combat counterintelligence. By the summer of 1942, General Holbrook wrote, "...there had been several instances which had incurred the displeasure of certain powerful politicians with a result that in July information was given orally to the Counterintelligence Section it would be reduced radically in the scope of its functions and a great many of their civilian employees and officers would be transferred to other sections..." It was then, General Holbrook says, that he was relieved from the General Staff and transferred to combat troops.[511]

Meanwhile, Communists were boasting that they had some 50,000 comrades in the Armed Forces, but keeping discreetly quiet about the location of important agents who by this time had infiltrated practically all the nation's sensitive areas. Dies has stated that the Communists had infiltrated the Armed Forces even before Selective Service and that his committee found considerable evidence of this.[512]

It was at this time that plans were being made for the assignment of CIC agents with the first waves of invasion troops in North Africa and the start of a program that would take thousands of them away from the United States into combat duty in all areas of the world.

December 1941

On 1 December 1941, Item #314 of the Office Journal of the OCCIP reads, "All officers turned out in uniform for inspection." Item #324 on 4 December reads "Colonel Holbrook called a conference of all sections relative to a Christmas party for the Branch -- 3 to 5 p.m. December 23." The next significant item is dated "7 December 1941." This item, #329, reads:

> "In view of radio reports concerning the attack on Honolulu by Japanese aircraft, Captain Sheen and Lieutenant Wise reported to the office 5:30 p.m. Captain Sheet reported to Colonel Holbrook who stated no action to be taken until Monday, December 8. Captain Sheen called the field office, received no answer. Eventually aroused Sergeant Wills at his home and instructed Sergeant Wills to detail two agents to duty at night in the field office."

511 Ibid, p 3, (Uncl).
512 Dies, Martin, from U.S. News and World Report, dated 20 Aug 54, p 64, (Uncl).

0665

The next day staff studies were forwarded requesting that the strength of the Corps be doubled to a total of 1,026 men; that all former CIPs now in the Enlisted Reserve be ordered back to duty and that orders for the transfer of 90 agents to the Provost Marshal General be revoked.[513] The doubling of strength and recall of Enlisted Reserve members was approved the next day. But the Provost Marshal General was not to be denied and in spite of the cost to the Corps, 90 agents were transferred as of 15 December.[514]

The increased strength was allocated as follows:[515]

Corps Areas		Other Areas	
1st	38	Hawaii	35
2nd	89	Philippines	56
3rd	78	Panama	53
4th	67	Puerto Rico	32
5th	39	Alaska	15
6th	49	Bermuda	3
7th	39	Caribbean	23
8th	56	Greenland	4
8th	71	Iceland	24
MID	106	Newfoundland	3
		Trinidad	20

Allocations do not immediately produce manpower, and although the Corps was authorized 1,026 by 22 December 1941, it had a total of 405 men of which 383 were available for duty.[516] By 31 December 1941, the total actually on duty had increased to 399.[517] Demands were growing steadily and the year ended with a request from the Air Force that a special allotment be made to provide at least one CIP agent for each air base; world-wide, this would require practically all of the existing CIP force then.

The tempo was fast increasing. On 11 December, an additional $3,000 a month was received for increased rentals for the Chicago school to handle additional quotas.[518] On 23 December, instead of the Christmas party, there was a meeting of section chiefs to discuss coordination of counterintelligence activities with the newly established Defense Command headquarters within

Military Intelligence Division
In replying refer to
10589-119-MIN

WAR DEPARTMENT
OFFICE OF THE CHIEF OF STAFF
Washington

March 1920.

From: Director of Military Intelligence,

To: Assistant Chief of Staff for Military Intelligence.
Southern Dept., Fort Sam Houston, Texas.

Subject: Counter-Espionage Manuals.

1. The counterespionage service will be discontinued as it is believed that there is no longer any necessity for such an organization in the Military service. The C. E. service was organized primarily for locating and eliminating enemy agents in our ranks. The war being over, the activities of the German Secret Service are no longer a source of danger to the Army. The only menace we will have to combat is the radical propaganda that the Reds may try to disseminate in the Army, and the activities of Red agitators who may enlist. It is believed that this can be successfully met by requiring each organization commander to keep his own ranks free from radical influence. This should be done through the vigilance of noncommissioned officers rather than by operation of a C. E. system.

2. The fact that radical organizations, such as the Union of Russian Workers, the I. W. W., the Communist Party of America and the Communist Labor Party, are openly advocating the overthrow of this Government by force should be carefully explained to the noncommissioned officers in each organization.

3. It is therefore requested that you return immediately to this office such of the following confidential pamphlets as may be in your possession:

Provisional C. E. Instructions, edition of February, 1918.

Principles of C. E. Organizations and Control within the Military Establishment edition of May, 1918.

Provisional Intelligence Instructions for Civilian Personnel under Military Control.

Instructions for the Organization and Maintenance of C. E. Service within Military Units, edition of August, 1918.

4. Upon receipt of these confidential pamphlets, proper credit will be made on our record.

14 August 1956

Colonel Landon G. Cox
Assistant Chief of Staff, G-3
Headquarters 1st Armored Division
Fort Polk, Louisiana

Dear Colonel Cox:

The March 1920 letter from the Director of Intelligence which you found among old records and sent to us has turned out to be a very important document. Researchers who were working from 1953 through 1955 on a History of the Counter Intelligence Corps and its predecessor, the Corps of Intelligence Police, had heard of its existence but were unable to locate a copy. Although they finished their basic manuscript last November, this letter will be incorporated, since it furnishes a significant link in the deemphasis of our intelligence organization during the years between the two World Wars.

Your thoughtfulness in rescuing this document and sending it to us is deeply appreciated.

Sincerely,

FRANK M. HOSTERMAN
Colonel, Infantry
Commanding

Memo for Record: Original letter filed in AIS Museum by PIO 13 Sep 56

ARMY Ft Holabird

continental limits of the United States, and a conference with the acting G2 followed the next day.[519]

Washington became very security conscious. Radar equipment arrived at Bolling Field and CIP was called upon to furnish two uniformed agents as security guards.[520] The Provost Marshal apprehended a suspicious individual at the main entrance of the Munitions Building on 12 December and requested CIP assistance for the interrogation. A CIP agent investigated and cleared the suspect.[521]

CIP agents were assembled on 12 December and briefed on plans for a security survey of the Munitions Building. Three days later the initial reconnaissance and preliminary survey had been completed; this included obtaining floor plans. Conferences were held with the Provost Marshal concerning security problems of the area. During the night of December 17-18, Captain Sheen, 11 officers and 34 special agents conducted an exhaustive search of the Munitions Building and secured a room full of classified material which had not been properly safeguarded. Included was the official War Department seal and a proposed promotion list for high ranking officers that was obtained from the Adjutant General's office. Although the search had been approved by the Secretary of War, the Chief of Staff and the G2, Maj. Gen. E. S. Adams, The Adjutant General, was not particularly pleased at the seizure of the promotion list. The next day he called upon Brig. Gen. Raymond E. Lee, who was Acting G2 in the absence of General Miles for a trip to South America. General Adams complained about the methods used by the searchers, but when Captain Sheen, who was present at the meeting, explained what actually had been done, it was evident that General Adams had been mislead by his officers who were trying to cover up for themselves and their personnel.[522]

Another security assignment was safeguarding a meeting of the Supreme War Council. Rooms to be used in the Federal Reserve building were surveyed and six special agents under Capt. F. C. Brennecks, commanding the Washington Field Office, were scheduled for interior coverage during the conference.[523]

In connection with a general security survey of the District of Columbia, a CIP special agent discovered that there were two danger points in the District water supply system; guards were immediately ordered to these points. Conferences were held with representatives of the Office of Naval Intelligence relative to internal security problems in the District.[524]

519 CIP Office Journal, Item #380, dated 23 Dec 1941.
520 Ibid, Item #350, dated 11 Dec 1941.
521 Ibid, Item #352, dated 12 Dec 1941.
522 Ibid, Item #369, dated 18 Dec 1941; and Item #370, dated 19 Dec 1941.
523 Ibid, Item #382, dated 23 Dec 1941.
524 Ibid, Item #391, dated 29 Dec 1941.

On 11 December, Colonel Holbrook approved the recommendation to change the name of the Corps and on 13 December, AG letter order, AG 320.2 (12 Dec 41) MR-M-B, was issued stating, "Effective January 1, 1942, the Corps of Intelligence Police is redesignated and will thereafter be known as the Counter Intelligence Corps... All enlisted personnel who are members of the Corps of Intelligence Police as of midnight December 31, 1941 will be transferred in their present grade to the Counter Intelligence Corps."[525]

On 9 December 1941, General Miles submitted to the Chief of Staff the proposal to bring the Corps out from undercover. He wrote:

"The anonymity surrounding the Corps of Intelligence Police serves as a barrier to the full and efficient accomplishment of certain missions of that body and should be abandoned...

"In the current endeavor to function secretly it has been found that agents of the Corps of Intelligence Police encounter much difficulty in obtaining rapid and whole-hearted cooperation from persons who know nothing of the existence of the organization our agents purport to represent... Secrecy also serves to prevent persons possessing information of military value from reporting such data to the appropriate intelligence authorities...

"Long established professional investigative units such as the Federal Bureau of Investigation, the Secret Service and similar bodies have found that any attempt to cloak their organizations in secrecy has the sole effect of placing such organizations into a vacuum... It is believed that knowledge of the existence of a trained body of carefully selected agents operating within the military service will have a salutory affect upon the Army and the general public... Under present circumstances, requirement for classification of all communications of a general nature, not pertaining to suspects or cases, constantly retards and impedes the normal functions of the Corps of Intelligence Police.

General Miles recommended that "the existence, history, activities and jurisdiction of the Corps of Intelligence Police be made known publicly... That in its future operations the Corps of Intelligence Police will function with part of its personnel operating as such openly and the remainder operating under cover."[526]

A proposed directive was prepared which included personnel identification stating, "Identity of commissioned and enlisted Corps of Intelligence Police

525 CIP Office Journal, Item #346, dated 11 Dec 1941.

526 MID 322.999 CIP, "Immediate Action Staff Study," dtd 9 Dec 41, (Conf) (Cen Rec Fac).

0668

personnel will remain undisclosed except in those cases where, in order to further the interests of the service, it is deemed appropriate to permit certain individuals to be known in the community as agents of military intelligence." The directive would also state, "This change in policy in no way affects the classification of case reports, rosters, suspect lists, movements, strength and other matters of an official or professional nature."

On 24 December, Brig. Gen. William Bryden, Deputy Chief of Staff, directed Captain Sheen to report to him concerning the proposed abandonment of the anonymity now surrounding the CIP. Captain Sheen explained the need and General Bryden approved this action unofficially, but suggested that a press release be prepared in conjunction with the Bureau of Public Relations and a copy of the press release be sent out with the letters announcing change in policy.[527] This action was still pending at the close of the year and the announcement was not made until mid-January.

With war an actuality, the question of CIP leadership became critical, and on 26 December, General Lee, Acting G2, forwarded to the Chief of Staff a staff study by Captain Sheen in which he recommended that prior to assignment of commissioned officers to duty with the CIP, the names of the officers would be furnished to G2, War Department, for clearance. To eliminate misfits already in such positions, Captain Sheen further recommended that all field units furnish MID with a roster of all officers in such positions. This recommendation was speedily approved.[528]

In his discussion of the problem, Captain Sheen reported:

> "Effective operation of the Corps of Intelligence Police cannot take place without suitably experienced officers... Fourteen month's actual experience has proved that the majority of the officers who have been assigned by local commanders are unsuited and untrained. This has injured the morale of our Corps of specially trained Intelligence Police, and the counterintelligence mission is less effective than it must be... The counteraction of the skillful professional enemy agents will not occur under inexperienced amateurs. ...This division has a list of competent and experienced commissioned personnel who are exceptionally qualified by previous training to supervise the activities of the Corps of Intelligence Police wherever the services of that body may be required, and believes they should be used for this purpose. This is particularly true at this moment when the effectiveness of counterintelligence should be at its peak."

527 CIP Office Journal, Item #384, dated 24 Dec 1941.

528 MID 322.999 CIP, Memo to C/S, Subj: "Commissioned Personnel of the Corps of Intelligence Police," dtd 26 Dec 1941, (Cen Rec Fac).

The full impact of the war was felt almost immediately at the Office of the Chief CIP, with greatly increased activity due to movement and procurement of personnel, interviews with prospective members of the CIP; supply problems, fiscal matters and general matters. A direct two-way line had to be installed between the Executive Officer of the MID Counterintelligence Branch and the Office of the Chief, CIP (OCCIP). Captain Wise, the personnel officer, was literally swamped as applicants for CIP duty came in personally or forwarded mail. The Office Journal notes, "This office is being flooded with visitors volunteering their services, most of whom have an idea that intelligence work consists of nothing but glamor and excitement."[529]

In a letter urging field G2s to make provisions for physical exercise facilities for CIP agents, the "glamor and excitement" is described by the Chief, CIP as being "subject to call twenty-four hours per day, they have to work long hours without adequate rest, they are subjected to the harshness of certain weather conditions, and quite often they find it necessary to go long hours without food. In addition these agents often find it necessary to resort to physical bodily force in self-defense..."[530]

So ended the 23 years between World Wars and the longest span of peace in the history of the United States. The CIP was now better organized than ever before and at the start of World War II it had nearly half as many agents actually on duty as it had in World War I. But the growth which should have been spread over two decades was compressed into two years with an inevitable loss of efficiency. Nevertheless, team work with associated agencies under the Delimitations Agreement had resulted in the virtual neutralization of German and Japanese espionage and sabotage agents in the United States. But national security cases were piling up; CIP's backlog totaled in the thousands and the FBI was reported to have nearly 50,000 such cases unassigned.[531]

In these two decades, Soviet espionage had reaped a harvest of military information and had so successfully penetrated the United States Government at high levels that it took another decade to dislodge it. Even then it was doubtful whether it had all been uncovered. In the 30 years, when Army counter-intelligence should have been at its best, it is evident that there was little military information from atomic bomb data to morale in the ranks, that failed to reach Soviet spy masters.

In retrospect, it seems easy to assess the blame but perhaps Nathaniel Weyl in his book, "The Battle Against Disloyalty," came close to the truth:

---

530 MID 322.999 CIP, Memo for Chief, CI Branch, Subj: "Physical Fitness," (Cen Rec Fac).

531 Lowenthal, p 422, (Uncl).

"Throughout most of American history, the temper of the people has been to distrust law enforcement agencies; to confine the power of the state to a bare minimum and to prefer revolution to anything smacking of despotism. It was only when the United States plunged into the maelstrom of European conflicts and found itself facing conspirative organizations which were in essence mere forward lines of a foreign enemy that the need for a complex federal organization to investigate, explore and secure punishment of the disloyal became evident."[532]

532 Weyl, p 8, (Uncl).

MISSION OF THE COUNTER INTELLIGENCE CORPS

"The mission of the Counter Intelligence Corps is to contribute to the operations of the Army Establishment through the detection of treason, sedition, subversive activity, and disaffection, and the detection, prevention, or neutralization of espionage and sabotage within or directed against the Army Establishment and the areas of its jurisdiction."

Auth: AR 381-100

HEADQUARTERS
U. S. ARMY INTELLIGENCE CENTER
FORT HOLABIRD, BALTIMORE 19, MARYLAND

ACSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Section 1

THE OFFICE OF THE CHIEF

At the beginning of 1942, the Counter Intelligence Corps still was in its infancy, despite a history spanning more than 20 years as the Corps of Intelligence Police. The name was new; the Corps of Intelligence Police was rechristened the Counter Intelligence Corps only on 1 January 1942. Most of the Corps' personnel were novices at counterintelligence, and, more important, a host of new and unforeseen problems were thrust upon the Corps by the outbreak of global war. The urgency of the times demanded that they be solved quickly.

Within the office of the Chief, Counter Intelligence Corps, rested the tremendous responsibility for recruiting, training, and equipping new CIC agents and for determining policies governing their employment in untested situations.[1] To key CIC officers, the scope of the problems seemed to require centralized control of counterintelligence activities. The question of centralization or decentralization was an old one, never quite answered. But in the first two years of the war, concentration of control within a central organization was authorized.

By 1 January 1943, it had been recommended that CIC operations be divorced from the existing staff organization and established under a special staff officer as an operational division similar to the Signal Corps.[2] Although this recommendation never was accepted, strong arguments were advanced for greater centralization.

On 22 May 1943, the Chief of the Counter Intelligence Corps Branch insisted in a memorandum to Col L. R. Forney that his office must have certain powers if it was to accomplish its mission. "If the job assigned to the Corps is to be performed," he wrote, "it will be necessary to:

a. Improve the quality of the Corps.
b. Limit activities of members of the Corps to approved CIC functions.
c. Redistribute personnel to meet work load conditions."

---

1 History of the Counter Intelligence Corps, 1907-1943, (CONFIDENTIAL) (Central Records Facility), p. 148.

2 Memorandum for Colonel Crist, dtd 1 Jan 43, subj: "Memorandum from the Detachment Counter Intelligence Corps dtd September 26, 1943, subject: "The Counter Intelligence Corps," /s/Hugh D. Wise, Maj, Chief Counter Intelligence Corps, (Unclassified) (in Origin and Organization of the Counter Intelligence Corps, 1917-25 October 1943, Central Records Facility).

He particularly stressed the third point. "The redistribution of CIC personnel to conform with work loads must continue to be a continuing activity with the control of the Corps centralized under the CIC branch..."[3]

Letters from the field also emphasized the desirability of centralized control of CIC personnel. In a personal letter to Maj Gen George V. Strong, the War Department G2,[4] Brig Gen James C. Crockett, G2, European Theater of Operations, commented: "Experience here and in North Africa indicates that these investigators should be under central control and sent out either for specific missions or to handle territorial areas...All special investigators should be Chicago trained, under the central control of the Theater G2...."[5]

In the summer of 1943, when General Strong was transferred and Brig Gen Hayes A. Kroner became acting G2, War Department, his CIC briefing from the CIC Chief again called attention to the need for centralization:

> The counterintelligence mission can be accomplished more efficiently by a centralized Corps carried on War Department overhead, than by personnel assigned to utilizing units on a permanent Table of Organization basis.
>
> (1)...Complete centralization of control has long been established as essential in intelligence work; e.g., Federal Bureau of Investigation, Scotland Yard, Royal Mounted Police.
>
> (2)...Centralized control permits the utmost economy in the use of manpower...
>
> (3)...Both by Presidential Directive and War Department Regulations, the counterintelligence responsibility rests on G2, War Department. The direct control of the instrument, through which this responsibility is discharged, greatly facilitates the operation.
>
> (4)...Centralized control of the War Department overhead organization permits maximum secrecy of operation.

---

3 Memorandum from Col H. R. Kibler to Col L. R. Forney, 22 May 1943, subject: "Suggested Changes and Adjustments Within the Counter Intelligence Corps," (CONFIDENTIAL) (Central Records Facility).

4 General Strong had replaced Brig Gen Raymond E. Lee as G2 on 5 May 1942.

5 Ltr from Brig Gen James C. Crockett to Maj Gen George V. Strong, 6 Jul 43, (SECRET) (Central Records Facility).

(5)...Centralized control permits the utilization of the individual at the point where his specific qualifications or talents can be of maximum value.[6]

Organization of the Chief's Office

The concept of centralization was reflected in the mission and organization of the Office of the Chief, Counter Intelligence Corps.

Duties of the Chief were essentially administrative. They included the selection, investigation, assignment, movement, supply, and training of all members of the Counter Intelligence Corps. Mobilization, with its concomitant increases in the size of the Corps, multiplied the duties--and problems--many times. On 1 June 1942, Maj H. G. Sheen estimated that his work as Chief had increased by 250 percent since the beginning of the war.

At that time, the Counter Intelligence Corps Branch was organized into five sections: Personnel, Supply, Fiscal, Operations, and Plans and Training.

The Personnel Section, directed by 1st Lt James F. Foothorap, was given responsibility for the stepped-up CIC recruiting program. Three other officers and six civilian employees assisted Lieutenant Foothorap in the selection, investigation, assignment, and classification of all CIC personnel. Maintenance of files, preparation of strength reports, and review of efficiency reports were among the duties of this section.

Selection, testing, procurement, and shipment of investigative equipment to detachments in the field were among the major responsibilities of the Supply Section, under Maj Thomas G. O'Neal. This section, composed of three officers and three civilian employees, also handled all Military Intelligence and Counter Intelligence Corps badges and credentials.

Capt Neville K. Adkinson, as Chief of the Fiscal Section, was assigned the complicated task of setting up budget requirements of the Counter Intelligence Corps. He worked closely with commands utilizing CIC detachments and made frequent trips to the Corps areas to audit fiscal and property accounts.

The primary responsibility of the Operations Section was the coordination of CIC activities with all operations of the Army outside the United States. Capt Lowell J. Bradford, the CIC operations officer, conferred with intelligence personnel of outgoing task forces and arranged for CIC detachments to accompany

---

6 Memorandum from Col H. R. Kibler to Brig Gen Hayes A. Kroner, 31 Aug 43, subject: "Counter Intelligence Corps," (CONFIDENTIAL) (Central Records Facility).

the forces. He also assisted agents in the preparation of cover for special undercover missions overseas.

Work of the Plans and Training Section was directed by Capt Hugh D. Wise, Jr., who also doubled as CIC Executive Officer. Planning and control of all CIC training activities were among his responsibilities.[7]

Seven months later, after Major Wise had replaced Colonel Sheen as Chief, CIC, an Army Air Forces Liaison Section had been established to coordinate counterintelligence activities between CIC and the Air Forces.[8] For some time, Major Bradford served as liaison officer in addition to his duties as operations officer. In June 1943, he was appointed liaison officer on a full-time basis, and Capt Samuel E. Ewing became Chief of the Operations Office.

An Administrative Section was established in May 1943, with Lt Montgomery Curtis as Chief. A month later the Plans and Training Section was redesignated the Training Section, and Maj George L. Staudt was appointed section chief.[9]

On 1 February 1943, the expanded duties of the Office of the Chief, Counter Intelligence Corps, were itemized in a memorandum from Col John T. Bissell, Chief of the Counter Intelligence Group. They included the formulation of general policies pertaining to CIC; liaison with directors of intelligence of the service commands; liaison with the War Department's Operations Division, Services of Supply, Army Ground Forces, Army Air Forces, and the various services; selection and procurement of investigative equipment; selection of detachments for special missions; auditing of CIC funds; maintenance of training schools and selection of special agents for attendance at officer candidate schools, and all matters pertaining to CIC personnel.[10]

7 History of Counter Intelligence Corps, 1907-1943, (CONFIDENTIAL) (Central Records Facility), pp. 152-153; and Memorandum from Maj H. G. Sheen to Chief, Counter Intelligence Group, 1 June 1943, subject: "Report on Study of Organization and Civilian Personnel Needs," quoted in History of the Counter Intelligence Corps, 1917 to March 1945, (CONFIDENTIAL) (Central Records Facility).

8 Memorandum from Major Wise to Chief, Counter Intelligence Group, 29 Dec 42, Subj: "Duties and Functions of the Counter Intelligence Corps Branch, Military Intelligence Service," quoted in History of the Counter Intelligence Corps, 1917 to March 1945, (CONFIDENTIAL) (Central Records Facility).

9 History of the Counter Intelligence Corps, 1907-1943, (CONFIDENTIAL) (Central Records Facility), pp. 153-154. Work of these sections will be discussed more fully in other sections of this chapter.

10 Memorandum from Col John T. Bissell to Chief, CIC, 1 Feb 43, subject: "Duties of the Counter Intelligence Corps Branch," included in CIC Office Manual, 1941-1943, (CONFIDENTIAL) (Central Records Facility).

Several important personnel changes occurred on 10 May 1943. Colonel H. R. Kibler became Chief, CIC, and Lieutenant Colonel Wise was designated Assistant Chief. Major Adkinson was appointed Executive Officer.[11]

CIC Goes House-Hunting

The Counter Intelligence Corps Branch was forced to move its offices frequently during 1942 and early 1943 as the ever-increasing staff required larger quarters.

Originally located in a single room in the Munitions Building in Washington, D.C., the CIC Headquarters expanded and moved into a second room in the same building on 12 February 1942.[12] In March, with office space in the Munitions Building at a premium, CIC Headquarters were opened in the Security Exchange Commission Building in Washington. A month later, CIC moved again--this time to offices at 1430 K Street in the nation's capital.[13]

A problem more serious than cramped quarters prompted the next move of CIC Headquarters. On 3 December 1942, a War Department memorandum specified that not more than a third of the officers assigned to any section in Washington could be below 35 years of age. A quick check of the Counter Intelligence Corps Branch revealed that six of its nine officers were below that age. Either the young officers had to be replaced, or CIC Headquarters had to be moved outside Washington.

In a memorandum for the Chief, Counter Intelligence Group, Major Wise explored the possible solutions to CIC's problem. Since the CIC Chief felt that replacement of the officers in his section would result in impared efficiency, he requested that CIC be excepted from the provisions of the War Department memorandum. As an alternative, he proposed moving CIC Headquarters to Baltimore.[14]

14 Memorandum, Maj Hugh D. Wise to Chief, Counter Intelligence Group, 17 Dec 42, subject: "Memorandum dated December 3, 1942, Subject, Allotment of Officers of Different Classifications," (Unclassified) (Central Records Facility).

Even before Major Wise officially suggested the move to Baltimore, he had inspected a large, private residence at 2327 N. Charles Street in Baltimore and had learned that it could be rented for a price substantially lower than the rent on CIC's Washington offices. The building, formerly a girl's dormitory at Goucher College, would be ready for occupancy by 1 January 1943.[15]

The move to Baltimore was approved. On 16 January 1943, Colonel Bissell notified the Military Intelligence Service that CIC had been directed to close its Washington offices and reopen at the Baltimore location on 28 January. Both military and civilian personnel in the Office of the Chief, CIC, were transferred to Baltimore.[16]

Actually, the move was completed without top-level G2 knowledge or approval. On Monday after the Baltimore office had been opened, Major Wise notified G2 of the change and requested confirming orders.[17]

CIC's Mission: A Perplexing Problem

A far more perplexing problem than the housing situation was the misunderstanding of the CIC mission by commanders and G2's in the field. Some misunderstandings were inevitable, since the Corps still was virtually unknown when the United States entered the war. But continued flagrant misuse of CIC agents and detachments became a serious problem in some areas.

As early as 25 March 1942, The Adjutant General sent to all commanding generals a letter describing the organization, personnel, training, and operation policies of CIC in order to "insure the most efficient and beneficial results through the use of trained personnel." In this letter he pointed out that:

> The primary mission of these agents is undercover operation for the detection and investigation of espionage, sabotage, disaffection, disloyalty, and general subversion. It is the policy of the War Department that these agents be fully utilized to perform the mission indicated above. They should not be used as clerks, typists, or to perform other duties which

17 Interview with Col Hugh D. Wise, Jr., (Unclassified) (Central Records Facility).

can be equally well accomplished by other personnel having fewer specialist qualifications.[18]

On 15 February 1943, a tentative field manual describing the military intelligence mission of the Counter Intelligence Corps with tactical organizations and in theaters of operation was submitted to units in the field for comment. It strongly emphasized the role which CIC was to play:

> It is the mission of the Counter Intelligence Corps to provide effective counterespionage, countersabotage, and countersubversive security for the unit to which assigned, and to investigate all cases of positive or suspected disaffection, disloyalty, and general subversion within or affecting the military service. The CIC will not serve to replace or assume the responsibility for tactical security, combat counterintelligence or countersubversive installations prescribed for all field force units but will be considered as a supplemental counterintelligence agency available to the commander for the enforcement of counterintelligence discipline, and for other activities in combating the operation of enemy agents.[19]

The manual stressed that CIC personnel were to be encouraged to "exercise... initiative to the fullest extent" and to be permitted to operate "with minimum restrictions" upon movements or channels of communication. Agents were to be prepared at all times "to resort to any means, methods, or stratagems necessary to accomplish the mission assigned."[20]

The tentative manual was the basis for Technical Manual 30-215, "Counter Intelligence Corps," which was published on 22 September 1943 as the first CIC manual for use in the field.[21]

Despite the manual's emphatic words concerning the employment of CIC agents and detachments, reports of improper use of CIC by commanders and intelligence officers continued to flood CIC Headquarters in Baltimore. The situation was so acute by 29 March 1943 that Maj Gen George V. Strong, the War Department G2, prepared a letter for distribution to all commands in which he

---

20 Ibid., pp. 2-3.

21 War Department Technical Manual 30-215, "Counter Intelligence Corps," 22 Sep 43, (CONFIDENTIAL) (Central Records Facility).

outlined anew the War Department policy governing CIC operations.[22] A separate memorandum for the record noted that the letter was necessitated "by the lack of understanding prevalent among intelligence officers of air and ground force units and directors in intelligence or service commands regarding the functions of CIC personnel..."[23]

Some specific instances of misunderstanding of CIC duties were reported to Major Wise on 10 April 1943 by the G2, Sixth Service Command. The G2 listed these glaring violations of policy gleaned from letters and interviews with agents assigned to duty with divisions and tactical units:

> Divisional intelligence officers have no knowledge of the capabilities, training or type of duties which Counter Intelligence Corps personnel should perform, and assign such personnel to either routine duties or to combat intelligence....
>
> Enlisted men already on duty with the division regard the Counter Intelligence Corps agents with distrust and suspicion, and the officers of the division do not give any weight of authority to the Counter Intelligence Corps duties, if and when the men are allowed to do Counter Intelligence Corps work....
>
> A staff sergeant-special agent...stated that there were no Counter Intelligence Corps duties for him to perform; that all of the men in his detachment were assigned for infantry duty and were engaged in performing fatigue duties....The divisional intelligence officer did not know the use of the Counter Intelligence Corps...
>
> A second lieutenant...writes: 'I am familiar with the CIC Detachment Manual (Tentative) which is apparently our bible, but to try to put some of that doctrine into practice here would be the worst possible mistake. Both the Divisional G2 and the camp intelligence officer would see red.'[24]

---

22 Memorandum from General Strong to The Adjutant General, 29 Mar 43, subject: "Counter Intelligence Corps Personnel Assigned to Units of the Army Air Forces and Army Ground Forces Within the United States," (CONFIDENTIAL) (Central Records Facility).

23 Memorandum for the Record, undated and unsigned, attached to Memorandum from General Strong to The Adjutant General, 29 Mar 43, subject: "Counter Intelligence Corps Personnel Assigned to Units of the Army Air Forces and Army Ground Forces Within the United States," (CONFIDENTIAL) (Central Records Facility).

24 Memorandum from Colonel Furbeshaw, G2, Sixth Service Command, to Major Wise, 10 Apr 43, subject: "CIC With Tactical Units," (CONFIDENTIAL) (Central Records Facility).

0688

In an effort to combat this situation, Major Wise and Major Bradford held a series of conferences with Col Giles Carpenter, G2 of the Army Ground Forces. As a result of these conversations, Major Wise prepared a suggested directive which he hoped Colonel Carpenter would forward to all ground force units. Basically, the directive reiterated the counterintelligence mission and specified that CIC personnel would not be used for duties not related to counterintelligence.[25]

Colonel Carpenter refused to issue the suggested directive. He approved the tentative CIC manual, but objected to Major Wise's insistence that CIC agents not be required to perform routine housekeeping and fatigue duties. He considered CIC personnel members of the G2 section and declared that they would be used interchangeably for CIC and other G2 work when the situation demanded.[26]

Another conference between Colonel Carpenter and Major Bradford followed, and Colonel Carpenter requested a list of specific cases where CIC personnel had been improperly employed. Major Bradford gave him a list of incidents in which CIC detachments with 14 Infantry divisions and two corps had been required to perform tasks either specifically prohibited or not within the CIC mission.

"This conference was productive of a fine spirit of cooperation," Major Bradford reported. "An educational program and other corrective suggestions were to be taken up with Colonel Forney by Colonel Carpenter."[27] Records do not indicate the nature of the "corrective suggestions;" however, on 25 May 1943, a letter from Colonel Carpenter to all Army Ground Forces G2s stated:

> "It is the desire of the Counter Intelligence Corps Branch, Counter-intelligence Group, Military Intelligence Service, War Department, that the CIC personnel serving with units of Army Ground Forces be trained and function as detachments under the command of the senior CIC officer assigned to that unit."[28]

On 4 June 1943, General Strong prepared a letter for distribution to all commands in which he stressed once again that the shortage of CIC personnel,

28 Ltr from Colonel Carpenter to G2s of all Army Ground Forces Units, 25 May 43, subject: "Information Concerning CIC Detachments," (CONFIDENTIAL) (Central Records Facility).

combined with the specialized nature of their training, made it absolutely essential that agents be used only for counterintelligence duties.[29]

In fairness, it must be stated that the CIC concept of its own mission in combat was developed only through a period of evolution as detachments entered battle and proved their worth. As late as May 1943, Colonel Kibler, CIC's new Chief, was uncertain of CIC's role in combat. Agents in the field, top-level G2s, and field commanders all had their own opinions of what the work of the Corps was supposed to be.[30]

An example of some of these individual opinions concerning the CIC mission was expressed by Brig Gen James C. Crockett, G2, European Theater of Operations, in a personal letter to General Strong. General Crockett felt that the field security and investigative missions of the Counter Intelligence Corps should be distinct and that two types of agents should be employed. For field security work, well-trained soldiers with a minimum of investigative training were desirable, in General Crockett's opinion. On the other hand, he was convinced that special investigators needed little or no field training but required extensive schooling in their specialty. "CIC should be charged with both special investigation and field security but there should be a certain amount of cleavage between personnel for each function," he wrote.[31]

Another G2, Colonel Homer P. Ford of IV Armored Corps, was emphatic in his assertions that field security was perhaps the major CIC combat function.[32]

CIC Inspection Trips

To clarify the CIC mission, Colonel Kibler sent officers assigned to the Counter Intelligence Corps Branch on extensive inspection trips to all overseas areas where agents were serving, except the Pacific. Out of interviews with CIC agents and officers, commanders, and tactical G2s, a clearer concept of CIC's work gradually emerged.[33]

---

29 Memorandum from General Strong to The Adjutant General, 4 June 43, subj: "Use of Counter Intelligence Corps Personnel," (CONFIDENTIAL) (Central Records Facility).

31 Ltr from Brig Gen James C. Crockett to Maj Gen George V. Strong, 6 July 1943, (SECRET) (Central Records Facility).

32 Memorandum from Colonel Kibler to Assistant Executive Officer, Counter Intelligence Group, 21 August 1943, subject: "Items of Interest," (CONFIDENTIAL) (Central Records Facility).

33 Interview with Col H. R. Kibler, 19 September 1952, (CONFIDENTIAL) (Central Records Facility).

Actually, the trips abroad were continuations of similar tours to the Corps areas in the United States begun in 1941. They were not limited to discussions of the CIC mission, but touched on every phase of Counter Intelligence Corps organization and activity.

One of the earliest inspection trips on record was made during March 1942 by Captain Wise, while he was still the CIC Executive Officer. Between 15 March and 7 April, he visited First, Second, Fourth, Fifth, Sixth, and Seventh Corps areas. In every area, he found a backlog of cases resulting from a shortage of CIC agents and clerks. Officer personnel were on duty in the Corps areas in sufficient numbers, but many were required to perform non-CIC duties in addition to their counterintelligence responsibilities. In some instances, agents were forbidden to investigate commissioned officers or to conduct investigations within military installations. Some G2s were using clerks who had not been investigated to handle confidential and secret documents. Captain Wise's report recommended correction of these deficiencies.[34]

At Colonel Kibler's direction, a series of overseas inspection tours was completed in the summer of 1943. Major Bradford visited CIC detachments in the Western Defense Command, Alaskan Defense Command, Northwest Service Command, and Air Transport Command CIC detachments in Puerto Rico, Trinidad, Belem, and Brazil. CIC detachments in the Caribbean Defense Command were inspected by Major Adkinson. Colonel Wise visited units at Accra, Gold Coast; Cairo, Egypt; Bengasi, Libya; Algiers, Algeria; Oran, Algeria; Casablanca, French Morocco; London, England, and Presque Isle, Maine.[35]

The value which Colonel Kibler placed on these inspection trips is indicated by a report he prepared on 8 February 1944, as he prepared to vacate the Office of the Chief, Counter Intelligence Corps. He listed the trips and the resulting "firsthand knowledge of counterintelligence activities within each theater" among the more important accomplishments during his tour of duty as Chief, CIC.[36]

---

34 Memorandum from Capt Hugh D. Wise, Jr., to Chief, Counter Intelligence Corps, 16 Apr 42, subject: Report of Liaison Trip to Certain Corps Areas, (CONFIDENTIAL) (Central Records Facility). See also the Chapter of CIC in the Service Commands during World War II.

35 Memorandum from Col H. R. Kibler to Col L. R. Forney, 22 Jun 43, subject: "Inspection Trips by Counter Intelligence Corps Personnel," (CONFIDENTIAL) (Central Records Facility). Reports of these trips are discussed fully in chapters dealing with CIC operations in the various base and defense commands and theaters of operation.

36 Memorandum from Col H. R. Kibler to Chief, Counterintelligence Group, 8 February 1944, subject: "Activities of Office of the Chief, Counter Intelligence Corps, 10 May 1943--8 February 1944," (CONFIDENTIAL) (Central Records Facility).

Technical Manual 30-215

Conclusions and recommendations of the inspecting officers were embodied, in part, in the Counter Intelligence Corps Technical Manual 30-215 when it was finally published on 22 September 1943.[37]

Actually, by the time the long-awaited manual was distributed, most G2s and detachment commanders had devised their own methods of operation. The manual came too late to be of much value in Europe, and it was rescinded before the intense Philippine fighting was well under way in the Pacific. It was replaced by a letter from the Adjutant General outlining CIC organization and mission for all commands.[38]

Publicity: Bane or Boon?

While the Chief of CIC was resorting to manuals, letters, and inspection trips to explain CIC's role to other units of the Army, key planners within the Office of the Chief were debating how much--if anything--the public ought to know about the Corps.

In late 1941, when authority was granted to change the name of the Corps of Intelligence Police to the Counter Intelligence Corps, plans were made to bring the Corps and its activities "out in the open." It was thought that the public would be told something of the Corps and its work.[39] To implement this policy, CIC issued through the Bureau of Public Relations on 9 January 1942 the first press release concerning the existence and activities of CIC.[40]

However, in June 1942, Col J. T. Bissell, Assistant Executive Officer of the Military Intelligence Service, censured the G2 of the Third Corps Area in Baltimore for what he called "inappropriate Counter Intelligence Corps publicity." Newspapers in Philadelphia and Norfolk published stories which stated that the Army

was accepting enlistments for the Counter Intelligence Corps. Colonel Bissell demanded an explanation for the newspaper articles.[41]

Another indication that CIC was not too eager to publicize its work was the comment by the Inspector General on 6 November 1943 that in many instances "telephones were not listed, the locations of offices secret, and the identity of resident agents concealed. This is in direct contrast to the FBI, the existence and purposes of which are widely publicized, their offices known, telephones listed, and public support and cooperation encouraged."[42]

As CIC detachments with combat units fought their way through North Africa, Sicily, and Italy, war correspondents for American newspapers filed glowing accounts of CIC success in thwarting the plots of enemy agents. For the most part, the stories glamorized the spy-catching angle of CIC's work. A typical story in the Army newspaper, Stars and Stripes, referred to CIC as "one of the Army's hush-hush departments."[43]

The publicity question was forced upon CIC in the fall of 1943 when a Look Magazine correspondent who had worked with the 45th CIC Detachment in Sicily requested approval for a picture story on CIC combat operations. Major Bradford felt that publication of the story might do more harm than good, since security questions were involved.[44] However, Colonel Kibler authorized publication of the article "in view of the fact that other investigative organizations outside of G2 have claimed credit for the counterintelligence work accomplished by the Counter Intelligence Corps." One of the organizations of which Colonel Kibler spoke was the Office of Strategic Services (OSS), which had been organized on 13 June 1942, primarily for collection of positive intelligence. By the time of Colonel Kibler's comment, CIC agents in combat areas had run into considerable trouble with OSS agents.[45] The CIC Chief felt that properly censored publicity for the Corps would

boost morale of agents in the field and would also help to educate Army officers on the work on the Counter Intelligence Corps.[46]

On 9 October 1943, Major Bradford recommended the appointment of a CIC Public Relations Officer responsible for periodic release of CIC information through Army publications and bulletins and to the general public through the media of the press, radio, and periodicals.[47] Although records do not show whether the request was approved, ten days later Major Bradford prepared a standing operating procedure governing the release of CIC publicity. Among the more important provisions of the SOP were specifications that names of CIC personnel and full-face photographs of agents would not be published. The policy also required approval of the Chief, CIC, for each article released.[48]

Following a 5 November tour of CIC offices and the staging area in Baltimore,[49] representatives of the Army's Bureau of Public Relations in Washington outlined an extensive publicity program designed to educate both the Army and the public on CIC's wartime role. Press conferences, radio broadcasts, newsreels, motion picture short subjects, fiction based on actual CIC cases, news releases, and a CIC history were among the publicity devices suggested.[50]

Colonel Kibler forwarded the report for General Strong's consideration,[51] but available records do not indicate whether it was ever approved.

More and more stories of CIC's work in combat appeared in the nation's newspapers during 1944 and early 1945.[52] In January 1945, The American Magazine featured an article on CIC operations entitled "G-Men in Khaki." The Adjutant General distributed copies of the article to all commands.[53]

Anonymity of Personnel

Underlying the early hesitancy to publicize CIC activities was the belief that identities of agents should be concealed if their operations were to be effective. This concept was carried into the war years to some extent, despite the avowed intention to dispel some of the secrecy surrounding the Corps and its personnel. Agents were required to sign an oath to conceal their association with CIC at all times, except in the conduct of official business.[54]

In combat zones, where CIC units worked closely with tactical troops, agents often wore brightly lettered brassards identifying them as CIC agents on entering a town for the first time. Yet in the rear areas, where enemy saboteurs and spies were more likely to be active, efforts were made to conceal the identities of the CIC agents.[55]

Actually, the major problem of anonymity in combat zones was that of concealing the rank of CIC agents, whose status as noncommissioned officers sometimes was a hindrance. Especially was this true in North Africa and in Europe. One team of enlisted agents working on an important case in North Africa was eating at an officers' mess when someone discovered they were enlisted men and ordered them out of the mess. The resulting disturbance compromised the entire CIC operation, and the team had to begin its work anew. At Baltimore, the Office of the Chief determined that the only practical solution to the problem of concealment of rank was for agents in combat to wear U.S. brass with the civilian uniform.[56]

55 "G-Men in Khaki," The American Magazine, January 1945.

56 Interview with Col H. R. Kibler, 19 Sep 52, (CONFIDENTIAL) (Central Records Facility).

In the United States, where most CIC agents wore civilian clothing and were called "Mister," anonymity also created problems, particularly when agents were required to operate on Army posts. At the Presidio of San Francisco, for example, the post commander ripped one agent's post exchange card to shreds because it listed his rank only as "Mr." The post commander directed the post exchange officer not to acknowledge such cards.[57]

As a result of this incident, the G2 of the Western Defense Command recommended that the Chief, CIC, obtain specific authorization for agents to possess post exchange cards, installation passes, and similar documents which would not reveal the rank of the agent or his connection with CIC.[58]

The question of whether the rank of CIC agents should be known came up frequently, and correspondence of the Office of the Chief indicates a conviction that concealment of rank was an operational necessity. General Strong, in a memorandum for the Chief of Staff dated 3 June 1943, declared that CIC agents known to be enlisted personnel were at "an extreme disadvantage" in investigative activities involving cooperation between CIC, FBI, and the Office of Naval Intelligence.[59] The Chief of Staff of the Western Defense Command reported similar conclusions in a memorandum to the War Department Chief of Staff on 9 August 1943.[60] In a letter clarifying the War Department policy governing use of civilian clothing by CIC agents, the Adjutant General notified all commands that civilian clothing often was necessary to protect the identity of the agent.[61]

Badges and Credentials

The official identification for the CIC agent or special agent was his credentials.

61 AG Ltr to all commands, 29 Aug 44, subject: "Civilian Clothing for Counter Intelligence Corps Personnel," (CONFIDENTIAL) (Central Records Facility).

Soon after the creation of the Office of the Chief, Counter Intelligence Corps, and the centralization of CIC control, the Military Intelligence Service withdrew from the Corps areas the authority to issue CIC credentials and badges. Effective 1 April 1942, the Military Intelligence Service assumed the responsibility of issuing all credentials and badges. Forms were sent to Corps areas to be signed by the agents, then were returned to Washington for authentication. Special agent credentials were authorized for commissioned officers and for certain noncommissioned officers. Agent credentials were provided for enlisted men designated as agents.[62]

Apparently the plan did not prove satisfactory, for the responsibility for issuing CIC credentials and badges was again decentralized to service commands and base commands on 15 November 1942. Under the new arrangement, G2, War Department, provided supplies for issuance of credentials to the various commands in quantities not exceeding the total CIC allotment for the command. Special questionnaires and receipts were retained at War Department level for all credentials and badges issued. Whenever an agent was transferred from one command to another, he carried his credentials with him. They were destroyed as soon as the agent had been issued credentials at his new assignment. G2, War Department, was notified within 48 hours of any changes affecting the possession of credentials and badges.[63] Similar provisions were adopted for tactical detachments, with the division, corps, or Army G2 authorized to issue credentials.[64]

Despite the distribution of instructions on issuance of badges and credentials to all commands, the Chief, CIC, reported a "widespread lack of uniformity" concerning their handling in the summer of 1943. As a result, Colonel Kibler requested all offices responsible for issuing the credentials to submit a Monthly Change Report of Credentials and Badges to the Office of the Chief, Counter

Section 2

PERSONNEL

Few problems faced by the Office of the Chief, Counter Intelligence Corps, surpassed those which centered on personnel procurement, administration, and employment in an expanding Corps.

Early 1942 brought rapid increases in CIC strength. On 27 April 1942, when the authorized strength of the Counter Intelligence Corps was only 1,026 noncommissioned officers, General Strong requested immediate approval for a CIC quota of 543 officers and 4,431 enlisted men. The G2 made a strong plea for the assignment of officers to CIC "in order that only the most proficient and experienced counterintelligence commissioned personnel may have supervision over the specialized activities of the Counter Intelligence Corps and to provide...that the security mission of the Corps may not be impaired through transfer of such personnel to other duties." General Strong proposed the transfer into CIC of 337 officers currently performing counterintelligence duties connected with CIC activities. The remaining 206 officers were to be obtained from former CIC agents who were graduates of officer candidate schools.

Both G1 and G3 concurred in General Strong's recommendations, and on 13 May 1942, the Deputy Chief of Staff approved the suggested CIC allotments.[67] On 6 July, The Adjutant General notified G2 that the authorized commissioned strength of the Counter Intelligence Corps was set at 12 colonels, 28 lieutenant colonels, 55 majors, 136 captains, 156 first lieutenants, and 156 second lieutenants. Enlisted strength was established at 80 master sergeants, 300 technical sergeants, 750 staff sergeants, 1,049 sergeants, 1,900 corporals, and 352 privates first class.[68]

The next request for an increase in CIC strength came on 23 February 1943, when a staff study recommended that CIC be allotted 1,392 officers and 8,360 enlisted men, for a total strength of 9,752. To justify the request, General Strong cited the ever-increasing work of the Corps in areas throughout the world:

0699

"In order to meet the need which exists and the ever-increasing demands, particularly from tactical units overseas and Services or Supply organizations overseas, it is essential that the authorized strength of the Counter Intelligence Corps be substantially increased at this time. The presence of American forces in hostile and semi-hostile countries has given rise to counterespionage, countersabotage, and general counter-subversive problems of extraordinary volume and importance. The continued operation of American forces in such areas and the eventual invasion of other hostile and semi-hostile countries will increase these problems which are complicated by differences in language, race, and custom, and create additional demands for Counter Intelligence Corps personnel qualified to combat enemy agents under such circumstances."[69]

The request, like others that were to follow, was doomed to a stormy future marked by nonconcurrences and administrative delays.

In May, while the request was still pending, Major Bradford, the CIC liaison officer, learned informally that it would not be approved. Colonel Kibler began immediately to plan ways to redistribute CIC personnel and to limit activities of members of the Corps to approved CIC functions.[70]

Meanwhile, another request for an increase in CIC strength was being prepared. On 31 May, General Strong asked the Chief of Staff to approve a CIC strength of 3,187 officers and 3,787 enlisted men. He also sought approval for 2,000 vacancies for CIC in the Army's officer candidate schools.

General Strong insisted that CIC duties required a high ratio of officers to enlisted men and maintained that almost all personnel within the Corps were officer material. He said the increases in grades and ratings were necessary to boost morale and to check the increasing loss of expensively investigated and trained personnel.[71]

This request also was ill-fated. G1 reluctantly concurred in the need for additional personnel, but bitterly opposed the plan suggested by General Strong.

---

69 Memorandum from General Strong to the Chief of Staff, 2 Feb 43, subject: "Reorganization and Expansion of the Counter Intelligence Corps, Military Intelligence Service," (SECRET) (Central Records Facility).

70 Memorandum from Col H. R. Kibler to Col L. R. Forney, 22 May 1943, subj: "Suggested Changes and Adjustments Within the Counter Intelligence Corps," (CONFIDENTIAL) (Central Records Facility).

71 Memorandum from General Strong to the Chief of Staff, 31 May 1943, subject: "Reorganization and Expansion of the Counter Intelligence Corps, Military Intelligence Service," (SECRET) (Central Records Facility).

Brig Gen M. G. White, the G1, labeled the proposed ratio of officers to enlisted men "excessive" and urged decentralization of CIC control. He stated:

> "CIC activities are an essential element of command responsibility and must be operated with established channels. Personnel of the CIC directly under the Military Intelligence Division should confine their activities to the preparation of plans and policies, the supervision of counterintelligence functions, the procurement and supply of special equipment, and the conduct of Counterintelligence Training. The MID allotment of personnel for CIC should be reduced to the number required to discharge (these) functions... The balance now in the field should be transferred to the overhead allotments of the commands and activities concerned."

G1 also opposed granting CIC 2,000 vacancies for officer candidate schools, since that number was approximately 10 percent of the total vacancies. He recommended that additional officers be obtained from those already commissioned.[72]

Faced with the prospect of further opposition to the proposed increases in CIC strength, Colonel Kibler began preparation of a new staff study by asking directors of intelligence of all commands to forward through command channels letters stating their future CIC requirements.[73]

Replies signed by commanding generals of the various commands indicated a need for 1,513 CIC officers and 4,909 enlisted men. Almost uniformly, requests from the service commands pleaded desperately for a greater ratio of officers to enlisted men.[74] From the Director of Intelligence, Second Service Command, came a typical reply. He wrote:

> "We are operating in an area and dealing with persons in all walks of life where a larger proportion of officers would be distinctly advantageous, and operate with greater efficiency....It is recommended that a proportion of one officer agent to every three enlisted agents be secured...in order

to place us on a comparable footing with the Navy and the Federal Bureau of Investigation, which operate on similar missions in the same area."[75]

Armed with these figures, G2 submitted another staff study on 23 September 1943 requesting a minimum increase to 1,331 officers and 5,432 enlisted men. Of these, 2,317 were slated for duty overseas, 1,182 with the Air Force, and 3,264 for duties within the Zone of Interior.[76]

The Assistant Chief of Staff for Operations concurred in the proposed increase in CIC strength,[77] but once again G1 and G3 balked. The Personnel Division (G1) agreed to a total of only 1,150 officers and 4,750 enlisted men and insisted that these would have to be made available within the troop basis.[78] Maj Gen Ray E. Porter, G3, repeated G1's comments and added that any increase in officer strength should come from the existing officer surplus rather than from CIC enlisted ranks.[79]

Another indication of G1's opposition to strength increases for CIC was a letter from Colonel Wise to Colonel Kibler on 23 September. Colonel Wise said General White, the G1, had been in the Middle East asking unit commanders: "How about CIC men, you don't need them do you?" All over the area the G1 was told that CIC agents were needed. Each echelon felt that CIC personnel should be assigned there and attached to lower units.[80]

Despite nonconcurrences by two staff sections, General Strong submitted the original staff study to the Chief of Staff and asked that he overrule the objections of G1 and G3.[81]

81 Brief of Staff Study on Increase in Authorized Strength of the Counter Intelligence Corps from G2 to Chief of Staff, 19 Oct 43, (SECRET) (Central Records Facility).

On 3 December 1943, G3 notified G2 that Counter Intelligence Corps units were not included in the 1944 troop basis being submitted for approval by the Chief of Staff. Tentative estimates of CIC needs were to be included in the overall allotment figures in overseas and continental United States overhead. G3 also asked G2 to prepare tables of organization and equipment for CIC units with division, corps, army, Zone of Interior, Army Air Force, and Army Service Forces. According to the G3 memorandum, a cellular type table would be favorably considered.[82]

When CIC tables of organization were prepared by G2, they were not of the cellular type recommended by G3. Instead, G2 wrote:

> "It is recognized that these Tables of Organization are not the cellular type in its strictest sense but are considered to be modified cellular Tables of Organization and Equipment. The cellular type of organization is adaptable to organizations such as Signal Corps where the personnel have been specifically trained for one major duty. The specialized training furnished personnel of the Counter Intelligence Corps involves concentrated training in investigative technique and other prerequisites of counterintelligence work....To break down CIC detachments in cells for specialized functions would necessitate increasing the number of personnel required by each unit, since each unit would require a combination of specialists teams....If the cellular principal in its strict sense were applied to CIC detachments, the numbers and grades necessary would exceed the number that the commands...have requested."

Emphasizing that the recommended tables were based on requests from theater commands, G2 urged that modification of the cellular principle be permitted for CIC.[83]

Once again, G3 refused to accept G2 recommendations on the strength of the various types of CIC detachments. Col Lloyd S. Partridge, acting G3, returned the suggested tables of organization and reiterated the G3 demand for strict adherance to the cellular type of organization. Colonel Partridge drew up samples

83 Memorandum from General Strong to G3, 18 Dec 43, subject: "Tables of Organization and Equipment for Counter Intelligence Corps Personnel," (SECRET) (Central Records Facility).

of flexible cells and asked that specification serial numbers be furnished for all officers and enlisted men.[84]

Finally, on 18 January 1944, G2 submitted a cellular table of organization for CIC units which was approved by G3. The table did not contain the specification numbers requested by G3, but G2 said the numbers would be added later, as soon as The Adjutant General could establish new classifications for CIC officers, special agents, agents, and clerks. Although the table was designed primarily for CIC units in overseas theaters, it was also adaptable for detachments in training with tactical units within the United States. Once more G2 asked approval for a bulk allotment of CIC personnel for the Air Force.[85]

The negotiations finally resulted in Table of Organization and Equipment 30-500, published on 24 January 1944.[86] This table actually represented a compromise between G2, G1, and G3 and terminated, for the time being, the inter-staff feud over CIC personnel requirements. During the months of haggling over CIC strength, Colonel Kibler gradually realized that part of G1 and G3 opposition to CIC increases was based on the request for senior officers, since this would eliminate these grades for other units. As a compromise measure, Colonel Kibler decided to eliminate the twelve full colonels authorized on 6 July 1942. The top grade suggested in the CIC table of organization which was finally approved was lieutenant colonel. Surrender of the twelve colonel vacancies expedited the approval of other staff sections for the new CIC table of organization.[87]

On 25 January 1944, G3 announced approval of the G2 plan and said a CIC pool would be included in the 1944 troop basis.[88]

Actual vs Authorized Strength

Throughout the period when CIC was struggling to obtain authorization for more officers and agents, the actual strength of the Corps remained slightly under the total allotment. However, a vigorous recruitment program directed by the personnel section in the Office of the Chief quickly narrowed the gap of vacancies.

On 6 May 1942, overseas bases had only 165 of their authorized 250 CIC agents. On 30 June 1942, when the total authorized strength was 1,026, rosters showed only 833 CIC agents. After the authorization on 6 July 1942 for 543 officers and 4,431 enlisted men, CIC strength began to climb rapidly. By the end of the year, there were 157 officers and 3,219 enlisted men.[89] On 30 September 1943, CIC agents and officers numbered 4,901--only 73 short of the total allotment. Of these, 1,720 were serving overseas.[90]

An estimate of the distribution of CIC personnel as of 31 December 1944, prepared by Colonel Kibler for the Operations and Plans Division for inclusion in the 1944 troop basis, listed 2,642 CIC personnel in theaters of operation and 1,396 in the Zone of Interior.[91]

Qualifications for CIC Personnel

Despite the tremendous increase in the size of the Corps, CIC did not lower its standards for agents or officers.

Slight changes were made, however. On 13 April 1942, the age span for CIC agents was increased to include persons between the ages of 22 and 45.[92] On 24 July 1942, Major Sheen notified G2s of the Corps areas that the minimum age for CIC clerks was 20 years.[93]

93 Ltr from Maj H. G. Sheen to G2s, all Corps areas, 24 Jul 42, subject: "Requests for Approval of Assignments to the Counter Intelligence Corps," (CONFIDENTIAL) (Central Records Facility).

Another requirement imposed shortly after the beginning of the war was that all CIC applicants must first complete at least eight weeks of basic military training. On 23 January 1942, Brig Gen Raymond E. Lee, Acting G2, notified The Adjutant General that "favorable consideration will not be given to requests for assignment to the Counter Intelligence Corps made with respect to individuals who have, as of the time of the request, completed less than eight weeks' basic military training."[94]

Apparently, however, service commands ignored the basic training qualification in some instances. As late as November 1943, CIC agents were assigned to tactical detachments or to officer candidate schools without first completing basic training, and the Military Intelligence Service found it necessary to remind directors of intelligence in the service commands that CIC agents must first qualify as soldiers.[95]

Indicative of the high standards demanded of agents of the Counter Intelligence Corps was an information leaflet prepared by Major Sheen for CIC applicants early in 1942. Many of the men who flocked to the CIC office in Washington after Pearl Harbor sought to evade fighting, or were intrigued by the possibility of a glamorous undercover assignment. Major Sheen went to considerable length to dispel such notions and to stress the high qualifications expected of every CIC agent:

> "The Counter Intelligence Corps does not solicit applicants...Nine out of every ten applicants are rejected, and the Corps has more potential material than can be absorbed...To be a special agent the applicant must possess certain linguistic, investigative, legal, technical, or other ability qualifications peculiar to the mission of the Corps...The officers and men of the Corps...are aggressive, daring, determined, shrewd, resourceful, and self-reliant. Their loyalty to their country and to the Army is unquestionable. The most important word in the vocabulary of the Corps is "DUTY." Their discipline is largely self-imposed and severe."

The brochure listed these additional qualifications for Counter Intelligence Corps personnel: active duty in the United States Army, completion of eight weeks basic military training, subjection to an exhaustive background investigation, and actual experience as an attorney, investigator, accountant, or a similar profession.[96]

95 Ltr from Col J. T. Bissell to Directors of Intelligence, Service Commands, 9 Nov 42, subject: "Basic Military Training," included in CIC Office Manual, 1941-1943, (CONFIDENTIAL) (Central Records Facility).

96 "Counter Intelligence Corps Information for Applicants," signed by Maj H. G. Sheen, (Unclassified) (Central Records Facility).

Excellent physical condition was another prerequisite for the potential CIC agent, although this requirement was waived on rare occasions when an applicant was outstandingly qualified for CIC assignments otherwise, and the physical impairment was of a relatively minor nature.[97]

All these, plus certain educational requirements, were embodied in Technical Manual 30-215, when it was published on 22 September 1943. For officers, a college education, experience in military intelligence activities, experience in investigative work, or linguistic qualification was essential. Similar standards were established for enlisted men, although only a high school education was required.[98]

Personnel Procurement

Urgent procurement problems faced the CIC Personnel Section as new vacancies were authorized for both officers and enlisted men.

On 25 February 1942, directors of intelligence in the Corps Areas were directed to fill all CIC vacancies in their Areas and were advised that agents soon would be needed for duty outside the United States.[99] On 14 May, the Military Intelligence Service notified the Corps Areas that authorization for 1,900 vacancies for CIC corporal agents was expected shortly. Selection of these agents within the Corps areas was directed, without prior approval of the War Department.[100] Less than a month later, the anticipated expansion of CIC was authorized, and the Chief, CIC, prodded directors of intelligence in the Corps areas to expedite procurement of the new agents and clerks. Meanwhile, the Personnel Section in the Office of the Chief was pushing recruitment of special agents.[101]

101 Ltr from Maj H. G. Sheen to G2s, all Corps areas, 3 Jun 42, subject: "Reorganization of the Counter Intelligence Corps," included in CIC Office Manual, 1941-1943, (CONFIDENTIAL) (Central Records Facility).

Similar attention was given to the selection of CIC officers. When the vacancies allotted to CIC at officer candidate schools did not immediately supply an adequate pool of commissioned personnel, all branches of the War Department's Counter Intelligence Group were directed to report the names of officers of troop age who could be released for CIC duty.[102] Service Commands were advised of the officer grades available to CIC, and instructions were issued to effect the transfer of counterintelligence officers within the commands to the Counter Intelligence Corps, Military Intelligence Service, War Department.[103]

Tabbing of Potential CIC Personnel

As early as 25 July 1941, the Corps of Intelligence Police had prepared a definition of an investigator so that classification sections at Army reception centers could refer men with investigative experience to the Corps.[104] This was the beginning of a tabbing system which ultimately became one of CIC's most important procurement devices.

In March 1942, arrangements were made with the Adjutant General of each Corps Area to tab the name of every soldier being considered for assignment to the Counter Intelligence Corps. Once a tab was affixed to a prospective agent's records, he could not be transferred from his present assignment without word from the Corps Area G2 that he was no longer desired by CIC.[105]

As an additional procurement aid, reception centers in October 1942 began furnishing directors of intelligence excerpts from qualification cards of all enlisted men with investigative or stenographic experience.[106]

Although the tabbing system was a valuable procurement tool, it had its drawbacks. Perhaps the most serious disadvantage was the delay in training of men

who had been tabbed for CIC consideration. Army Ground Forces, Army Air Forces, and Army Service Forces all complained that the tabbing kept them from putting valuable men in either jobs or training.

The complaints resulted in a modification of the system in the summer of 1943. Instead of the tab which isolated a potential CIC man, a letter was attached to his service records which indicated that he was being investigated by CIC. Whenever he was transferred to another station, the Counter Intelligence Corps Branch was notified. If the man at any time was dropped from CIC consideration, the letter was removed from his service records.[107]

Obtaining Linguists a Problem

The greatest single CIC procurement problem during the war years was the difficulty in obtaining linguists who were qualified for CIC duty. As reports poured in to the Office of the Chief from tactical units throughout the world, all stressed the need for agents who could conduct interrogations in the native languages of the countries in which they were serving.

On 29 November 1942, the CIC personnel officer directed his section to concentrate on selection of agents fluent in any foreign language. Urgently needed were men who could speak Portuguese, Spanish, Arabic, Egyptian, Dutch, Russian, French, German, Italian, Hungarian, Polish, Lithuanian, Latvian, Japanese, Chinese, and Korean.[108]

From the first, personnel in the Office of the Chief were aware that linguists would eventually be required in large numbers. On every visit to the service commands, officers from the Baltimore headquarters emphasized that procurement of qualified linguists was to take precedence over selection of other CIC personnel.

It was relatively easy to locate linguists from information furnished by the Adjutant General from questionnaires completed at reception centers, but the percentage of individuals who were acceptable for CIC was quite small. The cards furnished by the Adjutant General showed the language spoken and the degree of fluency claimed, as well as the individual's score on the Army Classification Test. Linguists whose score was only slightly under the 110 minimum prescribed for CIC were investigated, but few proved to be qualified. In many

107 Ltr from Col H. R. Kibler to G2s, Service Commands, 3 Jul 43, subject: "Change in System of Tabbing Prospective Counter Intelligence Corps Personnel," (Unclassified) (Central Records Facility).

instances, persons who were excellent linguists were dropped from consideration because of a G2 ruling that men with close foreign backgrounds could not be assigned to the Counter Intelligence Corps.[109]

Racial requirements also complicated the CIC procurement problems. Negro agents were needed for assignment with Negro troops in the United States, Africa, and Australia. One task force in the South Pacific Area requested Polynesian agents for a special operation.[110]

CIC Seeks Technicians

Throughout 1943, CIC gave special attention to the procurement of agents with technical or mechanical training for duty with Air Force CIC detachments.

At first, the Air Force was reluctant to transfer to CIC men who had completed training at its technical schools. CIC was forced to resort to the few men they could muster who had worked with aircraft in civilian life. Finally, after a series of conferences between Major Wise and Air Force officials in February 1943, the Air Force agreed to furnish trained personnel to CIC.[111]

Arrangements were made through the Assistant Chief of Staff, A2, of the Technical Training Command, for CIC officers to visit Air Force Technical schools to screen records of potential CIC agents. After the men thus selected graduated, they were transferred from the Air Force to the Counter Intelligence Corps for duty with Air Force CIC detachments.

At the outset of the new procurement program, CIC requested 175 graduates of the aircraft mechanic schools, 75 from radio operators and mechanic schools, and 50 from other specialized schools of the Technical Training Command.[112]

By the end of June 1943, CIC counted among its agents 256 men supplied by the Air Force or trained in aeronautical work in civilian life. Requests for 171 other Air Force personnel were pending, and Colonel Kibler was confident that agents for Air Force duty would be available in adequate numbers.[113]

Investigation of CIC Personnel

An integral part of personnel procurement was the background investigation conducted on every potential CIC agent, clerk, or officer.

On 1 January 1942, when it became evident that a large number of officers would be required for the new Counter Intelligence Corps, The Adjutant General notified commanders of all Corps Areas and departments that commissioned officers must first be cleared by G2, War Department, before assignment to CIC duties.[114] Top priority was placed on loyalty investigations of prospective CIC agents. Only sabotage and espionage cases took precedence over the background checks for potential agents.[115]

As increases in CIC strength were authorized, Corps Area G2s were cautioned not to slight the background investigations in the haste to bring the Corps up to wartime strength. Col Ralph C. Smith, the G2 executive officer, warned that in accomplishing the rapid increase in CIC strength, "the primary consideration must be that of selecting properly qualified personnel and assigning only those who have been thoroughly investigated and found to be absolutely reliable and loyal."[116]

To expedite the investigations and to simplify transfers to the Corps, G2, War Department, assumed control of all background investigations of CIC

candidates in late January 1942. Corps Areas were instructed to complete any investigations already in progress, but requests for any new investigations were to be channeled through G2, War Department.[117]

The change in policy may have been the result of laxity on the part of some Corps Areas in making only superficial investigations. On 3 February 1942, the CIC personnel officer advised the Chief that security considerations had been ignored in the investigations of some CIC agents. He cited the presence in the Corps of a "large number" of special agents of questionable loyalty as "a source of real potential danger."

Agents in the field were warned that thoroughness in the background investigations was absolutely essential. They were told:

> "Investigations of prospective agents of the Counter Intelligence Corps should be made from two points of view. In the first place, it should be determined that the subject possesses a suitable personality and experience or background which makes him at least good potential material from which it may be expected that a well qualified special agent may be developed. In the second place, the candidate should have been thoroughly investigated and found to be absolutely loyal, honest, courageous, and reliable."[118]

However, a seemingly contradictory directive went out to Service Commands on 14 May 1942, when a G2 letter advised that complete investigations were not necessary prior to the assignment of agents and clerks to the Corps. Although the letter urged every effort to secure only personnel of proven loyalty, it stated that "it is not expected that a complete and thorough investigation will be made with respect to them prior to such assignment." The criteria of the investigations of potential special agents were not relaxed.[119]

On 21 October 1942, the control of investigations of CIC candidates was again decentralized to the Service Commands. The G2 of each Service Command was authorized to instigate investigations in his own area and to request investigations in other Service Command areas. Copies of reports on investigations were

forwarded to the War Department, which still retained the authority to appoint special agents.[120]

Soon the Military Intelligence Service again protested the manner in which the investigations were being conducted in the Service Commands. Investigations were being continued long after sufficient evidence to warrant action was obtained, apparently for the purpose of making records formally complete. In some areas, the investigations spanned periods of up to eight months. The result was a tremendous backlog of cases in every Service Command, while detachments in the field begged for more agents. Service Command G2s eventually were instructed to terminate investigations immediately when a CIC candidate became unavailable for any reason. Other suggestions were that records checks and similar leads should be developed by mail and that more discrimination should be exercised in initiating an investigation.[121]

Assignments and Allotments

An extensive bookkeeping system was developed within the Office of the Chief, Counter Intelligence Corps, to check CIC vacancies by comparing assignments to the various commands with their portion of the total CIC allotment.

When staff studies produced increased strengths, the overall allotment was divided among the various Service Commands. Each Service Command had its permanent allotment and an apportionment of the War Department reserve pool set up for the procurement of personnel for service with tactical units overseas. As each new detachment was activated, the War Department reserve pool vacancies were taken from one or more Service Commands, usually the ones from which personnel were being transferred. An allotment for the newly activated detachment was set up from vacancies subtracted from the Service Commands. This required considerable bookkeeping, since the allotments were not only by numbers but also by officer and enlisted grades. Eventually the record became quite complex, and each week the allotment vacancies for all units had to be proved out.[122]

120 Ltr from The Adjutant General to Commanding Generals, Service Commands, 21 Oct 42, subject: "Investigation of Prospective Counter Intelligence Corps Personnel," included in CIC Office Manual, 1941-1943, (CONFIDENTIAL) (Central Records Facility).

Bissell to Directors of Intelligence, Service Commands, 25 Mar 43, subject: "Investigation of Prospective Counter Intelligence Corps Personnel," (CONFIDENTIAL) (Central Records Facility).

122 Memorandum from Lt Col James F. Foothorap, (MI-Res) to Chief, Historical Section, Counter Intelligence Corps, 23 Sep 55, subject: "History of the Office of Chief CIC from Change of Name in January 1942 to Disbanding of Baltimore Headquarters in January 1944," pp 25-26, (Unclassified) (Central Records Facility).

For example, in September 1942 a special Task Force "A" was being assembled at the A. P. Hill Military Reservation in Virginia. An allotment of 45 CIC special agents, agents, and clerks was established for the task force. CIC allotments for the First, Second, and Fifth Service Commands and the Western Defense Command and Fourth Army were reduced by the number of CIC personnel transferred from those commands to the new tactical detachments.[123]

In October 1942, when the Counter Intelligence Corps was authorized 4,431 enlisted men, 2,216 were allotted to the Service Commands, leaving 2,215 for overseas service and the War Department reserve pool.[124]

The Service Command permanent allotments and their portion of the War Department reserve for tactical units in October 1942 were as follows:

	Permanent	Overhead
First Service Command	228	60
Second Service Command	311	67
Third Service Command	298	61
Fourth Service Command	282	58
Fifth Service Command	230	70
Sixth Service Command	245	127
Seventh Service Command	208	53
Eighth Service Command	266	60
Western Defense Command and Fourth Army	292	61

Service Commands were authorized to fill not only their permanent quotas, but also their share of the reserve pool to be used for subsequent assignment overseas.[125]

On 24 April 1943, Service Command control over CIC personnel was withdrawn, and agents were assigned to the War Department, then detailed out to the

123 Memorandum from Col J. T. Bissell to The Adjutant General, 11 Sep 42, subject: "Allotment of Counter Intelligence Corps Enlisted Personnel to the Field Army, Task Force 'A'," (SECRET) (Central Records Facility).

124 Memorandum from Col J. T. Bissell to Director of Military Personnel, Services of Supply, 6 Oct 42, subject: "Allotment of Counter Intelligence Corps Enlisted Personnel," (CONFIDENTIAL) (Central Records Facility).

125 This information was extracted from a series of letters from The Adjutant General to Commanding Generals of the First through Eighth Service Commands and the Western Defense Command and Fourth Army, all dated 23 Oct 42 with the subject: "Allotments, Counter Intelligence Corps Enlisted Personnel," (CONFIDENTIAL) (Central Records Facility).

Service Commands as needed.[126] Until 26 June 1943, theaters of operation were authorized to select and release agents and clerks under their allotments. On that date this selection privilege was withdrawn and was vested in the War Department.[127] The new arrangement was destined to be short-lived, however. The Chief of the Military Intelligence Service decided to transfer CIC agents to the using agencies, and a plan to implement the decision was submitted on 17 September 1943.[128]

New tables of organization for the various theaters of operation were prepared by 29 November 1943, and assignment of CIC personnel to the theaters was once again authorized. The quota for the European Theater of Operations was set at 38 officers and 428 enlisted men; United States Army Forces in Middle East, 13 officers and 81 enlisted men; Southwest Pacific Area, 29 officers and 299 enlisted men; South Pacific Area, 10 officers and 108 enlisted men; Allied Force Headquarters, 52 officers and 459 enlisted men. Theater commanders were directed to issue orders relieving the CIC personnel from the Counter Intelligence Corps, Military Intelligence Service, War Department, and assigning them to the theaters in which they were serving. Provision was made for automatic increases in the theater CIC allotments as new tactical detachments arrived from the United States.[129]

In the United States, however, functions and activities of the Counter Intelligence Corps were passing from the Office of the Chief, CIC, to the Army Service Forces. War Department Circular 324, dated 14 December 1943, ordered the combination of CIC and Provost Marshal general functions in the Zone of Interior in a single staff agency under each Service Command. With few exceptions, CIC agents remaining in the United States were transferred out of the Corps and assigned to the Service Commands.[130]

Forney, subject: "Transfer of CIC Personnel from the Zone of the Interior to Theaters of Operation, Army Ground Forces, Army Air Forces, and the Special Detachment," dtd 16 Sep 43, s/Kibler and Memorandum for General Kroner, dtd 17 Sep 43, (CONFIDENTIAL) (Central Records Facility).

129 Extracted from a series of memoranda from Maj Gen George V. Strong to The Adjutant General, all dated 29 Nov 43 with the subject: "Table of Organization for Counter Intelligence Corps Personnel," (CONFIDENTIAL) (Central Records Facility).

130 War Department Circular 324, 14 Dec 43. See Section 5, Part I, of this chapter for a complete discussion of the transfer of CIC to the Army Service Forces.

After the publication of Table of Organization and Equipment 30-500 in January 1944, its provisions were used as a guide for the activation and assignment of CIC detachments in overseas commands.

In February 1944, Maj Gen Clayton Bissell, War Department G2, recommended to G3 the procedures for activating detachments in accordance with the new table. For Army Ground Forces units, the provisions of the table were to be followed explicitly. Air Force detachments were to be activated on the basis of the cellular type table, but the total strength of the Air Force detachments was not to exceed the total CIC personnel then serving with the Air Force in the United States. Commanding generals of theaters, overseas departments, and base and defense commands were to be given the authority to activate detachments based on teams indicated in a special table.[131]

Under Table of Organization and Equipment 30-500, detachments were activated by the theaters and attached to divisions, corps, and field armies by combining one or more headquarters teams with one or more operations teams. Although the size of the detachments varied, a divisional detachment ordinarily was composed of four officers and 13 enlisted men; a corps detachment, of five officers and 14 enlisted men. A common size of an army detachment was six officers and 15 enlisted men, although these detachments contained as few as six and as many as 72 men.[132]

Personnel Classification

In the early days of the Counter Intelligence Corps, when few men were assigned to CIC, an officer in the Personnel Section reviewed personal history statements to locate men with linguistic, occupational, or other specialized qualifications for a particular assignment or mission. As the Corps grew, however, extensive personnel records had to be maintained to permit selection of properly qualified men with a minimum loss of time.

From a review of personal history statements, the classification system spread to looseleaf file records and then to card records on the various characteristics and backgrounds of CIC agents. In mid-1943, when large numbers of men were being transferred from the Zone of the Interior to overseas units, the personnel records were inadequate to keep pace with the vast personnel movements. As a result, one CIC enlisted agent, who had been a college professor in civilian life, was brought in to the office of the Chief to revise the personnel

[redacted]

classification system. He organized the files on a visible index basis, using different colored cards for different subjects. Although the system was in use only a short time, it proved especially helpful in the selection of personnel for special projects, such as assignment with the Manhattan District Engineers Project.[133]

A classification system of a different type was the designation within the Service Commands of certain "key men" among CIC agents who were considered unavailable for transfer to overseas units.

In May 1942, the Corps Area G2s were directed to forward to the Office of the Chief, CIC, a list by name of special agents considered essential to counter-intelligence operations within the areas, along with descriptions of their jobs and the reasons why they were considered key personnel.[134]

Three months later, after some Corps Areas had designated large numbers of agents as key personnel, The Adjutant General ruled that not more than ten percent of the CIC strength of any Service Command could be classified as essential. Service Commands were reminded that they were responsible for providing CIC personnel for combat as well as for operations within the Zone of the Interior.[135]

Despite the continual emphasis on the responsibility of the Service Commands to provide qualified CIC personnel for tactical units, some persisted in releasing for combat duties only those agents who were of little or no value locally.

This practice resulted in a complaint from The Adjutant General that Service Commands were sending overseas "personnel not possessing suitable qualifications for such assignments." "The present practice of meeting requests for personnel

for assignment to tactical organizations and overseas with personnel most easily spared will be discontinued," a directive dated 20 March 1943 stated.[136]

Promotions

One personnel problem which at times seemed to defy solution was that of promotions. Rank accorded CIC agents was startingly low--a fact so widely known that a civilian magazine writer listed lack of rank as one of the Corps' greatest handicaps. Men of the caliber required for the Counter Intelligence Corps quickly gained promotion and commissions in other branches of service, but those who preferred CIC and stayed in the Corps sometimes went as much as two years without promotion![137]

Within CIC, the main distinction within the enlisted ranks was between agent and Special Agent. The coveted title of "Special Agent," available only to sergeants and persons of higher rank, was a symbol that the CIC man had proved himself worthy of the most exacting duties and responsibilities. Service Commands were empowered to designate corporals and sergeants as agents of CIC, but the War Department jealously guarded its authority to create Special Agents.[138] For a time, the Hawaiian Department and the Caribbean Defense Command were authorized to promote agents to Special Agent and to appoint Special Agents directly. The War Department revoked that authority on 15 June 1943.[139]

Provisions were made for a number of CIC agents to be commissioned after completion of Officer Candidate Schools. Thirty agents were commissioned after their graduation from a special eight-week advanced course at the CIC Training School in Chicago in the spring of 1942.[140] However, War Department policy forbade operation of a separate Officer Candidate School for CIC personnel, and vacancies in existing schools were allotted to the Counter Intelligence Corps for

its agents. Special Agents with 60 days prior service in CIC were permitted to apply for admission to Officer Candidate Schools.[141] Apparently this system was satisfactory, for on 2 September 1943, Colonel Kibler notified the Counter Intelligence Group that there was no need for a CIC Officer Candidate School as long as agents could be returned to CIC after receiving commissions at Officer Candidate Schools of the arms and services.[142]

CIC repeatedly attempted to secure authorization for more of its agents to attend Officer Candidate Schools. In one plea for increases in officer strength, General Strong wrote:

> "The personnel of this Corps is of officer caliber; the standards for assignment to the Corps are higher than those established for admission to Officer Candidate Schools....The character of work being done by these men is work which should be done by commissioned officers. Its counterpart is done in the Navy by commissioned officers and in civilian life by the carefully trained and well paid special agents of the Federal Bureau of Investigation."[143]

Although it was against War Department policy to offer direct commissions for Counter Intelligence Corps work, corporal and sergeant agents often were offered commissions in other branches of the service. In many instances, they refused commissions, preferring instead to remain with CIC in an enlisted capacity.[144]

Special Agents, on the other hand, were forbidden to accept direct commissions under any circumstances, except in the case of battlefield commissions. General Strong stated the reasons for this seemingly harsh policy in a letter to the Commanding General of the Third Service Command on 23 November 1942:

141 Ltr from Maj H. G. Sheen to G2s, Corps Areas, Departments, and Base and Defense Commands, 14 May 1942, subject: "Officer Candidate Courses for Special Agents of the Counter Intelligence Corps," included in CIC Office Manual, 1941-1943, (CONFIDENTIAL) (Central Records Facility).

142 Memorandum from Colonel Kibler to Chief, Counter Intelligence Group, 2 Sep 43, subject: "Counter Intelligence Group, Officer Candidate School," (CONFIDENTIAL) (Central Records Facility).

143 Memorandum from Gen George V. Strong to Chief of Staff, 31 May 43, subj: "Reorganization and Expansion of the Counter Intelligence Corps," (SECRET) (Central Records Facility).

144 Memorandum from Maj Hugh D. Wise to Colonel Bissell, 12 Dec 42, subj: "Activities of the American Intelligence Command With Respect to Counter Intelligence Corps Personnel," (CONFIDENTIAL) (Central Records Facility); and "G-Men in Khaki," The American Magazine, January 1945.

"While the release of agents from the Counter Intelligence Corps is entirely a Service Command matter, Special Agents will not be released for the purpose of accepting a direct commission. The reasons for this are several. In the first place, a very large portion of the Special Agents are of officer caliber. They have been extremely carefully selected and they possess exceptional backgrounds of experience and education. Were the various Arms and Services of the Army, Navy, and Coast Guard permitted to give direct commissions to these men, the results of such "raids" would be disastrous to the Counter Intelligence Corps....In the second place, the effect upon the morale of the Corps as a whole resulting from the selection of individuals from such a relatively small organization for commission directly would be very harmful. In the third place, Officer Candidate Schools are available to the personnel of the Counter Intelligence Corps and...we do not think that the Corps should be officered by lieutenants who have not been given the very valuable training available in candidate school..."[145]

For those agents and clerks who did not attend Officer Candidate Schools, promotions came slowly. Although Service Commands were authorized to promote CIC enlisted men within the approved allotments, the opportunity for advancement dwindled as the Corps was brought up to strength. On 22 May 1943, the Chief, CIC, urged increases in grades and ratings for CIC personnel and stated "unless morale can be maintained it is doubtful that the Corps...can satisfactorily accomplish its mission..."[146]

The situation did not improve immediately. A survey completed on 24 August 1943 indicated that CIC had lost 565 men in the past seven months, many of them to seek greater opportunities for advancement elsewhere.[147] Still the promotion situation tightened. On 1 October 1943 all CIC promotions were frozen, both in the United States and in overseas areas.[148] Nine days later, the authority to

promote CIC enlisted personnel was withdrawn from the Service Commands.[149]

Officer promotions required the approval of the Assistant Chief of Staff, G2, through the Chief of the Counter Intelligence Corps, since CIC commissioned personnel were assigned to the War Department. Officers were eligible for promotion, providing vacancies were available, after six months in rank.[150] One drawback to the officer promotional program was the long delay that frequently followed recommendation for promotion by the Office of the Chief, CIC, and the final approval by the Military Intelligence Service. In some instances, promotions were delayed as much as two months after approval by the Office of the Chief, CIC.[151]

CIC Efficiency Reports

Efficiency reports of both officers and enlisted agents were considered in promotions. G2s who supervised CIC agents were required to submit semi-annual efficiency reports on all Special Agents to G2, War Department. Special reports were required on the transfer of Special Agents to other commands, or on transfer out of CIC.[152]

Section 3

OPERATIONS

The Office of the Chief, Counter Intelligence Corps, was purely an administrative office not directly concerned with actual investigations such as those conducted by detachments in the field. Still, the Chief, CIC, was vitally concerned with operations of a different sort, the movement of CIC detachments from the Zone of the Interior to overseas theaters and to tactical units in training in the United States. It was for this purpose that the Operations Section of the Office of the Chief was created in March 1942.[153]

As its primary mission, the Operations Section was charged with selection of men for overseas assignment, forming of detachments of the men selected, in proper grades, and moving the detachments to their proper destinations. Obviously, fulfillment of the mission required the closest liaison with the theaters, the War Department General Staff, and with other sections within the Office of the Chief, CIC.[154]

In the first days of the war, the CIC Operations Section was seriously hampered by failure of the Operations Division of the War Department General Staff to notify CIC of pending troop movements. The result of this lack of coordination was stated bluntly in a letter from Col J. T. Bissell, Assistant Executive Officer of the Military Intelligence Service, to the Operations Division on 1 May 1942:

> "...at the present time no specific plan for Counter Intelligence personnel is made in the initial stages of preparation prior to sending such forces overseas. In the past forces have gone overseas without any Counter Intelligence personnel in some instances and in others without sufficiently prepared personnel. This has resulted from a failure to take into account the need for such personnel until the shipment has reached its destination."[155]

---

153 This followed reorganization of the General Staff when the Military Intelligence Service was created to take G2 out of the operating business. (It didn't work)

154 History of the Counter Intelligence Corps, 1907-1943, pp. 223-224, (CONFIDENTIAL) (Central Records Facility).

155 Ltr from Col J. T. Bissell to Col Carl A. Russell, Deputy Chief, Theater Group, Operations Division, War Department General Staff, 1 May 1942, subject: "Notification to the Counterintelligence Group of Actual or Contemplated Shipments Overseas of Task Forces, Expeditionary Forces, or Reinforcements for Troops Already Overseas," (SECRET) (Central Records Facility).

A conference between Capt Lowell J. Bradford, CIC Operations Officer, and Col Carl A. Russell, Deputy Chief of the theater group within the Operations Division, resulted in an official CIC request for more information concerning contemplated troop movements. The Joint Staff Planners, Operations Division, were specifically asked to notify CIC of projected shipments of troops overseas "while the plans are still in the formulative stages" and to include the character, destination, and mission of the force.

CIC declared that early notification was essential if properly qualified, trained, and equipped CIC agents were to accompany the tactical units.

To coordinate movements of tactical units and CIC detachments even more closely, CIC suggested that commanders of task forces and their staffs should confer with representatives of the Chief, CIC, when they came to Washington for pre-movement briefings.156

The Operations Division of the War Department General Staff agreed to only a portion of the CIC request. Although the Office of the Chief, CIC, was placed on the distribution lists for troop movement orders, CIC actually was notified only of shipment of troops from training camps to staging areas. Ultimate destination of the troops still was withheld.

Another series of conferences between Captain Bradford and officers in Operations Division followed in July, but results were inconclusive. CIC still was denied access to top-level plans for employment of the tactical units.

Finally, on 6 July, another G2 letter stating CIC's dilemma was forwarded to the Assistant Chief of Staff for Operations. The letter stressed that CIC agents, to be effective, should be picked specifically for service in certain areas: "To operate efficiently in a foreign theater, a Counter Intelligence Corps detachment must be thoroughly staffed with personnel having special language and background qualifications in that particular geographic area."

Once more permission was sought for Captain Bradford and Capt Samuel E. Ewing, the CIC Assistant Operations Officer, to secure from the Logistics

156 Ltr from Col J. T. Bissell to Col Carl A. Russell, Deputy Chief, Theater Group, Operations Division, War Department General Staff, 1 May 1942, subject: "Notification to the Counterintelligence Group of Actual or Contemplated Shipments Overseas of Task Forces, Expeditionary Forces, or Reinforcements for Troops Already Overseas," (SECRET) (Central Records Facility).

section of the Operations Division ultimate destinations of all troop movements.[157]

Four days later, a terse indorsement to the G2 letter indicated that CIC had won the argument:

> "Effective this date, the Operations Officer, Counter Intelligence Corps and Military Intelligence Service, is authorized to obtain from the Chief, Logistics Group, Operations Division, War Department General Staff, such information concerning destination of troop movements as is necessary."[158]

Once other staff sections had conceded CIC's authority to participate in early planning for combat operations, the CIC Operations Section began work in earnest to study procedures for organizing the tactical CIC detachments.

Actually, proposals for organization and operation of tactical detachments had already been drafted in the Office of the Chief. On 20 May 1942, a recommended organization for a theater detachment was completed. The suggestions called for division of detachment personnel into five sections: executive and administrative, counterespionage, countersabotage, specialist, and general assignments sections. A further recommendation called for undercover assignment of highly qualified special agents at strategic points within the theater.

Several recommendations for internal procedures were also urged:

> "(1) That all incoming cases be carefully read by specially selected reviewers in the Executive and Administrative Section and that these cases be classified and assigned to individual special agents on the basis of the case itself and the special agent's particular ability.
>
> (2) The detachment commander should be authorized to initiate investigations on his own responsibility.

---

157 Ltr from Col T. E. Roderick, G2 Executive Officer, to AC of S, Operations Division, 6 Jul 42, subject: "Notification to the Counterintelligence Group of Actual or Contemplated Shipments Overseas of Task Forces, Expeditionary Forces, or Reinforcements for Troops Already Overseas," (CONFIDENTIAL) (Central Records Facility).

158 1st Ind by Col C. K. Gailey, Jr., OPD Executive Officer, 10 July 42, to Ltr from Colonel Roderick to Operations Division, 6 July 42, subject: "Notification to the Counterintelligence Group of Actual or Contemplated Shipments Overseas of Task Forces, Expeditionary Forces, or Reinforcements for Troops Already Overseas," (CONFIDENTIAL) (Central Records Facility).

(3) The special agents should be armed...

(4) A close check system should be adopted in order that the theater office may make rapid contact with all special agents wherever they may be...

(5) ...all...special agents should be familiar with the use of technical equipment;...

(6) A carbon copy of memoranda, notes, and other written records of special agents' actions and activities should be turned over to the reviewers daily in order that any mistakes made by the special agents may be corrected at once rather than several weeks later when the case is completed."[159]

But the real work of the Operations Section, so far as overseas troop movements were concerned, began in the summer of 1943 after Colonel Kibler had been ordered to transfer CIC to the theaters of operation.[160] A series of conferences between CIC officers and representatives of the G2, Army Ground Forces, helped to clarify the role of the tactical detachments.

At the first conference in the series, on 19 May 1943, it was determined that CIC detachments would serve Army Ground Forces units in five ways:

a. Advising and assisting in the installation of the CS System.

b. Making the investigations required by the information developed through the CS system.

c. Making investigations necessary in the elimination of subversive personnel.

d. Conducting investigations and other security activities relating to sabotage, espionage, etc.

e. Making general investigations required of the G2 section.

Army Ground Forces were cool to the CIC proposal to establish a separate CIC Staging Area. Colonel Giles R. Carpenter, G2 of Army Ground Forces,

159 Memorandum from Major Sheen to Colonel Guenther, 20 May 42, subject: "Proposed Organization and Operation of the Theater Counter Intelligence Corps Detachment," (Unclassified) (Central Records Facility).

160 Interview with Col H. R. Kibler, 19 September 1952, (CONFIDENTIAL) (Central Records Facility).

believed the detachments could get enough soldiering with their divisions to equip them for combat duty. In any event, Colonel Carpenter opposed sending the entire detachment to a separate Staging Area immediately prior to the division's embarkation. He conceded, however, that it might be desirable to send small groups of agents to a CIC Staging Area well in advance of overseas shipment.[161]

At another conference on 12 June, Colonel Carpenter stated his conviction that CIC detachments should be attached to divisions as soon as the divisions were activated rather than just before embarkation.[162]

By September, when movement of CIC detachments overseas was in full swing, Colonel Carpenter apparently had revised some of his opinions concerning CIC training for combat. In a conference with 1st Lt Donovan J. Ault of the CIC Operations Section, Colonel Carpenter declared that the CIC Staging Area was of "definite benefit" to tactical detachments. Furthermore, Colonel Carpenter advised the G2 of the II Armored Corps that the Corps' specialized training program for its CIC detachment was not necessary in view of the training at the CIC Staging Area.

Apparently the efforts of the Operations Section to coordinate activities of CIC with the tactical commands was paying dividends, for Colonel Carpenter stated that the tactical CIC detachments "are generally becoming more effective and more standardized in their administration and operations." Realizing CIC's personnel problems, Colonel Carpenter expressed willingness for tactical detachments to operate slightly understrength until the War Department granted CIC requests for additional personnel.[163]

Work of the Operations Section increased proportionately with the number of CIC agents marked for overseas assignment. With the rapid expansion of the Corps, it became necessary to reorganize the Operations Section according to theaters of operation. A separate sub-section was established for each theater, and officers in the sub-sections were detailed to handle all matters pertaining to their theaters.

---

161 Memorandum from Colonel Kibler to Colonel Forney, 21 May 1943, subject: "Report on a Conference of 19 May 1943, with Colonel Carpenter, AC of S, G2, Army Ground Forces," (CONFIDENTIAL) (Central Records Facility).

162 Memorandum from Colonel Kibler to Colonel Forney, 16 June 43, subject: "Meeting with Col Giles R. Carpenter, G2, Army Ground Forces, on 12 June 1943," (Unclassified) (Central Records Facility).

163 Memorandum from 1st Lt Donovan J. Ault to Chief, Operations Section, 10 Sep 43, subject: "Conference at Office of the Assistant Chief of Staff, G2, Army Ground Forces, War College, Washington, D.C.," (CONFIDENTIAL) (Central Records Facility).

As new agents arrived at the CIC Staging Area, they were interviewed by officers from the Operations Section to determine their suitability for proposed assignments. Once marked for a particular theater, each agent received an orientation on his area of service from the assistant operations officer in charge of that theater.[164]

On 22 September 1943, The Adjutant General notified service commands of an impending mass movement of CIC agents and officers to overseas areas. The service commands were directed to release a total of 165 officers and 1,894 enlisted men for shipment overseas before 31 January 1944.[165]

Implementation of the mass movement required considerable planning in the Office of the Chief, Counter Intelligence Corps, most of it by the Operations and Personnel Sections. In a report to Colonel Forney, Colonel Kibler said the transfers could be completed on schedule only through a number of modifications in the existing operating procedure. Additional facilities and personnel at both the CIC Advanced Training School in Chicago and at the CIC Staging Area in Baltimore were held essential to the success of the operation. Colonel Kibler anticipated resistance from the service commands and urged that the G2, War Department, plan to counter this opposition.[166]

It was contemplated that the mass movement of CIC personnel to theaters of operation between September 1943 and February 1944 would solve personnel problems in the theaters. On 17 January 1944--just seven days before the publication of Table of Organization and Equipment 30-500--a letter from CIC Headquarters advised the Chief, CIC, NATOUSA, that by the following month "the major job of procurement, selection, equipment, distribution and shipment of an enormous organization will have been completed."[167] That, in effect, was a statement that CIC personnel had been procured in adequate numbers to fulfill the requirements established by Table of Organization and Equipment 30-500, which by then had already been drafted. It was a statement proved false by subsequent developments, for at the time of the invasion of France only those detachments assigned to the European Theater of Operations that actually participated in the landings were up

166 Memorandum from Colonel Kibler to Col L. R. Forney, 16 Sep 43, subject: "Transfer of CIC Personnel from the Zone of the Interior to Theaters of Operation, Army Ground Forces, Army Air Forces, and the Special Detachment," (CONFIDENTIAL) (Central Records Facility).

167 Ltr from WDGS, MID to Maj Edward L. Ray, Jr., 17 Jan 44, (CONFIDENTIAL) (Kansas City Records Center).

to strength.[168] Either the Office of the Chief was ignorant of the status of the field detachments--which is unlikely--or top CIC officers had deliberately endorsed a Table of Organization and Equipment they knew could not be filled.

The Office of the Chief ducked another operational problem in late 1943 when Maj Edward L. Ray, Jr., CIC Chief at Allied Force Headquarters, urged that immediate attention be given to plans for CIC's occupational duties at the end of the war.[169] On 17 January 1944, Major Ray was notified that "your problems with respect to post hostilities activities are receiving some consideration and thought now, but final respect to the establishment of broad policy, etc., will be delayed for at least another 45 days."[170] In less than a month the Office of the Chief, CIC, was closed without determination of occupational policies.

Undercover Missions

One specialized function of the Operations Section at CIC Headquarters was the selection of men for undercover missions in all parts of the world and the preparation of adequate cover for agents chosen for the secret missions. Details of the specific undercover missions are related in other chapters of this history,[171] but the undercover duties of the Office of the Chief will be discussed briefly here.

Close coordination with the Personnel Section was necessary for the selection of agents for undercover work. Once personnel records revealed men potentially qualified for an undercover mission, the agents in question were ordered to the Office of the Chief on temporary duty. Only after interviews with all candidates did the Operations Section choose agents to go undercover.

After agents had been selected for undercover assignment, the Operations Section faced a host of problems in planning transportation and cover employment, securing passports, and obtaining proper Selective Service identification papers.

---

168 Rosters of ETO detachments indicated only about ten detachments which were going ashore in the initial waves were near the authorized strength. In the fall of 1944, after it was obvious that no replacements were coming from the United States, the other detachments were authorized to recruit agents locally to reach authorized strength. See also Chapter 3, "Critique: North Africa and Sicily."

170 Ltr from Colonel Wise to Major Ray, 17 Jan 44, (CONFIDENTIAL) (Kansas City Records Center).

171 See particularly the chapter on CIC in Base and Defense Commands. Most undercover operations directed by the Operations Section occurred in these areas.

V-48 0728

CIC also managed to eliminate considerable administrative red tape in the processing of applications for passports in connection with undercover missions. At first, agents sent passport applications directly to the State Department. Soon it was discovered that processing time could be cut by channeling the papers through the War Department.[173]

Selective Service credentials also were essential for agents posing as civilians. Since agents had surrendered their draft cards on entering the Army, the Military Intelligence Service requested Selective Service officials to issue special registration cards and permits to leave the country to CIC agents who needed such documentation to back up their cover stories.[174]

Since undercover agents--and those who operated in the open--often were required to make unexpected expenditures during the course of investigations, the Military Intelligence Service stipulated that all agents must carry at least $20 at all times. The money was issued from confidential funds, and inspections were made periodically to account for it.[175]

Despite these preparations, blunders in connection with undercover assignments came frequently as officers at headquarters learned through trial and error the steps necessary to prevent compromise of secret missions. One agent was sent to Newfoundland to pose as a civilian employee of a construction company, yet he was forced to travel on orders and transportation requests which identified him as a sergeant. Others were often required to sign military payrolls. Lack of coordination between the Office of the Chief and commands in which undercover agents worked also caused misunderstandings. For example, the Operations

Section arranged cover employment for several agents destined for work in Iceland only to learn later that the G2 there wanted the men to work in uniform.

On another occasion, cover for one agent assigned to Iceland was so airtight that no one in Iceland--not even the G2--knew he was connected with CIC. Not until the War Department decided to bring the agent home months later did the Iceland G2 know he was supposed to be receiving reports from the undercover agent.[176]

Despite frequent fiascos in connection with undercover assignments, the processing of agents for undercover roles probably could be most effectively handled through the CIC Operations Section rather than by local detachments. This concept was clearly explained in correspondence between CIC headquarters and the Western Defense Command on 14 October 1943. The G2, Western Defense Command, wanted approval to place an agent undercover. The Operations Section advised:

> "In view of the danger of revealing the identity of the agent under the original plan, it is believed that a period of processing in the Office of the Chief, CIC, on a background story and the agent's possession of a "section-eight" discharge and draft card exempting him from service could be advisable and effective. If your office desires him to use any particular background story, it is requested that this division be so advised immediately."[177]

Improper requests for undercover agents sometimes were received--and vetoed--by CIC Headquarters. In December 1942 the American Intelligence Command asked for CIC vacancies so that agents might work on special missions under the supervision of the American Intelligence Command in South America. CIC rejected the proposal as inconsistent with War Department policy, and the CIC Chief suggested that the American Intelligence Command "be requested to cease proselyting Counter Intelligence Corps Personnel."[178]

The Manhattan District Project

Another task of the Operations Section in late 1943 and early 1944 was the selection of qualified officers and men for a special CIC detachment to perform

176. Details and documentation of these incidents are recorded in the Chapter on CIC in the Base and Defense Commands.

177 Ltr from Capt Samuel E. Ewing to G2, Western Defense Command, 14 Oct 43, subject: "DSM Project," (SECRET) (Central Records Facility).

178 Memorandum from Major Wise to Colonel Bissell, 12 Dec 42, subject: "Activities of the American Intelligence Command with Respect to Counter Intelligence Corps Personnel," (CONFIDENTIAL) (Central Records Facility).

security duties in connection with the Manhattan District Engineers Project. This project is discussed in detail in a separate chapter of this history.

The Washington Field Office

One of the most peculiar operational responsibilities of the Office of the Chief, Counter Intelligence Corps, was centered in a special CIC detachment in the nation's capital.

This strange organization, known officially as Detachment, Counter Intelligence Corps, Military Intelligence Service, was commonly called the Washington Field Office. Its command structure and its duties were unique among the wartime CIC detachments.

Although the Washington Field Office originally was under the administrative control of the Washington Provisional Brigade and later the Third Corps Area, its investigative work was conducted under the sole direction of the Assistant Chief of Staff, G2, War Department. The G2 exercised this control directly in some cases; in others, subordinate echelons from the Military Intelligence Service down to and including the Office of the Chief, CIC, guided activities of the special detachment.[179]

Under such a complex system, some confusion was inevitable. One of the early misunderstandings involved the question of personnel allotments for the Washington Field Office. The question was clarified by a G2 letter which stated that the allotment for the Washington office was separate and distinct from the Third Corps Area, despite the attachment to the Third Corps Area for administration.[180]

The mission of the special detachment was equally confusing. Originally intended to be the G2's agency for high-level investigations, the detachment by early 1942 was operating primarily as a pool of agents for overseas duty or for special undercover missions. Gradually it became a sort of "errand boy" for G2, and its rosters included Military Intelligence Division couriers, draftsmen, and legal researchers in addition to regular Counter Intelligence Corps personnel.[181]

179 Memorandum from Brig Gen Sherman Miles to The Adjutant General, 31 May 1941, subject: "Relief of Corps of Intelligence Police Personnel from Attachment to Headquarters Company, Washington Provisional Brigade," (CONFIDENTIAL) (Central Records Facility); and interview with Lt Col Franklin E. Jordan, 27 Oct 55.

180 G2 Disposition Form dtd 1 Jul 41, subj: "Allotment of Grades to Corps of Intelligence Police," (CONFIDENTIAL) (Central Records Facility).

181 Ltr from Maj F. C. Brennecke to Chief MIS, 2 Jun 42, subj: "Reorganization of the Counter Intelligence Corps," (CONFIDENTIAL) (Central Records Facility).

A memorandum prepared by the detachment commander on 16 April 1943 discussed his concept of the Washington Field Office's mission and lists some of the organization's many bosses:

> "(Its mission is to)...Complete all phases of investigations and miscellaneous confidential missions pertaining to counterintelligence activities as assigned or requested by the Military Intelligence Service; the Counter-intelligence Group; the Investigative Branch, C.I.G.; the CIC Branch, C.I.G.; and the Directors of Intelligence of the Service Commands... For operational purposes within the Military Intelligence Service, the Washington Branch Office has always been considered a part of, or closely affiliated with, the Investigative Branch, Counterintelligence Group..."

Little is known of the detachment's internal organization, except for brief glimpses of the detachment's structure gleaned from a letter written by the commander, Lt Col F. C. Brennecke. The Washington Field Office was divided into two sections. An Administrative Section was responsible for personnel, services, plans and training, case assignments, and report review. Personnel in the Investigative Section were grouped according to their duties: counter-espionage, countersabotage, personnel investigations, safeguarding military information, and specialists.[182]

Extensive use of the Washington Field Office as a replacement pool for CIC personnel complicated its investigative work throughout 1942, since the turnover of agents was tremendous. The detachment commander protested this situation on 2 June 1942 in a letter to the Chief, Military Intelligence Service:

> "This organization has actually functioned as a replacement training center as well as an investigative agency, and in the interest of efficiency it is requested that, so far as possible, the present force be left intact... It is pointed out that approximately seventy (70) men have been transferred from the organization since January 1, 1942. Since the maximum strength has been one hundred sixteen (116), this means that over half the force is constantly in the 'recruit' or 'trainee' class. If the ratio of experienced and inexperienced agents is too disproportionate, the quality and quantity of work performed must suffer."[183]

Two weeks later, Captain Bradford of the CIC Operations Section called attention to the Washington Field Office's plight in a report to Major Sheen.

---

182 Memorandum from Colonel Brennecke to Col David G. Erskine, 16 Apr 43, (Unclassified) (Central Records Facility).

183 Ltr from Maj F. C. Brennecke to Chief, MIS, 2 Jun 42, subject: "Reorganization of the Counter Intelligence Corps," (CONFIDENTIAL) (Central Records Facility).

He noted that the detachment "cannot possibly supply" all the demands made on it for personnel, and cited figures to show that the special detachment had been the source of all agents recently assigned to foreign duty.[184]

By September, with the situation no less acute, Major Brennecke suggested a remedy. He recommended that 70 percent of the agents in each command be retained in their original assignment for at least six months in order to provide a pool of experienced agents and to stabilize the investigative situation.

Major Brennecke said 150 agents had been transferred out of his detachment since the first of the year, with the result that as many as eight different agents sometimes worked on a single case before it could be closed. "As we now operate," he wrote, "an agent has just begun to learn the area, make his contacts, and get into his cases when he is ordered to a new station." Agents were reassigned almost as soon as they began to develop qualities which would make them valuable as investigators. Personnel turnover in the Washington Field Office was almost 200 percent in less than nine months.[185]

Apparently the fluid situation had been stabilized by mid-1943, for on 16 April 1943 the detachment commander wrote of his unit: "...except for miscellaneous assignments, the only function is investigative."[186]

A change in the Washington Field Office's complicated command structure also had been effected by mid-1943. Divorced from the Third Service Command, the detachment was placed under the administrative care of the Military District of Washington. One of the earliest available records indicating the change is an estimate of strength requirements for the Washington Field Office, prepared by the G2, Military District of Washington. On 3 August 1943, the G2 listed the detachment's requirements at one lieutenant colonel, one major, five captains, one first lieutenant, one second lieutenant, and 120 enlisted men.[187]

Only three months later the Washington Field Office was condemned to a quick death, when, on 5 November, CIC was ordered to terminate its operations

in the nation's capital.[188] Although available records do not cite the reasons for the edict, a series of events which took place concurrently caused some top-ranking intelligence officers to speculate that one of the detachment's investigations was about to embarrass a person high in government circles.[189]

Operations of the Washington Field Office

Few records are available on specific cases handled by CIC agents in Washington, although some investigative activities can be traced back to 1940, when the Washington Field Office was first opened.

Most of the work of the special detachment before the declaration of war was routine, consisting largely of background investigations of applicants for the old Corps of Intelligence Police. Occasional discreet investigations of Nazi, Fascist, and Communist sympathizers were conducted. After war was declared, General Holbrook has written, "Our activities with regard to the Communists had to be carried on very carefully because of the sympathetic attitude of the White House."[190]

A few days after Pearl Harbor, agents seized hundreds of classified documents in an unannounced, midnight security raid of War Department Headquarters in the Munitions Building. Documents of every classification had been left unlocked in desk drawers and filing cabinets. Agents carted the papers away to their office, which was deluged the next day by irate War Department brass who were infuriated by the CIC tactics. Particularly bitter was Maj Gen E. S. Adams, The Adjutant General, in whose offices the agents had found an unprotected classified list of high-ranking officers slated for promotion. General Adams stormed into the G2 office to complain, but his attitude softened when he discovered that his subordinates had misinformed him about the nature of the search.

Despite the furor created by the security raid, it accomplished its purpose. Stricter measures to protect classified documents resulted.[191]

Blair House Detail

The Washington Field Office provided coverage at Blair House, the official residence provided French General Giraud during his visit to the United States in July 1943.

Four agents were on duty around the clock inside the residence, and a CIC automobile detail patrolled the streets outside. Officers in charge of the detail made frequent inspection tours of the area.[192]

192 Ltr from Col L. R. Forney to Gen George V. Strong, 21 Aug 43, (CONFIDENTIAL) (Central Records Facility).

Section 4

SUPPLY

Procurement of specialized investigative equipment for the Counter Intelligence Corps assumed new importance as CIC ranks swelled during the rapid expansion of 1942.

At the time of the creation of the Office of the Chief, Counter Intelligence Corps, the supply function was listed as one of the major responsibilities of the Chief. Equipment ranging from weapons and ammunition to miniature cameras and recording devices were required not only for use in the field, but also for training new CIC agents.

To the Supply Section in the Office of the Chief was delegated the responsibility for the selection, procurement, storage, and issuance of all CIC equipment and supplies. From a simple list of five categories of investigative equipment in 1942, the operational needs of CIC detachments in the field increased so rapidly that by the end of 1943 a list of CIC equipment numbered more than a hundred items.

Originally, the Supply Section classified its equipment in these groups: observation, identification, examination and preservation of evidence, sound detection and recording devices, and weapons and defensive equipment. Binoculars was the only item listed as observation equipment. For identification purposes, detachments were issued cameras and fingerprinting sets. Ultra-violet ray lamps, cameras, moulage, latent fingerprinting sets, and iodine fumers were considered necessary for examination and preservation of evidence, while Speak-O-Phone and Recordgraph were the only items of sound equipment listed. Weapons and defensive equipment included .38 caliber revolvers, holsters, and ammunition; blackjacks, and handcuffs.

In early 1942, manufacturers and distributors of investigative equipment were asked what types of equipment they normally furnished to investigative agencies. Samples were examined. When approved by the Chief, special equipment was purchased directly from commercial agencies through confidential military intelligence funds. Distribution, not governed by special lists of equipment, was based largely upon requests from individual officers selected to command CIC detachments.

Change in Procurement Policies

On 1 August 1942, the Army clamped down on the purchasing powers of the Chief, Counter Intelligence Corps. CIC was advised that it must use the Army's normal supply channels for procurement of equipment. Before authority could be

0736

granted for CIC to requisition equipment, the Chief was required to submit to the Commanding General, Army Service Forces, an estimate of supplies needed during the coming year.

Although the new method of procurement curtailed the discretion previously exercised by the Chief, he still was authorized to use G2 confidential funds to obtain essential equipment not available through the Army Service Forces.[199]

On 22 November 1942, the Requirements Division, Services of Supply, approved the CIC Chief's first catalog of estimated requirements of equipment. The catalog, covering a period from 1 November 1942 to 31 December 1943, listed heavy demands for photographic and sound equipment, lockpicking sets, weapons, and various expendable items.[200]

CIC Supply Depot Established

With large shipments of CIC equipment arriving at Baltimore headquarters at increasingly frequent intervals, CIC's meager storage facilities were quickly exhausted. In March 1943, it became apparent that creation of a Counter Intelligence Corps Supply Depot was the only practical solution to the problem.

On 20 March, General Strong requested authority for the Counter Intelligence Corps to establish a Supply Depot "for the purpose of receiving, storing, and issuing of Counter Intelligence Corps investigative equipment and supplies."[201] The request was quickly approved, and on 31 March the CIC Depot was established and assigned a service number of the Office of the Chief of Finance, Army Service Forces. The action made it possible for CIC to procure high-priority items, such as cameras, and to expedite the shipment of vital supplies to tactical units overseas.[202]

By November, the storage space rented by the CIC Supply Depot in the Pace-Pratt Building in Baltimore was filled to capacity, and there was no room for ten

202 History of Counter Intelligence Corps, 1917-1943, p. 171, (CONFIDENTIAL) (Central Records Facility).

tons of photographic equipment en route to CIC from the Philadelphia Signal Depot. Colonel Kibler submitted an urgent request for authority to negotiate for rental of additional space in the Paca-Pratt Building. The request was approved on 17 November, and the CIC Depot increased its storage capacity by 960 square feet.[203]

Since there was no table of equipment for CIC detachments, the requests for equipment varied according to the whims of the individual commanders.

In an effort to standardize the issue of special equipment, a letter went out from the Office of the Chief on 10 June 1943 requesting all detachments to submit recommendations concerning CIC equipment. Commanders also were asked to survey their supply rooms and determine whether any equipment already on hand was not applicable to present or anticipated needs. Few changes were suggested by the 39 commanders who replied to the questionnaires.[204]

When results of the survey were compiled, the first Special List of Equipment and Supplies for the Counter Intelligence Corps was prepared for distribution to detachments in the field on 17 July 1943. The list itemized not only investigative equipment but also standard military equipment obtainable through the Army's technical services.

Tactical detachments were instructed to requisition equipment and supplies, other than investigative equipment, through the commanding generals of the tactical units to which they were attached. Nontactical detachments could obtain the supplies upon requisition by the commanding generals of the service commands, defense commands and base commands to which they were attached. All CIC investigative equipment was issued through the property officer, Counter Intelligence Corps Supply Depot, on requisition.[205]

Such a lack of policy inevitably resulted in misuse of the authority to requisition special investigative equipment.

In September 1943, while on a visit to the European Theater of Operations, General Strong discovered vast surpluses of technical equipment for which the tactical detachments had no use. He immediately cabled Colonel Forney:

---

203 Memorandum from Colonel Kibler to Chief, Counterintelligence Group, 13 November 1943, subject: "Additional Bulk Storage Space for the Counter Intelligence Corps Supply Depot," (CONFIDENTIAL) (Central Records Facility).

204 History of the Counter Intelligence Corps, 1917-1943, p. 172, (CONFIDENTIAL) (Central Records Facility).

205 Ltr from Maj Gen J. A. Ulio, The Adjutant General, to all commands, 17 July 1943, Subject: "Special List of Equipment and Supplies for the Counter Intelligence Corps," (CONFIDENTIAL). A copy is attached as Appendix 6.

> Matters of equipment particularly of technical character needs looking into. Immediate steps should be taken to return officers to the United States from both active and nonactive theaters for consultation in regard to equipment in order that equipment situation may be straightened out. It is now highly academic basis on which types and quantities of equipment have been determined is making CIC an ineffective laughing stock. Get busy on this.[206]

Colonel Forney retorted that "the list (of equipment) represents the considered opinions of the using services and is not at all academic or theoretical." "In particular," he explained further, "the views of responsible CIC officers of ETOUSA were incorporated." He noted that officers already had been recalled from the theaters to give their advice on CIC's need for equipment.[207]

Colonel Kibler agreed with Colonel Forney. In a memorandum for the Chief, Counter Intelligence Corps, Colonel Kibler wrote:

> It is believed that the action taken by the Counter Intelligence Corps Supply Section and Depot has been based on the best information available to the Property Officer, CIC Supply Depot, from personnel in the field as well as from technical experts. It is further believed that on the basis of available reports, CIC investigative equipment and supplies are in general suitable to the mission of the Counter Intelligence Corps and are desired by CIC detachments for the prosecution of their missions.[208]

To substantiate CIC's claims that its equipment was purchased and distributed according to needs of detachments in the field, a detailed history of the CIC Supply Section was prepared.[209] In addition, Colonel Forney forwarded a special memorandum to General Strong, which purported to be "at least a partial answer" to the CIC equipment situation in Europe. Colonel Forney told of receipt of a request from ETOUSA for "a long list of considerable quantities of quite technical investigative equipment, much of it of dubious value in a theater such as ETOUSA... Thus far we have not had any report of unnecessary equipment from ETOUSA

except the general statement made to General Strong that the equipment furnished was ridiculous. Probably some of it was ridiculous, but they got just what was asked for."

At the bottom of the memorandum the following note was scribbled: "Suggest you advise Forney that 'all is forgiven' if he keeps up the good record of CIC since three months ago." It was signed only "TNC."[210]

A revision of the Special List of Equipment and Supplies on 29 November 1943 did not include supplies obtainable through the technical services, but listed only CIC investigative equipment. Instructions which accompanied the list stipulated that the Chief, CIC, would determine the initial issue of equipment for each detachment. Additional items would be available on requisition to the Property Officer, CIC Supply Depot, "providing a sufficient investigative need for such issue is shown." Detachment commanders were directed to requisition expendable supplies quarterly, through G2 channels of communication.[211] On 10 February 1944, with the closing of the Office of the Chief, commanders were instructed to requisition investigative equipment from the Military Intelligence Service through command channels.[212]

Property Responsibility and Accountability

At first, accountability and responsibility for CIC equipment varied according to local policies in the Corps areas, but on 1 August 1942 accountability for all CIC equipment was vested in the Supply Officer at the Washington headquarters. Each Corps area designated a responsible officer to care for property locally. In preparation for the change to the new system, property officers of all detachments inventoried equipment on hand and forwarded debit memorandum receipts for CIC equipment to the Supply Officer in Washington, who then assumed the responsibility for maintenance of records and inventory of CIC equipment.

---

210 Memorandum for General Strong from Colonel Forney, 14 September 1943, (CONFIDENTIAL) (Central Records Facility).

211 Ltr from Maj Gen J. A. Ulio, The Adjutant General, to all commands, 29 November 1943, subject: "Special List of Investigative Equipment and Supplies for the Counter Intelligence Corps," (CONFIDENTIAL) attached as Appendix 7.

212 Ltr from Maj Gen J. A. Ulio, The Adjutant General, to all commands, 10 February 1944, subject: "Supply of CIC Investigative Equipment and Supplies to Overseas Commands," (CONFIDENTIAL) (Central Records Facility).

CIC detachments were authorized to purchase some items of equipment locally, through G2 funds, but such purchases were to be reported to the CIC Supply Officer for purposes of accountability.[213]

The system was abandoned shortly, when the mounting flow of investigative equipment to detachments in the field made central accountability difficult, if not virtually impossible. Accountability reverted to the major commands to which CIC units were attached on 1 December 1942, and a responsible and an accountable officer for CIC property were appointed within each command.[214]

CIC supply policies, once clarified and defined, were included as a special section in Technical Manual 30-215, published 22 September 1943. The manual set forth in detail the responsibilities of the Chief, CIC, and the individual detachments with regard to supply problems.[215]

The Chief, Counter Intelligence Corps, also was charged with procurement of certain types of noninvestigative equipment and supplies. Among them were .38 caliber ammunition, automobiles, gasoline, automobile tires and civilian clothing.

Ammunition for Training

CIC agents in Zone of the Interior and Base and Defense Command detachments received periodic weapons training with the .38 caliber revolver. One of the major supply problems was the procurement of ammunition for training purposes. To solve the problem, the Office of the Chief, CIC, maintained liaison with the Chief of Ordnance.

Initially, detachments were authorized 300 rounds of .38 caliber ammunition per individual per annum, although each detachment was required to keep 100 rounds per man in reserve for an emergency. Students at the Chicago school were issued 50 rounds each for weapons instruction while attending classes.

213 Ltr from Col T. E. Roderick, G2 Executive Officer, to G2s, Corps areas, Commanding Officer of War Department CIC Detachment, and Commandant of CIC Training School, 29 July 1942, subject: "Counter Intelligence Corps Equipment and Supplies," included in CIC Field Manual, 1941-1943, (CONFIDENTIAL) (Central Records Facility).

214 Ltr from Col J. T. Bissell to G2s, Service Commands, 17 November 1942, subject: "Property Accountability for CIC Investigative Equipment and Supplies," included in CIC Field Manual, 1941-1943, (CONFIDENTIAL) (Central Records Facility).

215 Technical Manual 30-215, "Counter Intelligence Corps," 22 September 1943, (CONFIDENTIAL). See copy attached as Appendix 1.

Requisitions for ammunition were forwarded through the G2 to the ordnance officer of the major command.[216]

Pressing demands for ammunition on the battlefields of the world early in 1943 brought drastic reductions in the amount of ammunition allotted to CIC for training purposes. On 26 January 1943, the Military Intelligence Service warned that the quantity of .38 caliber ammunition being allocated to the Army was "considerably less" than requirements. Strict economy of existing supplies was urged, and "dry shooting" practice was encouraged. Top priority on the ammunition available went to agents who previously had failed to qualify with firearms.[217]

Fortunately the shortage was only temporary. In mid-April, detachments received word that .38 caliber ammunition was again available at the rate of 300 rounds per man per annum "or as necessity may require."[218]

Automobiles and Jeeps

Both in the United States and in combat zones, transportation was a problem for CIC agents.

Agents in the United States and in certain base commands where civilian clothing was worn often drove their private automobiles. For those who had no cars of their own, the Army provided civilian-type sedans whenever possible. In the summer of 1942, the Military Intelligence Service persuaded the Services of Supply to purchase 108 second-hand sedans for CIC use in the Corps Areas and in Washington. Intended for "exclusive use" of G2s and CIC personnel, the automobiles carried no visible Army identification numbers, and state license plates were purchased from confidential funds. As a further aid in concealing CIC's connection with the automobiles, a variety of makes and colors were purchased.[219]

217 Ltr from Col J. T. Bissell to G2s of Service Commands and Commandant of CIC Advanced Training School, 26 January 1943, subj: "Necessary Economy in the Use of .38 Caliber Special, Revolver Ammunition," included in CIC Office Manual, 1941-1943, (CONFIDENTIAL) (Central Records Facility).

218 Ltr from Col L. R. Forney to G2s, all Theaters, Departments, and Base Commands, 12 April 1943, subject: "Ammunition, .38 Caliber Special Revolver, for CIC," included in CIC Office Manual, 1941-1943, (CONFIDENTIAL) (Central Records Facility).

219 Ltr from Maj H. G. Sheen to G2s, Corps Areas, Western Defense Command, and Commanding Officer, CIC Detachment, MIS, WD, 6 June 1942, subject: "Automobiles for the Counter Intelligence Corps," included in CIC Office Manual, 1941-1943, (CONFIDENTIAL) (Central Records Facility).

In some Base Commands, transportation problems were not so easily solved These problems are discussed more fully in other chapters of this history, but the following examples typify the problems which confronted the Office of the Chief, CIC. Eighteen civilian-type vehicles sent to Panama for CIC use were promptly identified as CIC vehicles, despite efforts at concealment. All identical new models, the cars bore consecutively numbered license plates. In Bermuda, agents were forced to use a pick-up truck borrowed from the post engineer for most of the duration of the war. Requests for trucks for use by CIC in Iceland were repeatedly denied.[220]

CIC detachments attached to tactical units sometimes found the tactical units unwilling to issue transportation for CIC agents.[221] In the summer of 1943, the Chief, CIC, initiated action which resulted in provisions for a jeep for every two agents in a tactical detachment, along with a cargo trailer for every second jeep.[222] When Table of Organization and Equipment 30-500 was published on 24 January 1944, it clarified the right of the tactical detachments to transportation of their own.[223]

Agents Get Extra Gas and Tires

For those agents in the United States who drove their personal automobiles on CIC business, gasoline rationing was a hardship until the Office of the Chief, CIC, secured extra rations for agents in the field.

On a request initiated by the Office of the Chief, CIC, the Office of Price Administration issued blocks of gasoline rationing "C" books and "C" stickers to service command G2s for distribution to CIC agents. New books were issued quarterly. To protect the identity of the agents, records of the specially issued ration books were maintained centrally in Washington rather than in local Office of Price Administration offices.[224]

222 History of the Counter Intelligence Corps, 1917-1943, (CONFIDENTIAL) (Central Records Facility).

223 Table of Organization and Equipment 30-500, 24 January 1944, attached as Appendix 4.

224 Ltr from Col J. T. Bissell to Directors of Intelligence, Service Commands, and G2, Western Defense Command and Fourth Army, 13 November 1942, subject: "Nation-wide Gasoline Rationing," included in CIC Office Manual, 1941-1943, (CONFIDENTIAL) (Central Records Facility).

Gasoline for the government-owned sedans was obtained through Quartermaster facilities, although agents were reimbursed when they purchased gasoline for the government vehicles.[225]

The Office of Price Administration also approved requests for new tires and tubes for personal automobiles used by CIC agents in their work.[226]

Civilian Clothing Allowance

A final aspect of supply of particular interest to agents in the Zone of the Interior was the civilian clothing allowance from confidential funds.

Until 11 June 1942, agents whose duties required that they wear civilian clothing received an initial allowance of $140 and a $117 annual maintenance allowance. At that time, however, the initial allowance was reduced to $100 and the maintenance allowance was set at $7 per month.[227]

The clothing allowance was increased again on 20 May 1943, when the Adjutant General notified all commands that a $125 initial allowance had been authorized to protect the "health and identity" of CIC enlisted agents. G2s were empowered to increase the initial allowance when unusual circumstances dictated such action. A monthly maintenance allowance of $12 was established.[228]

CIC's Budget Requirements

CIC's wartime budget assumed tremendous proportions when compared with the meager expenditures for counterintelligence during the years between the wars. On 9 January 1943, the CIC Fiscal Officer estimated budget requirements for the 1944 fiscal year at a whopping $10,476,910, excluding the cost of equipment procured through the Services of Supply and salaries of military personnel.

---

225 Ltr from Maj H. G. Sheen to G2s, Corps Areas, Western Defense Command, and Commanding Officer, CIC Detachment, MIS, WD, 6 June 1942, subject: "Automobiles for the Counter Intelligence Corps," included in CIC Office Manual, 1941-1943, (CONFIDENTIAL) (Central Records Facility).

226 Technical Manual 30-215, "Counter Intelligence Corps," 22 September 1943, attached as Appendix 1.

227 WD Ltr, file AG 322.999 CIC (6-6-42) MS-B-M, subject: "Counter Intelligence Corps Clothing Allowances," dtd 11 June 1942, To All Commands, (Unclassified) (Central Records Facility); and Interview with Arthur K. Peters (Maj MI-Res), 23 September 1955.

228 Ltr from Brig Gen H. B. Lewis, Acting The Adjutant General, to all Commands, 20 May 1943, subject: "CIC Clothing Allowance," (CONFIDENTIAL) (Central Records Facility).

Largest single item in the proposed budget was $2,740,400 earmarked for salaries of 1,768 civilian clerks. Quarters allowances for agents totaled $1,909,800, and was the next largest expenditure. A total of $1,273,200 was set aside for subsistance not covered by commutation allowances.

Travel costs also were a big share of the suggested budget. It was estimated that mileage not covered by travel orders would cost $1,432,350, while mileage partially covered by orders would require $254,640. For general transportation - trolly and taxi fares and the like - the budget estimate was $954,900. Some travel expenses such as gasoline and oil for government-owned automobiles were absorbed by the $318,300 designated for miscellaneous investigative expenses.

Another major item was the civilian clothing allowances. Initial clothing allowances were expected to total $380,000 during the year, and clothing maintenance costs added another $106,000 to the budget.

Only two other items were listed - $636,600 for entertainment of informants and $25,000 for incidental supplies and equipment to be purchased through the Office of the Chief, CIC, for use at headquarters and by detachments in the field.[229]

229 Memorandum from Maj Wise and Maj Adkinson to Colonel Crist, 9 January 1943, subject: "Estimate of Funds, Fiscal Year 1944," included in CIC Office Manual, 1941-1943, (CONFIDENTIAL) (Central Records Facility).

Section 5

OFFICE OF THE CHIEF ABOLISHED

Trouble for CIC was brewing in the summer of 1943, even as the Corps stepped up the flow of agents into combat areas.

Acting on orders from the Deputy Chief of Staff, the Army's Inspector General launched on 16 July 1943 an extensive investigation of intelligence activities in the Service Commands. His report, published three and a half months later, was damning to the Counter Intelligence Corps. It foretold the end of CIC activities in the service commands and resulted in the closing of the Office of the Chief, Counter Intelligence Corps, on 15 February 1944.[230]

What prompted the investigation is not revealed in official records, although a chain of events which began as early as April 1943 indicates that top-level embarrassment over certain CIC investigations may have touched off the probe.

The first indication that something amiss had attracted the attention of officials high in the Roosevelt Administration came in April, when the Deputy Chief of Staff requested a list of all agents operating in Washington by name.[231] At a period when the Allies were rushing preparations for the invasion of France, this request from a general officer high in the War Department must be construed as more than passing interest in CIC affairs. There was little time in those hectic days for consideration of trivia at top echelons.

On 5 May 1943, the Assistant Secretary of War asked Colonel Forney for an explanation of CIC policies regarding attendance of special agents at officer candidate schools. Despite Colonel Forney's detailed reply, an informal note from James F. Perry to Major Wise on 27 May advised:

> "Hugh...Harvey H. Bundy, special assistant to Secretary Stimson, has become interested in CIC because of letters from some of his friends asking why certain enlisted men with outstanding qualifications for the Army have not been commissioned. Bundy had one of his young officer assistants look into the CIC situation and it is reported his young man felt a thorough investigation warranted."[232]

0746

Whether the "thorough investigation" mentioned in the note to Major Wise had any connection with events leading to the Inspector General's probe is problematical. It is conceivable, however, that once the door was opened for an investigation of CIC promotion policies, persons fearful of exposure by CIC could easily have agitated for a closer scrutiny of Counter Intelligence Corps activities.

That such persons did exist and did attempt to influence CIC policy has since been confirmed by both Colonel Kibler and Brig Gen W. A. Holbrook, who as an officer in the G2 section was keenly aware of events pertaining to the Counter Intelligence Corps.

In his unpublished memoirs, General Holbrook states that several incidents during the summer of 1942 "incurred the displeasure of certain powerful politicians" with the result that "in July information was given orally to C.I. section that it would be reduced radically in the scope of its functions."[233]

In an interview ten years after the publication of the Inspector General's report, Colonel Kibler charged bluntly that the probe was the direct result of top-level intervention in CIC affairs. The former CIC Chief asserted that Gen George C. Marshall, then Chief of Staff, ordered the investigation after repeated insistence from Gen Joseph T. McNarney, his deputy, to stifle one CIC report "personally embarrassing" to persons high in the Government.[234]

Colonel Kibler refused to elaborate on the nature of the "embarrassing" report. Communism was involved, he said, but the main consideration was a personal matter unrelated to communism.[235]

Originally Maj Gen Virgil L. Peterson, the Inspector General, was directed to investigate and make appropriate recommendations on the organization, scope of activities, and operating procedures of the directors of intelligence and their offices in the Service Commands. Oral instructions issued after the probe was underway extended its scope to include a study of Provost Marshal General investigative functions within the Service Commands. Reason for the additional investigation purportedly was to determine whether Provost Marshal General and intelligence personnel were performing overlapping duties.

When the Inspector General's report appeared on 6 November 1943, it was far afield from the assigned mission. Most aspects of intelligence and Provost

233 Memoirs of Brig Gen W. A. Holbrook, undated, (Unclassified) (Central Records Facility).

234 Interview with Col H. R. Kibler, MI, USAR, at Fort Holabird, 27 Oct 53, (Unclassified) (Central Records Facility).

235 Ibid.

Marshal General activities were slighted, but the report criticized the Counter Intelligence Corps at every opportunity.[236]

But the forces opposed to CIC didn't wait for the Inspector General's report to wreak their vengeance. On 5 November--the day before the report was submitted--CIC was ordered to withdraw its agents from the District of Columbia in a move that strengthens the theory that the investigators were about to uncover embarrassing information about certain high officials.[237]

The report first scored CIC training. Charging that little or no military training of value was given CIC agents, the Inspector General also criticized the lack of instruction in foreign languages. Time allotted for CIC training was described as inadequate.

CIC investigations and reports in the Service Commands were disparaged, as these excerpts from General Peterson's report indicate:

"In many Service Commands the telephones were not listed, the locations of offices secret, and the identity of resident agents concealed...Investigations of military personnel were carried on without the knowledge of such personnel and by agents...who concealed their identities and purposes.

"...investigations...with the exception of the so-called 14-point CIR-1 reports, were superficial and unproductive of positive results...

"...geographical expansion of the investigation without evaluation of the importance and pertinency of the undeveloped leads caused unnecessary delay...

"In other Service Commands there appeared to be little supervision by commissioned officers over the conduct of the investigations by the agents and special agents....An examination of the reports indicates that there was no attempt to delete adverse or derogatory information based on hearsay, rumor, and gossip."[238]

---

236 Memorandum from Maj Gen Virgil Peterson, Inspector General, to Deputy Chief of Staff, War Department, 6 Nov 43, subject: "Intelligence Activities in Service Commands," (Unclassified) See Appendix 2.

237 AG Memo, file 320.2 PO-M-A, 5 Nov 43, subject: "Allotment to the Assistant Chief of Staff G2, WDGS, for CIC Personnel," (SECRET) (Central Records Facility).

238 Memorandum from Maj Gen Virgil Peterson, Inspector General, to Deputy Chief of Staff, War Department, 6 Nov 43, subject: "Intelligence Activities in Service Commands," (Unclassified). A copy of this report is attached as Appendix 2.

The Inspector General was particularly disturbed by instances in which CIC enlisted agents conducted investigations of commissioned officers. According to General Peterson, reports of such investigations often contained an evaluation of the officer's efficiency by an enlisted man, in violation of Army regulations. To attach adverse information to an officer's service records without giving him an opportunity to deny charges against him was a breach of the 97th Article of War and the fundamental principles of American justice, the report stated. It went so far as to recommend that all such CIC case reports be recalled, reviewed, and destroyed, except when evidence to substantiate adverse information was absolutely conclusive.

General Peterson also criticized the centralization of CIC control at War Department level:

> "The Directors of Intelligence of the Service Commands were placed in an anomolous position. They were members of the staff of the commanding general...and owed him complete loyalty and allegiance and acted in their field of activity as his representative. However, they received directives for the use of the CIC detachment directly from G2 WDGS....This situation has been a contributing cause to the deficiencies found during this study....The Army has been built on certain fundamental premises; namely, command responsibility for activities from the lowest level upwards, strict adherence to command channels, and immediate corrective action of deficiencies at the lowest command level. The study of the operation of intelligence activities in the field clearly indicates that the failure to adhere to these fundamental principles has been a contributing cause to the deficiencies..."

Then came the words that ultimately led to the removal of the Counter Intelligence Corps from the Service Commands:

> "The arbitrary division of investigative activities between the CIC and the PMG resulted in a duplication of personnel, overhead, and effort. The administration of the Army's responsibilities in the Zone of Interior can be accomplished by placing the responsibility on the commanding generals of the service commands for the security of their geographical areas. A consolidation of the investigative functions of the CIC and the PMG within the Zone of Interior should be made and a group of investigators should be organized and trained as a section of each service command unit for the purpose of making such investigations as may be required by competent authority."

CIC's place was with tactical units in theaters of operation, General Peterson declared. He recommended that CIC agents be recruited and trained exclusively

for combat activities "except for such activities within the Zone of Interior as shall be specifically directed by appropriate authority."

That there was duplication of effort between CIC and the sergeant investigators of the Provost Marshal General cannot be denied. Over a period of time, the Office of the Chief, CIC, had gradually yielded to repeated requests to transfer counter-intelligence personnel and functions to the Provost Marshal General. First plant security responsibilities, then loyalty investigations of civilian employees of firms holding classified contracts were shifted to the Provost Marshal General. Even highly trained CIC agents were loaned to the Service Commands and carried as Provost Marshal General personnel.[239] The Office of the Chief watched silently as the empire-building tactics of the Provost Marshal General steadily gnawed at the foundations of the Counter Intelligence Corps.

Reaction to the Report

The speed with which top-echelon approval was stamped on the Inspector General's report left little doubt that someone--possibly Communists who still held key positions in government--was determined to halt CIC investigative activities in the United States.

The Counter Intelligence Corps was given opportunity neither for rebuttal of the charges nor for correction of deficiencies.

On 15 November, General Strong hastily sent to the Chief of Staff a memorandum outlining CIC's combat successes in Sicily. After emphasizing CIC's value in combat operations, General Strong lashed out at the proposed decentralization of CIC activities:

> "The Military Intelligence Division is constantly receiving requests direct from theaters for individuals or detachments of CIC personnel... To fill these requests fully and with the necessary speed, it has been necessary for the Military Intelligence Division to be able to take the required personnel from where it could be found. Recent directives which will require a complete decentralization of control of the Counter Intelligence Corps, particularly a decentralization of the personnel on duty in Service Commands which has been the pool from which theater

239 Memorandum from Maj Gen Virgil Peterson, Inspector General, to Deputy Chief of Staff, War Department, 6 Nov 43, subject: "Intelligence Activities in Service Commands," (Unclassified) A copy of this report is attached as Appendix 2. See also chapter on CIP in the Pre-World War II Era.

requisitions are filled, will make it difficult if not impossible to fill requisitions from theaters for personnel of special qualifications."[240]

His protest went unheeded. On 25 November the Office of the Deputy Chief of Staff announced the approval of the Inspector General's report in its entirety.[241]

CIC's reaction to this stunning blow was best summed up in a terse memorandum signed by the CIC Chief. On 4 December he wrote sarcastically:

"The following item is submitted as being of possible interest to the Assistant Chief of Staff, G2, War Department: CIC--period. (signed) H. R. Kibler."[242]

Approval of the report brought immediate and drastic steps to curtail CIC's investigative jurisdiction within the United States. CIC personnel in the Service Commands who were assigned to the Military Intelligence Division, War Department General Staff, were ordered assigned to the Service Commands by 31 December. A physical merger and integration of the Intelligence Division and the Internal Security Division in each Service Command was directed--a move to combine CIC agents and the sergeant investigators of the Provost Marshal General into a single investigative agency. Other measures directed by the Deputy Chief of Staff were the elimination of CIC Headquarters at Baltimore and the closing of the CIC Staging Area.

Army Service Forces were ordered to provide basic training for counterintelligence personnel, and G2 and Army Service Forces were to coordinate plans for procurement and shipment of CIC agents to overseas theaters. Although overall supervision of counterintelligence activities remained with G2, the Deputy Chief of Staff insisted that command channels would be used and command responsibility emphasized in all future CIC activities.[243]

War Department Circular 324

The formal order which spelled out the fate of the Counter Intelligence Corps was published on 14 December 1943 as War Department Circular 324. The circular reiterated the pronouncements of the Deputy Chief of Staff regarding combination of CIC and Provost Marshal General functions and announced the transfer of counterintelligence responsibility within the Zone of the Interior to the Army Service Forces, effective 1 January 1944.[244]

On 20 December, the Army Service Forces directed each Service Command to establish immediately a new staff agency known as the Security and Intelligence Division. This division, which merged intelligence and Provost Marshal General functions, was to be subdivided into four branches: Military Police and Prisoner of War Branch, Internal Security Branch, Personnel Security Branch, and Intelligence Branch.

The Provost Marshal General in each Service Command was charged with the supervision of all investigative functions in the Zone of Interior when the merger was completed.[245] This paved the way for the creation of the Security Intelligence Corps, which succeeded CIC in the United States.

Policies governing the new consolidated investigative agency were announced to the Service Commands on 10 January 1944. Like CIC, the Security Intelligence Corps was to be composed of both "agents" and "Special Agents," with the latter coming from the top three enlisted grades and commissioned officers.

Jurisdiction of the new agency was limited to loyalty investigations of military and civilian personnel within the military establishment and of certain civilians in vital war industries; investigation of the same groups and incidents within the military establishment where subversion, espionage, sabotage, or disaffection might be suspected; personnel security inspections in important war plants and facilities, and investigations of disturbances of any kind which would require the use of troops.

"Under no circumstances will the Security Intelligence Corps be used for any other purposes," the directive stated.

245 Army Service Forces Ltr, 20 Dec 43, (CONFIDENTIAL), (MID File 200.3, Oct-Dec 43, Office of the Chief, CIC, AG Intermediate Records Depot, Fort Holabird).

Agents of the Security Intelligence Corps were authorized to wear civilian clothing, except when investigative duties required the use of military uniforms.[246]

Countersubversive System Abandoned

Another aftermath of the Inspector General's report was the abandonment of the Countersubversive System which had been one of the Army's prime sources of information on disloyal soldiers since the early days of the war. Although the Countersubversive System was not a part of CIC's assigned mission, it did produce many leads which subsequently were checked out by CIC agents. The Adjutant General, on 2 December, ordered destruction by burning of all countersubversive manuals, statistical reports, and personnel records.[247] On 13 December, an Army Service Forces letter required all commands to submit rosters of personnel under investigation as a result of the Countersubversive System.[248] A week later, Service Commands were told that "every effort should be made" to reduce the number of investigative personnel conducting loyalty investigations.[249] Combined, these directives paved the way for concealment of the activities of many persons suspected of subversive activity within the Army.

CIC Prepares to Close Shop

The War Department directives left little time to prepare for the transfer of CIC functions and the closing of the Office of the Chief. On 14 December, Colonel Kibler was ready with his recommendations for the phase-out period.

A request to continue operations at the CIC Staging Area until 5 February 1944 was granted by the Deputy Chief of Staff, and Colonel Kibler estimated the extension would allow completion of the transfer of 116 officers and 1,229 enlisted men to tactical units overseas. An agreement between the Office of the Chief, CIC, and the Army Service Forces called for the transfer of approximately 58 officers and 943 enlisted men to the Service Commands on 1 January 1944. Colonel Kibler

planned to close the Advanced Training School in Chicago on 31 January 1944 and to vacate the Office of the Chief, CIC, by 15 February.[250]

Since War Department Circular 324 authorized limited use of CIC within the United States when "specifically directed by appropriate authority," General Strong asked for three exceptions to the new CIC employment policies. He wanted special detachments assigned as follows:

> "a. To the Army Air Forces for duty with Air Forces and Air Force Commands in the Zone of the Interior...for the investigation of specific incidents within the Army Air Forces, particularly airplane crashes, and for special security duties in connection with flight safety.
>
> "b. To the Army Ground Forces for duty with and training with elements of the Army Ground Forces prior to the shipment of such elements to theaters of operation....
>
> "c. To the Manhattan Engineering District for security duties in connection with the activities of that district, as requested by the Commanding General of the district."

All three requests were approved. Later, another CIC detachment was authorized in the Zone of the Interior for port security duty with the Office of the Chief of Transportation.[251]

Meanwhile, Colonel Kibler prepared recommendations for G2 regarding the discharge of G2's continuing counterintelligence responsibilities. The CIC Chief proposed that the existing CIC Branch be abolished and its duties absorbed by one officer within the Counterintelligence Group.

Colonel Kibler pointed out G2 still was charged with staff responsibilities pertaining to procurement, training, supply, assignment, and distribution of CIC

0754

personnel. After 1 January 1944, however, the G2 role was one of planning and coordinating, and control rested with the major commands to which CIC detachments were assigned.[252]

Although Colonel Kibler's suggestions regarding the Counterintelligence Group were not immediately adopted, they were the basis for a reorganization which was completed in May 1944.[253]

After 1 January 1944, there remained few important decisions for the Chief, CIC to make concerning the Counter Intelligence Corps world-wide, but Colonel Kibler was swamped with administrative details as he prepared to vacate his office.

Agents for Ike

One of the last personnel requests received at the Baltimore headquarters was a radiogram from General Eisenhower on 19 January 1944 asking for 71 officers and 402 enlisted men for the European Theater of Operations. The requisition was not easily filled, since 963 enlisted CIC personnel already had been transferred to the Army Service Forces on 1 January.

Colonel Kibler decided to attempt to draw the needed personnel from three sources: nonalerted Army Ground Force units, excess CIC personnel assigned to the Air Force, and reclaiming of 169 CIC vacancies which had been transferred to the Army Service Forces.

Both the Army Ground Forces and the Army Air Force agreed to the plan, but records do not indicate whether the Army Service Forces consented to return men to CIC for overseas duty.[254]

How to process men destined for Europe posed another problem, since the Staging Area was scheduled for deactivation on 5 February 1944, and facilities at Camp Ritchie were inadequate to handle the large group.

---

252 Memorandum from Colonel Kibler to Chief, Counterintelligence Group, 14 Dec 43, subject: "Discharge of G2 Continuing Responsibilities Relating to Counter Intelligence Corps," included in History of the Counter Intelligence Corps, 1917 to March 1945, (CONFIDENTIAL) (Central Records Facility).

253 History of the Counter Intelligence Corps, 1917 to March 1945, pp. 84-85, (CONFIDENTIAL) (Central Records Facility).

254 Memorandum from Colonel Kibler to Chief, Counterintelligence Group, 26 Jan 44, subject: "Request for CIC Personnel from General Eisenhower," (CONFIDENTIAL) (Central Records Facility).

A paperwork maneuver was the answer. The CIC Staging Area at Holabird Signal Depot was formally deactivated on 5 February to comply with directives from the Deputy Chief of Staff. On the following day, the "CIC Overseas Pool" was established at Holabird to serve as an assembly point for CIC personnel being transferred to Europe pursuant to General Eisenhower's request. For practical purposes, it continued to operate until May 1944 when the European requisition was filled.[255]

On 26 January 1944, with most of the work at headquarters completed, Colonel Kibler reported CIC's authorized strength at 483 officers and 3,498 enlisted men. The Corps was 51 officers and 319 enlisted men short of its allotment. A total of 180 officers and 1,190 enlisted men still were in the United States with Army Ground Forces and the Air Force.[256]

Office of the Chief Closes

Phase-out activities at the Office of the Chief proceeded according to schedule. On 10 February 1944--exactly nine months after he came to Baltimore--Colonel Kibler stepped down as Chief, CIC, and returned to the Sixth Service Command, where he had previously served.[257] In his final report to the Counterintelligence Group, the outgoing Chief summed up the accomplishments of the Baltimore headquarters during his brief tenure there. Among the highlights he mentioned were the establishment of a CIC Staging Area; inspection trips to all areas where CIC was serving, with the exception of the Pacific; improvement of technical and language training facilities; publication of Technical Manual 30-215, and organization of tactical detachments by cellular-type tables of organization. He concluded:

> "At present, all theaters of operation have been provided with CIC personnel to meet approved requests. This personnel is properly trained, equipped, and prepared to perform its mission. While present War Department policy does not permit the centralized control of the Corps by G2, War Department, it is War Department policy that G2 continue to establish the broad overall policies and to maintain

0756

general supervision of CIC activities. The proper discharge of this responsibility will assure the Counter Intelligence Corps continuing to be an effective Army instrument."[258]

Colonel Wise became Acting Chief, CIC, on 10 February and remained in that capacity for five days to close the Baltimore office on 15 February 1944. When the CIC headquarters was officially dissolved, about half the officers who had been assigned to the Office of the Chief were included in the personnel being processed for shipment to Europe. Six officers and seven civilian employees moved to the Pentagon in Washington for duty with the Counter Intelligence Corps Branch of the Counterintelligence Group, Military Intelligence Service, War Department.[259]

Staudt to Assistant Executive Officer, CIG, 19 Feb 44, subject: "Items of Interest Pertaining to the CIC," (CONFIDENTIAL) (Central Records Facility).

Section 6

CIC OPERATIONS UNDER ARMY SERVICE FORCES

On 22 May 1944, a reorganization within the MIS placed the office formerly known as the CIC Branch under the Security Branch of MIS, with the title CIC Section. At this time the Counterintelligence Group was abolished.[260]

The CIC Section operated under the Security Branch, MIS, until a War Department letter, dated 25 July 1944, transferred the Section's functions to the Army Service Forces, effective 1 August 1944. The letter listed the "principal functions" of the section as the supervision of procurement and assignment of agents; arrangement of undercover status of agents as requested by using agencies; supervision of training; procurement of investigative supplies not available to field units through normal channels; and supervision of CIC administration and operation. The letter directed that: "Staff action on changes in allotment of Counter Intelligence Corps personnel will continue to be performed by the Assistant Chief of Staff, G2, War Department General Staff."[261]

The CIC Section, with Maj George L. Staudt as Chief, operated under the Domestic and Counterintelligence Branch of the Intelligence Division of Army Service Forces until 1 December 1944.

A letter from the Office of the Commanding General, Army Service Forces, dated 30 November 1944, designated the CIC Section as a separate branch of the Intelligence Division effective 1 December 1944. The CIC Branch assumed the exact duties of the CIC Section.[262]

To accomplish the duties outlined in the letter of 25 July 1944, the CIC Section, and later the CIC Branch, was divided into three units: Procurement, Training and Supply, and Assignment.[263]

The major task of the Procurement unit involved the formulation and recommendation of policies relating to recruitment and selection of CIC personnel. Up to

0758

September 1944, there was no formal procurement authority for CIC. War Department Circular 216, dated 1 June 1944,[264] had been published as a procurement authority, but was never used.[265]

Prior to September 1944, procurement was generally accomplished through informal arrangements with the service commands. Then, on 19 September 1944, the War Department published, as Part One of Circular 379,[266] an order for a CIC procurement program. Under this order, quotas of men were procured from Army Air, Ground, and Service Forces and sent for training to the Camp Ritchie MITC course. Assignment to CIC was contingent upon successful completion of the Ritchie course and the granting of a security clearance as a result of a background investigation.[267]

The principal difference between Circular 379 and the older Circular 216 was that the former established officer and enlisted strength of the three major commands as of September 1944 as the basis for CIC procurement quotas. Under Circular 216, the basis for enlisted quotas was the strength of the respective commands at 30 November 1943. There was no basis for quotas of officer procurement.[268]

Circular 379 also authorized the Army Ground and Air Forces, theaters of operation, overseas departments and base and defense commands to procure within their departments and transfer men into CIC subject to War Department approval. This, in effect, was official authorization for overseas detachments who found themselves understaffed to seek agents for replacement on their own initiative.[269]

269 War Department, Washington 25, D.C., Circular 379, Part One, "Counter-intelligence Personnel," 19 Sep 44, (Unclassified) (Central Records Facility). Local procurement of CIC personnel in the European Theater of Operations, as authorized under paragraph 4, WD Circular 379, is discussed in the ETO series, Chapter 7, Part I, Section 1.

Circular 379 Lists Agents Qualifications

Under Circular 379, qualifications for officers and enlisted men for CIC assignments were outlined. All personnel were to be between 25 to 38 years of age at the time of their entry into CIC, "physically fit for full field duty overseas," and a U.S. citizen. Fluency in one or more foreign languages was desired and a background investigation must have established "character, loyalty, integrity, and discretion."

Officers were to be college graduates or "experienced in CIC either as an officer or enlisted man." Enlisted men who had not graduated from college were required to have "linguistic ability or special qualifications for investigative work" in addition to a General Classification score of at least 110. Officers were desired to have had previous military service in the field.[270]

Circular 379 was broad enough to allow CIC to recruit the number of agents needed to meet the immediate demands of the field. However, the program was such that many commissioned officers with no experience in even related investigative fields were procured and placed in responsible positions with CIC detachments. Many of the enlisted men obtained through the program did not come up to the standards formerly required by the organization.

Need for More Agents, Better Training Prompts Staff Study

Beginning in August 1944, 1,281 men successfully completed the Camp Ritchie course and were assigned to CIC duties.[271] However, the basic emphasis in this course was combat intelligence--with little emphasis on counterintelligence. Furthermore, as the war in Europe drew to a close, the counterintelligence mission there changed from combat to occupational. Concurrently, the need for additional agents for duty with the Pacific Theater increased. It was determined that a new type of training program was necessary to enable the Commanding General, Army Service Forces "to discharge his counterintelligence responsibilities."[272] Maj Edwin Bennett was given the mission of preparing a staff study on the problem.[273]

273 Interview with Col H. R. Kibler (Res MI), 14 Oct 53, Building 2, Fort Holabird, Md, (CONFIDENTIAL) (Central Records Facility).

CTCC

Major Bennett divided CIC activities in World War II into four phases. The third phase had begun in February 1944 with the transfer of all CIC personnel from G2, War Department General Staff, to the using agency, and, most particularly, the utilization of the MITC course at Ritchie for CIC training. It was felt that the Ritchie course did not adequately cover all phases of the specialized CIC activity. Lack of linguistic courses and training in the application of investigative techniques in urban areas were considered to be glaring deficiencies of the Ritchie school - at least from a counterintelligence standpoint.

As a result of the increased need for men in the European and the Pacific Theaters, it was envisioned that the fourth phase would most certainly resemble the period from May 1943 to February 1944 (phase two) when the Office of the Chief was in operation and 3000 agents were trained, equipped, processed, and shipped to using agencies.

It was deemed necessary that War Department Memorandum 350-44 which directed that CIC agents be trained at MITC be rescinded and that authority "be granted to conduct such additional training needed to prepare CIC personnel to perform their duties."

The study then cited the necessity for reestablishment of the Office of the Chief:

> To insure uniformity in administration, training, and supply of the Counter Intelligence Corps during the redeployment and post redeployment period, in the training of new personnel as required by the Pacific area, and in training of replacements, reestablishment of the Office of the Chief, Counter Intelligence Corps, under the Director of Intelligence, Army Service Forces, is necessary.

Five specific recommendations were made as a result of Major Bennett's findings in his staff study. They were as follows:

1. That the Commanding General, Army Service Forces, be authorized to establish on or about 1 June 1945 the Office of the Chief, CIC, and the Counter Intelligence Corps Detachment, Army Service Forces, of Counter Intelligence Corps officer and enlisted personnel as a Class IV activity outside the Military District of Washington under supervision of the Director of Intelligence, with authority to transfer from Military Intelligence Training Center into the Class IV activity the Counter Intelligence Corps Supply Depot.

2. That the Office of the Chief, Counter Intelligence Corps, be authorized:

a. To supervise and/or conduct Counter Intelligence Corps training, redeployment training and training of replacements for rotated personnel in accordance with War Department policy...
b. To maintain and operate the Counter Intelligence Corps Supply Depot in accordance with War Department policy.
c. To assign Counter Intelligence Corps personnel to Counter Intelligence Corps detachments and theaters of operating, including compliance with provisions of POM and POR prior to overseas movement, and to perform such other activities in connection with the Counter Intelligence Corps responsibility of the Commanding General, ASF, as are assigned to him by the War Department.

3. That War Department Memorandum 350-44, 7 September 1944, be rescinded and that there be published in lieu thereof a new memorandum.

4. That vacancies, to include the following grades and ratings, be authorized for the Counter Intelligence Corps Detachment, Army Service Forces, and for no other purposes:

1-Colonel
5-Lt Colonels
8-Majors
12-Captains
13-1st Lieutenants
3-Master Sergeants
1-1st Sergeant
3-Technical Sergeants
8-Staff Sergeants
8-Sergeants
8-Corporals

This Counter Intelligence Corps Detachment will be reduced in proportion of the procurement, training and shipment work-load caused by redeployment and by replacement requirements.

5. That authority be granted for a Counter Intelligence Corps Training Group, to be assigned to the Office of the Chief, Counter Intelligence Corps, to include 788 vacancies to be filled by personnel procured for the Counter Intelligence Corps and undergoing training prior to assignment; that authority be granted to attach to the Counter Intelligence Corps Training Group Counter Intelligence Corps personnel redeployed or rotated from theaters of operations and undergoing specialized Counter Intelligence Corps training or redeployment training prior to assignment.[274]

274 Army Service Forces, Office of the Commanding General, Washington 25, D.C., Memorandum for the Chief of Staff, USA, Subject: "Administration, Training and Redeployment Training of the Counter Intelligence Corps, 18 May 1945, (SECRET) (Central Records Facility).

The G sections of the War Department General Staff concurred in the recommendations. In a memorandum for the Commanding General, Army Service Forces, dated 23 June 1945 and signed by the Deputy Chief of Staff, the proposals were approved by the War Department.[275]

The CIC Detachment, Army Service Forces, was established effective 15 July 1945 to operate under the supervision of the Director of Intelligence, ASF, and under the command of the Chief, CIC. The detachment was assigned to the CIC Center located at Fort George G. Meade, Maryland. The personnel allotment as recommended in the staff study of 18 May 1945 was instituted for the ASF Detachment.[276]

Summary: The Chief and the Center Reinstituted

It had become increasingly apparent that great numbers of new agents were needed for the war in the Pacific; that CIC faced a major deployment problem and a change of mission in Europe as the war came to a close and that attendance at the MITC school was insufficient preparation for CIC work. To handle these problems, the Office of the Chief and the CIC Center had been reinstituted after lying dormant for more than a year and a half.

275 History of the Counter Intelligence Corps Branch, Intelligence Division, Army Service Forces, from 1 Aug to 1 Sep 45, p 40, (CONFIDENTIAL) (Central Records Facility).

276 Memorandum for The Adjutant General, subject: "Counter Intelligence Corps Detachment, Army Service Forces," 14 July 1945, (Unclassified) (Central Records Facility); and Headquarters Army Service Forces, ASF Circular Nr 268, Part Two, Par 1, 13 July 1945, (Unclassified) (Central Records Facility); and Operational History of Theaters, "CIC Center, 1945-48," (Unclassified) (Central Records Facility). NOTE: There appears to be a lack of documentation to indicate exactly how the "Center" came into existence; the Office of the Chief, CIC, unofficially became tagged "The Center" upon its establishment in Baltimore in 1944. Gradually the term became adopted in official references and correspondence relating to the establishment of the Chief, CIC. In August 1954 the CIC "Center" was officially redesignated the Army Intelligence Center.

Publicity	7

1. Purpose.--a. In addition to the counterintelligence responsibilities recognized in 30-25 and the usual field security counterintelligence mission, there exist other counterintelligence responsibilities which fall upon commanders of geographical areas and which must be assumed by theater commanders and the commanders of units therein, but for which no personnel provision is made in Tables of Organization. These responsibilities are those connected with the prevention or neutralization of the activities of enemy agents within the territory occupied. Included in these responsibilities are the need for the prevention of the entrance of enemy saboteurs into the territory and the prevention of their reaching installations vital to the military effort. This counterintelligence mission requires personnel particularly trained and specially qualified. The fulfillment of this phase of the counterintelligence mission demands organization upon a territorial basis, with provision for personnel to remain in the territory, operating without being moved with tactical organizations. The necessity that a number of men in this work be placed undercover for long periods of time and that many operate over extended periods without in any way disclosing their connection with the Army, emphasizes the need for a Corps free from the limitations and the control of smaller tactical units.

b. The mission of the Counter Intelligence Corps is to furnish appropriate commanders with carefully selected personnel specially trained and equipped to assist commanders in the performance of the duties incident to this type of counterintelligence coverage and the mission of field security. It will not serve to replace or assume responsibility for tactical security or counter-subversive installations prescribed for all field force units.

c. In order to accomplish this mission, the Counter Intelligence Corps will utilize commissioned and enlisted personnel which has been carefully selected and thoroughly trained. This personnel will be fully investigated as to its loyalty, discretion, and basic qualifications prior to its transfer to the Counter Intelligence Corps.

0766

d. This manual furnishes the basic principles of the operation of the Counter Intelligence Corps and it will govern the organization, administration, operation, and employment of Counter Intelligence Corps personnel. Where applicable, its provisions apply equally to Counter Intelligence Corps activities in the Zone of the Interior and in theaters of operation.

2. Freedom of action.--a. It is essential to the effective accomplishment of the Counter Intelligence Corps mission that the personnel of the Corps be encouraged to exercise its initiative to the fullest extent and that it be permitted to operate with minimum restrictions upon its movements or channels of communication. Counter Intelligence Corps credentials and badges will be honored at all times. The personnel of the Corps are frequently entrusted with extremely hazardous and important secret missions requiring expeditious action and, when engaged upon such missions, they are often delayed by the observance of standard customs and prohibitions. Speed is an essential of counterintelligence, and lateral communication between Counter Intelligence Corps echelons is authorized.

b. In order for Counter Intelligence Corps detachments to perform their missions effectively, expeditiously, and in a secret manner, it is essential that the commanding officer of each detachment have full authority, in appropriate circumstances, to direct the movement of his men within the area of his jurisdiction upon his verbal authorization and without either previous or subsequent written orders. It is further advisable that the commanding officer of the Counter Intelligence Corps detachment attached to a theater of operations be designated an Assistant Adjutant General for purposes of preparing and issuing classified orders to Counter Intelligence Corps personnel.

3. General supervision.--The Assistant Chief of Staff, G-2, War Department, will prescribe policies governing the administration, operation, and employment of the Counter Intelligence Corps. The Military Intelligence Service, War Department, acting through the Office of the Chief, Counter Intelligence Corps, will render general supervision over all Counter Intelligence Corps activities, but the immediate supervision of operational activities of the Counter Intelligence Corps will be exercised by the commands in which detachments are serving.

4. Function of command.--The employment of the Counter Intelligence Corps is a basic function of command and is an operational activity. The commander of any organization with which Counter Intelligence Corps personnel are serving, is responsible for the proper and effective organization, administration, and employment of such personnel. In the discharge of this responsibility, these commanders will be governed by the policies established pursuant to the provisions of paragraph 3.

5. Jurisdiction.--The jurisdiction of the Counter Intelligence Corps is limited by the counterintelligence jurisdiction of the command with which it is serving. The extent of this jurisdiction in the Zone of the Interior will be limited by the Delimitation Agreement of February 22, 1942, entered into by Military Intelligence Division, Office of Naval Intelligence, and the Federal Bureau of Investigation. In departments, and defense, service, and base commands overseas, jurisdiction is limited by the counterintelligence responsibility of the command. In theaters of operation, jurisdiction is limited by the policies of the commanding general of the theater, and by existing international agreements.

6. Power of arrest.--a. The personnel of the Counter Intelligence Corps on duty in the United States has only that power of arrest which all citizens of the United States possess; that is, the power to arrest any person in the act of committing a felony.

b. Counter Intelligence Corps personnel in theaters of operation will have full power and authority to make arrests in cases within its jurisdiction where it is apparent that the arrest being made is essential to the performance of the counterintelligence mission and that its accomplishment is not in violation of any policy of the commanding general of the theater of operations with respect to such enforcement activities.

7. Publicity.--a. The fact of the existence of the Counter Intelligence Corps will not be considered as classified information. However, every effort will be made to keep identities, locations of personnel, and methods of operation confidential. In the event that contact is unavoidably made with individuals connected with the press, radio, or other news agencies, every effort will be made to prevent publicity.

b. Since Counter Intelligence Corps personnel will, from time to time, be used in undercover capacities, identification cards furnished such personnel will bear no military title. This applies particularly to post exchange and gasoline cards. It is deemed advisable that Counter Intelligence Corps personnel be addressed by all concerned as "Mister" during conversations which might divulge the identity of such personnel and its connection with the Counter Intelligence Corps, in a manner which might be detrimental to the military intelligence mission. Normally, such personnel will be addressed as "Mister" when in civilian clothing and by military title when in uniform.

c. Emphasis will be placed upon the protection of the identity of Counter Intelligence Corps personnel both in the interest of the mission and to protect the lives of the personnel. The identity of members of the Corps will be disclosed to the minimum number of civilian or military personnel. All members of the Corps are constantly subject to being placed on undercover or other missions where a

knowledge by others of their identity would seriously jeopardize the success of the mission and endanger their lives.

Section II

ORGANIZATION

	Paragraph
General	8
Disposition	9
Replacement of personnel	10
Command	11
Internal organization of detachment	12

8. General.--a. The Counter Intelligence Corps is composed of such commissioned and enlisted personnel as may be authorized by the Chief of Staff, United States Army. Personnel in Service Commands, departments, and in oversea Defense, Service, and Base Commands, and with Army Ground Forces and Army Air Forces organizations, are attached and are carried chargeable to War Department overhead; it is not chargeable to allotments of personnel authorized for such commands. These commands will carry Counter Intelligence Corps personnel as over and above their existing tables of organization. Personnel in theaters of operations will be assigned to such theaters and will not be carried as War Department overhead. These theaters will exercise all normal command and administrative functions with the following exceptions:

(1) Neither officers nor enlisted men will be transferred into the Counter Intelligence Corps, nor relieved therefrom, without the prior approval of the Assistant Chief of Staff, G-2, War Department, except in instances of gross inefficiency of for disciplinary reasons.

(2) Enlisted personnel will not be promoted from the classification of agent to the classification of Special Agent without prior approval of the Assistant Chief of Staff, G-2, War Department.

(3) Enlisted personnel who are commissioned either through Officer Candidate School, or directly, will not be returned to the Counter Intelligence Corps except with the prior approval of the Assistant Chief of Staff, G-2, War Department.

b. The supervision over the Corps rendered by the Military Intelligence Service will be exercised through the Office of the Chief, Counter Intelligence Corps, which office will be organized and operated under the Chief, Military Intelligence Service, War Department.

9. Disposition.--Counter Intelligence Corps personnel will be utilized directly under the supervision and control of the Assistant Chief of Staff, G-2, War Department, when necessary. Normally, however, detachments will be attached or assigned to headquarters of commands which are charged with counterintelligence responsibilities. It is the responsibility of the Assistant Chief of Staff, G-2, War Department, to furnish personnel as provided for in theaters of operation, departments, and oversea Defense, Service, and Base Commands, Army Ground Forces and Army Air Forces, and Service Commands in the Zone of the Interior.

a. Service Commands in the Zone of the Interior.--The Assistant Chief of Staff, G-2, War Department, will furnish to each of the Service Commands in the Zone of the Interior, authorization for detachments of appropriate strength. These detachments will be of sufficient strength to provide the personnel necessary in accomplishing Counter Intelligence Corps missions, and to serve as reservoirs of personnel to be relieved from attachment thereto, and assigned or attached to other commands as needed.

b. Departments and oversea Defense, Service and Base Commands. Counter Intelligence Corps detachments will be attached to departments and oversea Defense, Service, and Base Commands in accordance with tables of organization, based upon the needs of such commands, and in consideration of the extent of the counterintelligence responsibility of the command. Bases and other departments or commands which are component parts of defense or other larger commands will not normally be furnished detachments, but necessary personnel will be placed with them on detached service by the higher command to which a detachment has been attached.

c. Army Ground Forces and Army Air Forces units in the Zone of the Interior. Counter Intelligence Corps detachments will normally be attached to units of the Army Ground Forces and the Army Air Forces in the Zone of the Interior for operational and training purposes in accordance with tables of organization established for such units. Such personnel will not normally be attached to Army Ground Forces echelons lower than divisions nor to Army Air Forces echelons lower than Air Forces or the Air Force commands.

d. Theaters of Operations. (1) All Counter Intelligence Corps personnel in a theater of operations will be assigned to the headquarters of that theater. The headquarters of the theater will have assigned to it the detachment provided for by its initial table of organization. Thereafter, as Army Ground Forces or Army Air Forces units arrive in the theater of operations with Counter Intelligence Corps detachments, those detachments will, after the arrival of the units, be relieved from such attachment by the commanding general of the theater, and assigned to theater headquarters, the theater table of organization being

thereby automatically increased. The commanding general of the theater of operations may, thereafter, in his discretion, place Counter Intelligence Corps personnel on detached service with such tactical units from one theater of operations to another, the commanding general of the theater from which the units are leaving, will attach Counter Intelligence Corps detachments of appropriate strength to such units prior to their departure, the tables of organization being, accordingly, altered. These detachments will move to the new destination of the units and there be assigned to the headquarters of the new theater of operations, again with appropriate changes in tables of organization.

(2) Theater commanders, in placing Counter Intelligence Corps detachments on detached service with tactical units within the theater of operations, or attaching such personnel to units departing therefrom, will constantly maintain, to the fullest extent practicable in view of available personnel, adequate Counter Intelligence Corps personnel assigned to the theater headquarters for counterintelligence missions vital to the theater of operations and the geographical area covered by it.

10. Replacement of personnel. Replacement of lost personnel and necessary increases in detachment strength will be furnished to the various commands by the Assistant Chief of Staff, G-2, War Department, within authorized tables of organization, upon request made to him and according to the availability of personnel.

11. Command. Each Counter Intelligence Corps detachment will be under the command of the senior Counter Intelligence Corps officer thereof, and the commanding officer of the detachment will be responsible for all matters relating to the detachment to the commanding officer of the command with which it is serving, through the Assistant Chief of Staff, G-2, A-2, or S-2, of that command.

12. Internal organization of detachment.--a. The commanding officer of a Counter Intelligence Corps detachment will establish such internal organization within the detachment and make such distribution of Counter Intelligence Corps personnel, through the area involved, as may be directed by the commanding officer of the command with which it is serving. In making such disposition of personnel and establishing such internal organization, the commander of the area will consider fully the mission of the detachment and will carefully weigh the recommendations of the detachment commander.

b. Since the strength of Counter Intelligence Corps detachments furnished to various commands will vary, the internal organization of such detachments will not be uniform. However, in every instance where circumstances permit, the Counter Intelligence Corps headquarters should be established,

physically removed from the other sections of the command headquarters. When the size of the detachment will permit, it may be organized internally into five sections as follows:

(1) Administrative section. Personnel required for maintaining records and performing clerical duties.

(2) Counterespionage section. Personnel whose experience, training, and natural aptitude fit them for counterespionage activity.

(3) Countersabotage section. Personnel familiar with plant, communication, port, and transportation security, mechanical and electrical engineering, and other allied subjects qualifying them to perform security surveys and make recommendations based thereon.

(4) Technical section. Personnel with technical training and experience qualifying them to perform duties connected with photography, sound recording, telephone supervision, detection of secret links, and other technical investigative activities.

(5) General assignment section. Personnel not possessing specialized training or experience qualifying them for assignment to one of the above enumerated sections.

Section III

PERSONNEL

	Paragraph
General	13
Procurement of commissioned personnel	14
Qualifications of commissioned personnel	15
Procurement of enlisted personnel	16
Qualifications of enlisted personnel	17
Background investigations	18

13. General. The Counter Intelligence Corps is composed of officers and enlisted men whose natural and cultivated abilities, talents, characteristics, and professional qualifications are such as to fit them for certain specialized activities peculiar to counterintelligence operations. They are selected, investigated, equipped, and intensively trained under the direct supervision of the Assistant Chief of Staff, G-2, War Department. The personnel of the Corps is divided into four classifications:

0772

a. Officers. The commissioned personnel of the Corps is composed of qualified officers of the arms and services assigned to the Counter Intelligence Corps, Military Intelligence Service, War Department.

b. Special agents. Special agents are enlisted men possessing investigative, linguistic, legal, technical or other qualifications to a marked degree, who have been selected because they have been proved loyal, intelligent, self-reliant, and resourceful.

c. Agents. Agents are enlisted men who possess characteristics, training and experience which make them potential Special agents.

d. Clerks. Clerks are enlisted men whose training as typists, file clerks, and stenographers qualifies them for such duties.

14. Procurement of commissioned personnel.--a. The Assistant Chief of Staff, G-2, War Department, is charged with the responsibility of taking action to accomplish the procurement of properly qualified officer personnel for assignment to the Counter Intelligence Corps and the relief from assignment to the Corps of officers found not qualified for continued assignment to it. Commissioned officers will not be assigned to the Counter Intelligence Corps nor relieved therefrom except with his approval. In selecting officers for assignment to the Counter Intelligence Corps; and in determining upon the relief of officers from such assignment, consideration will be given to the recommendations in the case made by the Assistant Chief of Staff, G-2, A-2, S-2, or director of intelligence of the command in which the officer is desired for service, or in which, in the case of relief from the Corps, he is serving at the time the action is contemplated.

b. So far as practicable, commissioned personnel will be obtained from among former enlisted men of the Counter Intelligence Corps who have been commissioned after graduation from accredited Officer Candidate Schools. However, any commissioned officer may make application through normal military channels for assignment to the Corps. It is not the policy of the Counter Intelligence Corps to request original commissions for civilians, nor for enlisted men in the Corps.

c. The Chief, Counter Intelligence Corps will, from time to time, make arrangements whereby a limited number of Counter Intelligence Corps enlisted personnel may attend Officer Candidate Schools, and, upon graduation therefrom, be assigned to the Corps as commissioned officers. The names of the enlisted personnel recommended by the Assistant Chief of Staff, G-2, A-2, or S-2, and the directors of intelligence concerned, for assignment to Officer Candidate Schools, under such arrangements, will be furnished to the Chief, Counter Intelligence Corps, upon request, for final approval.

d. No obstacle will be placed in the way of any Counter Intelligence Corps personnel desiring to attend Officer Candidate Schools, pursuant to provisions of AR 625-5. If recommended by the command from which Counter Intelligence Corps enlisted personnel is assigned to an Officer Candidate School, the Assistant Chief of Staff, G-2, War Department, will, if practicable, take the action necessary to have such personnel reassigned to duty with the Counter Intelligence Corps, in commissioned capacity, upon graduation from Officer Candidate School.

15. Qualifications of commissioned personnel. The specialized mission of the Counter Intelligence Corps makes it necessary that its commissioned personnel be exceptionally well-qualified, and highly desirable that they possess previous experience warranting their assignment to the Corps. Except in special instances, commissioned personnel who do not possess one or more of the following qualifications will not be assigned to the Counter Intelligence Corps:

a. College education, preferably followed by study of law;

b. Experience in investigative work;

c. Experience in Military Intelligence Service, or Counter Intelligence Corps activities, or both;

d. Linguistic qualifications in one or more languages pertinent to the mission of the Counter Intelligence Corps.

16. Procurement of enlisted personnel.--a. The Assistant Chief of Staff, G-2, War Department, is charged with the responsibility of taking action to accomplish the procurement of relief from assignment to the Corps of enlisted men, found not qualified for continued assignment thereto. The responsibility for the procurement of enlisted personnel may be delegated to the directors of intelligence of the Service Commands in the Zone of the Interior. Such enlisted personnel will be procured in accordance with policies established by the Assistant Chief of Staff, G-2, War Department. The relief of enlisted personnel in the classification of clerk or agent may similarly be delegated to the directors of intelligence of the Service Commands in the Zone of the Interior.

b. Enlisted personnel of the Army may make application for assignment to the Counter Intelligence Corps to the Chief, Counter Intelligence Corps, through appropriate channels.

c. Request, where appropriate, for the assignment to the Counter Intelligence Corps of soldiers who are found suitable, may be initiated to the Chief, Counter Intelligence Corps, by any Assistant Chief of Staff, G-2, A-2, or S-2, or the director of intelligence who desires the assignment to be effected.

d. Soldiers, who in civil life had investigative experience, are given a classification of "301 Investigator," and upon entrance into the Army, their identities will be furnished by classification officers to appropriate authority for consideration for the Counter Intelligence Corps, the names of all enlisted personnel in the Army who have special language qualifications.

e. Close liaison will be maintained with civilian investigative organizations by the offices concerned with procurement of Counter Intelligence Corps personnel, in order to determine when personnel of such organizations is inducted into the Army. It will be the responsibility of offices charged with Counter Intelligence Corps procurement to provide for the identification at induction centers of individuals apparently suitable for assignment to the Corps, and to insure that consideration is given to all such personnel with a view to such assignment.

f. Subject to the procurement policies established by the Assistant Chief of Staff, G-2, War Department, the transfer of enlisted men to the Counter Intelligence Corps, as agents or clerks, will be accomplished through The Adjutant General of the Service Command desiring such transfer, provided the individual desired is within the jurisdiction of that command. In the event the individual is not within the jurisdiction of the command concerned, request for his transfer will be made to the Chief, Counter Intelligence Corps, who will initiate the action necessary to accomplish transfer.

17. Qualifications of enlisted personnel.--a. To be eligible for assignment to the Counter Intelligence Corps, enlisted men must possess the following minimum qualifications:

(1) Age - 22 to 44 years, inclusive, for Special agents, and 20 to 44 years, inclusive for clerks.

(2) Education - graduation from high school, or equivalent thereof.

(3) Military training - completion of a minimum of eight weeks actual basic military training at a Replacement Training Center.

(4) At least one of the following:

(a) Linguistic fluency in one or more foreign languages.

(b) Technical experience of value to the Counter Intelligence Corps, such as ability in the fields of photography, electrical engineering, laboratory technician, etc.

(c) Experience in investigative work, or in allied fields.

0775

(d) Aptitude for general Counter Intelligence Corps activities and undercover assignments.

(e) Actual ability as a stenographer-typist (for clerks only).

b. Waiver of one or more of the above basic qualifications may be granted by the Chief, Counter Intelligence Corps, in his discretion, and upon receipt of a request that such a waiver be granted, accompanied by an explanation of the consideration believed to justify granting it.

c. Since the mission of the Counter Intelligence Corps is extremely broad in scope, it is necessary that personnel of the Corps be diversified as to qualifications, training, and experience. Imagination must be used by procuring authorities to secure personnel with civilian and military experience in multitudinous fields of endeavor in order that undercover and other secret missions, both foreign and domestic, may be properly carried out. Personnel with language, travel, legal, and investigative experiences are particularly useful for assignment to the Corps, but these factors in and of themselves are not necessarily controlling. Primary consideration should be given to an individual's work, and also to his mental capacity for adapting himself to varying situations and conditions with which he will be faced.

d. Since the duties assigned to personnel of the Corps are arduous and exacting, it is essential that, with a few exceptions, personnel selected for assignment to the Counter Intelligence Corps be qualified for general military service.

18. Background investigations.--a. It is essential that all personnel assigned to the Counter Intelligence Corps be thoroughly and completely investigated. The responsibility for accomplishing such investigation rests with the office of origin of the case involving investigation of his suitability.

b. No individual, either commissioned officer or enlisted man, will be assigned to the Counter Intelligence Corps until sufficient investigation has been made to establish strong indications of his suitability for such assignment, and personnel assigned prior to the completion of full investigation will, so far as practicable, be denied access to secret and confidential information. No member of the Corps will be approved by the Chief, Counter Intelligence Corps, for promotion to the classification of Special Agent until a thorough and complete investigation has been accomplished with respect to him.

22. Records and reports.--a. All records which tend to establish the identities, locations, or activities of Counter Intelligence Corps personnel, will be given a classification sufficiently high to insure adequate safeguarding of the information contained in such records.

b. Officers' Qualification Cards (W.D. A.G.O. Form Nr 66-1) for Counter Intelligence Corps commissioned personnel attached to various commands and assigned to Counter Intelligence Corps, Military Intelligence Service, War Department, are retained by the Personnel Office, Military Intelligence Service. Entries on these cards will be made in that office when the officers submit the proper material. It is the individual responsibility of every officer to submit this material and to insure that it is submitted by proper authority. Qualification cards of officers assigned to other commands will be sent to those commands upon such assignment and will be handled in conformity with existing regulations.

c. Efficiency reports will be rendered on Counter Intelligence Corps commissioned personnel in accordance with the provisions of AR 600-185. Such reports with respect to officers assigned to the Counter Intelligence Corps, Military Intelligence Service, War Department, and attached to a command will be sent to the Chief, Counter Intelligence Corps, for final disposition.

d. Efficiency reports, Counter Intelligence Form Nr 3, with respect to Special Agents attached to various commands, will be prepared by detachment commanders and submitted by 1st Indorsement to the Assistant Chief of Staff, G-2, A-2, or S-2, or director of intelligence of the command to which the detachment is attached, to the Chief, Counter Intelligence Corps, semi-annually, on June 30 and December 31. Such reports with respect to enlisted personnel assigned to a command will be prepared and handled in accordance with existing regulations. In addition, efficiency reports will be rendered upon the transfer of Special Agents, from one command to another, or upon transfer from the Counter Intelligence Corps. An efficiency report will not ordinarily be rendered covering a period of 1 month or less, but may be rendered if, in the opinion of the reporting officer, the service appears to have been unusual through merit or lack thereof. These reports will be forwarded by the reporting office within 10 days after the period covered by the report. Only one copy of an efficiency report will be made on each individual, and this copy will be forwarded through the Chief, Counter Intelligence Corps to The Adjutant General, War Department. The efficiency of Counter Intelligence Corps personnel should not be judged upon the basis of the volume of cases completed, but rather upon the character of the work done and the exercise of judgment and ingenuity in its accomplishment. Whenever an efficiency report contains entries that may be considered in any sence unfavorable, the reasons for the entries will be clearly stated. Unfavorable official communications will normally be attached to efficiency reports; however, reporting offices are not required to attach thereto administrative admonitions or reprimands which, as corrective measures, have served their purpose in creating or maintaining efficiency.

e. In addition to the records maintained by the headquarters with which Counter Intelligence Corps detachments are serving, all Counter Intelligence Corps

detachments serving with Army Ground Forces or Army Air Forces units or in theaters of operation, will maintain a confidential morning report. This record will be maintained at all times, and will report a chronological personnel history of the detachment. W.D., A.G.O. Form Nr 1 (Morning Report) will be used for this purpose and will be marked confidential.

f. In addition to such reports as operational circumstances may require, each detachment will furnish to the Assistant Chief of Staff, G-2, or A-2, or S-2, or the director of intelligence of the command with which it is serving, a monthly Counter Intelligence Corps Situation Report. A copy of this report will be sent at the time it is prepared directly to the Chief, Counter Intelligence Corps. Negative reports, when appropriate, will be submitted. The report will be brief and will contain appropriate remarks covering subjects indicated below:

(1) Current strength showing officers and enlisted men separately and by grade. This will include a roster noting changes which have occurred during the month reported on.

(2) Statistical summation of cases, pending and closed, indicating the character thereof.

(3) Special difficulties being encountered in operation or administration.

(4) Specific needs including personnel, funds, equipment, or supplies. This should indicate also unnecessary equipment and supplies on hand.

Reports made by detachments on detached service will be rendered to the theater G-2 through the G-2 or A-2 of the tactical unit with which the detachments is on detached service.

g. Special Counter Intelligence Corps Situation Reports will be rendered whenever circumstances warrant.

23. Assignment, promotion, and transfer of commissioned personnel.--
a. Changes of station within the Counter Intelligence Corps of officers assigned to Counter Intelligence Corps, Military Intelligence Service, War Department, will be made at the direction of the Chief, Counter Intelligence Corps, in accordance with the needs of the service. The assignment of officers to theaters of operations and the transfer of such personnel from such assignment will be made at the direction of the Chief, Counter Intelligence Corps, with the concurrence of the theater concerned.

b. Promotion is based on War Department Policy and covered by current War Department regulations and directives. Recommendations for the promotion of Counter Intelligence Corps commissioned personnel assigned to the Counter Intelligence Corps, Military Intelligence Service, War Department, will be submitted to the Assistant Chief of Staff, G-2, War Department, through the Chief, Counter Intelligence Corps, for necessary action. Recommendations for promotion will, in addition to the data required by War Department instructions and regulations, contain the following:

(1) Component of officers. (AUS, Res., etc.)

(2) Military history and date of birth.

(3) Date of assignment to Military Intelligence Service or Counter Intelligence Corps.

(4) Date of last promotion (or date of original appointment).

c. Recommendations for demotion will be accompanied by full particulars and will be in form to be forwarded to proper authority for final action without further correspondence.

d. Promotion and demotion of officers serving under commanders who have been granted authority to promote and/or demote on their own initiative will be made in conformity with existing War Department instructions, regulations, and policies without reference to the Assistant Chief of Staff, G-2, War Department.

e. Copies of all special orders affecting the duty status of commissioned personnel assigned to Counter Intelligence Corps, Military Intelligence Service, War Department, will be submitted to the Office of the Chief, Counter Intelligence Corps, War Department.

24. Assignment, promotion, reduction and transfer of enlisted personnel.

a. Assignment of enlisted personnel to the Counter Intelligence Corps will be accomplished in accordance with policies established by the Assistant Chief of Staff, G-2, War Department.

b. Changes of station of enlisted personnel assigned to the Counter Intelligence Corps, Military Intelligence Service, War Department, will be made at the direction of the Chief, Counter Intelligence Corps, in accordance with the needs of the service. Individuals, groups of individuals, or whole detachments may be relieved from attachment to one command and attached to another. When

a command is directed to relieve personnel, not specified by name, from attachment to it, and send such personnel for attachment or assignment to another command, every effort will be made to send well-trained and properly qualified personnel. No agent or clerk will be transferred from attachment to one command for attachment or assignment to another, until a full background investigation has been completed with respect to him, unless the individual in question is specifically required to be transferred. The assignment of enlisted personnel to theaters of operations and the transfer of such personnel from such assignment will be made at the direction of the Chief, Counter Intelligence Corps, with the concurrence of the theaters concerned.

c. Promotions of enlisted personnel, within the limits of established tables of organization, will be made by the commander of the command to which the detachment is assigned, acting upon recommendations made by the detachment commander, subject to the limitation set forth in d. below. Promotions of enlisted personnel attached to a command may be made by the commander of the command within the limits of promotion furnished for the attached detachment, subject to the limitation set forth in d. below.

d. No enlisted man, including Counter Intelligence Corps agents and clerks, will be appointed Special Agent without the prior approval of the Chief, Counter Intelligence Corps.

e. Reductions in grade of enlisted personnel will be made by the commander of the command to which such personnel is attached or assigned, except that an enlisted man will not be reduced from Special Agent to agent or clerk without prior approval of the Chief, Counter Intelligence Corps.

f. Agents and clerks attached to Service Commands in the Zone of the Interior, may be relieved from assignment to the Counter Intelligence Corps by the commander of the command to which such personnel is attached. Special agents will not be relieved from assignment to the Corps without prior approval of the Chief, Counter Intelligence Corps, except in emergency situations making such action imperative. In such event, full information with respect to the action taken and the reasons therefor, will be furnished without delay to the Chief, Counter Intelligence Corps.

g. Copies of all special orders affecting the duty status of Counter Intelligence Corps enlisted personnel assigned to Counter Intelligence Corps, Military Intelligence Service, War Department, will be submitted to the Office of the Chief, Counter Intelligence Corps, War Department.

25. Finance.--a. The missions to which Counter Intelligence Corps personnel is assigned are often exceptional in character, requiring unusual and

unforseeable activities and expenditures. The Assistant Chief of Staff, G-2, or A-2, or the S-2, or the director of intelligence of any command to which Counter Intelligence Corps personnel is assigned or attached, is authorized to furnish to Counter Intelligence Corps detachments Military Intelligence funds necessary to such detachments for the accomplishment of their mission. These funds will be supplied from Military Intelligence funds available to the G-2, or A-2, or S-2, or director of intelligence concerned. Necessary supervision over the expenditure of the Military Intelligence funds will be maintained to prevent excessive expenditure as compared with results obtained.

b. Counter Intelligence Corps personnel in the Zone of the Interior and overseas, operating in civilian clothing, who are not furnished Government rations and quarters will be provided per diem payments in the amount provided for by applicable finance regulations or will be placed on commutation of rations and quarters.

c. In consideration of the fact that Special agents and agents of the Counter Intelligence Corps, in performing their investigative duties, frequently find themselves in a position where there is an urgent and immediate need for cash, every Special Agent and agent of the Counter Intelligence Corps will be required to have in his possession at all times, except following an emergency expenditure, not less than twenty dollars ($20.00) or, in the case of personnel serving overseas, a similar amount of the appropriate currency.

d. Subject to the provisions of e. below, all travel performed by commissioned and enlisted Counter Intelligence Corps personnel for official business of the Army, which is necessary in Military Service, will be accomplished in accordance with official travel orders, and reimbursement therefor will be made in accordance with existing Army Regulations.

e. Reimbursement from Military Intelligence funds allotted to the commands concerned for the following expenses, when such expenses are incurred in the performance of investigative duties in connection with official business of the Military Intelligence Service, will not normally be questioned by the Chief, Military Intelligence Service.

(1) Travel.--(a) Reimbursement to commissioned and enlisted personnel of the Counter Intelligence Corps for expenses incident to the performance of official business of the Military Intelligence Service will be made from "Travel of the Army" funds on mileage vouchers (Standard Form Nr 1071) or on per diem vouchers (Standard Form Nr 1012); or from Military Intelligence funds disbursed by the Assistant Chief of Staff, G-2, or A-2, or S-2, or the director of intelligence concerned. In some instances, partial reimbursement may be made both from "Travel of the Army" funds and Military Intelligence funds.

(See (d) below.) It is believed that few instances will arise where "Travel of the Army" funds cannot be used to cover at least part of the cost of travel of officers and enlisted men, and every effort should be made toward the conservation of Military Intelligence funds and the utilization of "Travel of the Army" funds.

(b) Official travel orders. Reimbursement to officers and enlisted men of the Counter Intelligence Corps for the difference between the total mileage or per diem allowance and the total of actual normal expenses incurred while traveling under official orders will normally not be questioned by the Chief, Military Intelligence Service. All travel incident to inspection trips, attendance at conferences, permanent changes of station, and other official business not directly connected with actual investigative duties will be performed on official travel orders in accordance with the existing Army Regulations. In this connection, attention is invited to the fact that confirmatory orders may be secured when circumstances preclude the issuance of orders in advance.

(c) Reimbursement for mileage, not to exceed five cents (5¢) per mile, for local travel, by privately owned automobiles, when the officers of Counter Intelligence Corps detachments, or Counter Intelligence Corps enlisted personnel concerned are not traveling under official travel orders will normally not be questioned.

(d) Additional reimbursement of Counter Intelligence Corps enlisted personnel for mileage, at a rate not to exceed two cents (2¢) per mile, when traveling under official orders providing mileage at three cents (3¢) per mile in accordance with paragraph 10, AR 35-4540, will normally not be questioned. In this connection, attention is invited to the fact that it often may be advisable to utilize repeated travel orders. Special agents and agents of the Counter Intelligence Corps should be encouraged to use their privately owned automobiles wherever it is believed that the use of such transportation will increase the efficiency with which cases are handled. Their attention should be invited, however, to the fact that the Government will not be held liable for any damage which might result from accidents involving such privately owned vehicles. Special agents and agents of the Counter Intelligence Corps who use their privately owned motor vehicles should be encouraged to take out insurance policies covering property damage and personal liability.

(e) Government automobiles (civilian type) furnished for Counter Intelligence Corps.

1 Normally, the division engineer, having jurisdiction, will provide for the rental of garage space in the vicinity of branch offices. Such arrangement should be effected through the Office of the Assistant Chief of Staff, G-2, or A-2, or S-2, or the director of intelligence concerned.

0782

2 Gasoline, oil, and greasing. Normally, when practicable, credit cards should be issued for the servicing of Government automobiles (civilian type) with gasoline, oil, lubricating, and car washing. These cards will be issued by the quartermaster of the command in which the Counter Intelligence Corps detachment is located. They should bear fictitious names, as accounting for purchases will be made according to the serial numbers of the cards. A statement for each card of all purchases made, together with the sales slip, should be sent to the commanding officer of the Counter Intelligence Corps detachment concerned, at the end of the month, for transmission to the quartermaster for the checking of the bill rendered by the vendor.

3 Maintenance repairs, and tires and tubes. Replacement of tires and tubes, on an exchange basis, can normally be obtained from the motor transport district. When a maintenance repair is necessary, a request should be made for a job order on the quartermaster maintenance unit which is to make the repair. In making the request, the requisition number, serial number, motor number, and make of the vehicle should be stated. For breakdowns on the road, the car should be towed to the nearest maintenance shop, or be taken to a civilian garage, and the officer in charge of the detachment concerned should be notified. This officer should call the motor transport district officer for instructions. In emergencies, when Government sources are not available, garage rent, minor repairs, and the necessary expenditures for the operation of these cars may be made and reimbursement therefor may be claimed on a confidential subvoucher. Amounts of gasoline and oil so purchased will be held to the minimum necessary to reach the nearest point of Government supply in the course of a mission.

4 Maintenance records. A log will be maintained for each automobile, showing the daily mileage for each operator, the total mileage and the case numbers, or purposes for which the vehicles were used. In addition, it may be advisable to maintain Motor Vehicle Service Record books on each Government-owned Counter Intelligence Corps motor vehicle.

(2) Public transportation. Reimbursement for trolley fares, bus fares, taxi fares, rental of automobiles, and ferry travel will normally not be questioned. The use of taxis and the rental of automobiles should be kept to a minimum, consistent with maximum efficiency in accomplishing missions. This method of transportation is expensive and should be used only in exceptional cases.

(3) Charges for parking and for rental of storage space.

(4) Tolls incurred. Tolls incurred in the use of privately-owned motor vehicles, and those furnished by the Government for Counter Intelligence Corps use, where passes are not furnished, normally will not be questioned.

0783

(5) Communications. Telephone calls and telegrams on official matters are proper charges against Military Intelligence funds, when official Government telephone and telegraph service is not available. Telephone calls and telegrams concerning personal matters not of an official nature, are not proper claims for reimbursements. Reimbursements for the cost of installation service, where necessary in the interest of the Government, and the rental charges for such telephones, normally will not be questioned.

(6) Purchase of information and salaries of informants. The cost of the entertainment of informants who furnish, or who are known to be qualified to furnish, information of definite value to the Military Intelligence Service constitutes a proper claim for reimbursement. Such expenditures must be left to the judgment of individual Special agents and agents, but the occasion for such expenditures must be reasonable and appropriate, and of definite value to the investigation in progress. Lavishness will be avoided in order not to arouse suspicion. Counter Intelligence Corps personnel may claim reimbursement for drinks and meals taken by themselves under circumstances necessitating their doing so in conjunction with informers or contacts. Habitual use of this method of investigation will be avoided.

(7) Gratuities or tips. Gratuities or tips in reasonable amounts constitute proper claims for reimbursements.

(8) Certain items of equipment and supplies. Reimbursement for certain items of equipment and supplies needed immediately to assist in the securing of information of definite value; that is, tape, wire, film, rope, etc., normally will not be questioned. This will include, in the case of detachments overseas, the local purchase of necessary equipment which has not been furnished to the detachment by higher Counter Intelligence Corps echelons or which, having been furnished, has become lost, destroyed, or unserviceable, and must be replaced without delay.

(9) All other normal expenses. All other normal expenses incurred in investigation of appropriate cases not mentioned specifically herein, are properly reimbursable from Military Intelligence funds. This will be interpreted to include extraordinary living expenses incurred by the necessity of the character of the duties assigned.

(10) Subsistence.

(a) Reimbursement for actual expenses. In cases where enlisted special agents and agents are absent from their official stations in connection with actual investigative duties pertaining to official business of the Military Intelligence Service, and find it impossible to obtain their meals at

0784

their boarding houses, the reimbursement of such personnel from Military Intelligence funds for the actual expenses incurred in procuring the necessary meals will normally not be questioned by the Chief, Military Intelligence Service.

(b) Deduction for commutation of rations. When Counter Intelligence Corps personnel is not subjected to the costs outlined in (a) above, the total of the commutation of rations allowance granted such personnel while on the DEML, in accordance with AR 35-4520, should be deducted from the total of the expense accounts on which reimbursement is claimed.

(11) Quarters. The total of the allowance for commutation of quarters for Counter Intelligence Corps personnel on the DEML should be deducted from any claim for reimbursement for cost of quarters incident to the investigative duties of such personnel, unless such personnel maintains quarters of a permanent nature when, at the same time, it is required to spend certain periods of time away from such quarters on official business for the Military Intelligence Service.

(12) Shipments of property. Except in emergencies, the quartermaster designated to supply the concerned station should be called upon to provide for shipments of material necessary for the conduct of Military Intelligence Service activities.

26. Civilian clothing.

a. Allowances for civilian clothes.

(1) When enlisted personnel are transferred to the Counter Intelligence Corps, it will be provided with the seasonable clothing necessary to protect its health and identity. Normally, the cost of this initial procurement of civilian clothing will not exceed one hundred and twenty-five dollars ($125.00); however, this amount may be exceeded provided it is determined that the additional clothing required is actually necessary. The responsibility for making this determination rests with the Assistant Chief of Staff, G-2, or A-2, or S-2, or director of intelligence of the command to which such personnel are assigned or attached. So far as practicable without jeopardizing necessary security, issue clothing (underclothes, handkerchiefs, towels, and similar items) should be used by enlisted men of the Corps. Military Intelligence funds should be used for the purchase of such items only when the use of issue clothing is impracticable from the point of view of the mission to be performed.

(2) Provided enlisted personnel assigned to the Counter Intelligence Corps has certain civilian clothing which it desires to use, only such additional items of clothing as actually may be required should be procured; therefore the entire initial allowance need not be expended at once.

0785

(3) This initial civilian clothing allowance is not authorized for soldiers who reenlist and are retained on duty with the Counter Intelligence Corps. No additional clothing allowance will be allowed members of the Counter Intelligence Corps upon recalling such individuals to active duty from an inactive status.

(4) In addition to the initial allowance prescribed in (2) above, Counter Intelligence Corps enlisted personnel are authorized a clothing maintenance and replacement allowance of one hundred and forty-four dollars ($144.00) per annum. This maintenance allowance is available to this personnel at the rate of twelve dollars ($12.00) per month, and cannot be drawn in advance.

(5) Special clothing needed to accomplish specific Counter Intelligence Corps missions may be procured and furnished to Counter Intelligence Corps personnel without regard to the allowance prescribed in (2) and (4) above.

(6) When essential, appropriate clothing will be obtained for Counter Intelligence Corps personnel regardless of expenditures for clothing which may have been made by or for the individual in question upon previous occasions.

(7) Since Counter Intelligence Corps enlisted clerks normally are not required to perform investigative duties, civilian clothing normally will not be furnished them. Enlisted clerks assigned to undercover offices may be furnished civilian clothing as prescribed in the preceding subparagraphs.

(8) The allowances for civilian clothing prescribed in the preceding subparagraphs will be defrayed from Military Intelligence funds. These allowances are furnished solely for the purpose of supplying clothing needed by Counter Intelligence Corps personnel in the performance of their assigned duties and do not accrue to the man, nor should they automatically be authorized nor allowed when not actually required.

(9) Articles of civilian clothing purchased for members of the Counter Intelligence Corps will be classed as expendable and will be dropped from accountability in accordance with the provisions of paragraph 1c, AR 35-6620.

(10) Adequate clothing records will be maintained for all members of the Counter Intelligence Corps showing separately obligations and unobligated balances under the initial and maintenance allowance for civilian clothing.

b. Mixture of civilian clothing and uniform. Under no circumstances should a mixture of civilian clothing and uniform clothing be worn simultaneously by Counter Intelligence Corps personnel when to do so might disclose the connection of such personnel with the Army or arouse comment.

0786

c. Statement of civilian clothing allowances. Upon the transfer of Counter Intelligence Corps enlisted personnel, statements of civilian clothing, initial and maintenance allowance will be forwarded, together with the service records and allied papers of the individuals concerned, on the date of transfer, to the Assistant Chief of Staff, G-2, or A-2, or S-2, or the director of intelligence of the command to which such personnel is transferred. As an alternative, these data may be entered in the appropriate section of the soldier's individual service records, if desired. Upon the release of Counter Intelligence Corps personnel from the Corps, and upon discharge of such personnel from the Army, statements of civilian clothing and initial and maintenance allowances will be inserted as part of the individual's service record.

27. Preparation of vouchers and expense accounts.

a. Mileage and per diem (travel on official orders). Mileage vouchers (Standard Form Nr 1071) and per diem vouchers (Standard Form Nr 1012) will be prepared in accordance with AR 35-5020 and 35-5320.

b. Expense accounts (Subvoucher to Confidential Voucher Form Nr 6).

(1) Individual monthly expense accounts. These will be prepared in complete detail. Expense will be listed opposite the actual dates on which incurred, and under the actual case numbers to which they pertain. Reference to an OCS Form Nr 21 (CIC Nr 1) is not sufficient. General entries such as "Entertainment - $10.00" will not be considered as being sufficiently detailed. In such cases it is necessary to show the type and purpose of such entertainment and the name of the individual entertained, unless it is deemed inadvisable to divulge his name. In connection with payments to informants, reference should be made to the cases concerned or to the purpose of securing such information. Prior to being paid by the Assistant Chief of Staff, G-2, each individual expense account should be thoroughly reviewed by the officer in charge of the detachment concerned, who should indicate the correctness of the expense account by initiating a statement on the face of the vouchers, such as: "Approved, reimbursement recommended." Totals for each page will be carried forward to the next. These vouchers are to be classified as "confidential," or, if deemed advisable, "secret."

(2) Expenditures for civilian clothing for Counter Intelligence Corps (Subvoucher to Confidential Voucher Form Nr 6). A separate voucher for each agent to cover expenditures for civilian clothing will be submitted after purchases have been made. The voucher will show each item and the cost thereof, and will be supported by receipted bills of sale or sales slip. The officer in charge will certify on the voucher that the items purchases were necessary.

0787

c. Receipts. Receipts, when available, will be obtained when it is possible to do so without jeopardizing the identities of Counter Intelligence Corps personnel and its mission.

d. Use of OCS Form Nr 22. In all cases of reimbursement from Military Intelligence funds for travel performed in privately owned automobiles in connection with actual investigations, OCS Form Nr 22, properly executed in every detail, should be attached to the subvoucher covering such reimbursement. The column headed "Time of Departure and Arrival," on OCS Form Nr 22, should be disregarded and "Case Number" should be substituted therefor. Proper case numbers, to which the travel was incident, should always be listed or, when case numbers have not been assigned, the words, "Special Investigative Mission" should be shown, together with name of authorizing officer. The total amount on OCS Form Nr 22 should be entered as a separate item on the regular monthly expense account of the individual concerned. When more than one page is required, the certificate at the bottom of all but the last will be cut off, thereby requiring only one signature for each individual. These vouchers are to be classified as confidential or, if deemed necessary, secret. Responsibility for determining the necessity for use of privately owned motor vehicles by Counter Intelligence Corps enlisted personnel is placed with the officer in charge.

28. Salaries, gifts, gratuities and favors.

a. Funds received by Counter Intelligence Corps personnel as payment for services rendered employers, while such personnel are employed in "undercover capacities," normally will be turned over to the commanding officers of Counter Intelligence Corps detachments to which such personnel are assigned. The commanding officers of Counter Intelligence Corps detachments receiving such funds will obtain United States Postal Money Order, made payable to the Treasurer of the United States, in the amounts indicated, and will forward such money orders to the Finance Officer, Military Intelligence Service, for final disposition. Expenses incurred by Counter Intelligence Corps personnel in the performance of their "undercover missions" will be paid from Military Intelligence funds in accordance with the provisions of paragraph 25.

b. No member of the Counter Intelligence Corps shall receive any gift, favor or gratuity from, or make such payments to any individual firm, group, organization, or society, without specific authority of the Assistant Chief of Staff, G-2, or A-2, or S-2, or director of intelligence of the command to which he is attached or assigned.

0788

Section IV

SUPPLY

	Paragraph
General	29
Procurement of investigative equipment and supplies	30
Property responsibility and accountability	31
Ammunition	32
Maintenance of investigative equipment	33
Gasoline rationing "C" books	34
Procurement of tires and tubes for privately owned automobiles	35

29. General.--a. The type of work performed by the Counter Intelligence Corps requires the use of certain types of supplies and equipment not normally provided in standard tables of equipment. The procurement of Counter Intelligence Corps investigative equipment and supplies will be accomplished by the Chief, Counter Intelligence Corps, who will furnish initial issues of Counter Intelligence Corps supplies and equipment to detachments attached or assigned to the various commands. Replacement of such supplies and additional needed supplies will be furnished to these detachments by the Chief, Counter Intelligence Corps, upon request made to him through military intelligence channels. Detachments on detached service will requisition upon the detachment from which they are on detached service for replacements and for additional supplies and equipment.

b. Equipment and supplies, other than Counter Intelligence Corps investigative equipment and supplies, will be obtained upon requisition made by the commanding general of the command to which the detachment is assigned or attached upon the appropriate chief of technical services. Such equipment and supplies will be furnished in accordance with W.D., A.G.O. letter File Nr AG 400 (16 Jul 43) OB-S-B-M, Subject, Special List of Equipment and Supplies for the Counter Intelligence Corps," 17 July 1943, and the special list of equipment inclosed therewith.

30. Procurement of investigative equipment and supplies.--a. All procurement of Counter Intelligence Corps investigative equipment and supplies will be accomplished by the Chief, Counter Intelligence Corps, who is charged with the responsibility of selecting, procuring, storing, and issuing all such equipment and supplies. He will obtain the necessary equipment and supplies from the Army Service Forces which procure them in accordance with approved requirements included in the Army Supply Program. The Chief, Counter Intelligence Corps, is charged with the responsibility of preparing the annual estimate of Counter

0789

Intelligence Corps, investigative equipment and supplies requirements, which estimate will be submitted to the Director of the Requirements Division, Army Service Forces, for inclusion in the Army Supply Program, for the respective periods.

b. Assistant Chiefs of Staff, G-2, or A-2, or S-2, and directors of intelligence will procure Counter Intelligence Corps investigative equipment and supplies for Counter Intelligence Corps detachments under their jurisdiction from the Property Officer, Counter Intelligence Corps Supply Depot, 2327 North Charles Street, Baltimore, Maryland, on requisitions (W.D., Q.M.C. Form Nr 400), except where emergencies require that local procurement be made, as indicated in d below.

c. The Chief, Counter Intelligence Corps, may make local purchases of investigative equipment and supplies when an emergency exists, and when Army Service Forces is unable to provide the desired materials within the time available. Such purchases may be made with Military Intelligence funds, but the approval of the Finance Officer, Military Intelligence Service, G-2, War Department, must first be obtained, when such purchases amount to five hundred dollars ($500.00) or more.

d. Local procurement is authorized to be made from Military Intelligence Service funds by the Assistant Chief of Staff, G-2, or A-2, or S-2, and Directors of Intelligence Divisions, where the investigative equipment and supplies are essential to the accomplishment of emergency missions and cannot be promptly obtained through the normal channels of supply.

31. Property responsibility and accountability.--a. Responsibility and accountability for Counter Intelligence Corps property will be maintained in accordance with Army Regulations. Attention is particularly invited to War Department Circular MO-D-M, Subject: "Policy Governing Property Accountability in Theaters of Operation," 21 February 1942.

b. Accountable officers for Counter Intelligence Corps property will be appointed for the Office of the Chief, Counter Intelligence Corps; for the Counter Intelligence Corps Advanced Training School; and for all Counter Intelligence Corps detachments. These officers will perform the duties as prescribed for accountable officers in AR 35-6520, 35-6640, and 35-6680.

32. Ammunition.--a. The .38 caliber special revolver and the .45 caliber automatic pistol are the standard weapons of the Counter Intelligence Corps. Other weapons, carbines, caliber .30 M1, and Grenades, hand throwing (dummy), are authorized for training purposes only. The following per individuals allowances

of training ammunition per annum for personnel of Counter Intelligence Corps have been authorized by the Secretary of War, pending publication of an appropriate change to AR 775-10:

Cartridge cal.	.30 Ball (Rifle)	50 rounds
Cartridge cal.	.30 Carbine	40 rounds
Cartridge cal.	.45 Pistol Revolver	25 rounds
Cartridge cal.	.45 SMG	25 rounds
Cartridge cal.	.38 Revolver	*200 rounds

*Includes 100 rounds for qualification, 100 rounds for combat, close combat and special training. An additional 100 rounds "Ball" ammunition per individual will be maintained for emergency (initial issue only of this quantity will be made).

An allowance of 50 rounds of caliber .38 special revolver ammunition is authorized for use in training commissioned officers and enlisted personnel while assigned as students at the Counter Intelligence Corps Advanced Training School.

b. Counter Intelligence Corps detachments attached or assigned outside the continental limits of the United States, including Alaska, will direct requests for all types of ammunition listed in a above, to the ordnance officer of their respective commands.

c. Counter Intelligence Corps detachments attached to the service commands in the Zone of the Interior, will requisition ammunition from the Property Officer, Counter Intelligence Corps, Supply Depot, 2327 North Charles Street, Baltimore, Maryland. The basis for issue will be computed on the actual strength of the Counter Intelligence Corps organization concerned, as of the date of the requisition. Ammunition allowances are not cumulative.

33. Maintenance of investigative equipment. All items of technical equipment will be adequately maintained, the cost of such maintenance being properly payable from Military Intelligence funds. Equipment which becomes damaged or unserviceable should be disposed of in accordance with existing Army regulations.

34. Gasoline rationing "C" books.--a. The Chief, Counter Intelligence Corps, will arrange for the procurement of an adequate supply of gasoline rationing "C" books for issue to personnel of the Counter Intelligence Corps operating personally owned or Government-owned automobiles, on official business within the continental limits of the United States.

b. The gasoline rationing "C" books will be issued by the Chief, Counter Intelligence Corps, to the directors of intelligence of their respective commands. Requests, in blocks, for gasoline rationing "C" books should be submitted to the Chief, Counter Intelligence Corps, when needed.

35. Procurement of tires and tubes for privately owned automobiles. It is the responsibility of the Chief, Counter Intelligence Corps, to effect arrangements with the Office of Price Administration to provide new tires and tubes for personally owned automobiles of Counter Intelligence Corps personnel who use their cars principally for official business of the Military Intelligence Service. Counter Intelligence Corps personnel requiring tires and tubes for personally owned automobiles will submit to the director of intelligence of the command of the area in which such personnel is serving (whether attached to that command or to an Army Ground Forces or Army Air Forces unit stationed therein) application for needed tires and tubes. The director of intelligence will thereupon forward Office of Price Administration Form Nr R-1, properly accomplished to the Chief, Counter Intelligence Corps, together with a request that an authenticated certificate for purchase of tires or tubes be issued by the Office of Price Administration. The director of intelligence will accompany this request with a certification that a "C" gasoline rationing book issued by the Office of the Chief, Counter Intelligence Corps, has been reissued to the automobile for which the tires or tubes are desired. Upon receipt of this request, the Chief, Counter Intelligence Corps, will take necessary action to secure from the Office of Price Administration and forward to the requesting director of intelligence an authenticated certificate for the purchase of tires or tubes.

Section V

OPERATIONS

	Paragraph
General	36
Channels of communication	37
Credentials and badges	38
Duties and functions of Counter Intelligence Corps detachments	39
Coordination	40
Liaison with other agencies	41
Civil situation overseas	42
Special missions	43

0792

36. General. The Assistant Chief of Staff, G-2, War Department is responsible for the formulation of policies governing the operation of Counter Intelligence Corps personnel. The actual operational activities of Counter Intelligence Corps detachments are a function of command and the commanding officer of such a detachment is responsible to the commanding general of the command with which the detachment is serving for the operation of the detachment. He is the operational Counter Intelligence Corps advisor to the G-2, A-2, S-2, or director of intelligence of the command concerned. Within the policies established by the Assistant Chief of Staff, G-2, War Department, the control and direction of the operations of Counter Intelligence Corps detachments lies with the commanding officer of the command to which the detachment is attached or assigned and regardless of wether it is assigned or attached. The recommendation of the Counter Intelligence Corps detachment commander should be considered in determining upon missions which may involve Counter Intelligence Corps personnel. In formulating plans for offensive intelligence action, it is advisable that the Counter Intelligence Corps detachment commander be consulted concerning probable enemy counterintelligence measures.

37. Channels of communication. Counter Intelligence Corps channels of communication are the same as those prescribed for other intelligence organizations. Direct communication between Counter Intelligence Corps detachments of adjacent units is authorized whenever circumstances justify it. Direct communication between commanding officers of Counter Intelligence Corps detachments and the Office of the Chief, Counter Intelligence Corps, is authorized on all administrative matters.

38. Credentials and badges.--a. The Assistant Chief of Staff, G-2, War Department, is responsible for the design and procurement of Counter Intelligence Corps credentials and badges. Commands with which Counter Intelligence Corps personnel are serving will requisition necessary credentials and badges together with necessary supplies and instructions required for the issuance of such credentials and badges from the Chief, Counter Intelligence Corps, to be issued to the personnel entitled to them. The credentials will be authenticated by the Assistant Chief of Staff, G-2, A-2, or S-2, or the director of intelligence of the command to which the detachments for which credentials or badges are being issued is attached or assigned. Proper records with respect to the possession of the credentials and badges will be maintained by his office. The Office of the Chief, Counter Intelligence Corps, will be advised of the issuance of any badges or credentials by the command issuing it, and Monthly Reports of Change with respect to badges and credentials will be furnished to the Chief, Counter Intelligence Corps, by every command to which such badges and credentials have been furnished.

b. Counter Intelligence Corps credentials and badges should never be taken to the front lines or elsewhere where there is a serious danger of their loss or capture. Counter Intelligence Corps personnel will be constantly reminded that the careless loss of Counter Intelligence Corps credentials or badges is a serious offense. They will, however, also be instructed that the failure to report such a loss is a more serious offense than the loss itself. Periodic inspections at intervals of not more than three months will be made of Counter Intelligence Corps credentials and badges.

39. Duties and functions of Counter Intelligence Corps detachments.--
a. The duties and functions of the Counter Intelligence Corps fall, generally, into two categories: the general investigative, rear echelon mission, including safeguarding military information, security against the activities of enemy agents and rear echelon counterintelligence functions in general: and the field security mission, including counterintelligence measures performed in forward echelons.

(1) General investigative and rear echelon mission. This part of the Counter Intelligence Corps mission includes the investigation of cases and other appropriate duties within the scope of the counterintelligence jurisdiction of the command to which the personnel concerned is assigned or attached. The scope of the jurisdiction of the Corps will be limited in the Zone of the Interior by the Delimitation Agreement of 22 February 1942. Overseas it will be limited by existing agreements entered into by the commanding general of the command or area concerned. Included in this category will be the following general duties:

(a) Provisions of TM 30-205. Assisting in the establishment and functioning of the provisions of TM 30-205 (Confidential) 27 March 1942, and furnishing investigative coverage with respect to material obtained through the operation of the provisions of that manual, the primary duty of the Counter Intelligence Corps will be investigative work which arises from the provisions of the manual. However, this personnel will render assistance and advice in connection with the establishment and functioning of the provisions of that manual. Counter Intelligence Corps personnel will not be used to form an integral part of the organization described in TM 30-205.

(b) Safeguarding military information. The Counter Intelligence Corps will assist in the enforcement of the provisions of AR 380-5, "Safeguarding of Military Information" and will investigate to determine the responsibility for violations of those regulations. It is a part of the mission of the Corps to conduct surveys to determine measures taken to insure compliance with AR 380-5 and other directives concerning the safeguarding of military information, and to make recommendations through the Assistant Chief of Staff, G-2, A-2, or the S-2, to the commanding officer of the unit surveyed with respect to appropriate measures

to be taken to obtain proper security and insure compliance with the security measures taken. Members of the Corps, will periodically, deliver lectures on safeguarding military information to troop units.

(c) Frontier control. The Counter Intelligence Corps will cooperate with the Corps of Military Police and other military and civil authorities in exercising control at frontiers of territory under the jurisdiction of the command to which such personnel is attached or assigned. This section will include recommending the establishment and assisting in the maintenance of controls systems over the entrance of persons, goods, and information into the territory occupied by the command.

(d) General security against activities of enemy agents. This will include the following:

1 Investigation of actual or apparent instances of or plans for espionage, sabotage, antiallied propaganda, harmful rumors, fifth column activities, disaffection, or other subversive activities within or affecting the Armed Forces.

2 The performance of security surveys to determine the security of communication, transportation lines, storage and supply facilities, headquarters, and other military activities and installations from adverse actions of enemy agents, and the recommendation of security measures to be taken based upon surveys conducted. However, Counter Intelligence Corps personnel will not be used to accomplish the actual protection of such installations or the implementation of the recommendations made. The function of the Corps in this connection is advisory. This does not preclude the use of Counter Intelligence Corps personnel to make periodic checks with respect to the effectiveness of security measures taken.

3 Recommendations with respect to necessary control of the movements of civilian personnel within the area under the jurisdiction of the command with which the detachment is serving, including suggestions with respect to the establishment of pass systems, restricted areas, refugee control and related matters.

4 The maintenance of constant liaison with Signal Intelligence Service and the performance of investigations resulting from intercepts indicating the existence of enemy activity.

(e) General investigative duties. Counter Intelligence Corps personnel will be used to perform other necessary investigative missions, falling within the counterintelligence field. Every effort will be made, however, to

prevent the diversion of a large percentage of the performance of the more important counterintelligence missions falling within the jurisdiction of the Corps both in the Zone of the Interior and overseas.

(2) Field security mission. The field security mission of the Counter Intelligence Corps will be performed with forward echelons during tactical operations and will be designed to neutralize the efforts of enemy agents relating to the tactical operation. It will include the securing of information of counter-intelligence value with respect to the identity and activities of enemy agents. The performance of these duties may be outlined as follows:

(a) Search of enemy headquarters, billets, and personnel, and seizure of significant documents.

(b) Arrest of known enemy agents and dangerous sympathizers.

(c) Establishment of an informer net based upon immediate contact with known friends.

(d) Seizure of telephone exchanges and/or radio stations, arrangements for their protection until they are taken over by proper personnel.

(e) Stopping of all civilian communications by mail, radio, telephone, telegraph, and the seizure of all mail and civilian post boxes and of the records of all radio and telegraph stations.

(f) Establishment of contacts with local officials.

(g) In the event of withdrawal, the search of evacuated headquarters, bivouac areas, billets, and other installations and areas for documents or material which would be of value to the enemy and the safeguarding or destruction, as required by circumstances, of material found.

(h) The control of refugees to prevent enemy infiltration.

b. While division has been made above between the general investigative mission and the field security mission, both come within the general mission of the Counter Intelligence Corps, and duties coming within the scope of either will be performed by Counter Intelligence Corps personnel, when appropriate whether such personnel be in the Zone of the Interior, in a theater of operations, in an overseas defense, service or base command, or with a tactical unit of the Army Ground Forces or Army Service Forces either in the Zone of the Interior or overseas.

c. Counter Intelligence Corps personnel attached to tactical units may be used for routine housekeeping duties when such use will not interfere with the proper performance of its primary functions as outlined in this manual.

40. Coordination.--a. Successful operations of the Counter Intelligence Corps frequently depend upon the rapid and concerted action of several Counter Intelligence Corps detachments or elements thereof. Such teamwork can only be properly developed by close and constant liaison between the commanding officers of Counter Intelligence Corps detachments and individual contacts, where feasible, between the enlisted personnel of such detachments.

b. To accomplish this coordination, the commanding officer of the Counter Intelligence Corps detachment in each theater of operations will maintain close contact with the officers in charge of the detachments throughout his theater and will require those officers to maintain close liaison among themselves at all times. Similarly, in the Zone of the Interior, the commanding officers of the Counter Intelligence Corps detachments attached to tactical units of higher echelons will maintain close contact with the commanding officers of detachments attached to lower echelons, in order that the activities of all may be coordinated.

41. Liaison with other agencies. The commanding officers of Counter Intelligence Corps detachments and the personnel of such detachments, both in the Zone of the Interior and in theaters of operations, will foster close liaison and mutual cooperation between the Counter Intelligence Corps and the Corps of Military Police in the same area. In theaters of operations, every effort will be made by all Counter Intelligence Corps personnel to establish and maintain cooperation with local law enforcement agencies and the Intelligence and Military Police Organizations of Allied Armies. Emphasis will be placed upon this element of the operations of the Counter Intelligence Corps in theaters of operations.

42. Civil situation overseas.--a. Counter Intelligence Corps detachments entering new areas with tactical units or as the initial detachments assigned to a new theater headquarters will take appropriate steps to become oriented at the earliest practicable moment. The personnel will seek to familiarize itself with local political and economic conditions, racial and religious elements and problems, the particular outstanding customs and characteristics of the civilian population, and the attitude of the population toward the war.

b. Having begun the orientation outlined in a above, the Counter Intelligence Corps detachment will prepare itself, within the policies established by the commanding general of the theater of operations, to make discreet contact with friendly elements in the area and to identify hostile and neutral individuals, and groups, taking appropriate action with respect to them. These friendly elements will form the nucleus of informant nets to be established.

43. Special missions. Counter Intelligence Corps personnel are frequently required to perform special missions involving complicated activities and highly specialized capabilities. The number of individuals selected for a mission of this character will depend upon the mission and circumstances but, normally, not less than two individuals will be assigned. Whenever practicable, a commissioned officer will be placed in charge of such a mission. It is important that individuals selected for special missions be familiar with each other's methods of operation and have full confidence in each other's ability.

(A. G. 300.7 (9 Aug 43).)

By order of the Secretary of War:

G. C. MARSHALL
Chief of Staff

OFFICIAL:
J. A. ULIO,
Major General,
The Adjutant General.

WAR DEPARTMENT
Office of the Inspector General
Washington

333.9-Intelligence Activities 6 November 1943

MEMORANDUM for the Deputy Chief of Staff

Subject: Intelligence Activities in Service Commands

AUTHORITY FOR INVESTIGATION

1. This study was conducted 16 July - 28 October 1943 by this office pursuant to a directive from the Office of the Deputy Chief of Staff (16 July 1943) to The Inspector General to investigate and make appropriate recommendations on the existing organization, scope of activities, and operating procedures of the directors of intelligence of Service Commands and their offices, including military personnel allocated by the Service Command for such duty, Counter Intelligence Corps police attached to the Service Commands by G-2, civilian employees allotted by the Service Commands, and civilian employees made available by allocation of funds by G-2; the relationships between Military Intelligence Division, War Department General Staff (Counter Intelligence Branch) and the offices of the directors of intelligence of the Service Commands. Additional oral instructions were given (11 August; 7 September 1943) to extend the investigation to include the investigative functions of the Provost Marshal General at Service Commands and the possible duplication and overlapping of these investigative functions with those made by the intelligence personnel allotted to the Service Commands; the C/S System; and the correlations of intelligence activities between the directors of intelligence of the Service Commands, those of the Army Air Force units and installations and Army Ground Forces, and the Military Intelligence Division, G-2 WDGS.

2. The installations visited are listed in Tab "A". They include all Service Commands, Defense Commands, Armies and several Air Force headquarters and installations.

ORGANIZATION AND EXPANSION OF THE COUNTER INTELLIGENCE CORPS

3. It was reported that prior to 1940 the Corps of Intelligence Police consisted of a small group (less than 40) of enlisted personnel, operating as secret police (in civilian clothes) under the G-2 WDGS chiefly in the Philippines and Panama. During 1940 it became evident that the existing personnel of MIS G-2

WDGS for the investigation of "espionage, counterespionage, and sabotage" within the military establishment as contemplated in the Memorandum of the President (26 June 1939) was inadequate. A subdivision of the MID G-2 WDGS was constituted for this purpose and authorized at T/O of approximately 1,000 enlisted men to be carried as War Department overhead and to be controlled and directed by G-2 WDGS. The plan of operation called for the procurement and training of this Corps by the then Corps Areas. The qualifications required that the personnel should have had investigative or legal education and experience. A certain number were attached to each Corps Area headquarters for investigations directed either by the G-2 WDGS or the G-2 of the Corps Area; the balance of this personnel was maintained under the control of the G-2 WDGS in Washington, D.C. Although the reorganization of the Army creating the AAF, AGF and ASF was authorized 9 March 1942 no change in status was made of the CIC personnel attached to the Service Commands. On 27 April 1942 a study was submitted by G-2 WDGS to the Chief of Staff recommending that 543 officers be commissioned or transferred into the CIC and that the enlisted personnel be increased to a total of 4,431. The stated basis of the recommendation was the need of additional personnel both for service within the United States and for eventual service in theaters of operation. This request was approved 13 May 1942. The strength of the Corps on 30 September 1943 was reported to be 480 officers and 4,121 enlisted men (Tab "B"), of which 234 officers and 1,486 enlisted men are reported with tactical units and either in staging areas or on overseas duty. It is contemplated that on or before 31 January 1944 a total of 399 officers and 3,380 enlisted men will be ordered to duty with tactical units or to duty overseas. This will leave for duty within the United States, on the basis of the present strength of the Corps, 81 officers and 741 enlisted men, the Corps being 63 officers and 310 enlisted men understrength.

COUNTERINTELLIGENCE GROUP (G-2 WDGS)

4. At the time of this investigation the control and direction of the Counter Intelligence Corps was exercised by the Chief of the Counterintelligence Group, an integral part of the Military Intelligence Division, WDGS. This group was composed of the following branches:

Investigation and Review Branch
Evaluation Branch
Counter Intelligence Corps Branch
(Headquarters located in Baltimore, Maryland)
Visa and Passport Control Branch
Security Branch
Censorship Branch
Special Assignments Branch

The activities of the first three branches are the only ones covered by the directive for this investigation. The personnel of the Investigation and Review Branch consisted of 29 officers (not CIC) and approximately 150 civilians. The personnel of the Evaluation Branch consisted of 14 officers (not CIC) and approximately 30 civilians. The personnel of the Counter Intelligence Corps Branch at Baltimore, Maryland (which included certain personnel at the "Counter Intelligence Corps Advanced Training School" at Chicago, Illinois) consisted of 64 officers (CIC), 59 enlisted men (CIC) and 31 civilians (these civilians are carried as War Department overhead by the Third Service Command).

The total number of personnel engaged in intelligence activities in Service Commands was reported as 348 officers, 2,598 enlisted men, and 770 civilians. Of this number, 174 officers, 2,547 enlisted men and 726 civilians were carried as War Department overhead. The remainder were charged to the bulk allotment of each Service Command. A breakdown of this personnel by Service Commands is shown in Tab "C."

PROCUREMENT AND TRAINING

5. The procurement and preliminary training of the CIC personnel was generally handled by the Service Commands. The selection of personnel was based mainly on previous civilian experience in investigative fields or on legal education. The training in the Service Command schools (Tab "D") has consisted to a large extent of methods of surveillance, detection and "undercover" operations in plain clothes in use by governmental agencies charged with law enforcement and apprehension of criminals. Emphasis was placed on report writing. Little or no military training of value in or with combat units was given these men. Uniforms were seldom, if ever, worn. Although linguistic ability was one of the several major requirements, instruction in foreign languages was completely subordinated to the investigative training. This method of procurement and training continued into the summer of 1943. The curricula of the "25th Enlisted Men's Class" 9 August to 4 September 1943 (Tab "E") and of the "Nineteenth Officers' Class" 16 August to 11 September 1943 (Tab "F") indicates that this type of training was carried out in the "Counter Intelligence Corps Advanced Training School" at Chicago, Illinois. The curriculum of 3 October 1943 (Tab "G") indicates the first definite change in the training policy, concentrating on subjects related to activities in the theaters of operation. This training is now further supplemented by the teaching of various foreign languages by the Berlitz Language Schools, authority for which has recently been obtained. Short periods of advance training in military intelligence activities in theaters of operation are carried on at Camp Ritchie, Fort Belvoir, Holabird and the staging area (CIC), Baltimore, Maryland. The curricula in use at these various schools (Tab "H") indicate an attempt to cover subjects concerning combat activities prescribed for

0802

CIC personnel. However, the time allotted by G-2 WDGS for instruction is too short (for example, two weeks for the regular eight-week intelligence course at Ritchie) to permit adequate coverage of these subjects.

SPECIALIZED PROCUREMENT AND TRAINING REQUIREMENTS

6. It was evident from this investigation that the qualifications, training, and physical characteristics of personnel required to perform the prescribed functions of CIC in the Zone of Interior, in the theaters and with the Air Forces differ to a marked degree. It would be practically impossible to recruit the Corps from men possessing all qualifications. For example, in addition to basic investigative training, the Air Forces require personnel with technical mechanical knowledge of engines and planes; and the combat forces in theaters require combat training, knowledge of military intelligence operations and languages. Within the last few months these requirements have been recognized in procuring and training of the personnel.

DEFINITIONS OF COUNTERINTELLIGENCE

7. The most generally known and accepted definition of counterintelligence is that given in FM 100-5 (22 May 1941) (paragraph 279, page 57), "The object of counterintelligence is to destroy the effectiveness of the enemy intelligence system." The counterintelligence measures available to a command are detailed in the same paragraph and the application of these measures is set forth in FM 30-25 (15 February 1940). Directives issued subsequent to the manuals assign certain responsibilities such as censorship, activities of newspaper correspondents to other agencies of the War Department, but the primary object of counterintelligence as understood by the Army in general remains the same.

TM 30-220, Corps Area Intelligence (8 January 1942) defines counter-intelligence as (paragraph 18, page 11) "Functions: The counterintelligence functions in the Corps area intelligence office include the safeguarding of military information, the collection of information concerning the domestic situation, enemy espionage activities and subversive tendencies, the apprehension of enemy agents and sympathizers operating within the military establishment. These functions will be carried out in accordance with provisions of AR 380-5, FM 30-25 and instructions issued by the War Department."

TM 30-215, Counter Intelligence Corps (22 September 1943) defines the responsibility of the Counter Intelligence Corps as those connected with the prevention or neutralization of activities of enemy agents within the territory occupied. This manual is written primarily for operations of the Counter Intelligence Corps in theaters but it states in paragraph 1d "Where applicable, its provisions apply equally to Counter Intelligence Corps activities in the Zone of Interior and in theaters of operation."

0803

RESPONSIBILITIES OF THE MID WDGS UNDER THE PRESIDENTIAL MEMORANDUM (26 JUNE 1939) AND DELIMITATION AGREEMENT

8. The Presidential Memorandum of 26 June 1939 reads as follows:

"It is my desire that the investigation of all espionage, counter-espionage and sabotage matters be controlled and handled by the FBI of the Department of Justice, the MID of the War Department, and the ONI of the Navy Department. The directors of these three agencies are to function as a committee to coordinate their activities."

"No investigation should be conducted by any investigative agencies of the government into matters involving, actually or potentially, any espionage, counterespionage or sabotage except by the three agencies mentioned above."

On 9 February 1942 an agreement of coordination of the FBI, MID, and ONI was entered into on the basis of "the President's Memorandum of 26 June 1939, as augmented by his directive of 6 September 1939, and the Delimitation Agreement of 5 June 1940, and the supplemental interpretation and agreements thereunder." Paragraph 3 of this agreement reads "MID will be responsible for: '1) Investigation and disposal of all cases in these categories (espionage, counter-espionage, subversion, and sabotage) in the military establishment including civilians employed on military reservations or under military control." Paragraphs 9-12 inclusive, under the heading of "Periods of predominant military interest, not involving martial law" authorizes a military commander of an "area" which has come into prominence as a potential theater of operation to take such steps in his discretion as he may believe necessary "to analyze the facilities existing and to explore the manner in which complete coverage will be obtained if martial law is declared."

SCOPE OF ACTIVITIES OF DIRECTORS OF INTELLIGENCE OF SERVICE COMMANDS

9. In addition to the procurement and training of CIC personnel as described in paragraph 5, supra, the directors of intelligence of service commands were generally performing the functions described in TM 30-220, Corps Area Intelligence (8 January 1942), supra, and were charged with the supervision of the activities of CIC personnel and the countersubversive system in military units within the service command area. They made current and weekly summary reports of incidents and of the general intelligence situation within the service command area to G-2 WDGS.

ACTIVITIES OF THE CIC PERSONNEL ATTACHED TO SERVICE COMMANDS

10. The prescribed duties of the CIC personnel attached to Service Commands (under the supervision of the directors of intelligence of Service Commands) concerned investigation of alleged subversive incidents and the loyalty of military personnel and civilian personnel paid from War Department funds. An elaborate manual for investigation and report writing was prepared by G-2 WDGS (CIRM-1, revised July 1942 and now in process of revision). The Service Command areas were subdivided into zones and districts in which CIC personnel were stationed. The zones and districts did not conform in boundaries either with the operating districts established by the FBI or the Directors of Internal Security. Contact was maintained with the local law enforcement agencies, the ONI and the FBI. In many Service Commands the telephones were not listed, the locations of offices secret, and the identity of resident agents concealed. This is in direct contrast to the FBI, the existence and purposes of which are widely publicized, their offices known, telephones listed and public support and cooperation encouraged.

Investigations of military personnel were carried on without the knowledge of such personnel and by agents in plain clothes who concealed their identities and purposes. The military personnel seldom learned either of the investigation or of any of the derogatory information contained in the reports of these investigations.

INVESTIGATIONS AND REPORTS OF CIC

11. The activities of CIC personnel included not only investigation of incidents of alleged subversion and of the loyalty of military personnel and civilians paid from War Department funds but also alleged violations of AR 380-5 (Safeguarding Military Information), AR 600-90 (Illegal wearing and sale of decorations and insignia) and impersonation of military personnel. These investigations, because of their volume and the limited number of investigative personnel, were, with the exception of the so-called 14-point CIR-1 reports, superficial, and unproductive of positive results except in rare instances. No information of a statistical nature was available to determine the percentage of investigations which developed positive (not potential) evidence of subversion. During a week's period, 3,952 cases were received in all Service Commands, 3,020 cases closed and 12,836 held pending. A detailed tabulation is attached hereto as Tab "I." For example, commanding officers were authorized to request an investigation of the loyalty, integrity and discretion of personnel having habitual access to confidential and secret information. The volume of these requests permitted merely a superficial investigation which rarely developed any positive information other than that contained in the personal questionnaires, service records and qualification cards. It is fair to assume that this authority to request an investigation has been widely abused, the result used as an "alibi sheet" and the purpose defeated by the superficiality of the investigations.

The loyalty investigations of candidates for Officer Candidate Schools in the past were of the same superficial nature and the volume developed such a backlog that the majority of investigations were not completed until the candidate had completed more than half his term at school. Many of these were expanded to the 14-point investigation and CIR-1 reports.

In contrast to the loyalty investigations described supra the so-called 14-point investigations and CIR-1 reports were detailed and exhaustive. Although the number of these investigations was small, in comparison to the other type, it was estimated by the majority of the directors of intelligence that this type of investigation required from 60 to 65 percent of the time of the CIC investigators. These investigations concerned two general classifications of personnel; first, applicants for transfer to the CIC and second, military and civilian personnel (paid from War Department funds) suspected or alleged to be subversive. In the first classification the investigation required a complete background history of the applicant to determine his loyalty, integrity and discretion as well as his qualification for transfer to the CIC. In such cases the applicant tacitly consented to a complete investigation of his life. In the second classification (suspected or alleged subversion) the person involved was subjected to the same detailed and exhaustive investigation of his life, but without his consent or knowledge. The manual for investigation and report writing (including specimen reports and memoranda) covering both of these classifications required an investigation in and a recording of information under 14 different headings. These reports were forwarded to the Investigation and Review Branch of the Counterintelligence Group WDGS which rigidly enforced the requirement that complete information be reported under each of these 14 headings. This was required even though information was obtained in the early stages of the investigation in the case of applicants for transfer to the CIC from which it could be definitely determined that the person investigated was not qualified for transfer to the CIC; and in the case of alleged subversion the investigation into the life history of this personnel was continued at great length even though the falsity of the allegation of subversion had already been established. These investigations were made by agents (corporals and sergeants) under the supervision of special agents (master sergeants, technical sergeants, and staff sergeants). The reports were usually written by the special agents who were authorized and required to make "an evaluation of the subject's (person investigated) efficiency" under the sub-topic "personal characteristics;" to record all adverse information (this included, in actual practice, adverse information based solely on hearsay, rumor and gossip); to express his opinions of the person investigated; and under the heading "Recommendations" to recommend what action should be taken with respect to the subject (person investigated) and what disposition should be made of the case. In the course of this type of investigation it was found frequently that the person investigated had lived during some period in his life in places outside the service command area in which the investigation originated. The agent was required to list undeveloped leads (sources of information) outside the service command area. The manual places the

0606

responsibility on the Assistant Chief of Staff, G-2 (now Director of Intelligence) of the Corps Area (Service Command) (the Office of Origin) for the investigation of all undeveloped leads in other Corps Areas (Service Commands). This geographical expansion of the investigation without evaluation of the importance and pertinency of the undeveloped leads caused unnecessary delay in the closing of the investigation. The manual provided that the Assistant Chief of Staff, G-2 (Director of Intelligence) of the various Corps Areas (Service Commands) establish their own internal system for approval of these reports. In some Service Commands a system of supervision of these investigations, of the evaluation of undeveloped leads and of the pertinency and accuracy of information contained in the reports and memoranda had been established. In other Service Commands there appeared to be little supervision by commissioned officers over the conduct of the investigations by the agents and Special Agents, in the requests to other Service Commands for investigations of undeveloped leads and in the inclusion of adverse information based on hearsay, rumor and gossip. The distribution of these reports (complete to include copies of all memoranda) was as follows: 3 copies of each report originating within a Service Command to the MID, War Department, Washington, D.C. (one of which was given to the FBI); 2 copies to the office of origin; 1 copy for the files of the director of intelligence of the Service Command in which a supplemental investigation had been made; 1 copy for each intelligence office in a post, camp, or military establishment at which a lead was developed; 2 copies for the office requesting the investigation. The Investigation and Review Branch of the CIG MID G-2 WDGS (29 officers and approximately 150 civilians) processed these reports and, in such cases as the reports did not include complete information under each of the 14 headings, returned the report for a further investigation without regard to the importance or pertinency of the item. An examination of the reports indicated that there was no attempt to delete adverse or derogatory information based on hearsay, rumor, and gossip.

The CI Group MID G-2 WDGS were authorized to take action in two classes of cases; investigations of candidates for Officer Candidate Schools and transfer of subversives. It was reported that the CIC had prevented the commissioning of only some 50 out of the total number attending Officer Candidate Schools and had recommended the transfer of a comparatively small number of subversives. The functions of this Investigation and Review Branch CIG MID G-2 WDGS, as reported, were to coordinate and guide the investigative activities and the disposition of subversive personnel to prevent unnecessary investigations; to act as an office of origin for investigations requested by overseas components; to correlate and coordinate sabotage investigations among the various Service Commands; to transfer dangerous subversives to special organizations; to direct the transfer to the Pacific or Alaskan Theater of Operations personnel who have expressed a reasonably understandable reluctance to fight either Germany or Italy but are otherwise loyal to the United States; to initiate all adverse counter-intelligence action concerning officers; to recommend the removal of individuals from Officer Candidate Schools.

0807

The examination of a great number of CIR-1 reports of investigations of commissioned officers alleged to be or suspected of subversion showed a common pattern of a complete life investigation in spite of the fact that the alleged subversive act or statement was proved to be untrue in the early stages of the investigation; that these reports had attached to them in the form of typewritten memoranda alleged interviews containing unverified information derogatory to the character of the officer based on hearsay, rumor and gossip; that these reports quoted such information as factual; that these reports contained "an evaluation of the efficiency of the subject" (officer) made by an enlisted man in violation of the regulations prescribing the method and persons authorized to make efficiency reports on officers; that recommendations were made by agents (enlisted men) adverse to the standing of the officer in the military establishment; that these reports were presumably reviewed by officers of the various service commands and of the Investigation and Review Branch CIG MID G-2 WDGS and allowed to become a part of the permanent record of the officer, distributed as stated supra; that copies of these reports were sent to his commanding officer and forwarded to his new station or unit upon transfer; that the officer was not informed of the imputations and allegations against his character, integrity, discretion and conduct and was given no opportunity to deny and disprove the statements recorded. This practice is directly contrary to the inherent right of a commissioned officer of the U.S. Army to be advised of imputations and allegations as to his character, integrity, discretion, conduct and efficiency affecting his standing in the Army. It is a violation of the spirit of the 97th Article of War, the War Department policy as expressed in paragraph 7, AR 20-30, and the fundamental principles of American Justice. This subject has been discussed in its application to commissioned officers as many of such cases have been reinvestigated by this office. All military personnel are entitled to the same rights.

ORGANIZATION AND ACTIVITIES OF THE PMG SERGEANT INVESTIGATORS

12. Subsequent to the organization of the Office of the Provost Marshal General certain activities previously handled by G-2 WDGS were transferred to the jurisdiction of the Office of the Provost Marshal General. These activities included the responsibility for security of facilities operating classified War Department contracts, investigations of civilians holding key positions in such plants, certain classes of aliens called for induction, civilians applying for employment in War Department agencies and applicants for commissions from civilian life. A small number of Counter Intelligence Corps personnel and other enlisted personnel (with legal experience) was transferred to the PMGO for the performance of these investigative activities. Allotments were made to the different service commands and the investigative operations were carried on under the direction of the directors of Internal Security. These investigators (sergeants), now totaling approximately 900, operate in civilian clothes and are carried as PMGO personnel, and not part of the bulk allotment of the service commands. The details of this personnel as

0808

attached to the different service commands are tabulated in Tab "C". There are no officers nor civilians included in this group other than those charged to service command bulk allotments.

Authority was given to managers of factories holding classified War Department contracts and various War Department agencies employing civilians to request an investigation of the loyalty of certain classes of employees either before or as a result of a change in their status as employees. This authority was apparently interpreted by the managers of these plants and by the various War Department agencies as a requirement rather than as a safeguard in special cases involving access to confidential or secret material. As a result of this interpretation the volume of cases increased to a point far beyond the capacity of the personnel of the PMGO. In order to cope with this work load, loyalty investigations were divided into two classes: routine and special. The routine investigations consisted of a verification of certain of the statements made by the person on his Personal Security Questionnaire. This type of investigation was turned over to selected commercial investigative companies at the contract price of $3.00 per investigation. Special investigations, all of which were performed by the sergeant investigators of the PMGO, consisted of a thorough and complete check of the person's history and background. These special investigations were made only when derogatory information was developed in a routine investigation or when special circumstances required a full and complete investigation. It was noted that in the month of July the routine investigations completed by the commercial companies aggregated 100,000; special investigations, 25,000. An examination of the information developed as a result of these routine investigations showed that only a small percentage disclosed information requiring a special investigation. For example, in one service command during the month of August one potential subversive case was developed from 7,900 routine investigations by commercial companies. It is to be noted in this connection that the field of activity of the sergeant investigators of the PMGO does not extend into investigations of subversive activities. In such cases, when the investigation developed a suspicion of subversion, it was required that the investigation be turned over to the Director of Intelligence. Under the Delimitation Agreement supra the CIC investigates cases of potential subversion of military personnel and civilian personnel paid from War Department funds and turns over to the FBI the cases involving civilians not within this classification. From an examination of activities of both the PMG sergeant investigators and CIC personnel it was indicated that there was duplication of effort in this particular field.

A recent memorandum (4 August 1943) Nr W380-15-43, subject: "Screening of internal security questionnaire" is directed to a reduction of requests for loyalty investigations. At the time of this study the results from this memorandum were not reflected in any figures available. The assignment of the investigative group to the service command as a part of the bulk allotment and direct command

responsibility and authority to the commanding general (who has knowledge of local conditions) can result in an elimination of unnecessary investigative activities and duplication of effort.

THE COUNTERSUBVERSIVE SYSTEM

13. Under date of 27 March 1942, TM 30-205 (Countersubversive Instructions) was approved as a manual of instructions for the establishment and operation of the CS system within the military service. Its function is stated in Section I, paragraph 4, as follows: "Function of CS Service.--a. The CS Service is informative and preventive, not punitive. It collects information upon which competent authorities may act." The information includes espionage, sabotage, propaganda against and disaffection toward the Government of the United States.

This system represents an elaborate and fine network of secret agents within the military establishment composed of both military and civilian personnel. In military organizations the average is one for every 30 men in a group or unit. The personnel are chosen from all types and necessarily include these with little education or training. It can be fairly described as an undercover organization the purpose of which is to report any statements or activities which, in the opinion of the operative, indicate possible disaffection or disloyalty toward the Government of the United States. The extent to which this system has been integrated into the Army is shown in the report for the month of July 1943 of the director of intelligence of a service command. In this command there were over 53,000 operatives. These operatives submitted over 150,000 reports for that month. These reports had to be read, evaluated, and processed. The activities for this month were in proportion to the number of military personnel within that service command for the previous months of 1943. It was reported that out of approximately 1,000,000 reports a total of 600 suspicious persons had been named in the reports for the first seven months of 1943. No record, however, was available to determine how many times the same person had been reported and included within this total number of 600. There were no statistics either compiled or available in this service command or any other service command to indicate definitely that positive results had been obtained by this activity. Many reports were read, none of them found to contain any information of value, and many were found to contain information relative to actions of individuals which might require disciplinary action unconnected with disloyalty or disaffection.

TM 30-205 emphasizes the fact that the CS System is valueless unless its existence is kept secret. It states that "It is imperative that commanding officers see to it that the operation of the Countersubversive System does not disrupt the morale of their troops or employees." It was found, however, that the existence of the CS System has become a matter of public knowledge, a subject of criticism by newspaper columnists. It has been adversely "written up" in at

0810

least one newspaper with a wide circulation among the colored people. All public comments have been adverse and severely critical of this system. It was the opinion of officers interviewed that the knowledge of the existence of the system had placed potentially subversive personnel on notice and that it had created a feeling on the part of some of the military personnel that they were relieved of responsibility to report un-American activities as this responsibility had been assigned to definite personnel.

It was the opinion of many officers interviewed that the responsibility for security in a unit should be that of command and that the personnel should be regularly indoctrinated with their individual responsibility, from the viewpoint of their own safety and the safety of their organization, that they should report any evidence of un-American activity coming to their attention either within the military establishment or elsewhere.

SPECIAL ACTIVITIES OF G-2, WDGS

14. This report has concerned itself with intelligence activities which can be appropriately delegated to subordinate commands. It is recognized, however, that matters of a highly secret nature arise which must be handled directly by the highest command authority. These activities require liaison, coordination, and correlation with the Chiefs of the ONI, FBI, OSS, State Department, and other Governmental agencies. In order that the highest degree of secrecy may be maintained, it is necessary that the responsibility for and the direction of these activities be centralized within the smallest possible group. The proper agency for this responsibility and activity is G-2, WDGS. There should be made available when required personnel of the trained investigative group attached to the various service commands. This responsibility and authority to conduct activities should be limited to matters which are the subject of special directives from competent authority and should not invade the field of intelligence which are the responsibility of subordinate commands.

DISCUSSION

15. The Presidential Memorandum of 1939 and the Delimitation Agreement between the FBI, MID and ONI places the direct responsibility on MID of G-2 WDGS to control, handle, and conduct investigations into matters involving, actually or potentially, espionage, counterespionage, and sabotage. G-2 WDGS organized the Counter Intelligence Corps as the operating agency. This was accomplished during the period that the Army was organized and commanded under the Corps Area System. The growth in personnel of the CIC was gradual due to the requirements as to qualifications of the personnel. Small detachments of CIC personnel were attached to the various Corps Area and Defense Command Headquarters. It was planned that these groups would operate as units under the

command of a CIC officer under the direction of the then G-2s of the Corps Areas and Defense Commands within their prescribed fields of activities. In the development of this activity direct intelligence channels between G-2 WDGS and the G-2s of the Corps Areas and Defense Commands were gradually utilized. An intimate control was exercised by G-2 WDGS over all these G-2s during this development period so that it became the accepted practice that the G-2s and subsequently the directors of intelligence of the Service Commands were responsible and accountable directly to G-2 of the WDGS in these operations. The directors of intelligence of the Service Commands were placed in an anomolous position. They were members of the staff of the commanding general of the Service Command and owed him complete loyalty and allegiance and acted in their field of activity as his representative. However, they received directives for the use of the CIC detachment directly from G-2 WDGS. This resulted in misunderstanding as to the responsibility for intelligence activities within the Service Command. This situation has been a contributing cause to the deficiencies found during this study; namely, lack of low level supervision, a misconception and misinterpretation of manuals and directives, a waste and misapplication of manpower and effort, delays in the completion of investigations, and a multiplication of paper work. The Army has been built on certain fundamental premises; namely, command responsibility for activities from the lowest level upwards, strict adherence to command channels, and immediate corrective action of deficiencies at the lowest command level. The study of the operation of intelligence activities in the field clearly indicates that the failure to adhere to these fundamental principles has been a contributing cause to the deficiencies described supra. The arbitrary division of investigative activities between the CIC and the PMG resulted in a duplication of personnel, overhead and effort. The administration of the Army's responsibilities in the Zone of Interior can be accomplished by placing the responsibility on the commanding generals of the Service Commands for the security of their geographical areas. A consolidation of the investigative functions of the CIC and the PMG within the Zone of Interior should be made and a group of investigators should be organized and trained as a section of each Service Command unit for the puspose of making such investigations as may be required by competent authority.

16. The activities of the Counter Intelligence Corps and the requirements as to the qualifications of the personnel for operations in the Zone of Interior and the theaters differ to a marked degree as described in paragraph 6 supra. It is a logical conclusion that the Counter Intelligence Corps as such should be procured, trained and organized for service in theaters and with tactical units. Consideration should be given to the advisability of procuring personnel for service with the AAF and the AGF from those recommended by each of these commands.

17. It is evident from this study of the activities of the PMG and CIC that there were many unnecessary and unproductive investigations made and that many of the investigations made were carried into fields involving matters not pertinent

to the issue. It is impracticable to make a loyalty check of all military personnel, civilian personnel paid from War Department funds and civilian personnel employed in facilities holding classified government contracts. The existing directives relating to loyalty investigations have permitted such a volume of requests to be made that the great majority of investigations have been superficial. New directives should be published emphasizing the fact that the selection of personnel for confidential positions is a command responsibility and that the request for a loyalty investigation does not evade that responsibility.

18. The manuals for investigations and report writing should be rewritten to restrict the investigation to the issue involved, to require the closing of the investigation upon the determination of the truth or falsity of the allegations, to limit the report to pertinent facts and to verify information susceptible of proof. Competent officers should be selected to review these reports, draw the conclusions and make the recommendations. Only one copy of the report and memoranda of information should be made. This should be kept at headquarters of the Service Command in which the investigation originated. Pertinent information required by other commands and agencies should be forwarded in summary form. Requests for supplemental investigations should be limited to vital and pertinent information. The reports of investigations should include a definite determination of the issue involved. The present CIR-1 report with information required under each of the 14 headings is cumbersome and unnecessary. The investigation and report should be limited to the issue involved.

19. Paragraph 11 of this report deals with CIR-1 investigations and reports concerning commissioned officers. These investigations are in violation of the spirit of the 97th Article of War and the War Department policy as expressed in paragraph 7, AR 20-30. All investigations of commissioned officers should be made in accordance with the established War Department policy. A problem exists, however, as a result of these investigations and the reports involving commissioned officers, copies of which have been widely distributed. Grave injustice has been committed against these officers and this injustice will exist so long as these reports are permitted to remain as a permanent part of the records of such officers. All copies of these reports should be recalled by the War Department, reviewed, the pertinent factual information extracted, and the original and the copies of these reports and attached memoranda destroyed.

20. Countersubversive System. The value of the Countersubversive System has been weakened by the publicity given to it. The security of a command is the responsibility of the commanding officer. The Countersubversive System is not designed to discover trained enemy agents but to maintain a channel of information for reports of disloyalty, disaffection and sabotage. It is believed that effective results generally can be obtained by a regular indoctrination of the personnel in their individual responsibilities to report any evidence of un-American activity

either within the military establishment or elsewhere. Authority should be given commanding officers, however, to provide a special channel of all information for reports of disloyalty, disaffection, and sabotage, when deemed necessary. TM 30-205 (Confidential) (Countersubversive Instructions) should be rescinded and a directive issued in accordance with the suggestions supra.

21. The directors of intelligence of Service Commands are required to make current reports of incidents and weekly summary reports of the general intelligence situation within the Service Command. An examination of these reports indicated that, in general, the information was based on news items. The outline for reports required information under the following headings: economical, political, psychological, espionage and subversive activities, and geographical and meteorological data. Many of these reports were long and covered over 50 pages of single spaced typing. A total of 14 officers and over 30 civilians were actively engaged in a summarizing of these reports for a monthly report to the Chief of Staff. The information contained in the monthly report could not be classed as current intelligence information. No justification could be found for a continuance of the weekly summary reports.

RECOMMENDATIONS

22. It is recommended:

a. (1) That the investigative functions of the Provost Marshal General and the Counter Intelligence Corps be consolidated within the Zone of Interior and that a group of investigators be organized as a section of each Service Command unit for the purpose of making such investigations as may be required by competent authority.

(2) That all procurement, assignment, training and operations of this investigative group be decentralized to appropriate commands.

(3) That administrative or disciplinary action based on these investigations be delegated to the appropriate subordinate commander.

(4) That the manual of report writing be revised to provide that the completed report contain only verified information pertinent to the issue, appropriate conclusions and recommendations.

(5) That effective supervision be established on all levels.

b. That all reports and attached memoranda of investigations made by the Counter Intelligence Corps be reviewed, pertinent verified information extracted and the originals and copies recalled by the War Department and destroyed.

c. That the Counter Intelligence Corps be specially procured and trained for utilization in theaters of operation; that they be so utilized except for such activities within the Zone of Interior as shall be specifically directed by appropriate authority; that the functions and activities of the Counter Intelligence Corps within the Zone of Interior except as stated supra be performed by the investigative agency referred to in paragraph 22a(1).

d. That TM 30-205 (Confidential) (Countersubversive Instructions) be rescinded, and a directive issued giving authority to a commanding officer, in his discretion, to organize and operate an adequate channel of information for reports of disloyalty, disaffection, and sabotage.

Magazine Article: "G-Men in Khaki"

(Attached to Copy 1 Only)

CONFIDENTIAL

G-MEN IN KHAKI

An article published in "The American" magazine, January, 1945 issue.

Not long ago a general court martial tried an American soldier accused of violating the 81st and 96th Articles of War, by aiding the enemy and fraternizing with prisoners.

Four hours later, speaking in the grim language of war, it pronounced its terrible sentence: "...to be discharged dishonorably from the Army of the United States, to forfeit all pay and allowances, and to be hanged by the neck until dead."

The evidence against him was unanswerable; it had been gathered by the expert Counter Intelligence Corps, the U.S. Army's amazing and little-known G-men in khaki.

Ironically, a compass had led him to a traitor's noose.

The condemned man (let us call him "Smith") was a patient in an army hospital, convalescing from a minor illness. Next to the hospital, in an area set off by barbed wire, were many German prisoners of war. It was easy for walking patients like Smith to talk to them over the barrier. This he did frequently, and made friends with some.

He was incredibly stupid or incredibly careless: he confided in another American patient. He began praising Germany, belittling America, and once said that if the chance ever came, he would desert to the Germans, though he was not of German ancestry. One day he revealed he was planning to help ten prisoners escape; he had already found them American clothing, food, medicine.

"They're ready to go as soon as I can get them a compass," he said.

The second American shrewdly pretended to be sympathetic, but secretly reported to army authorities, who assigned the Counter Intelligence Corps to the case. To develop sound legal evidence, CIC laid a clever trap:

An agent began working in the hospital as a wardboy. One day (making sure Smith was listening) he mentioned casually that he had a nice war souvenir: a German compass. Smith's eyes lighted up and he bit eagerly at the bait. He said he'd always wanted a compass like that and wondered if he could buy it. After proper reluctance and bargaining, the "wardboy" sold it to him. Of course, it was secretly marked so that later it could be positively identified.

The end came quickly. That very night Smith sauntered to the prisoners' area, began talking to some Germans who drifted up to meet him. When he thought no one was looking, he passed over the compass. A moment later he and the prisoners with him were under arrest. The fatal compass was found on one of the Germans, who quickly confessed the whole plot. Smith was doomed...

Few people, even in the Army itself, knew much about the Counter Intelligence Corps, for obviously it must operate behind a smoke screen of secrecy. CIC has two major functions: First, to catch enemy spies, saboteurs, and subversive agents. Second, to prevent out military plans and secrets leaking out to the enemy. Operating under G2 (Intelligence), CIC is the operational field force that does most of our counterintelligence.

The Corps is a puzzling mixture of G-men and plain G.I. Although its agents scoff at any cloak-and-dagger mystery about themselves, they have, in fact, done detective work that rivals any Oppenheim novel. They have caught literally hundreds of enemy agents. By recovering lost Allied secret papers and by discovering equally secret enemy ones, they have unquestionably saved thousands of American lives.

But they are also soldiers, and often trigger-pulling ones. They have ridden the very first waves of every African or European invasion, by landing craft, glider, and parachute. They have done front-line intelligence work that has won them many medals and more compliments.

Not the least of the CIC romance lies in its own agents, who remain as nearly anonymous as possible, never appear in print, and sometimes fool even their friends about their real jobs. Once, in Algiers, I knew a lieutenant fairly well for six months without realizing he was a CIC agent. Even in official reports they are sometimes referred to merely as "Agent XXX." They may wear any kind of insignia, from cavalry to air corps. Within CIC itself, rank means little; the real difference is between "special agent" and "agent," the first ranking higher.

CIC is an outgrowth of the last war's CIP (Corps of Intelligence Police), organized in 1917. It saw active service overseas, but after the Armistice CIP was--like the rest of the Army--drastically whittled down, until in 1940 it had less than 20 men in it. At the beginning of this war, CIP was abolished, and a new, streamlined unit was formed in its place. This was CIC, which now numbers thousands of agents.

The Army was combed to find men of exactly the right background. Hundreds of thousands of names were examined; only a few thousand were chosen (the exact number is still secret). Perhaps no other army unit has men of such consistently high caliber. Mostly they were ex-diplomats, newspapermen, accountants,

0818

lawyers, private detectives, FBI agents, foreign representatives for American firms, and some college professors. The Army favored men who had traveled extensively abroad and could speak at least one foreign language well. Their loyalty and integrity were, of course, triple-checked.

Such drastic selection produced men of astonishing talent, experience, and education. Almost all hold college degrees, and at one time, in the London office alone, there were 8 PH.D.'s. The composite experiences of one 15-man group were typically startling: Among them, they had raced cars in Italy, played hockey for Harvard, newspapered in Paris, investigated credit ratings in New Jersey, taught English in France, fought legal cases for the Government, studied science in Germany, learned naval aviation, taken scientific photographs in Alaska, investigated the Bund, taught political science, prospected for gold.

No less remarkable was their Army training, partly done in a certain Chicago hotel taken over especially for that purpose. Their teachers were America's best --formerly secret service agents, FBI aces, narcotics investigators, military intelligence experts. They learned all known detective arts, and also such things as jujitsu, enemy spy methods, the laws of arrest and trial. They learned the almost magical powers of "interrogation"--how to trap a suspect by cunning questions. They became cract pistol shots. They also got rigorous, toughening field training.

Often, wearing civilian clothes, they had to endure the sneers of people who wondered--and sometimes out loud: "Why aren't they in uniform?"

Sent overseas, they learned some more, depending on where they were. In Britain and on the Mediterranean they sometimes spent three hours a day on languages alone. They had to learn the intricacies of government, politics, coinage, weights and measures, laws, police systems, etc., of many countries-- especially Germany, Italy, France.

This almost frightening thoroughness has turned out agents superbly efficient and versatile. They have to be both. Today a CIC agent may find himself posing as anything from a deserter to a diplomat, from a clerk to a colonel. One day he may lounge in a smart London bar; the following week he may be assaulting an enemy invasion beach, utterly G.I. He may be interviewing a beggar or a general, a duchess or a prostitute; he may be wearing a dinner jacket or torn trousers.

The new CIC's first real combat test was the North African landings; it passed with flying colors and a fat fistful of decorations. Long before the invasion, every agent knew exactly what building to dash for and exactly what he would probably find there.

0819

At Casablanca one agent (who won a Silver Star for it) was so intent on racing from the beach to the Axis armistice commission building that he outstripped our own advance! For 36 hours he remained alone in the building, under heavy American shellfire, guarding valuable documents with drawn pistol.

Such swift work gave the enemy no time to destroy highly secret papers, and two especially fat plums fell into CIC's hands. These enabled the Allies to round up hordes of pro-Axis Frenchmen and Arabs with a speed that left them gasping.

Another agent won a Silver Star by sneaking 40 miles behind enemy lines to capture a German agent who controlled Arab chieftains; he was the nephew of Field Marshal von Brauchitsch.

Within 10 months, CIC ran up an astonishing record: It captured no less than 100 enemy agents in North Africa. All were turned over to the French, tried in French courts, and many were shot.

One of CIC's biggest headaches--especially in France--was the problem of civilian refugees. Homeless and hungry, they wandered in disorganized hordes in and about battle areas, usually heading for their ruined villages and Allied food. They had already suffered so terribly that it seemed heartless to bother them further.

Yet grim experience had shown they must all be carefully examined. As CIC agents explained to them so many weary thousands of times, "We know 99 out of 100 of you are all right. But we also know one of you might be a German agent. So, to catch that one, we must check all of you." This is a long, tiring task, involving endless questions, and it has created some resentment among French people, who continually demand, "Why do you treat us as if we were les boches?"

Sicily proved how necessary this sifting is. There, in one batch of 900 refugees, CIC discovered 16 spies, all Italians who had been specially trained by the Germans. They had good stories, but one of them aroused suspicion by a wrong answer to a minor question. Then the full barrage of relentless cross-examination was turned on him and he broke down. He squealed on the others and revealed the hiding place of three radio transmitters and some $30,000 in Allied currency. In all, CIC rounded up over 100 German spies in Sicily.

In Normandy, agents found two young Frenchmen from quite a different part of France, and with about $400 on them. These two things, not of course damning in themselves, were enough to call for stricter questioning. The answers became more rattled and vague. Finally one confessed they were both German agents. Hidden on their clothing were sketches of American gun positions, and the roster of an American engineering unit. The French sentenced both to life imprisonment.

One day a CIC agent, looking through binoculars from a French hilltop, actually watched six German soldiers change into civilian clothes. After that, the check on refugees became even tighter.

Aside from spies and German soldiers, CIC also watched for what one officer aptly called "political booby-traps." The Germans, old hands at promoting Fifth Columns and having occupied France for four years, unquestionably left behind some secretly pro-Axis Frenchmen to cause us trouble. This they can do by encouraging friction, spreading false rumors, and working against us politically. (Once in Italy, CIC arrested 17 men who were plotting to set up a new Fascist regime in a town far from our front. The leader was sentenced to death.)

By quizzing civilians and prowling about the front, CIC agents often stumbled across precious nuggets of information valuable to military commanders on the spot. They are trained to recognize such nuggets and pass them on swiftly to the proper officers. Occasionally they have thus changed the course of battles.

It may now be told that the swift fall of Cherbourg was helped by two CIC agents who jumped into Normandy with paratroops. The Ninth Infantry Division, which captured the city, had its job made infinitely easier because it possessed two priceless documents, found by the CIC agents in an abandoned German command post. The first was a detailed plan of all the Cherbourg fortifications; the second was a "mine overlay," showing exactly where every German mine was placed.

These "overlays," of which the public has heard little, were especially valuable finds, and CIC was always on the lookout for them. Whenever the Germans (or we, for that matter) lay mines, the locations are marked on a transparent sheet of paper or plastic. By itself, this sheet means nothing, but when placed over the proper map, it reveals everything. Obviously, a commander who has an enemy overlay can plan his attack so as to save hundreds of lives.

I talked to three CIC agents, a sergeant and two corporals, who went to France with an airborne division. In peacetime, the sergeant had painted covers for detective magazines. But he had also been a national champion rifle and pistol shot, had lived in France and Poland eight years, and spoke the languages of both countries well. He was supposed to go with paratroopers, but broke his leg in two places during a practice jump and barely left the hospital in time for D-Day in a glider. It crashed, killing two other occupants, but the sergeant escaped injury and went right to work.

"Once," he told me, "we were questioning French civilians and came across one old boy who'd just walked through no-man's land. He said he'd seen a column of Germans moving up to the front, almost a division strong. We told G2

(Intelligence) about it right away. They checked up, found the peasant was right, called for the air force, and bombed hell out of the column. G2 sent a major over to thank us for that little item."

One of the corporals, formerly a Richmond newspaperman, recalled how they'd found some French civilians who, only a few hours before, had watched Germans putting in new gun sites and minefields. "We passed that along to G2, and our artillery neutralized them in an hour." he said.

The other corporal, who had been a private detective in Peoria, described how they'd searched an abandoned German officers' clubhouse, finding documents that showed strengths of various outfits...

Another of CIC's major jobs is "security"--guarding our military secrets. Before one invasion (not Normandy), the Corps quietly made its own tests to see just how secure the security was. Two agents, posing as American civilians, began visiting pubs, listening to U.S. soldiers talk, trying to get information.

They visited various Army headquarters, asking to speak to a mythical "Colonel Henderson," explaining they were from his home town. This thin excuse, plus their authentic American accents, got them by everywhere. Everybody was most helpful--and shockingly careless. One major left them alone in his office while he went off to see if he could locate "Colonel Henderson" for them. While he was gone, one agent quickly photographed secret papers and maps lying on his desk, using a tiny camera concealed in his hand. A real spy could have done the same.

This kind of thing went on for days. After deluding colonels and majors galore, the two agents were finally caught by a staff sergeant who got suspicious of their conversation in a pub. Arrested, it took them several hours to prove their identity. The sergeant won a warm official commendation. As for the rest, sizzling letters came down through channels, and security was drastically tightened up.

The greatest secret, of course, was the when and where of D-Day in Normandy. As the tension mounted, Britain became increasingly spy-conscious, and CIC had to handle hundreds of reports of "suspicious activities," most of which proved false alarms.

Late one night, an American officer blundered by mistake into the hotel room next to his own. He was startled to find quantities of German literature in the closet and quickly reported that a "spy" was obviously there. Actually, it was a perfectly respectable Swiss diplomat, quite entitled to read German.

Only a few days before D-Day, CIC received a frantic call from a secret marshaling area. Someone had found a mysterious capsule containing tiny rolls of paper which bore strange, unreadable inscriptions.

"It's obviously a code," a worried colonel explained. The capsule turned out to be a mazuza, a religious object which devout Jews wear about their necks, as Catholics wear a crucifix. The "code" was merely portions of the Five Books of Moses, written in Hebrew. An embarrassed Jewish soldier reclaimed it.

One agent told me, "We must have got hundreds of tips about 'flashing lights' and 'hidden radio transmitters.' We checked them all, but not a one amounted to anything. Once the 'transmitter' was a little kid blowing on a mouth organ."

There were other reports, too. A high-ranking officer was dating a lovely Viennese girl of questionable politics. A night-club hostess was asking too many questions about air force targets. A certain "pub" was reported to be the starting point for an "underground railway" to Eire, for spies and AWOL soldiers. An unknown civilian had taken a photograph of a secret headquarters. A prostitute seemed to know where every airdrome in Britain was. A German refugee kept pigeons in his back yard and listened to Nazi broadcasts. Perhaps the birds were carrier pigeons.

In such cases, which involved people other than American military personnel, CIC worked with British authorities, who of course have jurisdiction over all civilians in the British Isles. The vast majority of cases were like this, and the hush-hush Anglo-American cooperation thus developed was surprisingly harmonious. Information was pooled, and often a Briton and an American would work together as a team. The Americans have the utmost respect for such British agencies as Scotland Yard and Field Security, the British counterpart of CIC.

"There aren't many things in the world that live up to their reputation," one CIC officer told me, "but British Intelligence is one of them. You can believe whatever the novelists tell you about it." The British have equally kind things to say about CIC, being frankly amazed that an organization only three years old can do such excellent work.

In the comparatively few cases which concern purely American military personnel, CIC is of course supreme. One disgruntled corporal, embittered because he thought he hadn't been promoted fast enough, decided to revenge himself by selling information to the enemy. Being in a certain secret department, he had something to sell, too.

"We got on his trail immediately," an agent on the case told me, " and instead of arresting him right away, we followed him for weeks, hoping he'd

lead us somewhere. But he couldn't find anybody to buy his information! Finally we saw neither he nor we were getting anywhere, and we picked him up."

There were a number of serious breaches of security by informed people who talked too much. More than one officer was reprimanded, demoted, and sent home for carelessly revealing information worth millions of dollars to the Germans. CIC managed to neutralize all such leaks.

There were other breath-taking slip-ups, although CIC retrieved all of them. One officer left a brief case of the most secret plans in a hotel cloakroom. Once a bundle of maps, showing the invasion beaches, fell off the rear of a speeding truck. (In North Africa, a CIC agent hunting down lost documents found an Arab street vendor innocently using them to wrap pecans.) A civilian electrician, fixing some wiring, accidentally happened to see a full map of the invasion scheme.

Yet the great secret was kept. Although all the world knew the blow was coming, although thousands in Britain knew exactly when and where, the Nazis were kept in the dark.

It is now definitely established that they were not certain until an excited German lieutenant, commanding some guns on a rocky islet just off the Norman coast, actually saw the invasion fleet looming up out of the morning mists of June 6. For this triumph, CIC can claim a good share of the credit.

Besides these major tasks, CIC has many side lines. It does a fairly thriving business rounding up phonies of one kind or another. Like the fake American sailor in London, blazing with ribbons, who was spotted because he creased his trousers in the front, instead of on the side.

Occasionally the Corps dabbles in censorship, usually only when regular censors find something suspicious. They've discovered messages in such crude invisible inks as lemon juice, aspirin, and a mixture of brandy and milk. They've found innocent-looking newspaper clippings with certain letters underlined by invisible ink or pinpricks.

CIC even takes a hand in civil affairs in front-line towns just captured. Combat troops are too busy fighting; civil affairs officers haven't yet arrived. Once CIC men were, by accident, the first American troops into a city of 40,000--Agrigento in Sicily. For five hours no other Allied soldiers were there, and the population was bent on loot and riot. The five agents managed to keep order, working with town officials and broadcasting assurances that everything was going to be all right...

Despite its striking success, CIC is by no means perfect. Like any other three-year-old, it has growing pains. Its own agents are the first to admit that it has not yet come up to the level of the much more experienced British counter-intelligence. For one thing, it still hasn't enough linguists. An agent may be perfect in all other respects, but almost entirely useless if he can't speak the language of the country he works in.

CIC has startlingly low rank, which is often a handicap. One outfit I know is commanded by a major; in almost any other branch of the service he would be a full colonel. Some agents have remained without promotion for as much as two years, which is not good for morale.

In the field, they are still occasionally cold-shouldered by some commander who doesn't know CIC's full function and capacities. Recently, in France, one group was deprived of all eight of its jeeps (thus slowing down its work to almost nil) by a high-ranking officer who thought CIC agents were merely a bunch of gumshoes. The CIC agent in charge couldn't argue much; he was only a sergeant.

But nothing is perfect in the Army, and CIC agents know it. Almost without exception, they would laugh at the idea of transferring to any other branch of service. For now they are having adventures that a few years ago would have seemed the wildest dreams of some novelist. They are on the inside of great happenings.

Many of them want to stay in CIC after the war. "Always assuming, though," as one of them told me, "that never again will the Counter Intelligence Corps of the United States Army consist of only 20 men."

COLUMN II—REMARKS

† Insert number of detachment. • Executive officer. ▷ Liaison officer. ◦ May be designated as adjutant.

Counter Intelligence Corps detachments composed of a combination of 1 or more headquarters and administrative teams and 1 or more operations teams will provide Counter Intelligence Corps personnel to discharge the counterintelligence responsibility as prescribed by TM 30-215. Tables of Organization and Equipment will be composed of at least 1 headquarters and administrative team and 1 operations team, but the two kinds of teams are so designed that any combination will provide a well-balanced Counter Intelligence Corps detachment.

While a Counter Intelligence Corps detachment may, when authorized by the War Department, be made up of any combination of teams, standard detachments, as follows, will ordinarily meet the counter-intelligence responsibility indicated above:

1. A detachment composed of headquarters and administrative team, type No. 1 plus an operations team, type No. 1 for tactical units, ground or air, from 1,000 to 15,000 troops; for any army installation of a fixed nature exercising counterintelligence jurisdiction over 1,000 to 5,000 civilians; or a small geographical territory requiring a small number of counterintelligence personnel.

2. A detachment composed of headquarters and administrative team, type No. 2 plus an operations team, type No. 2 for tactical units, ground or air, from 15,000 to 40,000 troops; an army installation of a fixed nature exercising counterintelligence jurisdiction over 5,000 to 25,000 civilians; or a geographical territory more complex than indicated for type No. 1.

3. A detachment composed of headquarters and administrative team, type No. 3 plus an operations team, type No. 3 for a large tactical installation such as an Army headquarters, or Army Air Forces headquarters; or for complex fixed installations such as base commands, ports of embarkation or debarkation, frontier areas, etc.

4. A detachment composed of headquarters and administrative team, type No. 4 plus an operations team, type No. 4 will provide a staff for a headquarters exercising counterintelligence jurisdiction over a large geographical area such as a theater of operations; over a number of separate military units or installations; over a large civilian population; or where there is an important liaison responsibility with other headquarters or important civilian agencies.

Detachments organized under this table are not self-sufficient and will be attached to another unit for administration, mess and supply except technical supply.

For specification serial numbers shown in column 2, see AR 615-26; for officers, see TM 12-406.

COUNTER INTELLIGENCE CORPS DETACHMENT

SECTION II

EQUIPMENT

GENERAL

1. This table is in accordance with AR 310-60, and it will be the authority for requisition in accordance with AR 35-6540, and for the issue of all items of equipment listed herein unless otherwise indicated, subject, however, to the provisions of AR 705-5, paragraph 5, section c, sub-section 2, which provides issues of equipment will be based on actual needs rather than authorized allowances. This table rescinds all Tables of Basic Allowances, Special List of Equipment, and Tables of Equipment heretofore published except the following: T/E 21, Clothing and Individual Equipment; Special List of Investigative Equipment and Supplies for the Counter Intelligence Corps, file AG 400 (27 Nov 43) OB-S-SPDDL-M, 29 November 1943, as amended, so far as they pertain to the allowances of equipment for the organization and individuals covered by this table.

2. Items of clothing and individual equipment, components of sets and kits, spare parts, accessories, special equipment, including investigative equipment tools, and allowances for expendable items, are contained in the following publications:

Chemical Warfare Service.

Standard Nomenclature and Price List.

Allowances of Expendable Supplies, Circular No. 1, OC of CWS.

Corps of Engineers.

Supply Catalog, Parts 1, 2, and 3.

Allowances of Expendable Supplies, Series A.

WAR DEPARTMENT
The Adjutant General's Office
Washington

AG 400 (16 Jul 43) OB-S-B-M CJM/hg-2B-939-Pentagon

17 July 1943

SUBJECT: Special List of Equipment and Supplies for the Counter Intelligence Corps.

TO: Commanding General's,
Army Ground Forces;
Army Air Forces;
Army Service Forces;
Commander-in-Chief, Southwest Pacific Area;
Commanding General's,
Theaters of Operations;
Defense Commands;
Hawaiian Department;
Service Commands;
Ports of Embarkation;
Separate Base Commands;
Commanding Officer's,
Ports of Embarkation;
Separate Base Commands;
Chiefs of Technical Services.

1. The equipment and supplies included in the inclosed Special List of Equipment and Supplies for the Counter Intelligence Corps will be issued to Counter Intelligence Corps Detachments upon requisition. Requisition and issuance will be made in accordance with the basis of issue as stated in this Special List of Equipment and Supplies for the Counter Intelligence Corps.

2. Equipment and supplies, other than Investigative Equipment and Supplies, for Counter Intelligence Corps Tactical Detachments will be furnished by the Chiefs of Technical Services upon requisitions by the Commanding Generals of the tactical units to which they are attached. Counter Intelligence Corps Detachments activated within the continental limits of the United States to be attached to tactical units already outside the continental limits of the United States will be issued equipment and supplies at the Port of Embarkation. A Counter Intelligence Corps Tactical

0859

[redacted]

Detachment will be construed to be the Counter Intelligence Corps personnel authorized to be attached to a Division, Corps, Army, Theater Headquarters, Air Force, Air Transport Command Wing or any other tactical unit.

3. Equipment and supplies, other than Investigative Equipment and Supplies, for Counter Intelligence Corps Detachments attached to Service Commands, Defense Commands and Base Commands will be furnished by the Chiefs of Technical Services, upon requisition by the Commanding Generals of the Service Commands, Defense Commands and Base Commands to which they are attached.

4. Counter Intelligence Corps Investigative Equipment and Supplies for all Counter Intelligence Corps Detachments will be furnished by the Property Officer, Counter Intelligence Corps Supply Depot upon requisition.

5. Allowances of Quartermaster clothing and individual equipment are stated in Table of Equipment No. 21, War Department, 10 March 1943.

6. Components of sets and kits, spare parts and accessories and supplies will be issued in accordance with the following publications:

Chemical Warfare Service Nomenclature and Price List,
Corps of Engineer Supply Catalog, Parts 1 and 2,
Circular No. 8 SGO, Allowances of Expendable Supplies,
Ordnance Standard Nomenclature Lists,

SECTION VII CIC INVESTIGATIVE EQUIPMENT AND SUPPLIES

(To be supplied by Counter Intelligence Corps Supply Depot as deemed applicable to investigative mission by the Chief, Counter Intelligence Corps)

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Adapter, lens, 16mm, Cine Kodak for use with Anastigmat Telescopic Lens.	1 each	Per Camera, 16mm, Cine Kodak.
Adapter Ring, Bantam Kodak.	1 each	Per Camera, Bantam.
Ammunition, Cal. .30 Rifle, Ball.		Non-tactical detachments within continental limits of United States in accordance with AR 775-10.
Ammunition, Cal. .30 Carbine, Ball.		Non-tactical detachments within continental limits of United States in accordance with AR 775-10.
Ammunition, Cal. .45, Ball, Sub-machine gun and pistol.		Non-tactical detachments within continental limits of United States in accordance with AR 775-10.
Ammunition, Cal. .38 Special, Ball.		Non-tactical detachments within continental limits of United States in accordance with AR 775-10.
Automobile, civilian type, sedan.		As authorized by Chief, CIC.
Battery, "A", f/Speak-O-Phone, 1-1/2V.	2 each	Per Speak-O-Phone, Battery operated.
Battery, "B", f/Speak-O-Phone, 45V.	2 each	Per Speak-O-Phone, Battery operated.
Battery, "C", f/Speak-O-Phone, 4-1/2V.	2 each	Per Speak-O-Phone, Battery operated.
Battery, Eveready 789, f/ Folmer-Graflex Fingerprint Camera.	2 each	Per Folmer-Graflex Camera.

0872

[redacted]

[redacted]

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Blackjacks	1 each	Per individual in tactical detachment, per six (6) individuals or fraction thereof in non-tactical detachments.
Brush, Wire, f/Cal. .38 Revolver.	1 each	Per ramrod, Cal. .38.
Camera, Bantam Kodak, f/4.5.	1 each	Per four (4) individuals or fraction thereof in tactical detachments, per twenty (20) individuals or fraction thereof in non-tactical detachments.
Camera, Bolsey, 16mm.	1 each	As authorized by Chief, CIC.
Camera, Cine Kodak, 16mm, Magazine type, f/1.9 lens, w/combination case.		Tactical detachments: 1 each per Corps, 2 each per Army, 1 per 25 individuals in all other detachments. In non-tactical detachments as authorized by Chief, CIC.
Camera, Folmer-Graflex, Fingerprint.	1 each	Per fifty (50) individuals or fraction thereof in tactical detachments, per fifty (50) individuals or fraction thereof in non-tactical detachments.
Camera, Speedgraphic, PH-104, c/w case, tripod, and Synchronizer, filter, lens shade, etc.	1 each	Per twenty-five (25) individuals in tactical detachment. In non-tactical detachments as authorized by Chief, CIC.
Case, Carrying, f/Bantam Kodak.	1 each	Per Bantam Kodak issued.
Case, Carrying, f/Kodascope Projector.	1 each	Per Kodascope Projector.
Film, Bantam, Plus X, Tropical Pack.	24 rolls	Per Camera, Bantam.

0873

[redacted]

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Film, Bolsey, 16mm, Panatomic X, Tropical Pack.	2 mag.	Per Camera, Bolsey.
Film, Minox, 50 Weston, Tropical Pack, 2 cass. per pkg.	12 cass.	Per Camera, Minox.
Film, Speedgraphic, pack 4 x 5, Plus X, Tropical Pack.	24 packs	Per Camera, Speedgraphic.
Film, Speedgraphic, pack 4 x 5, Super XX, Tropical Pack.	24 packs	Per Camera, Speedgraphic.
Film, 16mm, Super X in Magazines, Tropical Pack, f/Cine Camera.	20 mag.	Per 16mm Camera, Cine.
Film, 16mm, Super XX in magazines, Tropical Pack, f/Cine Camera.	20 mag.	Per 16mm Camera, Cine.
Film, 35mm, Plus X, Tropical Pack.	24 rolls	Per photographic set, Lab. PH 261.
Film, 35mm, Super XX, Tropical Pack.	24 rolls	Per photographic set, Lab. PH 261.
Film, 2-1/4 x 3-1/4, Contrast, Tropical Pack, f/Folmer-Graflex Fingerprint camera.	6 packs	Per Folmer-Graflex Fingerprint Camera.
Film, Recording, Recordgraph, 50' Straight Loop.	50 rolls	Per Recordgraph.
Film, Recording, Recordgraph, 50' Reversible Loop.	50 rolls	Per Recordgraph.

0874

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Fingerprint-Taking Set, c/w Ink, slab, Card holder, tube of ink, roller.	1 each	Per ten (10) individuals or fraction thereof in tactical detachments, per twenty-five individuals or fraction thereof in non-tactical detachments.
Handcuffs.	1 pair	Per three (3) individuals or fraction thereof in tactical detachments, per ten (10) individuals or fraction thereof in non-tactical detachments.
Holster, hip, leather, for Colt, Cal. .38 Special Revolver, 2" bbl.	1 each	Per Revolver, Colt, Cal. .38 Special, 2" bbl.
Holster, hip, leather, for Colt, Cal. .38 Special Revolver, 4" bbl.	1 each	Per Revolver, Colt, Cal. .38 Special, 4" bbl.
Holster, shoulder, leather, for Colt, Cal. .38 Special Revolver, 4" bbl.	1 each	Per three (3) Revolvers, Cal. .38 Special, 4" bbl.
Iodine Fumer, (Component Parts): Calcium Chloride Flakes, 1 lb.	1 can	Per four (4) individuals or fraction thereof.
Funnels, Glass, 40mm, short stem.	1 each	Per four (4) individuals or fraction thereof.
Glass Wool, 1 oz. box.	1 box	Per five (5) individuals or fraction thereof.
Iodine Crystals, 1 oz. btl.	1 btl.	Per five (5) individuals or fraction thereof.
Stopper, rubber, 1 hole, size 3.	1 each	Per eight (8) individuals or fraction thereof.
Tube, glass, drying, CaCl, 200mm.	1 each	Per four (4) individuals or fraction thereof.

0875

[redacted]

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Tubing, rubber, 3/16".	1 foot	Per eight (8) individuals or fraction thereof.
Kit, fingerprint, Latent, c/w four types fingerprint powder, magnifying glass, rubber lifter, camel's hair brush.	1 each	Per five (5) individuals or fraction thereof in tactical detachments, per ten (10) individuals or fraction thereof in non-tactical detachments.
Lamp, Photoflash, (bulb), GE-22.	25 each	Per Camera, Speedgraphic.
Lamp, Photoflash, (bulb), GE-5, blue.	25 each	Per Camera, Speedgraphic.
Lamp, Photoflash, (bulb), GE-5, clear.	25 each	Per Camera, Speedgraphic.
Lamp, Projector, 750 Watt.	1 each	Per Projector, Kodascope, 16mm.
Lamp, Ultra-Violet, portable c/w Transformer, stand, reflector, BH-4 bulb, extension cord and carrying case.	1 each	Per ten (10) individuals or fraction thereof in tactical detachments, per fifty (50) individuals or fraction thereof in non-tactical detachments.
Lamp, Ultra-Violet, GE, BH-4, bulb only.	1 each	Per Lamp, ultra-violet.
Lens, Portra, f/Bantam Camera.	1 each	Per Bantam Camera.
Lens, Telescopic, Anastigmat f/2.7 63mm or equal for 16mm Cine Camera.	1 each	Per Cine Camera, 16mm.
Lock-pick Sets, c/w case, 8 tools, 1 tension wrench.	1 each	Per five (5) individuals or fraction thereof in tactical detachments, per ten (10) individuals or fraction thereof in non-tactical detachments.

0876

[redacted]

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Magnifier, glass, tripod, 25mm lens, f/studying fingerprints.	1 each	Per five (5) individuals or fraction thereof in tactical detachments, per ten (10) individuals or fraction thereof in non-tactical detachments.
Microphone, Carbon, w/rubber shields and terminal wires.	1 each	Extra per Sound Detector, Speak-O-Phone, AC-DC or Battery type.
Microphone, Contact, w/ screw jacks terminal.	1 each	Extra per Sound Detector, Speak-O-Phone, AC-DC or Battery type.
Moulage, Positive, 5 lb. pkg.	1 pkg.	Per twenty-five (25) individuals or fraction thereof.
Moulage, Negative, 5 lb. jar.	1 jar	Per twenty-five (25) individuals or fraction thereof.
Needle, cutting, f/Speak-O-Phone Recorder	10 each	Per Recorder, Speak-O-Phone.
Needle, playback, f/Speak-O-Phone Recorder, (100 per pkg.)	2 pkg.	Per Recorder, Speak-O-Phone.
Needle, Cutting, f/Record-graph.	1 pair	As required.
Needle, Playback, f/Record-graph.	1 pair	As required.
Photographic Set, processing, PH-406.	1 each	Per tactical detachment. Per Defense Commands, Base Commands and Service Commands as authorized by Chief, CIC.
Photographic Set, PH-261, c/w camera, field laboratory for 35mm processing.	1 each	Per twenty-five (25) individuals in tactical detachments.

0877

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Powder, Latent, fingerprint, black.	1 oz.	Per six (6) individuals, except for individuals of detachments assigned to Air Forces, Divisions, Army Corps and Air Transport Command Wing.
Powder, Latent, fingerprint, brown.	1 oz.	Per six (6) individuals, except for individuals of detachments assigned to Air Forces, Divisions, Army Corps and Air Transport Command Wing.
Powder, Latent, fingerprint, gray.	1 oz.	Per six (6) individuals, except for individuals of detachments assigned to Air Forces, Divisions, Army Corps and Air Transport Command Wing.
Powder, Latent, fingerprint, white.	1 oz.	Per six (6) individuals, except for individuals of detachments assigned to Air Forces, Divisions, Army Corps and Air Transport Command Wing.
Projector, Kodascope, 16mm, (16-10) not sound equipped.	1 each	Per Cine Camera, 16mm.
Protractor, Semi-circular, Vinylite, 6".	1 each	Per individual in tactical detachment, per ten (10) individuals in non-tactical detachments.
Ramrod, Cal. .38.	1 each	Per Revolver, Cal. .38, Colt, 2" or 4" bbl.
Recorder, Speak-O-Phone, portable AC c/w lead-in jacks.	1 each	Per Sound Detector, Speak-O-Phone, AC-DC.
Recording Discs, Speak-O-Phone, Cardboard base.	50 each	Per Recorder, Speak-O-Phone.
Recording Discs, Speak-O-Phone, Steel base.	25 each	Per Recorder, Speak-O-Phone.

0878

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Recordgraph, portable, AC, "Commando" model, built in speaker, direct taps, conference microphone and accessories.	1 each	Per fifty (50) individuals in non-tactical detachments.
Revolver, Colt, Cal. .38, Special, 2" bbl.	1 each	Per five (5) individuals.
Revolver, Colt, Cal. .38, Special, 4" bbl.	1 each	Per individual, except individuals furnished Revolvers, Colt, Cal. .38, 2" bbl.
Sound Detector, Speak-O-Phone, portable, AC-DC, c/w tubes, 2 carbon microphones, 1 contact microphone, 1 direct tap, 1 induction coil, 2-50' lengths twisted pair wire.	1 each	Per twenty (20) individuals in Defense Commands, Base Commands, and Service Commands; to tactical Detachments as authorized by Chief, CIC.
Sound Detector, Speak-O-Phone, portable, battery operated c/w tubes, batteries, 2 pair earphones, 1 contact microphone, 1 induction coil, 1 direct tap.	1 each	Per twenty (20) individuals or fraction thereof in Corps and Army detachments; all other as authorized by Chief, CIC.
Tape, Scotch, transparent, fingerprint lifting.	1 roll	Per tactical detachment, per thirty (30) individuals in non-tactical detachments.
Telephone Hand test set, (both letters and numbers) with mouthpiece and receiver.	1 each	Per twenty (20) individuals or fraction thereof in Corps and Army detachments; all others as authorized by Chief, CIC.
Tube, Vacuum, Speak-O-Phone, N5G.	1 each	Per Speak-O-Phone.
Tube, Vacuum, Speak-O-Phone, G6G.	1 each	Per Speak-O-Phone.

0879

[redacted]

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Tube, Vacuum, Speak-O-Phone, 123J7/GT.	1 each	Per Speak-O-Phone.
Tube, Vacuum, Speak-O-Phone, 14-F-7.	1 each	Per Speak-O-Phone.
Tube, Vacuum, Speak-O-Phone, 35L6/GT/G.	1 each	Per Speak-O-Phone.
Tube, Vacuum, Speak-O-Phone, 1LB4G.	1 each	Per Speak-O-Phone.
Tube, Vacuum, Speak-O-Phone, Recorder, 35Z5(GTG)	1 each	Per Speak-O-Phone Recorder.
Tube, Vacuum, Speak-O-Phone, Recorder, 123J7/GT	1 each	Per Speak-O-Phone Recorder.
Tube, Vacuum, Speak-O-Phone, Recorder, 35/25/GT/G.	1 each	Per Speak-O-Phone Recorder.
Tube, Vacuum, Recordgraph set of 1 each of the following: 6F5; 6SF5; 6L7; 6N6G; 5W4; 6H6; 7F7; 20-50.	1 set	Per Recordgraph.
Wire, copper, #30, white cotton insulation, 1/2 lb. spool.	1 spool	Per Sound Detector, Speak-O-Phone.
Wire, copper, #30, black cotton insulation, 1/2 lb. spool.	1 spool	Per Sound Detector, Speak-O-Phone.
Wire, Telephone, twisted pair, #14.	500 feet	Per Sound Detector, Speak-O-Phone.

Basis of Issue for Expendable Supplies in Section VII is per year.

WAR DEPARTMENT
Washington 25, D.C.

AG 400 (27 Nov 43)OB-S-SPDDL-M KIS/sr-2B-939 Pentagon.

29 November 1943.

SUBJECT: Special List of Investigative Equipment and Supplies for the Counter Intelligence Corps.

TO: The Commanding Generals,
Army Air Forces;
Army Ground Forces;
Army Service Forces;
Commander-in-Chief, Southwest Pacific Area;
The Commanding Generals,
Theaters of Operations;
Defense Commands;
Alaskan Department;
Service Commands;
Ports of Embarkation;
Separate Base Commands;
The Commanding Officers,
Ports of Embarkation;
Separate Base Commands;
Chiefs of Technical Services.

1. Inclosed for your information and guidance is copy of Special List of Investigative Equipment and Supplies for the Counter Intelligence Corps which supersedes and rescinds letter, AG 400 (16 Jul 43)OB-S-B-M, 17 July 1943, subject: Special List of Equipment and Supplies for Counter Intelligence Corps.

2. The investigative equipment and supplies included in the inclosed Special List of Investigative Equipment and Supplies for the Counter Intelligence Corps will be issued to Counter Intelligence Corps Detachments from the Counter Intelligence Corps Supply Depot, 2327 North Charles Street, Baltimore 18, Maryland. An initial issue of investigative equipment and supplies included in the inclosed list will be made to each CIC Detachment without requisition. Amounts and types of investigative equipment and supplies issued initially will be determined by the Chief, CIC, on the basis as set forth in this list.

3. Additional items of non-expendable investigative equipment over and above initial issue will be supplied by the Property Officer, CIC Supply Depot, on requisition from CIC Detachment Commanders, providing a sufficient investigative

[redacted]

need for such issue is shown. Expendable supplies will be requisitioned by CIC Detachment Commanders on a quarterly basis. Requisitions will be submitted to the Property Officer, CIC Supply Depot, in triplicate, on W.D., Q.M.C. Form No. 400, if available, and should be forwarded through G-2 Channels.

4. Counter Intelligence Corps Detachment Commanders in non-tactical units issued investigative equipment and supplies under the provisions of this list are hereby directed to assume property accountability for same under existing Army Regulations. Counter Intelligence Corps Detachment Commanders in tactical units where property accountability does not apply are directed to assume property responsibility for same under the provisions of War Department Circular 170, 24 July 1943.

5. Components of sets and kits, spare parts and accessories and supplies will be issued in accordance with the following publications:

Circular No. 10-1, OCSigO, Allowance of Spare Parts, Accessories and Expendable Supplies,

SPECIAL LIST OF INVESTIGATIVE EQUIPMENT AND SUPPLIES
for the Counter Intelligence Corps

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Adapter, lens, 16mm, Cine Kodak for use with Anastigmat Telescopic Lens	1 each	As authorized by Chief, CIC.
Adapter Ring, Bantam, Kodak	1 each	Per Camera, Bantam.
Ammunition, Cal. .30 Rifle, Ball.		Non-tactical detachments within continental limits of United States in accordance with AR 775-10.
Ammunition, Cal. .30 Carbine, Ball.		Non-tactical detachments within continental limits of United States in accordance with AR 775-10.
Ammunition, Cal. .45, Ball, Sub-machine gun and pistol.		Non-tactical detachments within continental limits of United States in accordance with AR 775-10.
Ammunition, Cal. .38 Special, Ball.		Non-tactical detachments within continental limits of United States in accordance with AR 775-10.
Automobile, civilian type, sedan.		As authorized by Chief, CIC, in non-tactical detachments.
Battery "A", f/Speak-O-Phone, 1-1/2V.	2 each	Per Speak-O-Phone, Battery operated.
Battery "B", f/Speak-O-Phone, 45V.	2 each	Per Speak-O-Phone, Battery operated.
Battery "C", f/Speak-O-Phone, 4-1/2V.	2 each	Per Speak-O-Phone, Battery operated.
Battery, Eveready 789, f/Folmer-Graflex Fingerprint Camera.	2 each	Per Folmer-Graflex Camera.

0885

[redacted]

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Blackjacks	1 each.	Per individual in tactical detachment, per six (6) individuals or fraction thereof in non-tactical detachments.
Camera, Bantam Kodak, f/4.5	1 each	Per four (4) individuals or fraction thereof in tactical detachments, per twenty (20) individuals or fraction thereof in non-tactical detachments.
Camera, Victory, 16mm.		As authorized by Chief, CIC.
Camera, Cine Kodak, 16mm, Magazine type, f/1.9 lens, w/combination case.		As authorized by Chief, CIC.
Camera, Folmer-Graflex, Fingerprint.		As authorized by Chief, CIC.
Camera, Speedgraphic, PH-104, c/w case, tripod, Synchronizer, filter, lens shade, etc.		As authorized by Chief, CIC.
Case, Carrying, f/Bantam Kodak.	1 each	Per Bantam Kodak issued.
Case, carrying, f/Kodascope Projector.	1 each	Per Kodascope Projector.
Film, Bantam, Plux X, Tropical Pack	48 rolls	Per Camera, Bantam
Film, 16mm, Panatomic X, Tropical Pack, f/Victory Camera.	2 mag.	Per Camera, Victory.
Film, Minox, 50 Weston, Tropical Pack, 2 cass. per pkg.	12 cass.	Per Camera, Minox.

0886

[redacted]

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Film, Speedgraphic, pack 4 x 5, Plux X, Tropical Pack.	48 packs	Per Camera, Speedgraphic.
Film, Speedgraphic, Cut, Infra Red.	6 boxes	Per Camera, Speedgraphic.
Film, 16mm, Super X in Magazines, Tropical Pack, f/Cine Camera.	20 mag.	Per 16mm Camera, Cine.
Film, 16mm, Super XX in Magazines, Tropical Pack, f/Cine Camera.	20 mag.	Per 16mm Camera, Cine.
Film, 2 1/4 x 3 1/4, Contrast, Tropical Pack, f/Folmer-Graflex Fingerprint camera.	6 packs	Per Folmer-Graflex Fingerprint Camera.
Film, Recording, Recordgraph, 50' Straight Loop.	50 rolls	Per Recordgraph.
Film, Recording, Recordgraph, 50' Reversible Loop.	50 rolls	Per Recordgraph.
Fingerprint-Taking Set, c/w Ink, slab, Card holder, tube of ink, roller.	1 each	Per ten (10) individuals or fraction thereof in tactical detachments, per twenty-five individuals or fraction thereof in non-tactical detachments.
Handcuffs.	1 pair	Per three (3) individuals or fraction thereof in tactical detachments, per ten (10) individuals or fraction thereof in non-tactical detachments.
Holster, hip, leather, for Colt, Cal. .38 Special Revolver, 2" bbl.	1 each	Per Revolver, Colt, Cal. .38, Special, 2" bbl.

0887

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Holster, shoulder, leather, for Colt, Cal. .38 Special Revolver 4" bbl.	1 each	Per three (3) Revolvers, Cal. .38 Special, 4" bbl.
Iodine Fumer, (Component Parts): Calcium Chloride Flakes, 1 lb.	1 can	Per four (4) individuals or fraction thereof.
Funnels, Glass, 40mm, short stem.	1 each	Per four (4) individuals or fraction thereof.
Glass Wool, 1 oz. box.	1 box	Per five (5) individuals or fraction thereof.
Iodine Crystals, 1 oz. btl.	1 btl.	Per five (5) individuals or fraction thereof.
Stopper, rubber, 1 hole, size 3.	1 each	Per eight (8) individuals or fraction thereof.
Tube, glass, drying, CaCl, 200mm.	1 each	Per four (4) individuals or fraction thereof.
Tubing, rubber, 3/16".	1 foot	Per eight (8) individuals or fraction thereof.
Kit, fingerprint, Latent, c/w four types fingerprint powder, magnifying glass, rubber lifter, camel's hair brush.	1 each	Per five (5) individuals or fraction thereof in tactical detachments, per ten (10) individuals or fraction thereof in non-tactical detachments.
Lamp, Photoflash, (bulb), GE-22.	25 each	Per Camera, Speedgraphic.
Lamp, Photoflash, (bulb), GE-5R, Infra Red.	12 each	Per Camera, Speedgraphic.
Lamp, Projector, 750 Watt.	1 each	Per Projector, Kodascope, 16mm.

0888

[redacted]

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Lamp, Ultra-Violet, portable c/w Transformer, stand, reflector, BH-4 bulb, extension cord and carrying case.		As authorized by Chief, CIC.
Lamp, Ultra-Violet, GE, BH-4, bulb only.	1 each	Per Lamp, ultra-violet.
Lens, Portra, f/Bantam Camera.	1 each	Per Camera, Bantam.
Lens, Telescopic, Anastigmat f/2.7 63mm or equal for 16mm Cine camera.		As authorized by Chief, CIC.
Lock-pick Set, c/w case, 8 tools, 1 tension wrench.	1 each	Per five (5) individuals or fraction thereof in tactical detachments, per ten (10) individuals or fraction thereof in non-tactical detachments.
Magnifier, glass, tripod, 25mm lens, f/studying fingerprints.	1 each	Per five (5) individuals or fraction thereof in tactical detachments, per ten (10) individuals or fraction thereof in non-tactical detachments.
Microphone, Carbon, w/ rubber shields and terminal wires.	1 each	Extra per Sound Detector, Speak-O-Phone, AC-DC or Battery Type.
Microphone, Contact, w/ screw jacks terminal.	1 each	Extra per Sound Detector, Speak-O-Phone, AC-DC or Battery type.
Moulage, Positive, 5 lb. pkg.	1 pkg.	As authorized by Chief, CIC.
Moulage, Negative, 5 lb. jar.	1 jar	As authorized by Chief, CIC.
Needle, cutting, f/Speak-O-Phone Recorder.	10 each	Per Recorder, Speak-O-Phone.

0889

[redacted]

[redacted]

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Needle, playback, f/Speak-O-Phone Recorder, (100 per pkg)	2 pkg.	Per Recorder, Speak-O-Phone.
Needle, cutting, f/Record-graph.	1 pair	As required.
Needle, Playback, f/Record-graph.	1 pair	As required.
Photographic Set, Processing, PH-406.		As authorized by Chief, CIC.
Powder, Latent, fingerprint, black.	1 oz.	As required.
Powder, Latent, fingerprint, brown.	1 oz.	As required.
Powder, Latent, fingerprint, grey.	1 oz.	As required.
Powder, Latent, fingerprint, white.	1 oz.	As required.
Projector, Kodascope, 16mm, (16-10) not sound equipped.	1 each	Per Cine Camera, 16mm.
Protractor, Semi-circular, Vinylite, 6".	1 each	Per individual in tactical detachment, per ten (10) individuals in non-tactical detachments.
Recorder, Speak-O-Phone, portable AC c/w lead-in jacks.	1 each	Per Sound Detector, Speak-O-Phone, AC-DC.
Recording Discs, Speak-O-Phone, Cardboard base.	50 each	Per Recorder, Speak-O-Phone.
Recording Discs, Speak-O-Phone, Steel base.	50 each	Per Recorder, Speak-O-Phone.

[redacted]

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Recordgraph, portable, AC, "Commando" model, built in speaker, direct taps, conference microphone and accessories.		As authorized by Chief, CIC.
Revolver, Colt, Cal. .38, Special, 2" bbl.	1 each	Per individual except those issued 4" bbl. revolver.
Revolver, Colt, Cal. .38, Special, 4" bbl.	1 each	Per individual except those issued 2" bbl. revolver.
Sound Detector, Speak-O-Phone, portable, AC-DC, c/w tubes, 2 carbon microphones, 1 contact microphone, 1 direct tap, 1 induction coil, 2-50' lengths twisted pair wire.		As authorized by Chief, CIC.
Sound Detector, Speak-O-Phone, portable, battery operated, c/w tubes, batteries, 2 pair earphones, 2 carbon microphones, 1 contact microphone, 1 induction coil, 1 direct tap.		As authorized by Chief, CIC.
Tape, Scotch, transparent, fingerprint lifting.	1 roll	Per tactical detachment, per thirty (30) individuals in non-tactical detachments.
Telephone Hand test set, (both letters and numbers) with mouthpiece and receiver.		As authorized by Chief, CIC.
Tube, Vacuum, Speak-O-Phone, N5G	1 each	Per Speak-O-Phone.
Tube, Vacuum, Speak-O-Phone, G6G	1 each	Per Speak-O-Phone.

[redacted]

ITEM	ALLOWANCE	BASIS OF ISSUE AND REMARKS
Tube, Vacuum, Speak-O-Phone, 123J7/GT	1 each	Per Speak-O-Phone.
Tube, Vacuum, Speak-O-Phone, 14-F-7	1 each	Per Speak-O-Phone.
Tube, Vacuum, Speak-O-Phone, 35L6/GT/G	1 each	Per Speak-O-Phone.
Tube, Vacuum, Speak-O-Phone, 1LB4G	1 each	Per Speak-O-Phone.
Tube, Vacuum, Speak-O-Phone, Recorder, 35Z5(GTG)	1 each	Per Speak-O-Phone Recorder.
Tube, Vacuum, Speak-O-Phone, Recorder, 123J7/GT	1 each	Per Speak-O-Phone Recorder.
Tube, Vacuum, Speak-O-Phone, Recorder, 35/25/GT/G	1 each	Per Speak-O-Phone Recorder.
Tube, Vacuum, Recordgraph set of 1 each of the following: 6F5; 6SF5; 6L7; 6N6G; 5W4; 6H6; 7F7; 20-50.	1 set	Per Recordgraph.
Wire, copper, #30, white cotton insulation, 1/2 lb. spool.	1 spool	Per Sound Detector, Speak-O-Phone.
Wire, Telephone, twisted pair #14.	500 feet	Per Sound Detector, Speak-O-Phone.

MISSION OF THE COUNTER INTELLIGENCE CORPS

"The mission of the Counter Intelligence Corps is to contribute to the operations of the Army Establishment through the detection of treason, sedition, subversive activity, and disaffection, and the detection, prevention, or neutralization of espionage and sabotage within or directed against the Army Establishment and the areas of its jurisdiction."

Auth: AR 381-100

ACSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Chapter 1

THE CIP INVESTIGATORS TRAINING SCHOOL

The Selective Service Act, passed on 16 September 1940 by a United States Congress to which the fall of France had crystallized the realization that an "arsenal of democracy" was a necessity to a free world,[1] brought the strength of the U.S. Army to approximately 1,640,000 men within slightly more than a year.[2] Yet the end of 1940 found the CIP, upon whose shoulders would fall the responsibility for providing internal security for this expanded force, with only 42 trained investigators.

The first problem was to secure qualified personnel; the second was to train the personnel after they had been secured. In light of these requirements, an order from the Secretary of War, dated 18 January 1941, initiated the Corps of Intelligence Police Investigators Training School in Washington, D.C.[3] A little over a month later, on 24 February, the first students of this school crowded into the single room in the Army War College, now Fort Leslie J. McNair, where their classes were to be held.[4] Army counterintelligence training for World War II had begun.

The CIP Investigators Training School

The original plan that preceded the Adjutant General's order to establish the CIP Investigators Training School recommended that the "courses cover essentials for investigators to provide uniform method throughout the service." A Chief of the Corps of Intelligence Police was to be charged with the supervision of training and the preparation of manuals of instruction for the students.[5]

The minimum qualifications for attendance at the CIP Investigators School opened the doors to many new and old members of the Army. According to the proposed plan, a potential student was required to meet the following requirements:

1 The Army Almanac, p. 292.

2 Ibid, p. 298.

3 History of CIC in Army Service Forces, (CONFIDENTIAL) (Central Records Facility).

4 Office Journal, Headquarters CIC from 27 Jan 1941 to 1 May 1942, entry dated "2-24-41." (CONFIDENTIAL) (Central Records Facility).

5 Memorandum for General Miles from Lt Col J. T. Bissell, Subj: Plan for Corps of Intelligence Police, dtd 2 Dec 1940, (CONFIDENTIAL) (Kansas City Record Center).

Age: 22 to 33
Minimum education: Graduate of High School (College Education preferable with training in law or accounting).
Completion of basic military training.
Desirable qualification: Previous experience as an investigator in some governmental or law enforcement agency.[6]

The allotment of CIP personnel was jumped from 42 to 188 men in December 1940. Maj Garland Williams was selected as Chief, CIP and Commandant of the CIP School. He reported for duty 27 January 1941.[7]

The men chosen to instruct at the school were detailed from the Military Intelligence Division, Washington, D.C. They were to be assisted by the FBI, when available, and officers who were graduates of the FBI school. By the time the CIP School was opened, five full time instructors had been procured.

Students who attended the first classes of the school found that the entire course was geared to training agents for duties they would encounter in the Zone of the Interior. No basic texts were provided. Instead, instructors in the school were requested to reduce all their lectures to written form so that they could be mimeographed. The reproduced lectures would enable students to compile their own reference material. These could be used during training as texts and after training as continual guides in the absence of immediate advice from trained supervisors. The instructors complied with the request, and soon the volume compounded from the various lectures became a standard ready reference at CIP offices throughout the United States.

The curriculum of the school was entirely oriented around procedures involved in the conduct of an investigation and the aids that could be utilized by an investigator. Students were taught the principles of observation and description, espionage and counterespionage, bombs and "infernal machines," undercover work, and numerous other topics that the well-trained investigator should know. A total of 61 separate courses and practical problems were listed in the course of study prepared for the first class.[8] From this material the students could be expected to gain an introduction to their future work. The basic FBI courses, on which the CIP School's four week curriculum had been patterned, extended for 14 weeks.

Since the CIP School planners had chosen the FBI as a model, subjects were included in the curriculum that dealt almost exclusively with criminal matters. For example, ten hours were allotted to "Practical Work With Headquarters

6 Training History of CIC, (CONFIDENTIAL) (Central Records Facility).
7 Office Journal, Headquarters CIC from 27 Jan 1941 to 1 May 1942, entry dated "1-27-41" (Central Records Facility).
8 Course of study attached as Appendix 1.

Detective Squads of the Metropolitan Police Forces." Potential CIPs were scheduled to spend these hours working with detectives on the robbery, check forgery and fraud, homicide, theft of jewelry and clothing, narcotics, auto theft, and fugitive and wanted persons squads. Another ten hours were set aside for work with agents of the U.S. Secret Service, Alcohol Tax Unit, Customs Agency Service, Narcotics Bureau and Intelligence Unit of the Treasury Department.[9]

The performance of the men assigned to the CIP Investigators Training School varied considerably. In the first class 39 men were given certificates of "satisfactory completion of instruction," while nine men failed the course. In the second class, 43 students received certificates, while seven failed. In the third class, all 50 students graduated satisfactorily.

CIP headquarters officers were faced with the problem of evaluating the degree to which a student's record at the school reflected his ability as a CIP agent. The conclusion was reached that "the record made by an individual in the CIP School is not necessarily indicative of his value to the CIP. An individual who makes the highest possible grade does not necessarily deserve the highest possible grade in the CIP, and conversely the individual who fails to make a satisfactory grade in the school does not necessarily have to be separated from the CIP."[10]

But the course of study was generally approved by the agents attending the CIP School. One student wrote back to his commanding officer, "There is a very high-class group of boys from other sections of the country. We have several excellent instructors and a couple that lull me to sleep. But, in all, the course is very interesting, and the men are studying hard to see that they make the proper showing."[11]

The Corps of Intelligence Police Investigators Training School continued to function in Washington, D.C., until six classes, numbering 298 students, both officers and enlisted men, had graduated.[12] In addition to the basic investigators course, special training for 48 commissioned officers from all Corps areas and the Puerto Rican Department was given from 7 April to 3 May 1941.[13] The subjects that were studied in this supplementary course were primarily concerned with industrial security and consisted of the following:

10. Follow-up Investigations[14]

While the Corps of Intelligence Police Training School provided standard instruction for all potential CIPs, there still existed complications that G2 planners had to solve. At this time CIP was still a confidential organization whose existence was not generally known throughout the Army. Lt Col A. R. Bolling, Assistant Chief of Staff, G2, First Corps Area, noted that while a potential CIP was in basic training with other recruits, he became known as a member of the military service to soldiers who would later be assigned to units throughout the Corps Areas. To avoid this possible compromise of CIP identities, Colonel Bolling suggested that the CIP training school conduct two courses, basic and advanced. The basic course would include fundamental military training, and instruction in small arms and qualification firing with the .45 caliber pistol. Successful completion of this basic course would be the condition for admission to the advanced training that would acquaint the CIP with his specific future responsibilities.

Colonel Bolling concluded that this method of centralized schooling would insure uniformity in instruction in stages. Nor would it necessitate the attachment of members of the CIP to units within the CASC (Continental Army Service Commands) for basic instruction and firing of the pistol, thereby aiding to a great extent in not disclosing the identity of members of the Corps. These schools would

14 Training History of CIC, (CONFIDENTIAL) (Central Records Facility).

further establish a basis for promotion, supplementing quarterly efficiency reports and recommendations from the AC of S, G2 of the Corps Area."[15]

Although this plan was never adopted, the concept of two stages, preliminary and advanced, in the education of a counterintelligence agent was put into practice one year and a half after Colonel Bolling's report.

A major problem that faced the CIP planners was finding a suitable site for locating the training school. The classroom provided at the Army War College was entirely inadequate. The billets provided at the Arlington Cantonment were "definitely unsatisfactory." CIP officers combed Washington military reservations in search of school rooms, and Fort Foote, Fort Hunt, Fort Washington, Fort Belvoir, Camp Sims, and Bolling Field were tried. The forays all ended with the same remark: "No space available." [16] One suggestion was to rent a private hall in Washington, requisition bunks, blankets and other supplies and hire a janitor who would take care of the hall while CIP students attended classes.

The Provost Marshal came up with the suggestion that the CIP School be merged with the Provost Marshal General's Military Police School then being organized. This was the first recorded of many attempts by the Provost Marshal to usurp the functions of the CIP and later the CIC.[17] This suggestion was ignored. A little more than a month later, however, the Provost Marshal made another attempt, this time requesting that the CIP School be moved to the Arlington Cantonment, the same location selected for the proposed Military Police School.[18] It was not until 26 November, after the school had physically moved to Chicago, that the Army G3 made the final decision in CIC's favor.[19]

For several weeks classes were held at 2145 C Street, NW. Then they were switched to the Post Theater at the Arlington Cantonment with some courses given at the Munitions Building.[20] It became increasingly clear that an expanding defense effort was placing a premium on every bit of space within Washington and its immediate environs.

0941

On 7 October 1941, Col Hayes A. Kroner, Acting AC of S, G2, in a memorandum for the Chief of Staff, reported the results of a survey which revealed that suitable accommodations for the CIP School had been found in Chicago, Illinois. An athletic club and two hotels in the "Loop" area were large enough for the necessary class rooms, offices, and housing the students.[21]

Arrangements in Chicago were hastily completed by Capt Sylvester P. Smith and Corps Area Quartermasters for the lease of the Tower Town Club. On 3 November, Headquarters CIP in Washington received a telephone call from Captain Smith advising that he was prepared to open the school on 10 November. On that day orders were issued transferring instructors and students to Chicago. The struggle for permanent quarters for the CIP Training School was temporarily over.[22]

Chapter 2

THE CHICAGO TRAINING SCHOOL

The Tower Town Club at 820 North Michigan Avenue was a far cry from the original locations of the CIP Investigators Training School. In addition to the ample classrooms arranged within the club building, the police laboratory of the City of Chicago was made available to the CIP School. CIP instructors were also permitted to give demonstrations at the criminal laboratory of Northwestern University, and study sabotage problems at the huge Underwriters Laboratory.

The students were billeted in comfortable hotel rooms that were well suited for quiet study. In contrast to the crowding in the barracks at the Arlington Cantonment, two men were accommodated in each room. The students were fed in the school mess that was also located in the hotel; meals were described as "wholesome, appetizing, well prepared, and well served...typical of the bill of fare found in any good hotel." Students had daily access to the hotel swimming pool and an exercise room that was used for recreation and jui jitsu instruction.[23]

Capt H. G. Sheen, who had become Chief of CIP in October 1941, was completely satisfied with the facilities following a visit from 13-15 November. By 7 December 1941, the day that the Japanese bombed Pearl Harbor, plans had already been laid for a second set of school classes. The enlisted men were to begin on 5 January and the officers on 19 January.

The attack on Pearl Harbor and the subsequent declaration of war altered the CIP plans drastically. The Military Intelligence Division was suddenly faced with the problem of supplying hundreds of counterintelligence agents to the Army forces in addition to increasing the strength of operatives to accomplish missions within the Zone of Interior. By 9 December 1941, the first step in mobilization had been completed. The Chief of Staff had authorized an increase in the strength of CIP to 1,026 agents.[24]

Two days later, increased funds for the expansion of the CIP School in Chicago were informally approved by representatives of the AC of S, G3, and the AC of S, G4, War Department.[25] Captain Smith maintained direct contact with CIP Headquarters awaiting the announcement of revised figures for the January classes in the school. When the order of the Secretary of War redesignating the Corps of

24 Office Journal, Headquarters, CIC, from 27 Jan 41 to 1 May 42, entries dtd Nov-Dec 41, (CONFIDENTIAL) (Central Records Facility).

25 Ibid, entry dtd 11 Dec 41.

Intelligence Police as the Counter Intelligence Corps, effective 1 January 1942, was released, the title of the school was appropriately changed to the Counter Intelligence Corps Investigators Training School.

The first enlisted men's course at the school had 51 members. Courses starting in January had an enrollment of 100 agents. No major changes in the curriculum were instituted despite the sudden broadening of the scope of counter-intelligence activities. Maj Charles A. Ellis, CIC Chief at the Office of the AC of S, G2, Second Corps Area, recommended after a visit to the school that practical assignments in taking fingerprints, "shadow work," and physical descriptions, be increased.[26] There was no mention of preparing the potential CIC agents for overseas duty while at the Chicago school. Instead emphasis was placed on turning out the best possible investigators for duty within the Zone of Interior.

The basic course was not substantially altered during the early months of 1942. The curriculum for both enlisted men and officers covered 26 days. In order to instruct a maximum number of personnel, each officer's class was scheduled to commence exactly two weeks after the start of the enlisted men's class then in attendance. The succeeding enlisted class began a week prior to the termination of the officers' class. This arrangement of staggering classes eased the teaching load of the heavily taxed instructors somewhat without greatly reducing the number of agents turned out by the school.[27]

During July, Maj Theodore J. Walker relieved Major Smith as Commandant of the CIC School.[28] Two months later, the school was subjected to a careful scrutiny by several high ranking officers of the Office of the AC of S, G2, War Department General Staff. Maj Gen George V. Strong in the course of a routine visit to the school had noticed a number of weaknesses in the organization and facilities of the school that he considered necessitated a staff study. Among the suggestions that General Strong wished to be considered were: (1) increase in the faculty; (2) relief of the crowded living conditions of the students; (3) re-examination of curriculum; (4) use of visual training aids and "skits;" and (5) use of outstanding civilian personnel in the selected fields as lecturers.[29]

---

26 Ltr to AC of S, G2, ATTN: Captain Sheen, from Col F. J. Pearson, containing Rpt of Maj Charles A. Ellis on CIC Training, Subject: CIC Training School, dtd 19 Jan 42, (CONFIDENTIAL) (Central Records Facility).

27 Memo for Captain Smith from Captain Sheen, Subject: School Schedule, dtd 25 Jan 42, (Unclassified) (Kansas City Records Center).

28 Training History of CIC, (CONFIDENTIAL) (Central Records Facility).

29 Memo for the Chief, CIC, Subject: CIC Investigator's Training School, Chicago, Ill., dtd 3 Sep 42, (Unclassified) (Central Records Facility).

The staff study was accomplished under the direction of Col P. H. Timothy who visited the school from September 15-18. A single word could best summarize Colonel Timothy's opinion of the entire school: inadequate. Among the shortcomings discussed were the following:

"a. Housing - Present facilities for classrooms, office space, and sleeping accommodations are inadequate. Lighting is poor throughout. Rooms are overcrowded. Neither classrooms nor bedrooms are satisfactory for study purposes.

"b. Staff and Faculty - Inadequate. There are at present nine officers on duty at the school. The Commandant, a Major, instructs and has little time to supervise school activities. The Executive Officer and Adjutant, a Captain, also instructs. The Supply Officer, a Lieutenant, instructs in addition to his supply duties. Four Captains and two Lieutenants instruct without additional administrative duties.

"c. Assignment of Officer Graduates - Student officers are procured through allotments to the various Service Commands. They are ordered to the school on temporary duty and upon graduation revert to control of the service commands. The bulk of the graduates, consequently, are not assigned Counter Intelligence Corps duties, for which trained at the school, but are assigned post intelligence, public relations, or duties not connected with intelligence activities...

"d. Directive - No approved directive was available covering school objectives, the procurement and assignment of students. Furthermore, certain subjects now taught at the school such as pistol marksmanship, could be taught in the field under the supervision of the Directors of Intelligence and the time saved devoted to other important school subjects...

"e. Methods of teaching - The classes are too large due to lack of sufficient classrooms and instructors. The methods of teaching are believed sound and effective. However, much improvement can be made through the use of more and better visual aids. Copies of Army and FBI training films and slides should be provided for the school...In lieu of the exclusive use of blackboards, charts mounted on cloth and rolled on sticks should be prepared for use whenever practicable. A projector is needed for slides. Some of the existing equipment needs replacement."[30]

In the course of his survey, Colonel Timothy had come across many weaknesses in the school. He did not have to search for these failings; they had been apparent for many months to the school administrators and officials at CIC Headquarters. There was no single doorstep to which the school troubles could be

30 Memo for the Chief of the Military Intelligence Service from Col P. H. Timothy, Subject: Inspection of CIC Training School, Chicago, Ill., dtd 19 Sep 42, (Unclassified) (Central Records Facility).

traced. In the overall mobilization of the country, the affairs of the Counter Intelligence Corps Training School were only a small part of the large war problem.

The most significant disclosure of the staff study of the school was the fact that conditions which had been more than satisfactory for the training of the CIP agents prior to Pearl Harbor were no longer adequate. Formerly comfortable quarters were now cramped, classroom space had dwindled from ample to scarce, and the ratio of instructors to students had taken a sharp decline.

The change in the physical facilities of the school was not solely due to the increased student body. The Navy had been assigned space in the Tower Town Club and the rooms of the hotel building bulged with Armed Forces personnel.[31] Students now got off the elevators at decks instead of floors.

The recognition at high levels of the plight of the CIC Training School proved to be a cue to action. Within a few weeks after the staff study was published, a memorandum from General Strong to the Adjutant General requested that the Commanding General, Services of Supply, locate new quarters "within an approximate two-mile radius of the center of Chicago, Illinois" for the school. The urgency of the move was increased when the Navy developed aspirations of expanding the space allotted to them in the Tower Town Club. The letter was sent forward marked "immediate action."[32] A new location for the school was found at 66 East 11th Street on Chicago's South Side, and the shift was made during November 1942.[33]

Even while these changes in the facilities of the school were being contemplated and accomplished, plans were crystallized for streamlining the training of potential CIC agents. Prior to Colonel Timothy's visit to the Chicago school, a plan was devised that would make the Chicago CIC School an Advanced Training School. The initial instruction of agents would be delegated to preliminary CIC schools within all Departments and all Service Commands except the Ninth, which was to be included with Western Defense Command and Fourth Army. A memorandum dated 3 November 1942, to the Adjutant General suggested that courses be conducted for periods of not less than three and not more than four weeks.[34] The The AC of S, G2, would assume responsibility for assigning quotas of commissioned and noncommissioned officers for attendance at the CIC Advanced Training School

---

31 Training History of CIC, (CONFIDENTIAL) (Central Records Facility).

32 Memo for the Adjutant General from Maj Gen George V. Strong, Subject: CIC Investigator's Training School, (CONFIDENTIAL) (Central Records Facility).

34 Memo for the Adjutant General from Maj Gen George V. Strong, Subject: CIC Training Schools, dtd 3 Nov 42, (CONFIDENTIAL) (Central Records Facility).

to be filled by the various commands. Students selected for the Chicago school would be placed on temporary duty by their respective Commands and would report and remain in civilian clothing throughout the training period.

This two-level training program was designed to ease the load of the Chicago school without reducing the number of CIC agents. All members of CIC would receive similar fundamental training. Specialized training could be offered to selected agents without hindering the efficiency of detachments in the field. Officers and enlisted men already graduated from the Advanced CIC School would serve as training cadre.[35]

The program met with quick approval. On 11 November, a letter was dispatched to the Departments and Commands calling for the establishment of the preliminary training schools. Enclosed with the letter was a list of the basic courses that would be taught in the Service Command schools, and also the revised curriculum of the Advanced Course.

CIC Training School instructors took the initiative in suggesting changes in the program, and the new curriculum for the Chicago School[36] included several courses previously not taught. These included the Delimitation of Jurisdiction Agreement; a short lecture on Counter Intelligence Corps Detachments in Theaters of Operation; a brief history of the Corps of Intelligence Police in World War I; and countersubversive systems. Hours were added to such courses as counterespionage and countersabotage. The Counter Intelligence Corps School was beginning to prepare agents for CIC's biggest task in World War II, service with the tactical commands in areas of operations. The school still turned out investigators, but many were destined to be "gumshoes" in combat boots.

The change in administration and instruction at the Chicago school late in November 1942 was accomplished by a revised Table of Organization that called for a total of 18 commissioned officers. The Headquarters Detachment also had to be staffed by non-CIC personnel to perform maintenance services and operate the mess. The TOE was adjusted to allow for a total of 26 enlisted men to take care of these functions.[37]

The Chicago school continued to operate at 66 East 11th Street without significant changes in curriculum until July 1943. By this date, high level planners realized that the CIC School was the victim of a considerable time lag. CIC agents had been overseas with combat units for many months and yet the principal training

35 Interview with Arthur K. Peters, Major, MI Reserve.

36 Curriculum attached as Appendix 2.

37 Memo for the Chief of Staff, from Maj Gen George V. Strong, Subject: CIC Advance Training School, dtd 11 Nov 42, (CONFIDENTIAL) (Central Records Facility).

school for these agents was still concentrating on preparing investigators for domestic service. Something had to be done to bring the school up to date.

The something turned out to have two phases: a change in instructors and a completely overhauled curriculum. CIC Headquarters turned to foreign areas of operation to locate new members of the faculty. Lieutenant Colonel William B. Parsons, commander of the detachment in North Africa was transferred from NATOUSA to Chicago on 16 July to be commandant of the school. Major Walker became executive officer. Men with combat experience, such as Paul Heegard-Jensen, were placed on the faculty as instructors. Up to this time, the instructors had been of uniformly high caliber. But they all had similar professional backgrounds: members of State and Federal Police organizations, district attorneys, treasury officials, special agents who had recently completed OCS.[38]

The revamping of the curriculum was along logical lines. The new instructors were freshly returned from combat zones. Their experiences and the lessons they had learned would provide the core of practical data around which lectures on frontier and travel control, troop security and other combat CIC concerns would be constructed. No single sweeping change was made in the curriculum. The goal was apparent and the CIC School Staff worked steadily toward it.

By January 1944, a course of study had been evolved that seemed to answer the training needs of agents destined either for work in the Zone of Interior or with tactical detachments overseas.[39] The final curriculum accented schooling in the work of CIC detachments in the various theaters of operation, allied and enemy political intelligence and police systems, and additional hours of security. Investigative training was not made subordinate: 101 hours were devoted to surveillance, interrogation, report writing and allied subjects. Moulages, microphone planting and several technical subjects were deleted to free hours for the new courses.

A major change in the administration of the Chicago school during this time of revision was the requiring of all school personnel to report in and attend school in military uniform. There was no worry about compromising agents, most of whom would soon be wearing the bright red "CIC" brassard on their arms in combat areas. With the donning of the uniform came a new stress on "soldiering." Command inspections and unarmed combat military drill were included in the program for students who understood that they would be soldiers first and agents second.

The Counter Intelligence Corps School that evolved from these modifications was far different from the original Washington CIP School. No longer were agents

38 Training History of CIC, (CONFIDENTIAL) (Central Records Facility).
39 Curriculum attached as Appendix 3.

"detailed" to receive instruction, often in subjects in which they had long practiced in the field. The men attending the Chicago school at the end of 1943 were for the most part engaged in serious study that would teach them how to perform their counterintelligence duties effectively wherever in the world they were sent.[40]

The report of the Inspector General who took CIC operations in the Zone of Interior out from under G2 doomed the revised Chicago CIC School to an early demise. Early in November 1943, the Commanding General of the Sixth Service Command announced that General Strong, the AC of S, G2, had agreed to release control of the CIC Advanced Training School to the Sixth Service Command. This announcement was followed by a proposal to move the school from Chicago and merge it with the Provost Marshal General School at Fort Custer, Michigan.[41] This was the same idea CIC had vetoed in 1941. The argument was the same: that both the Provost Marshal and the counterintelligence investigators were charged with similar responsibilities and that the personnel of both organizations were mainly individuals who had been lawyers and investigators in civilian life. The difference in purpose and procedure between intelligence and criminal investigations was overlooked or bypassed.

In a memorandum to Colonel L. R. Forney, dated 6 November 1943, Colonel Kibler put up what amounted to a last ditch fight for the Chicago school. His arguments in defense of the school were numerous and urgent. Some were based on current Army Regulations, some on the past performance of the school, and some on common sense. Included were the following points:

> "Direct control of the school by the Office of the Chief, CIC, permits immediate changes and modifications in training to meet changing conditions in the various theaters...
>
> "The Counter Intelligence Corps is presently engaged in a special operation involving the transfer of the bulk of the Corps from duty in the Zone of Interior to duty in theaters of operation and with tactical units... To successfully accomplish this movement, and to provide the theaters with highly trained men, it was necessary to utilize the entire facilities of the school for the instruction of three classes of 270 men each in a revised program based squarely on the immediate, current theater needs. The ability to make such a quick and sudden shift in the activities of the school was only possible because the school was under the control of the office of the Chief, CIC...
>
> "For many months the school has been built into the consciousness of the members of the Corps. It has become the center of the morale and esprit de corps of the entire Corps...

40 Curriculum attached as Appendix 4.

41 Memo for Col L. R. Forney, from Colonel Kibler, Subject: CIC Advanced Training School, dtd 6 Nov 43, (CONFIDENTIAL) (Central Records Facility).

"The present physical establishment of the CIC Advanced Training School has been the result of many months of experimentation and testing, and only within the last months have there been secured what are considered complete and adequate facilities."[42]

The earnestness of Colonel Kibler's opposition to the closing of the school was no match for the determination of high level commanders to follow the Inspector General's suggestions. On 5 February 1944, the twenty-fourth enlisted class graduated from the Counter Intelligence Corps' Advanced Training School in Chicago. From the school's inception in November 1941 to this date, approximately 3,000 enlisted men and 1,000 officers had attended the Chicago course.[43]

Jurisdiction of the buildings and training was transferred to the Provost Marshal General's office, and the name of the school was changed to the Security Intelligence School. The change came so rapidly that orders cut on CIC personnel were not rescinded and the first class at the Security Intelligence School consisted largely of CIC agents.[44]

Chapter 3

MILITARY INTELLIGENCE OFFICER CANDIDATE SCHOOL

The qualifications required of an individual for selection as a CIC agent were at least equal to the qualifications of an applicant to Officer Candidate School. Many War Department officials admitted that the CIC requirements were even stiffer than the standards set for OCS students. It was evident to many individuals that a program for commissioning selected CIC agents was highly desirable, but the Military Intelligence Division had no OCS of its own. Enlisted intelligence men who wanted to receive a commission had to attend an OCS conducted by a combat arm of the service.

On 5 December 1941, two days prior to the attack on Pearl Harbor, radiograms had been sent out from CIP Headquarters in Washington to all Corps areas and departments, urging that all qualified and deserving CIP agents be sent to certain Officer Candidate Schools under quotas allotted to the Corps areas and departments. Less than two months after the United States entered the war, a staff study authorizing the appointment of CIC personnel to the grade of Second Lieutenant, MI Reserve was prepared. A representative of the Assistant Chief of Staff, G1, revealed that this plan was generally acceptable but suggested that it would be more suitable to conduct the CIC School in Chicago as an Officer Candidate School for the Military Intelligence Division.[45]

On 3 February 1942, Capt Sylvester P. Smith, the Commandant of the CIC School in Chicago, received a memorandum from Capt H. G. Sheen, the Chief, CIC, that recounted elements of a telephone conversation the two men had held a few days previously. Captain Sheen noted that an Officer Candidate School for CIC personnel "considered qualified for commission" was needed. He suggested that this school be conducted as an advanced version of the CIC School with the addition of courses suitable for the education of future officers. The factors that Captain Sheen termed essential for eligibility were completion of basic military training, service as a CIC agent for a period of not less than six months, successful completion of the CIC basic course, and "demonstration by actual performance of duty his fitness for commission."

Selection was to be initially the responsibility of an individual's immediate commanding officer. But the choice would have to be approved by the Assistant Chief of Staff, G2, of the headquarters to which the individual was assigned and confirmed by the AC of S, G2, War Department. The Chief, CIC, would be authorized to select three students at large for every course.

---

45 Office Journal, Headquarters CIC from 27 Jan 41 to 1 May 42, entries dtd 5 Dec 41 and 23 Jan 42, (CONFIDENTIAL) (Central Records Facility).

Captain Sheen included in the memorandum an outline of courses that he deemed essential for the instruction. Listed were the following:

1. Military history of the United States.
2. Organization of the Army.
3. Military customs, courtesy and service.
4. Company administration.
   a. supply
   b. mess management
5. Military law and courts martial.
6. Map and aerial photo reading.
7. Military hygiene and first aid.
8. Defense against chemical warfare.
9. Scouting and patrolling.
10. Rifle and pistol marksmanship.
11. Bayonet combat.
12. Military correspondence.
13. Camouflage and field fortification.
14. Military Intelligence (to include organization of the Military Intelligence Division, War Department General Staff, combat intelligence, including interrogation of prisoners of war, censorship, public relations and all allied matters).
15. Refresher course of basic CIC School.[46]

Captain Sheen's memorandum reflected the considerable thought that had been given to the idea of an Officer Candidate School for the Military Intelligence Division. But there were still numerous administrative matters to be accomplished before the plan on paper became a reality. In Chicago, Capt James B. Long, a member of the staff of the CIC School, conferred with representatives of the National Park Service trying to obtain the facilities of a former Civilian Conservation Corps camp located some 17 miles from the city. By 6 February 1942, however, conferences with the Commanding General of the Sixth Corps Area revealed that space, shelter, all facilities, equipment and personnel could be provided at Fort Sheridan, and CIC officials regarded this arrangement favorably.[47]

Two months and one staff study later, the first (and only) Military Intelligence Officer Candidate School in the history of the United States Army was opened at the Illinois Women's Athletic Club in Chicago. Major Long was designated as Commandant. Captains Kent Carris and E. C. Townsend and Lieutenants

R. W. Tucker and A. K. Peters were assigned as instructors. The first class of 30 candidates reported on 20 April and undertook an eight-week course that was primarily geared to train the agents in subjects provided in any OCS; a background in investigative work was a prerequisite for all the candidates.[48]

The course totaled 628 hours with 306 devoted to General Military Subjects. The candidates spent hours in Infantry drill, learning elements of scouting and patrolling, camouflage, fox hole construction, bayonet combat, and weapon firing. These courses were designed to acquaint the prospective officers with the combat responsibilities that they would have to shoulder. Specific duties required as intelligence personnel were also covered in the course, including instruction in maps and mapping, reconnaissance, and other combat intelligence problems. An additional 78 hours were spent in review of investigative procedures and other subjects that pertained to Domestic Intelligence. This varied program was designed to prepare the candidates for assignments either in the Zone of the Interior or overseas theaters to meet the need for trained intelligence officers that existed throughout the Army.[49]

All 30 agents that attended the Officer Candidate School successfully completed the course, a fact which testified not only to the careful instruction they received but also to the outstanding qualifications of the men themselves.[50] On 13 June, at a ceremony in the main ballroom of the Knickerbocker Hotel in Chicago, the graduates received their commissions as 2d Lieutenants in Military Intelligence. Major General George V. Strong, the AC of S, G2, WD, was present at the exercises and delivered the commencement address.[51]

Even while this OCS class had assembled to receive their commissions, plans had taken form to disband the school. In fact, four days before the men were to graduate, word came through that the Craig Board in Washington, which supervised the procurement and training of Army officers, had disapproved commissioning the Military Intelligence agents. After a good deal of discussion, a statement was released that the AC of S, G1, and the Craig Board did not consider the course at Chicago as a candidate school within the accepted definition.

The conclusion had been reached that the Military Intelligence Service and the Military Intelligence Division did not have sufficient personnel or sufficient demand for officer personnel to justify the continuance of an officer candidate school for Military Intelligence. It is interesting to note, despite this conclusion,

that CIC was shortly to have its authorized officer strength increased to 543 officers and that many officers were later commissioned from CIC ranks.[52]

The 30 men were granted their commissions. The Military Intelligence Division Officer Candidate School, however, was discontinued after this class had graduated.[53]

The irony of this was that the 30 commissions had been given to the Chief, CIC, to award direct. Since Captain Sheen came from an old Army family and had been to West Point, he did not feel that men should be given commissions without some officer training. The school was organized to provide it. A complaint of an agent with a foreign background who was not selected for the course, is said to have called the school to the attention of the Craig Board.[54]

Chapter 4

A SERVICE COMMAND PRELIMINARY TRAINING SCHOOL

Although there were some variants in the operation of the different Service Command Preliminary Training Schools, the CIC school maintained by the Third Service Command, was more or less typical in its procurement of personnel, its teaching methods and its administration.

On 11 August 1942, Headquarters, Counter Intelligence Corps Detachment, Third Service Command, moved into one of the former dormitories of Goucher College in Baltimore, Maryland. Six days later, the initial session of the CIC Training School for this Service Command was under way. The administration of the school was under the direction of the Detachment Commander. A lieutenant was designated as Training Officer, and a special agent performed the dual function of Sergeant Major for the Detachment and the School. All classes were conducted within the Detachment Headquarters Building.

A photographic darkroom and investigative research laboratory were established in the Headquarters building and completely equipped for photographic development, printing and enlarging, photostatic reproductions, and ultra-violet examinations.

The faculty that the Third Service Command gathered for the training school consisted of members of the detachment and outside speakers who simply accepted the teaching assignment as an added responsibility. This system eliminated the procurement of a large permanent faculty, and provided for experts and specialists instructing in the fields with which they were particularly conversant.

By 11 November, when the Adjutant General's letter requiring the Service Commands to institute CIC training schools was published, the Third Service Command School had already completed two separate sessions and had graduated 66 men for duty in the field.

The theory behind the Third Service Command School curriculum was that CIC training fell into two primary classifications: military and investigative. The military aspects were to be obtained at Basic Training Centers in order that an agent could function properly when assigned a military mission. The investigative aspects were the responsibility of the Counter Intelligence Corps. The Service Command felt that it should provide the basic investigative training and the apprentice training in a field office. Further specialized and advanced training was considered the province of CIC Headquarters and the War Department.

The training program was designed for classes of four weeks duration, and of sufficiently wide scope to:

"1. Teach agent to handle himself properly under all circumstances before anyone, in a manner that will reflect credit to the Corps.

"2. Keep agent out of trouble generally.

"3. Teach agent to recognize urgent important facts or 'hot' leads and what to do with them.

"4. Cause agent to know his limitations and not to hesitate to get competent help when the situation requires it.

"5. Orient agent so that he will know what is expected of him, in what subjects he is weak, and from what sources he can secure help in overcoming these weaknesses.

"6. Show agent how to get started off on the right foot, practicing good investigative procedure."

With these six points as a guide, the Third Service Command evolved a full scale training program. When the prospective agents arrived at the CIC detachment, they were greeted and given living quarters in the building. After filling out administrative forms, they were dispatched to purchase civilian clothing. Lectures on security regulations, safeguarding military information, supplies, and report writing as well as typing and driving lessons were included in the "pre-training duties." The trainees were strictly enjoined to avoid revealing their connection with CIC unless required by the nature of their duties. They also were warned to avoid congregating in groups with fellow agents when outside the building and never to "talk shop" in public places. To underscore these requirements, each prospective agent took an oath which bound him to the maintenance of secrecy about his assignment.

The formal curriculum taught at the Third Service Command entailed almost two hundred hours of training for the role of investigator. Included in the course of study were forty-six hours of subjects grouped as "investigative" (e.g., observation and description, surveillance and undercover, personnel investigation), seventy hours of "technical and practical" studies (e.g., fingerprints, microphone installation, moulage, plaster casts), fourteen hours on "laws," five hours on "government agencies," eleven hours on "pistol marksmanship," and six hours on "espionage and counterespionage."[55]

55 Curriculum for Third Service Command School attached as Appendix 6.

CONFIDENTIAL

Upon completion of this course, the trainees were sufficiently well educated in investigative procedures to begin work as apprentice agents in Service Command field offices. Under the guidance of a special agent, each newly trained agent was given practical experience for four weeks. After showing himself to advantage during this apprenticeship period, the agent was advanced to the title of special agent and became eligible for further training at the CIC Advanced Training School in Chicago.[56]

56 All material in this section is drawn from: Report of Counter Intelligence Corps Investigator's Training School, Third Service Command, Baltimore, Maryland, complying with War Department letter AG 320.999 CIC (11-3-42) OB-D-B-M, subject: Counter Intelligence Corps Training Schools, dtd 11 November 1943. (Unclassified) (Central Records Facility).

Chapter 5

CIC STAGING AREA

Education for investigative work was one phase of CIC training; education for combat activity was another. By mid-1943, most of the agents of CIC had completed eight weeks of basic training. Few had more than a nodding acquaintance with the weapons and techniques of the fighting men. The Chicago Advanced Training School, with its desks and blackboards, was hardly an adequate place for combat indoctrination, and the CIC planners saw the necessity for a staging area once the CIC role with tactical units became evident.

Many Difficulties Encountered at Ports of Embarkation

Another reason for a CIC Staging Area was the need for equipping CIC agents with special items, such as civilian clothing, to avoid compromise of the men at the ports of embarkation. Some difficulties encountered in processing CIC groups for overseas shipment were mentioned in a letter to the Chief, CIC, from a harrassed captain at the New York Port of Embarkation, shortly after the invasion of North Africa had been undertaken. Among the problems that were listed was the inadequate and contradictory Table of Equipment for CIC agents:

> The orders glibly recite, in what is probably approved form, that the men should be equipped in accordance with Table So-and-So for overseas service. In the first place the table cited, as amended up to date, makes no mention of impregnated clothing, which throws the entire allotment of clothing out of balance. At the present time, the authorities issuing the clothing take the position that the men are entitled to only one outfit of clothing, which suits everyone, and only one other complete outfit, which suits no one. Presumably, the men can hole up for the time necessary for periodic cleaning of their one suit of clothing...One day we are told that summer clothing is necessary - or permissable, and the next day, that it is not...[57]

Snafus similar to these frequently plagued CIC detachments during the critical days in which the units were staging for overseas duty.

One of the earliest recognitions of the need for a CIC Staging Area was recorded in a memorandum from Brigadier General Hayes A. Kroner, Chief, Military Intelligence Service, to Chief, CIC. Dated 6 May 1943, the memorandum

---

57 Ltr from Capt Earl Pettus, Fort Hamilton, N.Y. Overseas Staging Area to Chief, CIC, dtd 17 November 1942, Subject: Embarkation of CIC Detachments for Overseas Stations, (SECRET) (Central Records Facility).

CONFIDENTIAL

read, in part, "I am aware of the fact that no authority exists at the present time for a CIC casual detachment where personnel may be refreshed in up-to-the-minute information and directives just prior to being sent to the battle theater..."[58] By 15 May, Colonel Kibler was attempting to correct this lack.

Another factor which gave impetus to the creation of the staging area was a letter from the Adjutant General in March 1943, assigning quotas to Service Commands for an eight-week training program at Camp Ritchie, Maryland, designed to ready CIC personnel for overseas tactical duty.[59] But as Colonel Kibler stated, this training was primarily designed for "the instruction of the intelligence personnel of combat units, and for the instruction of language men being trained in the intelligence of enemy prisons." Colonel Kibler strongly recommended that the assignment of CIC agents to Camp Ritchie be discontinued and a CIC Staging Area established in lieu of this program.[60]

CIC Staging Area Activated

On 26 June 1943, a memorandum from Colonel Kibler to the Chief of the Counter Intelligence Group stated that space had been obtained at the Army Air Base, Logan Field, Baltimore, Maryland for a CIC Staging Area.[61] In addition, facilities had been offered for specialized training at Fort George G. Meade, Fort Holabird, and Fort Hunt.

The Staging Area was activated on 3 July 1943 by verbal directive of the Chief, Military Intelligence Service. Two days later the initial class entered training with 34 CIC agents (including officers) present. For men used to desk jobs, the schedule was arduous. There was no time to waste in preparing the men physically and mentally for combat duty.

The first week involved training at Logan Field in School of the Soldier: marksmanship with .45 automatic pistol, .38 revolver, sub-machine gun, and the M1 rifle; map reading; tent pitching; and other military subjects. At the close of this week, the trainees were transferred to Fort Hunt in Washington. Here the classified portion of the staging area program was undertaken with

0959

instruction given by members of the Prisoner of War Branch. Courses in escape and evasion, resistance to interrogation, Geneva Convention, and camp conditions were included in this highly specialized training.

After a week at Fort Hunt, the trainees were on the move again, back to Baltimore and the Holabird Motor Base. During the third week, the men at the staging area learned about the mechanics and operation of Army vehicles. In addition to practical driving tests, there were courses in motor "trouble shooting" and field expedients and blackout driving. The men were returned to Logan Field for the final phase of their staging area training at the end of the week.

The fourth week was dedicated to an accelerated program of physical training which included an overnight hike, review of marksmanship, drilling and preparation for departure.[62] By 31 July, the first group to enter the staging area had been transferred to theaters and tactical units. Some went to NATOUSA for special duty in Sicily, some to the China-Burma-India theater, and some to tactical units within the Zone of the Interior.[63]

Main Facilities of Staging Area Moved to Holabird

The CIC Staging Area had hardly been established at Logan Field for a month when the Air Corps requested the return of its loaned facilities to accommodate a new fighter command. CIC headquarters turned to the nearby Holabird Ordnance Depot where the motor training had taken place and asked if additional space could be made available.[64] Arrangements were made and on 8 August, Staging Area training became centered at Holabird. The new location proved superior in many respects. More men could be trained simultaneously, and the facilities were leased for a period of twelve months.

The physical facilities at Holabird were also more satisfactory. Barracks equipped with showers and latrines were available for approximately 30 officers and 150 enlisted men. Mess facilities for these personnel were available, and the administration section was provided with one building which served as an office, supply room, and day room. Space for two class rooms in the southwest

section of the post near Colgate Creek were also furnished.[65] No one realized then that three years later Holabird would become the postwar home of CIC.

The curriculum at the Staging Area remained substantially unchanged despite the new location. However, one significant feature was added. After four days at Fort Hunt, the trainees were shipped to the Military Intelligence Training Center at Camp Ritchie. Here, for two days the men were taught the fine points of knife-fighting, street fighting, house fighting, and unarmed offense.[66]

As reports filtered in from theaters of operation on the effectiveness of the Staging Area, revisions and additions were made to the program. By 30 August, the course was lengthened to six weeks under this new program. An entire week was spent at Camp Ritchie under the guidance of counterintelligence instructors who gave extended lectures and problems in map reading, scouting and patrolling, enemy identification, and port and field security. In addition the techniques of close fighting were included as before.

The course at Fort Hunt was maintained under the new curriculum, but it was compressed into three days. The time thus saved was spent at Fort Belvoir where the trainees were instructed in camouflage and camouflage discipline, mines and booby traps, methods of search and disposal of explosives. Approximately 700 officers and enlisted men received this three-day training.[67]

The second additional week was gained by the inclusion of special courses and trips in the vicinity of Baltimore. Time was spent inspecting the Port of Baltimore with lectures enroute on Port and Harbor security, Cargo Search and Placement, and Ship Search. For most of the men attending the Staging Area, these were subjects which had been completely neglected in previous training. CIC's mission in many theaters soon brought into play many of the principles that approximately 725 trainees learned in their tour of the Baltimore harbor.

Industrial Security Added to Program

Industrial security was another phase of the revised program. An afternoon was spent by the trainees at the Glenn L. Martin plant where critical war industry

67 Training History of CIC in World War II, (CONFIDENTIAL) (Central Records Facility).

CONFIDENTIAL

was in progress. A tour of the plant under the instruction of the security officials permitted a view of actual protection procedures. Approximately 940 CIC officers and enlisted men took this tour.[68]

Although these new features of the Staging Area seemed more closely allied to the specialized work of CIC, the goal of the Staging Area remained primarily the preparation needed to meet the physical rigors of combat. A letter received from a CIC agent stationed in New Guinea stressed the importance of physical conditioning for the agents:

> The first battle that every man in this section fights is the one to keep himself physically fit...A soldier must be in perfect shape when he comes here, and he must know how to keep himself in shape. That is his first duty.
>
> The US Army is mainly a civilian Army, but do not let them act like civilians when they get into an operations zone. Give them hell now, and they will thank you for it later.[69]

The Staging Area was never a literal "hell" for the trainees, but hundreds of CIC agents were transformed from civilians to soldiers during their brief stay.

Modifications in the Staging Area program continued until the Area was deactivated on 5 February 1945. Some changes were desirable and others were simply necessary. With the transfer of Camp Holabird from Ordnance to Signal Corps control, the automotive course had to be taught at Aberdeen Proving Grounds, about 30 miles from Baltimore, after 8 November. Approximately 400 officers and enlisted men took the Aberdeen training. The course of instruction remained essentially the same despite the change in locale.[70]

Staging Area Deactivated

With the curtailment of CIC activities in the Zone of the Interior, the Staging Area was officially discontinued. However, in reality it continued as a "Casual" center until 10 May 1944 in order to train the last scheduled personnel for the

0962

European Theater. These were for the most part personnel from the Office of the Chief, CIC, which was discontinued on 5 February.[71]

On 29 January 1944, authority was granted for establishment of a CIC Overseas Pool at Fort George G. Meade, Maryland. Physical training and refresher courses were given agents here just prior to shipment.[72]

In reviewing the activities of the Staging Area, Colonel Kibler remarked that the program had been designed to accomplish two specific purposes:

a. To bring about an orderly transfer of CIC from Service Commands to theaters and tactical units.

b. To permit a more careful selection and organization of detachments for tactical organizations and to provide an opportunity for specialized training.[73]

These objectives had been achieved during the six months of the CIC Staging Area operation; 218 officers and 2,201 enlisted men were processed, trained and moved through the Staging Area. The training gap left by the CIC Advanced Training School in Chicago, even with its revised program, had been filled temporarily.

Staging Area Administration

The organization of the Staging Area constituted a major problem from the time when the Area was only a plan on paper. First to be considered was a dual procurement matter; how to get trainees from the Service Commands and where to get instructors. The first was solved by notifying the Service Commands in June of the number of men to be withdrawn monthly through November 1943 for Staging Area training.[74] These requests were made with the understanding that most of the men who completed the Staging Area would not revert to control of the Service Commands that sent them. Instead, they would be ticketed for overseas duty.

74 Memorandum for Chief, Counterintelligence Group from Colonel Kibler, Subject: CIC Staging Area, Baltimore, Md., dtd 7 February 1944, (Unclassified) (Central Records Facility); and Memorandum for Chief, Counterintelligence Group, Subject: Activation of CIC Staging Area, dtd 25 June 1943, (SECRET) (Central Records Facility).

The officers selected for training were drawn in part from the members of CIC Headquarters. Lt Col Neville K. Adkinson was initial Commanding Officer of the Staging Area. He was relieved to assume duties as Executive Officer of CIC and was succeeded by Capt Ralph Sims in August.[75] Capt LeRoy C. Hill commanded from December 1943 through May 1944. Officers who participated in the Staging Area program were often detailed to serve as student instructors, to gain familiarity with command and respect from the enlisted men who frequently were to serve under them in combat. Since many of these officers had never attended Officer Candidate School in a combat arm, a one-week, pre-training, indoctrination course was provided to teach them the principles they in turn would be teaching at the Staging Area.[76]

Strict adherence to the standards of military discipline and courtesy was demanded of all the trainees, most of whom were accustomed to rather informal relations between officers and enlisted men. The following general schedule was put into effect to be observed by all personnel assigned to the Staging Area:

First Call	0545
Assembly	0555
Reveille	0600
Calisthenics	0600
Breakfast	0645
Sick Call	0730
Drill Call	0755
Recall	1150
Dinner	1200
Drill Call	1255
Recall	1730
Supper	1800
Tattoo	2100
Call to Quarters	2245
Taps	2300 [77]

Although the duty hours were long, the training rugged, and the requirements on the individual trainee rigid, reports from official Staging Area observers

Chapter 6

CIC TRAINING AT THE MILITARY INTELLIGENCE TRAINING CENTER

The Inspector General's report of November 1943 that spelled the end of CIC's domestic role also threatened to deactivate all CIC training programs in the Zone of the Interior. However, an important factor had been neglected by the efficiency-minded officials of the War Department; CIC still had an overseas mission to perform.

On 4 January 1944, Colonel Kibler met with the Chief, Counter Intelligence Group, to devise a means of training CIC agents for duty in overseas combat areas. The plan that appeared most feasible was to send CIC personnel to the Military Intelligence Training Center (MITC) at Camp Ritchie, Maryland.[79] Agents would be enrolled in the General Intelligence Course, which included some counterintelligence training. They also would receive special instruction in subjects formerly taught at the CIC Advanced Training School in Chicago. Instructors for the CIC subjects would be selected from the personnel who had taught at the Advanced Training School.[80]

Program Works Out on Paper Only

This plan was duly placed on paper, but the proposed training program soon became enshrouded in a fog of uncertainties and vaguenesses. When the fog had lifted, it was clear that no formal CIC training was to take place at Camp Ritchie. Usually, only officer personnel, newly assigned to the Counter Intelligence Corps, were sent to MITC for the General Intelligence Course. Only occasionally did small groups of enlisted men enrol in this course.[81] CIC

CIC training remained in this indefinite status for more than six months despite the issuance of War Department Memorandum 350-44 on 12 June 1944 which outlined a three stage training program for CIC personnel consisting of:

---

79 Memorandum from Lt Col Hugh D. Wise, Jr., to Assistant Executive Officer, CIG, Subject: Items of Interest Pertaining to the CIC, dtd 8 January 1944, (CONFIDENTIAL) (Central Records Facility).

80 A memo for the Deputy Chief of Staff from Maj Gen George V. Strong, dtd 2 December 1943, (CONFIDENTIAL) (Central Records Facility), indicates that although all CIC training was to end not later than 5 February 1944, the "Staging Course" at Camp Ritchie was to continue. General Strong apparently first conceived the idea of expanding facilities at Ritchie to encompass all necessary CIC training when the other facilities were shut down.

81 MITC Training File, (CONFIDENTIAL) (Central Records Facility).

(1) A 17-week basic tactical and technical training program to be provided by the Army Service Forces at the Provost Marshal General's Replacement Training Center, Fort Custer, Michigan.
(2) A four-to-six-week investigative training at the Security Intelligence School (the successor to the CIC Advanced Training School) in Chicago.
(3) A eight-week general Intelligence Course at the MITC.

An attempt was made to start the first phase of the CIC training at Fort Custer, Michigan, but the effort was abandoned when no personnel were procured. A staff study of the plight of CIC training, completed on 7 August 1944, concluded that War Department Memorandum 350-44 was unsatisfactory, since it required too long a period of training before personnel were prepared for assignment to overseas theaters of operation.[82]

On 11 August 1944, Maj G. L. Staudt, Chief of the CIC Section, met with members of the MITC staff to attempt a consolidation of the informal training arrangements that had been made for CIC personnel. At the conference, it was noted that MITC was currently teaching the majority of the 58 subjects deemed essential for a CIC agent. In order to train CIC personnel on a full-scale basis, no additional instructors were needed. The MITC officers suggested, however, that experienced CIC members be returned from theaters of operation for temporary duty at MITC to advise and assist in the instruction. The meeting was ended with the understanding that the MITC would be ready to start CIC classes composed of sections of 30 students by 22 September.[83]

One immediate result of this meeting was that the number of CIC agents assigned to Camp Ritchie for General Intelligence training beginning 22 August was promptly stepped up from 10 to 30.[84] The period in which CIC agents had been slipped into the MITC program under rather nebulous agreements was at an end.

A revision of War Department Memorandum 350-44, dated 7 September 1944, established CIC training on a solid basis once again.[85] On 21 September, the first CIC class under this new authorization embarked on the eight-week course

0967

designed to prepare the 121 officers and enlisted men for overseas assignments. The CIC Section in Washington undertook the preparation of a CIC guide book to assist the instructors, and monthly CIC information reports and other field reports were forwarded to Camp Ritchie to be used as illustrative material in the CIC course.

Many of these documents were of current intelligence value, and security precautions were not overlooked by the inclusion of this classified material in the course of study. The note appended to the documents stated that "Reproduction of any of the items submitted for use in training purposes will be authorized provided the classification is maintained. Since CIC trainees will handle confidential and secret material to a major extent when assigned to CIC detachments, it is believed they should be permitted access to such material while in training. Any breach of security discipline with regard to classified material will be considered lack of discretion sufficient to disqualify the individual for assignment to CIC and all students should be so advised."[86]

Counterintelligence Simply One Phase of MITC School

Despite these preparations by the CIC Section in Washington, the MITC program for CIC personnel did not deviate to any large degree from the General Intelligence Course that had been the standard instruction at Camp Ritchie. Counterintelligence was simply one phase of the training, consisting of a total of 24 hours. CIC trainees received an additional "specialist course of instruction" of 82 hours that was tailored for their future needs.[87] But the requirements of the revised War Department Memorandum 350-44 were still not met. The Memorandum called for a general breakdown of CIC training as follows:

1.	Investigative subjects	83 hours
2.	Security subjects	41 hours
3.	General subjects	31 hours
4.	Field subjects (including a 7-day field problem employing all subjects)	297 hours
5.	Allied subjects	28 hours

The course that actually was given was but a dull reflection of the Counterintelligence Section's outlined program. As late as 7 January 1945, the Commandant of the MITC contended that "The CIC students are not a separate class, but are part of each regular class undergoing a course of instruction at the MITC...

86 Ltr from Major Staudt to Major Winkler, MITC, Subject: Material for Instruction in CIC Course, dtd 14 October 1944, (SECRET) (Central Records Facility).

87 MITC curriculum, August-October 1944, attached as Appendix 7.

Special scheduling of special students or special sections is confusing to the extent that the regular instruction suffers immeasurable harm."[88] CIC training had been officially authorized, it had become part of an Army school, and it had been given to several hundred officers and enlisted men. But despite the efforts of officers at the CIC Section, the training fell far short of the goal anticipated by WD Memorandum 350-44.

The outlook was not entirely bleak. The Chief of the Counterintelligence Section at Camp Ritchie took a particular interest in the CIC trainees, and, after they had completed the regular eight-week MITC course, he accompanied some of them on a "post-graduate instructional visit to Hampton Roads Port of Embarkation, Newport News, Virginia.[89] The purpose of the three-day trip was to demonstrate the special problems of intelligence involved in port security. Another innovation in CIC training at MITC was the division of the students into "Counter-intelligence-ETO" and "Counterintelligence-Pacific" groups. Although the period of training was too short for real specialization, CIC graduates earmarked for theaters of operation were given a mild taste of the problems they would face.

Throughout the first six months of the MITC program, CIC officials persisted in their efforts to have courses of specific value to the CIC trainees added to the training program at Camp Ritchie. Only slight modifications were made in the standard intelligence course of the MITC, but by March 1945 the curriculum mirrored some important changes.[90] A careful course-by-course analysis of the extent to which the training program prepared agents for duties in the theaters of operation was completed in this month. It revealed significant shortcomings and omissions. Such matters as "Checking jails and all persons confined therein, impounding mails, establishing CIC office in the center of town, were only briefly touched on." The obvious inadequacies of the CIC training program caused Colonel Kibler (at this time, Executive Officer of the Intelligence Division) to write a memorandum in March 1945 that strongly indicated the need for some serious revamping of the Camp Ritchie CIC program. The memorandum stated in part:

> Within the limitations imposed by the Commandant, MITC, the Intelligence Division, ASF, has sought to specify the specific subjects within the regular training schedule of greatest benefit to CIC personnel

88 1st Indorsement of a letter to Commanding General, ASF, Attention: Director of Intelligence, dealing with the establishment of a language course for CIC personnel at Camp Ritchie, from Col Mercer C. Walter, Commandant, MITC, dtd 7 January 1945, (Unclassified) (Central Records Facility).

89 Memorandum for Colonel Kibler from Major Staudt, Subject: Special Activities Report, dtd 2 December 1944, (Unclassified) (Central Records Facility).

90 MITC curriculum, 11 March 1945, attached as Appendix 8.

and to bring about changes and additions to the regular course that would incorporate a maximum of Counter Intelligence Corps materials.

Under the former Commandant at MITC it was virtually impossible to secure changes in the schedule. CIC classes received the eight-week MITC course with practically no Counter Intelligence Corps modification.

With the advent of the new Commandant of MITC that situation was materially changed. The new Commandant has offered full cooperation and there have been...changes and additions in the course. The new Commandant is also seeking to replace certain faculty members with Counter Intelligence Corps personnel. The new Commandant does, however, concur with the former Commandant in the position that faculty and facilities will not permit a separate eight-week Counter Intelligence Corps course at MITC.

Colonel Kibler also enclosed an hour-by-hour comparison of the prescribed CIC training program (WD Memorandum 550-44) with the current course. The following breakdown was noted:

SUBJECTS	hrs in WD Memo	hrs in present schedule
Investigative	83	58
Security	41	31
General	31	66
Field	297	314
Allied	28	15
	480	484

Subjects such as "terrain intelligence" and "foreign maps" were still receiving an inordinate amount of the CIC trainees' time while courses such as "investigation of sabotage" and "CIC in tactical operations" were not being taught at all. A final shortcoming was noted in Colonel Kibler's summary:

> The facilities at Ritchie do not and cannot be made adequate for the instruction of certain specialized subjects of vital importance to the Counter Intelligence Corps; for example, in the investigative field, the course at Ritchie does not permit adequate instruction in surveillance, undercover investigations, technical laboratory equipment, methods of searching in municipalities, and actual problems concerning these subjects...[91]

91 Memorandum for Colonel Jones, G2, WDGS, from Colonel Kibler, Subject: Counter Intelligence Corps Training at MITC Camp Ritchie, Md., dtd 24 March 1945, (Unclassified) (Central Records Facility).

The lingering effects of the Inspector General's report of a year and a half earlier still permeated CIC training at MITC and the investigative aspects of security were often overlooked. Nevertheless, CIC's role as a field intelligence agency was clearly recognized. Although the end of the war in Europe was approaching, CIC officials soon began to concentrate on establishing a program for redeployment of CIC personnel for the Pacific Theater.

Redeployment Training at MITC

On 18 December 1944, the Director of Military Training, Army Service Forces, had disseminated a memorandum entitled, "ASF Military Training Policy After the Defeat of Germany." The initial paragraph contained a message that was, in effect, the preamble of a new CIC training program:

> All training activities during this period (post German conquest) will be conducted to prepare individuals, crews, teams, and organizations specifically for operations against JAPAN...Redeployment training will be the term used to designate the training conducted in the UNITED STATES for individuals and organizations returned from other theaters for eventual redeployment in the Pacific Theater.[92]

By 5 April 1945, CIC and MITC officials had prepared a suitable course outline for the redeployment training of CIC agents. The training was scheduled to cover two weeks and entail a total of 88 hours broken into major subject divisions as follows:

Terrain Intelligence	9 hours
Signal Intelligence	3 hours
Staff Intelligence	2 hours
Counterintelligence	47 hours
Enemy Armies	15 hours
Military Interpreters	7 hours
Combat Section	5 hours

Courses in investigation, interrogation, travel control, use of informants and other CIC duties especially oriented for the Pacific Theater were included, along with instruction dealing with "Japanese Racial Characteristics," "Japanese Espionage Agents and Techniques," and "Japanese Police Systems."[93]

92 ASF Military Training Policy After the Defeat of Germany (Reference Memo, Dir/MTD "Changes in ASF Basic Plan for Period 1," SPTRG 370.01 (Pl), 18 December 1944), (Unclassified) (Central Records Facility).

93 Report from MITC, Camp Ritchie, Md., dtd 5 April 1945, "Reorientation Training for CIC Personnel," (Unclassified) (Central Records Facility).

The Redeployment Training Program was given to personnel from ETO who had not gathered sufficient points for discharge and who were sent to Camp Ritchie prior to shipment to the Pacific Theater. A major problem confronted the instructors at MITC throughout the CIC Redeployment instruction. The men who were assigned to Camp Ritchie for training were, for the most part, experienced in CIC combat operations. The members of the second class submitted comments on the program that were largely unfavorable. While individual courses and instructors were praised, serious basic faults were found with the program:

> The great emphasis that most instructors give to the fact that the war in the Pacific is entirely different from war in ETO is a bunch of Malarky. This is especially true in the case of CIC.
>
> Many references as to the difference of CIC operating procedure in the Pacific from that in ETO have been made, but no evidence of such has been shown.
>
> The lecturers who happened to be veterans of the Pacific tended to give the impression that landing a couple of regiments on some Pacific atoll was a greater triumph than the whole victory in the ETO...

Particularly strong "gripes" were lodged about the practice of using instructors who had never been overseas to teach combat veterans, and the utilization of nine hours a day for training. Many of the unfavorable comments could be traced to a single cause. The men in the redeployment class had finished "their war" and were being transferred to another theater of operations before the exhilaration of victory had worn off.

With the unconditional surrender of Japan on 14 August, the need for preparing CIC agents for Pacific combat duty ended. The Redeployment Training program continued at Camp Ritchie with modifications suitable for preparing men for occupation duties.[94]

World War II was over, only the initial chills of the Cold War had set in, and CIC training, like many other military matters, entered into a new period.

Chapter 7

SPECIALIZED TRAINING FOR CIC AGENTS

In addition to the investigative training, some CIC personnel received specialized training that was designed to better prepare them for their assignments during World War II.

Berlitz Language Schools

To meet demands for more CIC agents with linguistic ability, an intensive 13-week language training program was established from 6 September 1943 to 4 December 1943. Arrangements for the instruction were made with the Berlitz Language Schools located in Baltimore, Maryland; Chicago, Illinois; New York, New York; and San Francisco, California.

One hundred fifty members of the Counter Intelligence Corps were selected for the Berlitz language training. They were temporarily attached to the Service Command in which their schooling was given. When not attending classes, the agents were assigned regular investigative duties.

By the time the courses were completed, 60 agents had received instruction in French, 40 in German, 20 each in Italian and Spanish, and 10 in Dutch. Each class was limited to five students so that the full benefit of the language instruction could be received.[95]

Language Training at University of Pennsylvania

To meet the heavy demand for German-speaking agents as the U.S. forces drove into the Rhineland, a radiogram on 23 December 1944 from the ETO CIC Chief to the Chief, CIC, in the War Department, recommended that agents shipped to ETO be trained in at least the rudiments of the German language. The recommendation was turned over to the CIC Training Section which presented a proposal to the Military Intelligence Training Center at Camp Ritchie for the addition of two weeks to the CIC training course for instruction in German. Officials at MITC demurred on two grounds: first, Camp Ritchie lacked qualified personnel to teach German; second, an extension of the regular MITC course from eight to ten weeks was undesirable because it would cause classes to overlap.

The Director of Intelligence turned to other sources. On 3 February 1945, he secured approval from the Director, Military Training, ASF, to institute a

95 Training History of CIC, (CONFIDENTIAL) (Central Records Facility).

course in training in the German language at the University of Pennsylvania.[96] Under the direction of Otto Springer, Professor of Germanic languages, the instruction was planned for a period of four weeks per class.

The initial class to enter this training began 22 February 1945 and continued until 21 March. Three other classes received training before the course was discontinued in June 1945, with a total of 263 men completing the studies.

In establishing the course, Professor Springer and his associates took heed of several difficulties. The men who were selected for the German training came to Philadelphia with varying degrees of proficiency in the language. For the purpose of more efficient and individual instruction, each class was subdivided from the outset into two main groups - beginners (men with little or no linguistic preparation) and advanced (men with some or considerable linguistic preparation). Each of these main subdivisions was further split into small sections of eight to twelve men each. The men in each class who were extremely fluent or "native speakers" were utilized as Army assistants and helped the teaching staff. In the four classes that completed training, there was almost even division between "beginners" and "advanced." The faculty had a sizeable task in attempting to produce fairly skilled German linguists.

There were three phases to the language instruction at the University of Pennsylvania: conventional drill, language lectures and applicatory exercise. In addition, the agents were given a CIC lecture once a day and an hour of physical training was included in the daily schedule.

The work done in the conventional drill hours was deemed the core of the program. A technique known as the "direct method" was utilized. The instructor repeatedly read aloud phrases of graded difficulty in the language, the students responding in chorus and then individually, trying to imitate the sounds that the instructor produced. Training aids included a compilation of German conversational phrases.

The most important aspect of these conversational drill hours was special training in "Interrogational CIC Practice." A series of about ten interrogational plots were worked out in mimeographed form, and utilized after the students had gained a minimum proficiency in the language. As a further aid to interrogation, the instructors prepared a list of interrogational CIC phrases, a standard interrogation form questionnaire, and an outline of the simplest possible routine interrogation.

96 History of the Counter Intelligence Corps Branch, Intelligence Division, ASF, (CONFIDENTIAL) (Central Records Facility).

The hours devoted to language lecture were spent in systematic instruction of German pronounciation, grammatical forms, word order, social and regional differences of speech, and other fundamentals of the language. The applicatory exercise gave the students a more informal opportunity to learn to use the language in everyday situations and also to understand the habits and customs of the country where they would soon be sent.

At the end of each week of training, the students were given a proficiency test, and the final examination was weighted heavily to test the students' grasp of interrogational procedure. At the end of the course, each man was given an Army proficiency rating based on his performance at the University of Pennsylvania.[97]

Air Mechanical Schools

Since CIC agents assigned duties with the Army Air Forces needed some technical understanding of airplane construction, a special air mechanical training program was organized from 4 July 1943 until 5 February 1944. Three hundred sixty-five agents received this training.

Offered at Middletown Air Depot, Harrisburg, Pennsylvania; Chanute Field, Illinois; and Hill Field, Ogden, Utah, the course was designed to give CIC personnel a technical background and familiarize them with repair and overhaul of Army aircraft, engines, and accessories. Emphasis was placed on "trouble shooting" and inspection as well as on learning the operating principles of all airplane parts.

Training of the CIC agents at these schools was considered a part of the regular Air Corps Mechanical course. The graduates qualified as skilled mechanics, capable of performing undercover missions as ground crew men, competent to investigate mechanical failures of aircraft for possible sabotage.

Upon completion of this special training program, the agents were assigned duty with the Air Corps. In March 1944, when a directive placed all these agents directly under Army Air Forces command, future training for the investigators became Air Corps responsibility.[98]

CORPS OF INTELLIGENCE POLICE

Investigators Training School

Washington, D.C.

February 24 to March 22, 1941

Subjects of Instruction and Time Allotted Each

Subject	Hour Periods
1. Enrollment and Welcome Ceremonies Entrance formalities; general instructions by school commandant; purpose of course, and general outline of course; speech of welcome by Colonel Lester.	2
INVESTIGATION COURSE	
2. General Principles of Investigative Procedure Hard work, intelligence, resourcefulness, personal initiative, patience in following out leads, common sense; force versus tact; general knowledge of identity of possible suspects; cooperation with all other officers and offices; duplication of work of other officers or services is prevented if you maintain contacts with them and merit their genuine assistance; studying files on previous investigations; the value of information to military authorities as contrasted with evidence in civil life; contemporaneous memoranda; use of experts; professional concept of your work; unethical tactics; duress, third degree, entrapment; idealism in your work, ethics and standards; realization of possible importance in national security of any job to which you may be assigned; ethics and standards of conduct; practical psychology; modus operandi files; diaries; legality of your work; personal courage; willingness to sacrifice your career or your life.	4
3. Observation and Description Variation in accuracy of observation by different persons; study of detail is essential; observation and perception closely related; fallibility of the senses; time, speed, color, light, and distance; understanding of the cause of the facts observed; see things from an investigator's viewpoint; know suspects; memory gets dimmer by the hour;	2 Lecture 8 Practical

0977

constantly train yourself in observing situations and recording facts; use your intelligence in arriving at conclusions from known facts; general appearance files; portrait parle; conduct visual memory test.

4. Modus Operandi: Arsonists

Known methods of arsonists; material used; igniting devices; traces of materials used; indicators of origin of fire; photographs of previous investigations; exhibit of instruments of arson; ashes; use of experts. 1

Modus Operandi: Burglars

Common methods of entry; protective devices; instruments used by burglars and source of such; time; inside jobs; marks of professionals. 1

5. Alien Registration Laws and Alien Investigations

Immigration and naturalization laws; alien registration act; enforcement of laws by immigration service, relation to National Defense; organization of field force, how to contact them for information, what information is available. Mutual cooperation. 2

6. Bombs, Infernal Machines

Exhibit of known types; particles; entire procedure when located; protective procedure; origin of materials; use of experts. 2

7. Sabotage and Saboteurs

Industrial, political, and military; methods; previous cases; protection against. 2

8. Espionage and Counterespionage

Types; origin; objectives; countermeasures. 5

9. Labor Organizations Affecting National Defense

Identities; methods; objectives; membership; localities; public relations. 2

10. Plant Protection

Need for; surveys; recommendations; plant protective officer; plant police; patrols; passes; badges; gates; view; lights; freedom of movement of employees; fire-fighting equipment; vital points; exterior protection. 2

0978

11. Applicant and Charge Investigations — 2

Suspects; applicants; employees; thoroughness in checking credit companies; civil service records; neighbors; associates; drinking; promiscuousness; number of past jobs and why left--word of subject not sufficient; waste-basket and garbage surveillance; tailing; detailed knowledge of short period of activities for use in frightening subject on questioning; hotel detectives; precinct detectives; neighborhood policemen; children who know subject; record everything.

12. Methods of Surveillance — 3 Lecture, 8 Practical

In automobiles, on foot, on train, in airplanes, on streets and country roads; big cities and small towns; dress; language; pretext for presence; study neighborhood first when possible; observation posts in commercial buildings or neighboring homes, meeting subject's eyes; hotels; saloons; hours of duty; telephone reports to superior; written reports in detail each day; attention to small matters; signals of suspect; adjacent telephone booth; surveillance of subject's associates; A. B. C. Method; radio cars.

13. Undercover Work — 3 Lecture, 8 Practical

Aptitude; psychology; self confidence; forget you are an officer; establish unbreakable background story; dress; appearance; various attitudes to adopt; objects to be achieved; deafness; blindness; expenses; drinking; telephoning reports; care in reporting; "throwing a tail;" women; famous cases.

14. Informers — 2

Honest citizens; suspects; nuts; professionals; questioning; toughness versus politeness; appreciation of information; payment; control; relationship with officer; women; cautions; corroborating information; their undoubted value; how to secure from other officers and by yourself.

15. Interrogation of Persons — 2

Extreme value to investigator; careful study of psychology quickly recognize types; consider procedure; private place; only one questioner; written notes; stenographer; set the stage; create dignified and authoritative impression; get on your ground; lie detectors; truth serum.

16. Moulage

Plaster cast; footprints; tire treads; practice in making casts. 2

17. Fingerprinting

Taking; keeping cards; patterns; disposition; practice in taking. 2

18. Latent Fingerprints

Great value; where found; how found; mechanical methods; chemical methods; photographing; lifting; preserving; practice. 3

19. Systems of Identification

Old thieves; men; rogues gallery; Schwartzkapf system; Bertillion; geometrical identification; modus operandi; factors in modus operandi are type of property or person attacked; how attacked; the means used; the time of work; the object of the work; trade marks; be familiar with modus operandi of your principal suspects. 1

20. Codes and Ciphers

General familiarity with simple codes and ciphers; how to encode and decode; types of codes in espionage; secrecy; powers of cryptoanalysist; get as many words as possible for submission; frequency. 1

21. Handwriting Comparison

Elementary document examination; exemplars; tentative comparison; identification; continuous custody; submission to experts; value as evidence; typewriting identification; FBI files; samples from all machines available to suspect; more than one sample from each machine; length of sample; invisible inks; types; use of; concealment; value; paper; chemicals to bring out; test suspected documents. 2

22. Documentary Corroboration

Value of corroborative evidence; where to look for records; how to get documents informally; subpoenas; bank records; telephone and telegraph companies; business concerns; public utilities; passport records; citizenship records; credit companies; laundry marks; copying names and addresses found on persons and premises; contact with other government agencies to ascertain if they have record of persons you are working on. 2

23. Photography

Elementary photography and use of cameras; types of cameras best suited for law enforcement; minox cameras; movie cameras; fixed and concealed cameras; posing as street photographer. 1

24. Methods of Searching

Persons; premises; wooded areas; open areas; vehicles. 4

25. Preserving Evidence

Physical evidence; documents. 1

26. Dictaphones, Induction Coils, etc.

Installation of microphones; wiring; location of observation posts and how to secure them; entering and leaving observation posts; records of conversation; mechanical recording; discreetness; primary use as information and not in evidence; secrecy; most valuable source of information available. 2

27. Scientific Aids to an Investigator

Microscophy, ultra-violet rays; infra red rays; chemistry; physics; metallurgy; spectrosophy; firearms identification; glass; traces; ashes; teeth; hair; dust; dirt; fingernails; ear wax; bloodstains; other stains. 6

LAW COURSE

28. Civics

Development of constitutional and common law; powers and limitations of officers; organization of government and theory of operation; advantages of democracy. 2

29. Law of Arrest

Military Personnel and Civilian Personnel. 2

30. Law of Search and Seizure

Affidavits; warrants; returns; entry; motions to quash; legality; certificate of probable cause; searches without warrant. 2

31. Evidence

Rules of evidence. 2

CONFIDENTIAL

32. Confessions and Statements
Types; weight; taking; recording. 1

33. Conspiracy
Definition; common design; overt acts; venue. 2

34. Laws
Espionage act; Hatch act; neutrality act; selective service act; civil service law and regulations; firearms laws; explosive laws; restricted areas; treason; impersonation laws; reference to all laws affecting national defense.

35. Articles of War and Military Law 2

36. Functions of United States Attorney's Office 1

37. Federal Court Procedure
Commissioner; grand jury; arraignment; information; pleadings; trial; sentencing; commitment. 1

38. Visit to Local Courts 3

39. State Court Procedure
Outline of typical organization; distinction between state and federal court practices and procedures. How to initiate action by state courts. 1

40. Court Martial Procedure 1

41. Testifying in Court
Conduct on the witness stand; manner of testifying; hearsay; value of conferences with District Attorney in matters to be ultimately submitted to him. 2

GENERAL COURSE

42. Report Writing
Forms; method of composition; promptness; summary of case; accuracy; neatness; elimination of superfluous matter; conciseness versus completeness; no slang; placing yourself in the position of reviewing authority. 4

43. Military Correspondence
Formal letters; informal memoranda; indorsements; copies; subjects; filing. 1

0982

[redacted]

44. Public Relations and Personal Conduct

Dress; appearance; demeanor; tact; diplomacy; no hard-boiled attitude; understanding; representative of the government; publicity. 1

45. Organization of the Army

Particular reference to identification of present-day units and their insignia; location of post stations and units throughout the country and abroad. 1

46. Communism

History; current organization; agencies in this country; known members and leaders; method of work, aims, methods of combatting; constant study; attitude of public; discreetness; keep informed of activity of all suspected organizations and persons. 2

47. Nazism

History; current organization; agencies in this country; known members and leaders; method of work, aims; methods of combatting; constant study; attitude of public; discreetness; keep informed of activity of all suspected organizations and persons. 2

48. Fascism, Japanism, Falange

History; current organization; agencies in this country; known members and leaders; method of work; aims; methods of combatting; constant study; attitude of public; discreetness; keep informed of activity of all suspected organizations and persons. 2

49. War Department Policies

General outline of War Department policies which would concern a Military Intelligence investigator who is constantly in contact with the public and engaged in conduct which might involve foreign nationals; also engaged in conduct affecting national defense and private individuals concerned therewith. This to include all matters except military intelligence; war department organization and corps area organization. 2

50. Military Intelligence Organization, Policies, and Functions

Complete and detailed information relative to the Military Intelligence organization; its policies and practices; its 3

[redacted]

powers and limitations; its objectives and the manner in which the program is executed. This to include all phases from War Department to all lower echelons.

51. Inspector General's Department--Organization and Functions
A general outline of organization and functioning sufficient to acquaint CIP personnel with its sphere of activity. What can be expected from Inspector General's office and what it expects from Military Intelligence. Methods of possible cooperation and ways to avoid conflict. 1

52. Judge Advocate General's Department--Organization and Functions
General outline of the organization and functioning of the Judge Advocate General's offices, their responsibilities, and their sphere of activity; type of reports that are most valuable; type of assistance that can be rendered by the Corps of Intelligence Police; possibilities of cooperation and insurance against conflict. 1

53. Organization and Functions of the Military Police
Organization of the Military Police of tactical commands and of Zone of Interior agencies; duties and responsibilities of Provost Marshals in posts and stations and in territorial assignments; possibility of cooperation between Corps of Intelligence Police and Military Police; close understanding of the criminal investigative agencies of the Military Police and development of methods insuring joint action on common causes; exchange of information. 2

54. Organization and Functions of the Federal Bureau of Investigation
General outline of the organization and functioning of the bureau; detailed outline of the bureau's organization in connection with national defense problems particularly espionage and counterespionage, sabotage and countermeasures; plant protection and subversive elements; methods of which FBI and CIP can mutually work toward common objectives on individual cases and general programs; joint action on cases; reference of matters to each other; contact with local field offices; contact between individual agents of the two services; exchange of information. Visit to FBI offices and laboratories. 2 3

0984

CONFIDENTIAL

55. Organization and Functions of the Naval Intelligence

General understanding of the organization, operations, and aims of Naval Intelligence; information as to location of field offices and persons available for contact by the CIP officers; methods of exchanging information; methods of cooperation. 1

56. Organization and Practices of State and Municipal Police

General outline of organization of state and municipal police sufficient for our officers to know the cooperation that can be secured and the assistance available from police agencies; types of detective squads and their value as sources of information and assistance on specific types of violator suspects. 1

57. Practical Work with Headquarter Detective Squads of the Metropolitan Police Forces

CIP's will spend one full day and evening with working detective on the following named squads: robbery squad, check forgery and fraud squad; homicide squad, theft of clothing and jewelry squad, narcotics squad, auto theft squad, fugitive and wanted persons squad. 10

58. Organization and Functions of the Post Office Inspectors

General outline of the organization and laws enforced; information on covering mail and securing tracings; method of securing information from post office personnel; money order records; special delivery records; foreign money orders. 1

59. Organization and Functions of the Treasury Investigative Agencies

Customs; intelligence; A. T. U.: Narcotics; Secret Service; Coast Guard; organization and function of each of these investigative service; laws enforced; information at their command; ways of securing information from these agencies; location of field offices; types of information available from these various agencies; method of insuring cooperation and exchange of information; assistance that can be secured from treasury agencies. 2

60. Practical Work With Federal Investigative Agencies

The students will spend one full day and evening with experienced investigators of local offices of following service: 10

0985

U.S. Secret Service
U.S. Alcohol Tax Unit
U.S. Customs Agency Service
U.S. Narcotic Bureau
U.S. Intelligence Unit

61. Ju Jitsu — 8

62. Examinations
Two hours of examinations each Saturday on the previous week's works; examinations to consist of a multiplicity of questions that can be answered by true or false, or yes or no. — 8

63. Graduation Exercises
Presentation of certificates of completion of course; speech by the Acting Chief of Staff, G2; checking out; departure. — 2

COUNTER INTELLIGENCE CORPS COURSE OF INSTRUCTION

PAC SECTION

IV. COUNTERINTELLIGENCE (136 hours total)

Loose Talk — 1 hr

Orientation to Counterintelligence (first hour of course): definition of terms; purpose of counterintelligence; general nature of course; conduct of classes and presentation of material; tests and grades. Loose talk hazard; security regulations.

Security Against Indirect Attack — 1 hr

Enemy use of espionage and sabotage in this war; methods of entry; operating techniques; preventive and countermeasures.

Classified Information — 2 hrs

Practical interpretation and presentation of revised AR 380-5 (effective 15 Mar 44). Reasons for classification; limitations on dissemination of classified information; registration of documents and materiel; marking; handling, transmitting, and storing of classified material; field precautions; methods of destruction; records and reports.

Principles of Censorship — 1 hr

Reasons for military censorship; responsibility and organization for censorship in theaters of operations; base censorship detachment; unit censors; censorship stamps; censorship of mail in unit and base; action taken by censors in case of violations; preparation and disposition of comment sheet; necessity for education of all troops.

Safeguarding Military Information in the Field — 1 hr

Practical application of loose talk, classified information and censorship in the field. Chief sources of information open to

enemy; markings and information on personal or organizational equipment and personal possessions. Necessity for making all personnel security conscious.

Tactical Measures — 1 hr

Nature and purpose; positive aspects of counterintelligence. Tricks, feints, ruses, and other strategems adopted to deceive the enemy; current examples of enemy measures reported in Intelligence Bulletins and other sources.

Camouflage Demonstration — 3 hrs

A practical field exercise to illustrate individual camouflage methods. Different means and types of camouflage are explained and demonstration troops demonstrate how they actually appear and blend with various types of background.

Combat Propaganda — 1 hr

Use of propaganda as an offensive weapon; enemy techniques; countermeasures; examples of American, Allied, and enemy propaganda. Illustrated by specially prepared set of slides.

Counterintelligence Plan — 2 hrs

Necessity for prior planning; origin and dissemination of plan; explanation and application of approved form; use of available agencies. Practical problem involving drawing up a plan to cover given situation.

Security Survey — 4 hrs

Three-hour practical exercise preceded by orientation lecture. Nature and purpose of survey; physical safeguards; map and ground reconnaissance; selection of critical points; report on findings; recommendations based on survey. Problem situation in theater of operations. Fifteen minute critique illustrated by slide map at conclusion of exercise.

Principles of Investigation — 1 hr

Fundamental investigative procedure; preservation of evidence; use of scientific aids and qualified experts in the field; records and reports.

Use of Informants 2 hrs

This lecture sets forth the function of informants in CIC work, the information we can and do obtain from informants and how to organize an informant net, as well as how to enlist individual informants. The general rules to follow in handling informants are also stressed.

Investigative Techniques 2 hrs

The purpose of this lecture is to point out the investigative techniques peculiar to CIC investigatory work. The CIC investigative systems are explained and specific cases of CIC investigation are discussed.

Introduction to Raids and Searches 1 hr

Illustrated lecture showing procedure for raiding an occupied building and searching for documents, materiel, and personnel. Planning and reconnaissance; organization of raiding party; arms; posting of cordon; raid and search proper; disposition of documents and personnel; necessary reports.

Operation of Mines and Booby Traps 2 hrs

First hour deals with component parts of mines and booby traps, the actions which will explode them, and the functioning of US anti-personnel devices. During the second hour foreign mines and booby traps are discussed with instruction in their detection and neutralization.

The Japanese Espionage Agent 1 hr

This course presents the basis for the doctrine of "Total Espionage" and the exploitation of every national or subject native as an agent whenever possible. The standard Japanese espionage agencies are reviewed as well as the selection, training, and employment of agents. Means of entry, typical assignments methods used are also discussed.

Sabotage Devices 1 hr

This course presents the incendiary and explosive devices available to the saboteur. Their mechanical operation, employment, and neutralization are explained. Through a knowledge of the capabilities and limitations of these devices, the student is able to neutralize the efforts of the saboteur.

Crash Investigations (Sabotage of Aircraft) 1 hr

The purpose of this lecture is to teach the students how to detect and to prevent sabotage of aircraft. The lecture includes a discussion of the general techniques to be employed in preventing sabotage, and to investigating accidents resulting from sabotage. This latter phase of the instruction includes information on how to preserve the evidence, the persons to be interviewed, documents to be examined and a list of the kinds of physical evidence that may be encountered which would be indicative of sabotage. AAF and I.O. forms and reports in connection with this subject are also discussed.

Security Talks (Practical) 5 hrs

First hour is a discussion of topics and methods of presenting security talks. The last four hours are used to give each student experience in effective speaking by giving a five-minute talk. Talks are critiqued by class and instructor.

Security Education Program (Practical) 2 hrs

The course teaches the student to plan a balanced security education program and to coordinate this plan with combat training. The course stresses the need for education and the importance of eliminating conflicts and omission in security education. It also points out the advisability of making certain specially qualified individuals responsible for the instruction in the various phases of the program. The second hour is devoted to a practical exercise requiring the students to draw up a program for security education.

Construction and Use of Booby Traps 4 hrs

Following a short discussion on hasty and deliberate mine fields, students, formed into groups of four, are required to: (1) sweep a bivouac area for mines and traps with mine detector SCR 625 F and to mark and neutralize all booby traps and mines detected. (2) Proceed as a patrol through booby trapped wire. (3) Search a house and neutralize all booby traps located. Throughout the exercise umpires assess casualties when mines or traps are detonated and give spot critiques at the conclusion of each phase.

Explosives and Demolitions 2 hrs

Security personnel are instructed in the detection and isolation of demolitions prepared by the enemy. The characteristics of hasty

and deliberate demolition methods are discussed with emphasis on German and Japanese explosives. Charts showing the stress points of steel, wood and concrete structures are employed as training aids. Detection and isolation of improvised bombs are discussed.

Security Survey Problems — 1 hr

A practical lecture showing the student specific problems of a security survey under various circumstances, and actual types of security checks that CIC might be called upon to make either in a survey or as an isolated check; the essential parts of a security check (preparation; the check itself; on-the-spot education of violators; the report of findings) and the relationship between CIC and the organization security officer.

Principles of Interrogation — 8 hrs

This lecture is designed to equip the student with information necessary to conduct a complete CIC interrogation and to give him practical experience in conducting them for this purpose he is instructed in the basic principles of interrogation, the characteristics of the enemy espionage agents, the part that interrogation plays in CIC work, CI questionnaires, case studies, how to obtain the whole truth from an interrogee and how to conduct a complete interrogation.

Principles of Interrogation (Application) — 4 hrs

Demonstrations and practical interrogations by the students; are also conducted for the purpose of giving actual, practical experience in the type of interrogations conducted by CIC agents.

Interrogation Through Interpreters (Problem) — 6 hrs

Military investigation through the use of informants and interpreters. The problem is set up in the theater of operations, the military and political situation being as near as possible to that which actually exists in the territory selected as the locus of the problem. Problem is designed to bring out proper interviewing techniques and to point out the difficulties when working through an interpreter. At the conclusion of the investigation each student is required to write a report covering his investigative activity.

Investigation (Problem) — 8 hrs

A comprehensive hypothetical problem set up to give each student practical experience in various investigative techniques.

Court Procedure (Practical) 1 hr

Mock trial of a subversive. The proceedings are based on the factual evidence obtained during the eight-hour investigative problem.

Military Offenses 2 hrs

This lecture explains and defines the various military offenses with which CIC agents will concern themselves. Specifically detailed explanations of sedition, treason, espionage, sabotage, disaffection, subversive activities, war crimes, and war treason offenses are explained to the students. The various courts before which these offenses are prosecuted are also explained--these courts covered in this lecture are, courts-martial, military commissions, provost courts, and Allied Military Courts; the role of CIC in these courts is also explained.

Law and Preservation of Evidence 2 hrs

This lecture instructs students in how to preserve various types of evidence found in various cases which they investigate. The rules of evidence of the various military tribunals where military offenses are tried, are also explained to them.

Fingerprinting (Practical) 4 hrs

The first hour is a discussion of fingerprinting and standard CIC equipment. This includes some information on classification to show the detail needed in the print. In the last part of the hour, the students have practical experiences in taking fingerprints. The second hour is a discussion of the powder method and iodine fumer method of bringing out latent prints, the use of the Folmer fingerprint camera, and lifting prints with sticky rubber and scotch tape. The first part of the "lifting" the prints.

Lock Picking and Ultra-Violet Lamp 1 hr

This course is designed to acquaint the student with these valuable aids to the investigator. The fundamentals of locking mechanisms are discussed and the employment of lock picks and ultra-violet light explained.

Codes, Ciphers, and Secret Writing — 1 hr

Discussion of the characteristics of codes and ciphers and their employment. Demonstration of methods of detecting secret inks by the use of ultra-violet lamps, iodine and other chemicals.

Investigative Photography (Practical) — 4 hrs

Instruction in the functioning and operating of the 35mm and Speed Graphic cameras as used by the investigator. Two hours are devoted to classroom instruction, with demonstration of various investigator techniques. The other two hours are devoted to practical work. Each student is required to take pictures which are developed before the final hour of instruction which will include a critique of the work done by the students.

Observation and Description (Practical) — 2 hrs

Instruction covers the need for and some methods of perfecting an ability to describe accurately an individual or an event. Students are taught to observe and describe systematically so that their reports will be clear, concise, and accurate. Two practical problems are used to illustrate the difficulties involved.

Surveillance Techniques — 1 hr

A lecture on the purpose of conducting a surveillance of a person or a subversive headquarters. The various standard techniques and escape methods are discussed.

Raids and Searches (Problem) — 2 hrs

This is a practical field problem in which the students actually conduct a raid on a building containing subversives. The exercise is designed to drive home the essential matters to be borne in mind in conducting raids and searches in the field.

Security in Occupied Territory — 2 hrs

A discussion of the importance of adequate security for military operations; problems of security in occupied territory of Pacific Theaters; the role of CIC in general security work, and its relationship to Civil Affairs and Military Government; specific measures that must be taken to control an area and maintain security.

Riot and Refugee Control — 4 hrs

One hour is devoted to the threat to security which riots create and the means at the disposal of CIC personnel to prevent or control them. The second hour considers the physical control of refugees and the measures employed to channelize them into control centers. The remaining two hours are devoted to the detection of enemy agents from the refugee streams based on experience and reports from the theater. Stress is laid on the devise of the espionage agent to avoid normal refugee channels.

Port Security — 1 hr

A discussion of security problems in a port and of general security measures taken by CI and other security personnel.

Travel Control — 1 hr

A discussion of specific problems of all types of travel control in the Pacific theaters; reasons for travel control, types of travel control work that pertains to this area, and the CIC mission pertaining thereto.

Capabilities and Limitations of CIC Detachments — 2 hrs

Lectures bringing out the specific mission of CIC in Pacific theaters; relationship of CIC to other agencies in the field; types of assignments for CIC detachments and duties therein; and thorough study of the actual limitations of CIC and means of overcoming these limitations.

Administrative Procedures of CIC Detachments — 3 hrs

The first hour is devoted to overall administration, T/O and E, detachment operational status, and individual operational status. The second hour will consider Confidential Funds, civilian clothes, and credentials of CIC personnel. The final hour will cover matters of supply, CIC monthly reports and routine administrative operation considering morning reports, sick book, service records, finance, etc.

CIC Special Equipment (Display) — 1 hr

Classes will visit a display at the QM warehouse prepared by CIC overseas Staging Supply Officer showing all specialized equipment issued to the CIC.

CIC Cooperation with Civil Affairs — 3 hrs

Includes an analysis of liaison between CIC and the Philippine Commonwealth Administrative Units (PCAU). Mission of PCAU and a comparison with the Australian New Guinea Administrative Units is attempted (ANGAU). Cooperation with the Netherlands East Endies Armed Forces is also stressed (NICA).

CIC Liaison with Other Security Agencies — 1 hr

This lecture includes a discussion of the necessity for constant cooperation between CIC and the Field Security Personnel (British) and the Office of Naval Intelligence. Detailed consideration is given FSP development, training, organization and operational functions and a comparison made with CIC. The organization of Naval Intelligence agencies and the duties, functions and capabilities of each are discussed. Special emphasis is placed upon the type of information that can be obtained from Naval Intelligence.

CIC Cooperation With OB and Military Interpreter Teams — 1 hr

One hour devoted to the operation and duties of MI and OB teams, and their importance to CIC personnel. The information that these agencies will supply is emphasized in a counterintelligence light.

Report Writing (Practical) — 4 hrs

This lecture gives the student practical experience in writing the various types of reports required in the different theaters of operation. Problems laid in both the European and Pacific Theaters are presented and the student is required to write the kind of report appropriate to the problem and required in the respective theater.

CIC Organization in Theater and War Department — 1 hr

CIC Organization in the War Department is herein discussed. Brief consideration is then given to CIC Organization in ETO but stressed here is the organization in SWPA, POA, and IB. Letter of 13 Nov 44 is discussed as basis of CIC operations.

Experiences of Returned CIC Officers — 3 hrs

Officers returned from SWPA and POA discuss their experiences in CIC work. Difference of CIC operations in various echelons are discussed. Time is allowed for students to ask questions of these officers.

Japanese Espionage Techniques 1 hr

This lecture analyzes the organization and operation of the agencies performing intelligence and counterintelligence functions for the Japanese Army, with special mention of the methods used in establishing contact with the native populations in the Southwest Pacific and Asia. Characteristics of the Japanese people which peculiarly affect this type of work, such as the Japanese concept of "total espionage" and the close cohesion of the State are summarized. Individual organizations are outlined, including the intelligence branch of the field armies, the Japanese Intelligence Service, Foreign Ministry Intelligence, miscellaneous intelligence such as commercial and consular agents, the Japanese Gendarmerie, the state police, railway police, and the system used in occupied countries and territories.

Japanese Racial Characteristics 1 hr

A discussion of the main physical differences between the Chinese and Japanese. The means of easily identifying members of each race and some of the racial characteristics of each are discussed.

Orientation for Tropical Areas 2 hrs

The course deals with tropical foods, diseases, and topography likely to be encountered by our forces in the Pacific. Second hour includes a display of jungle and mountain equipment and rations being used by American troops in the far Pacific.

CIC Annex 8 hrs

Lecture, two graded problems and a critique hour to instruct students in the main CIC function in the "advancing" phase of an operation - namely - "Target hitting." Discussion of types of targets CIC will raid and search; reasons for such action; determination of priorities; and problems of target hitting.

Philippine Guerillas 1 hr

A cursory study of the activities of the guerillas of the Philippines after the fall of Bataan to the invasion of Leyte in 1944. The extent of utilization by CIC throughout the Philippine campaign is also stressed along with a running history of the potentialities of native groups in the Far East. It is expected that this course will be eventually expanded to include a discussion of the estimated 90 million fighting civilians in the interior of China.

PE -------- Practical Exercise
TE -----Terrain Exercise
TF -----Training Film

3. PROGRAM IN DETAIL.

A. GENERAL MILITARY SUBJECTS .....

(1) Organization of the Army	3
(2) Military Discipline, Courtesy and Customs of the Service	4
(3) Infantry Drill	84
(4) Military Sanitation and First Aid	5
(5) Military Law and Courts Martial	8

1017

(6) Defense Against Chemical Warfare 8
(7) Command and Staff Functions 8
(8) Map and Aerial Photograph Reading..... 35
(9) Signal Communication for all Arms and Services..... 7
(10) Message Centers 3
(11) Scouting and Patroling..... 24
(12) Combat Orders..... 8
(13) Administration 5
(14) Military Correspondence 5
(15) Mess Management 3
(16) Hasty Field Fortifications and Camouflage 10
(17) Conduct of Elementary Military Training..... 3
(18) Rifle Marksmanship 30
(19) Pistol Marksmanship..... 30
(20) Bayonet Combat 20

(1) Organization of the Army 3
Conf.....3

Purpose and Scope: To ground the student in general information about the composition of the Army of the United States and its territorial organizations in time of war and peace; general features of division, corps, and field army organization; a general picture of the military system of command and staff.

(2) Military Discipline, Courtesies and Customs of the Service... 4
Conf. and Dem....2. TF....1. PE....1.

Purpose and Scope: To acquaint the student with the essentials of military discipline; the disciplinary aspects of military courtesy; the social aspects of military courtesy; and the fundamentals and background of customs of the service.

(3) Infantry Drill.....84
Conf. and Dem.....4. Practical Work.....80

Purpose and Scope: To instruct the student in close and extended order drill. To promote in him the habit of instant obedience to command. To train the student in giving commands and in handling bodies of men. To provide an organized means of mental relaxation from the arduous instruction program.

(4) Military Sanitation and First Aid.....5
Conf. and Dem.....3. PE.....2.

Purpose and Scope: Instruction in first aid procedures and elementary sanitation with special reference to the protection and maintenance of physical efficiency of personnel.

1018

(5) Military Law and Courts Martial.....8
Conf. and Dem.....3. PE.....5

Purpose and Scope: To present to the student the elementary principles of the jurisdiction and procedure of courts martial and rules of evidence as applied by them. A moot court martial to be organized as a part of the practical exercise.

(6) Defense Against Chemical Warfare.....8
Conf. and Dem.....4. PE.....4.

Purpose and Scope: To give the student an elementary knowledge of chemical agents that may be encountered; use of field sets for identifying such agents; practice in the fitting, adjustment and care of the gas mask; a trip through a gas chamber; tactical defense against chemical attack.

(7) Command and Staff Functions.....8
Conf. and Dem.....4. PE.....4.

Purpose and Scope: To acquaint the student with the principles underlying command and staff organization; functions of the general and special staff; general staff procedure; duties of the several divisions of the general staff.

(8) Map and Aerial Photograph Reading.....35
Conf. and Dem.....5. PE.....15. FE.....15.

Purpose and Scope: To ground the student in orientation; direction; distances; vertical and horizontal; slope; visibility; conventional signs; and coordinates of maps. To teach elementary interpretation; orientation; scales; distances; appearance of natural and artificial features in aerial photographs.

(9) Signal Communication for all Arms and Services.....7
Conf. and Dem.....2. PE.....2. FE.....3.

Purpose and Scope: To give the student instruction in military messages; means and methods of transmission; signal orders; signal supply; abilities and limitations of various means of signal communication.

(10) Message Centers.....3
Conf. and Dem.....1. PE.....2.

Purpose and Scope: Instruction and practical work concerning message center procedure and operation.

(11) Scouting and Patrolling.....24
Conf. and Dem.....4. PE.....20

Purpose and Scope: Fundamental instruction in the conduct of individual scouts and reconnoitering patrols. Methods of taking cover and transversing various types of terrain by daylight and at night.

(12) Combat Orders.....8
Conf. and Dem.....4 PE.....6
Purpose and Scope: To instruct and train the student in the formulation and issuance of oral and written, complete and fragmentary field orders in assumed tactical situations.

(13) Administration.....5
Conf. and Dem.....2 PE.....3
Purpose and Scope: To outline for the student the basic company records and reports; individual personnel records and reports; rations and funds; payrolls and allotments of pay; supply and equipment; transportation; preparation and maintenance of administrative forms and files relating thereto; and efficiency reports necessary in a basic administrative unit.

(14) Military Correspondence.....5
Conf.....3 PE.....2
Purpose and Scope: To thoroughly familiarize the student with correct forms for military correspondence; use of franked envelopes; correspondence within the intelligence network.

(15) Mess Management.....3
Conf. and Dem.....1 PE.....2
Purpose and Scope: To teach the student the composition and use of the rations; preparation of monthly mess accounts.

(16) Hasty Field Fortifications and Camouflage.....10
Conf. and Dem.....4 PE.....6
Purpose and Scope: To acquaint the student with general camouflage practice; road screens; camouflage discipline; entrenchments and emplacements; obstacles; the application of the technique of hasty field fortifications to tactical situations.

(17) Conduct of Elementary Military Training.....3
Conf. and Dem.....1 PE.....2
Purpose and Scope: To emphasize for the student the methods and mechanism of instruction; organization and preparation of material and presentation of prepared material to a group.

(18) Rifle Marksmanship.....30
Preliminary Instruction.....15 Range Practice.....15
Purpose and Scope: To instruct the student in the efficient use of the rifle as a combat weapon.

(19) Pistol Marksmanship.....30
Preliminary Instruction.....15 Range Practice.....15
Purpose and Scope: Practical use of the pistol and revolver as defensive weapons.

(20) Bayonet Combat.....20
Conf. and Dem.....5 PE.....15
Purpose and Scope: To instruct and train the student in the proper use of the bayonet as a combat weapon.

B. MILITARY INTELLIGENCE SUBJECTS

(1) GENERAL

a. Military Intelligence Organization and Functions...5 hrs
Conf.....3 PE.....2
Purpose and Scope: To outline for the student the organization of the G-2 of all staffs from the War Department to the battalion in the field forces and through the corps areas to camp headquarters; G-2 functions and duties in each echelon.

(2) COMBAT INTELLIGENCE

a.	Combat Intelligence	10
b.	Intelligence Documents	5
c.	Interpretation of Aerial Photographs	7
d.	Maps and Mapping	6
e.	Map Reproduction in the Field	4
f.	Reconnaissance	10
g.	Tactics and Technique of the Separate Arms	100
h.	Combat Duties of Intelligence Personnel	5
i.	Combat Intelligence Problems	40

a. Combat Intelligence.....10
Conf.....5 Dem.....2 PE.....3
Purpose and Scope: To familiarize the student with means and methods employed in the collection of information in the field; evaluation of this information; means and methods employed in the dissemination of combat intelligence.

b. Intelligence Documents.....5
Conf. and Dem.....3 PE.....2
Purpose and Scope: Basic instruction and practical work in graphic representation of enemy information; preparation and use of battle order and

situation maps; intelligence records and preparation of intelligence plans, reports and annexes.

c. Interpretation of Aerial Photographs.....7
Conf. and Dem.....3 PE.....4
Purpose and Scope: To train the student to gain military information from aerial photographs and in the reconnaissance.

d. Maps and Mapping.....6
Conf. and Dem.....3 PE.....3
Purpose and Scope: To furnish the student information on military maps, their production types, importance, supply, and use; functions of the Corps of Engineers; the Air Corps, and the Military Intelligence Division as related to maps, mapping, and map reproduction.

e. Map Reproduction in the Field.....4
Conf. and Dem.....2 PE.....1 TE.....1
Purpose and Scope: To train the student in techniques of reproducing map overlays and sketches in the field.

f. Reconnaissance.....10
Conf.....3 TE.....5 TF.....2
Purpose and Scope: To familiarize the student with the basic principles of reconnaissance, its tactics and technique; the formation of small task forces to gain enemy information.

g. Tactics and Techniques of the Separate Arms.....100
Conf.....60 TF.....40
Purpose and Scope: To acquaint the student with basic tactics and techniques of infantry, field artillery and cavalry essential to an understanding of the powers, limitations and role of each in combined operations.

h. Combat Duties of Intelligence Personnel.....5
Conf. and Dem.....2 PE.....2 TF.....1
Purpose and Scope: To familiarize the student with the organization and functioning of the intelligence units of the battalion, regiment, and brigade and preparation of unit intelligence documents.

i. Combat Intelligence Problems.....40
Conf.....5 PE.....15 TE.....20
Purpose and Scope: To give the student practical training in combat intelligence.

(3) DOMESTIC INTELLIGENCE

a.	Review of Investigative Procedure	30
b.	Camp Intelligence Office	10
c.	District Intelligence Office	5
d.	Corps Area Intelligence Activities	5
e.	Public Relations	16
f.	Military Cryptography	5
g.	Domestic Disturbances	2
h.	Reserve for Classified Subjects	5

a. Review of Investigative Procedure.....30
Conf. and Dem.....30
Purpose and Scope: Refresher course on Counterintelligence with particular reference to investigative procedures.

b. Camp Intelligence Office.....10
Conf. and Dem.....10
Purpose and Scope: To acquaint the student with the organization of a camp intelligence office; sources of information; relations with Federal, State and Municipal authorities; and the duties and responsibilities of a camp intelligence officer.

c. District Intelligence Office.....5
Conf.....5
Purpose and Scope: Organization and functioning of a District Intelligence Office including review of necessary forms, reports and office routine as well as control and direction of CIC agents.

d. Corps Area Intelligence Activities.....5
Conf.....5
Purpose and Scope: To inform the student concerning military intelligence activities in the Zone of Interior; relations with other governmental agencies and with state authorities and the duties and responsibilities of a Corps Area G-2.

e. Public Relations.....16
Conf.....16
Purpose and Scope: To orient the student in the correlation of military intelligence and public relations activities.

f. Military Cryptography.....5
Conf.....3 PE.....2
Purpose and Scope: To acquaint the student with codes and ciphers as adjuncts to military signaling; instruction in simple types of ciphers; enciphering

and deciphering dispatches; simple code books; encoding and decoding; precautions in handling codes and cipher paraphernalia.

g. Domestic Disturbances.....2
Conf. and PE.....2
Purpose and Scope: To outline for the student the duties and responsibilities of intelligence officers during domestic disturbances.

h. Reserve for Classified Subjects.....5
Conf.....5
Purpose and Scope: To present to selected students near the end of the course certain classified matters relating to domestic intelligence.

Examinations		2 hrs
Training Films (6 hours total)		
TF 11-321	Combat Counterintelligence	1 hr
TF 5-1212	Detection and Neutralization of Enemy Mines	
TF 5-645	Camouflage - Individual Concealment	1 hr
TF 5-646	Camouflage - Bivouac Area	
TF 5-648	Camouflage - Use of Artificial Materials	
TF 5-649	Camouflage - Principles	
TF 15-992	Administration of Military Justice and Courts Martial	1 hr
TF 5-954	Enemy Booby Traps	1 hr
TF 5-2039	Passage of Mine Fields for all Arms	
TF 1-3383	Resisting Enemy Interrogation	1 hr
TF 19-1290	Riot Control	1 hr
TF 5-572	Demolition of Concrete Arch Bridge

* * * * * * * * * * * * * * * * * * *

In addition to the above regular subjects the following special class was given.

Security Education Program

1029

[redacted]

GENERAL COURSE OF INSTRUCTION
(Scope of Course)

COUNTERINTELLIGENCE (24 Hours Total)

Security Against Indirect Attack — 1 hr

Enemy use of espionage and sabotage in this war; methods of entry; operating techniques; preventive and countermeasures.

Combat Propaganda — 1 hr

Use of propaganda as an offensive weapon; enemy techniques; countermeasures; examples of American, Allied, and enemy propaganda. Illustrated by specially prepared set of slides.

Counterintelligence Plan — 2 hrs

Necessity for prior planning; origin and dissemination of plan; explanation and application of approved form; use of available agencies. Practical problem involving drawing up plan to cover given situation.

Loose Talk — 1 hr

Orientation to Counterintelligence (first hour of course): definition of terms; purpose of counterintelligence, general nature of course, conduct of classes and presentation of material; tests and grades. Loose talk hazard; security regulations; security education. Illustrated by posters and other training aids.

Classified Information — 2 hrs

Practical interpretation and presentation of revised AR 380-5 (effective 15 Mar 44). Reasons for classification; limitations on dissemination of classified information; registration of documents and materiel; marking; handling, transmitting, and storing of classified material; field precautions; methods of destruction; records and reports.

Censorship — 1 hr

Reasons for military censorship; responsibility and organization for censorship in theaters of operations; base censorship detachment; unit censors; censorship stamps; censorship of mail in unit and base; action taken by censors in case of violations; preparation and disposition of comment sheet; necessity for education of all troops.

Safeguarding Military Information in the Field — 1 hr

Practical application of loose talk, classified information and censorship in the field. Chief sources of information open to enemy; markings and information on personal or organizational equipment and personal possessions. Necessity for making all personnel security conscious.

Signal Security — 1 hr

Objectives of signal security; interest of intelligence personnel. Chief means of signal communication; methods of compromise and security measures in each case.

Tactical Measures — 1 hr

Nature and purpose, positive aspects of counterintelligence. Tricks, feints, ruses, and other strategems adopted to deceive the enemy; current examples of enemy measures reported in Intelligence Bulletins and other sources.

Booby Traps — 2 hrs

Interest to intelligence personnel. Construction and use; standard and improvised types; illustrated demonstration of enemy and American mines and booby-trap firing devices. Suggestions for training.

Security Survey — 4 hrs

Three-hour practical exercise preceded by orientation lecture. Nature and purpose of survey; physical safeguards; map and ground reconnaissance; selection of critical points; report on findings; recommendations based on survey. Problem situation in theater of operations. Fifteen minute critique illustrated by slide map at conclusion of exercise.

Principles of Investigation — 1 hr

Fundamental investigative procedure; preservation of evidence; use of scientific aids and qualified experts in the field; records and reports.

Use of Informants — 1 hr

Importance of informants overseas; types; motives; potentialities under proper approach and procedure.

Investigative Techniques 1 hr

Definition of terms; purpose and techniques of undercover agents; surveillance; observation and description; countering shake-off attempts.

Raids and Searches 1 hr

Illustrated lecture showing procedure for raiding an occupied building and searching for documents, materiel and personnel. Planning and reconnaissance; organization of raiding party; arms; posting of cordon; raid and search proper; disposition of documents and personnel; necessary reports.

Camouflage 3 hrs

Discussion on principles of camouflage and the security to be achieved by their effective application. Five colored camouflage training films are shown prior to the outdoor demonstration. The first phase of these demonstrates poorly camouflaged installations which the students critique by pointing out the errors and listing corrective measures. The second phase shows effective camouflage and proper camouflage discipline.

* * * * * * * * * * * * * * * *

Current series of CIC classes are given two hours Security Education lectures instead of Principles of Investigation and Investigation Techniques, because most of them are graduates of the Chicago or Service Command Investigative Schools.

Security Education Program 2 hrs

The course teaches the student to plan a balanced security education program and to coordinate this plan with combat training. The course stresses the need for education and the importance of eliminating conflicts and ommissions in security education. It also points out the advisability of making certain specially qualified individuals responsible for instruction in the various phases of the program. The second hour is devoted to a practical exercise requiring the students to draw up a program for security education.

SPECIALIST COURSE OF INSTRUCTION FOR CLASS 22
(Outline of Course)

IV.	COUNTERINTELLIGENCE (82 Hours Total)	Hours
	Raids and Searches	3
	Security Talks	5
	Practical Censorship	1
	Booby Traps and Mines	4
	Explosives and Demolitions	1
	Security in Occupied Territory	1

Final Examination	1
Political Situation of France	1
Disarming	2
Street Fighting	3
Weapons Firing	16
Silent Movement Course	4
Patrol Procedure and Night Patrolling	4
Order of Battle	1

SPECIALIST COURSE OF INSTRUCTION
(Scope of Course)

IV. COUNTERINTELLIGENCE (82 Hours Total)

Raids and Searches — 3 hrs

Three-hour practical exercise based on raids and searches as taught in basic course. Acting as member of raiding party, each student participates in planning reconnaissance, and conduct of a raid and search of an enemy-occupied building. Critique on spot at conclusion of exercise.

Security Talks — 5 hrs

Practical instruction in effective speaking to troops. At least one 3-minute security talk by each man before his class. Student gains experience in speaking before a group.

Practical Censorship — 1 hr

Examination of copies of letters condemned by censor. Notations of offending parts, with reasons, followed by class discussion.

Booby Traps and Mines — 4 hrs

Practical field exercise. Students required to detect and neutralize several types of mines and booby traps, and also pass through booby-trapped barbed wire entanglements, special areas and buildings being reserved and trapped for problem purposes.

Explosives and Demolitions — 1 hr

A basic training film is a prerequisite to this one-hour lecture. A consolidated picture of German and Japanese demolition tactics is presented with particular stress upon the explosive aspects. The construction and employment of changes are discussed and during the course of the lecture various changes are demonstrated and conventional locations explained. Comparisons are made as to the characteristics of Allied and Axis explosives and as to differences in employment.

Security in Occupied Territory — 1 hr

Review and summation of general security subjects, basic course, special problems encountered in territory evacuated by enemy; US Army policies in occupied territory; available agencies; civilian controls and administrative techniques.

Riot and Refugee Control 1 hr

Advanced lecture for CIC personnel showing methods of control of riots and refugees, the manner of detecting subversives among refugees and CIC preventative measures in occupation of a town. The lecture is illustrated with examples from the Italian Campaign, the African Campaign and the fall of France.

Control of Correspondents and Observers 1 hr

A study of the status and activities of correspondents and observers, the usual problems arising of interest to intelligence personnel, and the special controls and limitations needed for security. The course includes a brief introduction to duties of Public Relations Officer for better understanding for coordination with security.

German, French and Italian Police 1 hr

Organization and functions of chief continental police systems; characteristics in common; value to occupying forces; probable reliability.

Field Security Personnel 1 hr

British field security units, their organization, training and functions.

Functions of AMG 1 hr

The purpose, occasion, types and degree of control by allied Military Government is indicated. The general organization is set forth and considered in action as illustrated by our experiences in North Africa and Italy. Special emphasis is placed on the type of information the civil affairs officer might be able to contribute, how the work of CIC aids AMG in carrying out their mission, and the necessity for close cooperation between AMG and CIC.

CIC Annex to CI Plan 3 hrs

Illustration and demonstration of use of CIC Annex to Counterintelligence Plan by division CIC detachment in the attack; CIC missions; intelligence targets with priorities; control points; records and reports.

Investigation Through Interpreters 6 hrs

Military investigation by use of informants and interpreters; practical experience in interrogation through interpreters. Problem characterized

CONFIDENTIAL

by overseas setting, logical situation; qualified language personnel employed throughout. At conclusion of investigation students are required to write a report covering their investigative activity.

Radio Direction Finding 2 hrs

The beginning of the period will be devoted to a brief review of intercept equipment SCR 504. The remainder of the period will be utilized for practical work by the students in locating an outlaw station on the post. This outlaw station will be sending canned poop of a subversive nature and will be located at the CI House. The students start from the parade grounds and are given the approximate frequency on which to search for this station. Students will each be given the opportunity to operate the SCR 504.

Radio Operations Advanced 2 hrs

This period will be spent as follows: The first portion of the period will be a review of SCR 206 A operation. The students are divided into teams for each SCR 206 A, which will be spotted at various points along the road in the rear of C-1, Commandant's Office, and School Supply. On the road that passes in front of the hospital, there will be a jeep mounted with an SCR 284 radio. This jeep will move to various points along the road. At each point it will stop long enough to give the students an opportunity to pick up the canned poop being sent and to get a fix on that location. The information will be plotted on a map of Camp Ritchie. At the end of this exercise, the students will be given the location of the jeep at its various stops. They can then see where they made their errors.

Radio Intercept 1 hr

In this period the students will receive the complete method of operating the SCR 504 and the SCR 206 and their employment in the field. The last ten minutes of the time, they will be given a brief outline of what SIS does in the Army.

Foreign Equipment 2 hrs

Foreign equipment will be divided into two periods of one hour each. The first period will deal with methods employed by the enemy in booby-trapping wire and radio equipment. With an explanation of the various ingenious devices that could be used. Second period, the students will be shown exactly how and where booby traps could be employed in foreign signal equipment.

1037

CONFIDENTIAL

Wire Surveillance and Security 1 hr

This period will be divided as follows: First will be a brief lecture on wire security and a review of tapping methods. The remainder of the period will be a practical demonstration on wire tapping and how to find these taps.

Tactical Terrain Study 4 hrs

The course is designed to give the student practice in interpreting relief. The student must select four routes which will offer cover and concealment to an infantry unit. In order to select such a route he must, through the use of stereo-vision, pick out stream beds, gullies, etc., and wash-outs. All these particular features will offer cover. The "Floating Line Method" will be used to check enemy fields of fire and observation.

Selection of a Bivouac 2 hrs

Students move an R.C.T. into bivouac, using photographs in conjunction with a photomap. Must select routes of entrance and exit and areas to be occupied by each unit of the R.C.T.

Camouflage 2 hrs

This course is designed to give the student experience in detecting camouflage from a small gun position to a large supply installation. Camouflage measures are explained to the students with practical illustrations on aerial photos. The photos have examples of poor and good camouflage which bring out to the students the principles which have been violated.

German Documents 1 hr

Recognition, exploitation, and disposal of captured documents. This includes a lecture with training aids, and an examination of actual and facsimile documents. The documents used are the types encountered by CI personnel. Also covered in this lecture are the disposal of documents, German terminology, German abbreviation, and classification of documents.

Foreign Maps (5 hours total) 1 hr

German Tactical Maps

Practical problems on a German tactical map, 1:25,000.

Hachures 1 hr

Characteristics of hachures with practical problems on hachured maps.

US - British Maps of France 1 hr

Practical problems on new map series of France, 1:100,000 and 1:25,000.

Foreign Map Review 1 hr

Review of British, French, German, and Italian maps and coordinate systems.

Final Examination 1 hr

Examination on British, French, German and Italian maps bases on 15 hours.

Political Situation of France 1 hr

The lecture consists of a brief description of the Vichy Government and its character; the resistance movement, its origin, composition, and activities; the Free French Movement and the Provisional Government of the French Republic.

Disarming 2 hrs

Methods and practice in disarming a man when he confronts you with a pistol or rifle.

Street Fighting 3 hrs

A short movie on Street Fighting, firing weapons in a street fighting village problem.

Weapons Firing 16 hrs

Combat firing without the use of sights of the .45 automatic, .38 special, M-3 Sub-Machine Gun. Firing foreign sub-machine guns and rifles. Throwing live grenades. Each man shoots his way through "The Chamber of Horrors."

Silent Movement Course 4 hrs

This course consists of various types of terrain and natural and artificial obstacles which must be crossed quietly. This course is arranged according to the type terrain and obstacles a patrol might encounter in the active theaters.

Sniping. A demonstration showing the capabilities of a sniper, impressing on the students the need to utilize cover and concealment.

Individual Scouting and Patrolling--Standing and Moving Guard. During the daylight phase, each student, equipped with a compass and map is given a mission as a reconnaissance scout. Along the way snipers are distributed to furnish opposition of scouts not utilizing proper cover and concealment. At night, each student with the same equipment is given another mission. Again snipers and patrols are scattered along the routes. During this night phase, the students are canalized so they must pass through a field where standing and moving guards are located. The student must pass by both guards without being detected.

Patrol Procedure and Night Patrolling 4 hrs

The students, in patrols, go through the correct procedure in preparing themselves for a night mission. At night they operate as patrols against an occupied enemy position.

Night patrolling. The students, as patrols, operate against occupied enemy positions to gain information.

Order of Battle 1 hr

Functions of OB Team (1 hr). The functions of Order of Battle teams in the field, the scope of their work, and their cooperation with other intelligence agencies.

GENERAL COURSE OF INSTRUCTION
(Scope of Course)

IV. COUNTERINTELLIGENCE (All Sections Except CIC)
(28 hours total)

Loose Talk — 1 hr

Orientation to Counterintelligence (first hour of course): definition of terms; purpose of counterintelligence; general nature of course; conduct of classes and presentation of material; tests and grades. Loose talk hazard; security regulations.

Security Against Indirect Attack — 1 hr

Enemy use of espionage and sabotage in this war; methods of entry; operating techniques; preventive and countermeasures.

Classified Information — 2 hrs

Practical interpretation and presentation of revised AR 380-5 (effective 15 Mar 44). Reasons for classification; limitations on dissemination of classified information; registration of documents and materiel; marking; handling, transmitting, and storing of classified material; field precautions; methods of destruction; records and reports.

Principles of Censorship — 1 hr

Reasons for military censorship; responsibility and organization for censorship in theaters of operations; base censorship detachment; unit censors; censorship stamps; censorship of mail in unit and base; action taken by censors in case of violations; preparation and disposition of comment sheet; necessity for education of all troops.

Safeguarding Military Information in the Field — 1 hr

Practical application of loose talk, classified information and censorship in the field. Chief sources of information open to enemy; markings

1043

and information on personal or organizational equipment and personal possessions. Necessity for making all personnel security conscious.

Tactical Measures 1 hr

Nature and purpose; positive aspects of counterintelligence. Tricks, feints, ruses, and other strategems adopted to deceive the enemy; current examples of enemy measures reported in intelligence bulletins and other sources.

Camouflage Demonstration 3 hrs

A practical field exercise to illustrate individual camouflage methods. Different means and types of camouflage are explained and demonstration troops demonstrate how they actually appear and blend with various types of background.

Combat Propaganda 1 hr

Use of propaganda as an offensive weapon; enemy techniques; countermeasures; examples of American, Allied, and enemy propaganda. Illustrated by specially prepared set of slides.

Counterintelligence Plan

Necessity for prior planning; origin and dissemination of plan; explanation and application of approved form; use of available agencies. Practical problem involving drawing up plan to cover given situation.

Security Survey

Three-hour practical exercise preceded by orientation lecture. Nature and purpose of survey; physical safeguards; map and ground reconnaissance; selection of critical points; report on findings; recommendations based on survey. Problem situation in theater of operations. Fifteen minute critique illustrated by slide map at conclusion of exercise.

Principles of Investigation 1 hr

Fundamental investigative procedure; preservation evidence; use of scientific aids and qualified exports in the field; records and reports.

Use of Informants 1 hr

Importance of informants overseas; types; motives; potentialities under proper approach and procedure.

Investigative Techniques 1 hr

Definition of terms; purpose and techniques of undercover agents; surveillance; observation and description; countering shake-off attempts.

Introduction to Raids and Searches 1 hr

Illustrated lecture showing procedure for raiding an occupied building and searching for documents, materiel, and personnel. Planning and reconnaissance; organization of raiding party; arms; posting of cordon; raid and search proper; disposition of documents and personnel; necessary reports.

Introduction to Booby Traps 1 hr

Interest to intelligence personnel. Construction and use; standard and improvised types.

Operation of Mines and Booby Traps 1 hr

Illustrated demonstration of enemy and American mines and booby-trap firing devices. Suggestions for training.

The Enemy Espionage Agent 1 hr

A study of the individual agent - how he was selected, propositioned and trained. Typical espionage assignments and means ordinarily used to carry them out are discussed. Special stress is placed on the means used to enter Allied territory and the means used to transmit their information.

MISSION OF THE COUNTER INTELLIGENCE CORPS

"The mission of the Counter Intelligence Corps is to contribute to the operations of the Army Establishment through the detection of treason, sedition, subversive activity, and disaffection, and the detection, prevention, or neutralization of espionage and sabotage within or directed against the Army Establishment and the areas of its jurisdiction."

Auth: AR 381-100

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

2	Operations in the Service Commands	29
3	CIC with Army Ground Forces	74

NOTE

Overall strength allocations and many policy level decisions concerning Service Commands are covered in the Volume on "CIC Headquarters, Zone of the Interior, World War II" since their application was world wide even though the Service Commands were the units primarily concerned.

While Service Commands employed the greatest number of CIC agents during World War II, their work was for the greater part concerned with "routine" cases since the other types of cases in the ZI were, almost inevitably, within the jurisdiction of the FBI. To avoid meaningless repetition, these routine cases are portrayed as general problems of all commands and operations within the Service Commands confined to more localized angles.

Available records covering this section were in short supply and time did not permit interviewing sources for this Volume to the extent desired. It is hoped that readers will forward data on all significant events not covered and with which they are familiar or suggest sources who can be contacted at some future time when this initial manuscript is revised.

THE EDITORS

Chapter 1

GENERAL PROBLEMS IN SERVICE COMMANDS

World War II activities of the Counter Intelligence Corps in the Zone of the Interior were conducted for the most part in the nine Service Commands of Army Service Forces. These wartime activities may be divided roughly into three phases. The first phase was from May 1940 until May 1943, a period of three years when the primary emphasis was on the procurement of personnel for work in the United States. The second was the hectic one year from May 1943 until May 1944 when the Service Commands worked frantically to clean up their backlogs of cases before their personnel were drastically reduced by overseas shipments. Finally, the third phase was the two years from May 1944 to May 1946, when the CIC personnel in the Service Commands had been depleted 80 percent, their most important sources of information eliminated, and their activities restricted by merger into a Security and Intelligence Corps (SIC) under the operational control of the Provost Marshal General.

The period 1940-41 is covered in the section of this history entitled "The CIP in the Pre-World War II Era," and the period from mid-1945 until May 1946 is covered in the section of this history entitled "CIC in the United States in the Post War Era." As in all arbitrary divisions of history, various phases overlap one another and some summation of these other sections is necessary in this section to portray the complete problem.

Several name changes are confusing to historical writers and readers of this later era, as they confused CIC personnel originally. Fortunately, however, the nine Army Corps Areas of the pre-war era remained essentially the same in size, jurisdiction, mission, and command structure throughout the entire war. The Ninth Corps Area was pushed out of San Francisco to a headquarters at Fort Douglas, Utah, and all its CIC personnel were taken over by the Western Defense Command which then suballotted to Ninth Corps. Southern Defense Command, which controlled an eight-mile-wide strip of the Mexican border from Western Texas extending to New Orleans, likewise pushed Eighth Corps out of Houston to Dallas, Texas. However, Eighth Corps kept its CIC allotment and suballotted to Southern Defense Command until September 1943.

The Corps Areas had officially been titled Corps Area Service Commands. In March 1942 when the Services of Supply, (the following year redesignated Army Service Forces) were activated and took command of the areas, The Corps Areas were redesignated Service Commands. For this chapter they will be called Service Commands.

In May 1940, Brig Gen Sherman Miles, the new War Department G2, informed the Service Commands that for the first time in six years funds were available for

securing additional CIP manpower. Men could now be "detailed" from the Service Commands. Two months later when CIP got its first manpower increase in six years, eight of the nine Service Commands were again allotted two CIP spaces. Eighth Corps on the Mexican border, which had managed to keep two CIP spaces during the lean years, received an additional space. During the three years following 1940, the Corps grew steadily with its authorized strength always ahead of its actual strength.

Lack of CIC manpower was a continual wartime problem of the Service Commands. At the start of World War II, some Commands had nearly 400 CIC agents. One week after Pearl Harbor CIC lost 90 of them to the Provost Marshal General. From this low, they built to a high point of 2,900 in September 1943.[1]

There were three serious problems in connection with Service Command CIC manpower. First, CIC manpower needs for the United States were drastically underestimated in April 1942, and only 1,200 spaces requested. It was not until February 1943 that a total of 3,500 ZI spaces were requested, but by that time CIC was trapped by the Army's general manpower shortage.

Another problem in the Service Commands was that the Air Force, which eventually discovered it could meet its requirements with less than 1,000 CIC agents, originally asked for 2,600 men.

The third serious problem was that the Service Commands were used as a "pool" for holding CIC personnel destined for later assignment to Army Ground Forces and theaters. Remarkably, G2 estimated this requirement in April 1942 as totaling 3,300. In January 1944, when the last space requirement was met, the total was 3,250.

Had the Air Force request for 2,600 agents listed in the April 1942 CIC personnel requisition been reduced 40 percent and the 1,600 spaces saved included in the ZI request, the proposed allocations of the 7,400 requested would have very closely met the actual CIC manpower needs of the war. Instead, CIC spaces were cut to approximately 5,000 when an increase was approved. This loss of 2,400 spaces led to serious complications 17 months later, when men were required overseas.

What was not obvious in 1942 was that unless CIC obtained another increase in authorized personnel it would take all but some 350 ZI CIC agents to meet all future overseas requirements. No increase was obtained, however, until the Service Commands had been depleted.

---

1 For CIC manpower details see section of this Chapter on CIC Headquarters.

When the recall sounded and these tactical "loans" were taken, there was some bitterness in the Service Commands for having been used as a "pool" and training school while attempting to perform an intensive operational mission. Col H. R. Kibler, Chief, CIC, reported to Brig Gen Hayes A. Kroner, Chief of the Military Intelligence Service, G2, that "...A Service Command offers a safe pool in which to hold men during the thorough investigation to determine their suitability for retention in the Corps and provides time in which the individual can be observed in order to determine the position in which he can best serve. Finally, the Service Command pool provides an active and useful place to hold a man with a specialized talent until that talent is required in a specific area."[2]

Maj F. C. Brennecke, commanding the Washington Field Office of CIC, summed up the opposition to the policy in a letter to the Chief, CIC in June 1942 commenting on the use of his detachment as "a replacement training center."[3]

This use of the Service Commands for investigative recruit training had grave dangers and created the opportunity for charges such as were made by the Army Inspector General in November 1943 that some types of investigations were "superficial and unproductive" and included adverse information based on "hearsay, gossip and rumor." While CIC could prove that such instances were the exception and not the rule, every CIC operations officer of the era was well aware of the danger that existed when shortages of personnel forced him to send out a "green" agent on other than a routine case.[4]

This same report commented upon another problem of the Service Command G2's who, it said, were "placed in an anomalous position." As members of the staff of the Service Command they "owed the service commander complete loyalty and allegiance and acted in their field of activity as his representative." However, they received directives for the use of the CIC detachment directly from G2, WDGS. This resulted in a misunderstanding as to the responsibility for intelligence activities within the Service Command, since commanders were reluctant to see their men transferred into the Counter Intelligence Corps. For the most part of World War II, the directives transferred them from the local command to direct War Department jurisdiction.

At one point, the Chief of CIC was calling for Service Command CIC agents by name in order to assure good agents. G2s protested loudly at having their best agents taken away. At the Conference of Directors of Intelligence held

---

2 MID 909 (8-31-43) Memo from Chief, CIC to G2, Subj: "CIC," (Unclassified) (Central Records Facility).

3 See Operations Section, CIC Hqs, in Part I, this Chapter.

4 Interview with Lt Col Franklin E. Jordan, who was Chief of Investigations at the Aberdeen Proving Grounds during World War II, dtd 28 Oct 55, (CONFIDENTIAL) (Central Records Facility).

6 October 1942, one complained: "We were hard hit. Eighteen were called by name." Colonel Crist, from G2, War Department General Staff, admitted in reply: "Yes, it isn't good policy to pull out men by name."[5]

Later this practice was replaced by the system of calling for men by rank and special qualifications such as age, specific language ability or other criteria. This still permitted the Chief, Counter Intelligence Corps to pinpoint men effectively.

At the same Conference the Director of Intelligence, Third Service Command warned: "You can have a raid on your Corps so that you won't have a special agent left if you aren't careful."[6] These "raids" were often inspired by requests made upon the Office of the Chief, Counter Intelligence Corps by Counter Intelligence Corps detachment commanders overseas. Particular agents in the Service Command whom the commanders knew were requested.

The resentment of such raids was only natural, since Directors of Intelligence were responsible to their commanding generals of the Service Commands as well as to G2, War Department General Staff for a successful counterintelligence job. However, it sometimes seemed they had lost sight of the training mission of the Counter Intelligence Corps detachments in Service Commands. Also forgotten was the Military Intelligence Service directive of 14 May 1942 which asked them to name the key Counter Intelligence Corps agents in the Service Commands, not exceeding 10 percent of total strength, the balance of 90 percent to be considered available to G2. On the other hand, the Chief, Counter Intelligence Corps, soon discovered that the Service Command Directors of Intelligence were releasing their less satisfactory agents first to fill requests for personnel.

The most aggravating personnel problems in Service Command Counter Intelligence Corps detachments revolved around the procurement of suitable officers for Counter Intelligence Corps. Initially, the supply was adequate, but it dwindled so rapidly at Service Command levels that in October 1942 the Director of Intelligence for the Second Service Command stated: "I have 35 vacancies in my command for intelligence officers; I have lost six to the War Department and other agencies. There are no replacements. Installations requiring officers have jumped from 61 to 108 in three months and the demand is increasing," and with respect to officer allotments added:

"They don't exist as far as Second Service Command is concerned. Everyone is picked to the bone. We are operating on less than 70 percent authorized strength. ....That brings up my strong point. We need your help to get 35 more officers of any kind, even officers from civilian life. If I could get a procurement authority

---

6 See Personnel Section, CIC Headquarters, Part I, this Chapter.

CONFIDENTIAL

for 35 intelligence officers I'd be able to go on functioning. It's now very difficult. We can't pull out any men for intelligence duties. It is impossible to get them. I imagine the same condition exists elsewhere. When you give us this procurement authority, it ought to be definitely earmarked for intelligence, because it is like a bone to a hungry pack of wolves when you throw 10 officers into a Corps Area; everybody grabs them. Intelligence never gets a look at them."[7]

Another basic personnel problem which continued to harass the Service Command Director of Intelligence was promotion.

Authority to promote enlisted men in grade was decentralized to Directors of Intelligence of the Service Commands in June 1941. The allotted grades, though, were inadequate and promotions were repeatedly frozen for long periods. In the Second Service Command Security Intelligence Corps Detachment, for example, promotion recommendations as late as April 1944 were turned down on several outstanding enlisted men who had been corporals over one and one-half years. It was not unusual for such men to remain corporals for two or three years, no matter how well qualified they were for advancement.

During 1942 and 1943 a large number of enlisted men were sent to Officer Candidate School from the Service Commands. When it was found by the directors of intelligence that many such newly commissioned officers returned to the Service Commands only to be moved out immediately, the enthusiasm for sending enlisted men to Officer Candidate School cooled off. In 1943 only about nine enlisted men went to Officer Candidate School from the Second Service Command.[8] An inspection report from the office of the Chief, Counter Intelligence Corps, remarked that attendance at Officer Candidate School was not being directly encouraged.[9]

A letter from the Chief, Counter Intelligence Corps, to all Special Agents and Agents of the Counter Intelligence Corps was disseminated in July 1943, advised that all qualified and interested enlisted men should apply for Officer Candidate School because the Counter Intelligence Corps personnel ceiling had been reached. When the agents learned any enlisted men had the right to apply for Officer Candidate School, a number of applications were sent forward through channels by the agents on their own initiative. The reaction of detachment commanders and Service Command directors of intelligence can be illustrated by the

fact that one detachment commanding officer called a group of such applicants into his office, lectured them as being ungrateful trouble-makers, and tore up the applications in front of them.[10] As a last resort the directors of intelligence were sometimes forced to obtain Officer Candidate School quotas for Counter Intelligence Corps agents from Service Command allotments, but this was extremely difficult to arrange.[11]

On the whole, procurement of suitable personnel for the Counter Intelligence Corps in Service Commands was not so much a problem as clearing them through quickly enough. The usual personnel problems in Army units were at a minimum, since the Counter Intelligence Corps agents lived independently in civilian quarters (often at home), and since the caliber of man selected for Counter Intelligence Corps was extremely high. With few exceptions the enlisted men of the Counter Intelligence Corps at that time were of officer qualifications.

Within limits prescribed by the War Department, the Corps Area Assistant Chief of Staff, G2, recruited potential Counter Intelligence Corps personnel. Initially, emphasis was placed on securing men with extensive language, legal and investigative experience in civilian life. During 1941 nearly all officers doing counterintelligence work in the Second Corps Area were hand-picked reserve officers who volunteered for duty in G2.

Many of the enlisted men were volunteers who came directly from substantial positions in civilian life such as federal, state, and city investigative agencies, university faculties, and prominent law firms. All had college educations except those who had special abilities which made them essential for Corps of Intelligence Police purposes. A check of Second Service Command Counter Intelligence Corps personnel in 1942 showed men of the following backgrounds: lawyers, certified public accountants, district attorneys, judges, agents from the Treasury Department, Secret Service, Internal Revenue Department, Alcohol Tax Unit, college professors, men with Ph. D.'s and M. A.'s, language teachers, state police officers, New York City detectives, telephone company technicians, Merchant Marine, business men, and even one silversmith.[12]

The Second Corps Area, unlike some of the others, happened to include a wide range of civilian talents which could be tapped successfully for Counter Intelligence Corps candidates. The problem of interviewing these applicants at

12 See Personnel Section of CIC Headquarters, Part I this Chapter.

induction centers and at Corps Area CIC Headquarters, screening out ineligible and tabbing desirable men, and processing exhaustive Personal History Statements consumed the full-time efforts of several officers and enlisted men from the Office of the Assistant Chief of Staff, G2, in the Second Corps Area. Machinery was set up to investigate selected candidates as quickly as possible so they could be transferred into the local Corps of Intelligence Police detachment. But, due to investigative leads in other Corps Areas (who were also critically short of personnel and long on incoming cases) and because of the scarcity of Corps of Intelligence Police agents then available within the Second Corps Area, these cases often required months to complete. In the meantime the candidate frequently had moved on to another assignment in the Army and was no longer available.[13]

As more men were recruited later in 1942 and 1943, Service Commands were able to handle the steadily increasing case load. It had grown from 8,510 new cases opened in November 1942 to 11,627 cases in April 1943. In early 1943 as CIC approached its authorized strength, CIC headquarters found itself obliged to assign capable agents to Service Commands to avoid losing them. It appeared that Service Commands would be amply supplied with manpower without having an adequate quota.[14]

Service Commands had repeatedly warned losses were inevitable and in May 1943, the enemy had been driven from Africa. Other activities could be started. The bugle blew for CIC and recall sounded. Col L. R. Forney, officer-in-charge of CIC affairs for MID, WDGS, wrote all Service Command G2s that the War Department had requisitions for 1,900 agents overseas which would have to be filled. Moreover, he said, since there was no hope of getting any increase in strength, men would have to be provided without replacements. In February 1943, G2 had asked for a CIC strength of 9,752 men and when this was disapproved tried again in May for 6,974. This too had been rejected.

Colonel Forney said that G2 had been asked to relieve CIC detachments of the responsibility for loyalty checks, personnel investigations and investigations concerning safeguarding of military information (SMI). G2, he said, favored this as "an emergency measure." CIC personnel were to be employed directly on investigations of disaffection, subversion, espionage and sabotage. No longer would they be employed on any non-CIC duties.[15]

15 Correspondence Chief, CIC, May-Jun 43, Ltr from Colonel Forney to D/Is, Service Commands, dtd 29 May 43, (SECRET) (Intermediate Records Depot, Ft Holabird, Md.).

However, in May 1943, CIC had only 4,300 of its 5,000 authorization, leaving 700 vacancies. Consequently, although 700 persons were sent overseas in the next four months, Service Commands recruited an additional 300 men and their net loss was only 400 persons. They felt they had supplied half of their obligation of the 1,400 man overseas pool allocated them.

The Blow in September 1943

In September 1943 the recall bugle really blasted. G2, WDGS, had made another attempt to get a CIC increase, on the basis that field security had become an added CIC mission. This time he asked for 6,763 spaces. This increase was rejected. On 16 September, Colonel Forney gave the warning, in a letter to all Service Commands, "...This is a difficult letter to write because what I have to say will be very unpleasant news for you. It relates to the number of members of the CIC you may expect to be available to you in the near future... For the past nine months this office has been making strenuous efforts to obtain authority for an increase in the strength of the Counter Intelligence Corps. For various reasons our efforts have not met with success up to this time. There are urgent demands for CIC personnel for use in the theaters of operations and for other phases of the present offensive stage of the war. Filling these demands cannot be postponed any longer. The result is that we must take immediate steps to obtain needed personnel by denuding the Service Commands... I estimate you cannot count on more than five officers and 60 enlisted men..."[16]

On 22 August, the AG informed the Service Commands that 2,059 men of their CIC officers and men would be transferred overseas before 31 January 1944, leaving them only 787 CIC officers and men--an average of 87 each.[17]

Not only were spaces drastically cut, but quality manpower was in short supply. In May 1943, Service Commands had estimated that without lowering the standards of the Corps, not more than 2,000 men suitable for CIC assignment could be obtained within the next six months.[18] This total also had to furnish replacements for CIC personnel losses which were primarily by transfer to Officer Candidate School, or for cause. In eight months, nearly 600 men had been lost, so the indications were that the 2,000 prospects would make a net gain of not more than 1,600.

CONFIDENTIAL

However, the Air Force, which had only 129 CIC agents in July 1943, was tapping this same manpower source in a drive for 1,000 agents. It had opened CIC Air Mechanics Training schools at four airbases and in the next four months 365 agents were trained at these schools. Another 450 agents were recruited directly so that Air Force CIC had tapped about half the estimated available manpower. Air Force was supposed to provide the personnel from its own ranks, but in actual practice this was not the case.[19]

After September 1943, disintegration of the CIC ZI was rapid. From the 2,700 CIC agents in the Service Commands on 30 September, the figure had dropped to 2,150 by 25 November 1943. Service commanders protested. In the Third Service Command, where 311 CIC agents were being cut to 86, Maj Gen M. A. Reckord "urged that a minimum of 236 CIC agents be retained. General Reckord said that his command was prepared to take the maximum calculated risk" but "...to weaken our counterintelligence coverage beyond that limit would be hazardous and a greater threat to the safety of our people abroad than if we sent them no CIC at all..."[20]

General Reckord also asked that the countersubversion informant network which had been ordered abolished be retained. While this information service was not operated by CIC but by other sections of the Intelligence Service, it was a prime source of leads to potentially subversive personnel. Without it the number of espionage, sabotage, disaffection, subversion or other type of complaint cases would materially decrease.[21] In one Service Command, it was resulting in 90 new cases a month.[22]

The 2,000 communist agents that Congressman Dies reported in 1941 as entrenched in key spots in the government were still there. Communist Browder was boasting there were 13,000 comrades in the Army.[23] On the Board of Economic Warfare, Communist Lauchin Currie, administrative assistant to the President of the United States, was busy adding other Communists to this important board. In 1942, Currie attempted to get his Communist spymaster, Nathan Gregory Silvermaster, detailed to the Board. However, a G2 report, signed by General Strong, said Silvermaster was not only an active Communist but probably a secret agent of the OGPU. Silvermaster was sent back to his old job in the Farm Security Administration.

G2 counterintelligence was becoming a hindrance to the Communists.[24] But G2 was soon informed that its counterintelligence activities were going to be drastically reduced because it had incurred the displeasure of certain powerful politicians.[25]

Further evidence was not long in coming. In July, the Army Inspector General had been ordered to investigate G2 activities, including CIC, in the Service Commands. His report was submitted to the Deputy Chief of Staff, Lt Gen Joseph McNarney. (This, incidentally, was the same McNarney, who as Major McNarney of the Air Force had been pushed about by G2 during the Air Force controversy of the 30s.) Details of this IG report and its implications are covered in the section of this chapter on CIC Headquarters During World War II.

On 1 January 1944 the 963 remaining CIC agents in the ZI were merged into a Security and Intelligence Corps (SIC) to join with the 900 provost marshal investigators on duty.[26]

The Chief CIC had been urged to start pushing out activities in December. For activities in process, 4 February 1944 was set as "Der Tag" when the Office of the Chief, CIC, would close and all ZI CIC functions would cease. However, 718 agents would remain with the Air Force, 516 with the ground forces, and 162 with the Manhattan Engineering (Atomic) District. This would leave 1,396 agents on specialized missions.[27]

As far as the Service Commands were concerned, the worst appeared to have happened. But another blow came later. In January 1944, 169 more Service Command agents were taken to fill a European Theater request.

The final Service Command phase, from May 1944 until May 1946 when ZI CIC detachments were again authorized divides into the first year to the German surrender in May 1945 and the first post-war year. The latter is covered in another section and was marked by the end of the need for SIC personnel. The SIC gradually decreased to 512 persons in the spring of 1946, when War Department Circular 108 transferred all SIC personnel back to CIC.

27 Memo to Ex CIG for Chief CIC dtd 1 Feb 44, subj: "Estimated Distribution CIC Personnel," 31 Dec 43, (CONFIDENTIAL) (Central Records Facility).

In the interval, there was little for former CIC personnel to do in the ZI. Loyalty checks and personnel investigations had been taken from them, leaving only complaint-type cases. The Countersubversive System, principal source of this type of case, was abolished. There were as many posts, camps, stations and other Army units in the United States as there were agents. To cover them without informants was to spread CIC personnel to a point of complete inefficiency. During this final year of the war, CIC could but aid PMG investigators and hope that the FBI was able to provide an effective type of the security for the nation, since the Domestic Branch of Office of Naval Intelligence had had its countersubversive sources clipped at the same time as CIC. Most of the CIC agents remaining in the ZI had never had a chance to go to any of the CIC advanced or specialized schools before they were closed.

At the time of the frenzied shipment in the fall of 1943, the Second Corps Area lost 327 CIC personnel in 60 days. By December 1943 the Counter Intelligence Corps field office in New York was down to a first lieutenant in command. Sections previously headed by captains and lieutenants were being administered by corporal agents.

The phrase "calculated risk" became popular at this time.[28] At the operational level friction was so pronounced among the agents that the Security Intelligence Corps Field Office in New York was reorganized along geographic lines so as to force the former Counter Intelligence Corps and Internal Security men to work together as much as possible. Thus the feeling that each group had a special type of investigation was eliminated. In reality the functions previously performed by Counter Intelligence Corps and by Internal Security Division men in the Service Commands continued to be carried on as they were prior to the merger, by the same men and in the same way, except that all the agents were now called Security Intelligence Corps. This situation continued for the rest of the war.

Maj A. K. Peters, who commanded a Second Service Command field office in World War II has written: "In retrospect it is questionable whether the severe blow to morale of both Counter Intelligence Corps and Internal Security Division agents, and the virtual paralysis of investigative activity in the Service Commands which ensued from October 1943 through March 1944, were offset by the economy of combined operation as suggested by the Inspector General's report of November 1943. Certainly this six-month period prior to the Allied invasion of Europe was highly critical. If enemy sabotage or espionage was ever to move into high gear or to throw a sunday punch in a desperate effort to delay or frustrate the invasion, this, it seemed, was their last chance. And the Service Commands were left with the barest handful of trained men to meet such an emergency. Happily the calculated

28 Peters, A. K., Maj (MI)(USAR), CIC Officer Second Service Cmd during WWII, manuscript written in the Historical Project, dtd 19 Oct 55, (CONFIDENTIAL) (Central Records Facility).

risk policy was successful, but mainly through good fortune rather than the validity of the calculations, for the transfer of Counter Intelligence Corps overnight from Service Commands to tactical units was a crash program without proper advance planning and the subsequent attempt to plug the breach with Internal Security Division investigators in the Service Commands was a policy of expediency which resulted unquestionably in seriously lowering our level of security in the Zone of the Interior from October 1943 until the war's end."[29]

Among personnel at Service Command level this consolidation became the object of considerable bitterness and resentment. The agents no longer enjoyed their status as members of the Counter Intelligence Corps and felt they had been kicked downstairs by a mandatory merger with the sergeant investigators of the Provost Marshal General. Of this Major Peters has written, "There were three main reasons for this resentment by the former counterintelligence agents: first, they continued to do Counter Intelligence Corps investigative work plus a share of the Criminal Investigations Division work, and therefore felt they should retain their Counter Intelligence Corps standing. Second, the basic qualifications and training of the Criminal Investigations Division men was not considered up to the Counter Intelligence Corps standards nor had they been cleared by the same type of investigations as Counter Intelligence Corps qualifying them for access to highly classified information. Third, the Criminal Investigations Division was mainly composed of Jewish agents. Counter Intelligence Corps on the other hand was mainly Protestant and Irish Catholic, and although it should not have been so, the fact remains that this condition created a cleavage between the two groups which was never completely bridged. For their part, the former Criminal Investigations Division agents, many of whom had earned the grade of sergeant in tactical units before entering Criminal Investigations Division and who therefore usually outranked the 'Corps of Indignant Corporals,' considered the Counter Intelligence Corps men as 'prima donnas' and 'Ivy League boys.' This entire condition was a problem in human relations which had a serious effect on the morale of both groups and to a very definite extent adversely affected the successful accomplishment of the Security Intelligence Corps mission. The circumstances dictating this consolidation are discussed elsewhere in the History, but it should be pointed out here that the merger was superficial only. The new Security Intelligence Corps agents shared office space at 50 Broadway, New York, but the same individuals who were Counter Intelligence Corps agents before continued to work on Counter Intelligence Corps type investigations, and the same individual Criminal Investigations Division men continued to work on their type of cases. Although the missions and jurisdiction of the Counter Intelligence Corps and

29 Peters, A. K., Maj (MI) (USAR), CIC Officer Second Service Cmd during WWII, manuscript written in the Historical Project, dtd 19 Oct 55, (CONFIDENTIAL) (Central Records Facility).

Criminal Investigations Division had been combined under the Security Intelligence Corps, they continued to be carried out separately by the same men as before with the chief difference being the organization name."[30]

CIC ZI Mission and Operations

The Counter Intelligence Corps mission in the United States during World War II was based on the Delimitations Agreement with the FBI and ONI completed in 1940. Because of its huge case load, though, the FBI frequently overlooked CIC activities off military reservations where the boundary line of jurisdictions touched. Unless CIC worked the case it would only add to the FBI burden. This did not, of course, apply to a case of any magnitude or special importance.

Essentially the CIC mission was similar to its World War I ZI mission, which was primarily counterespionage and countersabotage. Although the FBI had taken over all plant security early in 1940, it agreed to a proposal made in February 1943 that in the case of so called "shadow plants" MID could assume jurisdiction, if it so notified FBI. These shadow plants were set up by the government for the exclusive manufacture of war materiel but were operated by private firms. In September 1943, to further this work, a Plant Security course was set up, and 940 CIC officers and men completed it.[31]

Specifically, the CIC mission in the Service Commands included the investigation of suspected espionage, sabotage, treason, sedition, subversion, disaffection and violations of regulations for safeguarding military information. Since impostors could have subversive as well as criminal intent, such suspects were included in CIC investigative jurisdiction. It also included loyalty checks and investigations, security surveys and the collection of radical group intelligence. At ports and borders as members of air, road or ship panels operated jointly with FBI and ONI, it had a positive intelligence mission.

Prevention of espionage and sabotage was the first consideration. If CIC could eliminate the opportunities, there would be none to detect. More practically, the probabilities of detecting an enemy agent increased proportionately with the effectiveness of security measures. Preventive work was unspectacular but, in effect, the most important of all.

Obviously the first essential was that every position of trust be filled by a person of pre-determined loyalty. This required an investigation based upon a

30 Peters, A. K., Maj (MI) (USA), CIC Officer Second Service Cmd during WW II, manuscript written in the Historical Project, dtd 19 Oct 55, (CONFIDENTIAL) (Central Records Facility).

31 Agreement dtd 13 Feb 43 signed by G. V. Strong, H. V. Train and J. E. Hoover, (Unclassified) (Central Records Facility).

CONFIDENTIAL

calculated risk theory that the more sensitive the position the more extensive the investigation must be. These varied from merely a records check to a complete background investigation requiring months to complete. Since the loyalty of the persons investigated was based on the loyalty of the investigator, CIC applicants were subject to the most complete background investigations, and since all other investigations depended upon the availability of CIC manpower, their investigations had top priority.

Once trustworthy persons were obtained, the next requirement was to provide physical security for the building or area in which they worked. Fences, locks and similar barriers were designed to provide a means of entrance and exit for only the trusted persons through a system of guards and passes. CIC had the responsibility of surveying the status of all military installations and recommending improvements to prevent the entrance of espionage or sabotage agents. It was because of such dangers that CIC arranged to provide the same service for the "shadow" War Department plants.

When a CIC investigation had resulted in a person being placed in a position of trust it was necessary periodically to check the person's current activities to insure that no change in his or her loyalty had developed since the previous investigation. This required the utmost in discretion, particularly in the case of high level scientists working for the Army. In general, this surveillance was left to informants. CIC only took an active part when some doubt had arisen.[32]

Much more important was supervision and assistance in security education. This included both teaching persons how to safeguard military documents and material and educating them not to talk about their own work. What they saw or heard of others' military activities also was restricted to authorized personnel who had a need to know. This was often a thankless, weary task but probably one of the most effective means of preventing espionage and sabotage. Throughout the war CIC agents conducted scores of "loose talk" campaigns both on posts and in adjacent communities.

Collection of radical group intelligence was an important part of prevention as it enabled the military authorities to anticipate disturbances that could have all the effect of sabotage. CIC agents collected this information frequently as incidental parts of other investigations. It came through extensive liaison with other investigative agencies and through informants, generally voluntary and frequently unknowingly. This intelligence, summarized, passed through various echelons to provide top level Army commanders with an overall picture of potentially subversive groups.

32 Interview with Lt Col Franklin E. Jordan, who was Chief of Investigations at the Aberdeen Proving Grounds during World War II, dtd 28 Oct 55, (CONFIDENTIAL) (Central Records Facility).

CONFIDENTIAL

Detection depended upon well organized and trained CIC sources. Many of the activities that aroused suspicion occurred off the military reservations when soldiers and civilians were off duty. For leads from such incidents, local CIC depended to a large extent on its liaison with the FBI, as the public had been well educated in reporting incidents to them. Moreover, since it was not until the war had started that CIC came out from complete undercover, agents soon discovered that in spite of their War Department Military Intelligence credentials, the greater part of the citizenry they called upon thought that they were FBI agents.

Local state and municipal law enforcement agencies also were good sources of information as to the activities of War Department personnel off duty. Until it was abolished in late 1943, the Countersubversive Informant Network, based on one source for each 30 military personnel and operated through unit intelligence officers, was a fertile source of tips. At the time it was abolished this network totaled about 250,000 secret informants.[33]

There were literally thousands of cases of suspected espionage and sabotage opened during World War II. All had to be investigated to the point where the truth of the charge could be determined. If indeterminate, a conclusion was usually reached to label the suspect "potentially subversive."

Espionage and sabotage, being enemy directed, involved more than one person. Usually there were a number in the chain extending from the agent in the United States back through cutouts and couriers to the enemy country. This inevitably involved civilians with military suspects and the case became connected with the FBI. The military aspect became minor, and major investigative effort was in the civilian community to locate the higher-ups who presumably were controlling more than one agent.

Available documents reveal no statistical record of the achievements of the Service Commands in this category. In a speech in late 1943, Col H. R. Kibler, Chief of CIC, summed up two years work of the Corps by saying there were only a few such cases. He did not identify them. However, any CIC case in this category is probably included in FBI statistics for the period. In July 1944, an FBI spokesman told how some enemy spy rings had been penetrated and furnished worthless information which had been prepared "...with the fine assistance of the Army and Navy intelligence organizations." Foreign agents, he told an Army Intelligence Conference, haven't had much success. Even including violations of the Foreign Agents Registration Act, the total number convicted of espionage activities since January 1940 had been only 117.

In the same period the FBI had checked out 16,295 complaints regarding sabotage and established that some form of sabotage occurred in 1,736 cases.

33 IG Report section in CIC Headquarters and Army Almanac.

Convictions were obtained in 531 cases. Included were the eight saboteurs sent over from Germany by submarine, which was a fairly good indication that Germany had no such apparatus functioning in the United States. Most cases of sabotage were not enemy inspired but malicious jokes that backfired or the result of grudges against other individuals or organizations.

Along the Atlantic seaboard, from Long Island to Florida, occasional landings of enemy sabotage agents were attempted by rubber boat from offshore submarines. In no known cases were these successful. The agents either were apprehended in a short time by the Coast Guard or surrendered themselves to the FBI when their funds were exhausted.

On the Pacific Coast the sporadic landings of high altitude balloons with incendiary devices attached indicated a sabotage effort by the Japanese to start forest fires. These attempts soon fell off when they proved unsuccessful. Probably the greatest single potential sabotage threat in the Zone of the Interior during the period of May 1941 to September 1945 was the confusion and discord sowed by the Communist element among the labor and minority groups of the population. The deliberate stirring up of animosities in these groups, as evidenced by the race riots of 1943 throughout the country, posed a continuous threat to the uninterrupted production of vital war materiel.[34]

has written: "The accusation of general overzealousness on the part of domestic counterintelligence more often than not emanated from sources who found counterintelligence investigations irksome or dangerous to their own activities. Such persons or groups were the ones who were caught flat-footed when Russia broke up the Russo-German pact in 1941. They were the type who also clamored loudest for a second front in 1942-43. And they were the ones who brought pressures directly on the White House in 1941-42 which culminated in the White House orders to discontinue certain investigations indicating Soviet Intelligence agents had stolen vital plans and drawings from commercial aviation construction companies at work on military production."[35]

In the vast majority of cases, including enemy sympathizers of all types, the verified, factual information necessary to positively establish a subject as either an enemy agent or sympathizer could not be obtained. Until January 1944 such persons were termed "potentially subversive." These were handled as the reverse of the calculated risk of the loyalty program. Disposition of the individual depended upon the degree of subversion suspected. In some cases this meant removal merely from sensitive positions; in others, being placed in a special unit

---

34 (CONFIDENTIAL) (Central Records Facility).

35 Ibid.

organized in the Service Command and set up isolated from classified projects where a limited type of surveillance could be maintained. A War Department Special Organization was set up in the Black Hills of South Dakota to handle those considered most potentially subversive.

The entire problem of potential subversives concerned the Communists. There was little problem in neutralizing the activities of any one suspected of pro-German, pro-Japanese or any of their satellites or sympathizers. With the Communists it was a different matter. On the books they were our Allies, but as Col L. R. Forney, in charge of CIC at G2 WDGS, told the 1944 Army Intelligence Conference: "There has been no change in Communist policy within the United States...at no time has it lost sight of its long-range goal of world Communism... Their objectives in the Army will be to make it difficult for troops to be used in the domestic field in cases where the Party resorts to violence to gain some immediate specific objective and to make it difficult to wage a war that the Communists do not like." Later at the conference, in discussing requests to bar radical publications from Army posts, Colonel Forney summed up the Army's counterintelligence problem: "G2 is extremely cagey because they know that everything of a radical nature is settled at the highest War Department level."

In this connection, Colonel Forney said, "In cases of removal of officer candidates from training, although the cases have not been numerous, they have been the most difficult cases we have had to handle in counterintelligence. When I was first confronted with the subject I thought we must have excluded 50,000 people. After a diligent search extending over a period of a year we found we had excluded less than 50 but the row created was as great as though the number had been 50,000. Here is one fundamental thing: if a man progresses any great distance in the Officer Candidate School, the high echelons of the War Department won't stand for his removal."

So touchy was the subject that Colonel Forney advised that if the investigation turned up any adverse information other than subversion, that information should be gotten to a faculty or examining board. In that way the candidate could be removed without bringing out the subversive angle.[36]

Colonel Forney said concerning the new policy which had been adopted on 15 February 1944, the day the Office of the Chief of CIC was abolished: "Most precautions based on reasonable suspicion of subversion before actual proof was obtained are now abolished." Moreover, the term "potentially subversive" was abolished and dispositive action was relegated to the time when factual information positively establishing disaffection was at hand.[37]

---

36 War Department Intelligence Conference, New York, 19-21 Jul 44, (SECRET) (Central Records Facility).

37 Ibid.

CIC agents who were investigating Communists during World War II read this directive of 15 February 1944 as they took over their new duties as Security and Intelligence Corps personnel. They realized from experience that such proof would require extensive and timely investigation, much of it in civilian areas. Also for all practical purposes unless there were indications of overt acts it was a waste of time to investigate military personnel merely suspected of Communism. Even in 1942, it had not been easy to get action. An Army major of Military Intelligence discovered to have an undercover connection with a subversive organization merely lost his commission.[38] CIC had never been an action agency, but it had been allowed to make recommendations. The Directive of February 1944 prohibited CIC agents from even making any recommendations in their reports.

Disaffection, a more acceptable term, escaped any ban. It was a catchall when subversion was not apparent. Whereas subversion implied a positive feeling against the United States, a disaffected person was not for the United States in the manner a good citizen would be expected to be in time of war. Cases classified "Disaffection" totaled next in size to loyalty cases and early in the war represented as much as 40 percent of all cases in a Service Command. Frequently, the attitude of a Communist led to his being labeled "Disaffected." Disaffection truly applied to members of other radical organizations, who, while not dedicated to the overthrow of the United States government, were so completely interested in furthering their own organizations that they would slow down production or in other ways hurt the war effort to accomplish their goals. Since such group actions could affect serious sabotage, their activities were closely watched by CIC.

Another large number of disaffection cases involved individuals with grudges against other individuals or organizations. Many of these individuals were actually cases for a psychiatrist. During the war CIC agents sometimes found liaison with this unit of the Army very profitable. Many mentally unbalanced people acted so suspiciously that their associates reported them to CIC agents who quickly learned that a doctor was needed.

These were not the only false alarms that kept CIC agents busy night and day all over the nation. Every month there were scores of reports of suspicious objects or flashing lights or severed communication lines that had to be checked out. Suspicious objects would turn out to be almost anything that the vivid imagination of a spy-catcher maniac could conceive. Flashing lights more often than not turned out to be from the headlights of cars on some lonely lover's lane.[39]

38 Memo from Capt Hugh D. Wise, Jr., to Chief CIC, 3 Feb 42, Subj: "Investigations of Prospective Agents of the Counter Intelligence Corps," (Unclassified) (Central Records Facility).

39 Interview with Lt Col Franklin E. Jordan, who was Chief of Investigations at the Aberdeen Proving Grounds during World War II, dtd 28 Oct 55, (CONFIDENTIAL) (Central Records Facility).

As copper prices climbed, communications lines were sliced by persons who wanted to obtain a few dollars from the local junk dealer. A "secret" radio turned out to be a model railroad enthusiast dispatching trains over an old fashioned telegraph set. As a CIC agent sped through the night to an inlet on the Chesapeake Bay to check out a report that a German submarine had surfaced there, the weary officer in charge located the spot on a chart and discovered there was all of eight feet of water in the cove when tides were exceptionally high![40]

All incidents, no matter how trivial, had to be checked out. There was no room for calculated risks in incident coverage. There was no basis for calculation or assumption. Only through a trivial incident resulting from a moment of carelessness by an otherwise cautious enemy agent, could the most dangerous subversives be caught. There was a presumption of sabotage in all accidents until proved otherwise. An impostor might be motivated by his work as an enemy agent or for personal gain.

At the working level such incidents brought CIC agents into jurisdictional collision with Criminal Investigators of the Provost Marshal General until both were merged in the SIC. Prior to that, appeals for a policy ruling had been unavailing and the question was generally settled by which agent first started the case. At posts where there were capable agents in both units, there was little problem. When one unit was weak, however, the other usually had a justified complaint that the cases transferred had been bungled before transfer. At the Army's Ordnance Research Center at Aberdeen, Maryland, the question was settled by a ruling of the commanding general that the CIC agents had primary jurisdiction in the investigation of all incidents until any intelligence interest was fully exploited. This ruling also cleared the scene of accidents of amateur investigators from Claims, Engineers, Quartermaster, Personnel, and other sections who all claimed an interest in the event.[41]

However, CIC agents had not always confined their activities to "the book." Major Peters has described the situation in the Second Corps Area:

> "In the late summer of 1941 all CIP agents were working on several different types of investigation from the above categories, and cases were assigned in a haphazard fashion, with the most delicate assignments going to those enlisted agents or officers judged best qualified for the particular case. Control over investigations was relatively loose and divided among half a dozen officers. Agents frequently became involved in investigations which went beyond CIC jurisdiction, or else spun out an investigation far

40 Interview with Lt Col Franklin E. Jordan, who was Chief of Investigations at the Aberdeen Proving Grounds during World War II, dtd 28 Oct 55, (CONFIDENTIAL) (Central Records Facility).

41 Ibid.

beyond the merits of the case. Also certain undercover agents who had not been thoroughly investigated themselves originally were found to be undesirable when careful background checks were made on them in early 1942 as the investigational activity became better organized."[42]

Until the merger of CIC and CID in 1944, fully half the time of CIC agents in the United States during World War II was devoted to personnel investigations for CIC. To acquire its 5,000 agents, it was necessary to make complete background investigations of more than 25,000 prospects. Equally extensive backgrounds had to be done for officer candidates, cryptographers, and many other intelligence personnel, including some working for the Office of Strategic Services.

Extensive background investigations had to be made of personnel working in Signal Corps activities such as radar. Ordnance had such items as the then highly secret proximity fuse and half a dozen other projects that required completely cleared workers. Chemical Warfare had some ultra-secret phases of bacteriological work. Air Force wanted to be sure its bombardiers would aim on target. Before the special CIC detachment was created for the Engineer's atomic bomb project, selected agents in certain Service Commands were used for investigation of scientists. The calculated risk policy of the Manhattan Project has been well publicized. This same policy was used in many other research and development projects of the various Army technical services, and part of the CIC work was keeping a discreet surveillance on such persons. All these projects had clerks, custodians and couriers who also required clearances.[43]

Interviewing citizens in connection with these personnel investigations resulted in some problems. A mid-West university professor couldn't understand the reasons for the detailed questions, such as "What games does he play?" The professor, writing to the War Department, said he told the investigator that as a boy the applicant "enjoyed playing with electric trains." However, the real reason for writing the War Department was that the investigator had not shown any credentials and the professor had forgotten to ask for them.[44]

Whether a CIP agent should identify himself by showing his credentials when seeking information was the subject of debate. Some argued that the immediate display of the credentials put the interview on an official basis and consequently resulted in more and more accurate information. Other agents claimed that

42 Peters, A. K., Maj, (MI) (USA), CIC Officer Second Service Command during World War II, manuscript written in the Historical Project, dtd 19 Oct 55, (CONFIDENTIAL) (Central Records Facility).

43 Interview with Lt Col Franklin E. Jordan, who was Chief of Investigations at the Aberdeen Proving Grounds during WW II, dtd 28 Oct 55, (CONFIDENTIAL) (Central Records Facility).

44 CIP Correspondence, 30 Apr 41, (CONFIDENTIAL)(National Archives).

showing credentials scared interviewees into giving less information for fear of getting someone into trouble. These agents claimed that by identifying themselves, they attracted more attention. The interviewee was subsequently more likely to tell his friends about talking with a federal agent and thus endanger security. The tentative CIP Regulations published in the spring of 1941, as interpreted by the Fourth Corps Area, did not answer the question specifically but stated "...cards will be exhibited at any time during the course of an investigation where it is necessary to do so to obtain the information desired..." Badges were to be shown only to illiterates.[45]

There were many occasions during the war in the Service Commands when CIC, ONI, and FBI worked together on cases. This was particularly true on mass screenings. The most common of these was at the ports and borders of the nation where travelers entered and departed. At the major seaports, CIC enlisted agents were regular members of a panel with ONI officer investigators and FBI agents to examine passengers and crews of neutral nation vessels.

While the counterintelligence angle of this screening was an effort to determine whether any of the persons screened were enemy agents or couriers, the major portion of the work was strictly positive intelligence. It included not only neutrals, but prisoners of war being shipped to this country for internment and our own rotated Army personnel. CIC agents had long lists of EEI's (Essential Elements of Information) from all the Army technical services. Even Medical Intelligence was desired.

Among the doorbell-pushing ranks of CIC, investigations of officers caused the most trouble. Extreme discretion had to be used when the case involved an officer of rank, particularly field grade and above. While investigations involving general officers were normally handled by officer agents, enlisted men handled practically all the others.

The order published in late 1941 that required all agents in civilian clothes to be called "Mister" helped to conceal identity. Officers in charge of agents explained, where necessary, that the rank of these agents was only simulated for pay purposes and that they were really "agents" or "Special agents." But this pretense was dispelled every pay day whey they were ordered into uniform to be paid. It was essential to conceal the rank of an agent to enable him to get information from his fellow Americans, not to deceive enemy agents who were just as much afraid of a CIC enlisted agent as of a CIC officer agent.[46]

45 Page 12, CIP Regulations, Basic History "Government Agencies," (CONFIDENTIAL) (Central Records Facility).

46 Interview with Lt Col Franklin E. Jordan, who was Chief of Investigations at the Aberdeen Proving Grounds during World War II, dtd 28 Oct 55, (CONFIDENTIAL) (Central Records Facility).

Spot and Other Reports

Counterintelligence branches of Service Commands were charged with the collection of domestic intelligence. At the operational level CIC agents were the only personnel available for collecting it. Thus, in spite of all the numerous reminders issued by higher headquarters that CIC agents were not to be used on non-CIC activities, they were still assigned to collect all types of information of interest to military authorities, including positive information and even general news.

This general information angle of intelligence was inherent in the work in spite of all efforts to escape it. At every echelon commanders expected Military Intelligence sections to keep them completely informed on any and all matters of general interest. Spot reports, consisting of a quick preliminary summary, forwarded by telephone or telegraph, were mandatory. Woe to the CIC agent out in the field who failed to report an incident that made morning headlines, unless there was not even a remote connection with the Army. "When in doubt, forward the dope" was a common guideline. Army superiors of agents at all levels would turn to them on almost any question and say, "You're Intelligence, what's the story?"[47] This involved gathering all information that affected the war effort and the Army. Col L. R. Forney categorized the information required as the following three types:

> 1. Information concerning matters having a detrimental effect on the morale, training and loyalty of members of the Army and on the security of military information and equipment. Of course in mentioning morale and training, I am not thinking of ordinary obstacles, but of subversive influences.
>
> 2. Information concerning the effects certain aspects of the domestic situation are having or may have on the war effort.
>
> 3. Information concerning specific conditions that may require the use of troops in the domestic area.[48]

One of the more legitimate information services was the preparation of monthly Subversive Situation Reports, familiarly known as "Sitreps." These

47 Interview with Lt Col Franklin E. Jordan, who was Chief of Investigations at the Aberdeen Proving Grounds during World War II, dtd 28 Oct 55, (CONFIDENTIAL) (Central Records Facility).

48 Address delivered by Col L. R. Forney, G2, War Department General Staff, 20 Jul 44, "Domestic Positive Intelligence and Counterintelligence," (See: Transcript of Proceedings, War Department Intelligence Conference, New York, 19-21 Jul 44), (CONFIDENTIAL) (Central Records Facility).

summaries were compiled in the field and collected at post, camp and station level, which in turn forwarded them to the Service Commands. The nine Service Command reports were consolidated at G2 War Department level by the Military Intelligence Service.

The Communist attempt in 1942-43 to dictate Army policy by demanding a "Second Front" was extensively reported by the various Service Commands. However, there were many more specific Communist problems of concern to the Army.

A great amount of the energy of the Communist Party was spent in attempts to infiltrate the Armed Forces and recruit servicemen to their cause. In late April 1943, for example, Second Service Command reported the continued distribution of the Communist publication, In Fact, to Army posts. Also servicemen were encouraged to attend Red-sponsored social functions at various rendezvous in New York City.[50] Reports of this nature were frequent.

Less often there were indications that the Communists sought to disrupt the military by criticism of the Army command system. In August 1943, First Service Command noted the distribution of a booklet entitled The Class Struggle in the Army. This publication spoke violently against the Army noncommissioned officer, stating that he was "part of the Army bureaucracy" and that only "the rottenest, most brutal, and backward soldiers become good noncoms."[51]

Particularly interested in attracting servicemen to the "cause" was the Young Communist League. The League's concern with servicemen was noted in the report from the Sixth Service Command in August 1943 that the group planned to

51 Ibid., 25 Aug 43.

form a club known as the SOS Club (Sweethearts of Servicemen) in Detroit. This club was supposed to sponsor social gatherings for servicemen.[52]

The Young Communist League, which also pitched its appeal to working youths and college students, began in late 1943 to formulate plans for going undercover. The league dissolved and then reappeared with a more respectable name, The American Youth for Democracy.[53] Like its predecessor, this group aimed at creating a heavy membership of service personnel and returning veterans. Reports in December indicated an all out effort to attract men in uniform in Massachusetts. Plans were in the works to open a canteen and obtain "respectable" sponsors to back the enterprise. The Massachusetts group, like the Communists in other areas, was seeking to influence the soldier vote and to get servicemen to sign various petitions.[54]

A paragraph from the 9 March 1944 subversive summary offers a concise conclusion on Communist efforts to "get through to" men in uniform:

> The Communist Party has intensified its efforts to win sympathizers in the Armed Forces and the Merchant Marine, in which infiltration the American Youth for Democracy is rapidly becoming a spearhead. In promoting their cause in the Army and Navy, the Communists are systematically operating under the guise of patriotism and all-out aid to serviceman, working through such organizations as the American Youth for Democracy and its servicemen's canteens, and the International Workers Order, which recently purchased 5,000 copies of the "Spotlight" to be sent to their members in the Armed Forces.[55]

It goes without saying that many persons already Communist Party members were taken into the Armed Forces. The following report from Eighth Service Command indicated the desire of the Party to keep hidden the identity of Communists in the service:

> Indications of the Communist Party's desire to keep undercover servicemen's participation in Party activities is evident in recent statements of leading functionaries that members of the Armed Forces who are Communists will be forbidden to pay dues to the Party or attend Party meetings, and that their wives will be requested to refrain from attending meetings or actively engaging in Communist Party affairs;

CONFIDENTIAL

however, they will be permitted to retain membership and their dues will be collected surreptitiously.[56]

Apparently in the realization that their basic subversive intent was becoming painfully obvious to the country's investigative agencies, the Communists added another arrow to their bow. Although most of the damage was done sub rosa, the Reds also publicly worked to discredit these agencies. Concurrent with their statement of the Communist attempts to hide the identity of Party members in the service, the Eighth Service Command reported:

> Communists in this area appear to be entrenching themselves and fighting anti-communistic accusations of fact-finding agencies with the charge that these agencies, in bringing to light alleged nefarious acts and practices of the Communists, fellow-travelers and liberals, are using Gestapo and undemocratic methods.[57]

The Communists found fertile ground for agitation in the Negro population. It was natural that there would be some unrest among Negroes as a result of the Army's segregation policy, but the Reds worked constantly to fan the flames. As Western Defense Command reported in May 1943:

> Racial discrimination by the Army represents the outstanding theme of Negro publications currently being distributed among Negro units of this command. The opinion has been voiced that the greater part of this radical propaganda is Communist-inspired.[58]

One particular instance of Communist agitation over the service's segregation of Negroes was the American Youth for Democracy's movement to secure signatures for anti-segregation petitions to Secretaries Knox and Stimson. This drive, reported in early 1944, was supposed to build up enough steam so that by April a delegation could proceed to Washington with the signed petitions.[59]

Activities of the more violent movements for Negro betterment were also reported in the MIS summaries. Of particular significance was the March on Washington Movement, headed by A. Philip Randolph. The organization attempted vigorously to combat "Jim Crow" measures and preached the necessity for Negro unity in order to gain their freedom.[60]

---

56 General Subversive Situation Summary, 3 May 43, (CONFIDENTIAL) (Central Records Facility).
57 Ibid., 3 May 43.
58 Ibid., 10 May 43.
59 Ibid., 30 Mar 44.
60 Ibid., 8 Jul 43.

The March on Washington Movement, agitating along the same lines as the Communists, was accused by the Reds of "black nationalism" and of putting their own race's problems and goals ahead of the "betterment of mankind."[61]

Areas of racial tension, particularly around military posts and defense plants, were also covered in the subversive summaries. The Detroit race riots of June 1943 were a particular source of concern, and all commands reported the reactions in their areas to this major disturbance.

For instance, Fifth Service Command reported after the riots that:

> ...the racial situation throughout this command has developed what has been termed a "powder keg" aspect. Numerous minor incidents have been reported from various points, primarily in the manufacturing states of Ohio and Indiana. Serious outbreaks are believed imminent, particularly in Evansville and Gary, Indiana, and Mansfield, Columbus, Cincinnati and Youngstown, Ohio. Growing tension is reported at Indianapolis where pawnshops have reported increased sales of guns and knives, etc., and where trouble between transient defense workers and Negroes is expected.[62]

The expected problems in the area of the Fifth Service Command did not materialize, and the racial tension diminished by the end of July. It was reported that both Negroes and whites had for the moment become weary of hearing the same gossip recounted time and time again. The inflammatory rumors had greatly decreased.[63]

The racial situation in the South, particularly around Army camps, was also extremely touchy. For instance, Fourth Service Command wrote:

> The Negro situation in this command is reported to be rapidly approaching a critical stage, spurred on by inflammatory write-ups in the Negro press concerning racial conditions, particularly the current tense situation at Camp Stewart, Georgia, the scene of a recent riot. Reports indicate that increasing numbers of Negroes in this command have been observed carrying guns and revolvers in place of the knives previously carried.[64]

61 General Subversive Situation Summary, 20 Jan 44, (CONFIDENTIAL) (Central Records Facility).
62 Ibid., 30 Jun 43.
63 Ibid., 4 Aug 43.
64 Ibid., 23 Jun 43.

After the Detroit riots, the MIS subversive summaries contained almost weekly reports from all commands on the possible points of racial tension. This sentence from the 30 March 1944 issue, written in reference to the nation-wide situation, is typical: "Service Commands report the racial situation as remaining tense, but foresee no imminent danger."[65]

Pro-Nazi Activity of Minor Proportions by 1943

Subversive activity among pro-Germans and pro-Nazis in the United States was of rather insignificant proportions by 1943. There were occasional reports that innocent-sounding organizations were cloaks for the continuation of the German-American Bund.[66] Other German organizations were reportedly refraining from open displays of sympathy to Nazilism so they could remain intact for "possible future help to Germany."[67]

Many German-Americans apparently nourished the hope that Germany would not be dealt with too harshly by the Allies. One report from the Sixth Service Command indicated the Germans of Chicago hoped to see the growth of serious differences between Russia and the other Allies which would result in easier peace terms. There were wild rumors that Germany and Russia had already come to a secret peace treaty.[68]

Indications of subversive intent among America's Italian population were also almost nonexistent in the period from March 1943 to March 1944.

One of the few significant reports came from the First Service Command in November 1943. It stated that most pro-Fascist activity had been driven underground or been displaced by "more timely objectives," namely attempts to secure "peace with justice," a peace without punitive or repressive measures against Italy.[69]

Incidents of subversion within the Japanese population were also infrequent. The Japanese population of the United States had been concentrated in relocation centers after Pearl Harbor. Those known to be disloyal were placed in the Relocation Center at Tule Lake, California. The major subversion incident involving Japanese was the upheaval at this camp in early November 1943. The Caucasian supervisors of the camp were held virtual prisoners by the Japanese

69 Ibid., 18 Nov 43

for several hours. For two weeks previous, the internees had been on strike against the management. They refused to harvest food on the grounds that they actually were "prisoners of war."[70]

On 4 November, the Army took over the Tule Lake camp and things quieted down rapidly. Some contraband, including 500 radio receivers and 500 knives, was seized; several attempted demonstrations were suppressed; and a number of the troublemakers were taken into custody.[71] On 14 January 1944, the Tule Lake Relocation Center was returned to full civilian control.[72]

Domestic Fascists Also Covered

The United States had its own breed of domestic Fascists to contend with during the war years. Perhaps the leading organization of this nature was the America First Party, whose national organizer, Gerald L. K. Smith, was described in one report as "pro-fascist, a Ku Klux Klan member, a promoter of anti-Semitism and an associate of Father Coughlin."[73] As the war progressed, Smith and his cohorts increased a program to win servicemen to their point of view. The America First argument was that the government should give more financial assistance to servicemen rather than spend money in foreign countries.

Smith constantly reiterated that, in the event the Republicans nominated another "stooge" like Wilkie, he and his followers would be forced to call a nation-wide convention and nominate a man for the presidency along the line of "a Nye, Wheeler or Lindbergh."[74]

Pacifist organizations like the "Peace Now Movement" and religious sects who aggressively preached pacifism, like the Jehovah's Witnesses, also were covered in the subversive summaries.[75]

Basically it can be said that the MIS summaries on subversion dealt with individuals and groups of a vehement and vocal nature whose speech and actions were primarily motivated by other than a desire to see America victorious in the war. Having goals other than American victory, these persons and groups tended to preach and aggressively strive for that particular outcome of the war which most favored their primary personal desire.

Chapter 2

CIC OPERATIONS IN THE SERVICE COMMANDS

Inspections and liaison trips through the various Corps Areas by Capt H. G. Sheen, CIP executive officer, and Capt Hugh D. Wise, his successor, in 1941 and 1942 give a good insight into CIC operations and problems during the period.

First Corps Area

The First Corps Area, later called First Service Command, had headquarters in Boston and included the states of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut, with an overall population of approximately 9,300,000. During the peak war years the area was commanded by Maj Gen Sherman Miles. Col A. R. Bolling held the post of Director of Intelligence, and Lt Col S. D. Brown commanded the CIC detachment. The detachment began the war with 15 agents but had a total strength of 271 men by September 1943. Drains on the unit for CIC personnel to man tactical detachments caused reduction to 101 agents by January 1944.[76]

In the pre-war era, work loads increased rapidly. Colonel Bolling, the G2, reported in June 1941 that with three agents at school, he had an effective force of only 12 CIP agents and three civilian investigators. With these he had to cover New England and such vital centers as the Watertown Arsenal and the Springfield Armory. Already he had 90 loyalty investigations pending for cases outside the Corps Area.[77]

Captain Wise found that while there was sufficient officer personnel in the First Corps Area office at Boston, the shortage of agents was so acute that even if all authorized and tentative quotas were filled, there would still be an insufficient number. At the time of the visit, the lack of civilian clerical help was holding up the typing and final disposition of 131 cases.

Liaison with Boston law enforcement agencies was termed excellent. A personality index file was maintained by CIC, with over 60,000 names carded. The Corps Area G2 did not seem particularly interested in discussing the use and employment of CIC and referred Captain Wise to the head of his counterintelligence section. The officer in charge of that section seemed cordial and cooperative, but was inexperienced and seem unaware of the ramifications of his position. The

76 CIC Record Lists, compiled as of Oct 43, (CONFIDENTIAL) (Adjutant General Intermediate Holding Depot, Ft Holabird, Md.).

77 Ltr AC of S, G2 First Corps Area to G2 WDGS dtd Jun 22, 1941, Corps of Intelligence Police Correspondence 1941, (CONFIDENTIAL) (National Archives, Washington, D.C.).

officers in charge of both field offices in the area had little or no intelligence experience and expressed strong desires for troop duty. Captain Wise felt that there was a lack of harmony in the internal organization. A backlog of 422 cases was being whittled down during the course of the inspection.

All agents with the detachments had completed at least basic infantry training, and all had good educational and background qualifications. However, it was felt by the officers in charge that the men left something to be desired as investigators. The officers suggested that CIC might do well to procure men with investigative experience, regardless of educational level.

All personnel in the First Corps Area detachment felt that the time in the CIC school at Chicago was well spent. There was no formal post-school training, but new agents were indoctrinated by being assigned for a short period to assist experienced men. A library of technical books and pamphlets was maintained by the detachment.

Agents were using private automobiles and collecting the authorized five cents a mile, but a problem was arising at the time of the inspection trip. Priorities for tires for the personal cars had not come through, even though they had often been requested. Subsistence, quarters, and clothing allowances were adequate, but special expenditures presented something of a problem. While the G2 stated that none of the agents were hard pressed financially, reports from agents contended that it was necessary to rely to some extent on private means without the expectation of reimbursement.[78]

Visits to First Corps Area Headquarters in Boston were made in January 1942 by Capt Neville K. Adkinson and in March 1943 by Capt James E. Foothorap. Both men prepared reports of their visits for the Chief, CIC.

No Room to Work

Captain Adkinson found that a severe shortage of physical facilities was hampering the unit. The situation was no better at the time of Captain Foothorap's visit. Although additional space had been procured in the interim period, an increase in agent personnel had kept quarters as cramped as ever. The agent shortage noted during the first visit was eased by 1943, however. The investigative backlog that provided a source of serious concern in 1942 was eliminated by 1943, but clerical shortages left a typing backlog of between 1,500 and 2,000 cases.

78 Memo dtd 1 Dec 41, Subj: "Report of Visit to Fourth, Fifth, Sixth, Seventh, and Eighth Corps Area," from Capt H. G. Sheen, (CONFIDENTIAL) (Central Records Facility); and Memo dtd 16 Apr 42, Subj: "Report of Liaison Trip to Certain Corps Areas," from Capt Hugh D. Wise, Jr., (CONFIDENTIAL) (Central Records Facility).

The need for official personnel with knowledge of intelligence operations, called imperative in 1942, was even more acute by 1943. Individual workloads were large. Coordinated performance of assigned duties had become impossible.

Although no language training or physical fitness program was conducted by the detachment in 1942, courses in Spanish, German and Italian were being taught by Berlitz instructors to all agents, and physical training schedules had been set up by the time of Captain Foothorap's visit.

Both inspection trips led to the conclusion that the First Corps Area Detachment left something to be desired when compared with other detachments. Captain Adkinson felt that personnel were below normal CIC standards. Morale was comparatively low. Officers charged with employment of the detachment seemed unaware of the magnitude of their duties.

Captain Foothorap concurred in these findings and added that the procurement program was the basic flaw in the detachment operation. He also felt that the wholesale distribution of CIC duties to many officers in the G2 Section was an evil that should be remedied by giving all routine counterintelligence duties to a junior officer. Enlargement of the basic CIC staff was recommended as a means of administrative improvement.[79]

Eastern Defense Command

The Eastern Defense Command, originally the Eastern Theater of Operations, was activated in December 1941 immediately after Pearl Harbor, when an enemy attack on the Atlantic Coast was considered a possibility. Its area of responsibility within the seaboard states included areas of the First, Second, Third, and Fourth Corps Areas and the Army bases in Newfoundland and Bermuda.[80]

The four Service Commands served the Eastern Defense Command for counterintelligence investigations so the larger command was assigned only one CIC officer and no agents, except for separate detachments in the Newfoundland and Bermuda Base Commands.[81]

Second Corps Area

The Second Corps Area, later called the Second Service Command, maintained headquarters at Governor's Island, New York. It was responsible for a geographic

79 Memos dtd 14 Jan 42 and 16 Mar 43, for Chief, CIC from Captains Adkinson and Foothorap, respectively, Subj: "Report on Visit to First Service Command, (CONFIDENTIAL) (Central Records Facility).

80 The Army Almanac, p. 599.

81 File FDC 1, 12 Nov 43, (Unclassified) (Central Records Facility).

area that included the states of Delaware, New Jersey, and New York. At the outbreak of war it had 47 agents, reaching a peak of 460 in July 1943 and, at the time agents were transferred to SIC in 1944, numbering 126.[82] The area was commanded by Maj Gen Thomas A. Terry. Col Samuel V. Constant held the post of Director of Intelligence.

In the center of this vital coastal area lay New York City, the largest port of entry for immigrants, the largest city, and the biggest shipping port in the United States. Within the Second Corps Area, with a total population of 20,000,000, lived more foreigners and enemy aliens than in any other two areas combined.[83] Also a vast number of induction centers, Army posts, camps and stations, and key industrial plants were located here. New York was a nerve center of the nation's communication and transportation network. For these reasons, the Second Corps Area was recognized as the one in which the counterintelligence burden would be the heaviest in time of war. Throughout World War II there were always more Counter Intelligence Corps personnel at work in the detachment of this area than in any other Corps Area or Service Command detachment.[84]

In the summer of 1941, a contingent of about 15 CIC agents operated in civilian clothes and in an undercover capacity out of a two-room office in the financial district of New York. The office door carried the name "Economics Research Corporation." Since there were only six desks and chairs available for the entire detachment, it was difficult to organize an orderly office administration. Personnel newly assigned to the detachment were taken by the officer in charge to a large file cabinet and shown a deep drawer into which hundreds of cards had been dumped. These were the suspect files, and Corps of Intelligence Police agents rummaged through them at random to pick out cases which looked most exciting. The assignment and investigation of cases was at best a haphazard affair, although an attempt was made to give some priority to possible espionage or sabotage leads. A few picked agents worked directly out of the office of the Assistant Chief of Staff, G2, Headquarters, Second Corps Area at Governor's Island, New York. There they were assigned as leg-men to several officers who reviewed incoming requests for investigation, screened the most urgent cases, and assigned them to the agents at hand for immediate investigation.

Several of these officers had attended the first Corps of Intelligence Police Investigator's School at Washington, D.C. This training, together with civilian

84 Arthur K. Peters, Historical Manuscript on Second Service Command, 1941-45, (Unclassified) (Central Records Facility).

backgrounds with investigative organizations gave them a head start on most of the Corps of Intelligence Police agents. At that time young college graduates eager for the adventure of spy-hunting were the usual agents.

Most of these agents were not draftees, but volunteers who were often granted waivers for a physical disability which might have kept them out of this work. Maj Charles A. Ellis, formerly a member of the United States Secret Service and an able investigator himself, supervised the officers and agents at Governor's Island for the Assistant Chief of Staff, G2, Headquarters Second Corps Area. In 1942, Major Ellis was selected to head the CIC force in the invasion of North Africa.

The atmosphere surrounding Corps of Intelligence Police activities before Pearl Harbor was charged with urgency, glamor, and informality from the agents' point of view. The civilian clothes, the impressive credentials describing the agents as a representative of the Office of the Secretary of War, the tacit permission to carry private firearms and blackjacks, the immediate-action, red-bordered, highly classified letters requesting investigation which flooded in with every mail, all created a strong sense of mission in officers and enlisted agents alike. Everyone was on call at all hours of the day and night. Surveillances, raids, and other special assignments frequently kept men in the field into the early hours of the morning. Many of the agents used their private automobiles for investigations without compensation, since there were, until late 1941, no civilian-type vehicles available for the Corps of Intelligence Police. Although some confidential funds were available, disbursements for entertaining informants, carrying out case investigations, and purchasing clothing and equipment, were frequently made by the agents out of their own pockets with no reimbursement.

From the increased CIC authorizations in April 1941, the Second Corps Area was allotted 21 men. Even with this increasing number of agents the investigators assigned to the Second Corps Area were daily dropping further and further behind the rapidly mounting case load.[85]

Agents were facing a backlog of over 1,600 cases when Captain Wise arrived for his inspection in April 1942. The report of his visit gives all officer and administrative personnel the highest commendation for their devotion to duty and enthusiasm for the CIC in the face of a tremendous work load. Liaison between the headquarters office at Fort Jay and New York City police and the FBI was termed excellent.

The personnel picture was similar to that in other areas. Officer personnel was available as needed, but the shortage of clerical personnel and agents was

85 Arthur K. Peters, Historical Manuscript on Second Service Command, 1941-45, pp. 4-6, (Unclassified) (Central Records Facility).

1111

acute. To remedy the shortage of agents, a unique system of procuring and processing applicants was implemented. Men not in the service who were interviewed at Fort Jay and appeared to be good CIC material were advised to enlist immediately. Arrangements were then made to have the men begin basic military training with the Military Police Battalion at Fort Jay. The men so taken were tabbed by the Adjutant General and were not available for assignment elsewhere. After eight weeks of basic training the men were transferred to the G2 office for clerical work until their security clearances were completed. Arrangements were made to carry such men over and above the authorized strength of the Corps Area, and when the clearance was completed the men were assigned to CIC.[86]

Despite the chronic problem of inadequate procurement authority and the delays in recruitment and investigation, the Second Corps Area had been authorized strength at that time of 49 men.[87]

The allotted strength was revised upward in September 1942, when the detachment's quota was set at 149 special agents, 263 agents, and 32 clerks.[88]

Like the other Service Commands, the Second Service Command reached its peak wartime strength in the summer of 1943, when as many as 460 agents were on duty at one time.[89] By December 1943, overseas shipments had taken a heavy toll of personnel from the Second Service Command. Only two officers and 170 enlisted men remained.[90]

In January 1944, after the merger of the Counter Intelligence Corps and the Provost Marshal General's Investigators, the strength of the Second Service Command Security Intelligence Corps was approximately 220 officers and enlisted men. SIC strength was stabilized at slightly under this level until V-J Day.[91]

Organization and Administration

In October 1942, the detachment required additional office space. It moved from 90 Church Street to a modern office building at 50 Broadway, where several entire floors of office space were allocated to CIC. The detachment remained there until 1946, when it returned to the Church Street location.

Four additional field offices were opened early in 1942 in an effort to provide adequate counterintelligence coverage of the Second Corps Area. CIC offices were established at Troy, Rochester, and Buffalo, New York, and at Trenton, New Jersey. The Trenton office later moved to Philadelphia as a joint operation with the Third Service Command.

All the field offices of the Second Corps Area came under the command of Maj W. A. Sullivan, the Counter Intelligence Corps detachment commander. The autonomy of the detachment was not complete, however, since it could initiate no investigations. All incoming cases were assigned to it by the Chief, Investigations Branch, Office of the Assistant Chief of Staff, G2, Headquarters Second Corps Area. Furthermore all case reports were reviewed by the Review Branch office of the Assistant Chief of Staff, G2, before they were disseminated to other interested echelons. One officer who served in the area had this to say of the system:

> "This machinery which was designed to keep the Counter Intelligence Corps detachment strictly as an investigative body without policy-making power, was a compromise of expediency. It worked reasonably well, although there were frequent clashes between the Counter Intelligence Corps Detachment and the Investigative and Review Branches at Governor's Island, who sometimes overstepped their administrative functions and tried to direct actual investigations from Governor's Island. This friction, which persisted throughout the war, invariably generated more heat than light."[92]

The administration of the Counter Intelligence Corps Detachment was controlled by the Field Office at 50 Broadway. An Administrative Section under the commanding officer was composed of a warrant officer and several clerks who maintained all personnel and pay records for the detachments. Two enlisted men with a part-time supply officer took care of all supply matters except the detachment automobiles, which were under the care of two mechanics. Credentials and badges, however, were issued and accounted for only by the Office of Assistant Chief of Staff, G2, at Governor's Island. An indication of the attitude of CIC agents toward administrative matters is this statement from a former CIC officer in the area:

92 Arthur K. Peters, Historical Manuscript on Second Service Command, 1941-45, pp. 24-25, (Unclassified) (Central Records Facility).

"The administration of the detachment was carried on with a minimum of red tape consistent with security and directives from higher authority. The primary target of the administrative 'team' was always to keep as many agents as possible actively at work in the field....

"In this connection the detachment was fortunate in being able to procure and keep several Civil Service administrative clerks who not only performed their functions most diligently but also provided the necessary continuity to administration of records when the military administrative personnel was rotated. The administrative and housekeeping details operating a large investigative organization like the Counter Intelligence Corps detachment in New York were always looked on as unnecessary evils."[93]

The field office at 50 Broadway was constantly manned, from the time it first opened. Internal guard duty was rotated among the agents, who also were assigned guard duty in the Office of the Assistant Chief of Staff, G2, at Governor's Island every night. Due to the classified nature of the correspondence and reports written in the field offices, the waste paper had to be collected from all three floors of the CIC offices and burned each night by Counter Intelligence Corps agents. Even the scrub women had to be followed on their rounds by a Counter Intelligence Corps agent. Much of the report typing, all the countless messenger details between the field offices and Governor's Island, and even the central files at Governor's Island were maintained by Counter Intelligence Corps agents.

One officer who inspected the detachment estimated that in view of the amount of agents' time consumed in housekeeping, administration, and training details, the effective investigative force of the detachment was diminished by about 40 percent at any given time.[94]

The most critical problem in administration of the Counter Intelligence Corps detachment was the procurement of enough civilian personnel to type and assemble the great number of investigative reports being turned out daily by the agents. One of the cumbersome arrangements which slowed down CIC operations of the Second Service Command was the locating of the Central CIC Files on Governor's Island across the harbor from the field office in Manhattan. Agents spent many valuable hours each week travelling back and forth on the ferry between these two points. In the course of four years, this loss of man hours added up to a very substantial figure.

93 Arthur K. Peters, Historical Manuscript on Second Service Command, 1941-45, p. 26, (Unclassified) (Central Records Facility).

94 Memo from Capt James F. Foothorap to Chief, CIC, 15 Mar 43, subj: "Report of Visit to Second Service Command," (CONFIDENTIAL) (Central Records Facility).

The disciplinary administrative problems common to tactical units were non-existent in the Counter Intelligence Corps detachment. There were no AWOL's or desertions, no reports of veneral disease, and no courts martial among the personnel of the detachment. The conclusion of the inspecting officer from the Office of the Chief, Counter Intelligence Corps on 15 March 1943 was that the operation and administration of the Counter Intelligence Corps detachment in the Second Service Command was "well organized and relatively efficient.[95] In the fall of 1945 the 1251 SCSU (as the Security Intelligence Corps Detachment for Second Service Command was designated) was awarded the Service Command Meritorious Service Unit Plaque by the commanding general for excellence of administration and performance of duties assigned.[96]

CIC Training

When Captain Wise visited the Second Corps Area in the spring of 1942, he commented favorably on the detachment's training program. At that time, most agents were sent to the Chicago school after brief preliminary training locally.[97]

As the war wore on, however, the early enthusiasm for sending agents to Chicago for advanced training waned. Usually agents were sent from the school to assignments outside the Second Service Command. One writer has described the situation in this manner:

> "Early in the war it was common to expose the best Counter Intelligence Corps agents to the advantage of training in the Counter Intelligence Corps Investigators Training School, but when it became apparent that these men were earmarked at school and shortly afterward withdrawn from the Service Command, the tendency was to keep the key agents at work on the most important investigations in the Service Command and to send the less capable men to school. The idea behind this practice was that they needed the extra training most anyway, and they would not leave as wide a breach in the Service Command investigative ranks if they were detailed elsewhere after completing school."[98]

98 Arthur K. Peters, Historical Manuscript on Second Service Command, 1941-45, p. 34, (Unclassified) (Central Records Facility).

In December 1942 the Counter Intelligence Corps Preliminary School was established at the Second Service Command's main CIC field office at 50 Broadway. All new agents were assigned to this school before beginning any investigative duty. The school included four weeks of instruction and practical work administered by qualified officers, agents, and representatives of local civil enforcement agencies. The curriculum followed that of the Chicago school. Twelve classes were completed from the inception of the school to June 1944. A total of 625 agents were graduated.

In addition to the preliminary school, arrangements were made for agents to practice pistol marksmanship at the United States Treasury range at 90 Church Street, New York. The prescribed Army Qualification Test was given each agent, and many men qualified as sharpshooters and experts. In their investigative work, the agents were not authorized to carry firearms without special permission from the officer in charge. There were probably not more than a dozen occasions from 1941 to 1945 when a Counter Intelligence Corps agent in the Second Service Command drew a gun in line of duty. Nevertheless, for guard duty in the field offices and for later emergencies overseas, as well as for the morale purposes, the extensive training in the use of the .38 caliber revolver was valuable.[99]

To compensate for the general lack of basic military training for CIC agents there were periodic attempts to toughen up the agents. Groups went through infiltration courses at Camp Upton, others took basic training refresher courses at Fort Ontario. Still others attended the Second Service Command Tactical Training School at Hackettstown, New Jersey. Agents were often not physically equipped or prepared for some of the field experience given them at these courses. They could see little connection between their ability to crawl under barbed-wire entanglements under machine gun fire and their primary occupational specialty of ringing doorbells in New York City. But in late 1943, when many of these same agents began moving to the Military Intelligence Training Center at Camp Ritchie and then overseas, the field training, brief as it was, stood them in good stead.

In addition to the Advanced Counter Intelligence Corps Investigators Training School at Chicago, to which the Second Service Command sent an average of 20 men per month during 1942-1943, and the tactical training courses mentioned above, the Second Service Command CIC Detachment was directed to detail men for other training. The Berlitz Language Schools, the Pennsylvania State School of Aeronautics at Harrisburg, Pennsylvania, and a great number of officer candidate schools (including Infantry, Armored, Military Police, Field Artillery, Cavalry, and Medical Administration) received quotas. But in the opinion of one historian of CIC activities in the Second Service Command:

---

99 Arthur K. Peters, Historical Manuscript on Second Service Command, 1941-45, p. 35, (Unclassified) (Central Records Facility).

"The most valuable training which eminently qualified agents for their work was that which they received during the 20 years prior to entering the Army. The men coming into the Counter Intelligence Corps brought with them not only sound family upbringing which instilled in them the fundamentals of integrity, loyalty, good character, and discretion which were rigorously demanded of all agents, but also professional skills in the fields of law, languages, investigation, business and education which the Army could readily build on but which it could never hope to provide."[100]

Supply and Finance

The first supply difficulties encountered in the Second Service Command were lack of automobiles for use in investigations and awkward arrangements for providing agents with civilian clothes. As late as January 1942, the Second Service Command Counter Intelligence Corps Detachment had only one vehicle. The country had been at war over a month and there were thousands of cases waiting to be investigated.[101] Even this one car had been requisitioned many months before it arrived. The ordnance officer had been asked to provide a civilian-type sedan, not painted olive drab, in an effort to make the car as inconspicuous as possible for surveillance work. The car turned up painted coal black from top to bottom except for the glass. There was not a speck of chrome or trim. That car was as "inconspicuous as an Italian funeral carriage." It was promptly dubbed "The Black Maria."

In October 1942 the car shortage was still acute in view of the sky-rocketing case load and the great influx of personnel. However, by early 1943 the civilian car pool of the Second Service Command Counter Intelligence Corps contained about 40 automobiles which were kept in a private garage. Two enlisted mechanics were permanently assigned for maintenance purposes. This arrangement proved adequate for the remainder of the war. Minor administrative problems were encountered due to gas rationing, but these were neither serious nor permanent.

Although a monetary allowance was available to each Counter Intelligence Corps agent for the purchasing and maintenance of civilian clothing necessary to "conceal his identity," the allowances were barely enough to keep the men from looking threadbare unless the funds were substantially supplemented by the agents themselves.[102]

100 Arthur K. Peters, Historical Manuscript on Second Service Command, 1941-45, pp. 36-37, (Unclassified) (Central Records Facility).

101 Memo signed by Capt N. K. Adkinson, 15 Jan 42, subj: "Report of Visit to Second Corps Area," (CONFIDENTIAL) (Central Records Facility).

102 Arthur K. Peters, Historical Manuscript on Second Service Command, 1941-45, (Unclassified) (Central Records Facility).

Much investigative equipment was available to CIC in the Second Service Command--moulage, lock-pick sets, ultraviolet lamps, photography and sound equipment, to mention but a few items. Although they sometimes were used, their primary value was as a morale factor in training. A laboratory was established as a part of the New York Field Office, but it was not used extensively until 1944 after the formation of the Security Intelligence Corps. At that time, the technical equipment was widely used in conjunction with criminal investigations.[103]

CIC Investigations

In the late fall of 1941, the New York Field Office, in accordance with the pattern of case categories established by War Department directives, set up the following investigative subdivision: Disaffection Squad, Personnel Squad, CIC Squad, Agency Check Squad, and Special Squad. The Disaffection Squad checked out all complaints of disaffection. The Personnel Squad conducted routine investigations of certain military and civilian personnel who had access to classified information or working in war plants handling classified Army projects. The CIC Squad conducted exhaustive background investigations on candidates for the Counter Intelligence Corps. File checks of local enforcement agencies were the duty of the Agency Check Squad. The Special Squad was responsible for investigating cases of espionage, sabotage, sedition, treason, and other cases not of a routine nature. Minor changes in titles and duties of these squads were made from time to time, but fundamentally the detachment was organized on this basis until the formation of the Security Intelligence Corps. At that time the added responsibility of criminal investigations was given to the Special Squad.

In January 1942, an inspector from the Office of the Chief, CIC, reported that agents in the Second Corps Area were working mostly on CIC personnel background and loyalty checks. A total of 1,773 cases were reported pending in the Second Corps Area. Of these less than half had been sent to the field offices for investigation. More than 900 incoming cases were still backlogged in the Investigations Section of the Office of the AC of S, G2 at Governor's Island, where they were registered in and read prior to assignment to the CIC detachment.[104]

In addition to the critical clerical shortage, the diversion of cadres of trained agents from the Second Service Command to help set up detachments elsewhere contributed to the bottleneck of cases. Twelve men from the Second Corps Area CIC Detachment started the newly created Investigations Branch of the Corps Area Provost Marshal's Office in December 1941. They were not returned to CIC duty until August 1942. Agents from the New York office also played similar roles in

103 Arthur K. Peters, Historical Manuscript on Second Service Command, 1941-45, p. 41, (Unclassified) (Central Records Facility).

104 Memo by Capt N. K. Adkinson, 15 Jan 42, subj: "Report on Visit to Second Corps Area," (CONFIDENTIAL) (Central Records Facility).

the subsequent formation of CIC detachments for the Manhattan Project and the New York Port of Embarkation.

Besides routine investigations of disaffection, loyalty, and personnel cases, the Second Service Command CIC agents were continually called upon to perform a wide range of additional investigative duties.

One of the most demanding of these was the "ship detail," during which panels of CIC, FBI and Office of Naval Intelligence personnel were formed. They interviewed passengers, refugees and repatriated internees from enemy zones who entered the United States by such ships as the Drottningham and Gripsholm. These panels attempted to gather positive foreign intelligence from the persons interviewed, and also served as a security screen. The number of these details increased so rapidly from early 1942 to 1945 that a group of CIC (and later SIC) agents was permanently assigned to the Foreign Positive Intelligence Office in New York to assist in this operation.

More than 1,000 displaced persons were interrogated and fingerprinted by Counter Intelligence Corps agents at Fort Ontario, New York. The State Department had brought most of them here from Yugoslavia.

Negro CIC agents in Harlem throughout the war conducted undercover investigations of subversive or borderline groups. The value of the Negro agents reached its peak during the summer of 1943 when a series of race riots spread across the country in New York City, Detroit, and Beaumont, Texas. CIC reports formed a regular part of Weekly Intelligence Summaries sent to Military Intelligence Service by the Director of Intelligence of the Second Service Command.

Visiting dignitaries of Allied military organizations were frequently given Counter Intelligence Corps escorts while in the Second Service Command. When General Giraud of the Free French Forces visited New York City, elaborate security measures were planned by personnel to prevent his assassination on American soil. These included such details as the microscopic search of the General's suite and the ballrooms at the Waldorf Astoria Hotel to detect concealed microphones or bombs, the installation of a woman undercover agent in the ladies' powder room to eavesdrop on persons present at receptions, and the posting of soldiers armed with submachine guns at every overpass and crossroad between Governor's Island, New York and the United States Military Academy when the General visited West Point.

In the days immediately following the Pearl Harbor attack, the Counter Intelligence Corps in New York conducted almost daily raids, in conjunction with the FBI and New York City police, on the homes and business places of suspected Nazi sympathizers. These persons included members of the German-American Bund, the NSDAP, and the Kyffhaeuser League. Property seized was mostly of a propaganda

nature such as booklets, swastika armbands, and uniforms. There were also some shortwave radios, weapons, and membership lists and records. By the middle of 1942 the menace from organized pro-German or pro-Nazi groups had been neutralized in the New York-New Jersey area, and CIC discontinued the raids.

The raids, together with many other specific investigations conducted jointly by Counter Intelligence Corps and Office of Naval Intelligence or the FBI helped build a close-knit system of cooperation between the organizations. This paid regular dividends in manhours saved and results accomplished. Liaison at the operational level reflected the harmony of inter-agency relationships between the Director of Intelligence of the Service Command, the District Agents of the FBI and the Office of Naval Intelligence.

Several Counter Intelligence Corps agents in New York were sons of top-ranking New York City police and State Police officials. These personal contacts prompted a degree of cooperation unobtainable under ordinary circumstances. Interdepartmental conferences held weekly in the Second Service Command between the local heads of the FBI, Office of Naval Intelligence and G2, were inaugurated by the Director of Intelligence, Second Service Command, and contributed greatly to better relations. These conferences were not attended by the commanding officer of the Counter Intelligence Corps detachment, but by the Director of Intelligence himself, partly as a matter of protocol and also to keep the military intelligence representation in strong hands.

The only complaint reported against the FBI by Counter Intelligence Corps agents was that instead of freely turning over their entire reports to a CIC investigator on request (as G2 did with them) the FBI agents revealed only the answers to specific CIC questions. As one CIC officer stated the situation:

> "This carryover from cautious dealing with less discreet enforcements than Counter Intelligence Corps was greatly resented by the Counter Intelligence Corps agents. There was also a tendency on the part of the Federal Bureau of Investigation agents to regard themselves as professionals in the field and the Counter Intelligence Corps men as dilletantes. When this feeling, which was only human nature, showed itself at the operating level it caused some bitterness between the agents involved. Except for a few minor instances of poor judgment by an FBI agent, as for example when one Federal Bureau of Investigation man accidentally stumbled into the Counter Intelligence Corps field office and was detained and interrogated by the Counter Intelligence Corps floor guards, there were no important problems between the FBI and CIC."[105]

105 Arthur K. Peters, Historical Manuscript on Second Service Command, 1941-45, (Unclassified) (Central Records Facility).

Another of the miscellaneous types of investigation frequently assigned to the Counter Intelligence Corps were those involving impersonation. Many neurotics, civilians and military, felt the urge during the war to add new lustre to their personalities by donning unauthorized uniforms and insignia. The bars and night clubs regularly attracted these impersonators. There they often spun mysterious and impressive yarns about their connections with G2, or they gave out imaginative accounts of military activities which, if true, would have been security violations. Since there was always the chance these people might be clumsy enemy agents, the job of apprehending them was usually assigned to Counter Intelligence Corps.

Usually the impersonators turned out to be nothing more serious than an old man who had absconded with a $4,000 payroll and had come to New York to spend it while passing himself off as an intelligence general. The cleverest impersonator removed from circulation by CIC in the Second Service Command was one Colar Theodore Ludberg, who was a young civilian of confidence-inspiring appearance. He not only passed as a lieutenant colonel but also commandeered a PT boat from the Navy and went up the Hudson in style to deliver a lecture at West Point.

The CIC Technical Laboratory, staffed by agents from the Special Squad of the Second Service Command Detachment, was frequently called on by the field agents to assist in microphone installation, clandestine recording of interviews and interrogations, wire tapping, fingerprinting, preparations of exhibits for reports, and similar work of highly specialized nature. The techniques of wire tapping in New York buildings required professional skill. Some training in this work had been received at Counter Intelligence Corps schools. But there were literally no agents in the Service Command who had acquired sufficient skill through practice to be able to install a complete tap with recording facilities without the expert assistance of Counter Intelligence Corps men who had civilian experience in this activity.

One potential espionage investigation conducted by the Special Squad involved a 24-hour-a day surveillance and telephone tap with recordings. The case ran for weeks. Before it was closed, four cartons of dictaphone records had been used up. By and large however, telephone taps and microphone installations, used in extreme cases, did not yield much evidence usable in court or courts martial.

The information developed through these means did speed up investigations by turning up leads quickly and establishing relationships between subjects in a case.[106]

---

106 Arthur K. Peters, Historical Manuscript on Second Service Command, 1941-45, pp. 50-52, (Unclassified) (Central Records Facility).

Although the German sabotage apparatus in the United States was considered neutralized by 9 December 1941,[107] there were instances of malicious mischief or neglect which amounted to sabotage, though not enemy inspired. Crude incendiary bombs made of candles and match boxes were discovered among warehouse material at the Brooklyn Army Base. Big coastal artillery guns in the harbor defenses of New York City were immobilized by rocks and gravel in the lubricating wells. Such incidents pointed up a necessity for sound inspection systems as a means of detecting and guarding against sabotage.

Another example of the preventive value of even the routine CIC investigations was finding a dangerous civilian timekeeper at the Craven Point ammunition loading piers. This man had been deeply involved in one of the greatest espionage scandals on record in the early thirties. He had joined the U.S. Army at that time at the insistence of the Young Communist League, and at the behest of Soviet Army Intelligence had stolen the White Plans for defense of the Panama Canal. For this he had been tried and convicted. Needless to say the man was removed from the ammunition zone, and no damage was done. Had he remained undetected in that assignment, another Black Tom explosion might have occurred.

Another investigative function of CIC was to check all reported violations of AR 380-5. In addition to making routine security lectures and spot checks of offices, technicians from the Special Squad were often directed to make careful inspections of the telephone and communications security of major Service Command installations, including the commanding general's circuits. Critical installations were also checked for concealed microphones or other surreptitious penetrations of War Department intelligence conferences and secret offices in the Service Command area.

One of the major cases of the Second Service Command SIC Detachment, although beginning as an espionage case, ended in investigation of a grave infraction of AR 380-5. A civilian employee of the Air Force had stolen in a New York hotel a suitcase containing plans he was to deliver to a secret Foreign Positive Intelligence office in New York City. The plans were so important that only the SIC officer in charge of the investigation was informed of their contents. Within 36 hours, after round-the-clock investigative activity, the missing plans were recovered by Second Service Command agents in Woonsocket, Rhode Island.

It was established that the contents had not been compromised. It was later divulged that these plans--which were originals having no copies--were too important to be classified at all. They were blue prints, indicating in detail the

107 Memo from Col H. R. Kibler to Chief, Counterintelligence Group, 8 Feb 44, subj: "Activities of the Office of the Chief, Counter Intelligence Corps, 10 May 43-8 February 44," (CONFIDENTIAL) (Central Records Facility).

1122

CONFIDENTIAL

target cities, bomb loads, and dates of buildup for the first long-range bombing of Japan by Air Force B-29's. Failure to follow the procedures outlined in AR 380-5 nearly cancelled the many years of work behind the plans and might have seriously delayed the prosecution of the war against Japan.

The preponderance of disaffection cases investigated by CIC and SIC in the Service Commands involved Communist activity rather than German or Japanese. It is not too much to say that the information acquired by CIC from May 1941 to September 1945 regarding communism and its adherents played a major part in keeping communism under control in the United States ever since.[108]

Loyalty investigations suffered in late 1943 because of a dearth of agents. After 1 January 1944, the Provost Marshal General men who had been incorporated into SIC conducted these investigations. In order to reduce the great backlog which had built up, the criteria for these cases were revised downward and the investigations were conducted largely by telephone. A bank of about 30 telephone cubicles was installed in the SIC office at 50 Broadway for this purpose, and the investigations were rapidly completed. On 1 November 1943, 60 days prior to the consolidation, the Second Service Command CIC Detachment had on hand about 5,000 cases and only 40 agents available for full time investigative duty.

SIC at Work

In January 1944 the newly formed Security Intelligence Corps in the Second Service Command was given the title of the 1251st Service Command Service Unit for administrative purposes. The various field installations within the Service Command formerly belonging to the Provost Marshal General's Office or under the Counter Intelligence Corps were closed, with the exception of the office in Rochester, New York. The Rochester office was discontinued in January 1945 and all work was thereafter carried on from New York City.

In early 1945, a further change was made. Agents devoted to a particular type of case, as under the old Counter Intelligence Corps, were reassigned geographically. A New York State section, a New York City section, and a New Jersey and Delaware section were created. The Special and Criminal Sections remained unchanged. During this latter period, a total of 63,000 cases of all categories were completed.

The SIC agents in the Second Service Command were assigned a new duty after the African invasion. The first German prisoners of war from Rommel's Afrika Korps arrived in Jersey City by the shipload. SIC agents traveled as guards and interpreters on the trains which took the prisoners to internment camps in inland areas.

108 Arthur K. Peters, Historical Manuscript on Second Service Command, 1941-45, pp. 53-56, (Unclassified) (Central Records Facility).

The SIC was also responsible for criminal investigations in the Service Commands. Due to the technical nature of this work, with violations ranging from desertion and malingering to homosexual activity and suicide, these cases were made the exclusive responsibility of the Special Squad agents and its laboratory. Personnel from other sections assisted on surveillances and other group requirements. Much valuable work was accomplished in this field by September 1945, including investigating of the Trial Judge Advocate of the General Court at First Army for bribery; the breaking up of a ring at Mitchell Field, L. I., which was accepting large sums from parents in return for arranging the transfers of sons in the service to choice stateside assignments, and solving numerous cases of grand larceny involving the theft of tremendous quantities of vehicle parts, signal equipment and arms and ammunition.

Perhaps the most involved criminal investigation in the Second Service Command concerned a trio of United States Army deserters. They left the Bastogne area and made their way back to this country via Paris, London and Glasgow on orders which they composed and mimeographed themselves. These men were apprehended by SIC agents. Interrogation disclosed they had drawn large sums of money from Army finance officers here and abroad, all on false orders of their own writing, during their months at large. Not only that, but they had personnally entered the Pentagon, obtained discharge blanks, and discharged themselves from the service! The three men were returned to their unit at the front for trial as deserters from a combat area. The SIC agent responsible for their apprehension accompanied them by plane to testify at their court martial.

The men were convicted, but before sentence could be carried out, two escaped in France. The SIC agent was immediately charged with their apprehension. He captured the first in Paris, and the second fugitive, heavily armed, was taken in a pub in London shortly thereafter. The SIC agent returned to the United States. Not long afterwards, it was learned that the ringleader of the trio had escaped a third time, killing a military policeman in the process. As deserters and larcenists these men had violated enough Articles of War to establish a shocking criminal record. Of greater importance to SIC, however, was the significance of their entire escapade. From an intelligence point of view, their incredible movement from the front lines to the Pentagon with the government financing the entire way, was a blunt travesty on military security.

The criminal investigations required quick action and quick investigation. They also required advanced interrogative ability and technical skill at microphone and recording installations. Notarized statements were usually necessary, and exhibits were carefully marked and maintained. All investigative action pointed toward ultimate trial by court martial or civil courts, instead of disposition by G2 directives as in the case of disaffected personnel. This meant that the agents

CONFIDENTIAL

doing the criminal work had to rapidly acquire the practical knowledge they did not already possess when the responsibility for criminal cases was unexpectedly thrust upon them.[109]

Third Corps Area

The Third Service Command started World War II with 34 CIC agents to provide counterintelligence coverage of the tri-state area of Pennsylvania, Virginia, and Maryland, which had total population of over 16,000,000. On 30 September 1943, agent strength reached a peak of 323, but by the time personnel were transferred to SIC in 1944, only 123 agents remained. Maj Gen Milton A. Reckord commanded the Area, Col Frederick S. Doll served as Director of Intelligence and Maj R. B. Curtiss commanded the CIC detachment.[110]

Italian Espionage in the U.S., 1941

An estimate of the Italian espionage system in the United States as of June 1941 was made by the G2, Third Service Command. Reliable informants reported that Italian consulates in all areas had selected a few loyal and trustworthy individuals as the nucleus of a widespread net. Most of the men selected were naturalized citizens, and in almost every case held membership in the Federation of Italian World War Veterans. The proficiency of these agents was tested after group schooling. The candidates had to procure some bit of information, extremely difficult to obtain, but not necessarily connected with espionage. By this evaluation system, the control man was able to select those men best qualified for espionage missions that did arise. A strong liaison and interchange of men between Italian and German intelligence in this country was also reported.

It was reported that most of the suspected agents had infiltrated vital industrial and manufacturing plants. Plans to broaden their activities with the cooperation of anti-British Irish-Americans contacted through acquaintances in the Catholic Church were learned.

The same informant reported that the best agents and informers were being concentrated in the central and western states, where it was felt that defense production would most likely expand. These agents were advised to send all correspondence by air mail, to evade any censorship and to travel by private auto rather than by public conveyances which could be traced. The agents were

109 Arthur K. Peters, Historical Manuscript on Second Service Command, 1941-45, pp. 57-62, (Unclassified) (Central Records Facility).

110 CIC Record Lists, compiled as of Oct 43, (CONFIDENTIAL) (Adjutant General Intermediate Holding Depot, Ft Holabird, Md).

paid through trusted intermediaries, but cover employment to allay any suspicion was purportedly advised by Italian officials running the net.[111]

Situation in the Orient, 4 Dec 1941

Intelligence officers in the Third Service Command were instructed on 4 December 1941, by a letter from the G2, to survey all files for recent information on the Orient. The officers were cautioned that the "greatest discretion is required in any inquiries made at the present time in this connection."

A summary of the current situation, compiled by the War Department, was forwarded for information. It gave little light on the intentions of the Japanese Empire, other than vigorous propagandizing efforts were being made by that government to justify its "New Order in Asia." It was pointed out that the Japanese had developed a sizeable information-gathering machinery in the United States.[112]

CIP and the Captive Mine Strike

Third and Fifth Service Commands used CIP for positive intelligence coverage of the United Mine Workers' strike that occurred along the east coast during late 1941.

The strike was anticipated about a month before it occurred. Agents were briefed far in advance as to the physical location of the mines, number of employees, production capacity, and expected trouble spots. In the prestrike period, two agents were sent out in the guise of reporters to determine sentiment among the workers and their families. Every effort was made to obtain a clear and complete picture of the situation before the men were called upon to act in the field.

When the strike broke, a temporary headquarters was set up at Pittsburgh, and additional agents within the Third Corps Area were immediately sent there. When the strike spread into Fifth Corps Area, it was felt that centralized control would provide improved coverage. Two agents within Fifth Corps Area were put at the disposal of the Pittsburgh office to allow central integration of information.

All agents working in the field were supplied with press stickers for their cars and press identification cards. These credentials provided ready access to

111 File, Italian Espionage System in US, dtd 14 Jul 41, signed by Maj W. W. Christian, G2 Exec, Third Service Command, (CONFIDENTIAL) (Central Records Facility).

112 File, Third Service Command, "Background on Present International Situation in the Orient," dtd 4 Dec 41, (CONFIDENTIAL) (Central Records Facility).

1126

most groups, since everyone was interested in a favorable press and would give the reasons behind his actions. The men traveled in pairs for their own protection and were instructed to avoid arguments and fighting at all costs. Spot reports were phoned in to the Pittsburgh office for evaluation and integration as quickly as they could be obtained. Instructions to the men regarding movement to critical areas could readily be relayed during the frequent "report" calls into headquarters, permitting optimum use of the few agents available.[113]

It was felt that the favorable showing made by CIC in what amounted to a pure positive intelligence mission spoke well of the ingenuity, adaptability, and general high quality of the type of men in the Corps.[114]

The "Gear Box" Cases

Agents in the Third Service Command were detailed in October 1941 to investigate the possibility of sabotage in the case of damaged trucks delivered to the Ordnance Training Center, Aberdeen, Maryland. Since a civilian manufacturer had produced the trucks under Army contract, the FBI was called in on the case at the same time. The two organizations coordinated all efforts by close liaison.

The transmission grease found in the trucks had a high water content which had caused corrosion and pitting of the gears. This called for extensive replacement and repair to over 20 trucks. Investigation at the factory in Michigan by agents of the Fifth Service Command and FBI men from the Detroit office disclosed that the water had probably been introduced during outside storage of the vehicles at a time when heavy rains occurred. The possibility of malicious damage was not eliminated, however, and investigation continued for almost a month. The case was conducted by interviews and laboratory examination. The technical facilities of the FBI were invaluable in leading to the closing of the case.[115]

Communist Activity in the Armed Forces, 1941

The G2, Third Corps Area, in late 1941 conducted a survey of Communist activity at various Army camps. Proof was demonstrated at some length that Communists were exploiting the recreational and educational agencies of the Army for propaganda purposes.

---

113 Report dtd 1 Dec 41, subj: "CIP Activities During 'Captive' Mine Strike," from Agent James E. Ray, Third Service Command, (CONFIDENTIAL) (Central Records Facility).

114 Ltr, dtd 1 Dec 41, to G2, WD, from Col Philip Thurber, G2, Third Service Command, (CONFIDENTIAL) (Central Records Facility).

115 Rpt, dtd 21 Oct 41, from Col Philip Thurber, Suspected Sabotage of Trucks, Third Service Command, (CONFIDENTIAL) (Central Records Facility).

The Daily Worker and other Communist organs were publishing letters from "comrades" in the service, and photographs of soldiers fraternizing with members of Communist-controlled organizations and unions.

The G2 pointed out that the activity of the Communists in the armed services was in support of the Leninist doctrine that "dissemination of Communist ideas necessitates carrying on a steadfast, systematic propaganda in the armies." He pointed out that the experience of the Communists and naivete of the Army made the operation relatively simple.

The G2 closed his report with the suggestion that careful control of publicity and Army publications would cut down on the amount of infiltration possible. He deemed it improper for the Soviets to utilize the morale and recreational programs of the Army to popularize the Party and build allegiance to Russia.[116]

Ship Panelling

CIC in the Third Service Command participated in the panelling of persons arriving in Philadelphia from foreign countries on neutral ships during the war. Many were refugees, but others were American-born persons who had spent the greater part of their lives abroad. These never claimed American citizenship until the outbreak of war made it necessary to establish some nationality. Most did not speak English, and many were very old.

To meet the need for interrogation of all of these individuals, a panelling team was formed in Philadelphia. It included representatives of the FBI, the Office of Naval Intelligence, the Immigration and Naturalization Service, and CIC.

The FBI was interested in subversive organizations and smuggling activity, while the ONI stressed the collection of naval installation and armament information. To this end, ONI generally interviewed all crew members of the ships. The Immigration and Naturalization Service sought to establish citizenship, while CIC interrogated for information on military installations where the persons had lived.

In one case uncovered by the panel, it was learned that a crew member had a piece of platinum about the size of a match box. Search of the ship failed to reveal the metal, but surveillance of the man when he left the ship led to its discovery.[117]

116 Summary of Information, dtd 13 Jan 43, Subj: "CP Activities in the USA," from Col F. S. Doll, (CONFIDENTIAL) (Central Records Facility).

117 Interview with Capt Leslie R. Harrison, Army Intelligence Center, 16 March 1954.

One difficulty encountered by CIC during these paneling operations was that the Army was represented by an enlisted man, in contrast to a commissioned Naval officer and a highly paid FBI agent. In spite of the fact that the CIC agents were of exceptionally high caliber, the agents were at a distinct disadvantage in this situation. The difficulty was expressly cited by Maj Gen George V. Strong, G2, War Department, in a memo he wrote for the Chief of Staff urging the allotment of more commissioned personnel to CIC.[118]

Undercover Error

A shipment of seven agents to the Military Intelligence Training Center at Camp Ritchie, Maryland, did not add to CIC's professional prestige. The agents had been requested for an undercover assignment, and it was intended that they be put in language classes as countersubversive operatives. The request had asked for men proficient in various languages, so that the study load would not effect their operational effectiveness.

The men arrived at Ritchie unaware of the assignment awaiting them and apparently ignorant of undercover operating techniques. In addition, three of the men did not possess the necessary language qualification, and one had a record of Communist affiliation and sympathies.[119]

Problems In Third Service Command

who later testified of the work he had done for the Communists at that center. When routine background checks were made at the start of the war, became a suspect because of his previous Communist connections. However, there were no tangible activities that could even cause suspicion of subversive activity. His work was, of course, superior.

As far as possible he was isolated from other workers and kept from classified materials. In three years of observation, nothing derogatory was observed. CIC agents who had watched him felt better when, after the war, he testified that he had done his Communist espionage at in the late thirties. Apparently he became suspicious when he was shifted at the start of the war to the less sensitive position and he followed the Communist policy of ceasing all activities for a long period.

118 Memo, dtd 16 May 43, from Maj Gen George V. Strong, Subj: "Reorganization and Expansion of CIC, MIS," (SECRET) (Central Records Facility).

119 Memo for the Chief, CIC, dtd 30 Jun 43, from Lt Donovan J. Ault, Subj: "Undercover Assignment at Camp Ritchie, Md," (CONFIDENTIAL) (Central Records Facility).

1129

In 1944, he applied for leave of absence and told friends he was going to New Mexico for his health. To the CIC agents at this had no particular significance until the location of the atomic test grounds in New Mexico was later made public. Then it was evident that his Communist spymasters had transferred him to an area where his mathematical brain could be of service to them.

As manpower problems grew more and more critical, personnel officers hiring War Department civilian labor to work on military reservations grew less and less critical of quality. Finally it was a common expression that anybody that was warm was hired. CIC agents of the Third Service Command picked up one civilian worker on a machine gun test range who had confided to a fellow worker that he was going to steal guns and ship them to Peru. The subject, waving a six inch knife, was apprehended. He turned out to have been just released from an insane asylum where he had been sent by a friendly judge instead of being jailed for stealing antique guns from a state historical museum. This was literally a "warm body."[120]

On another occasion, a CIC officer suddenly discovered that because the huge officers' mess at a Third Service Command post was civilian operated, the employees were not given the regular processing. Consequently they had had no check whatsoever. He immediately sent the mess steward a batch of personal history statements for the 90 cooks, bakers, waiters and other employees to fill out.

Four quit rather than fill out the statements. Reviewing the statements of others, the CIC agents found several who admitted serving prison sentences for robbery and larceny. Four of the men who were working in the center of dozens of wooden barracks admitted they had served terms for arson. The mess steward was not happy when the CIC agents informed him that his bookkeeper had done time for forgery. Subsequent records checks revealed police records on a number of others who had neglected to mention them on the personal history statements.

These "bottom of the barrel" employees created a tremendous burden for CIC agents. In one case a wholesale stealing of gun tool kits had all the attributes of enemy sabotage since these were special kits necessary for the assembly of the pack howitzer. Although this turned out to be just plain theft, the thievery in this one section was so widespread that CIC agents wound up with 40 signed confessions before they were convinced that some subversive had not suggested and abetted the stealing.[121]

CONFIDENTIAL

Fourth Corps Area

The Fourth Service Command covered the states of North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee, and Mississippi, a combined population in excess of 21,000,000. Maj Gen William Bryden commanded the Fourth Service Command, and Col Stacey Knopf held down the post of Director of Intelligence. Maj Asa W. Candler, later A2 of Army Air Forces, was commanding officer of the CIC contingent.

The Fourth started the Second World War with 30 agents and reached a strength peak of 298 agents in September 1943. Ninety-one agents remained when CIC merged into SIC in January 1944.[122]

When Captain Sheen visited the Fourth Corps Area late in 1941, he found the 41-man detachment spread thinly over 21 substations and field offices. The G2 requested nine more agents at that time. Captain Sheen closed his report with the remark: "An air of complete self-sufficiency exists in this area."

Captain Wise found much the same situation about five months later when he made an inspection visit to Atlanta headquarters of the area.

The G2 was thoroughly satisfied with the manner in which the CIC activities were being carried out in his area and was interested in specifics regarding CIC only insofar as they affected Fourth Corps Area.

Officer personnel was sufficient to meet present needs, but no replacement or emergency personnel was available. Agents were desperately needed. Clerical help shortages were cited as the main bottleneck in closing many investigations.

The case backlog of the detachment varied from 1,000 to 1,300, mostly personnel cases. Four agents were undercover, working on other matters at troop installations and at vital manufacturing centers.

Every effort was made to cultivate liaison contacts with other agencies in the Corps Area. Cooperation with the Provost Marshal General was remarkably good. This was due in no small part to the fact that when the transfer of agents to the Provost Marshal was ordered on 15 December 1941, that office found itself unprepared to take over assigned duties. The transfer was made on paper only, and G2 continued to perform functions for which the Provost Marshal was responsible. The most cordial relations existed between the two offices, and the Provost Marshal channeled many fine agent prospects to CIC. A gradual transfer of the duties which were chargeable to the Provost Marshal was being made at the time of the inspection.

122 CIC Record Lists, compiled as of Oct 43, (CONFIDENTIAL) (Adjutant General Intermediate Record Holding Depot, Ft Holabird, Md).

The detachment had set up a local orientation and training program for new agents which consisted largely of on-the-job assistance to experienced men. There was a general feeling expressed at administrative levels in the detachment that the training provided at the Chicago school was too theoretical and not sufficiently practical.

Captain Wise ran into a transportation problem. The general complaint that tires on private automobiles were wearing out, and priorities for replacement were not available was repeated. All pay, allowances, and special expenditure funds were considered sufficient by personnel contacted. The detachment had a full stock of technical equipment, but found much of it of little value for Zone of Interior duty. Agents were not allowed to carry firearms without express written permission from the G2; permission was granted only for a specific case. Special pains were taken in and out of the office to protect the identity and rank of all agents.

In commenting on the detachment in his report, Captain Wise felt that it was isolating itself from world affairs and the progress of the war because of the disproportionate concern and attention given local affairs. To remedy this, he suggested that summary sheets on vital and important developments world-wide be furnished G2s for dissemination and information.[123]

Fifth Service Command

The Fifth Service Command spread over the states of Ohio, West Virginia, Indiana, and Kentucky. The population of 17,000,000 in this area was covered counterintelligence-wise by fifteen agents at the outbreak of World War II. CIC peak strength in September 1943 was 267 agents, but the number dropped to 93 by January 1944.

Brig Gen John M. Eager was commanding general, while Lt Col Robert Copeland acted as Director of Intelligence. Maj H. Sobel headed the CIC detachment.[124]

When Captain Sheen visited Fifth Corps CIP, headquarters were located in an office building in Columbus, Ohio. By the time of Captain Wise's inspection trip, however, the CIC office had relocated at Fort Hayes, some three miles outside Columbus.

123 Memo dtd 1 Dec 41, Subj: "Report of Visit to Fourth, Fifth, Sixth, Seventh and Eighth Corps Areas," from Capt H. G. Sheen, (CONFIDENTIAL) (Central Records Facility); and Memo dtd 16 Apr 42, Subj: Report of Liaison Trip to Certain Corps Areas, from Capt Hugh D. Wise, (CONFIDENTIAL) (Central Records Facility).

124 CIC Record Lists, compiled as of 30 Oct 43, (CONFIDENTIAL) (Adjutant General Intermediate Record Holding Depot).

The personnel situation fell into the general pattern. Sufficient officers were available, but the 39 agents assigned were inadequate. Twenty-five more were on requisition. Clerical help was badly needed. All agents had completed basic CIC training, but certain operational deficiencies had changed the emphasis of the procurement program from educational background to previous investigative experience.

Agents were not placed in the field until after they had completed the school at Chicago and had a minimum of four weeks training with a veteran agent. No post-school or orientation training was conducted by the detachment.

The unavailability of tire priorities was creating a transportation problem being felt across the country, and 18 government vehicles were on requisition. No complaints on pay, allowances or reimbursement for special expenditures were registered, but a careful and rapid system of reimbursing for special expenditures was implemented by the unit. Investigative equipment was plentiful, and every evidence of frequent utilization was shown. A training course with firearms had been set up by the detachment, although agents did not carry arms as a rule.

No attempt was made to protect agents' identity within the office structure, and outside the office the men were called Special agents rather than "mister." Agents were not used for investigation of commissioned officers, for policy demanded that such cases be handled by officer personnel.

The drain of men being taken for overseas assignment created a problem of sorts, since the best men were selected for such duty. An attitude was promulgated within the unit that such assignment was an honor, and travel to ports of embarkation was made with civilian accommodations.

The report was closed with a note of the serious shortage of typewriters and the availability of a Negro agent for reassignment to more vitally needed positions.[125]

Military Information Program

The role of the CIC detachment assigned to Fifth Service Command in carrying out the program of safeguarding military information had three phases: personal contact with installation intelligence offices and other intelligence agencies; contact with the public; and investigation of specific cases.

125 Memo dtd 1 Dec 41, Subj: Report of Visit to Fourth, Fifth, Sixth, Seventh, and Eighth Corps Areas, from Capt H. G. Sheen, (CONFIDENTIAL) (Central Records Facility); and Memo dtd 16 Apr 42, Subj: Report of Liaison Trip to Certain Corps Areas, from Capt Hugh D. Wise, Jr., (CONFIDENTIAL) (Central Records Facility).

The contact with other installations and intelligence agencies which was an everyday part of the average agent's job gave an excellent opportunity for implementing military information security programs. Agents were called upon to supply advice as to proper security maintenance of files, to counsel commanding officers on the discharging of their counterintelligence responsibility, and to interpret and apply security regulations. This personal contact was expeditious and invaluable at smaller installations where officers and men in many cases had little or no intelligence experience.

SIC agents reached the public on the subject of safeguarding military information through publicity contacts and procurement and orientation of speakers. Publicity for SIC security campaigns took the form of newspaper advertisements, radio spot announcements, posters, stuffers in utility bills, and even specially printed bottle caps. In a number of instances, agents helped set up department store window displays with security themes.

Although the agents themselves did little public speaking because of operational necessity for anonymity, civilian lecturers were supplied information for security speeches, and films were made available for showing to club and social groups.

The third phase of SIC's role in the security program was corrective, in that it involved investigation of actual or suspected security violations. Coming within the scope of these investigations were instances of philatelists collecting cancellations from military post offices, troop attempts to evade censorship regulations, careless talk by troop personnel in public places, photographing of classified installations and equipment, and improper mailing of classified documents and orders.

In one case, confidential texts were sent out without proper cover or accounting measures. Agents assigned to investigate were able to locate all documents by standard accounting procedure. Findings of negligence and disregard for regulations led to disciplinary action by the proper agency.

In a more bizarre case, information was given the FBI through an informant that an espionage ring involving officers and enlisted men was flourishing on a post within the Fifth Service Command. FBI turned the case over to CIC, and preliminary investigation enlarged the story to include a German espionage agent who purportedly was a contact and courier for the ring and was known as the Prussian Baroness.

Investigation revealed that the entire incident had been given by a drunk sergeant who wanted to impress a local girl with his importance. Although he had committed certain security violations, the story of an espionage ring was a

figment of his imagination and had no foundation in fact. The CIC investigation of the case culminated in the separation of the sergeant from the service.[126]

Sixth Service Command

The states of Illinois, Michigan, and Wisconsin constituted the Sixth Service Command, and had a combined population of approximately 18,500,000. Maj Gen Henry S. Aurand commanded the area, and Lt Col W. L. Furbershaw was the Director of Intelligence.

The detachment had 22 agents at the outset of hostilities in 1941. It reached a peak strength of 325 agents by September 1943. One hundred six men remained for transfer to SIC in January 1944.[127]

Technical Manual 30-225 (tentative), which was sent to the various Corps Areas in April 1941,[128] required that each office mail to the next higher echelon a report of accomplishments for each month. This was one of the reports which the G2 Ninth Corps Area said "would entail a considerable burden of work that is not considered of sufficient value to justify the effort..."[129]

Apparently most Corps Areas felt the same way, because on the Sixth Corps Area reports are available in the records of the National Archives, and there is no mention or record of any others. Maj G. R. Carpenter, Sixth Corps Area G2 and later the G2 of Army Ground Forces, submitted reports for April, May, June and July 1941. Since there is no record of any others, compliance with this paragraph of the tentative regulations seems to have ended at that time.[130]

Collectively, these reports provide a statistical picture of a Corps Area in action during the critical summer months of the last pre-war year. Sixth Corps Area embraced a large population of first and second generation Germans and its subversion problems were comparable to those of the Second and Ninth Corps Areas.

---

126 Address by Maj J. J. Schnell, WD Intelligence Conference, 21 Jul 44, (SECRET) (Central Records Facility).

127 CIC Record Lists, compiled as of 30 Oct 43, (CONFIDENTIAL) (Adjutant General Intermediate Record Holding Depot, Ft Holabird, Md).

128 CIC Office Journal, Entry 21, dtd 12 Apr 41, (CONFIDENTIAL) (Central Records Facility).

129 Regulations CIC, File 8, 1940-41, 8 Sep 41, (CONFIDENTIAL) (Central Records Facility).

130 CIP Correspondence 96-98 for 1 Apr 41-30 Apr 41; CIP Correspondence 146-147 1 May 41-31 May 41; CIP Correspondence 70-71, 1 Jun 41-30 Jun 41; CIP Correspondence 25-26, 1 Jul 41- 31 Jul 41, (CONFIDENTIAL) (File MID 10389-A-1 Records WDGS, MID, National Archives, Washington, D.C.)

In April and May 1941, Sixth Corps CIP Detachment consisted of nine men of its authorized 18 men. Two were staff sergeants and seven were sergeants. The effective force, however, was only five men, because four agents were attending the CIP school at Washington.[131]

In June 1941, the Sixth Corps CIP force was increased from nine to 14 men, but before the month ended its allotment had been increased to 29. Since two agents were at the CIP school in Washington, the effective force was 12, consisting of a master sergeant, two technical sergeants, five staff sergeants, and four sergeants. In July an additional agent was added, leaving 14 vacancies and an effective force of 12, since by that time three more agents were at CIP school in Washington.

In April, with only five agents available, the G2 reported that the men were being held in a headquarters pool for temporary assignment as needed. In May, four agents were on detached service in various parts of the area, and in June five were so assigned.[132]

One of the May assignments was that of Sgt Joseph J. Dodge, who was sent to assist the intelligence officer at Sault Ste. Marie. From then on, assignment of agents to this area became an important part of the counterintelligence mission, since 80 percent of all the nation's iron ore passed through these locks, and damage to the canal could have had a crippling effect. Col H. R. Kibler, CIC's final wartime chief, later praised CIC's security work at Sault Ste. Marie.[133]

By June, work had increased to the point where three agents had to be detailed to the G2 office to process reports there. T/Sgt John E. Shea, who had replaced Dodge at Sault Ste. Marie in June, remained there in July. Scott Field, Illinois, had become a regular station for one CIP agent. Fort Custer, Michigan, and Camp Grant, Illinois, provided enough work to keep agents there on temporary duty much of the time. Trips to Detroit and Midland, Michigan; to Milwaukee and Madison, Wisconsin; and to Joliet, Belleville and Ottawa, Illinois, took much time and scattered the small force over long distances.

132 CIP Correspondence 96-98, 1-30 Apr 41; CIP Correspondence 146-147, 1-31 May 41; CIP Correspondence 70-71, 1-30 Jun 41; CIP Correspondence 25-26, 1-31 Jul 41, File MID 10389-A-1 Records WDGS, MID, (CONFIDENTIAL) (National Archives, Washington, D.C.).

133 Interview with Col H. R. Kibler (MI-Res) at Ft Holabird, 29 Sep 52, (CONFIDENTIAL) (Central Records Facility).

Administration was handled by a military intelligence officer on duty in the Office of the Assistant Chief of Staff, G2, in the post office building in Chicago. This officer also directed training and the assignment of cases.

On 10 April 1941, a separate CIP office was established in a downtown office building in Chicago. This office consisted of one large room and two smaller rooms. Office equipment included a fireproof vault with steel door, two desks, three tables, chairs, three rented typewriters, a card index unit, supply of stationery, wardrobe, lavatory and an unlisted telephone.

On the door of the office was lettered the name of a plausible-sounding but nonexistent business concern. Contact between the G2 office was maintained by telephone, and the location and identity of the office was reported by confidential letter to the Special Agent in charge of the Chicago office of the FBI, to the Chicago Chief of Police, and to the Cook County State's Attorney.

Office hours originally were 0800 to 2200 Monday through Friday and until 1700 on Saturdays, but within a month were changed to conform to the military post hours of 0830 to 1600. For the first month, an agent was detailed as a charge of quarters to tend office during the day, but the following month a full time stenographer was hired and all agents were freed for outside work.[134]

With the hiring of the stenographer, the practice of submitting roughly typed or handwritten reports to the G2 office was terminated. The stenographer typed the reports from agents' notes.

Most of the work consisted of searches and background investigations of prospects for CIP assignment to fill the existing vacancies in the authorized strength. In compliance with War Department orders in April, special efforts were made to recruit members of federal, state, and municipal police, bar associations, federal and district attorneys, private investigative agencies, college alumni associations, engineering societies, universities and colleges, and industrial enterprises. There were also a number of personnel investigations for clerical help and persons being assigned to sensitive positions. For the four-month period from April to July, personnel investigations averaged 50 percent of the work.

There were no cases of suspected treason, sabotage, or security violations reported during the period. Three cases of suspected espionage were listed, but no details were given. Since they were all closed in less than three months, they presumably were either not substantiated or were turned over to the FBI. There

134 CIP Correspondence, Sixth Corps Monthly Statements, Apr-Jul 41, File MID 10389-A-1-Records, WDGS, MID, (CONFIDENTIAL) (National Archives, Washington, D.C.).

were two impersonation cases during April, one in June, and another in July. Thirty "routine" cases during the period are not further identified. These cases totaled only 10 percent of the work load.

Labor unrest at the Dow Chemical Company at Midland, Michigan, was an example of a routine case which required continuous coverage by a CIP agent for an entire week. During National "Alert" Week, 29 May-1 June, when the Corps Area G2 maintained 24-hour coverage, CIP agents were working 12-hour shifts. However, no unusual incidents were reported.[135]

Forty percent of the cases handled during the period were labeled "suspected disaffection," but without case records there is no means of evaluating either their importance or the work load they represented. However, in previous years the Sixth Corps Area G2 had reported on the Nazi problems existing in the heavily Germanic populations in his area. When many of these German men were drafted into the Army, disaffection cases became common in all Corps Areas. Sixth Corps Area normally had a higher percentage.

These Sixth Corps reports also provided a picture of the accomplishments of CIP agents:

Month	Agents Working	Cases Completed	Interviews Completed	Cases Closed By One Agent	Most Interviews By One Agent
Apr 41	9	47	646	11	118
May 41	5	57	523	19	151
Jun 41	10	88	1020	20	187
Jul 41	12	63	855*	14	148
Total	--	255	3044	--	--
Average	9	64	761	--	--

* Work of only 7 agents

Some of these interviews must have been done by telephone, since the monthly average represents one interview every half hour, ten hours a day, six days a week.[136]

135 CIP Correspondence 145-146, 1-31 May 41, File MID 10389-A-1-Records, WDGS, MID, (CONFIDENTIAL) (National Archives, Washington, DC).

136 CIP Correspondence 96-98, 1-30 Apr 41; CIP Correspondence 146-147, 1-31 May 41; CIP Correspondence 70-71, 1-30 Jun 41; CIP Correspondence 25-26, 1-31 Jul 41, File MID 10389-A-1-Records WDGS, MID, (CONFIDENTIAL) (National Archives, Washington, DC).

Four months after the period covered by these summaries, Sixth Corps Area was inspected by the Chief, CIP, who reported that there was "...every evidence of efficient organization and operation... The Sixth Corps Area commander and his staff have exhibited a thorough understanding of the problems confronting counterintelligence operations and have demonstrated resourcefulness in the preparation of plans for the accomplishment of successful countersubversive action..."

Plans were discussed for establishing district offices at Detroit and Lansing, Michigan; Milwaukee and Madison, Wisconsin; and Rock Island, Rockford, and Springfield, Illinois.

The CIP Chief observed that the Chicago office was "...separated from the headquarters by some ten blocks. The office is well located and is provided with adequate furnishings and equipment."

The CIP detachment had reached its full strength of 29 agents, but the problem was that the Sixth Corps Area G1 would not authorize designation of specially selected enlisted men, then in basic training, for future CIP assignment, although by the time these men completed their basic training, normal attrition would have reduced the strength of the CIP detachment to such an extent that vacancies would exist. The local G2 suggested that the problem would be solved by authorizing a quota of 50 agents for the Corps Area, which would make vancancies immediately available and permit the "earmarking" of selected trainees.[137]

In March 1942, Capt Hugh D. Wise, Jr., Executive Officer of the Office of the Chief, CIC, made an inspection of the CIC operations in the Sixth Corps Area. There he met Maj H. R. Kibler, who later was to succeed Wise as Chief of CIC, and who was then Executive Officer of the Intelligence Section of the G2 office. Major Kibler handled the financial and travel problems of the local CIC detachment. Wise said Kibler was familiar with the organization and "to a certain extent the agents." He added that Kibler was interested in the Corps and its problems and discussed them at length.[138]

In the matter of personnel, the Sixth Corps Area had temporarily solved its officer problem. Its Acting G2 and its Chief, CIC, were both former Treasury Investigators, and the chief of its Investigations Division was a former attorney and graduate of the first CIP Officer's Investigative Course. Subordinate positions had been filled and reserve lieutenants over-age in grade had been designated as

CONFIDENTIAL

understudies. A current problem was a lack of promotions. Officers of the G2 division were all assigned to "BI" - Branch Immaterial - and since that branch was filled, there were no promotions available. Even vacancies in the G2 division could not be filled.

The number of agents was definitely inadequate. Instead of 29 men, the Corps Area needed a hundred agents in the opinion of the Chief of Investigations, although it was only asking for 78 if the pending CIC increase was approved. No plant security work was being done, although it was anticipated, but personnel investigations for CIC applicants, for bombardiers, for officer candidates and for Signal Corps personnel "buried" agents. Few other cases were handled in the field offices. There were some serious cases, but the countersubversion informant system was revealing little. The number of names in the personality file index of the area was growing steadily and had already reached 25,000. While clerical help was considered adequate, a backlog of 725 cases existed from an earlier period when personnel was critically short.

In conformity with the new CIC policy, the Chicago office was abandoning its undercover status, and liaison was good with all federal agencies except the FBI. Agents worked so closely with the Provost Marshal that no objection was voiced at a proposal to transfer six agents to the Provost Marshal.

Agents seldom used the special investigative equipment furnished the detachment, although the CIC unit requested a Speed Graphic camera to replace the Minox it was using for plant security work. The Minox created developing and enlarging problems. Firearms were stored under lock, and G2 policy forbade agents to carry weapons. This probably was just as well, since the agents had had no firearms practice. No regular physical training was provided, but it was hoped to have instructions in judo and in street fighting at a later date. All agents had completed basic training.

Although Army policy since May 1941 had permitted payment of five cents per mile to agents using their private automobiles, Major Kibler said he had been instructed not to pay more than three cents per mile. As a result, his agents were losing money. Automobiles were scarce, and those available needed new tires.

Personnel procurement had been systemized. Initial screening of the many CIC applicants was conducted at the Army Public Relations Bureau, where the obviously unsuited were weeded out. Others filled out a questionnaire which enabled the detachment commander to determine which candidates he should interview. When interviewed by the detachment commander, the prospective agents completed the official personal history statements.

If an applicant was tentatively qualified for CIC, he was told to notify the G2 at the time of his induction. When the man was inducted, his service records were tabbed for CIC duty. He was then sent to Fort Sheridan for basic training. If already in the service, the man was frozen at his station until a background investigation could be completed. By agreement with the G2, these candidates were assigned to the G2 file room while awaiting final approval for assignment.

The Sixth Corps Area had already had a taste of things to come. Already several of its agents had been tapped for overseas assignment. The Corps Area had provided credentials so the men could travel to ports of embarkation as civilians. The G2 had only one request: that more information be provided in connection with overseas assignments so that departees could be more effectively briefed.[139]

Procurement Difficulty in Sixth Service Command

Procurement difficulties developed when the system of tabbing potential agents was eliminated in late 1942. Under a new arrangement, men could only be procured from lists of those deemed qualified by officers in the reception centers. Or, if CIC furnished a list of the men it desired, it could ask the officer in charge of a recruiting or induction station to notify CIC when the man was inducted.

Under the former enlistment program, CIC could plan its procurement and maintain an age and training balance. This was not possible under the induction and assignment system. Furthermore, the induction program also blocked the enlistment for CIC by individuals who had highly specialized qualifications.[140]

Detroit Race Riot

The Sixth Service Command was faced with a race riot of some proportions in June 1943. For three days, the situation in the area was critical, and mobs armed with clubs and weapons roamed the city searching for other groups. After 24 hours of rioting, federal troops moved in, and a state of martial law was declared. CIC worked with troops to stop the fights that occurred in widely scattered areas of the city, and agents attempted to determine whether a central control or plan for the rioting existed.

It was concluded that the incident was of spontaneous origin, the result of several economic and political factors that belied the presence of any promotional

139 Memo from Captain Wise to Chief, CIC, 16 Apr 42, Subj: "Report of Liaison Trip to Certain Corps Areas," (CONFIDENTIAL) (Central Records Facility).

140 Memo for General Strong, dtd 19 Dec 42, from Col H. R. Kibler, Subj: "Sixth Service Command," (CONFIDENTIAL) (Central Records Facility).

agency. The rioting died down within three days, and CIC closed the case with the comment that there was no evidence of "coordinated planning of action by enemy subversive agencies."[141]

Disposition of this report is worthy of mention. Concern in Washington over the race situation was so great that the reporting officer was called to Washington for a briefing session with Secretary of War Stimson. The officer was flown to Washington on 23 June and prepared a more extensive report which was discussed at a cabinet meeting on 25 June 1943.[142]

Seventh Service Command

The Seventh Service Command included a large number of states but had a relatively small population. The nine states in the command, Missouri, Kansas, Iowa, Nebraska, Minnesota, North Dakota, South Dakota, Wyoming, and Colorado, had a combined population of only 15,600,000. Twelve agents were charged with coverage of the area in 1941, but strength soared to 185 men in 1943. The command was headed by Maj Gen Frederick E. Uhl, and Lt Col Harold White was Director of Intelligence. Maj O. C. Michelman commanded the CIC detachment.[143]

Captain Sheen found the situation at Seventh Corps Area during his November trip to be generally satisfactory, but in "some instances it is being impaired by interference and misinterpretation of existing policies."

The Corps Area Chief of Staff had formerly served as a G2 and still harbored a deep interest in G2 activities. He exerted considerable influence over management of the section, and his policy was at variance with that prescribed by the War Department.

The G2 felt that an experienced civilian investigator was sorely needed in the area and that eight additional CIP men could be utilized. Clerical help was a must, and improved physical facilities were needed. Captain Sheen closed his report with the comment that the G2 was "not much impressed with training by the CIP school and gave the impression of being reluctant to rely upon CIP personnel in the accomplishment of cases of a serious nature."

---

141 Memo dtd 25 Jun 43, Factors Behind the Detroit Race Riots, by Lt L. A. Lowenstien, (CONFIDENTIAL) (Central Records Facility).

142 Ltr, dtd 25 Jun 43, to Col L. R. Forney, Chief, Security Group, from Col H. R. Kibler, Chief, CIC, (CONFIDENTIAL) (Central Records Facility).

143 CIC Record List, compiled as of 30 Oct 43, (CONFIDENTIAL) (Adjutant General Intermediate Record Holding Depot, Ft Holabird, Md).

Considerable changes had occurred by the time Captain Wise made his liaison trip in April. Although the G2 still was reluctant to depend on CIC agents, new officers assigned to operating field offices in the area seemed to make up for the G2's lack of enthusiasm. A sharp improvement in CIC status was predicted.

The personnel shortage reported by Captain Sheen was corrected by the time Captain Wise arrived, at least with regards to officer personnel. Enlisted and civilian clerical help was still needed. The detachment had a case backlog of about 800 investigations. Though many agents were lawyers in civilian life, procurement by the detachment had stressed characteristics of dependability and varied experiences, rather than educational background.

Although many promotion spaces were available within the detachment, the grades were held back and awarded only as merit was proved. The system seemed to work well, and complete filling of higher grades was anticipated in a few months following the inspection.

The agent training pattern was slightly varied in the Seventh Corps Area. Men were held at the detachment in Omaha, Nebraska, for orientation and on-the-job training immediately after procurement for a period of five to six weeks. Under careful supervision, the men were put on cases of their own as quickly as possible after completion of the preliminary period. Agents were sent to the Chicago school for classroom work. No provision was made for post-school training.

The officer in charge of the investigations section was charged with all case report review work and in most instances rewrote all agent reports into a finished form. Original copies were kept on file for the protection of the agents concerned. Finished reports were not considered a job of the agent, but were felt to be the responsibility of the investigations officer.

The lack of adequate agent transportation was termed by Captain Wise as the dominating problem of the detachment. Agents were reluctant to use their own cars because of the lack of tire priorities. Government vehicles, when available, were painted in such a manner that identity of the user was immediately compromised. No monetary problems were discussed in the report.

All technical equipment was kept in custody of the G2 and was usable only with his permission. The G2 explained that this policy safeguarded equipment until a need for it arose. He felt that present case work did not require equipment and that no time was available for experimentation and familiarization by the agents. Firearms were distributed for use as needed, but no ammunition was available to permit practice and qualification.

The scope of agent jurisdiction allowed investigation of commissioned as well as enlisted personnel, and care was taken to conceal identities and rank.

Field offices, however, were run completely in the open, with the name on office doors and listed telephone numbers. CIC personnel were never used to conduct investigations on military installations. This duty was delegated to intelligence officers who employed trusted enlisted men. It was felt that this method was most satisfactory, since it did not cause new faces to appear during the course of an investigation and eliminated transfer and travel problems.

Captain Wise cited a few of the difficulties raised by the control exercised over G2 and CIC by the Chief of Staff. Although an agent from the detachment was sent to Washington for special training in the review of reports and assigned that task when he returned to the detachment, the man was returned to the field for investigative work when the Chief of Staff expressed the opinion that only officers should handle such work. The Chief of Staff also termed special investigative equipment sent the detachment "a lot of junk" and ordered it put under lock when it arrived at the headquarters. He did not keep the unit informed as to what had arrived and was available for use on the theory that "the less they know about it the less they would bother about trying to use it."[144]

Barring of Agents

When agents of the Seventh Corps Area detachment were barred from the premises after an explosion at the St. Louis Ordnance Plant, St. Louis, Missouri, sharp repurcussions followed. The agents had properly identified themselves and sought to investigate the explosion for the possibility of sabotage, but the commanding officer repeatedly denied them access to plant facilities.

Maj Gen George V. Strong, G2 War Department, in commenting on this situation remarked that the officer did not have the proper conception of the responsibilities, duties, and functions of the Military Intelligence Division. He pointed out that the case was one demanding CIC attention, and did so in terms that proved useful to agents with similar problems in all Corps Areas.

He stated that all "field personnel should be instructed to furnish to agents of the Military Intelligence Division any assistance which they may need in the performance of their duties."[145]

Eighth Service Command and Southern Defense Command

Eighth Service Command covered the southwestern states of Texas, Oklahoma, New Mexico, Arkansas, and Louisiana, with a combined population of about 15,000,000. Twenty-two agents were stationed in the area when World War II broke, and strength of the CIC in the command steadily increased to a peak of 236 men in 1943. Only 87 men remained in January 1944, when CIC was filling units for tactical groups moving overseas.

Maj Gen Richard Donovan commanded the Eighth Service Command and had Col Worrel A. Roffe as his Director of Intelligence. Lt Col Ralph W. Pierce commanded the CIC detachment in 1943.[146]

The Southern Defense Command, activated in March 1941, pushed the Eighth Corps Area to Dallas for the war, and took over the counterintelligence mission along the Mexican border. As far as the CIP agents were concerned, this assignment soon became essentially a border control mission. They interviewed returnees for Mexico and occasionally briefed a traveler en route as to what particular information was wanted. One of the principal targets along the border was the "Sinerquesta," or Mexican Communist Front organization, whose activities were closely watched. This control assignment extended from West Texas to New Orleans. Much of the information obtained concerned the attitude of Mexico toward the Good Neighbor Policy.[147] Southern Defense Command was not allotted any CIC agents until the summer of 1943, when it received 28, of which 12 were Negro. Prior to that time Eighth Service Command provided CIC coverage.

An inspection trip through Eighth Corps Area, with headquarters at Fort Sam Houston, Texas, by Captain Sheen, revealed perhaps the most extensive and ambitious deployment of agents in the Zone of Interior. Ten field offices, aside from the headquarters offices, were maintained, and though the agents were spread thinly, widespread coverage was obtained. It was felt, however, that additional agents were needed at Denver, Colorado and Houston, Texas, to provide assistance at what were felt to be the most sensitive areas in the Corps.[148]

One civilian investigator was requested by the G2 as essential to CIP operations, and a qualified man had been located to fill the position when authorization

for his employment was received. Government-owned transportation was urgently needed in the area, because of the large area of responsibility and the reluctance of agents to use their own vehicles in view of gasoline and tire shortages.[149]

Racial Coverage

Coverage of the racial difficulties that developed during this period provided a problem to all Service Commands. The method adopted by the Eighth Service Command for coverage was typical and effective.

Seven district offices were established within the command, corresponding with FBI districts. Intelligence offices were established in sensitive areas. All post, camp, and installation intelligence officers fed information from over 200 locations into this net. Cooperation and liaison with the FBI, Office of Naval Intelligence, state, county, and municipal police provided additional density.

The efficiency of coverage and the prompt and accurate reports that could quickly be obtained in this way allowed preventive rather than suppressive action. When racial incidents of any proportion occurred, agents were dispatched to the point of origin and information could be immediately disseminated to the interested staff agency for necessary action.[150]

Western Defense Command and Ninth Corps

In the Western Defense Command, which took over the Presidio of San Francisco in March 1941 and pushed the Ninth Corps Headquarters to Salt Lake City, Utah, Japanese workers and sympathizers constituted the principle problem, and the bulk of subversion investigations fell on the FBI. When war came, Army counterintelligence worked closely with the FBI in the initial roundup of potentially dangerous suspects and their internment. This Command also had the responsibility of supplying CIC personnel to the Alaskan Theater of Operations until November 1943.

Jurisdiction was always a problem in Army areas that embraced large land masses. In 1941, the Ninth Corps G2 described his operational procedure starting at post level, where the local intelligence officer assumed the responsibility for the investigations. This procedure was similar to that used in Third Corps Area. CIP assistance was furnished by the Corps G2 as needed. The post intelligence officer conducted all phases of the investigation and arranged directly with unit

149 Memo, dtd 1 Dec 41, subj: "Report of Visit to Fourth, Fifth, Sixth, Seventh, and Eighth Corps Areas," from Capt H. G. Sheen, (CONFIDENTIAL) (Central Records Facility).

150 Address delivered by Lt Col Cylburn O. Matfeldt, WD Intelligence Conference, 21 Jul 44, (SECRET) (Central Records Facility).

intelligence officers for the necessary cooperation when cases could best be handled at unit level. The Corps Area G2 assisted the post intelligence officer by conducting phases of the investigation at a distance from the post. Many of the installations, however, were so small that the post intelligence officer often had neither the time, the means, nor the experience to handle the investigation. In such cases the Corps Area G2 often assumed full responsibility for the investigation. The G2 also directed the investigation when two or more installations were concerned. In general, the matter of responsibility was settled at local level under the guidance of the Corps Area G2, who by having knowledge of all the cases in the area was best able to decide.[151]

The Seditious Lieutenant

Mimeographed pamphlets attacking the President, his Cabinet and the war effort in general turned up in the officers club at a large western Army camp in 1942, almost simultaneously with the discovery of similar material in USO clubs, libraries, and public vehicles in the area. A few days later, the proprietor of a stationery store about 1,000 miles from the came became suspicious of a young man who had requested the printing of these pamphlets and turned a copy of the literature over to local police. The man who had ordered the pamphlets had not given his name at any time during the transaction, but the dealer could furnish a complete description.

At the same time, a lieutenant assigned to an organization at the camp aroused suspicion when he began to put in a good deal of time in writing at his desk and was very careful to prevent others from seeing what he was writing. Eventually, he discarded a sheet of carbon paper which was turned over to Military Intelligence because of his strange actions. The carbon revealed that the lieutenant had been writing seditious material and had used the name of the organization which had purported to produce the pamphlets. Shortly after this, a letter was turned over to military authorities by a person in the middle west, which had been sent by the lieutenant in question and which contained additional seditious statements.

At this point, CIC entered the case and began a discreet surveillance on a 24-hour basis. During the course of the surveillance, the lieutenant was invited to speak at a local university on the subject of Criminology. During his talk, he bitterly attacked the Army. The lieutenant also placed an order and received new pamphlets from the same printer, all of which were seized by CIC agents. When it was determined that no other persons were involved in the case, the man was arrested and subjected to interrogation. A search of his quarters revealed

151 File #8, CIP Regulations 1941 & 1942, (CONFIDENTIAL) (Central Records Facility).

additional materials. When confronted with the evidence, the man confessed. He was convicted of sedition and other misconduct by a general courts martial and sentenced to a term in a federal prison.[152]

Golden Gate Bund

A voluntary informant told Western Defense Command officials early in 1942 that he had heard a War Department employee giving details of American losses at Pearl Harbor to unauthorized personnel. Since the individual concerned had access to confidential information, CIC was called upon to investigate the incident.

An agent was put undercover in the section where the civilian was employed and developed a friendly relationship with the suspect. Eventually, another man was placed undercover to assist in the case. It developed that the suspect was German-born and harbored strong pro-Axis sentiments. He claimed that he had relatives in German police positions and that he was anxious to form an organization in this country which would allow Germans with similar feelings to be of genuine aid to the Fatherland.

He eventually showed the undercover agents the plans for formation of the Golden Gate Bund. The suspect drafted rules and regulations for the organization and even had membership cards printed. The man was transferred to nonsensitive duties while the investigation continued. When it was determined that he and his associates were not engaged in espionage activities but were merely disloyal, he was discharged from his War Department position. He was later brought before the Individual Exclusion Board to show cause why he should not be removed from vital Pacific Coast areas, and it was determined that his past actions bordered upon treason. He was ordered to be excluded from Military Areas 1 and 2 of the Western Defense Command.[153]

An acute shortage of agents during early 1942 in the Western Defense Command was set out by that headquarters in a letter to the Military Intelligence Service. The G2 asked that the Command's CIC allotment be raised from 71 to 250 agents in order that effective coverage of the area could be effected. Of the requested allocation, it was planned to suballocate six agents to Headquarters, Ninth Service Command at Fort Douglas, Utah. Without the increase, the

153 File, undated, Summary of Investigation conducted by AC of S, G2, WDC and Fourth Army of Case, (CONFIDENTIAL) (Staff and Faculty Library).

staffing of field offices and branches with adequate forces was impossible. Formation of a sorely needed pool of men for overseas duties could only be possible if the number of men was increased.[154]

Undercover Investigation of Sabotage in Northwest

An agent of the Western Defense Command CIC detachment was sent to Canadian stations of the Air Transport Command in mid-1942 to investigate possible sabotage to Army aircraft leased to civilian operating companies. A fire had occurred aboard one ship, and a few weeks later an oil filter screen was found to be clogged with sand.

The agent was put undercover with civilian maintenance employees and moved to various stations where incidents occurred after servicing by civilian crews. He found that while the crews were young, inexperienced, and inclined to be negligent in maintaining fuel stores and spare parts, there was no positive evidence of intentional sabotage to aircraft.

The agent uncovered and explored a morale problem which developed from preferential treatment given civilian employees over Army personnel, and recommended certain changes to correct the situation. As a result of his suggestions, separated messes were abandoned, and comparable barrack accommodations were furnished civilian and military personnel.

The total length of the agent's stay in the area is not disclosed, but for at least three months he remained undercover at the airfields.[155]

Bomber Crash

The detachment with Western Defense Command investigated the crash of a large bombing plane during an experimental flight in early 1943. The plane was a total loss, over a million and half dollars of property damage was involved, and 32 lives were lost. Many agencies were involved in the investigation under G2 coordination: FBI, Army Air Forces personnel, local police, and aviation experts.

Over 200 witnesses to the crash were interviewed, and from their reports it was possible to plot a chronology of events and determine the probable cause

154 Ltr, dtd, 3 Apr 42, from Col John Weckerling, G2, WDC, to MIS, subj: "Allotment of CIC," (CONFIDENTIAL) (Central Records Facility).

of the disaster. While it was not possible to prove the absence of sabotage, mechanical failure was determined as the probable cause of the accident.[156]

Western Defense Command agents also handled the investigation of a fire at dog kennels on a Western Ordnance Depot. A report of the military guard responsible for patrolling the area was at variance with other eyewitness accounts and led to thorough background investigation of the man. When a large amount of derogatory information and certain psychological difficulties came to light, interrogation and reinterrogation brought a confession from the man that he had started the fire in order to bring glory to himself by rescuing the dogs. He underestimated the fury of the blaze he ignited, however. The dogs and the building were lost.

The investigation and reports by the detachment led to conviction of the guard for arson on a government reservation. He was given a prison sentence of three years.[157]

More malicious mischief was uncovered at Mills Field, California, where a civilian mechanic in a fit of anger at his superiors punched holes in a wing flap assembly at 14 points. After extensive questioning, the suspect admitted guilt and was prosecuted and sentenced.[158]

Cover Error Under Cover

Early in 1943, the G2 for the 92d Infantry Division, which was training in Southwestern United States, asked for four Negro agents from Western Defense Command to conduct an undercover investigation within his division.

Only two agents could be supplied, and the method of forwarding these agents very nearly compromised their identity. The division G2 had asked that the agents arrive in privates' uniforms with service records, but that portion of his request was apparently not forwarded to Western Defense Command. The agents were utilized for the investigation, but the attendant difficulties resulted in the setting forth of a definite policy by the Office of the Chief regarding forwarding of men to

tactical units for undercover investigations. Among the recommendations were provisions that the men carry their service records and report in a normal fashion to allay suspicion.[159]

American Intelligence Command

The American Intelligence Command asked in 1942 that vacancies be furnished it from the CIC allotment to allow selection and assignment of CIC personnel to duty under that command. The command, which was a G2 counterpart to the Office of Strategic Services, participated in a positive intelligence effort by interrogating returnees from South and Central America and maintaining card files on travelers and their reports. The ambition of the command is illustrated by its request of 8 September 1942 of the Director of Intelligence, that all 175 agents in the Caribbean be assigned to it.[160]

In spite of objections by Major Wise, Chief of CIC at the time of the request, some agents were furnished for duty with American Intelligence Command. As a part of his objection, Major Wise cited instances where the American Intelligence Command had attempted to "raid" CIC ranks by offering direct commissions to highly specialized personnel.[161] Although records on the unit are scanty, it does appear that the drain of that command on CIC personnel continued, for in a letter in mid-1943, Col H. R. Kibler, then Chief, CIC, asked that nine agents with American Intelligence Command be relieved of that assignment and returned to Fourth Corps Area, in view of the current drastic shortage of agents, and the non-CIC mission of the American Intelligence Command.[162]

Chapter 3

CIC WITH ARMY GROUND FORCES

A major problem for the top level CIC planners and administrators involved the establishment of CIC detachments for tactical units in training in the Zone of the Interior for eventual shipment of overseas combat areas. These detachments, many of which were later to reflect great credit on CIC, were initially only a source of headaches.

The basic reason for attachment of CIC units to divisions was stated by Gen George V. Strong, AC of S, G2, WDGS, in 1943 in a letter to the commanding generals of the various components under Army Ground, Air, and Service Forces:

> "Members of the Counter Intelligence Corps have been assigned to Army Air Force and Army Ground Force units within the United States primarily to afford them the necessary specialized training required before their departure for theaters of operations with their organizations. It is especially necessary that they learn the organization, characteristics and special needs of the units to which they are assigned and to prepare themselves to meet those special needs. In addition, they will assist in the operation of the countersubversion system, supplement without replacing the established investigative network of the Service Commands and the Western Defense Command, and provide immediately available investigative service for organizations to which they are assigned."[163]

Right from the beginning, there was controversy among high level intelligence officers over when CIC detachments should be provided the training divisions and corps. It was the thought of Col H. R. Kibler, the Chief of CIC, that detachments should be attached to divisions after the divisions had been fully formed and only a few months prior to the division's departure for the theater of operations. However, this policy was assailed from two sides--one favoring a longer period of attachment and the other no attachment in the Zone of the Interior at all.

Col Giles R. Carpenter, G2, Army Ground Forces, took exception to Colonel Kibler's plan, feeling that CIC personnel, at least a portion of what would be a full detachment, should be attached at the earliest stages of the division's activation. In a conference with Colonel Kibler on 12 June 1943, Colonel Carpenter outlined

---

163 Memo for The Adjutant General, Subj: "CIC Personnel Assigned to Units of the Army Air Forces and Army Ground Forces within the United States, 29 Mar 43, (CONFIDENTIAL) (draft of a letter to be sent to all the commanding generals of the various components of the Army Ground, Air, and Service Forces), (Central Records Facility).

the basic reasons for his stand. The Army Ground Forces G2 believed that during the initial stages of a division's activation, a large and important counter-intelligence problem existed. He felt it was then the investigations of potential subversives in the division's ranks might best be initiated and conducted. Secondly, during the activation period, the staff of the division would have more time to consider the proper use of CIC. Colonel Carpenter concluded: "It is very hard for a growing concern to absorb a new activity. It would be easier during the activation period for a new activity to be added. The CIC will fit into the picture better during the activation period."[164]

Eighth Service Command Officer Takes Opposite Stand

On the other hand, there was high level questioning of the advisability of having CIC personnel on duty with tactical units, both ground and air forces, in the Zone of the Interior. Col W. W. Roffe, Director of Intelligence in the Eighth Service Command, wrote to Col Lester R. Forney, Chief of the Counterintelligence Group of the War Department General Staff, that: "there is not sufficient work in such units to utilize the full time and effort of the personnel." Colonel Roffe elaborated, "Now that economy of CIC personnel is the order of the day and based on actual conditions in this Service Command, the further assignment or retention of the CIC detachments in tactical units cannot be justified."

Colonel Roffe felt that agents with divisions were being used for work outside the CIC jurisdiction, mainly because something had to be done to keep the agents busy "regardless of the legitimacy of such work;" and because division G2s in most instances had "no conception of the proper use of such detachments." The Colonel also felt that the agents' morale was "going to the devil" and their initiative deteriorating from lack of constructive work. A number of instances where agents were reported willing to take a cut in grade to be relieved of division assignments were noted.

Finally, the problem of CIC "cover" was cited: "...the identity of CIC personnel on duty with units is completely exposed to all other military personnel, and in many instances to others outside military circles. They are openly referred to as CICs, G-Men, Gestapo, Sherlock Holmes' and various other descriptive terms that clearly indicate their connection with CIC."

Colonel Roffe's main point, however, remained that CIC agents with divisions were not being utilized "to the fullest advantage" and could not be in such a situation.[165]

---

164 Memo for Col L. R. Forney, Subj: "Meeting with Col Giles R. Carpenter, G2, Army Ground Forces on 12 Jun 43," 16 Jun 43, /s/H. R. Kibler, Col, Chief, CIC Branch, MIS, (Unclassified) (Central Records Facility).

165 Hqs, Eighth Service Command, ASF, Office of the Director of Intelligence Division, To: Col Lester R. Forney, Director of Intelligence, WDGS, 4 Jun 43, (CONFIDENTIAL) (Central Records Facility).

In spite of the opposition of Colonel Carpenter and Colonel Roffe, the policy of attaching CIC agents to divisions several months prior to the overseas shipment of the division continued in effect throughout the war.

Difficulties Encountered by Detachment Commanders Numerous

If this top level controversy reflected a basic problem, it was academic compared to some of the tangled situation encountered by detachments newly assigned to training divisions. Most of the standard problems were encountered by one of the first of these CIC units, the 2d Armored Division Detachment, when it began operations at Fort Bragg, North Carolina on 24 September 1942. 2d Lt Paul A. Heegaard-Jensen, the CIC commander, reported the following difficulties: the fact that most of the agents were fresh from "door bell pushing" assignments in the ZI and were "quite unaccustomed to the rigors of field service;" the unavailability of .45 caliber pistols which were not an item of issue with an armored division; and the fact that one of his agents was on a "limited service assignment" and was classified as a noncombatant.

The lack of physical training was apparently the most glaring deficiency. The men of the 2d Armored Division CIC Detachment were all living in pup tents bivouaced 32 miles from the nearest town of any size, Fayetteville, North Carolina. Such a set-up was a far cry from field office operations in metropolitan areas. In regard to getting his men in shape to face a combat situation, Lieutenant Heegaard-Jensen wrote: "Physical conditioning, hand to hand combat training, use of the grenade, pistol marksmanship, nomenclature, care and use of the sub-machine gun training will be conducted by this officer as soon as the more important problem of adequately equipping these men is off our hands."

Lt Heegaard-Jensen also noted his own lack of rank as a stumbling block. He stated, "I have been received courteously by all officers of headquarters. Because of the predominance of rank in this section, however, the general impression appears to be that the CIC job cannot be so important as evidenced by the lack of rank accompanying this detachment."[166]

While the difficulties encountered by the 2d Armored Division CIC Detachment frequently reoccurred in subsequent months, new and additional problems for detachment commanders arose.

Frequently detachments would encounter periods of inactivity. It was then up to the commanding officer to arrange constructive training. Physical conditioning

166 Hqs, 2d Armored Division, Fort Bragg, NC, Subj: "CIC Administration," To: Director, CIC, Washington, D.C., 26 Sep 42, (SECRET) (Central Records Facility) (See Volume I, Series I of this history for an account of the difficulties of another early CIC unit, the 3d Division CIC, in the ZI training phase).

and combat training filled some time gaps and many detachments cooked up their own maneuvers. One of the more ingenious training ideas was evolved by 1st Lt Albert R. Bowen, Commanding Officer of the VIII Corps CIC in Brownwood, Texas. Lieutenant Bowen required each member of his detachment to submit written papers of 300 words or more in which they gave their opinions on such subjects as obtaining informants, setting up an informant system, activity of CIC in the combat zone and activity of CIC in tactical units. These papers were then read anonymously and a round table discussion held on the topics.[167]

Conflicts With Division G2s Most Serious

Of all the problems facing CIC units newly-assigned to tactical outfits, the difficulties arising out of conflicts between the division G2s and CIC detachment commanders were perhaps the most serious.

One typical instance of conflict arose in the 75th Infantry Division in training at Fort Leonard Wood, Missouri. The CIC detachment commander, 1st Lt David Blair, reported that his G2 was very "conservative concerning the initiation of any investigation, and has stated that he doesn't care for CIC." The G2 apparently felt that his CIC detachment was of little use as long as the division was in the United States. However, Lieutenant Blair was of the opinion that he and his detachment could convince the G2 of CIC's importance. Although the G2 had not initially favored barracks and unit checks by CIC, he had been convinced of their necessity and it was believed that further indoctrination and orientation could bring this "conservative" officer to recognize the value of CIC.[168]

In April 1943, a listing of detachment commanders' complaints of difficulty with the G2 and other officers of their divisions was compiled by Colonel Kibler's staff. It was recognized that there existed two possible reasons for these difficulties--basic personality clashes involving the CIC commander and the G2 and "a lack of sufficient information concerning the operation and mission of CIC."

The unfortunate happenings discovered by Colonel Kibler's staff were frequently trivial in themselves, but usually indicated the great gulf of misunderstanding that existed. Some of the reported incidents follow:

---

167 Memo for the file, subj: "Interview with 1st Lt Albert R. Bowen, Comg CIC Det, Hq, VIII Corps, Brownwood, Texas, 4 Jun 43, /s/Donovan J. Ault, 1st Lt, Operations Section, (CONFIDENTIAL) (Central Records Facility).

168 Memo for the file, subj: "Interview with Lt David Blair, Commanding, CIC Det, 75th Infantry Division, Ft Leonard Wood, Mo., 10 Jun 43, /s/Donovan Ault, 1st Lt, Operations Section, (CONFIDENTIAL) (Central Records Facility).

CIC investigative personnel were doing clerical work for the G2. (31st Infantry Division)

There was no phone in the CIC office. To make calls, agents had to take five minutes to walk to the G2 office. The situation made action in an emergency impossible. (31st Infantry Division)

The subversive situation was ignored as unimportant. It was felt that there was no need to "clean house" before going overseas. (31st Infantry Division)

The G2 had ordered half the week spent on basic infantry training and the other half in combat intelligence courses with the rest of the G2 section. The subversive situation in the division was not thought important. (44th Infantry Division)

The G2 felt that the detachment was with the division because of a War Department recommendation and not because the division wanted it or needed it. (84th Infantry Division)

The G2 was suspicious of the detachment. (85th Infantry Division)

The G2 had little use for investigations and felt that as far as tactical units were concerned, they needed every soldier they could get. Subversive elements in a tactical unit, he felt, could do little harm. (85th Infantry Division)

The G2 and his assistant failed to understand CIC or its functions. They stated their intentions of making field soldiers out of the agents. (98th Infantry Division)

The G2 informed the CIC detachment that during maneuvers, CIC would perform combat intelligence. (93d Infantry Division)

CIC officer was informed that he no longer commanded the detachment. As just another 2d lieutenant in the G2 section he took direct orders from the rest of the officers in the section. (93d Infantry Division)

CIC personnel were subject to company duty such as kitchen police, guard duty or CQ. (99th Infantry Division)

The G2 had disdain for enlisted men and would not allow them to contact him. He had no use for the recommendations of the Special agents. (102d CIC Detachment)

The entire CIC detachment was assigned and confined to clerical work and the administration of the division's countersubversive system. (104th Infantry Division)

The commanding general did not want the detachment, desiring no indications of subversion be brought to light within his division. He felt that such indications would reflect adversely on his outfit. Consequently, the G2 authorized no investigations. (103d Infantry Division)

CIC personnel were specifically instructed to in no way deal with the post intelligence officer, not even to establish liaison. (X Corps)[169]

Troubles Point Up Need for Manual on CIC With Tactical Units

Although some of these instances of resistance to CIC by G2s arose out of the animus to the organization and its doctrines, most of the unfortunate occurances resulted from a wide-spread misunderstanding for the use, purpose and mission of CIC with divisional forces. Many of these incidents might have been avoided had sufficient directives from the Office of the Chief, CIC been made available to G2s and other intelligence officers--and, for that matter, to the CIC detachment commanders themselves. However, it was 15 September 1943 before the manual dealing with CIC operations with tactical organizations (TM 30-215) was approved by the G1, WDGS, and 22 September 1943 before publication began. This manual on a tentative and unapproved basis was available in a limited supply throughout 1943, but apparently did not relieve much of the confusion.[170]

Even those CIC commanders equipped with the tentative manual frequently ran into resistance from division G2s. One second lieutenant commanding a detachment reported: "I am familiar with the CIC Detachment Manual (Tentative) which is apparently our Bible, but to try to put some of the doctrine into practice here would be the worst possible mistake. Both the Divisional G2 and the camp intelligence officer would see red."[171]

---

169 Memo for the AC of S, G2, Army Ground Forces, Army War College, Washington, D.C., subj: CIC Detachments on Duty With Army Ground Force Units, 26 Apr 43, (CONFIDENTIAL) (Central Records Facility).

170 Basic Field Manual, Military Intelligence Mission of the CIC with Tactical Organization and in Theaters of Operations (Tentative copies of this manual are dated 15 Feb) (Unclassified) (Central Records Facility).

171 Memo, CIC with Tactical Units (delivered personally to Major Wise by Colonel Furbershaw, AC of S, G2, Sixth Service Command on 20 Apr 43) dtd 10 Apr 43, (CONFIDENTIAL) (Central Records Facility).

Reports from another division indicated that the tentative manual lacked force and was ignored by G2 officers.[172]

Another detachment commander noted that the G2 supervising the detachment's operations "thinks the combat angle is the only thing and the positive and counter stuff are only foolish." Consequently this G2 was training his detachment in combat intelligence--to the exclusion of the tentative doctrines of the manual.[173]

In lieu of the manual, many intelligence officers wrote letters to the Chief, CIC, seeking detailed information on the proper use of CIC.

In a typical request for information, the Second Army, AC of S, G2, wrote to the Director of Intelligence, Fifth Service Command for "your interpretation of directives and policy letters" regarding the use and training of CIC with tactical units. It was noted: "Some confusion exists in the minds of detachment commanders and the G2s of the units to which they have been attached regarding their training and functions."[174] Fifth Service Command referred the matter to the Chief, CIC, but in the meantime passed along some suggestions on an informal basis:

> "CIC personnel already have had training and personal practical experience in the making of investigations of subversion and sabotage. It will be found that they are competent to make investigations on such matters originating within, or concerning, their tactical units. However, it may be found that the men of the detachment have had little more than basic training for combat and are not overly familiar with small arms weapons or combat intelligence. When attached to a tactical unit, it therefore may be advisable to give CIC personnel (including officers) thorough training in the infantry weapons available, training in the operation of combat and supply vehicles available (excepting tanks) and training, under the supervision of the G2, in combat intelligence....It is the opinion of this office that CIC personnel given field training under the G2 will be better prepared to do their jobs overseas; further, it is likely that a G2 will find such

---

173 Memo, CIC with Tactical Units (delivered personally to Major Wise by Colonel Furbershaw, AC of S, G2, Sixth Service Command on 20 Apr 43) dtd 10 Apr 43, (CONFIDENTIAL) (Central Records Facility).

174 Hqs, Second Army, Office of the AC of S, G2, subj: CIC Detachments, to Director of Intelligence, Fifth Service Command, 16 Jun 43, (CONFIDENTIAL) (Central Records Facility).

personnel extremely valuable to him if he familiarizes the men with the details of his office and work. In as much as subversion cases within a tactical unit are likely to be developed through the Countersubversion System, CIC detachments with the divisions should be familiar with the operation and use of the CS System in the division, and should be used in conjunction with, and to supplement that system...Within the continental limits of the United States, the mission of a CIC detachment with a tactical unit is the local investigation of subversion or sabotage within or particularly concerning the unit to which it is assigned. CIC officers or men should not be given assignments or duties which in any way will interfere with the accomplishment of this mission, for they have been highly trained for this specific purpose, were picked men of high qualifications prior to assignment to CIC, and many have passed up opportunities for promotion or attendance at OCS to remain in the Counter Intelligence Corps. The G2 of a tactical unit should utilize his CIC detachment to the utmost in the investigation of, and making reports on, subversion cases within the command. The G2 will find that the officer-in-charge of the CIC detachment and the agents are thoroughly capable of complete handling of such investigations, including physical and technical surveillances when necessary."[175]

Colonel Kibler Notes CIC Objective is Twofold

These suggestions were broadened in a letter from Colonel Kibler which noted the twofold objective of CIC units attached to tactical commands. The detachments were to be utilized by the division to perform counterintelligence investigations and to train for counterintelligence operations with the tactical unit.

In regard to the first objective, Colonel Kibler wrote:

"The CIC detachment has a definite mission in the field of counterintelligence even while the tactical unit is in its training phase. Investigations upon information received through the CS System; the proper supervision of the installation and operation of the CS System; investigation and removal of potentially subversive personnel; general security in the field of countersabotage, counterespionage, and countersubversion of enemy agents; and general investigations are all CIC functions. In fact, the CIC detachment is taking action to counter actual or potential activity of the enemy agents at the time the unit itself is in training for combat.

175 Office of the Director of Intelligence, Seventh Service Command, ASF, To: AC of S, G2, Hqs, Second Army, 23 Jan 43, (CONFIDENTIAL) (Central Records Facility).

CONFIDENTIAL

All activities are necessarily coordinated under the supervision and policy of the unit Assistant Chief of Staff, G2, and all reports are made to him."

Colonel Kibler then turned to the types of training that CIC agents should be engaged in while attached to a division preparing for combat:

"Although CIC personnel had abilities, qualifications, and experience fitting them for investigative duties before their assignment to CIC, considerable time and training has been expended in order that they might become specialists in counterintelligence duties. Since a maximum of effectiveness in their duties cannot be reached by training alone but is dependent to a great extent on actual experience in the duties for which they have been trained, it is believed that the best time for CIC personnel to gain the necessary experience is during their assignment to tactical units in this country. However, tactical training given them should not be so extensive as to divert them from the performance of their specialized functions, resulting not only in the hindrance of their practical counterintelligence training but also in a failure to accomplish their mission. It is recognized that to have CIC personnel thoroughly familiar with tactical or combat intelligence as well as counterintelligence might be the ideal situation, but this would only be possible if unlimited time were available. In view of the necessity for gaining proficiency in a limited period of time it is deemed more advisable for them to attain proficiency in their specialized field. CIC personnel, however, are to be trained in order that they might be physically and mentally equipped for specialized duties with a tactical unit. Physically they should be conditioned in order that when called upon, they will be able to undergo the rigorous activity required of tactical troops. Mentally they should be conditioned by study and knowledge of combat intelligence activities which are allied to phases of counterintelligence, and by obtaining complete familiarity with all components of the tactical unit so that they can operate therein intelligently and effectively. To enroll the CIC personnel in the complete intelligence and tactical training courses would preclude their devoting sufficient time to counterintelligence activities and obtaining effective results. It is believed that the CIC officer, in view of his knowledge of the functions of CIC, should be given the opportunity to select courses allied to counterintelligence and make recommendations and arrangements for the training of the CIC personnel in these subjects."

Colonel Kibler concluded with a suggestion that CIC detachments be given the essential operational latitude to accomplish the mission.

"The investigative field is in itself a difficult one, requiring not only specialized activities, knowledge and procedures, but also unusual abilities and character on the part of personnel so engaged. Considerable freedom of operations and a great deal of support are vital necessities if the desired result is to be accomplished."[176]

176 Military Intelligence Service, WD, Washington 25, D.C., To: Director of Intelligence, Fifth Service Command, Fort Hayes, Columbus, Ohio, 10 Jul 43, /s/H. R. Kibler, Col, Chief, CIC Branch, (CONFIDENTIAL) (Central Records Facility).

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Chapter 1

ORGANIZATION AND ADMINISTRATION

The story of the Counter Intelligence Corps with the Army Air Corps[1] had its official inception in April 1942 but the relationship between these organizations had a long and somewhat complicated background.

Until World War II the specialized counterintelligence requirements of the Air Corps were not generally recognized as being significant; the United States still was indulging in its pre-Pearl Harbor attitude of determined naivete in regard to matters of international espionage, sabotage and, to a lesser degree, the country's need to collect military information for its own use. Prior to Pearl Harbor, the security aspects were rudimentary at best; the collection aspects had fared rather better; they were seriously considered first in 1926 and some steps taken to put machinery into motion.

At this time air attaches were assigned to London, Paris, and Rome with instructions to overtly collect all the information they could on matters of importance to the Air Corps. At the same time Congress ordered all divisions of the Army General Staff, including that of Intelligence (AC of S, G2) to establish an Air Section under the control of an Air Officer. The first Air Officer to be assigned to G2 under this program was Maj Joseph T. McNarney.

From the start the G2 office expressed opposition to the new section and as time went on and air elements moved toward eventual independence, Army G2s on various levels opposed all efforts to establish a separate intelligence arm for Air on the basis that it would involve duplication and unnecessary expense. At the same time, however, Army commanders were becoming increasingly aware of the importance of air observation and, concurrently, the importance of controlling it. Essentially these and other aspects of disagreement were the inevitable by-products of the larger evolutionary process in which the specialized branch, the Air Corps, with its own particular requirements, were contrasted with those of the broader parent organization, the Army. The adolescent dependent was progressing toward adulthood; in thinking and actions it was looking toward the day when it would quit the parental fold and strike off on its own. The period of transition produced its harvest of conflicting opinions and resultant strivings on both sides. Some of these were selfish and shortsighted, most were honest, as may characterize human activities generally but particularly when concerned with the organization and operation of such an inexact activity as "Intelligence" within the rigid framework of service establishments.

---

1 Until 1943 the official name was the Army Air Corps; in 1943 it became Army Air Forces. The separation from the Army occurred in 1947 and the name then became United States Air Force.

Initial Authorities

Overall jurisdiction for counterintelligence activities within the Army originally was conferred by Presidential directive upon the Army's Military Intelligence Section (AC of S, G2), later called Military Intelligence Service. Zones of responsibility among the Army, the Office of Naval Intelligence and the Federal Bureau of Investigation were outlined in a "Delimitation Agreement."[2] The latter precluded dependent branches of the Army, such as the Air Corps, from engaging in most types of intelligence activities without the specific permission of the Army's chief of intelligence.

Sufficient delegation of authority was made by the Army to enable the Air Corps to implement a basic establishment. Counterintelligence matters for Air first were vested in a Counter Intelligence Section, Office of the Chief of Air Corps. The unit later became known as the Domestic Intelligence Section. On 1 July 1941 it was designated the Counter Intelligence Section, Intelligence Division. The staff consisted of three officers and nine civilians. They were primarily concerned with the establishment of security in Air Corps installations and plants manufacturing Air Corps materials; additionally they were to serve as a channel between Military Intelligence Service and Air Corps field activities.

* Specific counterintelligence "support" at first was provided the Air Corps facilities through the G2s of the various Corps Areas (later termed Service Commands). This "support" was more theoretical than actual, since from 1934 to 1940 the Corps of Intelligence Police for the whole Army establishment boasted no more than 16 agents assigned for duty.[3] When upon rare occasions agents could be spared by Corps Areas for Air Corps investigations, the agents were not attached to the Air Corps installations concerned but at all times worked out of and remained responsible to Corps Areas furnishing them. This lead to an undesirable development as Air Intelligence Offices on the lower levels postponed or decided against calling for assistance except in the most important instances, ignoring many incidents which perhaps warranted investigations. *

* Thus it was that the outbreak of World War II found the Air Corps without an investigative organization. The situation became aggravated to an intolerable degree almost immediately by the appearance of an Air Force directive making Air Corps commanders responsible for counterintelligence within their own commands.[4]

2 Memo dtd 26 Jun 39 from Franklin D. Roosevelt to Sec of War, from Appendix to Hist of CIC, (CONFIDENTIAL) (Staff & Faculty Library). Also see in same vol Memo dtd 5 Jun 40 from Brig Gen Sherman Miles, (CONFIDENTIAL).

3 Hist, MID, Vol 3, pp 96-108, (SECRET) (Office of Chief of Mil Hist).

4 Ltr, dtd 14 Jun 42, subj: CI Activities, from Maj Gen J. A. Ulio, to The CGs, AAF, (CONFIDENTIAL) (OIS Files, Wash DC).

The onset of war produced its automatic tremendous stepup in demand for counterintelligence services of all kinds. Requests for assistance swamped the G2s of Service Commands despite the fact that by this time, CIP had become Counter Intelligence Corps and there had been a sharp increase in the number of personnel assigned the new Corps. More than 300 agents now were available to the various Service Commands. Application for assistance still had to go to the Service Commands, and when agents were assigned, they still operated out of and reported to the G2 of the Service Command furnishing them.

Obviously this state of affairs could not satisfy Air Directors of Intelligence, especially in the face of the new policy making them responsible for their own counterintelligence. Urgent representations were made to the Army intelligence chief.

A study was undertaken by the Army. In consequence a recommendation was drawn up designed to insure a reasonable support by assigning CIC agents directly to the Air Corps.

Dated 27 April 1942,[5] these documents proposed to supply from CIC's authorized strength certain commissioned and enlisted personnel for duty with the Air Corps and at stations of the Ferrying Division of the Air Transport Command. Twelve Air Forces and 94 ferrying stations were provided for, through a total authorized allotment of 154 officers and 392 enlisted men. Each Air Force was to have a detachment of five officers and 17 men, while the ferrying stations were authorized one officer and two enlisted men.

Unfortunately, in the beginning this document also proved to be more academic than practical, although it did become a usable foundation for planning. By January 1943, only four officers and 11 enlisted men had been assigned to the Air Corps; of this number, fewer than half were stationed as designated by the staff study. It was seen by further study that even should there be a fulfillment of quotas, it would be necessary for the Air Force to look to the Service Commands for continued support because of swiftly expanding wartime responsibilities.[6]

Reasons for the delay in assigning allotted personnel are not clear but there is evidence that the requirements of the Air Corps were being met as quickly as CIC agents became available.[7] It is significant, though, that even as of January 1943 it was felt that even if existing quotas were fully met, the shortage of personnel for Air investigations still would be acute.[8]

---

5 Memo, dtd 27 Apr 42, for the C/S, from Maj Gen George V. Strong, subj: "Reorganization and Expansion of CIC, MIS," (CONFIDENTIAL) (OSI Files, Wash, DC).

6 Memo dtd 14 Jan 43, to Chief CID, AAF, subj: "Allotments of CIC Personnel to AAF," p 4, (CONFIDENTIAL) (OSI Files, Wash DC).

7 Ibid.

8 Ibid, p 5.

CONFIDENTIAL

The allocation of CIC personnel to the Air Corps was based on the theory that approximately one-fourth of the total strength of the military establishment would be in the Air Corps; since approximately a quarter of the counterintelligence investigative burden would be generated by that branch, it should logically be entitled to a proportionate amount of the total CIC strength. This proposition appeared sound on paper, but Air Corps officials wanted the allotment to be larger.

These officials based their argument on the points that there was a greater possibility of sabotage to vulnerable Air Corps equipment; that the geographically diversified operations of Air Corps commands required supervision of a large number of installations; that most Air Corps activities were of an especially confidential nature.[9]

Agitation for an Integrated Counter Intelligence System

Obviously, as of January 1943, the Air Corps was not satisfied with its counterintelligence program. Since the immediate future held no promise of improvement, the Air Corps conceived the idea of solving its problem through the creation of an independent and integrated counterintelligence system which would include the assignment of CIC agents to all Air Corps units.

The Air Corps was optimistic that it could fulfill its counterintelligence mission if given the necessary personnel and for proof offered an instance where something approaching the desired program had been implemented: a small CIC detachment had been given the Southeast Air Forces Training Center through an informal agreement with the G2, Fourth Service Command; under Air Force direction, this detachment had effected complete counterintelligence coverages through its own efforts and the coordinated assistance of the unit remaining with the Fourth Service Command.[10]

They Knew What They Wanted

Reasons behind the demand for an integrated intelligence system were clearly set out in a memorandum dated 25 February 1943.[11] It said: that experience had demonstrated that technically trained CIC investigators were needed for Air Corps sabotage investigations. Only with special knowledge of aircraft technology could an agent properly determine the method and means

9 Memo dtd 14 Jan 43, to Chief CID, AAF, subj: "Allotments of CIC Personnel to AAF," p 7, (CONFIDENTIAL) (OSI Files, Wash DC).

10 Ibid, p 4.

utilized to sabotage planes and servicing equipment. Only with these abilities could he efficiently function under cover to detect saboteurs, espionage agents, and subversive elements at aircraft installations and depots. It was estimated that the counterintelligence program of the Air Corps could be many times more effective if CIC personnel were so attached and deployed; at the same time, there would be no duplication with the type of work carried on by CIC attached to Service Commands. It was now clear, the memorandum said, that the Service Commands were unable to supply such personnel; even if present in the Service Command unit, delay incurred by the agent in arriving and undertaking an Air Corps investigation militated against success. The memorandum also indicated that it was the belief that the personnel problem would not ease under the system of Service Command control, for those Commands did not have a close enough lateral liaison and did not have a true perspective of the need of the Air Corps.

There were other Air Corps complaints. It was the opinion that the Service Commands could have earmarked men with special training and aptitudes for Air Corps investigations, or at least have consistently appointed the same men for Air Corps work when a new request for personnel was received; familiarity with Air Corps procedure would have elements of uniformity and continuity, as well as thoroughness.

On the other hand, the Service Commands felt that they should not hold men qualified for Air Corps work in reserve if their services were needed for other Army jobs and with this the Air Corps could only concur. There was evidence, however, that Army CIC personnel with Air Force technical training occasionally had been transferred to duty with the Army's tactical ground units and in other instances had not been assigned to Air Corps investigations even when available for such work.

Although the Air Corps made it clear that it preferred to be given men who had already completed technical training, it added that under a permanent assignment set-up, it would be possible to train CIC personnel in the intricacies of specialized investigation. Then too, experience in such manners alone would progressively increase the efficiency of the personnel.

Another facet of the problem was brought out. Although overseas operations were hardly initiated at the time the memorandum was written, the Air Corps was looking ahead to the massive transfer of tactical units to war theaters outside the continental United States. The need for qualified men would become acute and the present program was not gauged to meet such need, either quantitatively or qualitatively. While it was granted that tactical Air Force units were being furnished with CIC detachments, these were described as being so pitifully inadequate that a counterintelligence effort on their part was impossible. From the quality standpoint, it was seen that the men assigned to these units usually were those who

could most easily be spared, probably because of a lack of experience in the investigative field--especially in the specialized field of Air Corps investigations.

Along with the plan for assignment of CIC personnel to the Air Corps, it was emphasized that in any scheme for an integrated counterintelligence system the Air Corps must be allowed to supervise and control its own investigations. It was felt that only through experience could Air Corps intelligence officers gain knowledge of supervisory and control methods which they would be called upon to perform when placed on an active tactical status overseas. Under Service Command control of CIC, Air officers were gaining no supervisory experience and in many cases even lacked knowledge of counterintelligence activities being carried on within the confines of their own installations;[12] Service Commands, in providing counterintelligence coverage, often by-passed A2s and didn't even furnish those offices with reports of local investigations.[13]

Pressure for a complete revision became intense.

Nevertheless, it was not the original intention of the Air Corps to set up a wholly separate counterintelligence network and to divorce itself from the association with the Service Commands. Initially this not only was impossible under existing regulations but quite unfeasible. The Air Corps hoped to work with the Service Commands and believed it essential to retain the right to rely upon them for aid when an investigation required additional personnel or when it went beyond the scope of jurisdiction of one particular Air Force; it was Air's ultimate aim to increase the effectiveness of the Military Intelligence Service counterintelligence system with the Air Corps through the use of CIC assigned to Air under an Air Corps operations control structure, but it wanted to look to Military Intelligence Service for coordination and administrative control.[14]

Manning the Plan

Planning went so far in Air Corps staff offices as to include the draft of a plan for procurement of CIC personnel to man the proposed integrated system.

As the first step, it was suggested by Air that all CIC personnel with experience in the Army Air Corps be transferred thereto under existing quotas set up by the April 1942 staff study.[15] By now it was known that this alone would

15 Memo, dtd 27 Apr 42, for the C/S, from Maj Gen George V. Strong, subj: "Reorg and Expansion of CIC, MIS," (CONFIDENTIAL) (OSI Files, Wash DC).

be insufficient and in any case, most such qualified personnel were at that time stationed within the continental United States. To this nucleus, it was suggested, therefore, that there be added, still within the limits of the quotas, men who regardless of branch prior to CIC training, had worked on Air Corps investigations while attached to a Corps Area Service Command or to a Defense Command. The selection of desired men and the actual transfer of personnel could be negotiated through Headquarters, CIC.

It was proposed that the remainder of men for the integrated program be obtained by selective processing of Army Air Forces specialists from CIC investigative training. The Air Corps itself expressed some apprehension about this element of the plan, however, for in the past it had happened that Air Corps personnel assigned to CIC for training had not found their way back to Air Corps branches. Relying on Headquarters, CIC, for coordination and supervision still appeared to be the most satisfactory solution. The plan was deemed workable for procuring both officers and enlisted personnel.[16]

Attempts at Resolution of the Air Corps-Service Command Conflict

The proposal did not go unheeded by Army Intelligence but no positive action was immediately forthcoming. Reports of disagreement within the Air Corps commands themselves as to the merit of the proposed plans were seized upon to effect delays, for it can be said that Military Intelligence Service did not easily accept the idea.[17] Finally, however, the Assistant Chief of Staff, G2, suggested to the Chief of the Air Staff that a conference be held involving representatives of Air Forces Commands and the Military Intelligence Service to consider adjustments. It was proposed that subsequent to this high level policy conference, a meeting of lower echelon officers be held to air differences. The Air Corps concurred and added that it further would arrange a meeting of Air Corps command A2s prior to the lower level meeting for the purpose of consolidating issues to achieve unanimity.[18]

To prepare for these meetings, draft memoranda were circulated among all Air Corps commands for comment. It was requested that each command give its reasons for considering an integrated force essential, list instances where Service

18 Memo, dtd 28 Mar 43, for the C/S, subj: Responsibilities, Controls, and Channels for CI Activities in the AAF, (CONFIDENTIAL) (OSI Files, Wash DC).

Command's control was compromising operations of its counterintelligence program; and if necessary, suggest modification of the proposed integration plan. When these comments were collected, a comprehensive memorandum was drafted for use as a basic agenda and foundation for discussion at the ensuing conferences. Matters touched upon by the memo summarized Air Corps points already alluded to but added a reference to the need for assignment of investigative funds directly to Air for use by Air CIC agents.[19]

The March Memo

It was stated there was existing authority, though not clear cut, for an integrated intelligence system within certain Air Corps commands; this "authority" was disputed by many Service Commands through a contrary interpretation of regulations. It was thought by them that the proposed program might be undertaken without directives being necessary if this ambiguity were resolved, not necessarily in favor of the Air Corps, but rather with full recognition of the immediate needs of the Air Corps.

To establish firmly its point in this memo that Service Command control of personnel and investigations was crippling the necessary and required training program for its own intelligence officers, the Air Corps cited as typical the situation of the Third Air Force. This group had headquarters at Tampa, Florida, in the geographic area of the Fourth Service Command. Within the Third Air Force installation, the Service Command exercised complete counterintelligence control over Air Intelligence officers, investigations, CIC personnel, intelligence funds and the preparation of reports of investigation. This was said to leave the A2 and his staff helpless to deal with matters of vital concern to the Air organization.[20]

The memo also brought to light the complicated fact that most Air Force commands extended over a geographic area larger than any one Service Command. This meant that as many as four Service Command groups might be involved; this could not afford a coordinated situation, with consequent failure of the counterintelligence effort. It was pointed out, too, that this multiple control system caused endless confusion relating to the utilization of and accounting for confidential funds.

Because of the cross-country nature of Air Corps operations, investigative expense could be incurred in any number of Service Commands in a given case.

---

19 Memo, dtd 28 March 1943, for the C/S, subj: Responsibilities, Controls, and Channels for CI Activities in the AAF, (CONFIDENTIAL) (OSI Files, Wash DC), p 1.

20 Ibid, tab B

Reimbursement practices among these commands varied but it was most often necessary to seek repayment from the Service Command in which the major expense was incurred.

The tenor of the memorandum indicated unanimity among Air Force commands in the desire for a change in the existing intelligence system and that minor alterations of the Service Command system would be inadequate.

Meanwhile, the counterintelligence effort remained static.[21]

The April Memo

During this otherwise unproductive interval memos were exchanged between the Army Assistant Chief of Staff, G2, and the Chief of the Air Staff, relative to the provisions of the original memorandum, that of 25 February 1943.[22] This correspondence served to draw the issues more clearly and eliminate elements of confusion and misunderstanding; the memos will be dealt with as a single unit.

General Strong apparently still retained the impression that the Air Forces wanted to set up a countersubversive and counterintelligence system independent of the powers of coordination of the Service Commands. He pointed out impracticalities in such a plan but Air answered by making clear its idea to work under the direct supervision of Military Intelligence Service to all Service Commands.

General Strong also stated his position that an independent CIC for the Air Corps was not feasible under the existing interrelated command structure. He visualized an endless duplication of effort under such a system and felt that it would hinder rather than improve the overall counterintelligence situation. The Air Corps replied with the argument that it only wished to control CIC for the purposes of Air Force investigations. Since these investigations were being neglected under the present system, there would be no duplication of effort, rather there would ensue a new and improved contribution to the counterintelligence picture. In addition to this, the Air Corps urged the argument of the original memorandum that its investigations needed highly specialized training not found in average CIC personnel.

As a further objection to CIC assignment with the Air Corps, General Strong voiced the opinion that a separate controlled investigative branch would breach the

terms of the existing Delimitations Agreement. The Air Corps felt that this would not be the case, for CIC within that organization would operate under direct supervision of Military Intelligence Service and in such a situation would be subject to all Military Intelligence Service directives and agreements.

The memoranda contained other than bickering and argumentation, however, for several important points under contention were ironed out by the correspondence.

As an example, the need for a separate allotment of confidential funds was obviated by General Strong's statement that under existing regulation, the Service Commands should honor intelligence fund vouchers regardless of where the expense was incurred. Payment should be made, he said, at the Service Command headquarters for the geographic area in which the Air Force Command headquarters was located.

Another matter, which had troubled Air Force Commands since the outbreak of the war, was settled by the memos. As previously stated, these commanders were aware of their responsibility for counterintelligence matters but felt that a proper performance was not possible while investigative power was vested in the Service Commands.

General Strong pointed out that since ultimate responsibility for counterintelligence investigations was expressly vested in Military Intelligence Service, it was necessary to delegate this duty for purposes of administration. This delegation, for the sake of convenience, was to the Service Commands. However, since the only positive duty of Military Intelligence Service was the provision and coordination of such matters, it followed that this duty, and no more, was all that was delegated to the Service Commands.

The issue, then, turned upon the meaning of "supervision and coordination." General Strong agreed to correct the erroneous interpretation of "supervision," which was taken by some Service Commands to give authority to direct counterintelligence matters within their geographic area, regardless of the installations involved. General Strong believed that since it was granted under existing authority, dissemination of such information would make clear the right of Air Force commanders to institute control investigations at least with their own installations. This pronouncement nevertheless assumed that agents to perform such investigations still would be obtained through the Service Commands.

In the same vein, General Strong agreed to issue a clarifying directive to the effect that any responsible commander had the right to be furnished with the reports of investigations conducted within the confines of his jurisdiction; several Service Command heads had refused to supply such reports to Air Force commanders.

It appears clear that the G2's attitude was that the present system, although it had flaws, could be made adequate if properly administered, and that the proposal for a separate integrated system was not justified. The only solution he offered under the circumstances lay in the more effective deployment of available facilities and utilization of CIC personnel.

The Conferences

Under these circumstances the high-level policy meeting was held in mid-April 1943. Transcripts of the parley are not available, but results are set out in an Air Corps letter that was intended to provide a foundation for discussion at the conference for Air Forces intelligence personnel set for 4 May 1943, at Gravelly Point, Virginia, and the meeting of G2 and A2 officers set for the next day in Baltimore.[23]

A letter indicated that at the policy meeting, the G2 had informally admitted the validity of some Air Forces objections and was ready and willing to see appropriate changes made. These concessions were said to be, in general, along the lines indicated in his memorandum to the Chief of the Air Staff.[24]

General Strong and his staff had agreed to equalize intelligence operations among the Service Commands to the end that the Air Corps would not be faced with the complexities of varying policies and procedures. The Air Corps also received a promise that the Service Commands would be notified through channels that counterintelligence was a command responsibility and that Service Command authorities were only to supervise and coordinate that function.

As to personnel and funds, Military Intelligence Service apparently would prove to be less conciliatory. The G2 had reiterated his plan to fill existing quotas for allocation of CIC to the Air Forces but refused to grant CIC personnel to fill separate investigative units for Air Forces work. The policy on funds was somewhat more satisfactory as it appeared likely that G2 would agree to make uniform the reimbursement policy among the Service Commands, obviating the need for separate allocations of funds to the Air Forces.

Under these conditions, the lower level conferences at Gravelly Point and Baltimore were inaugurated; it was hoped that here the outstanding differences could be resolved.

24 Memo, dtd 9 Apr 43, from Maj Gen George V. Strong, subj: Responsibilities, Controls, and Channels for CIC Activities with AAF, (CONFIDENTIAL) (OSI Files, Wash DC).

Gravelly Point, 4 May 1943

Lt Col Roy H. Boberg, Chief, Counter Intelligence Division, Army Air Forces, acted as chairman of the meeting. He warned that softening of the Air Corps demands set out in the memorandum dated 28 March would likely be necessary.

Colonel Boberg gave the opinion that Col L. R. Forney, Assistant Executive Officer, Military Intelligence Service, who would head the Army delegation at the forthcoming Baltimore conference, was extremely sympathetic and had indicated that accord could be reached on many points.

Boberg said that Forney was of the opinion that existing directives provided a framework for agreement and reiterated that uniformity of procedures within the Service Commands would be brought about. MIS appeared to be ready to set up intelligence channels paralleling command channels, and felt that while no change could be wrought in the Delimitations Agreement, it would be rigidly enforced. Other changes being contemplated by Military Intelligence Service were outlined, such as a plan whereby control of counterintelligence functions would be transferred from the Service Commands to certain district offices to be established by Military Intelligence Service. These district offices would either be responsible for a geographic area similar to Service Command areas, or be increased in number. At any rate, intelligence channels would be through the district offices rather than the Service Commands if the change were made. The Air offices favored this program in the hope that it would contribute to uniformity.[25]

The meeting also was told that Military Intelligence Service planned to spot CIC agents trained in Army Air Force investigations throughout the Service Commands and eventually to pass 1,500 CIC agents to the Air Corps for disposition by operating A2s. The jurisdiction of these agents would be sharply limited but a group could be retained as a unit at headquarters or assigned to various stations.

The gains to Air Corps appeared to be significant but by the end of the conference it was apparent that there existed solid agreement among the Air Forces officers to insist upon the direct assignment of CIC to the Air Forces for local employment. It was the consensus that in addition to this, there should be continued access to CIC assigned to Service Commands or the proposed district offices of Military Intelligence Service. It was also deemed necessary to enlarge the scope of jurisdiction enjoyed by Air Forces CIC agents. It was conceded, however, that this enlargement should be closely coordinated with the responsible Service Command.[26]

Baltimore Conference

At the joint conference 5 May 1943 at Baltimore, Colonel Forney assumed the chairmanship. His prefacing remarks indicated the extent of concessions to be made to the Air Corps, inasmuch as widespread importance of counterintelligence under present conditions had made obvious the need to relax strict control by Military Intelligence Service and Service Commands over the Air system. The scope of this relaxation proved to be significant and something more than had been expected by Air Force delegates.

For present purposes it was agreed that Air Force intelligence officers might call directly upon the nearest CIC unit in emergency cases, and for routine matters, request such personnel through the Director of Intelligence of the Service Command. To that end, Directors of Intelligence were ordered to inform the A2s of the location of CIC units for the contemplated emergency calls.

Military Intelligence Service agreed to assign CIC agents to overseas allotments of the Army Air Forces as well as to resident installations and to spot agents qualified for Air Corps investigations among the Service Commands. It was made clear that while this personnel should handle all Air Corps matters, it could also be used within the Service Command network when necessary. In all cases, where Air Force CIC agents were operating off the immediate installation, the local Service Command was to be furnished complete information.

A momentary conflict threatened to disrupt the harmony. It concerned the basic matters of control and supervision of CIC investigations. The Service Command Directors of Intelligence felt that no matter where CIC was assigned, those powers should remain with the Service Command, while the A2s contended that when a CIC agent was assigned to a Post Intelligence Officer at his request, that officer should retain supervision and control. The vital question was resolved in favor of the A2s with the stipulation that the Directors of Intelligence retain the power of recall and reassignment. Nevertheless, the original CIC report was to be routed to the Service Command of Intelligence with copies sent through Air Force intelligence channels.

The jurisdictional area of CIC assigned to the Army Air Forces was not clearly defined. While it was suggested that the area should be limited, what constituted a limited "local area" was left to the discretion of the Air Corps intelligence officers.

Although some problems remained, the gains made by the Air Corps at these conferences were very important. During the summer of 1943, the Counter

Intelligence Division worked in close coordination with the Military Intelligence Service in turning the conference agreements into workable directives.[27]

Era of Good Feeling

Following the conferences, an extensive period of planning began. Now that it was clear that CIC was going to be assigned to Air Force units, a survey was conducted among all installations to determine personnel on duty and needed for duty; estimates were forwarded through the Counter Intelligence Division Army Air Forces to the Military Intelligence Service.

A preliminary survey dated 14 May 1943, estimated that a total of 1,026 men would be needed by the Army Air Forces organizations by November 1943.[28] The total of CIC agents assigned or scheduled for assignment to the Army Air Forces on 22 July 1943 was something over 200, broken down to roughly 34 officers and 195 enlisted men. A revised estimate in July 1943, set the number of CIC agents needed at 344 officers and 963 enlisted men.[29] Under either estimate, however, the number of men assigned or scheduled for assignment by July 1943, was far short of stated requirements. Correspondence during the month of August reveals effort on the part of the CIC and Military Intelligence Service to train and supply the allotted personnel.

It was about this time that the Military Intelligence Service itself began serious consideration of the plan to completely separate control of counterintelligence functions from the Service Commands. Within the Air Corps there emerged, curiously enough, a degree of reluctance to accept the idea in which such a strenuous effort had been invested.[30] It was the broad consensus, however, that the die had been cast in favor of an independent setup and plans along that line were reviewed. Tentative conclusions in such a vein were made at a conference of low-level Army Air Force Counter Intelligence Division personnel and representatives of the Third Service Command.[31] The high levels were active, too, and

1180

crystalization of Air Corps thinking appeared in a memorandum distributed in late November 1943 over the signature of the Chief of the Air Staff.[32]

The terms of the memorandum placed all CIC attached to Air Force units under the general supervision of the Chief, CIC, Army Air Forces. Immediate supervision was to be the responsibility of local A2s. The Chief placed personnel on duty with subordinate commands as needed and available, and maintained a reserve pool at Headquarters, Army Air Forces, to meet unusual conditions in the field and to temporarily replace personnel undergoing training.

The investigative jurisdiction of these agents was clearly defined in an effort to prevent overlap with the work of Service Command detachments. The jurisdiction outlined included: Army Air Force personnel stationed on the air-bases of a given command; all other personnel for whom the operating A2 was responsible; investigation of incidents on the bases of the command; development of leads as requested by intelligence officers and A2s. Under no circumstances would Army Air Force CIC exceed the limits of Military Intelligence Service jurisdiction. Investigations conducted off of Air Force bases were to be carefully coordinated with the Service Command involved and requests from A2s were to be channel through CIC detachment commanders.

Even prior to this proposed and apparently imminent transfer of control to the Army Air Force, training schools were established by Air to acquaint CIC agents with the special problems of Army Air Force investigations. In instances where a special school was not deemed necessary, agents were put through technical schools on an accelerated basis to acquire a background in specialized fields.[33] It was planned to continue this program for CIC attached to the Army Air Forces.

An Air Service course was conducted at the Pennsylvania State School of Aeronautics, Middletown Air Service Command, Middletown, Pennsylvania, and at Chanute Field, Illinois. These courses featured a problem wherein agents were confronted with a wrecked plane bearing several traces of sabotage. An Aircraft Mechanics course was conducted at Hill Field, Ogden, Utah, where agents without prior mechanical training were detailed for instruction.[34]

"Operation Big Switch"

In mid-December 1943, a War Department Circular placed responsibility for investigation of personnel and incidents involving Army Air Force personnel and materiel on the Commanding General, Army Air Forces.[35] This was accomplished by a provision that all counterintelligence matters be confined to Air command channels. Pursuant to this regulation the Military Intelligence Service delegated its investigative jurisdiction under the Delimitations Agreement in a like fashion.[36] To execute this function, control of certain CIC elements was given to the Army Air Force in a letter dated 29 December 1943, and revised in a letter dated 24 May 1944.[37]

In addition to the elements granted by attachment to the Army Air Force by the two last mentioned letters, a War Department directive in March of 1944[38] assigned directly to the Army Air Force all CIC agents on duty with those commands as of that date. Such personnel were to be organized under TO&E 30-500, dated 24 January 1944. The establishment of policies and the broad supervision of CIC activities was retained by G2, War Department General Staff.[39]

The Adjutant General's letter of 24 May made it clear that the Air Force was to maintain self-sufficient counterintelligence networks. The letter made CIC agents assigned to the Army Air Force specifically responsible for investigating the following cases:

1. Sabotage, espionage, subversion and disaffection cases pertaining to Army Air Force personnel, materiel, and installations.

2. Checks on loyalty of Army Air Force military personnel.

37 Ltr, dtd 14 Mar 44, to CGs, AAF, subj: CI Investigative Activities, (Restricted) (OSI Files, Wash DC).

38 Ibid

39 It appears that this direct assignment can be traced to the recommendation of the Inspector General, in a report dtd 6 Nov 43 directed to the Deputy Chief of Staff, that the Counter Intelligence Corps be decentralized and the duties of the Chief, CIC be given through Military Intelligence Service to the appropriate subordinate commander. Appendix to the Hist of CIC, tab C, (Conf) (S&F Lib).

3. Security surveys and investigations pertaining to Army Air Force materiel and installations.

4. Violations of the security of military information within the Army Air Force.

5. Investigation of undeveloped leads in the above cases extending outside of the Army Air Force channels, but only with coordination through the Service Command involved, and strict observation of the Military Intelligence Service jurisdiction under terms of the Delimitations Agreement.

The letter further instructed Army Air Force commands to furnish the local Service Commands appropriate reports of investigation and to establish liaison with the Federal Bureau of Investigation and Office of Naval Intelligence.

Pursuant to this authority, all CIC personnel were transferred to Headquarters Squadron, Army Air Forces, Bolling Field, Washington, D.C. It was at this point that the planning stage ended and the execution of an integrated Air Forces intelligence service began. Agents were to be divided into such detachments or teams as were deemed practical for efficient field operation.

In this organizational period, the Air Corps seemed to recognize the difficulties which had harassed and hampered and continued to hinder CIC operations with both tactical and nontactical units[40] whose commanders were uninformed as to the real nature of the CIC mission and the proper use of CIC personnel. Misuse was as old as the Corps (nor would it be terminated with World War II).

It was provided that no CIC personnel, either officer or enlisted man, would be assigned or detailed to fatigue or administrative duties except as required in the operation of the detachments. Conversely it also made clear that regardless of seniority status, officers within the counterintelligence structure would exercise jurisdiction only over their respective detachments of teams and would have no command authority over non-CIC sections of squadrons.

Authority for activation of CIC under the Army Air Force was granted 21 June 1944. This provided for 12 detachments.[41] Total strengths were for 231 officers and 592 enlisted men. Official activation was effective 24 June 1944 under TO&E 30-500 and the 12 detachments were placed on duty with the major

commands of the Army Air Force.[42] Those commands further attached sub-detachments to the principal base within their areas or to other important installations. By July 1944, more than 235 installations of the Army Air Force had CIC personnel on duty, providing counterintelligence coverage.

Within the next month the Air Forces set up a procurement program within the Corps structure to meet existing and future needs.[43] By this time, the training schools operated by the Chief of CIC had been closed and all necessary training for Air CIC apparently would be done by Air Forces. Procurement standards were commensurate with those demanded by the War Department for CIC personnel within the whole Army structure.

During the same month the Commanding General, Army Air Force was granted authority to issue badges and credentials to Army Air Force CIC. These he obtained by requisition to the Commanding General, Army Service Forces.[44] Here too, standards were identical with those set up for other Army branches.

Once in operation, it was the policy of Army Air Force CIC to investigate all counterintelligence matters pertaining to Army Air Force personnel and materiel, and to cover appropriate undeveloped leads pertaining to those investigations. Even so, Army Air Force CIC was not divorced from the Service Commands, for in many instances it was more convenient and expedient to utilize Service Command facilities. Service Command assistance was appreciated, and cooperation was termed excellent.[45]

Administration of Complaint Investigations

Once a verified complaint concerning personnel within the jurisdiction of the Army Air Force CIC was ascertained, it was forwarded to the Operating Intelligence Echelon. This system, previously mentioned, was, in short, a system whereby one office within a command area was given responsibility for control of investigations and establishment of liaison. If the initiating office had been

delegated authority to develop leads, the report to Operating Intelligence Echelon merely served as notice that an investigation was being undertaken. If such authority had not been delegated, the Operating Intelligence Echelon dispatched appropriate "lead sheets" and acted as the control point of the investigation. In all instances, necessary liaison with the Service Command, the Office of Naval Intelligence, or the FBI for the development of leads was handled through the Operating Intelligence Echelon. When the investigation was concluded, a summary was prepared by the Operation Intelligence Echelon, with copies going to the appropriate action agency, to Headquarters, Army Air Forces, and to the local Service Command for permanent record. Records checks were accomplished through the Operating Intelligence Echelon liaison channels and it is noteworthy that through these same channels, undeveloped leads pertaining to Army Service Forces or Ground Forces personnel were disseminated for action by Army Air Forces CIC.[46]

Incident Investigations

The principal responsibility of CIC with the Air Forces was dealing with the investigation of incidents involving aircraft or aircraft materiel in which there was an indication or possibility of sabotage. This possibility was present in every incident, since it was considered that all incidents were the result either of design or of negligence; if the former, investigation was to determine the guilty party; if as a result of negligence, investigation was to determine whether that negligence was intentional or unintentional, and the identity of the person ultimately responsible.

It most often happened that investigation would result in a finding that no sabotage was involved, with consequent elimination of counterintelligence jurisdiction. However, since this jurisdiction was present until the establishment of such a finding, the investigations were continued as a regular part of CIC activity.

Reports of such investigation, though they did not reveal sabotage, were valuable for preventing future accidents and consequent losses. Ultimately these CIC investigations contributed to publication of revised technical manuals, modification of aircraft design, correction of deficient production methods, and the institution of important safety programs. It was reported that CIC deserved a large part of the credit for reducing aircraft accidents more than 30 percent in one six-month period.[47]

46 Item #55, Air Forces Conf, 21 Jul 44, subj: Problems and Policies Relating to Investigations, p 4, (Conf) (OSI Files, Wash DC).

47 Ibid, pp 4-6

The Finished Product

By December of 1944, the CIC structure of the Army Air Forces had assumed, for the most part, the organizational pattern and consistency that was to continue until the separation of the Army Air Forces from the Army in 1947. That structure is detailed here, not only because of its long period of evolution, but because it may serve as a framework for other Army branches which attain such stature that a separate counterintelligence service appears warranted.

As stated, for purposes of administration, all CIC personnel were assigned to "K" Squadron, 2d Army Air Force Base Unit, Headquarters Squadron, Bolling Field, Washington, D.C. The total authorized strength was 231 officers and 592 enlisted men. The squadron was divided into 12 detachments assigned as follows:

601st CIC Det (AAF)	1st Air Force
602d CIC Det (AAF)	2d Air Force
603d CIC Det (AAF)	3d Air Force
604th CIC Det (AAF)	4th Air Force
700th CIC Det (AAF)	Headquarters, AAF
701st CIC Det (AAF)	Troop Carrier Command
702d CIC Det (AAF)	AAF Proving Ground Command
703d CIC Det (AAF)	20th Air Force
704th CIC Det (AAF)	AAF Personnel Distribution Command
705th CIC Det (AAF)	Air Technical Service Command
706th CIC Det (AAF)	Air Transport Command
707th CIC Det (AAF)	AAF Training Command

A list of Air Force installations and bases where CIC personnel were stationed within this framework may be found in Appendix 1.

It should be understood that this initial setup was modified as expedience demanded; changes will be covered in this text as they occurred. It is natural

1186

that expansion of Air Force activities into foreign theaters would call for an enlargement of counterintelligence operations; such needs were met through additions to this framework.

When the War Department rescinded TM 30-215, an Air Forces letter[48] replaced the old system, with certain modifications. This new manual was tailored to Air Forces purposes.[49] It is summarized here.

The broad mission of Army Air Force CIC was to provide assistance to Air Force commanders in discharging their counterintelligence responsibilities.

The jurisdiction of CIC was limited to the area of jurisdiction of the command with which it was serving, that area in turn being determined by War Department directives.

Duties in the Zone of the Interior included: investigation of military and civilian personnel within Army Air Force jurisdiction suspected of disaffection, subversive activity, espionage, sabotage, treason and sedition, incidents or activities in which security violations were apparent or suspected, the conduct of surveys to determine the security of installations and to prevent the leakage of information. CIC was expected to maintain security with regard to Army Air Force materiel and troop movements and to orient troops on the importance of military security. Of primary importance was the duty of investigating incidents involving aircraft or aircraft materiel to determine the presence or absence of sabotage.

CIC was expressly prohibited from performing the following duties: combat intelligence missions; prisoner of war interrogation; black market investigations; criminal investigations; investigations of cases involving moral turpitude; kitchen police; fatigue or general guard duty.

Since the communication was designed to replace TM 30-215, it was necessarily comprehensive and in the final analysis worked well as a substitute for the old manual.

Chapter 2

OPERATIONS

In the pursuance of historical research, the availability of operational reports for CIC detachments with the Air Corps leaves much to be desired. Many files went to the Air Force in the separation of that service from the Army in 1947; records which have been located by this project are limited, at best. The cases which follow are considered to be a cross section of Air Corps CIC work; for with the exception of cases inherent or unique to a location, a screening of available material reveals few differences in the nature of missions accomplished, whether the installation was in California or Casablanca.

It is true that some unusual operational problems arose; they are treated in the text as they became important and affected a given case. It will be noted, too, that the number of cases in any category varied with the detachments, but in most instances, Air Corps CIC found itself principally occupied with aircraft accident investigations.

Brazilian Project

When the United States entered the war, Brazil, like most South American countries, remained neutral, at least in early 1942. In spite of this status, there was little question as to the sympathies of the Brazilian Republic. As evidence of western hemisphere affinity, President Getulio Vargas allowed the United States to establish airbases within Brazil and employed the Brazilian Navy in patrol operations along the South American coastline.

Personnel of the Air Transport Command were present in Brazil in some strength by May 1942, manning major ferrying stations at Belem and Natal. At this time, Brazil's neutrality, though conceded to be partial to the Allied cause, began to raise some difficulties. Axis citizens, agents, and consuls had the right of unrestricted travel within the country; many had resided there for long periods and had become firmly entrenched members of the business and social community. The presence of these persons generated the constant possibility of espionage and sabotage. Increasingly it was felt by U.S. authorities that some positive steps should be taken to establish all the military security measures possible under the circumstances.

In mid-May 1942, Special Agents Jose M. Bensuade and Anthony R. Mattos were temporarily released from the Counter Intelligence Corps by orders of the Chief, CIC, and assigned to the United States Ferrying Command for a period of six months. Linguistic abilities and some knowledge of the country made possible an undercover assignment at Belem, Brazil; original instructions contemplated a three-week stay there with American troops for purposes of familiarization.

[redacted]

An undercover assignment in civilian clothes was to follow at other locations; this phase was not carried out, however, and the agents remained at Belem for the entire six-month period.

Adverse conditions militated against accomplishment of a creditable intelligence job. The installation commander was informed of the mission contemplated for the agents and was directed to protect their cover as members of the military police unit of the base. It was thought that this would enable them to wander about the town on patrols and to otherwise permit movement without arousing suspicion. Because of the linguistic abilities of the men, however, their services soon were in demand by many officers on post, and these demands, along with military police duties, continued for the total period of the agents' assignments. Every effort was made by the agents to obtain more time for imperative counterintelligence work, but they were unsuccessful.

The report of the agents makes clear the fact that their true purpose in the area was not appreciated. In addition to military police duties which lasted from 1800 to 2400 hours every day, the agents were ordered to give daily instructions in the Portugese language to American soldiers at the installation; translate and dispatch official correspondence for the commanding officer; act as interpreter for the commanding officer, adjutant, and medical officer; dicker with merchants with regard to credit and payment of bills; act as shoppers for the supply and mess departments; perform special shopping tasks for officers on the base.

The duties as shoppers for officers on the base apparently were not authorized and worked a special hardship on the agents; if more important assignments interferred with these odious "duties," adminishments followed. Even so, the men accomplished something of their mission.

The agents were ordered to submit summary reports of intelligence activity after they had been in the area for about one month. To facilitate such reporting they hired a hotel room off base which was furnished for use as an operational office. From here they circulated about the area in off duty hours and endeavored to become acquainted with the residents of the area, and to pick up whatever information was available.

Their first report set a pattern for those to follow for the next six months. In that report, they described the principal social centers and hotels in the area and gave a short run-down on persons who appeared particularly prominent. Security-wise they noted much loose talk by American and indigenous personnel in the area regarding Air Corps operations. Their collection reports described in some detail the disposition and strength of Brazilian military units in the area. While functioning as interpreters on trips with the Air Transport Command they had been able to examine at first hand Brazilian military installations and the

[redacted]

The set-up of local public utilities and transportation systems was covered. They also compiled a list of suspect personalities.

Several citizens appeared to associate frequently with American troops and apparently were quite uninhibited about inquiries concerning air facilities in the area. Although no definite conclusion as to the loyalty of these persons was offered, the agents added that careful investigation was desirable in most instances.

Subsequent reports included investigations of such individuals, as detailed and as complete as the limited time and facilities of the agents would allow.

To insure security at the American installations, the agents in coordination with the commanding officer drafted lengthy information tracts for transient officers and enlisted men. These information handouts gave certain rules to be followed by personnel when on pass from the base and cautioned against the dangers of loose talk.

The general nature of the agents' assignments required the gathering of considerable positive intelligence. The most significant accomplishment in this field took place after an anti-Axis rally, just prior to the time Brazil actually entered the war. The rally degenerated into a riot in which many Axis-owned businesses and buildings were destroyed and eight Japanese killed.

The riot ended in the late afternoon.[50]

The agents interpreted in their reports as best they could, the Brazilian political picture and gathered necessary information through the contacts they had developed in the area. The Vargas regime exercised strong control and

[50] "Assignment Brazil" File #220.3, dtd 5 Nov 42, (Conf) (S&F Lib).

once Brazil was involved in the war, attempted to institute a system for handling enemy aliens in the country. All anti-Vargas elements combined themselves in the Integralista movement. Although this group was ostensibly loyal to the United Nations, it was felt that its members constituted a threat to Brazilian security, especially should cooperation with the Axis lead to the ousting of Vargas. The reports disclosed many instances of interference with the war effort by the Integralistas.

Eventually, the cover of the agents became a farce. Their informant contacts in the city as well as the Brazilian police and American military personnel guessed or became suspicious of their mission in the area. In October 1942, the agents were relieved of the Brazilian assignment and reported back to Washington.[51]

608th CIC Det (AAF)

In August 1942, a detachment designated the 608th was organized for duty with the Eighth Air Force. The unit was composed of five officers and 17 enlisted men and was placed under the supervision of the A2, 8th Air Force with operational and administrative control vested in the detachment commander. Operational records of the unit are scanty, but reflect activities similar to those of other detachments during this same period of time.

According to a January 1945 report, CIC agents discovered that large quantities of serviceable Army equipment were being discarded at a salvage dump, Great Staughton, Hunts, England; when this was reported, corrective action was promised. A spot check about two months later, revealed that the condition had not been corrected. At that time agents recovered several secret, confidential, and restricted documents from the area, along with considerable serviceable clothing. A report recommending disciplinary action was submitted. Meanwhile a police guard was instituted at the dump as a temporary measure and articles were recovered from many civilians who had innocently appropriated them.[52]

A possible security leak was turned over to the CIC by the Earl of Cranbrook, Cambridge, England. The Earl picked up a hitchhiker, who volunteered information on a new secret weapon and the date when Allied forces were to undertake operations on the Continent. A lengthy investigation ensued. The hitchhiker, an Air Force private, was reprimanded after it was determined that disciplinary action would be futile, since the man was of such low mentality that he could not have disclosed intelligible information that would have been of value to the enemy.[53]

609th CIC Detachment

The 609th first came into being as the CIC Detachment, Headquarters Ninth Air Force. Fourteen agents reported in January 1944. At that time the Ninth Air Force was stationed in England and teams of agents were distributed to provide counterintelligence coverage for all units. Just prior to the Normandy landings, the detachment was reorganized as the 39th CIC Detachment and provision was made for agents to proceed with Ninth Air Force units to advance bases on the Continent. In August 1944 the formal designation as 609th CIC Detachment came through. The unit by that time was operating largely on the Continent with the Ninth Air Force. By September, the entire unit was on duty on the Continent and the agents were providing coverage in Paris and at Chantilly, Beauvais, Laon, Reims, St. Quentin, Nancy, Cambrai and St. Dizier in France, and at Charleroi, St. Trond, Liege and Vierviers in Belgium, at Mastrich, Holland, and Luxembourg City, Luxembourg. The work of the unit was apparently outstanding, for 75 percent of the men received individual commendations from and through Ninth Air Force, while five enlisted men were given direct commissions in recognition of their work with the detachment. First Continental headquarters of the unit was located at Chantilly, France, but later was moved to Wiesbaden, Germany, as operations progressed. The commanding officer of the detachment was Maj Leon L. Lamet.[54]

Because of the proximity of detachment teams to tactical units, the 609th had many cases involving collaborationists. Certain psychological difficulties which faced the detachment in dealing with these instances were cogently set out in a detachment report:[55]

"A reliable informant made the statement that when German occupational troops arrived after the fall of France, many French people accepted them socially. The Germans condoned and fostered a 'black market' in food and clothing and the German soldier, supplied with little food and much money, made good business for farmers and merchants. Associations were condoned between French girls and German soldiers and often children were born as a result of these associations. If the offspring were male, guarantees of assistance were given the mother by German authorities. The few Frenchmen who resisted the overtures of the Germans found comfort in the belief that one day the Americans and British would surely come. At last the Americans arrived and those who consorted with the enemy would now meet retribution. But instead, the Americans began to associate with the offenders. The contractors who had fared so well under German occupation were now employed by the Americans. It is true the

54 Unit Hist, 609th CIC Det, undated, unsigned, (Uncl) from folder, AF-Europe, (S&F Lib).

55 CI Report for period 26 Sep to 10 Oct 44, 609th CIC Det, Hq, Ninth AF, dtd 28 Nov 44, /s/ Maj Leon Lamet, (Conf) (S&F Lib).

contractors who had been allowed by the Germans to survive were the only ones with proper equipment to do the work. Also, it is true that those who had collaborated with the enemy were in much better condition to entertain the Americans. All of which is disconcerting to those people who managed to keep their hands clean. It is believed that the Americans should exercise a much higher degree of care in accepting contractual and social obligations."

A typical case in point involved Nourhan Fringhian, who was brought to the attention of CIC through a developed informant. Fringhian, an Iranian subject of American origin had operated four factories producing consumer goods. He continued operation of the factories after occupation and employed 9,000 men in meeting the needs of the German Army. Because of overcharges and a breach of exchange regulations, Fringhian was arrested by the Germans and heavily fined and imprisoned. He was released after a short period, however, when he gave assurance of devotion to the German cause, and renounced his Iranian nationality. He was arrested when Allied forces moved into Paris, but after two weeks was released on the recommendation of high French officials. CIC felt that Fringhian's wealth and position had brought him undue consideration and recommended study of the case by the Bureau Securite Militaire, Paris.[56]

Several collaborators were able to obtain employment with American units and thereby delay identification and denunciation. This made persons who were aware of their true colors reluctant to come forward with derogatory statements. One such case was that of Lucien Noo, a Belgian national who had collaborated with the Gestapo during the occupation. Noo was employed by a military police company and when appearing outside the billet, where he acted as a fireman, would wear an American uniform. Only through liaison contact with Luxembourg police did the 609th learn of Noo's record.[57]

In other instances, the detachment was faced with the common problem of whom to believe. At St. Simon, France, it was found that almost without exception, the merchants had dealt commercially with the Germans; cross-denunciations by various shopkeepers put agents in a dilemma that could be solved only through investigation of all parties involved.[58]

The task of detecting collaborators was simplified in many sectors, especially with regard to female offenders. Soon after Allied forces entered the area, French patriots at St. Remy-les-Chevreuse had either cut or shaved the hair from all

56 CI Report for period 26 Sep to 10 Oct 44, 609th CIC Det, Hq, Ninth AF, dtd 28 Nov 44, /s/ Maj Leon Lamet, (Conf) (S&F Lib).

58 Ibid, p 3

women who had consorted with Germans during the occupation. It may or may not be significant that districts wherein these women resided were declared off limits to Allied personnel.[59]

Copious amounts of propaganda material were left behind in some sectors by the Germans, when it was found that many of our troops were collecting it as souvenirs. CIC [illegible] found [illegible] that [illegible] was anti-British and anti-[illegible] literature, along with picture cards warning civilians what indignities they and their daughters might expect from American troops. Wherever possible, the material was collected and burned, but the extent of circulation and effect of the leaflets and cards could not be determined.[60]

Responsibility for the detection of persons aiding German soldiers who remained in the area also fell upon the 609th. The task would have been simplified if a list of collaborationists had been available. In at least one town, Mons et Chause, French Forces of the Interior officials were unable to designate even one person as completely reliable and innocent of collaborationist activities. Even the Allied-appointed Mayor was highly suspect.

In that town CIC found an elderly Polish couple who freely admitted to having aided the escape of German soldiers of Polish decent. The excuse offered was sympathy for the plight of the soldiers who claimed they had only served under pressure and threats against their families. In such a situation, the course chosen by CIC was continual surveillance of as many suspects as possible, with a careful patrol supervised by CIC to enforce restriction of movement and curfew.[61]

Relationships which German soldiers had fostered during the occupation period also made detection of deserters and stay-behinds difficult. In the case of Richard Barber, a noncommissioned officer in the German Wehrmacht, informants lead to his arrest in the apartment of his mistress where he had been concealed in civilian clothes for almost a month. Interrogation revealed Barber to be a German deserter and he further revealed that men in Forces of the Interior and influential citizens were aiding such deserters. He gave the names and locations of six other German soldiers, who were apprehended. He named French participants in a black market ring in which he was a member, gave details on an escape route used by German personnel into Spain, and named a number of couriers and letter carriers who had worked for the Germans.[62]

60 Ibid, p 3

61 Ibid, p 3

62 Monthly Info Rpt, 609th CIC Det, dtd 4 Apr 45, /s/ Leon Lamet, Maj, AC, (Conf) (S&F Lib).

Well-intended but costly misunderstandings caused extensive damage to communications lines in France. A line between an airfield and an Air Group headquarters was severed on four consecutive nights, each time in at least 12 places. Surveillance and investigations disclosed that French Forces of the Interior personnel had cut the line, thinking it was a German operational line and that they were aiding the Allied cause. A few days later, approximately 1,800 yards of wire were removed from an important line between a tactical airstrip and the headquarters of an air unit at [illegible]. The offender turned out to be a [illegible] captain who had been told by local Frenchmen that the wire was not in use; he had appropriated it for use by his own unit.[63]

Although these investigations were predicated on an assumption of sabotage, a case handled by the detachment in April 1945 had more of the conventional aspects of a standardized sabotage case. Forty power units had been received by the Signal Company stationed at an Air Corps installation and examination of the units revealed damage to cables which rendered them useless. The cable had been severed in some instances by a sharp instrument; in other cases they appeared to have been cut and torn by pliers: one cable had a six-inch piece cut from it. Agents from the 609th photographed all the damaged wires and interrogated personnel who had uncrated the mechanisms. Since the damage appeared to have been accomplished before the units were sent from the United States, the case was referred to the Zone of the Interior.[64]

In November 1944, the 609th was instructed to investigate the possibility of sabotage when the Marne River overflowed and flooded a tactical airstrip. The order was flattering but fruitless. The river had first flooded a bivouac area and Air Group headquarters at the airstrip; in an effort to clear one area, a dam had been cut which made the situation worse and put the entire area under four feet of water. In a report three weeks after the incident, the closing comment reveals that the area was still under water. Group abandoned the air strip.[65]

702d CIC Detachment (AAF)

[redacted] came to the attention of CIC at a base of the Air Proving Ground, in September 1946. As a officer, [redacted] had made arrangements for a speaker from the [redacted] to appear at the base.

The case was noteworthy, not only because of the personality involved, but as well, for the investigative techniques which it utilized.

was interviewed. She stated that members of her squadron had expressed an interest in Soviet foreign policy. She had been advised by letter would be pleased to deliver the lecture she desired. At the same time, the forwarded numerous propaganda leaflets which admitted she had acknowledged by letter and had promised to distribute among members of her squadron. The interview was not particularly productive, but did open several leads.

It was determined that the Steps were taken by mid-October to tactfully refuse the offer of the speaker. In the interim an extensive file and agency check was undertaken and considerable information collected.

It was found that had been active prior to entering the WAC in a and was referred to as the It was found that the union was Communist-dominated and that its leading officers were confirmed members of the party. Of more interest was the close friendship of with these officials and her continued correspondence with them. Although no record of Party activities was discovered, additional contacts with card carrying Communists were brought to light in examining references furnished by at various times and listed in her 201 file. had been a collector for Russian War Relief during 1942.

A reinterview with on 18 October was unproductive except for the information that she intended seeking a position with the State Department after separation from the service.

Interviews with associates of revealed defense by her of the policy and activities of the Communist Party. At least one associate considered her to be a Communist.

Mail intercepts were imposed for a two-month period and a good deal of pertinent information was collected. In one letter from a confessed Communist, was accused of deviating from the Party line and embracing a Fascist philosophy by continuing her stay in the WAC. In mentioning the letter when writing another friend, mentioned that she had not changed her views, but felt "the same, fundamentally, about labor and such." She gave economic gain as her only reason for staying in the service.

During a furlough at her home in New York City, was under constant surveillance and an undercover agent managed to date her on several occasions. No positive information was gathered and results of the undercover portion and surveillance were inconclusive.

Results of the investigation were not a basis for discharge of but she was removed to nonsensitive duties on her return from furlough. A continued mail intercept was placed on along with periodic surveillance until she was discharged from the service in June 1948.[66]

602d CIC Detachment

The 602d was attached to the 2d Air Force and covered installations in the south-central and southwestern section of the United States. Headquarters for the detachment was maintained at Colorado Springs, Colorado. A rather unique orientation program for new agents involved a quick trip through the circuit of field offices within the command.

Since the 2d Air Force was largely operational, the major portion of case load consisted of aircraft accident investigations. An agent with the detachment from 1943 to 1945 reported many instances in which pilot error was found to be the cause of crashes.[67] In one instance, a C-47 crashed on take-off because of inattention by the pilot to the routine safety practices involved in a pre-flight cockpit check. In another case, a crash, which caused the death of three men, was due to disregard by the pilot of instruction to use instruments for a take-off. The pilot reportedly believed the light to be sufficient to use visual procedures and chose his own course. In yet another crash, a $650,000 B-29 was sent to the scrap heap when the pilot attempted to take off without the proper pre-flight running-up of engines.

In 1944, an agent was sent by Headquarters to Topeka Army Air Base, Kansas, to investigate a case of suspected subversive activity. An American-born soldier of German parentage, assigned to a service unit on that base, was suspected of distributing Nazi literature. A barracks check and surveillance revealed the man also to be involved in a bootleg liquor ring in the "dry" state and disclosed attempts by him to organize a branch of the German Bund.[68]

While evidence of these charges was being collected, it also developed that the soldier had intentionally injured himself to avoid being shipped overseas. It

66 Summary Rpt, Title:

67 Interview with J. Francis Ford, Munsey Bldg, Balto, Md, 17 Aug 1955.
68 Ibid

appeared that he had friends in the Personnel Office who informed him when his shipment was imminent. He would then hire a hotel room and repeatedly flex his knee, which had been injured before he came into the service. When in consequence it had swelled sufficiently, he would report to the infirmary and be taken off the shipping list. The ruse had been used successfully in at least two instances.

The man's footlocker was eventually inspected and disclosed considerable Nazi literature. After his arrest by military police and interrogation by CIC, he confessed to all charges. The case then took a wry turn.

All evidence, along with the sworn confession, was turned over to the Base Legal Officer. The CIC investigator, J. Francis Ford, remained for the Court Martial and subsequently reported that "an unbelievable chain of errors on the part of the prosecuting officer allowed his complete acquittal."[69]

In an equally bizarre case, Ford was sent to Pyote Army Air Base upon receipt of reports to 2d Air Force that an Air Corps owned dairy was turning out bad milk.[70] Ford found, first of all, that the dairy was not government owned but was the business of an Air Force officer who served as Provost Marshal at the Pyote installation. In addition to his dairy, the officer also owned the only pasteurizing equipment in the area and was using Air Corps enlisted men to run this business during and after duty hours! The agent also found the officer to be involved in local politics and it was further established by affidavits that he was attempting to control the vote of civilian employees on the base by threatening their jobs. Ford submitted his findings to the commanding officer of the base who commented that he would handle the matter administratively.

Ford later heard that the dairy had been closed by Texas authorities, but that the officer remained on duty despite recommendations from Headquarters, 2d Air Force. To Ford's knowledge, he remained as Provost Marshal until an investigation by the Inspector General's Office resulted in an order for his removal.

702d CIC Detachment (AAF)

Original plans attached the 702d CIC Detachment to the Air Proving Command but the detachment was not required by that branch after July 1945. The designation then was transferred to the Commanding General, US Forces, European Theater, for organization of a unit to take over personnel and equipment of the 609th CIC Detachment. The 609th had been serving with the Ninth Air Force but was to be deactivated. The 702d became functional again in August 1945 and the

69 Interview with J. Francis Ford, Munsey Bldg, Balto, Md, 17 Aug 55.
70 Ibid.

CONFIDENTIAL

following year was confirmed without a change in command as the 702d CIC Detachment.

As the occupation of Europe began, the 702d became attached to Headquarters, US Air Forces in Europe. With this, the highly technical activities which had characterized operations while the unit was attached to the Proving Ground Command were replaced by the more routine duties which all detachments faced on occupational status. The detachment worked in close coordination with Military Government and the Military Police, but continued to meet special Air needs when the occasion arose.

During June 1947, agents of the 702d apprehended Heinrich Susser, at Schondorf, Germany, identifying him as a former member of the German Criminal Secret Police. He had been stationed at Kilinskiege No. 152 (Concentration Camp) in Lodz, Poland. The investigating agent contacted inmates at the Jewish Displaced Persons Camp at Lansberg, Germany, in an attempt at positive identification. Eleven people identified Susser and named him as responsible for beating and torturing inmates of the camp. Susser was surrendered to the War Crimes Group at Dachau, Germany, for further disposition.[71]

Close liaison with displaced persons camps and other intelligence agencies also led to the arrest of Sylvester Weiss. Weiss was picked up by Military Police, and turned over to the 702d when his connection with the Schutz Staffeln came to light. Interrogation revealed that Weiss had been a block leader at Concentration Camp Diehenfurth in charge of more than 200 inmates. He admitted to brutal mistreatment and torture of his charges and was handed over to the 970th CIC Detachment for interrogation and disposition.[72]

The informant system maintained by the detachment led to the discovery of three persons who claimed to be CIC agents attached to the 702d. All were German civilians but had authentic-appearing forged papers which had been successfully used in lieu of identification cards to obtain the benefits of U.S. facilities and services. The impersonators were referred to the Office of Military Government at Schwabach, Germany, for prosecution.[73]

The informant net was also responsible for the recovery of more than $50,000 worth of technical equipment stolen by a German civilian. Leo Altmann had removed short-wave sending and receiving sets, radio and radar devices and

other technical instruments from the Flugforschungsinstitut (Flight Research Institute), Oberpfaffenhofen, Germany, to Herrsching and Friesing, Germany, where he intended to continue unauthorized research. The research value of the equipment far exceeded its monetary worth, for the Flugforschungsinstitut was formerly a part of the Dornier Works, which at that time were being occupied by units of the Air Force and Technical Intelligence Division. Altmann was surrendered to Military Government, Starnberg, Germany for prosecution and disposition.[74]

A suspected sabotage case which aroused considerable interest was handled by the 702d in January 1947. The detachment received word that the only remaining communication line between the Kissingen Air Base and the Kissengen base radio station at Schonberg Castle had been cut. An agent was dispatched to examine the line and found that 10 poles had been sawed down and removed. Lourance Geisler, a German farmer, was observed to be cutting and rolling the wire which had been a part of the communication line. He was taken to the field office for interrogation. Geisler denied any plans to commit sabotage and explained that he had assumed the line to be part of the old German system and that he needed the wire to fence his vineyard. His story apparently was proved true, for Geisler was freed after a fine and reprimand from Military Government.[75]

A case more closely allied with the imagined pattern of Air Force CIC investigations was handled by the 702d in May 1947. While a P-51 type aircraft had been receiving a final check prior to shipment, a bullet hole was detected in the fuselage. Examination revealed a .30 caliber slug imbedded in the wall of a self-sealing gas tank, and an investigation of the possible sabotage incident was opened.

From the position in which the plane had been parked, the location of the guard post, and the angle from which the projectile had entered the fuselage, agents felt that the bullet had been fired by one of the hired Polish civilian guards at Industriehafen Aircraft Storage Field. Five men who had served on the guard post involved at the time the incident occurred were questioned, but all denied firing the shot. Suspicion was strong enough, however, to decide the investigating agent to fire all of the weapons of the suspect guards and forward the projectiles to Erding Air Depot Analytical Laboratory for comparison with the slug recovered from the gas tank. The laboratory report established that the projectile found in the tank matched that fired from the carbine used by Guard Wlanyslaw

Szopinski. Szopinski refused to admit guilt and the intent to commit sabotage could not be established. He was discharged from his position at the airfield and steps were taken to return him to Poland.[76]

[redacted]

The 700th CIC Detachment stationed with Air Force Headquarters, Bolling Field, Washington, D.C., investigated in great detail possible sabotage to an engine on the special plane normally used by President F. D. Roosevelt. The incident is cited largely because it demonstrates the thoroughness that characterized CIC aircraft incident investigations.

The plane was used to fly the President to Russia in 1945 and prior to the return trip had been test-flown at Saki, Crimean Peninsula, Russia. Malfunction of the number two engine was noted during the test flight. The engine was removed from the plane prior to the return to the United States and shipped back to this country. It was subjected to thorough disassembly inspection at the factory and found to have a faulty connecting rod. Laboratory tests of the rod eventually disclosed metal fatigue as the causative factor; no sabotage having been involved. The investigation was closed only after the parts inspector and all assembly workmen had been given background checks and cleared.[77]

During October 1946, a routine inspection disclosed that 14 life rafts in an aircraft at McDill Field, Washington, D.C., had been slashed and the morphine syrettes pilfered from accessory kits in the rafts. Routine inspection reports revealed that the damage had been accomplished within one month prior to discovery. A shakedown inspection of a barracks and attempts to lift fingerprints from the rafts proved futile, as did the use of entrapment powder to ensnare future culprits. A two-week surveillance of parked aircraft also failed to develop any leads.

Assuming another task, CIC agents tried to associate crew members having ready access to the rafts with persons known by medical authorities to suffer from migraine headaches or other periodic acute pain. They also questioned all crew chiefs on the base as to the character and general behavior of crew members. These efforts, too, proved abortive.

As a stopgap measure, all morphine syrettes were removed from the rafts and a roving patrol was conducted on parked aircraft. It could not be determined

76. Monthly Info Rpt, 702d CIC Det, dtd 31 May 47, pp 2-3, from Lt Col C. D. Wright, (Conf) (S&F Lib).

77 Monthly Info Rpt, 700th CIC Det (AAF), dtd 2 Apr 45, pp 2-3, from Lt Col Asa W. Candler, (Secret) (S&F Lib).

whether the same instrument had been used in all cases, for there were no microscopic marks which would permit identification of the tool used.

About one month later, the informant [illegible] gave the first break in the case. Certain flight line personnel were reported to have had the drug in their possession about the time of the thefts. A check with the Flight Surgeon disclosed that the suspected men had the physical characteristics distinctive to drug users. After interrogation, two enlisted men were charged, tried, and found guilty.[78]

With regard to incident cases, the attitude taken by the 705th was typical of that assumed by all Air Force detachments. Jurisdiction was acquired in such cases by the presumption that sabotage was involved where an occurence was unexplained. In these cases, CIC completed investigations even though sabotage was disproved before the case was closed. The purpose of this was to assure remedial efforts and make certain that corrective administration action was taken. At any rate, it was felt that such investigations increased the overall efficiency of the Air Forces and the deviation from the actual mission of CIC was countenanced on the basis that the efforts were aiding the prosecution of the war.[79]

In a few isolated instances, commanding officers preferred to work on the theory that an incident did not involve sabotage until there were proved indications of positive activity. Such an attitude operated to reduce the jurisdiction of CIC but in most cases a change in attitude eventually was effected.[80]

The technical nature of some CIC investigations with Air Force units is demonstrated by a case at Tinker Field, Oklahoma, handled by Air Technical Service Command CIC personnel.

A C-60a type transport crashed after take off with a full load of passengers. Five men were killed, and nine were critically injured. The left engine had failed as the craft became airborne and investigation was initiated to determine the presence of sabotage.

Examination of the engine under CIC supervision, in cooperation with base personnel, disclosed that the failure was caused by shearing of the drive shaft of the engine-driven fuel pump. A steel washer was found to have locked the pump and caused the shaft to break. In addition it was discovered that foreign matter

78 Rpt, dtd 12 May 47, subj: Monthly Info Rpt, 700th CIC Det (AAF), from Capt Edward L. Forrest, (Conf) (OSI Files, Wash DC).

79 Monthly Rpt, 705th CIC Det, ATSC, from Maj Marshall E. Belshaw, (Conf) (OSI Files, Wash DC).

[redacted]

had found its way into the pump through negligence of the aircraft crew chief. Extensive bench tests made with an identical pump under flight conditions established the washer as the prime cause of the crash. Information to correct contributory negligence was disseminated through the Maintenance Division, ATSC, and the investigation was closed.[81]

All intelligence reports on aircraft accident cases were channeled into Wright Field and there processed for type of plane involved, common causative factors, and investigative techniques used. The findings were indexed and a card system established which made a ready reference file for investigators. The system was eventually duplicated in all Air Force commands, with the Wright Field office acting as a distributor of the information.[82]

Familiarity and repeated reference to this cross-indexing system was credited with the discovery of an important CIC case involving B-17 aircraft.[83] Agent Johnston Russell at the Headquarters office, noted that several B-17 crashes were due to defects and collapse in the rear landing wheel. At the same time, as a result of bench tests rear landing wheel assemblies for B-17s were being returned to the Wright Field parts depot with "Unsatisfactory" reports attached. Russell had one of the assemblies torn down for analysis. Metal stress tests showed that an important piece of the gear were not being properly hardened and would cause operational failure when put to heavy use. An order was disseminated by the command after this finding that the wheel be lowered cautiously by manual control until the part could be replaced with one meeting required specifications.

Russell found that the part, manufactured by the Maytag Company, did not meet specifications, but that gross factory negligence rather than intent was the source of the trouble. The saving in lives and material which was effected by Russell's thorough investigation cannot be computed.

In September 1944 CIC agents at the Middletown station of the ATSC, were faced with several damaged and cut fuel and gas lines which appeared to be the result of deliberate sabotage.

A civilian worker, employed as a supervisor on a shakedown crew, came under suspicion when he reported finding a number of such lines after planes had been inspected and approved. He seemed to make all of his discoveries when working alone, and in one instance his pocket knife was found near a cut fuel line.

[redacted]

1203

[redacted]

To offset [illegible] evidence, CIC agents had senior inspectors report an hour before the suspect came on the job, and make a thorough inspection of the plane on which the suspect was scheduled to work. After ascertaining that the [illegible] in good condition the plane was watched to prevent [illegible] but the suspect gained access to it. On several occasions after these prior inspections, the suspect would report damaged lines. Sworn statements were taken from witnesses to develop the case.

When the suspect was finally questioned, he seemed pained at the accusation and denied all guilt. But after protracted interrogation during which he was confronted with the evidence against him, he confessed to the deliberate damage and was turned over to the Federal District Attorney for prosecution.

The reason he gave for his action was that he was having trouble with the inspection department on the base, and hoped to gain better cooperation by showing up defects they had "missed." No connection with the enemy was disclosed.[84]

In a similar vein was a case at the San Bernadina Branch of Air Technical Service Command, at San Bernadino, California. A workman there was suspected of deliberate destruction of aneroid diaphragms worth $592.00. A CIC investigation was requested. All inquiries and evidence pointed to the workman and when interrogated he admitted damaging the material because he was disgusted with his work and believed that by causing the damage, he would be transferred to another section. He was--to Federal authorities for prosecution and disposition.[85]

Agents with the 705th were faced with racial problems of some magnitude during 1944. an incident at the Air Technical Service Command base at Stockton, California, involved a disaffection movement among colored troops to disregard all authority. It was suspected that this attitude was the result of the use of marihuana purchased with money supplied by German prisoners and numerous Japanese in the area. Several courts martial had resulted in prosecutions but these seemed to have no effect.

Colored agents were placed undercover for about three weeks. They confirmed that there was considerable unrest among Negro troops and extensive use of marihuana but reported no evidence of subversive activity or connections with German or Japanese elements.

---

84 Monthly Rpt, 705th CIC Det (AAF), dtd 12 Sep 44, from Maj Marshall E. Belshaw, (Conf) (OSI Files, Wash DC).

85 Monthly Info Rpt, dtd 10 Apr 45, from Maj Louis W. Krings, 705th CIC Det, (Conf) (OSI Files, Wash DC).

It should be noted here that at least one agent cast doubt on the practice of placing these colored agents on undercover assignments with Negro troops. He contended that while the men were probably efficient and as conscientious as possible, there was a general feeling in the detachment headquarters that their reports were not in all cases objective and without bias. The agent offered no proof or evidence to support this statement, but was firmly convinced of its validity.[86]

Colored troops at the Herbert Smart Airport, Macon, Georgia, held a sit-down strike in their mess hall and placed demands before the commanding officer. NCOs "turned in their stripes." Subversive activity was suspected to be behind the movement. CIC investigation in the open and undercover indicated that unrest was due to inefficiency on the part of several commissioned and noncommissioned officers assigned to the colored units. Key personnel were transferred and dissension subsided.

During May 1944, Negro troops stationed at Brookley Field, Mobile, Alabama, rioted after obtaining carbines, machine guns and considerable ammunition. More than 1,000 rounds were fired during the melee. One Negro soldier was critically wounded. CIC agents were placed with the unit in an undercover capacity. The case was complicated with erroneous newspaper reports which stated a white soldier had been shot in the course of the disturbance, thus arousing further resentment among the colored troops.[87]

Five CIC agents at Brookley Field worked directly with a Board of Inquiry established as a result of the incident and produced sufficient evidence to convict nine men of mutiny, and to bring about dishonorable discharges and long sentences at hard labor.[88]

Agents with the Air Technical Service Command at Ogden, Utah, received an important lead for investigation from the officer censoring mail of soldiers in the post stockade. The mail of two Negro prisoners addressed to friends and relatives expressed the idea that they were being discriminated against on a color basis. The soldiers wrote with vivid imaginations, a mixture of half-truths and wild stories. Investigation was begun after photostats had been made of the letters and the originals returned to their writers.

---

86 Interview with Marvin Smith, Law Bldg, Denton, Md, 18 Aug 55.

87 Memo, dtd 19 Jun 44, for Office of the Asst Chief of the Air Staff, Intelligence, from Maj Asa V. Candler, subj: Admin of CIC Program, (Conf) (OSI Files, Wash DC).

88 Memo, dtd 28 Jul 44, for Office of Asst Chief of the Air Staff, Intelligence, from Maj Asa V. Candler, subj: Admin of CIC Program, (Conf) (OSI Files, Wash DC).

One agent was placed under cover as a prisoner in the stockade and others were assigned to the guard personnel and other prisoners. The soldiers had told in their letters that "torture houses" were being constructed to kill Negro soldiers when actually small solitary confinement houses were being built within the stockade for normal punishment purposes. They said that whites wanted to make slaves of the colored people in the Army; that white soldiers never got guard house sentences while Negroes were always given six months; that the Army was more interested in killing the Negro than the Nazi.

The undercover agent gathered several incriminating statements. One suspect stated that if he were at liberty to kill his enemies "there would not be a white man on the base within one week." Both affirmed that if sent overseas they would kill everyone not black. The other suspect told his fellow prisoners that he hoped America would lose the war and that the Germans would soon invade the country. He alleged that he would sabotage the installation when released from the stockade.

During this period the agent in the stockade was also counseled by the suspects to play dumb when ordered to drill by the Officer of the Day.

Not to be outdone by the statements of his comrade, the other suspect argued that Americans were only fighting the Japanese because they were nonwhites and would be friends to the Negro. He, too, hoped the Allies would lose the war.

Interviews with other prisoners disclosed that the suspects had urged them to write inflammatory letters, and in at least one instance had written such a letter for one of the prisoners. Guard personnel testified that they had heard one of the suspects say that he was "strictly Nazi" and would join up with Tojo if sent overseas. At the close of the investigation, the two soldiers faced courts martial for disaffection and sedition.[89]

An important case of Communist infiltration came to the 705th CIC Detachment in January 1945. The editor of the "Orientation Digest," a publication of the Army Air Forces Special Services Section was suspected of being an active Communist. CIC investigations was requested. The Digest was distributed to unit commanders and Information and Education officers and received wider dissemination than any other publication within the Army Air Force.

Analysis of issues over a long period disclosed rigid editorial policy adherence to the Communist Party line; books listed as recommended reading by the Digest were authored by well-known Communists.

---

89 Monthly Rpt, dtd 12 Sep 44, 705th CIC Det (AAF), from Maj Marshall E. Belshaw, (Conf) (OSI Files, Wash DC).

CONFIDENTIAL

A record check and investigation of Leon Askin, the suspect editor, disclosed that he had three times been interned in German concentration camps before arriving in this country. After arriving in the United States he had become employed by Communist-controlled organizations in Washington, D.C. Askin associated socially with professed and proved Communists. He married an American girl, Mildred M. Smith, who characterized herself as "a great admirer of Communism." Askin was granted citizenship in 1943. He was inducted into the Army in 1942 and served at various stations before becoming editor of the Digest in 1944. Askin alleged that just prior to the war he had been offered jobs by the Federal Communications Commission, by the Federal Bureau of Investigation and by the Special Services Office in Washington, D.C., none of which he had been able to accept because he was not a citizen at that time.

A ten-day surveillance of Askin during a furlough revealed associations with Irwin Piscator, an internationally known and self-admitted Communist and organizer for the party, and with Herbert Berghof, a co-worker of Piscator. During the course of the surveillance, Askin became enraged by an anti-Communist comment of Senator Burton Wheeler published in a newspaper and was seen to throw it down and jump on it and exclaim, "What am I doing in this army?"

Undercover agents were placed on duty in Askin's office but they failed to discover much more than the fact that Askin believed himself very brilliant and well informed. Askin either reprinted verbatim or paraphrased much of the material he used, but no Communist material was found in his desk. Mail cover likewise disclosed nothing of a derogatory nature.

As a result of the investigation, Askin was removed from his position by special orders and divorced from any possibility of an opportunity to engage in specialized Army assignments.[90]

706th CIC Detachment (AAF)

The 706th was attached to the Air Transport Command. From headquarters at Washington, D.C., agents were distributed to ATC divisions and wings in all parts of the world. The detachment had probably the most widespread operations of any CIC unit and handled an enormous volume of cases.

At the Headquarters office in Washington, D.C., an agent was assigned to determine the possibility of sabotage in the crash of three C-46 transport planes, within a relatively short period of time.[91] The crashes all occurred after an engine seemingly would explode or disintegrate during flight. Since the plane

90 Monthly Info Rpt, 705th CIC Det (AAF), dtd 10 Mar 44, from Maj Lewis W. Krings, (Conf) (OSI Files, Wash DC), pp 1-4.

91 Interview with Marvin Smith, Law Bldg, Denton, Md, 18 Aug 55.

would not remain airborne on one engine, this failure always led to a crash. Examination of the craft which had crashed as well as study of models in current [illegible] the engine holdown studs which passed through a fire extinguisher bracket were not properly designed and were allowing the engine to vibrate loose from the wing assembly. This ruptured gas and oil lines close to hot exhaust stacks, precipitating the explosion. All C-46 aircraft were grounded until the defect was corrected.

A bona fide espionage case was developed by agents of the 706th at a Ferrying station in Sacramento, California. Interrogations of an enlisted man during a routine background check disclosed that a private in a barracks on the base had made several statements boasting the prowess of the average German soldier. Investigation of the private revealed that he had been born and educated in Germany. To clear the matter up, the man was called in for interrogation where, with little pressure, he stated he had left Germany and entered the Army as part of an agreement with the German Government to commit espionage. He argued with some force, however, that he had given the promise merely as a ruse to escape the country and had not, in fact, done anything inimical to the best interests of the United States Government. Legal officers could not advise prosecution since there had been no overt acts, and the man was merely put on a subversive list and eliminated for consideration for overseas assignment.[92]

Agents assigned to the South Atlantic Wing, ATC, were supplied with a memorandum prepared to orient them on undercover fundamentals which were to be used in the area. Each agent was instructed to prepare a background story which was to be borne out by his passport and identification cards, and it was the implication of the memo that all agents in the South American area would work in such a capacity.[93]

Although the memorandum may have been authentic at the time it was written, most operations in the area were not carried on in such a fashion. Perhaps as operations in the South Atlantic area increased, the program became unworkable but the real reason does not appear and there were many instances of agents working in uniform, in the open.

A case handled by the detachment in Brazil during 1944 and 1945 gave agents an introduction to Latin American politics and what appeared to be a serious sabotage ring.[94]

---

92 Interview with Marvin Smith, Law Bldg, Denton, Md, 18 Aug 55.

93 Memo, dtd 1 May 43, Re: Required Preparations for Agents Assigned to CIC Det South Atlantic Wing, ATC, (Conf) (S&F Lib).

94 Rpt, from CIC Det, South Atlantic Wing, ATC, Re: Pedro Pontes, dtd 14 Dec 44, (Secret) (S&F Lib).

95 Memo, dtd 13 Jan 45, CIC Det, AAF in the South Atlantic, from Agents Cloyes and Wilson, (Secret) (S&F Lib).

1209

A sabotage investigation was ordered when a C-47 transport caught fire during refueling at Bahia, Brazil, and was destroyed. Agents with the South Atlantic Division of the ATC, CIC Detachment found an enlisted Navy man who claimed that a Brazilian workman had started the fire with a cigarette lighter.

Facts revealed, however, that the workman had merely been attempting to fill his cigarette lighter and was heard to remark that he could not understand how the fire started. The workman left the field after the fire was extinguished and was never found. The agents concluded that sabotage was not intended, for the workman had endangered his own life by starting the fire as he did. This workman also had worked as a watchman for a long period on large gasoline storage tanks where he could have committed sabotage without fear of discovery.[96]

96 Monthly Info Rpt, dtd 10 Aug 45, 706th CIC Det, from Capt Paul S. Cooper, AC, p 4, (Secret) (S&F Lib).

Agents of this detachment at Belem, Brazil, also fell under the jurisdiction of the South Atlantic Wing. Here, too, aircraft accident cases constituted the bulk of the investigative load, and no evidence of positive sabotage was found by CIC in the area.

The Caribbean Division of the Air Transport Command spread its CIC agents as thinly as possible to maintain maximum coverage in its area. With six agents assigned to the unit in 1944, six installations were serviced, and although no cases of special interest are disclosed, the volume of personnel and incident cases handled was high.

British-controlled Ascension Island, a 34 square mile comparatively isolated piece of land in the South Atlantic, was the scene of considerable CIC activity. The island, which is approximately mid-way between South America and Africa, became an important Air Transport Command base and with the many operational flights coming through, there were numerous accident and incident investigations. No investigations, however, other than those pertaining to aircraft, have been found in available records. These files do not bear out instances where sabotage was established. Typical investigations during the months of June, July, and August 1945 disclosed pilot error and negligence on the part of flight and ground crew personnel as causative factors rather than sabotage attempts.[97] Again, the reason for including aircraft investigations as a standard portion of the CIC mission with the Air Corps is made clear by the lengthy reports written: in almost every instance, the investigations resulted in some safety regulation being drafted or a source of potential harm being eliminated.

North Africa

Agents of the 706th CIC Detachment attached to the North African Division, ATC, received reports that mail bags arriving from Abadan, Iran, where a sub-office was in function, had cuts and tears in them. When the damage continued despite continued surveillance, a method was devised of trapping the offender.

The mail bags were inspected and loaded on a transport plane and then offloaded and inspected. One bag had a long razor cut in it. The native personnel who had loaded the plane were then subjected to body searches. One man was found with two mailed packages on his person and several razor blades. He was turned over to British authorities for prosecution.[98]

97 Summary Rpts, Hqs, South Atlantic Div, ATC, dtd 18 Aug 45, 27 Aug 45, 10 Jul 45, from Capt Orly Davis, Div I and S Off, (Conf) (S&F Lib).

98 Monthly Situation Rpt, 1-31 July 44, dtd 5 Aug 44, from North African Div, ATC, Capt Pat J. Kirwin, (Secret) (S&F Lib).

CONFIDENTIAL

A rear security violation was detected by military police at Cazes Air Base, Casablanca, French Morocco, and turned over to CIC. An Arab employee was discovered on leaving the base to be carrying several classified military documents. The discovery resulted in the issuance of directives for the disposal of classified papers; the Arab was dismissed when he explained that he was illiterate and had taken the papers from a trash can to wrap up some "hashish," a native drug.[99]

Liaison difficulties with French authorities in North Africa developed over a case in April 1944. A French civilian was arrested by French intelligence agents, who had requested CIC assistance, and was charged with suspected espionage. Investigation prior to his arrest revealed that he had been trying to obtain information on American air installations and aircraft movements from military and indigenous personnel.

The French released the suspect after what CIC felt was a "thoroughly unsatisfactory interrogation," giving as a reason for the release that the suspect had informed another French intelligence agency of the matter and had been told to carry on in an effort to soon trap espionage ring leaders. CIC investigation revealed that some of the French officials involved had been friendly with the suspect for some time. The detachment kept the case pending with a request to the AC of S, G2, NATOUSA, for a full report on the French investigation and reasons for the release of the suspect.[100]

One agent with the North African Wing, Air Transport Command, particularly distinguished himself. Charles W. Dewing came to the CIC with a background as a news editor, broadcaster and free lance writer. He was attached to the North African Wing, ATC, where soon after arrival, plaudits began to pour in.

While attached to Detachment "E" in Adan, Turkey, Dewing's reports were commended by the Chief of Staff, ATC, as presenting a clear and concise picture of the relationships between State Department and military personnel with Turkish authorities. In a letter of commendation, it was stated:

"The manner in which Special Agent Dewing carried out his mission in the preparation of this report is most commendable and reflects great credit upon the Counter Intelligence Corps of the entire Command."[101]

---

99 Monthly Situation Rpt, 1-31 July 44, dtd 5 Aug 44, from North African Div, ATC, Capt Pat J. Kirwin, (Secret) (S&F Lib) p 7.

100 Monthly Situation Rpt, 1-30 June 44, dtd 5 Jul 44, from North African Wing, ATC, /s/ Capt Pat J. Kirwin, (Secret) (S&F Lib).

101 Ltr, dtd 16 Aug 44, from Col Harold R. Harris to CG, North African Div, ATC, in Dossier, Charles W. Dewing, (CRF) (Secret).

Comments in a letter of commendation from the commanding officer of the North African Detachment include:

"SUBJECT agent performed his own duties in a superior manner and was always willing to be of assistance to others whenever called upon to do so, and it was only through Mr Dewing's help and cooperation that the undersigned officer was enabled to establish certain valuable contacts in this area."[102]

The letter also commended Dewing for the special manner in which he managed his duties as agent in charge of a CIC district with the command.

When ATC planes were moved to bases in Greece, Dewing went along in spite of an agreement with the Russians that no American intelligence personnel would enter the Balkans. A reliable source has said that Dewing gained data which enabled him to notify his commanding officer of the exact date of the outbreak of the civil war in Greece, along with the information that American equipment and personnel would not be bothered by either faction in the conflict if clearly designated and identifiable. This same source advised that no action was taken on the information.[103]

There is also evidence that Dewing was instrumental in arranging the meeting of Greek leaders with Prime Minister Winston Churchill in 1944 when an effort was made to end the internal conflict.[104]

Dewing was eventually awarded the Legion of Merit. The citation accompanying the award further pictures the man.

> "Technical Sergeant Charles Wilson Dewing, Counter Intelligence Corps, as a special agent in Turkey, Greece, and North Africa, from April 1944 to January 1945, displayed unusual powers of discernment, tact, and sound judgment in the exceptional manner in which he handled the difficult problems of his assignment. By the skillful and intelligent way in which he conducted his operations, his reports were the basis of information for briefing all American personnel traveling through Turkey. When the Commanding General, North African Division, Air Transport Command, was directed to activate a detachment at Athens, Greece, he was sent to Athens to act as advisor to the Commanding Officer on all liaison with the British, Greek, and American diplomatic and other intelligence personnel. On 10 December 1944, a vehicle in which he was riding was totally demolished by mortar fire. His injuries resulted in the permanent loss of the sight in one eye;

102 Ltr, dtd 13 Jan 45, to CO, 706th CIC Det, ATC, Washington, D.C., from Capt Roy Wood, in Dossier of Charles W. Dewing, (CRF) (Secret).
103 Interview with Marvin Smith, Law Bldg, Denton, Md, 18 Aug 55.
104 Ibid

however, he continued to perform his duties until 6 January 1945. Sergeant Dewing, by his zeal and untiring devotion to duty rendered services of outstanding value to the Air Transport Service and to the war effort."

Central Africa

Investigations conducted by the Central African Division of Air Transport Command followed the pattern of other units in the command. Since there was no evidence of enemy activity or sabotage in the area; however, the CIC often investigated cases not strictly within its mission.[105]

Smuggling by United States military personnel of cigarette lighters and fountain pens into the area, where they could be sold for several times their nominal value, was detected by CIC and in one instance resulted in the courts martial convictions of two Army Air Force officers at Khartoum, Africa.[106]

The agents of the 796th also investigated alleged incidents where Air Corps officers were acting as "middlemen" in the sale of Gold Coast mahogany to American markets. Such transactions were against the policy of the command, and by obtaining a pronouncement that the contracts involved were voidable, CIC eliminated the situation.[107]

One monthly summary also discloses that five separate surveillances were being run on persons suspected of black market activity.[108] Illegal exchange transaction in French francs also were handled by CIC as a regular part of the mission in the area.[109]

Pacific Division

706th personnel with the Pacific Division of Air Transport Command participated in a "parachute case" which encompassed many Air Corps commands. The shroud and tie lines on all parachutes aboard a C-47 transport were found to have been cut, apparently by a sharp instrument, surmised to be a razor blade. Investigation in the Pacific area disclosed improper handling of equipment by crew members of the aircraft but did not solve the matter of the cut lines. Final outcome of the case does not appear, but leads were sent to the Ferrying Division,

Air Forces Training Command and to Air Technical Service Command before the data [illegible] sufficiently exploited.[110] The covering of such extensive geographic areas in the course of Air Corps investigations was not rare, for air crews were often spread out by transfers, and the number of stations where a plane might touch during a few days of operation was extensive.

European Division

Agents of the 706th attached to the European Division, Air Transport Command, were stationed throughout England, Scotland and Ireland by February 1944.

An agent from the unit was faced with a near international incident at Camp Comnock, Ayr, Scotland. The camp was used prior to the Normandy landing as a billet for Free French troops and there had been considerable friction between these troops and American soldiers stationed nearby, for reasons not made clear in the report. When French troops were transferred to the continent it was determined to use the camp as a German prisoner of war enclosure. Prior to such use, a complete cleaning and renovation was ordered by the new commanding officer. When engineers commenced such work, numerous booby traps were discovered in toilets and cupboards, constituting a serious hazard to the workmen.

CIC investigation disclosed that the French had learned before their departure that the camp was to be used for German prisoners of war and had left the explosives for that reason. No harm to friendly troops was intended and since it was impossible to trace the culprits, the case was closed.[111]

CIC WITH THE MANHATTAN DISTRICT

Chapter 1

ORGANIZATIONAL HISTORY

In August 1942 the United States government embarked upon a program that was to alter the whole course of the war, and to an unfathomable degree, affect the destiny of mankind itself. This was the Atomic Energy Program. Understandably, then, the need for the tightest kind of security was an absolute requirement. This was the more appreciated when it was known by Washington that the Germans likely were working on the same kind of broad program; the first nation to achieve a workable weapon in the field obviously would possess a tremendous military advantage.

The research work of the Program was masked initially under the name of "Development of Substitute Materials Project" while the overall effort was encompassed under the term "Manhattan District, United States Engineers."[112]

From the beginning, the situation demanded that the Project be protected from both sabotage and espionage. By the middle of 1943, when United States and other Allied scientists were convinced that they were making progress and that a successful end seemed in sight, the protection of this fact became equally important with the protection of actual data concerning atomic energy. Had the Germans learned of the progress being made by our scientists, their doubts that a successful solution of the technical and industrial problems was possible would have been eliminated and they would have extended greater efforts to keep the United States from that solution.

Apparently lulled by the belief that they were well ahead of the United States in the research and development race, German efforts continued to be limited and divided.

In the official "Manhattan District History," written in December 1945, preservation and nourishment of this deception was called "the greatest triumph" of the Intelligence and Security Division of the Project. The history of the Counter Intelligence Corps with the Manhattan Project is synonomous with the history of its Intelligence and Security Division, which was manned, from the beginning, almost entirely by experienced CIC officers and agents. A number of other persons,

---

112 Most of the information in this chapter, "CIC With the Manhattan District," has been taken from the "Manhattan District History, Book I, General, Volume 14, 'Intelligence and Security,' " (Classification SECRET) on file in the Atomic Energy Commission, Washington, D.C., which will hereafter be referred to as Basic Document.

added to the Intelligence and Security Division because of certain technical abilities, worked side by side with CIC agents from the beginning and were taken into the Counter Intelligence Corps and assigned to the Manhattan District CIC Detachment in January 1943.

Organizational Changes Made

The Intelligence and Security Division was actually the outgrowth of many operational and administrative changes made to keep pace with the growth of the District and its increasing security needs. A resume of these changes is pertinent here to show CIC's part in the protection of what has been called "the War's best kept secret."

In June 1942, just prior to the actual inception of the Manhattan Engineer District, the Protective Security Section was established in accordance with OCE Circular #1070, dated 15 January 1942. 1st Lt W. A. Fogg was designated District Protective Security Officer. During the one year that this section functioned, there was established a personnel security program, a plant protection program, and limited programs for security education and for safeguarding military information. The Assistant Chief of Staff, G2, was responsible for Counter Intelligence activities, and Maj John Lansdale, Jr., acted as Liaison Officer between the Manhattan District and the War Department Military Intelligence Division.

The first important change came in February 1943, as by this time the work of the District had progressed sufficiently to make it apparent that a carefully planned counterintelligence program was necessary. Capt Horace K. Calvert and Capt Robert J. McLeod were sent to the Manhattan District to organize an intelligence section with Captain Calvert designated as District Intelligence Officer. Approximately two weeks later, two additional officers were assigned on detached service from the Counter Intelligence Corps to serve as assistants in the Intelligence Section.

The Commanding Generals of the Service Commands were notified that this section had been created, and were requested to designate an officer in the intelligence division of each Service Command to act as liaison officer with the Manhattan District Intelligence Section.[113] These liaison officers were informed that the Manhattan District was engaged in a project of great secrecy and importance; that knowledge of the Project and of the nature and extent of the program were to be confined to as few persons as possible, and that it would be necessary to utilize Service Command investigative facilities since certain elements of the project

113 Ltr, dtd 12 May 43, from Provost Marshal General to Commanding General, Each Service Command, subj: "Loyalty Investigations of Personnel of the Manhattan District, United States Engineers," attached as App 1.

were located in each of the Service Commands. These Service Command liaison officers were authorized to correspond directly with the Manhattan District Intelligence Section.

During the next three months, other Counter Intelligence Corps officers were obtained and stationed at the Clinton Engineer Works, at Chicago, at St. Louis, at Site "Y", and at Berkeley, and others were assigned to branch offices in various areas to serve as intelligence officers for Manhattan District activities. As the work progressed, some of the original offices were eliminated and others were opened, until by the end of World War II, the United States had been divided into 11 geographical subdivisions with a branch office in each.

In May 1943 the responsibility for personnel security was transferred from the Protective Security Section to the Intelligence Section and was immediately decentralized to the branch offices, each of which assumed responsibility for the investigation and clearance of all persons engaged on classified Manhattan District work within their geographical boundaries, which closely paralleled the Service Command boundaries.

The next major organizational change came in July 1943, when the Intelligence and the Protective Security Sections were consolidated and renamed the Intelligence and Security Division, with Captain Calvert in charge. In August 1943, the Intelligence and Security Division moved, along with Manhattan District headquarters, from New York to the Clinton Engineer Works at Oak Ridge, Tennessee. From then on until after the end of World War II, every aspect of the security of the Project was handled by this Division. New sections were created and organizational changes were made to meet changing demands brought about by the expansion of the Project.

Counter Intelligence Corps Detachment Organized

Although many Counter Intelligence Corps officers and agents had been working with the Manhattan Project almost from its inception, it was not until December 1943 that a CIC detachment actually was organized to be employed exclusively on District work. The need for this detachment had been seen for some time. In a complex espionage case which had occurred in April 1943, the difficulties encountered in having the Service Commands perform auxiliary investigations pointed up the need for a CIC organization capable of assuming all investigative responsibility for the District. On 18 December 1943, Maj Gen George B. Strong, Army G2, signed a memorandum for the Commanding General of the Army Service Forces authorizing the creation of a special Counter Intelligence Corps Detachment of 25 officers and 137 enlisted agents.[114]

114 Ltr from Strong to CG, ASF, dtd 18 Dec 43, subj: "Organization of Counter Intelligence Corps Detachment for Manhattan Engineer District," (Conf), attached as App 2.

Captain Calvert and Captain McLeod went to the Staging Area at Camp Holabird, Maryland, and, through review of personnel files and by personal interview, selected 137 CIC agents. Among them were lawyers, technicians, former policemen, linguists, editors; all were specialists in some specific field. Many of these agents were scheduled for overseas assignments but, because of the high priority of the Manhattan Project, were withdrawn from shipping lists. The CIC officers already with the Intelligence and Security Division were also assigned to this new CIC detachment.

By letter dated 27 December 1943, General Strong notified the commanding generals of the Service Commands that they were relieved of counterintelligence responsibility for the Project, although their assistance might be required from time to time in cases of emergency and in maintaining routine liaison with other investigative agencies. With these changes, the District Intelligence Office, which formerly had functioned mainly as a staff unit, became an operational unit and was in a position to expedite investigations and to function more efficiently.[115]

By this time, the Security and Intelligence Division had assumed responsibility for plant and personnel security throughout the far flung installations that made up the Manhattan Project, including the installations at Oak Ridge, the Hanford Engineer Works, Site "Y", the University of California, Chicago University, Columbia University, and numerous other lesser installations. Even the preliminary investigations of federal crimes not of an intelligence nature, committed at Project sites, were made by Security and Intelligence personnel.

On 7 January 1944 Lt Col John Lansdale, Jr., was transferred from the War Department Military Intelligence Service to the CIC detachment as a special assistant to General Groves with full responsibility for all intelligence and security matters affecting the Project. This included the operation of a positive intelligence program and direct supervision over the counterintelligence and security programs of the Manhattan District.

For the next several months the Intelligence and Security Division expanded rapidly. In February 1944, Lt Col W. B. Parsons, former head of the CIC Advanced School in Chicago, was appointed Chief of the Division, replacing Major Calvert who had been sent to Europe on a mission connected with the Manhattan District. Additional plant inspectors were obtained from the Provost Marshal General, assigned to the Special Engineer Detachment, Manhattan District, and detailed to the Intelligence and Security Division for duty. Specially trained enlisted men were also selected from the Special Engineer Detachment and assigned to the Division to operate in undercover capacities and as consultants on technical investigations. This rapid expansion and the procurement of

115 Sample of letter from Strong to CG, each Service Command, dtd 27 Dec 43, subj: "Personnel on DSM Project," attached as App 3.

additional non-CIC enlisted personnel necessitated the creation in May 1944 of the 12th District CIC Unit, also commanded by Colonel Parsons. To simplify administration and since their work was so closely integrated, permission was obtained in January 1945 to transfer all the non-CIC military personnel to the Counter Intelligence Corps and assign them to the CIC Detachment, Manhattan District, thereby bringing the Detachments' strength to 148 officers and 161 enlisted men.[116] This personnel level remained fairly static throughout 1945. Thus, in name as well as in fact, the protection of the Manhattan Project became completely a CIC responsibility.

Numerous administrative and organizational changes were made until, by mid-1945, the Intelligence and Security Division was operating in six branches. Three of these, the Security Branch, the Administrative Branch, and the Clinton Engineer Works Branch operated under the supervision of Major McLeod, Deputy Chief; the other three, the Evaluation and Review Branch, the Branch for Safeguarding Military Information, and the Branch Offices Branch, were supervised by Capt Bernard W. Menke, Executive Officer.[117]

Administration Centralized at District Headquarters

For security reasons and to facilitate operational control, administration of the Detachment was centralized at the Manhattan District Headquarters at Oak Ridge. Agents were placed on detached service at the branch office headquarters or, in the case of Resident agents, at locations within the geographic boundaries of the branch offices. At times, the location of these agents was so highly classified that code symbols were used in referring to them and only the Finance Officer computing the pay of the agent was permitted to know his exact location. All records were maintained at Detachment headquarters, each branch office submitting a daily morning report by TWX. A single payroll was processed through the Finance Office in Knoxville, Tennessee; all orders were classified Confidential and per diem reimbursement for travel was paid by the Manhattan District Disbursing Officer. All travel vouchers were prepared by the Administration Section from itineraries forwarded by the various branch offices.

Special investigative equipment obtained from the CIC Depot at Camp Ritchie, Maryland, was issued by the Administration Branch to the various branch offices on memorandum receipts. Various types of cameras, sound detecting and recording equipment, guns ranging from two-inch detective specials to .30 caliber machine guns, fingerprint equipment, handcuffs, blackjacks, lock-pick sets, X-ray lamps, and shortwave radios were among the various types of equipment used. Central property records were maintained at the District headquarters at

116 Roster of Detachment attached as App 4.

117 Organizational chart of Intelligence and Security Division attached as App 5.

A uniform accounting system was established at all Branch offices, and periodic audits of all accounts were made by a special auditor for General Groves. The Administration Section also operated the mail and records and classified file sections of the Security and Intelligence Division which, for security reasons, had to be operated independently of the classified file and mail and records section of the Manhattan District.

Eventually the Administrative Section assumed responsibility for all civilian personnel at District Headquarters and processed routine personnel and company clearances.

Evaluation and Review Branch

In June 1944 an Evaluation and Review Branch was set up under Capt Curtis O. Clark to coordinate all subversive investigations and to prepare special reports daily and weekly for higher echelons.

Investigative Responsibility Subdivided

The Clinton Engineer Works Branch was responsible for supervision of all intelligence and security activities at the Clinton Engineer Works and the K-25, Y-12 and X-10 Area offices, and for investigation of all suspected subversive activities and security violations, while the Branch Offices Branch supervised and coordinated similar work in the eleven Branch office areas.

The Clinton Engineer Works Branch was subdivided into seven sections headed as follows: Guards, Maj Lloyd R. Block; Review Board, Capt Robert Tait; Intelligence, Capt George W. Remsen; Security, Capt James W. Haley; Tennessee Eastman Electromagnetic (Y-12) Plant Office, Capt Emmons B. Brown; Carbide and Carbon Diffusion (K-25) Plant Office, Maj Royden E. Johannessen; and Monsanto Chemicals (X-10) Plant Office, Lt Elmer A. McCaskill.

Eleven Branch Offices in Operation

By the end of the war, 11 Branch offices were operating throughout the country, their work being supervised and coordinated by the Branch Offices Branch at headquarters. The location and chiefs of these offices were: Boston, Massachusetts, Lt James E. Nolan; New York, New York, Capt B. S. Peeples; Baltimore, Maryland, Lt Harry R. Walsh; Cleveland, Ohio, Lt John R. Baskin;

Chicago, Illinois, Maj Grover C. Thompson; Grand Junction, Colorado, Capt Pearl P. Mountjoy; Santa Fe, New Mexico, Maj Thomas O. Jones; Berkeley, California, Capt John A. King, Jr.; Richland, Washington, Capt Lyalle E. Johnson; Washington, D.C., Capt Fred B. Rhodes, Jr.; and Pasadena, California, Capt Robert W. Kirkman. The organizational breakdown of each Branch office was similar to that of the District office and went through the same structural changes. The Branch Intelligence officers operated under the direct command of the District Intelligence Officer and also acted as members of the staffs of the various Area Engineers having responsibility for the installation located within the geographical boundaries of the Branch office.

End of War Brings Change

On 7 September 1945 the functions and operations of the Intelligence and Security Division were separated. The Area Engineer assumed responsibility for all activities in connection with production security, shipment security, personnel clearance, security education and minor security violations for all installations under their immediate supervision. Trained personnel were transferred to the Area Engineers' staffs to carry on this work. The Security Division of District headquarters, with Colonel Parsons as District Security Officer, served the District Engineer in a staff capacity. The Intelligence Unit, under the supervision of Maj Claude C. Pearce, was made responsible for conducting investigations of subversive allegations against Project personnel, sabotage, and safeguarding of military information type violations of a serious nature. It also was made responsible for all security and intelligence functions at site "Y" and its affiliates and at Washington, D.C., Branch Intelligence officers were made directly responsible to Major Pearce.

From the inception of the security program in 1942, it was recognized that the goal was two-fold: prevention of unintentional disclosure of information which might find its way to the enemy; and prevention of espionage and sabotage through infiltration of enemy agents. Measures taken to accomplish this two-fold goal generally fell into three broad classifications: physical security, education, and investigation. These general classifications will be treated separately in succeeding sections of this chapter.

Chapter 2

PHYSICAL SECURITY

The Security Branch, as it finally evolved, consisted of two subsections, Plant Protection and Shipments, both operating under Captain Haley, who coordinated and supervised all aspects of the security program in the many facilities engaged in the Manhattan Project. But much planning, organizing and reorganizing were accomplished before this final set-up was achieved. From the beginning it was recognized that the danger of espionage and sabotage would require that all possible measures be taken to prevent unauthorized entry and that employed personnel had to be controlled closely. It also was recognized that fires, explosions and other major accidents would cause delays equal in effect to deliberate sabotage. Any program of plant protection had to be all-inclusive to protect against these dangers.

Program Delayed by Personnel Lack

However, the lack of personnel experienced in plant protection delayed for a long time the development of an adequate program. Since comprehensive surveys covering all phases of plant security could not be made, the physical security provided at the various installations was largely dependent on "security mindedness" of area engineers, plant managers, research directors and security agents. The early security inspectors were concerned primarily with having the management designate a security agent who would be responsible for the security of District work at the facility and for reviewing and discussing the policies and procedures outlined in the protective security manuals. At a number of installations good security programs were developed, but some facilities were slow in providing the high degree of protection necessary for the nation's greatest secret and its most vital war production effort.

In the early days, because of the lack of personnel trained in security work, inspections were confined to those facilities engaged in highly classified work. The majority of the work at this time was concerned with research, design and development, but at some locations production of materials and equipment had been started. Although at this stage, the Commanding Generals of the Service Commands had full responsibility for the security of such facilities, it nevertheless was necessary in many cases, because of the highly classified nature of the work being performed, that the District assume this responsibility and to exclude Service Command representatives from these areas. Authorization for the assumption of this responsibility was not obtained from higher authority until 23 February 1943.

Program Launched in August 1943

It was not until August 1943, when sufficient plant protection personnel had been obtained, that a regular plant protection program was launched covering each of hundreds of vital plants and installations. A standard survey method was adopted to provide for prompt security surveys of all installations engaged on important work of interest to the District, including many suppliers of unclassified equipment, the prompt procurement of which was vital to the construction program.

The security standards established jointly by the Army and the Navy and published in "Plant Protection for Manufacturers," WD Pamphlet #32-1, dated 1 May 1943, were adopted as the basic plant protection policy. On the basis of these surveys, the particular contractors were informed as to essential measures necessary and were apprized of their security responsibilities. In many cases where contractors had neither the experience nor the personnel to take the required steps, it became necessary to assist them.

Full advantage was taken of the reports made by Service Command representatives and competent fire protection engineers of various insurance organizations. At the beginning, security inspections did not include fire prevention but on 20 September 1943 this responsibility was also assumed. From then on inspectors were alert to all conditions which might lead to sabotage, espionage, fire, explosions, major accidents, inadequate power and water supplies, labor trouble, and the improper handling of classified documents, any of which might cause interruptions to production or the compromise of classified information.

Plants Categorized from Security Viewpoint

In order to determine the degree of security which should be maintained at each facility, it was necessary to evaluate and constantly reevaluate the relative importance of each of the facilities engaged on the Project. Close liaison was maintained with area engineers and their technical staffs, so that the security program might remain consistent with the production and development program which was frequently subject to major changes.

By 15 April 1944 all facilities which were doing work of a classified nature or work important from the "continuity of production" standpoint had been surveyed. In June 1944, three general categories of facilities were established. Facilities in which interruption or delay of construction would definitely and seriously delay the Project were identified as "A" facilities; those in which interruption or delay would cause a minor delay were identified as "B"; and others supplying critical materials or performing classified work not of "A" or "B" importance were identified as "C" facilities. For example, the Tennessee Eastman Corporation and Carbide and Carbon Chemicals Corporation plants at Oak Ridge and the Hanford Engineer Works at Hanford were classified "A".

1237

Facilities such as the Linde Air Products Company, Tonawanda, New York, and the Mallinckrodt Chemical Works, St. Louis, Missouri, which were supplying uranium in various forms, were first placed in the "A" category but as duplicate suppliers became available and a stockpile was built up, these plants were given a "B" rating. Machine shops, such as the Distel Tool and Machine Company, and the Mercury Engineering Company, Detroit, Michigan, supplying parts to the Chrysler Corporation, an "A" facility, were placed in the "C" classification because substitute shops would be quickly available in the event production was interrupted.

Each facility which was surveyed was given an overall rating of "poor," "fair," "good," or "excellent" as applicable, with specific recommendations for any necessary improvement. Area Engineers were instructed that the security of "A" facilities should rate not lower than good and "B" facilities not lower than fair. Schedules for resurveys were based on the relative importance of the facility and its security rating. For example, an "A" facility which rated less than "good" was scheduled for monthly resurvey. In the early months of 1945, the list of facilities being surveyed averaged 450 installations. In the 12-month period from 1 July 1944 to 1 July 1945, approximately 1,036 surveys were made.

Upon receipt of a survey report, the Area Engineer instituted such action as he deemed necessary to provide protection in accordance with the findings of the report. For example, at the recommendation of the Intelligence and Security Division, a completely new security organization was set up at the Carbide and Carbon Chemical Company for better coordination of the security activities of the very important gas diffusion plant (K 25) area at Oak Ridge. Also, on the recommendation of the plant protection representative, the Decatur Area Engineer authorized the Houdaille-Hershey Corporation to install automatic sprinkler systems to improve greatly the fire protection in several vital warehouses and process areas containing combustible materials, at a cost of approximately $13,000. Again, upon the suggestion of the District representatives, a vital experimental chemical process at Yale University was, within a week, completely relocated and protected to eliminate an explosion hazard considered so serious that operations were otherwise to be suspended by the research director.

"Security" was by no means an exact science, since the seriousness of the hazards often could not be definitely determined. All protection was considered relative; therefore security measures depended upon balancing potential hazards against calculated risks. Full consideration had to be given to the cost of providing security. The maintenance of adequate guard forces was one of the major security expenses. In January 1945 there were more than 5,000 civilian guards protecting various important installations concerned in some way with the Manhattan District Project at an approximate cost of one million dollars a month. In addition, at the principal sites there were about 800 U.S. Army Military Police. Following V-E Day and V-J Day appropriate adjustments were made, based upon a

CONFIDENTIAL

careful evaluation of the need for such expensive guarding. For instance, a guard force of 855 at the Tennessee Eastman Corporation Plant in January 1945 was reduced by December 1945 to 444.

Agents Assist in Prior Planning

Although the security survey program was the keystone of the plant protection program, it was early recognized that a far more effective program could be developed if the representatives of the Security and Intelligence Division could take an active part in setting up the program in a particular facility before the weaknesses had an opportunity to develop. At the principal sites it was soon discovered that contractors had neither the experience nor the personnel to set up adequate security organizations. It became necessary for CIC agents to assist in the actual procurement and training of security personnel, the establishment of security procedures and the procurement of equipment and supplies for security activities. In many instances agents were able to review plans for fencing, lighting, patrol roads, towers, gates, and identification systems before they had been constructed or put into effect. Also plans for buildings and water supply systems were closely scrutinized to check the adequacy of fire protection features.

During the construction of the K 25 and K 27 Plants of the Carbide and Carbon Chemical Corporation at Oak Ridge, representatives of the District Intelligence and Security Division worked constantly with the construction officer and contractor to incorporate into the construction practicable measures to prevent sabotage, espionage, fires and explosions. When one chemical company was making plans for a new plant to process uranium, CIC agents were called in to advise on maximum fire protection measures and adequate safeguards for the ether extraction operation, and when the Monsanto Chemical Company at Dayton, Ohio, took over a new site, a plant security inspector met with company officials to discuss methods to be employed in fencing, lights, guarding, identification systems and fire protection. Security personnel worked very closely with the Eastman Corporation during the planning of its new final process building, and all possible measures were incorporated into the design to assure that only authorized personnel would be given entry to areas concerned with the vital final product.

Although the principles of protection remained the same, standards and requirements varied in their application throughout the various facilities engaged on the Manhattan Project. In general, security surveys and resulting recommendations provided for protection designed to prevent unauthorized entry and to control personnel.

Fencing, Screening, Effective Barriers

Fencing and screening were considered the most effective barriers; entrances were kept at a minimum and were locked and guarded at all times; lighting was

CONFIDENTIAL

provided to aid observation and, in certain cases, burglar alarm systems were installed. A well trained guard force was considered the principal enforcement agency to prevent unauthorized entry and to facilitate the detection of unauthorized entry, an identification system involving the use of identification cards and badges was established. Restricted areas were established, especially where regular plant employees, still uncleared, were working in the vicinity.

Visitors Carefully Controlled

In December 1942 when the District Personnel Security program was established, it was apparent that the same degree of control would have to be applied to visitors as was exercised over the selection and assignment of personnel to be regularly employed on highly classified work. It was necessary to insure that only individuals of known loyalty, who could definitely contribute to the advancement of the work at the installation visited, would be given access to areas where Manhattan District classified work was being performed. Each visitor was required to obtain written authorization from the District Engineer or his representative prior to his visit. Since most of the visits were between units of the Project, most persons who had occasion to visit a particular facility had already been cleared. Visitors who were not regularly engaged on the Project were investigated before being issued written authorization by the District Engineer. Visits were limited to those who were engaged on a particular phase of the Project.

The original system was revised in order to simplify mechanics and to assure uniformity. A standard printed pass was adopted which could be completed in less time than formerly and at the same time assure that certain personnel safeguards had been complied with. However, numerous problems were encountered which could not be solved completely. Since each contractor considered his visit urgent, there often was not time to arrange clearance and written authorization for a visit to an installation sometimes thousands of miles from the office of the District Area Engineer, and teletype and telephone clearances and authorizations became more and more frequent. Although there was no means of eliminating the necessity of resorting to certain short cuts, it was believed that experience proved that the basic policy upon which the system was founded was complied with throughout this period.

Physical Protection Considered Successful

In general the whole plant protection program was considered to have been successful. This was revealed in a study showing that during the history of the project up to 31 December 1945 there was no known compromise of classified information or damage to buildings, equipment, or materials which could be ascribed to the lack of physical protection against espionage or sabotage. Much credit was attributed to the many guards and Military Police who carefully checked credentials and badges of all personnel passing through the gates. Attempts to

crash the gates and run through road blocks were relatively few and only occasionally was it necessary to use firearms to stop a fleeing car or person ignoring a guard's challenge. One such incident resulted in a fatality. On another occasion, at the University of Chicago's West End Laboratories, a stranger was successful in evading the notice of a guard upon entering the classified area, but was apprehended in a few minutes.

Fire Prevention Program Effective

It was felt that stress placed on preventing fires and explosions had been worth while inasmuch as there were no serious construction or production interruptions attributable to these causes. Considering the fire hazards of some of the supply and research and warehouse facilities, serious fires might have resulted in costly delays in completing the mission. Fires originating from the spontaneous ignition of uranium in the form of turnings and grindings presented a serious problem at the Hanford Engineer Works, the University of Chicago and at a number of other plants processing uranium metal. Safeguards devised through studies made by plant protection personnel kept these fires at a minimum in both storage and transit and prevented this hazard from leading to any costly fires in vital production buildings and equipment.

Shipment Protection System Inaugurated

As a result of a survey made in November 1943, a Shipment Section was set up as a subsection under the Security Branch. During the early months of the Manhattan District Project, classified materials had been shipped among the various installations engaged on work for the Project in accordance with the general War Department policies prescribed for the safeguarding of all military information. In addition, from July 1942 to July 1943, the District Protective Security Section assisted and advised the responsible Area Engineers in providing necessary security measures to safeguard these materials.

It was not until the latter part of 1943 that the manifold problems related to shipment of many highly classified or hazardous materials made special consideration necessary. With the greatly increased volume of shipments, it became evident that close control would have to be exercised over these shipments and, in many cases, material involved would require special handling. Materials were being shipped in broadly fluctuating quantities between widely scattered installations, and security aspects were constantly changing. As a result of the November 1943 survey, a shipment security program was initiated to provide uniformity in the handling and shipment of classified materials. Guard pools, a courier system and other security measures were established, methods of transportation were prescribed, and special precautionary procedures to be followed in the case of shipment of certain vital products, materials and equipment were decided upon.

In February 1944 a guard pool consisting of 20 guards was established at Chicago, Illinois, under supervision of the Chicago Branch Office, and in May, a force of six men was set up in Wilmington, Delaware, under the supervision of the Wilmington Area Engineer. Later, the size of these guard pools was increased to 38 men and eight men respectively. All guards were sworn in as Auxiliary Military Police by the Service Commands and were armed. They were assigned primarily to guard rail shipments and truck convoy movements. All shipments of uranium billets being sent from eastern plants to Hanford were consolidated at Chicago and transported from that point as a single shipment, with guards from the Chicago pool providing the necessary protection. On the return trip from Hanford, these guards were utilized to protect shipments of classified scrap metal and turnings from Hanford, Washington, to plants in the mid-west and east for reprocessing. Guards were also drawn from the Chicago pool to protect truck movements of classified materials between various facilities and between facilities and the sites. In general, a policy was followed of using guard couriers on all shipments of secret material by either rail or motor whenever the high dollar value of the material or the urgency of delivery was of prime importance.

Under the courier system originally set up, all top secret documents and materials were to be carried by officer personnel when available and otherwise by CIC agents. In January 1945, it was decided that officer personnel only should be used for this purpose. Accordingly, approximately 25 officers were procured to form an officer courier pool and were assigned to Oak Ridge, New York, Chicago, Santa Fe, and Richland. In addition, guard couriers as well as officers were used to transport small but vitally important quantities of highly classified material by rail. They frequently traveled in civilian clothes and carried the material in ordinary luggage in order to avoid attracting attention. They were instructed to keep the material in their immediate physical possession in a locked compartment on the train at all times and to transport the material to and from the train by armed guard escorts. In March 1945, courier shipments of radioactive materials had become so numerous that it became necessary to give special consideration to the possible health hazards to the courier personnel. Since they were traveling in closed compartments in trains with the material in their immediate physical possession, it was felt that some method should be used to determine the degree of exposure experienced. Film badges were issued to couriers to carry on their persons during each trip. At the conclusion of each trip these badges were forwarded to the medical section for checking. Through December 1945, no serious exposures of personnel had been experienced.

When the use of guards or couriers on classified shipments was not possible or feasible, other substitute security measures consistent with the particular situation were taken. Special arrangements were made to equip railway cars with special seals and to make individual checks of cars at stops along the route.

CONFIDENTIAL

Measures taken on truck shipments included the use of special containers for materials, seals on the trucks, investigation of drivers, and special instructions in handling the shipment.

Eight Shipment Methods Used

It had been determined by the November 1943 survey that the selection of proper methods for shipping District materials would involve many considerations in addition to the classification of the materials themselves. Some of the more important factors were delivery time, size and weight, shipping costs, government and commercial restrictions, value and characteristics of the material, proper utilization of manpower and continuity of production. With these various considerations in mind, eight different methods of shipment, providing various degrees of security, were set up. These were: (1) railway express, carload, hand-to-hand signature, armed guard service; (2) railway express, less-than-carload, hand-to-hand signature, armed guard service; (3) rail freight, carload, sealed cars; (4) rail freight, carload, Manhattan District guards; (5) motor freight, commercial carrier, truck load, sealed truck; (6) motor freight, commercial carrier, truck load or less-than-truck-load, Manhattan District guards on trucks or in convoy car; (7) motor freight, government trucks, truck load or less-than-truck-load, Manhattan District guards on truck or in convoy car; (8) courier, special agents and Manhattan District guards, rail or air travel, closed space when required.

As a result of a study made in January 1944, it was decided that services of the Railway Express Money Department could be utilized to advantage by the District for intermittent shipments of classified material. Accordingly, instructions were issued regarding the use of this method.

Shipments of highly classified basic materials such as uranium metal, ores and oxides, special chemicals and other metals were carried by rail freight. In many cases these were consigned between individuals in order to conceal the identity of commercial firms engaged in processing classified material. Rail freight also was used to haul large size highly classified equipment between manufacturing plants and from manufacturing plants to the site. Where practicable, shipment was made in sealed railway cars. In some cases, however, because of the size and construction of units, it was necessary to place them on railway flatcars and use tarpaulin coverings. Large quantities of secret material were transported from Linde Air Products Company, Tonawanda, New York, to Houdaille-Hershey, Decatur, Illinois, by sealed commercial motor vans. After the material was processed into secret containers, the containers were then carried to the Chrysler Corporation, Detroit, Michigan, by government trucks with armed Auxiliary Military Police drivers. After the containers were installed in larger units these large and bulky units were shipped by railway flatcar and were protected from view by tarpaulin.

1243

In February 1945, a truck convoy system was established to transport end products from Hanford and the Clinton Laboratories to sites "T" and "Y". These convoys were in charge of officers with enlisted men and CIC agents acting as special guards. They were set up to move continuously to destinations with a complete change in personnel at the half-way point. Other motor truck shipments, such as regular shipments of uranium hexaflouride from a chemical company in Cleveland, Ohio, to the K 25 plant at Oak Ridge, were made in government trucks with armed Auxiliary Military Police drivers dressed in plain clothes.

During July 1945, when activities at site "Y" were in the most critical stage, air transport was used on three occasions to expedite the delivery of U-235 from the Y 12 plant at Oak Ridge. Arrangements were made with Army Air Forces to have a transport plane ready at Knoxville Airport at an appointed hour on each occasion. The material was transferred from the Y 12 plant to the airport by special military escort and accompanied on the plane trip by two officer couriers from the Shipment Security Section. A military escort was again provided from the Santa Fe Airport to site "Y". Numerous other classified shipments by ATC planes were made when urgency of shipment was paramount.

All of the important shipments of highly classified materials were handled exclusively by Manhattan District personnel. Top Secret materials were transported on hundreds of occasions either by officers traveling as passengers in trains, planes or automobiles or by truck convoys operated by military personnel under the command of officers. In every case, deliveries were completed without delay or unusual incident. Several minor vehicular accidents occurred; however, these were on practice runs or return trips and in no way jeopardized the safe delivery of material. Occurrences of lost, misrouted or damaged shipments of materials being carried by common carrier were few, but in every case full investigation showed that the incident was the result of normal operational hazards and not of subversive origin. On two occasions trucks carrying uranium oxide were involved in serious accidents. CIC agents, immediately dispatched to the scene, protected the shipments until new transportation was obtained. In one instance, a container of uranium grindings being shipped by railway express ignited spontaneously while standing on the station platform at Fort Wayne, Indiana. Flames shot 30 feet into the air and caused considerable local alarm and consternation among Railway Express officials. No damage resulted other than the loss of the material. District security officers contacted Railway Express officials and satisfied them that the District would take necessary steps to prevent a reoccurrence.

Considering the volume of classified shipments, the program was considered unusually successful. For example, it was estimated that during the 13 months prior to 31 December 1945, 18 officer couriers traveled approximately 832,000 miles. During this time they never lost or mislayed a bag, package or document

entrusted to them, nor did they even miss a train connection. During the same period government trucks, sometimes in convoys, traveled 300,000 miles carrying classified material without mishap.

Chapter 3

SAFEGUARDING MILITARY INFORMATION

During the early stages of the Manhattan Project the safeguarding of military information was handled mainly by instructing Project personnel in the meaning of classified information and the proper methods of handling, transmitting and caring for this material. The Protective Security manual, prepared in February 1943, emphasized the need for safeguarding classified information and set forth the rules for handling classified documents. Distribution of this manual and an explanation of its provisions constituted the Safeguarding of Military Information (SMI) program.

Special Section Created

Indications that foreign agents were making concerted efforts to obtain information concerning the Project made obvious the need for an intensive program to impress all personnel connected with the Project with the necessity for protecting this information. With this purpose in mind, a new section known as the Safeguarding Military Information Branch, was created in September 1943, under the direction of Lt Nicholas Del Genio, a CIC agent who had special training and experience in this subject. Lieutenant Del Genio set up a program divided into three distinct phases: security of information, security education, and censorship of publications. In November 1943, Intelligence Bulletin #5, "Safeguarding Military Information Regulations," was prepared, embodying in understandable form all information concerning the care and handling of classified information with definitions and illustrations of Restricted, Confidential, and Secret categories. In this bulletin certain additions and modifications to the rules of AR 380-5 were made in order to make it practicable and usable by large numbers of civilians and contractor personnel. In March 1944, this bulletin was revised to include the newly created Top Secret category. Studies were made of equipment, materials, products, processes, operations and administrative matters of the District in order to provide a basis for determining the proper classification of each of these items and the correspondence concerning them.

"Need To Know" Policy Followed

A policy of strict compartmentalization under which persons and facilities were furnished only such information as was necessary was initiated and later intensified. Laboratories, universities, plants and contractors were not permitted to obtain information concerning the overall structure of work of the District and were furnished only the data which their operations required. When practicable, assembly of equipment was performed in places other than those in which the manufacturing took place, and the processing of raw materials was broken down in such a way that it was done in various stages at scattered

CONFIDENTIAL

locations. The existence and relationships to one another of the various Project sites and the relation of the contractors, laboratories, and universities to one another and to the Project were concealed insofar as possible to prevent persons from acquiring knowledge of the scope or nature of the Project.

Code names were designed for the principal Project sites as well as for the basic materials and equipment and even for some of the personnel employed on the Project. Since the background and training of many of the Project's scientists were of such character and so well known that their connection with the District would indicate the nature of its work, elaborate care was taken to refer to them by code names and to avoid any publicity concerning them.

Since the immensity of the Manhattan District required the assistance and cooperation of key government agencies, the Intelligence and Security Division reviewed a large amount of official correspondence carried on with these agencies in order to insure the omission of as much information as possible concerning the scope and operation of the Project. For example, requests to Selective Service offices for deferment of key personnel were screened to insure omission of descriptive terms about the applicant's duties which would indicate the nature of the activity. In like manner, requests to War Manpower Commission offices in regard to needed personnel omitted terms and phrases which would reveal the nature of the work carried on by the District. Similarly, correspondence with other agencies such as the War Labor Board in connection with union and contractor negotiations was reviewed to minimize the disclosure of classified information.

Education Program Carried On

A well integrated and continuous security education program was carried on with the goal in mind that all District personnel, military and civilian, would become instinctively so security conscious that: classified documents, information and material would be properly handled and safeguarded; loose talk would be minimized; that no information of value would be disclosed by word or action to the enemy or to those not properly authorized to receive it. Under the direction of the Safeguarding Military Information Branch, the various Branch intelligence officers supervised the work of the security agents who had been appointed by individual contractors and provided them with educational material and ideas.[118]

Dangers of "Loose Talk" Stressed

As in any educational program of this nature, it was necessary first to overcome the natural inclination to discuss with friends items of great interest.

118 Intell Bulletin #3, dtd 15 Sep 43, is attached as App 6 in illustration of the type of materials sent to the various facilities.

Because of the extreme secrecy maintained concerning the work of the Project, the majority of the workers did not know what was being done on it, and because of the rules of compartmentalization, they did not know of the existence of other Project sites about the country, what other plants at their own sites were doing, or what work the other departments in their own plants were performing. It was necessary to impress upon them the fact that, although they had no knowledge of the actual purpo e of the Project, they nevertheless did have important information through their knowledge of types of equipment used, materials handled, size of buildings and the number of people on the job; and that the enemy could, by piecing together these isolated bits of information, obtain valuable knowledge of the Project. Appealing to individual patriotism and loyalty to the fighting men, employees were told that the less publicity given the Project the more difficult it would be for the enemy to acquire information about it and the greater would be the element of surprise. Not only did this program of security education suceed in preventing undue publicity about the District and minimize rumors and speculation which could have resulted in damaging effect, but it also strengthened the plant protection program as well by helping the personnel to understand the reasons for identification regulations and other requirements and by prompting them to report unusual incidents and suspicious circumstances or persons.

Security Education Continuous

By the fall of 1944 the overall program had been so developed that employees received security instruction from the day of employment through the day of termination. New employees were given security talks outlining their security responsibility on the new job and were furnished leaflets which explained the security requirements for the Project. New employees signed secrecy declarations stating they would not divulge classified information to unauthorized persons. Security agents conducted periodic meetings at which security lectures were given or training films were shown. Security posters, handbills, circulars and notices were continually displayed and distributed to employees. Payroll inserts and telephone stickers were employed as constant reminders of security responsibility. At the principal Project sites, flash movies trailers, containing security messages similar to the type used on posters and handbills, were frequently shown in theaters. Frequent editorials were published in Project newspapers stressing the importance of security information. Editorials and security talks prepared by the Safeguarding Military Information Section often made use of news events to emphasize the importance of security. The invasion of the continent of Europe through Normandy was used as an illustration of the success which could be obtained largely because of the secrecy with which the action had been guarded. The landings of German agents on the Atlantic coast were used as illustrations of the need for safeguarding Project information in conversations and correspondence.

CONFIDENTIAL

Corrective Action Taken in 1,200 Violations

Corrective action was taken in more than 1,200 violations of procedures for handling classified material between September 1943 and the end of December 1945. A common violation was the failure of various officers to lock safes containing classified material. At District Headquarters and at most other facilities where classified material was used, guards made tours shortly after closing time to check all safes. When a safe was found unlocked, an effort was made to contact the person responsible and instruct him to return to the office and check the contents to be certain they had not been disturbed. Other violations included the failure to put classified waste in proper burn baskets, failure to enclose secret and confidential mail in double envelopes, failure to send secret material by registered mail, and similar violations of Army rules for the handling and the disposition of classified material. For his first violation a Project employee was usually reprimanded, informed of the possible application of the espionage act and warned not to repeat the violation. Particularly flagrant violations or repetition of previous violations usually resulted in the employee's termination or his removal from all work involving access to classified material. If the person was other than a Project employee, an appeal was made to him to refrain from any further such violations, and an effort was made to stop the spread of the information already disclosed by making similar appeals to all persons to whom he had made the disclosure. It was estimated that about two-thirds of the cases of unauthorized disclosure involved Project employees.

Secrecy Declarations Required

All personnel, military and civilian, were required to execute declarations of secrecy and were given interviews upon separation to remind them of their responsibility for the protection of classified Project information. All scientific articles written by Project technical personnel, referring to this particular work or not, were screened prior to release. Personnel were instructed not to make personal notes or records from classified documents or equipment. All consultants on the Project were required to execute personal history statements and were given instructions in security matters prior to performing work for the District.

These security principles were applied to contractor facilities away from the Project sites, as well as those located on principal sites, by the Branch Security and Intelligence officer. Constant checks were made of the contractors' knowledge of and compliance with security information and regulations. Reports of security surveys were reviewed by the Section for Safeguarding Military Information to insure that standards commensurate with the classification of the contracts were being met. Labor recruiting teams were instructed not to divulge any classified information in their personnel recruitment programs, and contractors were warned not to use their firm names in return addresses on envelopes used in correspondence with the Manhattan District. Contractors were given instructions

to omit from registration statements for the Securities and Exchange Commission any information that might be considered classified by the Manhattan District. Upon the termination of a contract, surveys were made to see that all classified documents and materials had been returned to the District or that adequate safeguarding measures had been taken.

Newspaper Cooperation Obtained

Considerable public relations work was done in cities and towns located near principal Project sites in persuading newspapers to omit stories and news items which would disclose the scope or nature of the work, attract undue attention to it or unduly emphasize its secrecy. To avoid harmful rumors and speculation, it was considered important to secure the good will of nearby communities. This was done by pointing out in speeches made to civic groups that Manhattan officials were aware of the additional wartime burdens on the communities, including labor shortages, crowded living conditions and increased traffic problems, and that they were trying in every way to minimize these hardships.

Victory "Let-Down" Anticipated

In anticipation of the possible relaxation of security with the fall of Germany, elaborate plans were made to offset this possibility. Posters, handbills and editorials were prepared and distributed in advance to all Branch Offices which in turn distributed them to the company security agents. Upon the announcement of V-E Day, these materials were immediately displayed to remind all personnel that rigid security requirements were still in effect. Similar posters were prepared for immediate display after the dropping of the first Atomic Bomb and the public release of information concerning it. After this release of information, greater emphasis was placed on the close alliance of security officials with management, on the job superintendents, foremen, supervisors and technical leaders. Frequent meetings were held with such groups for discussion of security problems and the adoption of a realistic program regarding the information still to be protected. Employees were continually reminded through various educational media of the types of information concerning the Project which should not be discussed. The principal criteria for information that had been released was Dr H. D. Smyth's report "A General Account of the Development of Methods of Using Atomic Energy for Military Purposes under the Auspices of the United States Government," commonly known as "The Smyth Report."

Publications Scanned for Atomic Information

From July 1942 to February 1943 a few leading daily newspapers and a few periodicals were scanned by the censorship section for items of interest to the District or concerning its key personnel. In the spring of 1943, with the establishment of the District Intelligence Section, the coverage of newspapers and

periodicals was increased and a Wac was assigned to scan newspapers and periodicals published prior to that date. In September 1943 this censorship review work was placed under the then newly organized Safeguarding Military Information Branch where a Wac in that office continued the review of publications. A second Wac was added for this work in December 1943 and a third Wac in June 1944, and the Branch Intelligence Officers began reviewing leading newspapers published in their areas. In the spring of 1944, a survey was made of the completeness of the coverage of newspapers and periodicals, and additional assignments were made to each of the branch offices to insure complete coverage of the leading periodicals in their area. Three-hundred-seventy newspapers and 70 magazines were constantly reviewed until after public release of the Atomic Bomb had been made.

Reviewers of these publications were alert not only for violations or near violations of the censorship code but also for publicity pertaining to scientific developments related to the work of the District, for information concerning similar scientific work being done in foreign countries and for publicity about secret weapons developed by Allied and enemy countries which might be related to District work. Publicity regarding key personnel and principal Project sites was carefully reviewed to analyze the nature and amount of information being circulated and to determine whether such information included classified matter. Items concerning strikes and labor situations in key industrial areas where plants doing District work were located were also analyzed. Censors also were alert to any violations or near violations of the censorship code, in accordance with a confidential letter issued by Byron Price, Director of Censorship, on 28 June 1943, in which all editors and broadcasters were requested to avoid any mention of atomic energy or of any of the various elements with which the Project was experimenting. Technical trade journals and magazines were reviewed to learn the schedule of meetings of scientific groups so that such meetings could be attended by District personnel to ascertain whether scientific matters related to District work were discussed. Scientific books treating topics related to the work of the District were reviewed to detect any statements that the Army or the Government was interested in a particular work. These publications were also reviewed to follow the progress of current research at other facilities and by persons not connected with the District.

Few possibilities of compromise through published information were overlooked. When one CIC agent noticed that the pages concerning uranium in new manuals and reference books in the library were showing signs of use, agents were set to producing signs of wear in other sections of hundreds of library volumes.[119]

119 New Yorker Magazine, 27 Oct 45, Vol XXI, #37, "A Reporter at Large: The Top Top Secret." (This source is used as a reference since the official Manhattan District History mentioned the New Yorker account as accurate; furthermore, most of the facts contained in the New Yorker article are also in the official Manhattan District History.)

CONFIDENTIAL

All items containing possible censorship violations were forwarded by branch offices to the Safeguarding Military Information Branch where further analysis was made. If they were deemed violations, they were forwarded to the Office of Censorship which had the responsibility of contacting the appropriate editor or broadcaster, explaining to him the violation and requesting his cooperation in the future.

Strangely, some of these violations included letters to the editors of well known newspapers criticizing the Army for not getting busy with atomic weapons. "Hints point to the earlier realization of the Atomic Bomb," one optimistic reader wrote to the Toledo Blade in December 1944. "A special substance said to have amazing potentialities could, if it is automatically exploded the right way, insure victory." The University of Chicago's Maroon, shortly after V-E Day, praised the school for having a monopoly of Nobel prize winners and said, "Compton and His colleagues are working on problems fraught with tremendous possibilities to mankind: problems of releasing atomic energy." A Cleveland reporter, after spending a vacation near Los Alamos, New Mexico, wrote a story entitled "The Forbidden City." He said, "The Mr Big of the city is a college professor, Dr J. Robert Oppenheimer, called a second Einstein. A widespread belief is that he is developing ordnance and explosives. Supporters of this guess argue that it accounts for the number of mechanics working on the production of a single device, and there are others who will tell you tremendous explosions have been heard." The repercussion from these articles, however, was almost nil.

On 1 December 1943, a new code continuing the confidential directive of 28 June 1943, was issued to editors and broadcasters by the Office of Censorship.

1252

Chapter 4

INVESTIGATION: CIC'S MAJOR JOB

The elaborate physical security and educational measures previously discussed were designed to minimize the possibility of unintentional disclosure of information which might find its way to the enemy. But these measures could not give protection against the possibility of enemy infiltration or the compromise of information by persons whose lack of character and integrity would make them impervious to education in security measures or even make them suspect of approachability by enemy agents. It was early recognized that access to classified information must be restricted to those persons and business firms whose loyalty, integrity and discretion had been clearly established.

Basic Personnel Clearance Procedures Set

Personnel clearance procedures underwent several modifications as the District expanded and the conditions changed. In the beginning, all employees were divided into two classes, and later three, according to the type of information to which they would have access. Basic clearance requirements for individuals included positive identification, personnel security questionnaires or personal history statements, fingerprint checks and proof of citizenship or alien registration. These basic procedures were applied to all Manhattan District personnel and to employees of all contractors who were doing work for the Project. Basic procedures for company clearances included a check of the War Department G2 files, a Dunn and Bradstreet credit report and an agency check of key personnel. Additional investigations of companies and individuals were governed by the extent and type of information to which access must be given and by any doubts raised during the basic investigation. From the beginning of the Project until August 1945, approximately 400,000 employees and approximately 600 companies had been subjected to basic investigations.

Preliminary file checks eliminated many persons from employ. For example, one applicant, the author of a book on the structure of the atom, who had been employed on independent research in atomic energy for two years, was denied employment when a preliminary check showed that he was in contact with known subversive organizations.

FBI fingerprint file checks kept several thousand individuals from work with the Manhattan District, and in addition aided in the apprehension of many individuals wanted by other government agencies. Arrest records turned up by these checks ranged from speeding and disorderly conduct charges to murder, arson, rape, narcotics addiction, mayhem and other major crimes. One individual's record indicated that he had been arrested 116 times for bootlegging. Several escaped convicts, parole violators and deserters were apprehended.

1253

One man, however, who was about to be served by a process server for an increase in alimony, was spirited away by CIC agents to work on the Project, after investigation had indicated that he was otherwise all right.[120]

As an aid in eliminating unnecessary investigation, a master list of unemployables was distributed periodically to all contractors; and personnel were prohibited from transferring from one District installation to another except when such transfer was directed in the interest of the Project.

CIC agents were sent out with recruitment teams so that they might be able to eliminate obvious security risks during the initial interview. Alfred P. Ashton, one of the agents who worked for a while on this duty, recalled later that, during the first week, the team to which he was attached recruited 20 persons during the first week and put them on the train for Los Alamos. However, all but two or three were refused employment because they were not so highly skilled as they had seemed to be. Ashton made the suggestion that someone who knew the required qualifications be added to the team. This suggestion was adopted and largely eliminated this problem. Recruitment was also speeded up by making the first contacts with qualified electricians by mail, also at Ashton's suggestion.[121]

CIC Agents Employ Various Procedures

It was in the field of more complete investigations, those predicated upon a doubt raised during a preliminary investigation, or when a person was shown to have access to extremely sensitive information, that CIC agents were called upon to employ every known type of investigative technique to counter the accepted fact that the enemy would learn of the Project and would attempt to exploit that information. CIC had to assume the responsibility for the investigation of all persons suspected of disloyalty or disaffection; all incidents having possible espionage, sabotage or subversive significance; all unauthorized disclosure of classified Project information; and a considerable number of miscellaneous cases the import of which might endanger the Project's security. In attaining this objective, six types of counterintelligence investigations were performed: personnel, espionage, sabotage, general subversive, violations of the safeguarding of military information, and miscellaneous.

By the end of 1945, the Counter Intelligence Corps had handled more than 1,000 general subversive investigations; more than 1,500 cases of loose talk or leakage of information to unauthorized persons; approximately 100 cases in which espionage seemed to be probable; and approximately 200 cases where sabotage could have been present. According to the official Manhattan District History,

120 Interview with Alfred P. Ashton, Baltimore, Md, at NCICA Convention, Waldorf Astoria Hotel, New York, 6 Aug 55.

121 Ibid

these statistics measure only to a partial extent the quantity of work performed, since a number of additional tasks fell to CIC because of the unique position held by the Manhattan District.

Priority Requirements Make Investigations Difficult

Generally the extent of the personnel investigations was in direct proportion to the opportunity which the position afforded for obtaining classified information. Certain classified risks had to be taken in the case of the employee who was considered irreplaceable and whose removal would have retarded the progress of the work; such an employee was retained even though his loyalty might be questionable. This policy of giving first priority to getting the job done placed added responsibility on the investigators who of necessity had to follow the activities of such persons closely. Other calculated risks included certain key personnel whose recent migration to the United States make a complete background investigation impossible. These conditions, together with the recognition that human nature is apt to prove unpredictable when subjected to unusual pressure, necessitated more or less continuous watch over important Project employees.

The first known espionage case occurred in April 1943 when a non-District employee, whose loyalty to the United States was questionable, solicited and received classified information from a then unidentified Project employee. There also were indications that plans had been made to attempt to attain additional Project information at periodic intervals for transfer to a foreign government. Upon learning of this scheme, immediate steps were taken to identify this Project employee and to thwart the plan to establish an espionage channel. Specially selected agents were rushed to the area where the information had been obtained and after a few weeks of intensive surveillance, were able to identify the employee who had passed the information. They continued extensive surveillance and investigation of this employee, his associates, and many other Project employees whose loyalty appeared doubtful after preliminary investigation.

Agents Assume Various Covers

Provided with suitable background cover stories, agents, placed in strategic positions within the Project, were of great assistance as listening posts among suspected employees and in locating persons who warranted more than the usual investigation. An undercover office even was established in this area, operating ostensibly as the office of a magazine subscription company and later as an insurance adjustment agency.

Agents with the Manhattan District earned more than $60,000 in pay from their undercover civilian jobs, all of which was turned over to the United States Treasury.[122]

Other such surveillance squads were organized in the District to supplement personnel investigations as these activities were intensified. These specially trained agents maintained close surveillance of District personnel believed to be most likely to transmit classified Project information to unauthorized persons. Reports from all parts of the District were carefully reviewed at Oak Ridge, Tennessee, to determine: the members of any espionage network, including both District and non-District employees; the modus operandi for infiltrating Project installations; evidence of activities inspired by any foreign government; and any connection between similar activities at District installations even though widely separated geographically. Other espionage attempts were detected, but it was felt at that time that prompt action and intensified investigative activity in each case prevented the passing of any substantial amount of Project information.

Agents Become Proficient in Techniques

The CIC special agents assigned to espionage cases became proficient in all phases of investigative techniques. Many of them displayed skill and ingenuity unsurpassed by the most experienced investigators. Pictures of certain individuals and activities were obtained by the use of a telephoto lens or a special camera that could be concealed in the hand. On occasions, agents borrowed the equipment of street photographers or enlisted the assistance of night club photographers to obtain certain pictures.

Agents impersonated men of all occupations in order to obtain information. One agent worked as a hotel clerk for more than two years, while another worked as a bellhop and became bell captain in a few months. Agents posed as electricians, painters, exterminators, contractors and gamblers. One suspect may have wondered why the electrician took almost two hours to repair a light fixture and another might have thought it a coincidence that two men wearing hearing aids were sitting at tables near the one selected by him and his party. Actually the two men had special amplifiers carried in briefcases.

The surveillance of a certain individual immediately after his arrival in this country was made comparatively easy by an agent who learned of the traveler's plans in detail by sitting in at the ship panel with the customs officer.

Many difficult 24-hour surveillances were maintained. One suspect was shadowed by an agent who traveled as a fellow passenger on a cross-country

122 New Yorker Magazine, 27 Oct 45, Vol XXI, #37, "A Reporter at Large: The Top Top Secret."

plane trip. A crack train was held up for 30 minutes in one instance to allow time for agents to fly to a station to take up surveillance of a passenger.

Years later, Don Harley, former CIC agent with the District, told of a close surveillance which lasted for more than a year before the suspect realized that he was being followed, but by that time sufficient evidence had been obtained to indicate that he was in contact with a known Soviet espionage agent. The wind-up came with a week-long surveillance from Chicago to New York and down to Knoxville. Harley was given a 45-minute notice that the suspect, employed in the laboratory at Chicago, was taking a train for New York. The subject was closely associated with Clarence Hiskey, a scientist who was under suspicion, and Hiskey had been overheard telling him to "see Adams." Arthur Alexandrovich Adams,[123] long recognized as one of the top Soviet espionage agents in the United States, was then in New York, and it seemed probable that a meeting would take place there.

The tip came from an agent who was working under cover in the laboratory in an administrative capacity. Without luggage, even tooth brush, the agent boarded the train. He explained that the agents always carried extra money and a supply of transportation requests for such emergencies. Harley had been told that "the New York boys" would meet him at Grand Central Station and take over so that he could return to Chicago, but the agents who met him there insisted that they had been assigned only to "help" him and so Harley stayed on the job.

It was a hectic week, since the subject was a man "who got around." During one 30-hour stretch without sleep, Harley and one of the New York agents followed the subject on a bus trip to up-state New York. Much of the trip was during a heavy wind storm, nearing hurricane proportions. To add to their difficulties, they had car trouble, and had to follow the bus for many miles without lights.

But the surveillance was successful. The subject made the expected contact with Adams, and one of the agents even caught a bit of their conversation in which Adams was telling "how good things were in Russia."

On the final day, when the subject came out of the fraternity house in which he was staying, he walked up to the agents' car--it was during a heavy rainstorm--and said, "I have found out you have been following me. Will you drive me to the Railway station--I can't get a cab." The agents refused.

---

123 For information re Adams and Hiskey, see The Shameful Years, Thirty Years of Soviet Espionage in the United States, dtd 30 Dec 1951, prepared and released by the Committee on Un-American Activities, U.S. House of Representatives, printed by U.S. Government Printing Office, Wash, 1952.

Immediately after this the subject, as well as were removed from the deferred list and ordered into the United States Army, to be sent to some remote spot where their contacts could be of no harm to the country. Both had passed beyond the "calculated risk" stage.[124]

Sabotage a Particular Problem

The greatest degree of alertness toward the possibility of sabotage had to be maintained at all times, since attempts at sabotage could be suspected if the enemy became aware of the great progress being made by our country in the development of the Atom Bomb. Progress of the Manhattan District Project could not be delayed; it had to continue without interruption and particularly without destruction or damage caused by sabotage. From the very beginning, policy demanded a complete investigation of every mechanical failure or breakdown of equipment which could not immediately be attributed to normal operating causes. The complex, novel and intricate design of some equipment demanded that sabotage be suspected whenever such equipment failed to operate. Investigation usually allayed the fears of sabotage by establishing the cause of such failures to be the inexperience of loyal conscientious employees; nevertheless, these investigations were not wasted because they contributed considerably toward the adoption of remedial measures which aided the progress of construction and operation.

CIC agents at one plant apprehended the "saboteurs" who were cutting multi-colored wires from important electrical installations, but when apprehended they were found to be cutting out these wires to weave them together to form a colorful belt or watchfob. At one stage in operations it became a justifiable reason for termination if an employee possessed a ring fashioned out of monel piping. In too many instances this type of material was being ripped out, often from very essential equipment, by some thoughtless individual to make a ring for himself, his boss or his sweetheart. Wilful sabotage had to be assumed upon the initial information of such incidents.

At times a combination of circumstances caused calm and experienced CIC agents to consider a certain incident a wilful attempt at sabotage only to learn that the situation was actually quite different. One workman was caught while trying to pass a gate with a length of pipe, pieces of wire, dry cell batteries and an alarm clock carefully wrapped and concealed. Only an explosive was lacking to fabricate a time bomb. Investigation determined that the offender had taken the clock to the plant to repair it since proper tools were available to him there, and had stolen the other articles for his personal use in his home.

A certain number of incidents of damage or destruction to Project property could not be explained, but since these incidents were few in number and did not

124 Interview with Don Harley, New York City, at Ft Holabird, Md, Aug 55.

cause serious damage or delay, it was considered a reasonable conclusion that they were not the result of sabotage. To quote from the official Manhattan District History: "The activity of the Counter Intelligence Corps in performing its function to prevent sabotage has been admirably, efficiently and successfully performed."

Subversive Investigations of Varied Origin

General subversive investigations were based upon derogatory information obtained from personnel clearance investigations and from the overall surveillance program of the Counter Intelligence Corps which sometimes revealed undesirable facts which had not been disclosed during the individual's routine personnel clearance investigation. These investigations were necessarily delicate in nature and required exhaustive treatment in every detail. The object of the Counter Intelligence Corps was to get the facts in every case, including the circumstances surrounding the original complaint. Frequently the informant had unintentionally magnified the seriousness of a comment by removing it from the atmosphere in which it was made; other informants made charges about persons with malicious intent; others were alarmists and became apprehensive over insignificant matters. Only after thorough investigation did the true character of complaints become self-evident and permit intelligent evaluation of the facts.

Organization affiliations also had to be taken into careful consideration. There were certain of these which, although not subversive in themselves, were indicative of possible political ideologies inimical to the interests of the United States. Whenever it was discovered that an employee belonged to one or more such organizations, his investigation was intensified. The fact that an employee might omit the names of these organizations from his personnel security questionnaire was suggestive that he was aware that such affiliation would work against his clearance. Membership in these organizations often required that intensive investigations continue until sufficient information had been obtained to permit a decision as to the advisability of retaining such persons on classified work. A policy of discharging all employees about whom there was any doubt of loyalty was not followed because of two factors: the right of the individual to work; and the need of the Manhattan District for the individual's services. When an employee could be transferred to a less sensitive job and fulfill a need, he was usually retained even though some doubt may have existed as to his adherence to democratic principles.

"Loose Talk" Cases Prove Varied

Between September 1943 and the end of 1945, more than 1,500 "loose talk" and leakage of information cases were investigated, and corrective action was taken in more than 1,200 violations of procedures in handling classified information.

Several of the loose talk cases were unusually interesting. Several of these were committed by members of the clergy who were completely unaware that they were revealing classified information. A pamphlet entitled "Startling Power," published by the Good News Publishing Company, Chicago, Illinois, in 1943 and distributed by the Moody Bible Institute of Chicago, was amusingly the cause of several intensive investigations. This pamphlet, using scientific statements to illustrate a deeply spiritual fact, stated that: "Uranium 235, extracted from natural uranium ore, promised to make all of our power sources mere child stories by comparison. Professor John R. Dunning, Columbia University leader in atomic energy research, has stated that the natural substances from which Uranium 235 is extracted are found abundantly in the earth and throughout many sections of the world." The pamphlet continued to make the point, "We must not overlook the far more vital and assured fact that God has given to Christians the gift of the Holy Spirit with energies far more dynamic than those of exploding atoms or mysterious elements."

In the winter of 1945 a patent engineer who came into possession of this pamphlet concluded that U-235 merited investigation by his company and made this suggestion to his superior who in turn contacted Dr Compton at Chicago University. When this fact became known to CIC, an investigation was launched to find out how U-235 had become known to the company and the engineer with the discovery that the case had innocently arisen from the reading of this religious pamphlet.

Some months later, a Lutheran minister in the South gave a sermon based on a "New Source of Energy called Uranium 235," and, a short time later, a Presbyterian minister in Tennessee preached a similar sermon, both making the conclusion that regardless of this devastating energy the power of God was infinitely greater. Investigation revealed that both of these ministers had read "Startling Power."

In the spring of 1945 a confidential informant reported to the Intelligence and Security Division that approximately 10 employees, believing that a body rash they had developed had resulted from exposure to radio-active elements and, unsatisfied with the care given by Oak Ridge Hospital physicians, had gone to their own doctors. Investigation revealed that the story was somewhat exaggerated. Several employees had developed a rash, possibly from excessive thermal conditions or from handling large quantities of carbon tetrachloride for cleansing purposes. When the physicians at the hospital could not say positively what had caused the rash, one or two of the patients, already troubled by a fear about the unknown elements with which they were working, had gone to private physicians "back home" to seek additional advice. To prevent patients from consulting "off-area" physicians in the future and disclosing classified information by describing their working conditions and the materials used, CIC agents requested the doctors at the hospital to assure all

CONFIDENTIAL

patients that the Oak Ridge medical authorities were best equipped and trained to treat any cases arising out of the peculiar conditions of the area. All operating companies also were asked to stress this fact to their personnel.

One Leak Traced to

One security leak was traced to a field hospital in Belgium. This came to the attention of CIC when a man working at Oak Ridge reported that he had received a letter from a in which the officer mentioned that his roommate had a younger brother also at Oak Ridge who had stated that they were making Atomic Bombs there. The officer and the roommate, also a medical officer, were very much surprised when a CIC agent called upon them at the field hospital to inquire concerning the statement in the letter. The roommate of the letter writer stated that the subject of Atomic Bombs first came to his attention in an article which appeared in Time Magazine in 1941 and that when the subject was again brought up in the presence of several other officers, he told the gathering that his brother was an engineer working on Atomic Bombs at Oak Ridge, Tennessee. This man disclosed that when he visited with his brother shortly before leaving the United States, the brother said that he was working on the Atomic Bomb at Oak Ridge and that the work was very secret and conducted on a huge scale. The officer claimed that he had not mentioned the subject to anyone until shortly after the arrival of his unit in at which time the conversation mentioned had taken place. Back at Oak Ridge the brother was interviewed and admitted he had made the statement, although at the time he had acquired very little actual knowledge about the Project. He was seriously cautioned against future disclosures of this nature.

Some "Guessed" and Talked

At a dinner party in March 1945, a Naval lieutenant brought up the subject of the Atomic Bomb and expressed curiosity as to when we would use it. He stated that only about 10 pounds of U-235 were needed to end the war and that several thousands persons were working on it in Tennessee where most of TVA's electrical power was used. When questioned, the lieutenant explained that he recalled a lecture given the Chemistry Department at Harvard in 1942 regarding the possibilities of atomic power, and had since discussed the subject with friends and had read many articles in technical magazines on the subject. He added that anyone traveling for the government realized there was a great secret project in Tennessee and he had merely assumed that it was engaged in the development of atomic power. He was cautioned against such further disclosures.

In June 1945 received a long distance call from a man identifying himself as a who requested an unspecified quantity of U-235 for the purpose of creating a sensation in lectures he frequently gave. Upon investigation, proved to be an imaginative

who explained that about four years previously he had read several articles on the potentialities of U-235. He said he had met when the latter had visited employer, an old friend. Assuming that America was interested in U-235 from a military standpoint and knowing reputation in the field of cosmic rays and nuclear physics, had telephoned to learn from him where he could obtain a sample of this substance. After CIC agents explained the security aspects of the situation, promised to make no further inquiries.

A civilian employee, who, in her position as confidential secretary had necessarily acquired considerable information about the work of the Project, wrote a letter to an uncle stating that she knew what was being done at Oak Ridge; that was known as the ," and that it was expected that the war would be over quickly when the product produced at Oak Ridge was finally used. Unfortunately for her, but fortunately for security, the letter came into the hands of CIC agents after she dropped it in a bus on the Clinton Engineer Works area prior to mailing. Her employment was promptly terminated by the company.

In February 1945, a Project worker at the at the reported to the Director of Security that in a tavern across the street from the he had heard that the was soon to close and that many of the people would be transferred to New Mexico to a place that was quite confined and lacking in many of the urban comforts. Surveillance of the tavern for several days by CIC agents disclosed that employees of the tavern knew that the and the Army were working together at the that shipments entered the under armed guard; and that the owner of the tavern had probably made statements that some place in New Mexico was connected with the One employee was overheard to state in the tavern that the was engaged in experiments and research and that experiments were conducted on animals. The tavern owner was readily recruited in an attempt to stop this loose talk. He displayed security posters prominently and promised to inform agents of any further loose talk overheard in the tavern.

Engineer Careless With Papers

In the fall of 1944 an employee of a firm which was doing engineering work for the Project arrived at Pennsylvania Station carrying a highly secret file of engineering details. With several minutes to spare before departure time of his train, he made a last minute call to his wife from a telephone booth. As he started for the train he discovered that he did not have the secret papers with him. Since it was now time for the train to depart, he chose to report the loss by a quick telephone call to his office with the request that someone come down and look for the papers while he continued on the train. The security agent for the company

rushed to the station and finally located the papers at the information booth. A telegram was dispatched to the Union Station in Washington requesting that the employee be contacted when the train arrived there and told to telephone his office. When he made the call, he was ordered back to New York where he was soundly reprimanded for his failure to drop his travel plans and search for the papers himself. His employment by the company was terminated.

Fraud Cases, Bodyguard Duty Among CIC Jobs

There were in addition certain other investigations which could not be included in the above categories. Most of these were cases of suspected fraud against the government. In each such case CIC conducted an investigation before submitting the case to Federal authorities for prosecution. Among these cases was the apprehension of an individual who had stolen $5,000 from a bank and the investigation of bus drivers and operators which resulted in the indictment of 57 persons. Among the many and varied assignments for CIC agents was that of bodyguards for key scientists. J. R. Oppenheimer, E. O. Lawrence, A. H. Compton and Enrico Fermi were accompanied by agents almost constantly, and other scientists were protected at intervals depending upon the work they were doing. It was necessary for these agents to be good conversationalists and be able to adapt themselves to any situation in which their wards might become involved. They were selected to be pleasing companions as well as bodyguards.

One bodyguard assignment that carried a particular thrill was given to Don Harley and Morgan Frank Game. Just before the Atom Bomb test at Almogordo, they accompanied General Groves on a tour of all the major sites where he collected the final story of the development. As they entered the train compartment after their last stop, General Groves produced two manila envelopes. "It's all in these two envelopes," he said. "From now on they are your responsibility. Deliver them to me in Washington." Solemnly the two agents filled out receipts for the envelopes, but General Groves laughed as he received them; they all knew how little would be the value of the receipts if the papers were lost.

Before the Test

Among their final duties before the Atom Bomb test, for which all those in-the-know had been waiting, agents made an extensive survey of the area surrounding Almogordo. A CIC team fanned out over the area, gathering statistics on the population, extent and location of hospital facilities, fire fighting equipment, various means of transportation, including number of cars and trucks, and the available plane landing spots.[125]

125 Interview with Don Harley, New York, at Ft Holabird, Aug 55.

On the night before the test, about 30 agents were stationed in strategic spots in the surrounding area for the dual purpose of picking up any rumors as to the cause of the blast and to protect the government from fraudulent claims for damages, which might be made after the real cause became known. One agent who was sent on this detail told afterward that, when given the assignment, he was told to take a two-weeks supply of clothes, about $75 in cash, and a flash-light. He never did learn the reason for the flash-light. No damage was reported, but rumors as to the cause of the blast ranged from earth quakes to falling meteors.[126]

Praise from General Groves

After the Atomic Bomb dropped on Hiroshima, Maj Gen L. R. Groves wrote to Col H. R. Kibler, CIC Chief, a letter of appreciation for CIC's work with the Manhattan Project. His letter read in part:

> "From the date that this Special Detachment was organized to the present time, personnel of the Manhattan District Counter Intelligence Corps Detachment have performed the function of maintaining to the highest degree the secrecy of the work involved and of withholding from enemy agents all knowledge of our progress in this field. The manner in which they carried out this task will survive to the lasting credit of that organization.
>
> "The release of publicity concerning the work of this vast undertaking has evoked from the people of the world an expression of amazement that a job of such magnitude and vital interest could have been kept from the public ear. This outstanding success could not have been possible without the work performed by the Counter Intelligence Corps."[127]

126 Interview with Don Harley, New York, at Ft Holabird, Aug 55, and interview with Alfred P. Ashton.

Appendix 1

Letter from Provost Marshal to Commanding General of each Service Command, requesting the designation of officers to act in liaison capacity with the Manhattan District.

CONFIDENTIAL

12 May 1943

SUBJECT: Loyalty Investigations of Personnel of the Manhattan District, United States Engineers

TO: Commanding General
Each Service Command

1. The Manhattan District of the United States Engineers is in charge of a very important secret war project. Certain installations in connection with this Project are within your Service Command. It is essential that the civilian personnel employed at these installations be given loyalty investigations for employment without delay.

2. In order to maintain strict secrecy in connection with loyalty investigations of civilian personnel at these projects it is desired that you designate a suitable officer to act as liaison with the Manhattan District, United States Engineers. It is desired that this office be furnished a copy of your correspondence with Manhattan District.

3. All necessary details as to installations, contractors, facilities, and the location of each will be furnished to you direct by the District Engineer of the Manhattan District in the near future.

Appendix 2

Letter authorizing the organization of
a Counter Intelligence Corps Detachment
for Manhattan Engineer District.

18 December 1943

MEMORANDUM FOR: THE COMMANDING GENERAL, ASF

SUBJECT: Organization of Counter Intelligence Corps Detachment for Manhattan Engineer District

1. The Chief of Staff has authorized the establishment of a special detachment of Counter Intelligence Corps commissioned and enlisted men to provide security for the work carried on by the Manhattan Engineer District.

2. The Secretary of War directs:

a. That necessary action be taken to organize a detachment of Counter Intelligence Corps Commissioned and Enlisted personnel under the Chief of Engineers or an officer especially designed by him to be used solely to provide security for the work carried on by the Manhattan Engineer District.

b. That the following grades and ratings be authorized for this detachment and for no other purpose:

One Colonel		
One Lieutenant Colonel		
Five Majors		
Ten Captains		
Eight First Lieutenants		
Total	25	
Twelve Master Sergeants		
Twenty-two Technical Sergeants		
Twenty-six Staff Sergeants		
Seventy-seven Sergeants		
Total	137	
Total		162

c. That this detachment procure all supplies from a confidential list of equipment for Counter Intelligence Corps and that no standard table of equipment be established.

1268

d. That necessary Counter Intelligence Corps personnel to provide for this detachment be furnished by the Assistant Chief of Staff, G2, War Department General Staff.

Letter sent to each Service Command announcing formation of Special CIC Detachment to handle all intelligence matters pertaining to the Manhattan District.

27 December 1943

SUBJECT: Personnel on DSM Project

TO: The Commanding General
Fourth Service Command
Atlanta, Georgia

1. Reference is made to letter to you dated 25 May 1943, subject as above, which is rescinded.

2. Heretofore substantially all counterintelligence activities within your command with respect to the DSM Project have been carried on under the direction of Col Stacy Knopf of your command.

3. A special detachment is now being organized to carry on counterintelligence activities with respect to the entire DSM Project; however, your assistance may be required from time to time in cases of emergency and in maintaining routine liaison with other investigative agencies. Col Stacy Knopf of your command is familiar with this proposed organization and its representatives within your command.

4. The Secretary of War directs:

a. That effective 1 January 1944, you are relieved of counterintelligence responsibility with respect to the DSM Project.

b. That the separate files containing the DSM Project maintained by Col Stacy Knopf, by direction of this division, be transferred effective 1 January 1944 to the custody of the District Intelligence Officer, Manhattan Engineer District, within your command. Extracts of counterintelligence information from these files of general interest to your command may be retained for your general counterintelligence files to the extent that such extracts do not disclose the character, activities or objects of the DSM Project.

c. Confidential funds for the Military Intelligence Division continue to be disbursed by you to the District Intelligence Officer of the Manhattan Engineer District for DSM counterintelligence activities in accordance with present directions until further instructions are issued through this division.

d. That all equipment heretofore devoted by your office exclusively to counterintelligence activities in connection with the DSM Project be transferred to the District Intelligence Officer of the Manhattan Engineer District with your command.

e. That you cooperate with and render assistance to the District Intelligence Officer of the Manhattan Engineer District within your command to the fullest extent, and that such assistance and cooperation be given first priority in all cases.

f. That future instructions of the Secretary of War concerning this matter may be issued by Brig Gen L. R. Groves, C. E.; that all such instructions and communications issued through General Groves be communicated directly to the officer designated in paragraph 3, and that all liaison between the area intelligence officer of the Manhattan Engineer District and your office be through the same officer. The connection of General Groves with the Manhattan Engineer District will not be disclosed to anyone other than the officer designated in paragraph 3.

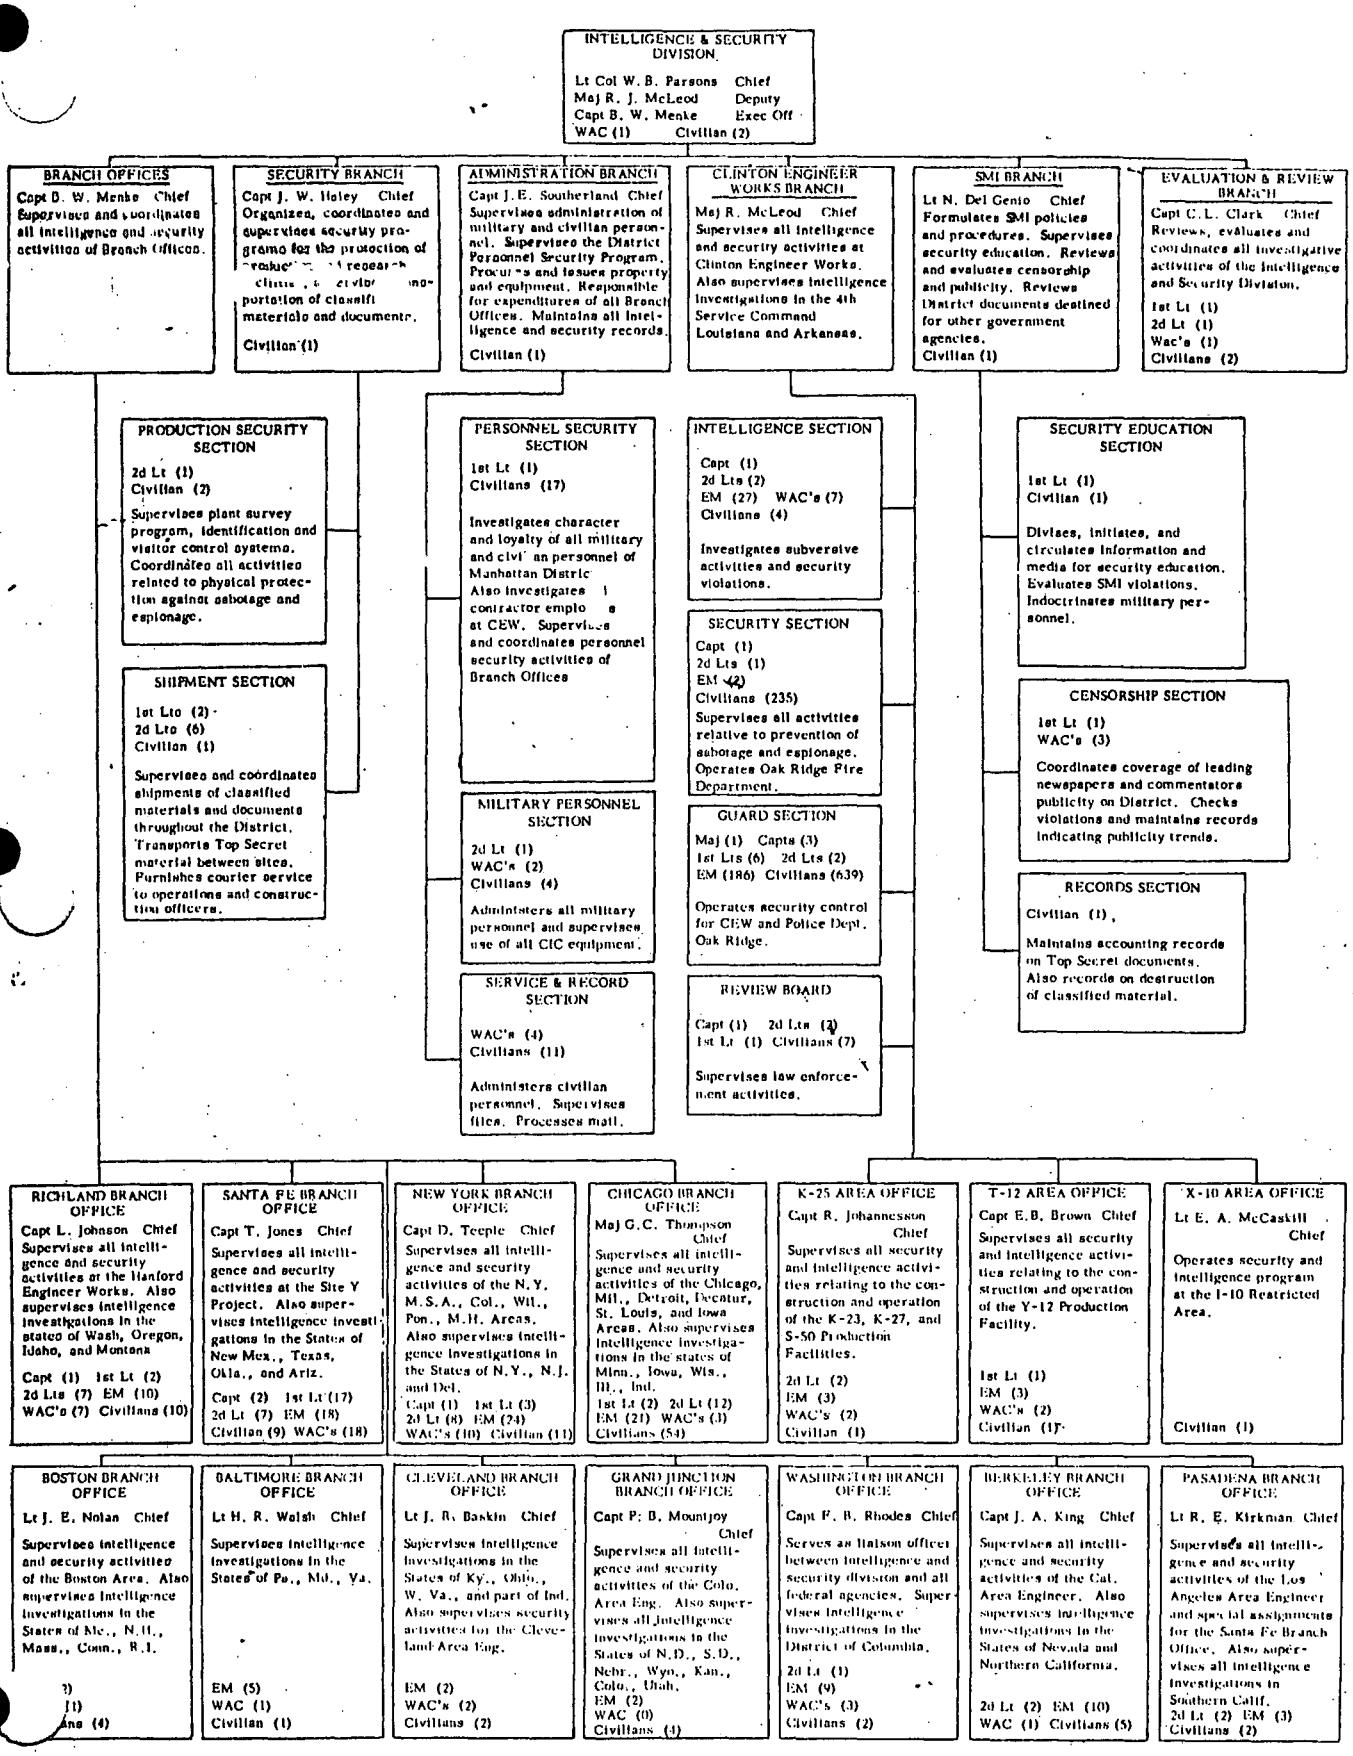
Organizational Chart of the
Intelligence and Security Division



INTELLIGENCE & SECURITY DIVISION
Lt Col W. B. Parsons Chief
Maj R. J. McLeod Deputy
Capt B. W. Menke Exec Off
WAC (1) Civilian (2)
BRANCH OFFICES
Capt B. W. Menke Chief
Supervises and coordinates all intelligence and security activities of Branch Offices.
SECURITY BRANCH
Capt J. W. Haley Chief
Organizes, coordinates and supervises security programs for the protection of
portation of classifi materials and documents.
Civilian (1)
ADMINISTRATION BRANCH
Capt J.E. Southerland Chief
Supervises administration of military and civilian personnel. Supervises the District Personnel Security Program. Procures and issues property and equipment. Responsible for expenditures of all Branch Offices. Maintains all intelligence and security records.
Civilian (1)
CLINTON ENGINEER WORKS BRANCH
Maj R. McLeod Chief
Supervises all intelligence and security activities at Clinton Engineer Works. Also supervises intelligence investigations in the 4th Service Command Louisiana and Arkansas.
SMI BRANCH
Lt N. Del Genio Chief
Formulates SMI policies and procedures. Supervises security education. Reviews and evaluates censorship and publicity. Reviews District documents destined for other government agencies.
Civilian (1)
EVALUATION & REVIEW BRANCH
Capt C.L. Clark Chief
Reviews, evaluates and coordinates all investigative activities of the Intelligence and Security Division.
1st Lt (1)
2d Lt (1)
Wac's (1)
Civilians (2)
PRODUCTION SECURITY SECTION
2d Lt (1)
Civilian (2)
Supervises plant survey program, identification and visitor control systems. Coordinates all activities related to physical protection against sabotage and espionage.
SHIPMENT SECTION
1st Lts (2)
2d Lts (6)
Civilian (1)
Supervises and coordinates shipments of classified materials and documents throughout the District. Transports Top Secret material between sites. Furnishes courier service to operations and construction officers.
PERSONNEL SECURITY SECTION
1st Lt (1)
Civilians (17)
Investigates character and loyalty of all military and civilian personnel of Manhattan District
Also investigates contractor employees at CEW. Supervises and coordinates personnel security activities of Branch Offices
MILITARY PERSONNEL SECTION
2d Lt (1)
WAC's (2)
Civilians (4)
Administers all military personnel and supervises use of all CIC equipment.
SERVICE & RECORD SECTION
WAC's (4)
Civilians (11)
Administers civilian personnel. Supervises files. Processes mail.
INTELLIGENCE SECTION
Capt (1)
2d Lts (2)
EM (27) WAC's (7)
Civilians (4)
Investigates subversive activities and security violations.
SECURITY SECTION
Capt (1)
2d Lts (1)
EM (42)
Civilians (235)
Supervises all activities relative to prevention of sabotage and espionage. Operates Oak Ridge Fire Department.
GUARD SECTION
Maj (1) Capts (3)
1st Lts (6) 2d Lts (2)
EM (186) Civilians (639)
Operates security control for CEW and Police Dept. Oak Ridge.
REVIEW BOARD
Capt (1) 2d Lts (2)
1st Lt (1) Civilians (7)
Supervises law enforcement activities.
SECURITY EDUCATION SECTION
1st Lt (1)
Civilian (1)
Divises, initiates, and circulates information and media for security education. Evaluates SMI violations. Indoctrinates military personnel.
CENSORSHIP SECTION
1st Lt (1)
WAC's (3)
Coordinates coverage of leading newspapers and commentators publicity on District. Checks violations and maintains records indicating publicity trends.
RECORDS SECTION
Civilian (1)
Maintains accounting records on Top Secret documents. Also records on destruction of classified material.
RICHLAND BRANCH OFFICE
Capt L. Johnson Chief
Supervises all intelligence and security activities at the Hanford Engineer Works. Also supervises intelligence investigations in the states of Wash, Oregon, Idaho, and Montana
Capt (1) 1st Lt (2)
2d Lts (7) EM (10)
WAC's (7) Civilians (10)
SANTA FE BRANCH OFFICE
Capt T. Jones Chief
Supervises all intelligence and security activities at the Site Y Project. Also supervises intelligence investigations in the States of New Mex., Texas, Okla., and Ariz.
Capt (2) 1st Lt (17)
2d Lt (7) EM (18)
Civilian (9) WAC's (18)
NEW YORK BRANCH OFFICE
Capt D. Teeple Chief
Supervises all intelligence and security activities of the N.Y. M.S.A., Col., Wil., Pon., M.H. Areas.
Also supervises intelligence investigations in the States of N.Y., N.J. and Del.
Capt (1) 1st Lt (3)
2d Lt (8) EM (24)
WAC's (10) Civilian (11)
CHICAGO BRANCH OFFICE
Maj G.C. Thompson Chief
Supervises all intelligence and security activities of the Chicago, Mil., Detroit, Decatur, St. Louis, and Iowa Areas. Also supervises intelligence investigations in the states of Minn., Iowa, Wis., Ill., Ind.
1st Lt (2) 2d Lt (12)
EM (21) WAC's (3)
Civilians (54)
K-25 AREA OFFICE
Capt R. Johannesson Chief
Supervises all security and intelligence activities relating to the construction and operation of the K-23, K-27, and S-50 Production Facilities.
2d Lt (2)
EM (3)
WAC's (2)
Civilian (1)
T-12 AREA OFFICE
Capt E.B. Brown Chief
Supervises all security and intelligence activities relating to the construction and operation of the Y-12 Production Facility.
1st Lt (1)
EM (3)
WAC's (2)
Civilian (1)
X-10 AREA OFFICE
Lt E. A. McCaskill Chief
Operates security and intelligence program at the I-10 Restricted Area.
Civilian (1)
BOSTON BRANCH OFFICE
Lt J. E. Nolan Chief
Supervises intelligence and security activities of the Boston Area. Also supervises intelligence investigations in the States of Me., N.H., Mass., Conn., R.I.
BALTIMORE BRANCH OFFICE
Lt H. R. Walsh Chief
Supervises intelligence investigations in the States of Pa., Md., Va.
EM (5)
WAC (1)
Civilian (1)
CLEVELAND BRANCH OFFICE
Lt J. R. Baskin Chief
Supervises intelligence investigations in the States of Ky., Ohio., W. Va., and part of Ind. Also supervises security activities for the Cleveland Area Eng.
EM (2)
WAC's (2)
Civilians (2)
GRAND JUNCTION BRANCH OFFICE
Capt P. B. Mountjoy Chief
Supervises all intelligence and security activities of the Colo. Area Eng. Also supervises all intelligence investigations in the States of N.D., S.D., Nebr., Wyo., Kan., Colo., Utah.
EM (2)
WAC (0)
Civilians (1)
WASHINGTON BRANCH OFFICE
Capt F. B. Rhodes Chief
Serves as liaison officer between intelligence and security division and all federal agencies. Supervises intelligence investigations in the District of Columbia.
2d Lt (1)
EM (9)
WAC's (3)
Civilians (2)
BERKELEY BRANCH OFFICE
Capt J. A. King Chief
Supervises all intelligence and security activities of the Cal. Area Engineer. Also supervises intelligence investigations in the States of Nevada and Northern California.
2d Lt (2) EM (10)
WAC (1) Civilians (5)
PASADENA BRANCH OFFICE
Lt R. E. Kirkman Chief
Supervises all intelligence and security activities of the Los Angeles Area Engineer and special assignments for the Santa Fe Branch Office. Also supervises all intelligence investigations in Southern Calif.
2d Lt (2) EM (3)
Civilians (2)

Appendix 6

Intelligence Bulletin #3, a sample of the kind of material sent to all installations engaged in Manhattan District work to aid in the program of "Safeguarding Military Information."

CONFIDENTIAL

WAR DEPARTMENT
UNITED STATES ENGINEER OFFICE
MANHATTAN DISTRICT
Oak Ridge, Tennessee MI-6

INTELLIGENCE BULLETIN #3 15 September 1943

SUBJECT: Security Educational Program

TO: All Area Engineers
MED
ATTN: Intelligence Officers

I. General:

A. Mission of the Program:

1. The manifold types of violations and derelictions in safeguarding classified military information evidence the need for a security educational program. The mission of such a program is to so educate all personnel concerned that they may become instinctively alert minded and security wise to the end that not only will all classified documents and other papers be handled and safeguarded in accordance with provisions of AR 380-5 and supplementary matter pertaining thereto, but also that loose talk will be eliminated and words and action will disclose no information of value to the enemy or to those not properly authorized to receive it. Accordingly the following program is submitted for adoption and adaptation as circumstances permit.

II. Details:

A. Security Agent.

1. Upon this person depends the supervision and execution of the bulk of the educational program presented.

2. Consequently the selection of such agent wherever possible should be made with care, not only should he have time at his disposal but also he should be tactful, a promoter possessing ability to sell himself and his work to all concerned. Further he should have personal address, some flare for public speaking, be possessed of imagination and some ability to dramatize.

B. Method:

1. This security educational agent should schedule activities so that he can assemble as large a group as possible of pertinent personnel - i.e., supervisors or others in charge of sections where classified work and documents are handled - for the first of periodic talks on the subject of "Security." These are the personnel who will execute the security agent's program in the lower echelons. The security agent might open his talk by explaining the average American's proneness for satisfying his curiosity for acquiring information, his tendency to disseminate it in his unguarded conversation or his incautious written communication or to give it without questioning the recipient's right to have it.

2. The security educational agent should explain that the object of enemy intelligence is to collect information which will reveal or from which can be deduced our proposed military activity. Then he should explain how espionage works--that is that it consists mainly of acquiring bits of information from this, that and other sources which may be apparently unrelated. From these varied scattered sources it is all compiled by specialists to formulate a complete picture, thus giving the enemy sufficient notice of our activities which may result in the failure of our mission and the destruction of our force. He should stress that, although information may be conveyed to one who is not authorized but yet apparently reliable, the informant has lost control of his information, he has set it in motion, and he can not be sure that the recipient will not in some way disclose it to another whose carelessness will cause it to fall into the hands of the enemy.

3. Further he should explain that if the individual can keep from disclosing his information, that makes one less available source contributing to the picture the enemy seeks to reproduce, and that the completion of their picture reflecting a military activity or defense work may be so delayed that it is of no use to them when it is completed because our mission will have been achieved. Indeed, it may be that the one bit of information that a person unwittingly passed on may prove to be the very piece that makes the jigsaw picture intelligible to the enemy. In short then, military or project information will be shared with no unauthorized person.

4. The question arises as to what categories of military or project information should not be discussed. The answer is simple. All military or project information should not be discussed with or written to persons not authorized to receive it.

5. To be effective however, the word all should be particularized. Particulars will vary at various installations. Accordingly, they may be drawn from the work being performed there; however, some of the following may be

1282

pertinent illustrations of what should be left out of conversations outside of technical areas or in the presence of unauthorized persons or should be omitted from personal letters.

(a) Any illusion to the mission of the Project.

(b) Any reference to the general problems being worked on.

(c) Any technical data covering (a) or (b).

(d) Reference to any materials being processed, procured or present anywhere on the reservation.

(e) The types of equipment within the restricted areas or the manner of operation.

(f) The affiliation of the Project with any other war project.

(g) Reference to the professions or former connections of persons working in any technical or restricted area.

(h) Discussion of the functions of co-workers in other restricted areas of the Project.

(i) The name of the contractor under whom this project is being operated.

(j) The size or scope of the Project.

(k) The mention of any sensitive points, e.g., the centers for communication, the power and water supply and other utilities including the fire protection system or the extent thereof.

(l) Circulation of newspaper articles that may discuss technical work or any of the above listed items performed on the Project.

(m) Circulation of any rumors covering the above listed subjects.

(n) Any photographs showing restricted areas or any items listed supra.

6. The purpose of elaborating on the topics here and above mentioned will be to illustrate how loose talk concerning any of these topics may result in loss or damage by hostile agents or may insight further search and inquiry by persons hostile to our interest. Further, the above listed topics will

serve to alert personnel towards any questions directed to them by strangers, for if an enemy agent cannot acquire information by listening to loose talk he must interrogate and the persistent interrogator will be reported and can be dealt with.

III. Suggestions for presenting the talk:

1. In pre enting his talk to supervisory or to operational personnel the security educational agent should bear several points in mind. He may have to overcome the prejudices or apathy probably existing among his audience that security is extremely dull. He will have to avoid technical jargon, e.g., "Security of information," "of materials," "of the Project;" for it may mean nothing to his listeners. He must show that security is not merely negative; it is a positive weapon to blind the enemy, to keep him guessing, possibly to dilute his strength by spreading his forces to cover all contingencies. He must avoid a succession of don'ts or the repetition of the necessity to "keep your mouth shut," or else he will soon put his audience to sleep. He should open on a light note, should sandwich heavy bits between more attractive material such as spicy stories, personal reminiscenses or examples of violations of security already noted in the particular installation involved.

2. He should emphasize that security is not a matter for specialists, rather it directly concerns every individual; he should stress that everyone is personally responsible for security and that a word on his part may well provide the enemy with what he wants to know. Emphasize to administrative or other persons in supervisory capacities the importance of exemplifying security consciousness, for the attitude of the workers will be conditioned by that of their superiors. It is well to remember that personal example is eloquent.

3. Further having presented his message on the "need-to-know," "loose talk," or the necessity for safeguarding military or project information, the security agent, to stimulate active interest on the part of all concerned may ask his audience for any suggestions on how such a program may be best effectuated.

4. Some sort of suggestion box or contest may be devised to receive suggestions which may be the subject of informative cartoons or posters which may be the basis of a better security observance program.

5. The importance in giving a clear informative talk covering the above subject matter cannot be over emphasized. Personnel see many memoranda covering many subjects. In many cases they develop a habit of merely glancing through the contents. The number of varied memoranda militates against their complete absorption in the absence of incessant supervision. Giving a talk therefore is a different approach and will serve to impress the content and the ends to

be achieved. Further, at the conclusion of the talk, where suggestions are asked for better effectuating the program, there should be an immediate participation therein. Suggestions for security made by personnel are more apt to be observed than any rules that may be imposed.

These devices keep the subject of security before the minds of personnel and will enliven interest.

IV. Other Media:

A. General.

1. Having explained the importance of security to the work being done on the installation, the security educational agent may employ other media further to vivify and to fix in the minds of his audience the need for security concerning the work being done.

B. Particular.

1. As soon as practicable after his talk, arrangements should be made for the audience to attend a showing of War Department training films on safeguarding military information and related subjects. A list of available training films and brief description of their contents is reflected in the appendix (Exhibit A). If in a project, films may be shown in a private theater as an extra to the current shows.

2. Thereafter there should be an appropriate follow up based on AR 380-5 circulated to all personnel handling or having access to classified papers. A composite diagram pertaining to handling of classified materials has been prepared and is submitted in the appendix hereto (Exhibit B). Copies of this diagram should be circulated to all personnel concerned and care should be taken to see that all have read it and understand it. An occasional checkup by the security agent is advisable to note compliance therewith.

3. Also helpful in this regard is a manual for personnel handling or having access to secret, confidential or restricted documents published by the Office of the Adjutant General, War Department, 1 June 1943, a copy of which is also appended hereto (Exhibit C). Some revisions have been made to suit Manhattan Engineer District subject matter.

4. Further, War Department Training Circular #99 (1942) contains an informative talk on the motives that impel loose talk and reasons for the necessity of eliminating it. Designed primarily as a basis for security talks to soldiers, this circular, nevertheless, has matter applicable to civilians.

5. Valuable for its explanations of how seemingly unrelated bits of information may be collected and fitted together by the enemy to reflect an intelligent picture of our war activities is a readable pamphlet entitled: A PERSONAL MESSAGE TO THE MOTHERS, WIVES, FATHERS, BROTHERS, SISTERS, AND FRIENDS OF SERVICE MEN FROM GENERAL MARSHALL AND ADMIRAL KING.

6. In order to remind pertinent personnel to check that safes, files and other repositors have been locked at closing time, a fan shaped card about six inches long may be inserted in the handles of safe cabinets, lock files and so forth when they have been opened, and removed after being locked for the night (Exhibit D).

7. Further small card notices (3 by 4 inches) bearing the inscription "IS YOUR SAFE LOCKED?" may be circulated and judiciou ly posted (Exhibit E).

8. Posters designed for individual as well as for mass appeal should be generously distributed throughout the buildings and other places where workers congregate throughout the area. These should include notice of the federal sabotage act, the espionage act and subject on the theme of no loose talk. Appended hereto is a title list of other posters, available from the AGO and procurable through Service Command headquarters (Exhibit F). Attempts are being made to secure pertinent posters from other sources such as the Office of War Information and Army Service Forces. These will be distributed upon receipt. They should be rotated frequently to keep them from becoming stale.

9. A large billboard or a large bulletin-board readily visible and located at entries or exits to the post may be erected reflecting in substance the following caution:

"What you see here,
What you do here,
What you hear here,
When you leave here,
Let it stay here."

10. Cautionary notices on the theme of "No Loose Talk," or "Zip Your Lip," or "Don't Discuss Your Work" may be printed on handbills or posted where other public notices are ordinarily circulated.

11. Use of music with cautionary slogans as a theme may be used such as:

a. Jingles in juke boxes or

b. Tunes broadcast in a public address system.

12. Telephone booths. Attractive posters therein reminding persons to omit reference, in conversation, to military matters or other topics concerning the Project.

13. Telegraph. Install a voluntary form of censorship; that is, "Leave out references to military matters or to the Project."

14. Match folders, stationary and so on, and other matter having general circulation. These may be utilized to carry some catchy line or cautionary notice.

15. Any other means which may be peculiar to an installation or which may serve to educate personnel to become security conscious may be utilized.

V. Areas Surrounding Installations

A. Having thoroughly covered the project installation, the security educational program may be carried into nearby communities, towns and cities. The approach in these outside contacts surrounding a project or other important installation should be made through the service command in order to disassociate the project as a sponsor of specific requests and thus check curiosity on the part of those whose services are enlisted.

1. The cooperation of such organizations may be solicited.

a. Chamber of Commerce: Responsible persons therein may be interviewed and their cooperation secured to circulate and post posters, cartoons and other educational notices in business houses, public gathering places and public conveyances, etc.

b. Newspapers in neighboring communities may be furnished lead stories, cartoons and so forth, all on the theme of "Zip Your Lip." "Don't discuss military or defense matters; the enemy wants to know what you know."

c. Local radio stations may broadcast appropriate spot announcements and so forth: "Here is a message from - (commanding general of the Service Command). We are at war. Keep military or other information out of your conversation;" or "We are at war; don't discuss defense industries or other military matters with anyone." They may also put on local dramatizations on the effects of leakages of information. The Office of War Information has done considerable work in this respect. Appropriate items may be suggested to this office for transmission to that agency.

d. The services of regional offices of the American Legion, the DAR, the USO and so forth may possibly be enlisted in disseminating a security educational program appropriate to their areas.

B. Summary: An enterprising security educational agent will capitalize on his knowledge of his constituency to develop other pertinent suggestions. The ... ls ... ...y the need for being security wise and to build a habit of alertness by constant repetition using a variety of appeal. Ingenuity is valuable. As alertness increases, the work of the enemy agent is made progressively difficult; he must interrogate persistently; he must try to observe; consequently, all those who are apparently unauthorized to seek information will be reported.

VI. Precautions:

A. Concurrent with the instructive talk and the publicity follow up various precautionary measures may be instituted. These may be summed up as follows:

1. Check the efficiency of the plan frequently and maintain recurrent inspections to insure compliance.

2. Maintain a list of contacts who will report criticisms of the educational talks or other phases of the program so that appropriate remedial action can be guided accordingly.

3. Undertake a survey especially in the section of the installations handling or having access to classified papers or the status of security or connection therewith. Appended hereto is a sample list of questions which may be used to test the adequacy of security in such places (Exhibit G).

4. If outside sources seek to purchase products produced under contract with the Manhattan Engineer District or destined for this District, see that all inquiries from such outside sources, without revealing the present activities of the company, will be forwarded to the District Engineer, Attention, the District Intelligence Officer.

5. Devote special attention to the security educational program as it affects young personnel. There are a number of young college and graduate students engaged in classified work which involves traveling and visiting experimental laboratories. Upon employment they will be exposed to the various phases of the security program. Prior to departure from a home station, care should be taken to see that they have reviewed pertinent sections of literature on the subject: AR 380-5; War Department Training Circular #99, 1942; "A Personal Message

CONFIDENTIAL

from General Marshall and Admiral King," etc, and have been again alerted to inquiries from unauthorized personnel and cautioned against discussing any matter pertaining to their work in public places or conveyances.

6. Maintain an inventory of security violations and the action taken with respect thereto. Similarly for any violations of censorships. A list of rumors concerning the Project or the work of contractors for the Project is valuable. All these serve as a guide in laying plans for future security educational measures.

FOR THE DISTRICT ENGINEER:

Part III: CIC With the Alsos Mission

CONFIDENTIAL

Part III

CIC WITH THE ALSOS MISSION

Ranking among the most important missions that CIC participated in during World War II was the ALSOS Mission. Created principally to determine how far [illegible] scientists and technicians had advanced in the application of atomic energy to warfare, the ALSOS Mission was accorded the utmost security precautions.

The military Chief and Deputy Chief of the Mission were both men of considerable counterintelligence experience. Before ALSOS was completed, a total of 22 CIC agents had been attached to the Mission. In December 1945 Lt Col George R. Eckman prepared a final report on the ALSOS Mission; it is from this document that the following history of CIC in the Mission has been extracted.[128]

Planning the Mission

The potential contribution of modern science to the waging of a new type of warfare confronted the War Department with a specialized intelligence problem in 1943. In recognition of this problem, the Army Assistant Chief of Staff, G2, Maj Gen George V. Strong, presented the Chief of Staff, Gen George C. Marshall, with a plan for the first American scientific intelligence mission on 25 September 1943. A memorandum setting forth a proposal for the organization of the mission was concurred in by Dr. Vannevar Bush, Director of the Office of Scientific Research and Development, and by Maj Gen Leslie R. Groves, Chief of the Manhattan Engineer District, which was developing the Atomic Bomb.

The plan was approved by the Secretary of War and the Secretary of Navy, and the Mission became a unified scientific intelligence endeavor representing the armed forces and the national emergency civilian agency responsible for coordinating science and research in the war effort.

The importance of the objectives of the Scientific Intelligence Mission and the nature of its operations dictated that the most thorough security measures be employed. In conforming with this policy, a code name, "ALSOS Mission," was selected to facilitate communications and other normal identification of the organization.

The first step in the change of ALSOS from a plan to an active organization was the selection of a Chief of the Mission. Due to the highly classified nature of the mission, counterintelligence factors as well as the collection and evaluation

128 "Final Report on the ALSOS Mission," prepared by Lt Col George R. Eckman, (Conf), is on file in the G2 Documents Lib, Pentagon, Wash DC.

1291

CONFIDENTIAL

of positive intelligence, had to be taken into consideration in appointments to the ALSOS staff.

On 26 November 1943, Lt Col Boris T. Pash, MI, was appointed Chief of the Mission. For the two previous years Colonel Pash had headed the Counter Intelligence Branch of the Western Defense Command and the Fourth Army. In addition to the Chief of the Mission, the Army provided a small operating staff, including four CIC agents. Military and civilian scientists from the War and Navy Departments and the Office of Scientific Research and Development were assigned as the technical specialists for ALSOS.

Initial plans for ALSOS called for a small organization to conduct exploratory probing in the first areas retaken by Allied forces in Europe.

First Mission to Italy

ALSOS operations began in Italy 17 December 1943, when the first operating headquarters was established in Naples. Some Mission personnel arrived in the Theater after travelling by air from Algiers. Four CIC agents, Ralph T. Gerame, Carl F. Fiebig, Perry O. Bailey, and Gerald L. Beatson, were attached to the Mission in Naples, and necessary equipment was obtained on loan from the Peninsular Base Section.

The first active intelligence work of the Mission consisted of locating and interrogating Italian scientists who were in Sicily and liberated areas of Southern Italy. During the approximately six weeks of interrogations, it became evident that any possible information in Italy on German scientific developments in the higher priority fields would be centered in Rome.

Two plans were considered: the first, to join the "S" Force being organized for the fall of the Italian capital; the second, to devise means of abducting key scientists from Rome and Northern Italy for questioning. Due to the stalling of the Allied advance during the winter of 1944, however, and the dubious outcome of the abduction plan, it was decided to return the Mission to the War Department in the latter part of February 1944.

The sending of the first small ALSOS group to Southern Italy represented a new undertaking in our military history, and its brief experience was largely experimental. This pioneering effort served to demonstrate the great need in this new warfare of laboratories for an intelligence collecting agency organized with highly specialized personnel, both operating and technical.

Plans for the Mission in the European Theater

Preliminary plans for ALSOS operations in Continental Europe in conjunction with the forthcoming invasion by the Allied Expeditionary Force were completed in the Military Intelligence Services Office of the War Department during April and the first part of May 1944.

ALSOS was attached to the Office of the AC of S, G2, European Theater of Operations, for administration. The Mission was without organized tables of allowance or personnel and equipment and Colonel Pash found it difficult to secure even a bare minimum of manpower and supplies; contributory was the highly classified nature of the Mission which prevented the dissemination of its importance to any but a few high ranking officials in the Theater.

While operational plans were being completed in London, Lt Col George R. Eckman, MI, arrived to join the mission on 13 August 1944 as London Liaison Officer. Previously associated with Colonel Pash in counterintelligence work in the United States, Colonel Eckman became Deputy Chief of the ALSOS Mission upon the establishment of an European Headquarters in Paris.

Further Exploitation in Italy

Even while plans for ALSOS in the North European operations were being drafted, Colonel Pash made a hurried trip to the Mediterranean Theater during the period 4-10 June 1944. Landing by plane at Naples, Colonel Pash travelled to Rome in a jeep accompanied by CIC Agent Bailey. They arrived in the Italian capital shortly after the city fell to the Americans and proceeded to investigate ALSOS targets of first priority. Three leading Italian scientists listed as top personnel targets were apprehended and interrogated.

While in Rome they made arrangements for the reopening of a Mediterranean ALSOS office. An officer member of the Mission flew from Washington to take charge of this branch, assisted by Special Agent Cerame and other CIC agents. The Mediterranean Section continued investigations and interrogations of scientific personnel in Italy.

ALSOS Operations in Liberated France

The initial tactical successes of the Normandy beach landings failed to expose targets of primary interest to ALSOS. However, with the collapse of the German defenses in Normandy and Brittany early in August, the first Mission team landed on the French coast.

Rennes, France, was reached late on the afternoon of 9 August by Colonel Pash and CIC Agent Beatson. The following morning, the first institutional target,

CONFIDENTIAL

the University of Rennes, was entered and searched. Colonel Pash located two members of the faculty and secured documents indicating the nature of scientific activities in other universities of France as well as German physics and chemistry publications dated as late as March 1944.

While on this excursion, the Mission Chief made arrangements with the 12th Army Group G2 for an ALSOS team to enter Paris.

The ALSOS team selected for the purpose of joining the Task Force for entry into Paris was headed by the Mission Chief and included CIC Agents Beatson and Nathaniel W. Leonard. The party crossed the English Channel by dispatch boat on 22 August and reached the 12th Army Group "T" Force Headquarters near Rambouidlet the following day. It became apparent on 24 August that the American Forces were delayed by enemy resistance and that the first entry into Paris would probably be made from the southwest by elements of the French 2d Armored Division. The ALSOS party received authorization to cut across country and join the French unit. Colonel Pash and his group reached the Port d'Orleans gateway to Paris and entered the city at 0855 hours, 25 August, the first American unit to move into the liberated French capital.

Early entry into Paris had been of prime importance to the Mission, since it was expected that the first top priority personnel target would be reached in this city. Frederic Joliot-Curie, eminent French physicist and Nobel Prize winner, was sought by the ALSOS party to furnish the first tangible clues as to German progress in the application of atomic energy to warfare. Information was obtained that Doctor Joliot-Curie might be found at his laboratory. Four times during the day, Colonel Pash and his party attempted to reach Joliot-Curie only to be turned back by German tank and sniper fire. Finally, at 1640 hours, the laboratory was reached and Doctor Joliot-Curie located. The scientist was unarmed and joyous in his greeting of the American liberators. He readily agreed to cooperate in furnishing what preliminary information he had available. Later he was sent to London for conferences with American and British scientists.

Following receipt of ALSOS progress reports, citing the successful entry into Paris and the information obtained from Dr. Joliot-Curie and other early contacts, letters of commendation were received by the Mission from Maj Gen Clayton Bissell, AC of S, G2, War Department, and Brig Gen R. A. Osmun, Chief of the Military Intelligence Service.

Belgian Targets Reduced

Allied progress to the north of Paris indicated the possibility of an early entry by British forces into Brussels, the Belgian capital, and Antwerp. An ALSOS advance unit, headed by Colonel Pash and including three CIC agents, left Paris

headquarters on 6 September. The G2 of Communications Zone, ETOUSA, accompanied the party in order to acquaint the British Intelligence chief of 21st Army Group with the activities and authority of the ALSOS Mission. Due to the rapidly changing combat situation, 21st Army Group Headquarters was not located, and the advance party of ALSOS proceeded to Brussels, entering the city late in the afternoon. As far as can be ascertained, the ALSOS team established another first at Brussels, being the first American unit to reach the city after liberation.

Information had been furnished the Mission that a supply of critical materials, used in the atomic bomb process, might be found in the vicinity of Antwerp. The Commander of the British "R" Force at Brussels was contacted and the necessity of reaching Antwerp explained to him. As the road between the Belgian capital and Antwerp was still under sporadic enemy fire, the British Commander furnished the ALSOS unit with a platoon of armored cars to serve as an escort. The Belgian port was reached without incident, although scattered shellfire was being directed by the Germans at portions of the city. Belgian officials with knowledge of the existence of the valuable material were contacted and arrangements were made to visit the storage area on the Albert Canal, west of Antwerp, at a later date. Then, the ALSOS "spearhead" group returned to Paris.

A highly classified message was radioed from Paris to the War Department for the Manhattan Engineer District, advising of the existence of the highly valuable material near Antwerp. On 19 September 1944 Colonel Pash travelled from Paris to Belgium by jeep, accompanied by CIC Agents Beatson and Fiebig. Arriving at the British Brigade Headquarters near the warehouse in which the material was reputedly stored, the investigators learned that the exact location was within 200 yards of the German lines. During the period 19 to 25 September, this area was searched four times during lulls in enemy fire. Colonel Pash and his two CIC agents were subjected to sniper fire three times and on one occasion narrowly averted being hit by German mortar fire. The material was finally located on 25 September and a platoon of British Royal Engineers was placed at the disposal of the Mission for guard duty and subsequent removal of the material for shipment to Great Britain and the United States.

Between trips in search of the material, Colonel Pash and Agent Beatson made a hurried entry in Eindhoven, Holland, on 21 September. A primary target, the important Phillips Works, was reconnoitered and arrangements were made for the reception and billeting of investigative teams of the CIOS (Combined Intelligence Operations Service).

Southern France Operations

In order to further consolidate Mission activities for exploitation of targets in the liberated countries and study of target data in Germany, a decision was

made to close the Mediterranean Theater office at Rome. Personnel of this office, including Agent Cerame, was ordered to proceed to Paris by way of Marseilles. This group arrived in Marseilles on 2 October and continued operations in Southern France until 18 October, exploiting targets along the Mediterranean Coast.

When the vital material had been located in Belgium, information was obtained that approximately two carloads had been shipped to the south of France at the time of the German invasion. But the reports on this shipment had been only fragmentary. The Mission Chief felt, however, that the indicated area would have to be combed by ALSOS personnel, although no allied troops yet had entered that area in Southern France. Nevertheless the small party of ALSOS personnel, which included Special Agent Fiebig, left Paris on 26 September for the operational "invasion" of the territory.

Temporary headquarters was established in a chateau near Perigueux and the group split up into small parties for an intensive ground search. Much critical material was discovered at Toulouse and eventually secured and transported to Marseilles. The unit had the distinction of being the first small showing of American troops in this part of Southern France.

New Leads Discovered in Paris

The major part of the month of November was spent in organizing target information for operations in Germany, in consolidating of all ALSOS activities in Paris and in conducting several small expeditions in the liberated areas.

The scientific leader of the Mission and ALSOS CIC agents uncovered several interesting new leads in Paris during this period. Offices of the important German firm of Siemens and Halshe and an undercover German scientific agency were located and searched. They were found just as the Germans had left them, since no other Allied intelligence agencies had entered the buildings prior to the ALSOS team. The investigation provided valuable leads for target exploitation of German institutions and laboratories. At the same time a secret German teletype system directory was uncovered that proved of extreme value to Allied intelligence.

As a result of data collected by Mission personnel in Paris, Colonel Pash, accompanied by CIC Agents Fiebig and Leonard, left on 8 November for a visit to Eupen, Belgium, near the German border. Here, the team located and seized the former German head of the Paris office of a leading German war materiel agency. Also apprehended was this official's secretary. They were given preliminary interrogations in Eupen and then evacuated to Paris for further questioning.

Operations in Strasbourg

Intelligence gathered by ALSOS in Paris and other liberated areas included German documents that listed the names of key scientists in Strasbourg and indicated that the Alsace capital might become the first highly important enemy-held ALSOS target likely to fall to Allied armies.

Planning for the Strasbourg entry was pushed during November. The Chief of ALSOS acquainted the G2 of Sixth Army Group with the special mission requirements, and the G2 directed his "T" Force commander for Strasbourg to give first priority to ALSOS targets.

Colonel Pash and his operatives left Paris on 24 November and arrived at a rendezvous point in Saarburg that day, moving on to Strasbourg the morning of 25 November. Intermittent German shelling of Strasbourg for the next two days kept Mission members dodging as they went about their work.

As a result of preliminary planning for target exploitation, key target areas were secured and placed under guard during the first two days in Strasbourg, despite the sporadic shellfire and the attendant confusion. Initial searches failed to locate wanted German scientists but, by the evening of 29 November, seven University of Strasbourg physicists and chemists were taken into custody.

Several key German scientists had received ample warning of the impending fall of Strasbourg and had fled the city. But they had left behind in their homes and laboratories, documents which later proved of high value in determining the scientific progress of the German war effort.

Results obtained from the Strasbourg operation were among the major ALSOS accomplishments during the entire history of the Mission. Due to the desire for the utmost secrecy in reference to ALSOS interest in nuclear physics and practical applications of atomic energy, interrogations of the personnel targets had to be conducted deftly and indirectly. Security considerations hindered the quest for some information. But the documentary evidence gave the Mission members the first concrete story of German progress in the atomic research field.

Commendations were received by the ALSOS Mission for the Strasbourg discoveries. From Major General Groves came the message: "We have recently completed an analysis of the voluminous records and other material collected by the ALSOS Mission in Strasbourg. This is the most complete, dependable, and factual information we have obtained bearing upon the nature and extent of the German war effort in our field. Fortunately it tends to confirm our conclusion that the Germans are now behind us."

1287

CONFIDENTIAL

Commendations were followed by promotions, and, in recognition of the superior work of two CIC agents, Carl Fiebig and Ralph Cerame, both men were given direct commissions as second lieutenants.

Cologne-Bonn Operation

In the second week of February 1945 ALSOS Mission directors learned of an impending Allied drive toward the Rhine in the Cologne-Bonn area. ALSOS planned to conduct operations in this new territory in conjunction with a 12th Army Group "T" Force. A Mission officer and several CIC agents went forward from Liege, Belgium, to the German city of Aachen to set up an ALSOS advance base for this operation. This team established the usual excellent ALSOS mess and prepared for the comfortable billeting of Mission personnel.

German resistance on the west bank of the Rhine collapsed suddenly on 6 March 1945. Colonel Pash and another Mission officer drove into Cologne on the morning of 7 March to find the "T" Force newly entered and preparing to establish a headquarters on the outskirts of the city. The Mission investigators were brought into Cologne on 8 and 9 March. They exploited targets at the University of Cologne and visited homes of personnel objectives.

On the afternoon of 8 March, while ALSOS teams were cleaning up target data in Cologne, word was received that the university town of Bonn was available for intelligence exploitation. Two teams were held in readiness for investigations in Bonn, but the city did not actually become available for entry until 10 March. A number of significant documents were secured at Bonn, and several personnel targets were interrogated. Exploitation of these targets continued until 12 March when part of the investigative team started back to Paris with a load of German documents. Major activities were completed the next day, and operating personnel returned to the ALSOS advance base at Aachen.

Information secured in the Bonn-Cologne area, though fragmentary, served to confirm the large amount of positive intelligence gathered earlier in Strasbourg on the highly important fields of practical application of atomic energy and bacteriological warfare. A few small details were added to the picture, and additional locations of important scientists and laboratories east of the Rhine were obtained and verified. A limited amount of data was also obtained on German research and development in metallurgy, aeronautics, and chemistry.

With the Germans driven across the lower Rhine, it became evident that the entire west wall would collapse and the upper Rhine would be cleared in the last week of March as well. ALSOS target preparations were pushed forward at Paris Mission headquarters for the next important Rhineland city: Ludwigshaven. Plans for the reduction of important scientific intelligence targets in this city were coordinated with the "T" Force of Sixth Army Group.

On 22 March, Colonel Pash led the ALSOS "spearhead" group into Ludwigshaven while the city was still being shelled by the enemy, who were holding their bridgehead on the west side of th Rhine to protect their retreat. The ALSOS party proceeded at once to the huge I. G. Farben Industries plant and secured guards for this important target from the armored unit driving through the city toward the Rhine. This major war plant was held by the ALSOS team and attached guards until the "T" Force moved in the next day.

Heidelberg Base Established

The crossing of the Rhine was delayed for the ALSOS advance elements until 29 March. All bridges had been destroyed by the retreating Germans, and Colonel Pash and his operating team finally crossed the river at Worms on a hastily constructed pontoon bridge. The "spearhead" outfit then turned south and entered Mannheim shortly before noon on the same day. A short survey of the secondary targets which ALSOS had listed in Mannheim revealed almost total destruction by shellfire and aerial bombing.

Contact was again established with the "T" Force of Sixth Army Group at Mannheim, and the ALSOS team learned that one possible avenue of approach to Heidelberg might be cleared. Colonel Pash decided to risk the dash to Heidelberg since the famous old German university town held many high priority targets.

Heidelberg was reached on the afternoon of 29 March, and the ALSOS advance party proceeded immediately to the Kaiser Wilhelm Institute. Because of the extreme importance of this target, two scientific consultants of the Mission accompanied the party. Ordinarily, the standard Mission practice had been to delay bringing up scientific personnel until targets were secured and deemed safe from fire. The ALSOS advance group spent the night at the Institute, and expert consultants started examining laboratory equipment and documents the following day. On 30 March, a new advance ALSOS base was established at Heidelberg.

New Base at Gottingen

German defenses along the lower Rhine were collapsing as ALSOS teams crossed the upper Rhine behind the advance elements to enter Mannheim and Heidelberg. From the Northern Advance Base near Aachen, a Mission officer and a CIC agent moved east, crossing the Rhine and entering the city of Frankfurt-am-Main on 1 Apr . 1945. However, heavy enemy fire forced a temporary withdrawal. Since Frankfurt had been severely damaged and many of the target personalities had fled, ALSOS obtained little information in this city.

On 9 April 1945, another party from the ALSOS Aachen base, which included CIC Agents Leonard and Mason A. Hicks, crossed the Rhine in an attempt to reach the important university center of Gottingen. The ALSOS party arrived at

the city at 1200 hours on 12 April. The chief of the Kaiser Wilhelm Institute, Doctor Telchow, who had fled from Berlin, was located and interrogated. It was learned that the important records of his institution were available in Gottingen, having been evacuated from Berlin and ALSOS set up a new Northern Advance Base section in the outskirts of the town.

Osenberg Capture

The development of ALSOS target intelligence had indicated that one of the top objectives in Germany would be the personnel and records of the planning office of the Reichsforschungsrat, the Nazi counterpart of the American Office of Scientific Research and Development. The latest information, gathered from interrogation of German scientists and examination of documents, revealed that the organization's records and personnel had been evacuated to the village of Lindau, near the town of Nordheim. Questioning of Dr. Telchow at Gottingen on the afternoon of 11 April, confirmed this intelligence.

Information from the combat headquarters controlling troops in the area resulted in a decision to delay an attempt to reach Lindau until the morning of 12 April. CIC agents accompanied two Mission officers in a jeep, and the party arrived in Lindau at 1000 hours on 21 April. A German civilian conducted the group directly to the temporary Reichsforschungsrat offices. Agent Hicks was posted as a guard at the main entrance, and the Mission officers went to the office of Professor Werner Osenberg, Chief of the Planning Board of the Reichsforschungsrat. A preliminary interrogation of Osenberg and a brief examination of the secret files of the organization revealed that the ALSOS team had made one of the most important intelligence captures of the war.

In addition to the apprehension of Osenberg, the ALSOS team secured the major portion of his scientific and secretarial staff and all the key records disclosing the locations, personnel, budgets, and progress of the scientific and war research activities of the Germans. Due to the large number of personnel and bulk of documents taken with Osenberg, and the apparent cooperative attitude of the German scientific leader, the ALSOS team leader decided to hold his group in Lindau so that the wealth of material could be put in order for Mission exploitation.

Since Doctor Osenberg reported that two of his staff members had disappeared the previous night and would probably return with SS representatives to destroy secret documents, it was considered necessary to remove a small number of key files to Gottingen. One Mission officer and the two CIC agents remained at the Lindau offices as a provisional security guard while arrangements were made for a regular guard detail.

1300

CONFIDENTIAL

During the next few days, expert scientific consultants of the Mission exploited the material of the Osenberg organization at the ALSOS base in Gottingen. While these scientists were at work, small expedition which included CIC Lieutenants James R. Aldorf and Delmore E. Reeves and Agent Hicks departed from Gottingen with the Brunswick area target list. They made an important contact near Brunswick when they located the former research center of the Luftwaffe. This institution proved of extreme interest to American aeronautics experts.

Stadtilm Operation

During the examination of documents which had been found at the University of Bonn, a few papers of dubious value were sent back to ALSOS Paris headquarters. A careful study of these papers revealed one potentially important clue to the evacuation address of a vital German war research activity. In some German correspondence it was stated that a leading scientist named Diebner was now living in the small town of Stadtilm. Previous documents recovered by ALSOS indicated that Diebner was probably connected with Nazi war research in the field of atomic energy. Interrogations of Diebner's colleagues in physics at the University of Heidelberg confirmed this information.

The extreme significance of the town of Stadtilm was perceived at Paris, and a scientific member of the Mission, who was also a licensed pilot, volunteered to fly his plane to Heidelberg to alert Colonel Pash and his operating personnel of this important target.

The scientist landed in Heidelberg on the afternoon of 10 April. On the following morning, Colonel Pash left for Stadtilm accompanied by scientists and three CIC agents. They reached Stadtilm less than an hour after the German troops had evacuated the town to discover that Diebner and another important personality target had fled, but additional research workers were rounded up and many important documents were seized. The installation turned out to be the atomic energy experimental laboratories and office headquarters of the German Army Ordnance. The Gestapo had managed to evacuate a large supply of highly valuable materiel from the laboratories, but this stockpile was later uncovered in the Bavarian mountains. The investigation at Stadtilm had uncovered one of the most important ALSOS targets in the field of nuclear physics and atomic energy.

Operations in Southwest Germany

Principal interest in ALSOS operations shifted back to the Southern Advance Base at Heidelberg during the latter part of April as plans were made for a major tactical advance into Southwest Germany. Reliable, confirmed information already obtained in ALSOS operations clearly indicated that remaining key German

SECRET CONFIDENTIAL

scientists engaged in war research work, particularly in atomic energy, would be found in this area, unless they had escaped eastward into Bavaria or southeast into the German and Austrian Alps.

The southwest Germany operation was the most elaborately planned, heavily staffed and carefully executed phase of the ALSOS Mission. Target data had been compiled and studied for a month before the movement took place. Aerial photographs, town plans, terrain features, and documentary evidence were reviewed in great detail.

On 21 April, Colonel Pash moved his ALSOS "Lightning A" advance unit into camp near Freudenstadt. This unit included 14 U.S. Army officers, seven British officers, five expert ALSOS consultants, eight CIC Special Agents, and 15 ALSOS enlisted men. On 22 April, this special task force advanced into Wurttemberg. During the next few days, as the combat forces captured five important towns, personnel, documentary, and institutional intelligence targets were seized by the ALSOS "Lightning A" unit. Scattered enemy resistance was encountered all along the route, but at only one point was the Mission delayed for any length of time by German fire.

While the combat phase of this penetration into southwest Germany ended on 25 April, ALSOS operations in the area continued until 29 April. Previous Mission findings had indicated that four important German laboratories had been evacuated to the Hohenzollern area towns of Haigerloch, Hechingen, Bisingen, and Tailfingen. These laboratories were found to possess key secret documents, equipment, and materiel of special interest, and they were staffed by the outstanding German scientists in the field of atomic energy research. One important ALSOS personality target had left for Munich two weeks previously but six scientists were held for evacuation to Paris where they were to be turned over to representatives of the Manhattan Project. ALSOS investigators also discovered the hiding places of critical material and secret documents which allegedly had been burned.

For the success of this ALSOS operation, Colonel Pash was recommended for the Legion of Merit by the Commanding General of Sixth Army Group. This award was later approved by the War Department.

Bavarian Operations

The completion of ALSOS operations in Southwest Germany found the Mission in possession of all but three important scientific personality targets. Information indicated that these scientists might be found either in Munich or in the Urfeld area of the Bavarian Alps. For the purpose of this "mopping up" operation, two teams were formed on 30 April in Heidelberg.

Colonel Pash took charge of a unit which included CIC men Fiebig and Beatson. On 2 May, this unit entered the town of Urfeld ahead of the American tactical forces with the aid of a patrol of combat troops only to discover a sizeable Wehrmacht unit nearby. German officers who came into the town with the intention of accepting surrender from the small band of Americans were bluffed by Colonel Pash into believing that large reserves were waiting in a nearby mountain pass. The Nazi officers left Urfeld, and Colonel Pash, realizing that to stay in the town might jeopardize the execution of the Mission and its security, withdrew his personnel. The following day, Urfeld was liberated by the American combat forces, and the ALSOS unit returned to take important personnel targets.

Meanwhile, another team which included two CIC agents and was headed by a Mission officer, entered the Bavarian city of Munich on 1 May, and located the home of their first target, Doctor Gerlach, a leading German physicist and war research director. There was no sign of the scientist at his residence, although the ALSOS investigators discovered a Luftwaffe major during a search of the house. The major was turned over to the 45th Division prisoner of war enclosure and the team proceeded to the University of Munich where they found Dr. Gerlach in the basement offices of the physics laboratory.

The Munich operation was a rapid and successful one. Personnel and documentary targets of primary interest to the Mission were secured without exception and returned to the base at Heidelberg.

Northern Base Activities

While the important operations in Bavaria and Wurttemberg were being conducted under the direction of Colonel Pash from the Heidelberg base, a number of investigative teams were dispatched from the Northern Advance Base at Gottingen during the latter part of April and early May 1945.

ALSOS investigative teams conducted several searches in the Harz Mountain area north of Nordhausen during the period 27 April to 10 May. Information had been obtained that valuable materials and documents might be cached in extensive natural caves in this region. A number of these caves and mines in the vicinity of the villages of Niedersachswerfen and Rubeland were searched and while various political documents of the Nazi party, stores of arms and explosives, and other supplies were discovered, no scientific documents were found.

Other targets visited by members of the Northern Base during this closing period of the war in Europe included personnel and institutional objectives at Hamburg, Jena, Braunschweig, Clausthal, Halle, Erfurt, and Essen. In the early days of May, ALSOS investigators uncovered additional caches of uranium compounds and "heavy" water which had been hidden away by the Nazis in the Harz and the Bavarian Mountains.

Berlin Investigation

During the early planning stages of ALSOS in 1943 and early 1944, many potential Berlin targets had been evaluated and listed for ultimate examination. However, as ALSOS intelligence was collected in operations in the liberated countries and Western Germany, it became evident that Berlin would become an area of only secondary interest. Most high priority targets had already been discovered by the ALSOS teams.

As the Air Force continued to rain down high explosives on the city, many of the war research laboratories and bureaus of institutes and factories were evacuated or obliterated. Following the German surrender and the Soviet Occupation of Berlin, it was expected that what ALSOS targets remained had been thoroughly "worked over" by Russian intelligence agencies.

There were certain missing items, however, that ALSOS officials thought might be discovered among the rubble of Berlin, and Colonel Pash headed a party of 14 Mission members that entered Berlin on 28 July. Three weeks were spent in following investigative leads, including documents and personnel of the Kaiser Wilhelm Institute. The effort was well spent, for a number of additional facts were added to the ALSOS dossiers.

The Berlin Operation was the last major expedition of the Mission. Colonel Pash returned to Paris headquarters in the second week of August 1945.

Mission Leaves the Theater

Mission field activities were completed during the latter part of September, and commendations and awards were received at ALSOS Paris Headquarters for outstanding service. Colonel Pash was presented the Legion of Merit while Colonel Eckman and Lieutenant Fiebig were awarded the Bronz Star Medal.

The ALSOS Liaison Office which had been established at Headquarters, USFET, was inactivated with the closing of operations, and all personnel, documents, and equipment of the Mission were centered in Paris. On 25 October, this Headquarters was closed, and on 15 November, the ALSOS Mission was officially inactivated by direction of the Assistant Chief of Staff, G2, War Department.

Appendix 1

CIC PERSONNEL IN THE ALSOS MISSION

Name	Rank	Dates of Service with Mission
Boris T. Pash	Col	26 Nov 43 to 1 Dec 45
George R. Eckman	Lt Col	1 Aug 44 to 1 Dec 45
William J. Carr	1st Lt	12 Mar 45 to 14 May 45
James R. Aldorf	2d Lt	12 Mar 45 to 14 May 45
Ralph T. Cerame	2d Lt	15 Dec 43 to 7 Sep 45
Carl F. Fiebig	2d Lt	25 Dec 43 to 7 Sep 45
Delmore E. Reeves	2d Lt	12 Mar 45 to 14 May 45
Luis Abella	S/A	12 Mar 45 to 14 May 45
Perry O. Bailey	S/A	25 Dec 43 to 25 Jun 44
Gerald L. Beatson	S/A	25 Dec 43 to 30 Sep 45
Archie J. Bray	S/A	12 Mar 45 to 14 May 45
Joseph P. Crotty	S/A	12 Mar 45 to 14 May 45
Henry J. Cullinan	S/A	12 Mar 45 to 14 May 45
Gustav V. Edlund	S/A	1 Apr 45 to 10 May 45
Lawrence R. Feindt	S/A	12 Mar 45 to 14 May 45
Mason A. Hicks	S/A	12 Mar 45 to 14 May 45
Ira Koenig	S/A	12 Mar 45 to 14 May 45
Nathaniel W. Leonard	S/A	20 Aug 44 to 15 Oct 45
Nicholas J. Madeira	S/A	31 May 45 to 15 Oct 45
James T. McIntosh	S/A	12 Mar 45 to 14 May 45
Peter F. Oates	S/A	5 Jan 45 to 29 Sep 45
Robert M. Peers	S/A	12 Mar 45 to 14 May 45
Marte Previti	S/A	31 Mar 45 to 15 Oct 45
John C. Woolley	S/A	23 Mar 45 to 15 Oct 45

Part IV

CIC WITH THE TRANSPORTATION CORPS

One of the most perplexing counterintelligence problems which followed the United States' entry into World War II concerned the protection of men and material in transit from the United States to active theaters overseas.

It was a perplexing problem not only because of its tremendous scope but also because of the absence, until the last days of the war, of directives clearly defining counterintelligence and security responsibilities at the Army's huge ports of embarkation.

When war erupted in Europe in 1939, the Army operated only two such ports, one at New York and one at San Francisco. Their security was of only minor concern. But after the Japanese attack on Pearl Harbor, the swift flow of troops and supplies to combat areas necessitated the opening of six other ports of embarkation, three cargo ports, and two sub-ports.[129] With the increased threat of enemy sabotage and espionage, port security became a major problem virtually overnight.

The very complexity of an Army port of embarkation spawned many of its security problems. Far more than a mere shipping terminal, the port included not only the actual point of embarkation but also a variety of auxiliary installations in the general area. The Port Commander was responsible for the reception, supply, transportation, embarkation, and debarkation of personnel and the receipt, storage, and transportation of supplies. He had to supervise military traffic between his port and overseas bases. He commanded all troops assigned to the port and its components, including troops staging for overseas movement.[130] During World War II, more than 7,500,000 men and almost 127 million tons of supplies were channeled through the Army ports.[131]

To carry out the multifarious activities of a port of embarkation, services of literally thousands of civilian and military personnel ranging from typists to stevedores were required. At the New York Port of Embarkation alone, more than 50,000 persons were employed in early 1945. This was 20 times the number of persons on the payroll at the outbreak of the war. Personnel employed at all the Army ports totaled 171,000. In addition, thousands of troops staging for overseas movement were stationed at the ports of embarkation at any stated time

130 Interview with F. L. Tobin, former CIC agent at New York Port of Embarkation, (Uncl) (CIC Files).

131 The Army Almanac, p 152, Table 14.

throughout the war. The New York Port of Embarkation, the largest of the eight, operated three staging areas capable of processing 78,099 troops.[132]

The security problems concomitant to operations on such a gigantic scale are obvious. Ammunition, clothing, weapons, food - all these were vulnerable to sabotage while in port warehouses or on ships lying at anchor in the harbor. With a few key "plants" among the thousands of port employees, an enemy could easily learn size and destination of movements of men and supplies. Even careless words by homesick soldiers could provide a clue for enemy agents in the area.

Since the Transportation Corps was charged with the responsibility of moving these men and supplies, it had to assume full responsibility for their protection from the time the troops or goods entered the port of embarkation until they were put ashore in a foreign port. Eventually, the War Department created a special Counter Intelligence Corps detachment to enforce security measures for the Transportation Corps. But evolution of the Transportation Corps CIC was slow. In the early years of the war, there was considerable confusion and duplication of effort whenever the security question arose.

Service Commands Responsible at First

Before Pearl Harbor, safety of Lend Lease shipments was entrusted to the various Service Commands through which shipments passed en route to a port for loading. Security agents from the Service Commands, the Federal Bureau of Investigation, the Office of Naval Intelligence, and the Coast Guard all participated in the effort to safeguard the vital supplies.[133]

With the tremendous increase in shipments after the entry of the United States into the war, it soon became obvious that Service Command investigators could not adequately control port security. Port installations embraced a wide variety of activities with which most Service Command personnel were quite unfamiliar. Special knowledge and training were necessary for the proper protection of water-front facilities, for preventing the landing of subversive crew members of foreign ships, for security checks of ships, and for dealing with longshore and marine labor.[134] Just who should be responsible for post security measures was not clear, however.

Part of the confusion stemmed from uncertainty of the role of the Transportation Corps itself. This organization, as it now exists, was not developed completely

until World War II. During the evolutionary process, the Transportation Corps absorbed many of the functions of the Quartermaster Corps, other services, and the Service Commands. The integration inevitably brought friction, disagreements, and jurisdictional disputes which were not readily solved.[135] This confusion was reflected throughout the entire structure of intelligence and security activities at ports operated by the Transportation Corps.[136]

Port Commanders Assume Responsibility

Gradually, Port Commanders assumed direct control of security and counter-intelligence matters within their installations under the limited supervision of the Intelligence and Security Division of the Office of the Chief of Transportation. Because they were aware of the problems peculiar to their ports, the commanders were in a position to select and train personnel for the specialized security and counterintelligence duties.[137]

As early as March 1942 the Commanding General of the New York Port of Embarkation, through his G1, began earmarking former lawyers, detectives, insurance investigators, and newspapermen for work as special investigators of the Transportation Corps. After completion of a special 54-hour training course in sabotage, espionage, and investigations, the Transportation Corps agents were placed on duty with the investigative branch of the port's intelligence division.

In April 1942, the new port investigators were issued Military Intelligence Division credentials. Quotas were established for several of the men to attend each class of the CIC School in Chicago, although they were not at first considered CIC agents.

In the port areas, the Transportation Corps agents had virtually unlimited jurisdiction. Criminal investigations, collection of positive intelligence from crews and passengers of incoming ships, censorship, and even recommendations for safety programs were tasks performed in addition to usual counterintelligence responsibilities. When leads carried them away from the port, the agents also operated in areas which normally would have fallen under the jurisdiction of either CIC or the FBI. Close liaison was maintained with both those organizations and the Office of Naval Intelligence.[138]

CIC Screens Seamen in Baltimore

The first documented instance of CIC agents being employed on port security in the United States occurred in August 1942, when the Office of Naval Intelligence requested CIC assistance in screening crews of foreign ships tied up in the port of Baltimore. Five agents, preferably Spanish, Portuguese, French, or German linguists, were needed to assist Navy Intelligence personnel in checks of nine neutral European vessels.

The request was granted. Five agents assigned to CIC, War Department, were placed under the supervision of Military Intelligence Division Headquarters, Third Service Command, for the port security operation.[139]

Lack of Uniformity at Ports

Absence of specific policy directives governing counterintelligence functions at ports of embarkation resulted in both operational and administrative lack of uniformity. Some ports, notably that of New York, had their own counterintelligence agents. Commanders of other ports requested and received assistance from CIC agents assigned to Service Commands. Provost marshals and military police were responsible for counterintelligence at still other ports.

Loyalty investigations of port employees exemplified the confusion existing during the early days of the war. At New York and New Orleans Ports of Embarkation, the Provost Marshal's office was responsible; at Boston, the Civilian Personnel office was responsible; port intelligence divisions conducted the loyalty investigations at all other Army ports of embarkation.[140]

A step toward elimination of the confusion was taken in November 1942, when the Office of the Chief of Transportation issued a directive governing control of subversive maritime employees at all Army ports. The directive outlined the procedure for establishing a system of dissemination of information on each undesirable maritime employee, so that each port would have that information in a card index file. Initiated immediately by all ports, the system proved an effective counterintelligence measure. It prevented undesirable seamen who had been refused employment on Army transports at one port from journeying to another and being hired.

1310

CONFIDENTIAL

The system was thoroughly outlined and implemented and was uniform at all ports. Distribution of the information contained in "flimsies" made on each undesirable maritime employee included all other ports of embarkation, Military Intelligence Service, War Department, Intelligence Division, Transportation Corps, and in some instances FBI and the Office of Naval Intelligence.[141]

CIC Recruits Transportation Corps Investigators

By early 1943, many of the Transportation Corps investigators at ports of embarkation were being transferred into the Counter Intelligence Corps. Instead of becoming members of organized CIC detachments, however, these agents were assigned to ports of embarkation with duty stations in the investigative branch of the port intelligence division. At the New York Port of Embarkation, which set the pattern followed by other ports, the new CIC agents continued to work with Transportation Corps investigators who had not been taken into CIC. Their duties were identical.

The importance which the War Department planners placed on CIC's port security operations was indicated in early 1944, when Service Commands were ordered to consolidate CIC and Provost Marshal General agents into a Security Intelligence Corps responsible for both counterintelligence and criminal investigations in the Zone of Interior. Although some Transportation Corps investigators were transferred into the new Security Intelligence Corps, those who had previously been designated as CIC agents retained their identity as such and continued to function at the Army ports under the overall supervision of the Intelligence and Security Division of the Office of the Chief of Transportation.[142]

During the fiscal year of 1 July 1943 to 30 June 1944, counterintelligence activities in ports of embarkation were directed by a newly organized Counter-intelligence Branch of the Intelligence and Security Division, Office of the Chief of Transportation. A historical report of that Division dated 29 June 1944 enumerated counterintelligence responsibilities at the ports:

"This Branch supervises and coordinates the counterintelligence activities of the Transportation Corps. This requires taking the proper action on violations of security that occur at ports of embarkation and other Transportation Corps installations which are referred to the Chief of Transportation for determination as to the extent of violation and appropriate action to be taken. It is responsible for the establishment of loyalty of military and civilian personnel assigned to the

CONFIDENTIAL

Office, Chief of Transportation."[143] The report went on to discuss seven categories of persons which Transportation Corps investigators could clear for access to ports of embarkation.

In summing up accomplishments of the 1944 fiscal year, the historical report cited a series of agreements between ports of embarkation and the Coast Guard which "resulted in a more effective security arrangement at all ports of embarkation and a harmonious and prized relationship between the two services." A CIC study of discussion of classified information over telephones at ports of embarkation resulted in establishment of a separate priority category for operational teletypes, specific recommendations as to their use, and a security education program in the ports.

Finally, the report called attention to the unique security and counterintelligence functions of the Transportation Corps:

"The Transportation Corps is one of the few services that have the direct responsibility for internal security of their field installations. The manner in which this job has been accomplished has been recognized to the extent that the Transportation Corps has been given increased independence in the operation of the program at the ports."[144]

Despite the ever-increasing role of the Transportation Corps in solving its own counterintelligence problems, through CIC agents assigned to ports of embarkation, confusion regarding responsibility for counterintelligence and security measures still hampered operations. This confusion was recognized in a report which itemized handicaps to counterintelligence coverage:

"It is believed that the main handicaps experienced in accomplishing the mission were due largely to:

(1) Lack of a firm policy from higher authority in matters involving subversion, sabotage, and security in general, especially those pertaining to investigation and removal of personnel.

(2) Lack of clear cut definition of the functions of various agencies and divisions of the U.S. Army, Navy, and Coast Guard.

(3) Lack of uniformity of basic organizational structure (Intelligence and Security) of the ports of embarkation.

(4) Lack of personnel.

(5) The responsibility for the solution of field problems presented to officers who had no field experience.

(6) Assignment of officers without special qualifications to duties in this Division requiring highly specialized knowledge and experience in internal security."[145]

Transportation Corps CIC Detachment Authorized

As the scope of Transportation Corps counterintelligence operations multiplied, the Assistant Chief of Transportation for Operations requested on 27 November 1944 the creation of a special CIC detachment for the Transportation Corps.

At the time of the request, the Transportation Corps was operating 1,700 vessels carrying troops, secret cargo, and war supplies of every type. More than 500,000 tons of explosives were being shipped through ports of embarkation monthly. More than 130,000 civilian employees had access to the piers and ships operated by the Transportation Corps. To cope with the security problems involved in such a tremendous operation, the Transportation Corps wanted a CIC detachment of from 127 to 175 officers and enlisted men.[146]

A staff study prepared for the Chief of Staff, Army Service Forces, concluded that Transportation Corps security problems coincided with CIC functions. It was determined impractical to utilize investigative agencies of the Service Commands and theaters of operations to discharge the security responsibilities of the Chief of Transportation. The study recommended formation of a detachment of 40 officers and 157 enlisted men from grades and ratings already authorized for the Transportation Corps. "In the past," the study commented, "the Transportation Corps was forced to rely upon borrowed personnel, special assignment of Transportation Corps personnel, and other makeshift methods. In many cases it was impossible to perform necessary functions."[147]

On 16 February 1945, a letter from the Chief of Transportation to ports of embarkation announced the authority of the Chief of Transportation to establish

145 Memo for the Exec Officer, ATC, dtd 29 Sep 45, Subj: Rpt on Accomplishments and Handicaps, Intel and Sec Div, (uncl) (Office, Ch of Trans).

an "Intelligence Agency." This unit was to perform, at ports of embarkation, loyalty, counterintelligence, and criminal investigations and was to gather foreign positive, technical, and domestic intelligence.

Three days later, the Chief of Staff approved the establishment of a Transportation Corps CIC Detachment. In the weeks that followed, plans were made to coordinate work of the Transportation Corps CIC Detachment and Security Intelligence Corps agents assigned to ports under the new Intelligence Agency. Confidential funds were allocated for Transportation Corps use, and arrangements were made to issue CIC credentials to agents procured for the Transportation Corps CIC Detachment. A Table of Organization for the new detachment allotted 40 officers and 117 enlisted men, with the initial authorization set at 20 officers and 49 enlisted men.

The Intelligence Agency was activated on 13 April 1945 and was attached to the Third Transportation Zone in Baltimore for administration.[148] The Transportation Corps CIC Detachment was established on 26 April to function within the Intelligence Agency.[149] Maj A. LaMar Benson was first chief of the Intelligence Agency while Maj Harold E. Hutchings commanded the CIC detachment.[150]

One of the first tasks of the Intelligence Agency was the processing of applications for transfer to the new CIC detachment. By 30 June, 202 persons had been recommended as agents. Investigations were completed on 118 of these people, and 65 were found acceptable. Twenty officers and 37 enlisted men were processed into the Intelligence Agency.[151]

Headquarters of the Transportation Corps CIC Detachment was established at Baltimore, with sub-detachments at New York, San Francisco, Boston, Seattle, New Orleans, and Hampton Roads ports of embarkation. Intelligence and security officers of sub-ports such as Baltimore, Philadelphia, Charleston, and Portland called on the port which controlled them for CIC agents when needed for special missions. The staff of the first headquarters in Baltimore included Capt Dan J. Shaper, Capt Robert J. DeBloise, and 1st Lt Sidney Medoff. M/Sgt Alfred Harrison was sergeant major.[152]

117th CIC Detachment Activated

Another change in the counterintelligence structure within the Transportation Corps was the activation on 17 May 1946 of the 117th CIC Detachment as the Transportation Corps investigative unit. The Investigative Agency, now moved to Washington, along with the Office of the Chief of Transportation, continued to supervise the CIC detachment. Capt Richard D. Gray became commanding officer of the 117th CIC Detachment. Sub-detachments continued in operation at major ports.[153]

Two days before the activation of the 117th CIC Detachment, the Intelligence and Security Branch of the Office of the Chief of Transportation was discontinued. Its functions, including those of the Intelligence Agency, were transferred to a new Planning and Intelligence Branch.[154]

Port Security Training

Prior to the establishment of the Transportation Corps' Intelligence Agency, all counterintelligence personnel at ports of embarkation were port personnel, and their training was the responsibility of the port commander. Most ports established brief training schools for investigators, similar to the 54-hour course developed at the New York Port of Embarkation. When agents from the ports attended the CIC School in Chicago or the Provost Marshal's School at Fort Sam Houston, they were instructed in investigative techniques but received no special emphasis on port security.[155]

When the Intelligence Agency was created, it was ordered to "supervise specialized training of personnel in investigations."

An Intelligence Agency survey to determine the state of training of agents under its supervision revealed two distinct categories into which personnel could be placed for training purposes. In one group were those agents who through long experience in the Transportation Corps and extended duty at a port of embarkation were strong on port organization and operation, but lacked experience in intelligence and investigations. On the other hand, experienced intelligence personnel

knew little of port organization and operation. Most of the personnel in the former category were sent to the CIC School at Baltimore; those in the latter group were given on-the-job training by port intelligence officers.[156]

Although the first classes in CIC training schools did not emphasize port security, on 29 November 1944 a group of 44 CIC student officers from the Military Intelligence Training Center at Camp Ritchie, Maryland, made a two-day training tour of the Hampton Roads Port of Embarkation. Maj Harold E. Hutchings, who commanded the student group, recommended that the port visit be continued for other CIC students.[157] The Director of Intelligence, Army Service Forces, was so impressed by results of the trip that he requested a letter be prepared for the Commanding General's signature authorizing continuance of port security training for counterintelligence officers.[158]

During 1945, in response to a request from the Commanding Officer, CIC Center, Camp Holabird, Baltimore, the New York Port of Embarkation conducted one-week classes in port intelligence for personnel in training for CIC duty overseas. These students were ordered to the New York Port of Embarkation for one week during their period of training at the CIC Center.[159]

Two years later, in 1947, groups of students from the CIC Center at Camp Holabird visited the New York Port of Embarkation for three-day tours of port installations. Agents of the 117th CIC Detachment presented daily lectures on port security to the students from Camp Holabird.[160]

CIC at Work in the Ports

In the early days of the war, when port commanders recruited their own investigators, the duties of the agents in the ports of embarkation were dictated

156 Memo, SPTOI CC 353, dtd 9 Nov 45, Chief Intel and Sec Div, Office of the Ch of Trans, to Dir of Mil Training, Office of the Ch of Trans, Subj: Training of Intelligence Personnel on Duty at Ports of Embarkation, (Conf) (Office, Ch of Trans).

160 Ltr, Agent Alfred Harrison, 117th CIC Det, to Maj James T. Reitz, dtd 7 Oct 46, (uncl) (CIC Files).

by need rather than by directives. The inevitable result was that agents whose primary job was counterintelligence and security found themselves involved in a host of other duties.

When CIC agents were placed on duty with the ports, under the supervision of the port commanders, the tendency to use them on all types of investigations was already established. At some ports, this practice continued as late as 1946, despite occasional mild protests that CIC agents were improperly employed.

At an Internal Security Conference held in September 1943, port intelligence and security officers discussed the work of CIC agents who recently had been placed on duty in the Army ports. Duties of the investigators included security surveys, countersabotage and counterespionage measures, fire prevention, criminal investigation, collections of positive intelligence, loyalty investigations of port employees, and security lectures to troops in staging areas.

At that conference, Col J. M. Roamer, Director of Intelligence, Army Service Forces, expressed concern about the practice of employing CIC agents on criminal investigations. "The Military Intelligence Service, the guide for all Army intelligence agencies, has been directed to keep out of criminal investigation," Colonel Roamer said. "The CIC is set up to do certain things; it does not include criminal investigations." In response to questioning, however, Colonel Roamer admitted that it might be necessary for intelligence personnel to conduct criminal investigations when the FBI refused to intervene.[161]

Much of the CIC work in the ports was routine, but in accomplishing the assigned tasks, agents quickly won the respect of port commanders, intelligence officers, and other investigative agencies. At Camp Shanks, one of the staging areas in the New York Port of Embarkation, CIC was so well-known that telephone operators overhearing suspicious conversations would report the incidents to CIC immediately. Civilian employees, made security conscious by CIC lectures, served as unofficial monitors of conversations on buses and in restaurants and other public places near the New York Port. Any suspicious conversations were reported to CIC.[162]

Despite the monotony of much of the port security work, important cases occasionally developed at all the ports - cases which gave CIC agents ample opportunity to prove their investigative skills.

161 Rpt of Proceedings of Int Sec Conf, Trans Corps Port of Embarkation, New York and Wash DC, 14-18 Sep 43, (Conf) (CIC Files).

162 Interview with Maj T. J. Kraszewski, (uncl) (CIC Files).

CIC Discovers Prisoner Escape Route

One of the earliest cases of note handled by CIC agents assigned to the New York Port of Embarkation involved the escape route used by German prisoners of war fleeing internment camps in Canada.

Late in 1942, a number of German prisoners escaped from stockades in Canada. Although it was believed they were making their way into the United States, authorities were unable to trace any of the escaped prisoners. Then during a routine interview with an informant at the New York Port of Embarkation, CIC agents received a tip that the prisoners were being sheltered by a restaurant owner in Westchester County, New York.

CIC relayed the information to FBI agents, who checked the story and found it to be true. The restaurant owner, a member of the German-American Bund, gave the prisoners food and clothing and arranged for their transportation to Mexico, where German submarines picked them up at designated points along the coast. CIC was credited with the first lead which enabled the FBI to plug the German escape route.[163]

Not all the reports from CIC informants were so accurate, however. Agents stationed at the Hampton Roads Port of Embarkation once went on emergency duty after they were told that an Army truck transporting secret equipment from Fort Story to Fort Monroe had been hijacked by enemy agents. The story was a hoax but the investigation broke the monotony of after-hour checks of piers, moorings, and docks.[164]

CIC detachments staging for overseas movement were sometimes asked to assist agents at the ports of embarkation on special cases. CIC agents at the New York Port of Embarkation learned through an informant that a soldier assigned to the port was operating a lucrative business of mailing letters outside the port, in violation of censorship regulations. Preliminary investigation indicated that the violator was an enlisted man who worked in the dental clinic.

Since CIC agents and members of the censorship team were known to other military personnel on the post, CIC asked for help from a detachment awaiting shipment in the Camp Shanks staging area. A CIC agent who needed dental treatment was asked to bait a trap for the suspect. He made a dental appointment. While at the clinic, he asked several enlisted men how he could get a letter mailed off post. When the suspect volunteered to mail the letter for a fee, the CIC agent reported him to the port intelligence officer. The suspect was apprehended and punished for violation of censorship regulations.[165]

163 Interview with Maj John Murphy, 21 Sep 55, (Conf) (CIC Files).
164 Interview with CWO William Hoffman, (uncl) (CIC Files).
165 Interview with Maj T. J. Kraszewski, (uncl) (CIC Files).

One detachment received a special commendation from the commander of the Camp Kilmer staging area, New York Port of Embarkation, for its assistance in port security projects. Col Cecil L. Rutledge praised the "excellent cooperation and superior operation" of the CIC detachment commanded by Capt Edgar E. Cambere. He wrote:

"With disregard for their own personal freedom to leave on authorized passes they often worked long hours on tedious jobs for the benefit of their experience in the assistance in various security projects set up during their stay at this post. It is with pleasure that I commend this unit for its fine work."[166]

CIC Traps a German Agent

What started as a routine investigation of an AR 380-5 violation in June 1944 suddenly turned into one of the most sensational espionage cases handled by CIC in New York.

Agents assigned to investigate the loss of a classified document from one of the port offices traced the missing paper to a WAC typist. At first she insisted that she knew nothing of the document. Later, after further interrogation, she admitted giving the paper to her boy friend. The boy friend, she said was keenly interested in the progress of the war, and from time to time she had given him information regarding movements of troops and supplies from the New York Port of Embarkation to overseas theaters of operation.

The boy friend turned out to be the German-born head waiter at New York City's famous Stork Club. Since he was a civilian, CIC turned the case over to the FBI. Subsequent investigation by the FBI uncovered evidence that the waiter was a German espionage agent. He was imprisoned and later deported.[167]

Most incidents involving disclosure of troop movements were less dramatic. At the Hampton Roads Port of Embarkation, CIC agents traced an accurate report on the movement of six troop trains to a high school boy. The youth, a part time messenger for the Chesapeake and Ohio Railroad, had told friends he was going to be busy because six troop trains would arrive at Hampton Roads within two days. CIC referred the incident to the railroad with the recommendation that officials stress security to their employees.[168]

1319

CIC Goes to Sea

From as early as 1943 until the end of the war, CIC agents operating with the Transportation Corps were frequently placed aboard Army transports in undercover capacities. Working as seamen or as scullions in the galleys, the CIC agents at sea were instructed to watch for evidence of any German or Communist courier system operating on Army ships. They also were alert to any security weaknesses on ships, as well as symptoms of disaffection among passengers or crew. Undercover agents on ships bound to Europe occasionally conducted surveillances of German sympathizers traveling abroad.[169]

In 1945, after the creation of the Transportation Corps Intelligence Agency, specific policies were adopted to govern the use of CIC agents aboard ship. Both open and undercover duties at sea were defined:

"In such operations, personnel may be engaged in conducting security surveys, gathering information of counterintelligence interest from returnees, giving security lectures to troops bound overseas, investigating incidents aboard ship in which espionage, sabotage, treason, subversion, disaffection are suspected; conducting surveys to determine compliance with and assisting in the enforcement of the provision of AR 380-5; observing in instances in which there is reasons to suspect espionage, sabotage, treason, subversion, and disaffection.[170]

Undercover operations were more restricted, however:

"the prior concurrence of the Intelligence Division, Army Service Forces will be obtained for each undercover mission undertaken. Concurrence will only be given upon a substantial showing that the mission is reasonably necessary, is calculated to produce the information desired, and probably will be accomplished without compromise."[171]

CIC Recruits Sea-Going Informants

To insure counterintelligence coverage of all voyages, CIC agents at the New York Port of Embarkation during 1943 established an informant net which included crew members of all Army transports entering the New York port. Special Agent John Murphy, who directed the formation of the net, recruited crew members from both the deck and engine room departments of Army ships.

170 Office of the Ch of Trans Misc Ltr 204 to Commanders, Ports of Embarkation, dtd 22 June 45, Subj: Transportation Corps CIC and SIC Activities, (Conf) (CIC Files).

171 Ibid.

Each time a ship entered the New York port informants made a midnight trip ashore to report to the CIC agent who controlled them.

One important result of the informant system was the discovery in September 1944 of a code used by members of the Communist cells aboard ships. The Communists chalked code symbols on the side of the ship near the gangway to warn any couriers coming aboard of the presence of CIC, FBI, or Naval Intelligence agents. The Communist couriers were under orders not to attempt to pass information when intelligence agents were passengers. When an informant reported the code system to CIC, agents made an early morning visit to every ship in the New York port and chalked the message which warned of the presence of intelligence personnel even though such personnel were not present, a measure that materially reduced Communist activity on Army ships.[172]

Prisoners of War Plan Sabotage

German prisoners of war interned in sub-installations of the Hampton Roads Port of Embarkation frequently drew the attention of CIC agents in that area. At Camp Hill 35 prisoners secretly organized what they dubbed "Sabotage Group 32." Determined to escape, they also vowed to commit acts of sabotage within the internment camp whenever possible. Their plot was discovered when CIC intercepted a note to one of the prisoners from an unidentified member of an Italian Service Unit. The group was separated; its members were shipped to various camps.[173]

End of the War Brings Change in Emphasis

A comparison of the types of cases investigated during the four war years 1942 through 1945 and the cases which Transportation Corps CIC agents investigated in the four-year period after 1945 reveals a definite shift in emphasis.

While the United States was at war, the emphasis was on possible cases of sabotage and of Nazi affiliation or sympathy. After 1945, however, virtually all the 117th CIC Detachment's work involved loyalty investigations of government employees, both civilian and military, at the ports of embarkation. In June 1948, a typical month, agents completed 176 loyalty investigations but closed only 23 other types of cases, none of them dealing with espionage, or sabotage investigations. At the same time, 496 other loyalty checks were pending.[174]

172 Interview with Maj John Murphy, 21 Sep 55, (Conf) (CIC Files).

173 Hampton Roads POE Weekly Intel and Sec Summary, dtd 13 Jun 45, (Conf) (CIC Files).

174 117th CIC Det, Monthly Rpt of CIC Activities for June 48, Maj Victor J. Layton to Chief, CIC, dtd 9 Jul 48, (Conf) (CIC Files).

The new emphasis on loyalty investigations resulted in dismissal of numerous government employees who were found to have maintained affiliation with Communist front organizations for years. In some cases, the persons in question had hidden their Communist activities by deliberate falsification of personal history statements.

Other investigations also centered on Communist activities. In New York, a bartender informant warned a CIC agent that Joe Curran, president of the Communist-dominated National Maritime Union, planned to stow away on an Army ship en route to England, where he was to attend a world labor conference. The informant stated that a seaman aboard the ship had obtained forged papers which would permit Curran to sail under an assumed name. CIC permitted Curran to board the vessel but a Military Police officer was waiting to meet him when the ship docked at Southhampton, England. Curran was confined to the ship until it returned to New York.[175]

Communists Infiltrate Army Transport Service

More startling, however, was a 1948 report prepared by CIC agents at the San Francisco Port of Embarkation.

An informant of the 117th's subdetachment in San Francisco described a 1936 meeting of five Communist Party leaders at which a long-range plan for infiltrating the Army Transport Service was adopted. The plan called for Communists to work through the Communist-dominated Marine Cooks and Stewards Union.

In the fall of 1947, the informant continued, one of the five leaders, who by now was president of the Marine Cooks and Stewards Union, ordered establishment of a Communist courier system within Army Transport Service vessels operating between West coast ports and the Far East. The informant asserted that there was not a single Army transport sailing from San Francisco that did not have Communists among its crew. He went on to name those people he knew to be Communist Party members.[176]

Even before this time, however, Transportation Corps CIC agents had given general coverage to all meetings of labor groups in port areas, particularly those which were known to be heavily infiltrated by the Communist Party. Reports from the Seattle Port of Embarkation show that as early as 1946, CIC agents were assigned to cover such meetings and to report details on speakers, physical descriptions of prominent leaders, agenda of meetings, and audience reactions.

175 Interview with Maj John Murphy, 21 Sep 55, (Conf) (CIC Files).

176 SOI, 117th CIC Det, San Francisco Port of Embarkation, dtd 28 Jun 48, Subj: Communist Infiltration of the Army Transport Service by Communist Party Members, (Conf) (CIC Files, No. T-4-179-F, Rpts 38 and 39).

At the New York Port of Embarkation, a suspected Communist was trapped in an attempt to steal radar plans during February 1946. The suspect, a civilian employee of the SS Argentina, was apprehended by a customs patrolman because of suspicious actions on a pier in the east coast port. When a search of the seaman turned up copies of the ship's radar plans, agents of the 117th CIC Detachment were called in to investigate.

A background investigation conducted by CIC revealed that the suspect was an alien, a native of Yugoslavia, and a suspected Communist. He had worked on American ships for three years.

With this information, CIC agents interrogated the seaman. He admitted taking radar plans and told agents he intended to deliver them to a fellow Yugoslavian in Hoboken, New Jersey. Since both men were civilians, CIC turned the case over to the FBI for further investigation.[177]

Less than eight months later, in October 1946, CIC agents smashed a Communist Party cell operating within the Fort Hamilton sub-installation of the New York Port of Embarkation. A tip from an informant touched off the CIC investigation, which disclosed that the organizers of the cell were a man and a woman "holding highly responsible duties" at Fort Hamilton. On the recommendation of CIC, both were discharged from government employment without reemployment rights.[178]

CIC Used on Non-CIC Tasks

Despite the increasing number of cases involving Communists working for the Transportation Corps, CIC agents still were used to investigate criminal cases, racial disturbances, and other incidents not related to counterintelligence.

Pilferage of Army cargo was the most common type of criminal case investigated by CIC. Between 1 February and 31 May 1945 CIC agents at the Army ports opened 2,353 criminal cases.[179] In June 1946 the 117th CIC Detachment submitted 87 summary reports dealing with theft of government property, but only 13 reports were related to all other case categories.[180]

180 117th CIC Det Monthly Info Rpt for Oct 1946, dtd 6 Nov 1946, (Conf) (CIC Files).

Racial incidents frequently demanded CIC attention. Agents assigned to the San Francisco Port of Embarkation investigated an abortive riot between Negro and white troops aboard the Army transport Admiral Benson on 7 November 1946,[181] and at New Orleans, agents often checked out reports of altercations between American and Puerto Rican soldiers.[182]

Protests by CIC agents who objected to performing duties not related to counterintelligence were unheeded. On 7 October 1946, Alfred Harrison, Chief Agent of the 117th CIC Detachment at the New York Port of Embarkation, complained to Maj James T. Reitz of Counter Intelligence Branch of G2, War Department, of "a flagrant violation of current War Department directives regarding CIC activities and the use of CIC personnel." He wrote:

"I understand that I am circumventing channels to some extent by writing to you in this manner but I am doing so...in the best interests of the organization. The Chief, Intelligence and Security Division, San Francisco Port of Embarkation, has requested additional CIC personnel to meet an increased work load at that port. However, the attached Monthly Report indicates that only criminal investigations are being conducted. I hope that something can be done to correct the situation. I know that CIC work exists at the ports and if only given the opportunity and support, our agents will successfully perform their work to a degree gratifying to both the 117th CIC Detachment and to the Director of Intelligence."[183]

In Washington, however, no action was taken to correct the situation. A penciled memorandum to Major Reitz, signed only "L" and believed to be Lt Colonel Leydecker of the Counter Intelligence Branch, G2, War Department replied:

"With all of our great amount of administration and shortage of personnel in the Branch, I am refusing to accept the responsibility for a crusade against CIC doing non-CIC work. Colonel Forney is also resigned to the fact. No use."[184]

CIC Officers Sail for Greece

One of the most important cases of the 117th CIC Detachment during 1947 involved security of a shipment of arms and ammunition from the United States

181 117th CIC Det, Summary of Investigation, dtd 20 Nov 46, Subj: Racial Incidents Aboard USAT "Admiral Benson," (Conf) (CIC Files).

184 Informal Memo to Major Reitz, undated and signed "L", (uncl) (CIC Files).

to Greece. The shipment was scheduled to leave the New York Port of Embarkation early in September on the USAT Lehigh Victory. Since the shipment was the first of several planned under an assistance program, both the War Department and the State Department publicized the event widely. Press and motion picture photographers were notified of the impending shipment. Only routine security measures were considered necessary.

Then on 28 July, the Commanding General of the New York Port of Embarkation received a report through a liaison officer of the Greek government that an attempt would be made to sabotage the shipment when it arrived in Greece. Maj Leon A. Michaelis, commanding officer of the 117th CIC Detachment, was ordered to plan security measures necessary to insure the safe arrival of cargo and crew.

Background investigations on all crew members were quickly completed and anyone with the slightest questionable background was transferred to another vessel. Restrictions on pictures that could be released for publication were hastily imposed.

When the ship sailed on 7 September, Major Michaelis was aboard as cargo security officer. Lt William S. McMahon, also of the 117th CIC Detachment, shipped as an ablebodied seaman. During the voyage, Major Michaelis made daily inspections of cargo, noting any changes in surrounding area which might indicate tampering. Both the captain of the ship and Major Michaelis presented security lectures to the crew.

After an uneventful ocean crossing, the Lehigh Victory arrived at the Port of Piraeus, Greece, on 21 September. The Greek government and the American mission had set up a security check of small boats in the harbor. Everyone boarding the ship was carefully screened. The cargo was safely unloaded.

The ship returned to the United States without Major Michaelis. At Leghorn, by prearrangement, Lieutenant McMahon was "arrested" and removed from the ship. He joined Major Michaelis, and they returned to the New York office by air.[185]

CIC Investigates a Fire

A spectacular fire at the Oakland Army Base, was another incident of suspected sabotage investigated by CIC agents.

On 17 March 1949, a mysterious, $5,000,000 fire broke out on piers at the Oakland Army Base, a sub-installation of the San Francisco Port of Embarkation.

185 117th CIC Det Rpt of Sec Mission aboard Lehigh Victory, dtd 3 Oct 47, (Conf) (CIC Files).

Two days later, with crates in some warehouses still smoldering, two agents from New York were flown to San Francisco to aid in the investigation.

FBI and Criminal Investigation Division agents already on the scene had failed to turn up a lead when the CIC agents from New York arrived and began questioning Military Police enlisted man who had reported the fire. Detecting flaws in the youth's story, the CIC agents reinterrogated him until he admitted starting the fire. In search of pilferable items, the soldier had used a cigarette lighter to illuminate markings on cases stacked in one of the warehouses. He dropped the lighter between two crates and was unable to recover it. Moments later the entire warehouse was in flames.

Since no sabotage was involved, CIC turned the results of the preliminary investigation over to the Army's Criminal Investigation Division for further action.[186]

Security Pays

In a special report prepared at the end of World War II, the Intelligence and Security Division, Office of the Chief of Transportation, claimed the following results for its security program:

"No case on record has resulted in proof:

(1) That the enemy secured knowledge of the movements of troops or cargo through compromise of the information within the Transportation Corps.

(2) That the Transportation Corps facilities were damaged, or operations hampered, through sabotage, subversion, or willful negligence."[187]

To the CIC agent who stressed security at every opportunity must go a share of the credit for that record.

MISSION OF THE COUNTER INTELLIGENCE CORPS

"The mission of the Counter Intelligence Corps is to contribute to the operations of the Army Establishment through the detection of treason, sedition, subversive activity, and disaffection, and the detection, prevention, or neutralization of espionage and sabotage within or directed against the Army Establishment and the areas of its jurisdiction."

Auth: AR 381-100

HEADQUARTERS
U. S. ARMY INTELLIGENCE CENTER
FORT HOLABIRD, BALTIMORE 19, MARYLAND

ACSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Part I: CIC in Alaska

CIC IN ALASKA

Until 1941, counterintelligence functions in the Territory of Alaska were performed by personnel of the Command Headquarters of the Alaskan Defense Forces under the supervision of Col. Lawrence V. Castner, the S2. This was necessitated by the unavailability of trained investigative personnel and, although the establishment of an extensive military and civilian informant system throughout the Territory made the job possible, it did not prevent the accumulation of a large backlog of intelligence work.[1]

To assist Colonel Castner, S/Sgts Thomas J. Chambers and Charles R. Dowling of the Corps of Intelligence Police were sent to Alaska in July 1941. Their work consisted in large part of the investigation of individuals and organizations whose loyalty to the United States had been questioned. As the military forces in the Alaskan area were strengthened, the office of S2 was designated G2 and the responsibilities of the units were markedly increased.[2]

When the Corps of Intelligence Police became the Counter Intelligence Corps after the declaration of WW II, seven more agents from Headquarters Western Defense Command and 4th Army, Presidio of San Francisco, California, were sent to Alaska and placed on detached service with the Command headquarters. By May 1943, 18 Special agents and four officers were serving in the area and were transferred to Detached Enlisted Mens' List, CIC, Military Intelligence Service, War Department, Headquarters Western Defense Command, and 4th Army, but remained on detached service with Headquarters Alaska Defense Command.

On 1 November 1943, the Alaskan Defense Command was renamed the Alaskan Department and designated a separate theater of operations. However, at that time, all CIC personnel were placed under Headquarters Ninth Service Command and it was not until April 1944, that they were organized as the CIC Detachment, Alaskan Department. By March 1944, the organization had been broken into a cellular structure and further altered pursuant to T/O and E 30-500 dated 24 January 1944. In April a CIC detachment for the Alaskan Department was organized. And on 26 July 1944, it was officially designated as the 467th CIC

[redacted]

Detachment. At that time the total strength of the unit was six officers and 18 Special Agents and clerks.[3]

After activation of the detachment as a part of the Alaskan Department, the headquarters was permanently maintained at Fort Richardson, Alaska.[4]

A statistical history of the 467th indicates a transfer of the headquarters to Elemendorf, Alaska, Air Force Base between December 1951 and January 1952, but after this period the detachment returned to Fort Richardson.[5]

The Branch Office Network

Colonel Castner retained supervision of the detachment until October 1942, when Lt. Col. Otis E. Hays, Jr., assumed control. It was under Colonel Hays as G2 that the detachment was expanded and a system of branch offices created.

The vast geographic area, nearly as large as western Europe, for which the detachment was given responsibility, necessitated the establishment of a branch and sub-office system. Once a branch became functional it was assigned jurisdiction over a specific area and held responsible for all counterintelligence matters evolving in that area.

The Fairbanks Branch office was set up in April 1943, with offices in the Federal Building, Fairbanks, Alaska. Within its geographic area were six Army air bases, two troop installations and considerable portions of the Alaska Military Highway, the Canada-Alaska Pipeline Project, and the Alaska Military Telephone System.[6]

An office at Juneau, along with a sub-office at Ketchikan, was established in July 1943. Within this area were six major troop installations and two landing fields. Juneau, as the capital of the then Territory, became the center for processing of enemy alien cases and Ketchikan, being the southern-most city in Alaska, served as a port of entry for most commercial visitors to the Territory.[7]

[redacted]

Offices in the Federal Building at Anchorage were opened in October 1943 and for a time this office was held responsible for the entire southern Alaska area as well as the Aleutian and Pribilof Islands. Establishment of an office at Adak in the Aleutians in February 1944 eased to some extent the burden of the Anchorage office, since responsibility for nine installations in the Aleutians was given the Adak Branch. The processing of thousands of War Department civilians employed by contractors in the Aleutians and the presence of limited combat activities in this area made necessary a sub-office to the Adak Branch which was set up at Shemya, Alaska.[8]

CIC in Unique Jurisdictional Situation

Alaska presented CIC with an unique intelligence jurisdictional situation. The responsibility for all intelligence matters within the Territory and within the jurisdiction of the War Department was the sole responsibility of the Commanding General, Alaskan Defense Forces. For counterintelligence matters, the responsibility was assigned to the 467th CIC Detachment. However, a division of counterintelligence responsibility between the CIC, FBI, and the Office of Naval Intelligence was implemented by special War Department directives and by conferences at which all three agencies were represented. While the jurisdiction of the 467th was substantially similar to that of detachments in other theaters, there were two important exceptions.

First, all intelligence activities in the Alaskan Peninsula-Aleutian Island area were the responsibility of the War Department, regardless of the status of the status of the individuals concerned.[9] This meant that CIC had exclusive jurisdiction over all persons in the area, military or civilian, whether employed by the Government or engaged in civilian pursuits. FBI and the Office of Naval Intelligence operated in those portions of the Territory, if at all, with the permission and indulgence of CIC.

---

8 History of the CIC in Alaska, Det History, 467th CIC Det, undated, p 3, (Secret) (Kansas City R.C., Box C-4308).

9 Ibid, p 4

NOTE: The Alaskan Peninsula area is generally construed to include only that tip of land appended to Alaska on its southern shore and extending toward the Aleutian Island chain. It includes Kodiak Island and that part of the mainland separated by a line drawn from Iliamna Bay northwest to the town of Old Iliamna, and thence following the south shore of Lake Iliamna to the Kvicak River and to Kvicak Bay. Records indicate that the award of exclusive jurisdiction to CIC was intended to include only this area and nothing more. It may be presumed that jurisdiction in other areas of the Territory was comparable to that obtained in the continental US.

Second, enemy aliens in the Territory were the responsibility of the War Department and hence CIC, to the exclusion of any other agency.[10]

Area of Responsibility Extensive

Difficulties raised by the extensive area of responsibility assigned to the 467th were pointed up in a memorandum written by Maj. Lowell J. Bradford of CIC Headquarters who made a field inspection of the CIC units there in 1943. Major Bradford found that the 467th was discharging the counterintelligence function of the Alaska Defense Command, the Army Air Force Exempt Stations in Alaska, and those bases of the Air Transport Command within the Territory.

Transportation was a major obstacle. For example, the distance between CIC Headquarters at Fort Richardson and the Fairbanks Field Office, where frequent trips were necessary, was over 275 miles. Inclement weather, absence of an adequate rail and road network and the slowness of water travel were factors to be contended with, and which could not readily be solved.[11] As late as 1945, it was necessary to depend upon dog teams and sleds for access to a relatively populous sector of the Territory.[12]

Weather was a serious hazard. While large parts of the Territory, especially in the southeast, enjoy a mild climate both summer and winter, northern Alaskan temperatures reach extremes of lower than 60 degrees below zero.[13]

Travel Control a Problem

A second problem was that of travel control from within the Territory. A civilian agency, Alaska Travel Control, had primary responsibility for this matter, but Colonel Hays and Col. L. E. Shick, Deputy Chief of Staff, Alaska Defense Command, told Major Bradford that the control agency was generally considered to be a "complete joke." They said there was substantially no control and that the travel and activities of persons coming into Alaska created a constant

13 Information Please Almanac, New York Herald Tribune Edition, 1953, Edited by John Kiernan, MacMillan Company, N.Y.

source of danger and unnecessary work for the detachment, since most of these people sought employment from War Department contractors and drifted from job to job.[14]

A contrary viewpoint concerning the value of the Alaska Travel Control is disclosed in other records. The 467th CIC Detachment felt that the bureau had made an invaluable contribution to the prevention of espionage within the Territory by checking through a fingerprint system the records of all civilians seeking to enter Alaska. This system provided a means for detecting and locating persons with subversive or criminal records and, after detection, those persons were either denied access to military installations or removed to the United States.[15]

Supply Shortages Acute

The detachment was also faced with an acute shortage of supplies and equipment. Major Bradford found that paper work constituted the main bottleneck, and the lack of typewriters, cameras, and sound equipment made borrowing from other units an every-day necessity to successful operation.[16]

Difficulties With Overlapping Jurisdiction

Still another problem arose when a CIC detachment was assigned to Alaskan Wing, Air Transport Command, in September 1943. Since this new unit operated in part within the geographic area of the Alaska Defense Command, the problem arose of integrating the counterintelligence program of separate detachments within an overlapping command. The program was apparently not too successful, for the Air Transport Command unit reported that cooperation being furnished it from within the Alaskan Department was poor,[17] and the author of a history of the 467th CIC Detachment expressed the opinion that the accomplishment of the CIC mission in the theater was being impeded by the assignment of separate detachments to overlapping commands. The same author strongly recommended that all CIC personnel within a theater of operations be assigned to the command

1336

ultimately responsible for counterintelligence operations.[18] This problem is further considered in the chapter on CIC With the Air Forces.

Training Within the Unit

All available material indicates that most personnel assigned to duty with CIC in Alaska were not given sufficient training prior to arrival in the theater. There was a divergence of views, however, as to the degree and type of training that was needed. So long as the training school at Chicago, Illinois, was in operation, the agents furnished were found to be fairly well qualified.[19] With the closing of the training center it was found that personnel arriving in the theater were not sufficiently skilled for the type of operations undertaken by the 467th CIC Detachment. Major Bradford reported that the main training deficiency was a lack of knowledge of proper report writing technique and the use of investigative aids.[20] It was felt by others that there was not sufficient emphasis being given to training for nontactical operations such as were being carried out in the Alaskan Department.[21] In his report, Major Bradford deplored the lack of knowledge concerning the possibility of field security work to be performed in uniform by personnel within a combat area.[22] Still a different source indicated preference for personnel with civilian experience in the investigative field for work in the Alaskan Theater.[23]

In spite of demands by Brig. Gen. Frank L. Whittaker, Deputy Commander, Alaska Defense Command, that fully trained personnel be assigned to the command since there were no training facilities available and Alaska had been termed a combat zone, the 467th found it necessary to establish training schools of its own.[24] General Whittaker took the position that there was no field security mission for the CIC to perform in the front lines of the Aleutians and that for

the CIC to fulfill the mission as he contemplated it, agents should be trained to perform nontactical work within the command.[25]

Three schools were in operation by 1945. The courses were designed to deal with general investigative practice and procedure, with special attention to problems regarding CIC operations in Alaska. When the authority to recruit agents from within the Alaskan Department was granted by the War Department on 15 August 1944, the men selected were trained through the Detachment Training School. By June 1945, four of these unit-trained agents were on duty with the 467th CIC Detachment.[26] Records do not indicate when these schools were discontinued, but a "routine report" in 1947 contained the recommendation that the amount of report writing given at the CIC school be at least doubled, and that the technical training given overseas replacements be decreased, and the gain in time be applied to training in investigation and interrogation techniques.[27]

Early Operation Under Cover

Early operations of the CIC in Alaska were performed by agents working solely in an undercover capacity. The agents either took civilian occupations or purported to be employees of various Government agencies. Any connection with Military Intelligence was carefully concealed except with the many persons involved in an extensive informant net.

The operational limitations inherent in such a system led to its abandonment in 1942 but the well established informant system was retained in both civilian and military channels.[28] The undercover technique was still used as an investigative aid and even after agents began to work in civilian clothes, in the open, they were not known as CIC agents, but rather as "War Department inspectors."[29]

Although one CIC agent from the Alaskan Department was stationed at Dutch Harbor during the Japanese air attack CIC personnel were not directly utilized in the combat operations of the Alaska Defense Command. Nevertheless, numerous counterintelligence missions closely associated with the execution of the Attu and

1338

Kiska campaigns and the combat operations of the Eleventh Air Force from Alaska bases were carried out by the detachment.[30]

Alien Loyalty Investigations

One of the first tasks given CIC in Alaska was the investigation of the loyalty of enemy aliens in the Territory. All Japanese persons of more than half-blood and all Japanese males of half-blood over 16 years of age were ordered to be evacuated from Alaska. This ruling apparently covered Nisei as well as Japanese citizens. Investigation of the loyalty of Italian and German citizens in the area also required CIC attention. Hand-in-hand with these investigations went searches for contraband goods and assistance to enemy alien Hearing Boards established at various points in Alaska.

When later in the war interned persons were released, CIC conducted investigations which aided the Commanding General, Alaska Department, in considering the applications which many submitted to be allowed to return to the area. If return was allowed, scrutiny of the individuals' activities fell to the CIC.[31]

CIC Checks Civilian Employees

Loyalty checks on civilian employees of the War Department contractors in Alaska constituted a major part of the detachment's work in the theater. Nearly 6,000 such investigations were completed between 1942 and 1945.[32] The investigations were considered extremely important, for no delay in strengthening the Alaskan Defense network could be countenanced. The routine aspect of these investigations was occasionally relieved by incidents such as the Fowlie Case.

In 1944 the 467th CIC Detachment was informed that an Alexander S. Fowlie was claiming in Juneau business and social circles that although he wore civilian clothes, he was in reality a brigadier general of the United States Army and that he was currently engaged in a secret mission for military intelligence. It was reported that Fowlie wore the star rank on the underside of his civilian coat lapel and that he alleged that his business address was the Pentagon in Washington. Fowlie was placed under surveillance by the detachment while a check was made with the War Department. When information arrived that he was neither military or civilian War Department personnel, the case was turned over to the FBI.

30 Hist of CIC in Alaska, Det Hist of 467th CIC Det, p 7, (Secret) (Kansas City Records Center, Box C-4308).

31 Ibid, p 8

32 Ibid, p 7

Fowlie was later arrested and in addition to the impersonation charge was faced with a warrant issued for his removal to Juneau on a polygamy charge.[33]

Sabotage Investigations Numerous

Up to 1945 the records of the Alaskan Department do not reveal a single case of enemy inspired sabotage. Several cases of suspected sabotage were investigated. Generally these investigations disclosed security violations. The detachment recommendations usually resulted in corrections. Gross negligence or mismanagement on the part of individuals was often revealed and provided a basis for their removal from sensitive positions.

Employees of War Department contractors in the theater had a high incidence of criminal record, and this often prompted the investigation of all incidents in which sabotage was remotely indicated.[34] This was particularly true in the many instances of highly destructive fire in Alaska. One cause of these fires was the dryness of the many wooden buildings which did not have central heating and yet had to be heated at all times during the winter season.[35] A second causative factor was the negligence of individuals.

A fire involving the loss of over $900,000 at the Station Hospital in Adak, Alaska, in December 1944, was ultimately traced through CIC investigation to a lighted cigarette carelessly tossed into a pile of sawdust. The disposition of the confessedly negligent workman is not revealed but the fire led to the institution of rigid fire control rules in the area.[36]

During the same month a fire at an automotive repair shop in Nome which caused a loss of over $32,000, was traced to negligence of personnel and malfunction of a furnace oil burner.[37]

CIC also investigated a fire aboard the United States Army Transport "Teapa." The vessel was waiting to unload near Seward when a fire broke out in its cargo hold and raged for about 13 hours. Damage to the ship and cargo was extensive;

37 Ibid, p4

a lengthy and thorough investigation revealed a leaky fuel line as the principle causative factor.[38]

Sabotage investigations were not limited to fires, although these did constitute the bulk of such work. Early in 1945 an object believed to be a home-made bomb and resembling a hand grenade was found aboard a troop carrier aircraft while in flight. For safety reasons the device was immediately tossed from the aircraft; so thorough investigation was precluded. Replicas of the bomb were constructed after interrogation of the crew, and it was concluded that it was a lethal device, but positive steps, other than the institution of countermeasures were not possible.[39]

The detachment was also faced with instances of malicious destruction which at first glance appeared to be sabotage. A typical incident occurred in late 1944. Within a short period sugar placed in gasoline tanks disabled a transportation truck being used by a civilian contractor and a generator motor in the power plant at Shemya, Alaska. CIC investigation revealed that a civilian employee of the War Department contractor at Shemya had caused the damage in an effort to "get even" with another employee who was responsible for both the vehicle and generator motor. The offending individual was discharged from his position upon the recommendation of CIC and details of the incident were furnished the FBI. Final disposition of the case does not appear in the report.[40]

Security Surveys Made

Many security surveys were performed within the staff sections and units of the army in Alaska. These surveys were designed to determine the safety of communications, transportation facilities, storage and supply facilities as well as the offices and installations involved. Many deficiencies were detected and called to appropriate attention, and it appears that the surveys and subsequent spot checks were generally well accepted.[41]

Russian Personnel a Problem

Close operations with Russian Army personnel in the Alaskan area, where lend-lease aircraft and supplies were physically transferred to the Russian Forces, raised many problems for CIC. In his 1943 report Major Bradford emphasized the need for Russian linguists in the theater and forwarded several recommendations for increased security measures with regard to Russian military forces in Alaska.

Unfortunately, the results of these recommendations are not disclosed in subsequent records. Major Bradford found that Russian officers went armed at all times, had free travel throughout the Territory, and frequently used cameras. The Russians were also seen to purchase U.S. Army clothing and insignia. The situation was complicated because it was not clear at this time whether responsibility for security measures regarding these Russian forces should fall upon the War Department or the State Department. The resolution of this problem does not appear in available records, but since it does appear that CIC acted in the situation, responsibility presumably was placed on the War Department. It is seen that in 1943 CIC investigated the suspected murder of an American soldier by two Russians,[42] and in 1944, acted to correct a security conflict between Russian and American report procedures.

In the latter situation it appeared that identical reports were submitted to the War Department by American and Russian personnel and that the American report was classified Secret while the Russian report was sent in the clear. In view of the international aspects of the case, the conflict was resolved in favor of the Russian report system.[43]

CIC Helps Other Agencies

The Alaskan detachments handled many other cases not of a counterintelligence nature. These cases were, in large part, the result of frequent requests by civilian and military agencies for investigative assistance, and it was felt that such cases had a direct bearing on the successful prosecution of the war effort. These requests came from the Provost Marshal and the Inspector General of the Alaskan Department, as well as from the Federal Bureau of Investigation, the Treasury Department, and the Immigration and Naturalization Service. The Immigration and Naturalization Service relied solely upon CIC reports to determine the suitability of enemy aliens for United States citizenship.[44]

CONFIDENTIAL

CIC Covers Labor Situation

Among the miscellaneous duties of the CIC in Alaska was the coverage through an informant network of the labor situation, particularly with regard to union elements.[45] G2 periodic reports throughout 1942, 1943 and 1944 contain complete and extensive coverage of labor and union activities within the area of the Alaskan Department but the source of this material is not given in reports and it cannot be conclusively established that CIC furnished the information, although it is the type of work CIC agents in the area were doing.

CIC as Censor and Monitor

Cases involving censorship violations, though not the responsibility of the CIC, were handled by the detachment. It was estimated in 1945, that probably 50 courts-martial convictions for censorship violations were due to CIC investigation in this field.[46]

Monitoring of radio broadcasts was also undertaken by the CIC with the cooperation of the Federal Communications Commission and the Federal Bureau of Investigation.[47] In a report dated 30 March 1944, it is revealed that a detachment with the Army Air Forces Air Transport Command in Alaska went so far with this activity as to have the Signal Corps install a radio receiving set at detachment headquarters. The purpose of the project was to obtain information as to the type of propaganda being broadcast by the Axis into Alaska.

In many parts of Alaska reception on short wave and standard band sets was far better from Japanese stations than from American stations. Since most of these Japanese propaganda programs were labeled by listeners as "bunk" and exaggerated claims, it appeared that most listeners were acting for amusement only, and it was felt that no serious problem existed as a result of these Axis efforts. To counteract the possibility of any ill effects, however, local radio stations were set up at many military installations and interesting news and musical programs were provided.[48]

CIC Investigates Japanese Balloons

Another miscellaneous duty which fell to CIC concerned the recovery of incendiary balloons released from Japan to drift and fall on American territory. Typical of these was one handled by the 467th CIC Detachment in January 1945. The pursuit of this balloon involved use of a charter plane and dogsleds; the balloon was recovered intact atop a 45-foot cottonwood tree. Examination of attachments to the balloon by an agent at an improvised laboratory at 467th Headquarters revealed the presence of incendiary acids and chemicals, but no bacterial matter. CIC agents were used in several such cases, according to the detachment report.[49]

Espionage, Subversive Activity Investigations Made

The task of dealing with espionage in the Territory was largely preventive in nature and to this end CIC conducted many security surveys as well as investigations which either caused the removal or prevented the entrance of persons suspected of such activity.[50] Control of communications and travel prohibited, in part, the dissemination of information which might be picked up and a careful examination of all baggage and personal effects belonging to persons leaving the Territory aided in preventing the accomplishment of espionage. The examination of baggage in at least one instance paid rich dividends.

During 1944 a civilian employee who had terminated his employment contract was found to have in a secret compartment in the tray of his foot locker 87 photographs of newly built runways, aircraft and materiel dumps. Investigation revealed the photos had not been approved by the base censor, and it was found that 43 of the photos disclosed classified information. As a result of the investigation a soldier who had aided the civilian in accumulating the photographs was court martialed. Although the violation on the part of the civilian was admittedly willful, he claimed its purpose was the gathering of souvenirs and he was released after being relieved of the photographs.[51]

Investigation of subversive activity was another mission of the detachment in Alaska. Although as late as 1945 it was felt that there was little or no indication of concerted or organized activity, on the part of individuals or groups,

designed to impede the war effort,[52] several investigations of suspected or potential subversives were conducted.

In March 1944, the unit attached to the Alaskan Wing, Air Transport Command, assigned undercover investigators to conduct a surveillance of an employee at the Watson Lake Air Base. The individual was reported as distributing literature which particularly opposed the United States Government financial policies. The outcome of the case does not appear.[53] In July of the same year, Anna Louise Strong, author of several books and articles praising the Communist Government, was refused transportation to Russia on planes of the Air Transport Command and investigated by the local CIC unit. She had no authority to use Government transportation, but did leave packages to be shipped from the Army Air Base at Great Falls, Montana, through Alaska to Russia. CIC recommended that customs officials carefully examine the packages before shipment, but the outcome of the case is not disclosed.[54]

Food Poisoning Case Investigated

In September 1944, the 467th was faced with a case of food poisoning which involved 471 employees of the War Department contractors at Ladd Field in Alaska.

The extensive investigation which was undertaken by CIC involved interrogation of almost 100 of the victims and distribution of printed questionnaires to all parties involved in an effort to determine what food and drink had been taken by all in common. It was ultimately concluded that the causative agent could either have been artificially introduced into the food or have developed naturally during a prolonged period of storage.

During the course of investigation, it was disclosed that Thomas Stoelting, a civilian interned early in the war as a potentially dangerous enemy alien but later released, was not only in the Alaskan Theater and working on a classified project but had also had access to the tainted food during its preparation. Steps to effect his removal to the United States were recommended and the case was turned over to the Federal Bureau of Investigation.[55]

"...No reason to Question..."

An article in the Chicago Sunday Tribune dated 14 March 1945, prompted an investigation by the 467th of post newspapers and radio stations within the Alaskan Department, and of the Information and Education program sponsored within the Territory. The article stated in substance that a widely read author and alleged Communist propagandist, paper within the The article implied by its headline that he was forcing Soviet views upon American troops and further described his activities and affiliations with the Communist Party. had already been investigated by the agents of the detachment and examination of the records failed to disclose any evidence of subversion or un-American activities. A report of the investigation concluded, "there is no reason to question his loyalty to the United States."[56]

The radio stations, newspapers, and Information and Education Branch were investigated by making close record checks of all personnel involved and if derogatory information was developed, a complete investigation was run. No evidence was found to indicate an effort on the part of these individuals to disseminate Communist propaganda, and the Tribune article was considered to have been satisfactorily refuted.[57]

In view of the essentially preventive nature of CIC's mission in the Alaska Department, it is not possible to tabulate an exact account of services and results in the theater. The record of the 467th CIC Detachment at Fort Richardson, Alaska, however, from the date of its inception through May 1945, provides a typical example:

Loyalty Investigations Completed	5,810
Enemy Alien Investigations	222
Suspected Sabotage Investigations	210
Censorship Violation Investigations	269
Subversion and Disaffection Cases	315

56 Ltr, dtd 19 May 45, Subj: CIC Monthly Info Rpt, from Lt Col F. L. Petru, p 4, Rpt File 319.1, 467th CIC Det, (Secret) (Kansas City Records Cen, Box C-4308).

57 Ibid

No figures are available to show the number of suspected espionage cases processed or whether they are included in the above. No totals are given for the multitude of cases falling into the miscellaneous category.[58]

Obstacles and Difficulties Encountered in Alaska

In the administrative field, CIC in Alaska met additional impediments, some unique and others common to CIC operations the world over.

One was the matter of expenses. In 1943, it was felt that the per diem allowance for enlisted agents was sufficient for their needs. But officers were suffering a monetary loss when cut off from the temporary duty allowance which was granted prior to 1943.[59] Authority to pay a similar allowance from what was called the "Task Force Fund" was requested, but the disposition of this demand is not recorded.

A letter in early 1944 over the signature of Brig. Gen. Frank L. Whittaker seems to indicate that the rising cost of living experienced in the area necessitated a re-evaluation of special allowances for CIC personnel. It was stated that the daily expense for food and lodging exceeded the monetary allowance, and the letter cited studies which provide a clear picture of prices in Alaska at this time. A report conducted prior to the war by the Juneau local of the National Federation of Federal Employees compared the cost of living in Alaska with that of Washington, D.C., and revealed that cost to be 116 percent higher in Fairbanks, Alaska, and 88 percent higher in Anchorage.

A report from the Bureau of Labor Statistics completed in January 1943 compared living costs in Alaska with similar expenses in Seattle, Washington, and showed that scale ran higher by 73 percent in Fairbanks and 61 percent higher in Anchorage. It appeared that the scale reduced as the comparison moved farther south, but even at Ketchikan, the southern-most city in the Territory, the index figure was 36 percent higher.[60]

General Whittaker's letter brought some action from the finance branch but that office felt that such financial difficulties were met by all personnel on

duty in Alaska, and that a rate in excess of the authorized figures could not be paid to a special group.[61]

The expense situation created a morale problem which was further aggravated by the lack of promotions available to CIC personnel in the Territory. Civilian personnel employed by War Department contractors were considered overpaid even in light of working conditions, according to one Monthly Report. "It is common knowledge that in many instances these civilians are unqualified and incompetent for their positions, and that they are continued in employment at high pay long after their usefulness has expired."[62]

Agents encountered the usual difficulties when their military status was revealed, but this obstacle was generally overcome through the resourcefulness of the agents and the prestige earned by the organization.[63] In 1945, however, it was still felt that the operations of the detachment could be more expeditiously performed if an effort were made to remove restrictive and burdensome military regulations from CIC personnel.[64] As a general rule, the organization received important backing and cooperation from all military and civilian agencies in Alaska.[65]

The best evidence of successful liaison efforts was shown by the CIC unit attached to the Air Transport Command, Alaskan Wing. Reports from this unit in 1944 and 1945 indicate a vigorous program of liaison[66] and significant accomplishments are specifically credited to the relations fostered by this program.

The problems of supply varied among detachments and in most instances it was necessary that field offices be equipped in such a manner that they could operate with complete independence since the geographic distance involved prevented the use of a central facility.[67] Motor transportation for use by CIC was generally in short supply, but through carefully directed utilization in most

instances proved sufficient.[68] Office and special investigative equipment was often slow in arriving in needed areas, but was ultimately delivered. These delays were sometimes costly and in many instances could have been avoided by careful planning and supervision on the part of responsible administrative personnel.[69]

CIC in Alaska After 1945--Organization

The CIC units in Alaska remained attached to Headquarters, Alaskan Department, until November 1947. At that time, along with the separation of the Air Force from the Army, all CIC personnel were transferred to U.S. Army, Alaska. As might be anticipated, this transfer also altered the jurisdiction of CIC in the Territory.

From 1945 to 1947, CIC jurisdiction was shared with the Federal Bureau of Investigation and the Office of Naval Intelligence. CIC was responsible for matters involving or dealing with uniformed personnel and employees of the War Department. When the Air Force was separated from the Army and set up its Office of Special Investigations, the jurisdiction of the CIC was further narrowed and included only Army personnel and Department of the Army civilians. At the same time, exclusive jurisdiction over the Alaskan Peninsula and Aleutian Islands was transferred to the Office of Special Investigations, which action considerably eased the burden of CIC in the Territory.[70]

In spite of official separation from the Air Force in November 1947, CIC continued to serve the Air Force in Alaska until 30 May 1948. It was on that date that the Office of Special Investigations became operational in the area and had sufficient qualified personnel to carry out a counterintelligence mission.[71]

The picture as to the Field Office structure after the end of the war is not clear. Headquarters of the 467th remained at Fort Richardson, but the detachment with the Air Transport Command was apparently removed from Alaska with the cessation of hostilities. The Juneau Field Office was closed, but the district office in the Aleutians was maintained until the Office of Special Investigations began its operations and took over in the area. It appears that for the most part,

71 Ibid, p 2

agents were sent from Fort Richardson as required in other sectors,[72] and all field offices were closed by December 1945.

The 703d CIC Detachment was stationed in Alaska from June through November 1951, but few records are available to document its six months of activities. Official reasons for the assignment and subsequent removal of the group do not appear in available records.[73]

One explanation for the presence of the 703d was offered by the supply officer of the detachment, Lt. George Munder. Munder felt that the real purpose of sending the detachment to Alaska was to assist the 467th in its summer workload. The weather in the Territory was such that the period during which outdoor construction was possible was extremely limited. During this period, the influx of transient workers was tremendous, and the number of background and incident cases which arose as a result of this increase became too much for one detachment to handle. Maj. Charles Butler commanded the detachment for its six-month stay in Alaska.

In aiding the 467th, it was contemplated that the 703d would handle all cases falling into the labor and construction incident categories. From headquarters at Elemendorf Air Base, agents were sent in teams to Anchorage, Tanacross, Whittier, Kenai, Fairbanks, Haines and Big Delta in order to provide complete coverage. The types of cases handled were not so limited as had been anticipated, however, and investigations of every sort falling within the counterintelligence mission were processed.

Of the seven officers and 15 enlisted men in the detachment, only two men were billeted at military facilities. The others were on a per diem allowance of $11 which proved adequate for civilian food and housing.

As was the experience of other detachments in Alaska, the 703d found its principal difficulties in the fields of transportation and communication. Vehicles performed well in the area if given winter maintenance but were in short supply. Tires were good for only 10,000 miles or less because of the poor condition of roads, and spare parts had to be sent up from the United States if not available in military supply pools. The communication network was poor; only two phone lines connected Anchorage and Fairbanks. In many instances, an air mail letter would be faster than a phone call between these points, as a flight was almost certain to be completed before it was possible to get a reservation for a call between the towns.[74]

74 Interview with George Munder, Gas and Electric Building, Balto, Md, 12 Aug 1955.

Post-war operations proved the value of files which were built up during and prior to the war. As the pace of operations slowed in Alaska with the coming of peace, closer liaison with other intelligence agencies was effected, for mutual advantage.[75]

Such liaison was found to be an absolute necessity to the accomplishment of the CIC mission as the strength of the 467th was sharply cut with the end of the war. In May 1945, there were 19 enlisted men and six officers in the detachment; by October 1945 the total dropped to 11 enlisted men and four officers; and in December of 1945 only one officer and two enlisted men remained on duty. For four months in 1946 only one enlisted man remained on duty; then a gradual buildup of forces began. The detachment did not reach its post-war strength until during the period of the Korean conflict, and strength reports have continued to fluctuate since that time.[76]

In addition to the problem of obtaining personnel, the training of that personnel once it arrived in the theater provided a further complication. In 1947, it was felt still that enlisted agents needed more training in report writing, interrogations, and investigations.[77]

Travel within Alaska remained a problem even after the war and during the winter months was most generally accomplished, of necessity, by aircraft. It was the opinion of one author that because of transportation difficulties, a case which could be completed in a day or two during the summer required a week or more in the winter.[78] The procurement of motor transportation was apparently eased to some extent by making it a matter of local jurisdiction.[79]

Housing for married agents remained a problem in post-war Alaska. Government facilities were so limited as to be almost wholly inadequate while rents for privately owned facilities were prohibitively high, ranging to $250 per month for a four-room apartment, with six months rent required in advance.[80]

As was the case during war time operations, special investigative equipment could be obtained but often involved long delays. A two-month period of correspondence was involved in the procurement of facilities for a photographic laboratory for the 467th in 1947.[81]

Because of the limited selection and high prices of civilian clothes in the Alaskan Territory, arrangements were made in 1947 for agents assigned to the 467th to be issued their initial clothing allowance before reporting to the detachment. From this arrangement it can be presumed that operations were continued with agents in civilian attire.[82]

An informative study of the effect of Alaskan weather on operational and investigative materials in common use was conducted by a Provisional detachment on maneuvers in Alaska during 1950. The 467th CIC Detachment had found through experience that certain inks and carbon paper froze at low temperatures, and that the Bantam type cameras used for investigative purposes had to be heated before use.[83] The 1950 experiments showed that the 35mm Kodak failed to function at low temperatures and that the lens of the Speed Graphic fogged from the heat of the operator's body. Several pieces of sound equipment had to be heated before use to prevent the bursting of vacuum tubes. Some snow vehicles considered for use by CIC were found to be too slow for practical work.[84]

Operations After 1945

In post-war operations, the CIC in Alaska carried on much the same sort of activity that characterized its wartime mission.

Many security surveys were conducted at Army stations within the area, and, where precautions were lacking, remedial steps were recommended.

Background investigations on military personnel and civilian Department of the Army employees having access to classified information were conducted, and it became the practice in the area to complete such checks prior to the effective date of employment.[85] During June 1947, 228 such cases were opened and 248 were closed.[86]

The detachment continued to be plagued with fire cases, as the wooden buildings in the area became dryer. In 1947, the Noncommissioned Officers Club at Ladd Field burned, causing the death of three enlisted men and a property loss of over $20,000. The possibility of sabotage was explored by CIC investigators but the fire was eventually laid to the use of fuel with a low flash point in the space heaters.[87]

The CIC continued investigation and coverage of labor and union activity in the area, and judging from a 1951 case report, put in considerable time in this pursuit. In compiling the above mentioned report, the detachment relied upon informants as well as agents working undercover and in the open.[88]

A possible espionage attempt also was reported in the 1947 files. The 467th investigated the attempt by various individuals in the vicinity of Ladd Field to gain military information from a noncommissioned officer, and felt that these individuals might be Russian agents. The disposition of the case does not appear in the incomplete reports available.[91]

Part II: CIC in Bermuda Base Commands

CIC IN THE BERMUDA BASE COMMAND

One of the smallest of the base commands occupied by United States military forces during World War II was that of Bermuda.

The Bermudas, hardly more than a dot on most maps, are a cluster of about 360 tiny islands some 580 miles off the North Carolina coast, yet the total area of the archipelago is only 19 square miles. A crown colony of Great Britain, the Bermudas assumed military importance to the United States in 1940, when the United States obtained 99-year leases on sites for military and naval installations in these Islands.

Construction on these installations was accelerated rapidly in the spring of 1942, after the Japanese attack on Pearl Harbor. Civilian contractors funneled thousands of workers from the United States into the islands to speed completion of the strategically important bases. Almost overnight Bermuda shed its reputation as one of the world's playgrounds and emerged as a bustling center of feverish defense preparations.

Presence of hundreds of uncleared workers on these restricted projects--and subsequently the arrival of troops to occupy the completed bases--made counter-intelligence coverage of the U.S. installations in the Bermudas a necessity. Since the mass of civilian workers--there were between 3,000 and 5,000--constituted the biggest security threat, it was determined that the first CIC agents should go into Bermuda under cover, posing as civilian employees of one of the construction firms.

Two CIC Agents Selected For Bermuda

Selection of these first agents was as easy as drawing a name from a hat. Preliminary planning had resulted in a decision that two agents assigned to the Washington Field Office, Third Service Command, would be chosen for the undercover missions. As soon as word to that effect got out among the agents in Washington, almost all of them wanted to go. Bermuda itself sounded glamorous enough and the intrigue of an undercover mission made the assignments even more alluring. To settle the question, names of all sergeants and staff sergeants in the Washington Field Office were dropped in a hat. The first sergeant then plucked out the names of and Within weeks, orders were cut transferring them to the Bermuda Base Command.[92]

92 Memo for the Bermuda Base Command File, John K. Smart, 19 Jul 55, subj: Interview with (MI, Res), (Hist Proj Files).

Actually, three agents--two staff sergeants and one technical sergeant--had been authorized for the command since 12 December 1941[93] but the vacancies were not filled until the spring of 1942.

The haphazard method of selection belied the amount of preparation which went into the mission for which and were chosen. Early in April 1942 both men were placed on temporary duty in New York City to enable them to make arrangements necessary to support their cover in Bermuda.

In New York, and learned that they were to pose as employees of the construction company which was building Fort Bell and Kindley Field on St. David's Island. The agents were hired through the company's normal channels in New York City, and only one official of the firm knew of their connection with the Counter Intelligence Corps. After an intensive briefing on the company's operations in Bermuda and their specific job assignments, and were treated like other civilian employees of the firm. Meanwhile, the agents were given passports, Selective Service cards, and other documents which would substantiate their cover stories. Both were promoted to the rank of staff sergeant.

and Arrive in Bermuda

By the end of April, and had mastered their cover and were ready to go to work. Boarding a plane at Baltimore, they arrived in Bermuda on 1942. Although both were thoroughly familiar with their civilian jobs, neither one had an inkling of the nature of the work he was to do for CIC. Their only instructions before leaving the United States were that they should not reveal their identities as CIC agents until contacted by an intelligence officer of the Bermuda Base Command.

It was a long wait. A month passed without word, and the undercover agents began to wonder whether they had been forgotten. Impatient to begin their counter-intelligence work, they could only wait. Wait and wonder. Wait and learn. Wait and grow sick of waiting. Then the word came.

One night in June, returned to his quarters in the civilian employees' barracks to find a letter returned to him heavily censored. With it was an order to report to the base censorship office. Maj. Eames S. Powers, S2 of the Bermuda Base Command, was waiting for at the censorship office. The censored letter was a ruse to get away from his civilian companions.

---

93 Memo, Brig Gen Sherman Miles to TAG, 12 Dec 41, subj: Allotment of Grades of Enlisted Personnel to the Corps of Intelligence Police, (Conf) (Central Records Facility).

Major Powers told --and later that they were to concentrate upon security. Weaknesses in physical security measures at Fort Bell and Kindley Field were to be reported. The agents also were instructed to watch for any security leaks among the civilian employees on the island. Any other information of intelligence interest also was to be reported to the S2.

No Glamour in Bermuda

Any ideas and might have entertained about the glamour of their assignment were quickly dispelled. They conducted virtually no investigations and the few cases they were occasionally assigned almost invariably produced negative results. The agents were the "eyes and the ears" of the S2. Their job was a trying one. was required to work seven days a week at his civilian job; sometimes had Sundays off. There was little time for either to devote to his CIC work or to his own interests. When reports to the S2 were necessary, and often had trouble getting away from their co-workers to contact Major Powers.

But their waiting and watching paid. The agents found security measures at Fort Bell and Kindley Field notoriously inadequate. Restricted areas were not nced. Too few guards were available. Identification cards and badges for civilian workers were improperly prepared, and guards often admitted persons who carried no identification at all. Reports by the undercover agents brought quick corrections of these glaring security weaknesses.

Undercover Agents Spot a Security Risk

When the S2 of the Bermuda Base Command made specific assignments to the CIC agents, the cases usually involved only requests for information about civilian workers who were suspected of anti-American sympathies. One such case centered around an employee whose sister was married to a German Luftwaffe officer. In applying for employment, the man had declared that his sister was divorced and was living in Switzerland. however, learned that she actually was still with her husband in Germany. From the subject's co-workers, the agents heard that he displayed unusual interest in fortifications and coastal defenses in the Bermudas. On the basis of these reports, the man was returned to the United States as a security risk. He was searched aboard ship before sailing from Bermuda and photographs and sketches of military installations in the islands were taken from him.[94]

Soon after began their work in the Bermudas, it became evident that an additional CIC agent was necessary for work among military

94 Memo, subj: Interview with

personnel within the Bermuda Base Command. To meet this need, T/Sgt. Philip F. Detweiler was transferred in grade to the Counter Intelligence Corps in January 1943. Detweiler had been working in the S2 office of the Bermuda Base Command since October 1941.[95] Working in uniform, Detweiler conducted all investigations among the troops and took from Major Powers the responsibility of receiving oral reports from and

CIC Gets an Officer

The first CIC officer in Bermuda arrived on 25 January 1943. He was 2d Lt. Benjamin T. Kinsey, who was transferred from the Office of the Director of Intelligence, Third Service Command, Baltimore, to direct CIC operations in the Bermudas.[97]

Lieutenant Kinsey coordinated the work of the three agents in Bermuda, occasionally contacting the two undercover operatives personally. Despite the arrival of a CIC officer, however, Major Powers, the S2, still exercised considerable control over CIC personnel. Lieutenant Kinsey himself was required to perform many duties not normally considered to be CIC functions. Acting as a sort of assistant S2 to Major Powers, he was allowed to devote only about 25 percent of his time to counterintelligence work.[98] Because of his legal experience, Lieutenant Kinsey was often detailed to serve on court martials and boards of inquiry.[99]

and Change Jobs

Completion of major construction projects in the Bermudas in the spring of 1943 threatened to bring the undercover work of and to an abrupt halt. The contract of the civilian construction firm which had employed the agents expired on 1 May 1943, and all but approximately 250 of its employees were returned to the United States. This relatively small group of workers was hired by the Post Engineer, and arrangements were made to transfer both and

to his office. became early in May 1943. entered as a about a month later.

Although their mission still was to watch for security leaks among civilian workers, the undercover agents were given more freedom of action. The Post Engineer was notified of their true status and was warned that their first responsibility was to CIC rather than to their civilian jobs. This enabled the agents to get away from their office whenever necessary. They were assigned a pickup truck by the Post Engineer which they were permitted to use for CIC work as well. Previously, bicycles had been their only form of transportation around the islands.

But complications also developed from the change in jobs. While working for the civilian construction company, and were permitted to keep their civilian pay in lieu of rations and quarters allowances from the Government. When they switched jobs, however, they were required to return the pay received from their cover employment. Rations and quarters allowances were authorized, but these usually proved insufficient to meet the expenses incurred by the agents in maintaining their civilian cover. Both and were required to sign an Army pay roll for their military pay, despite the fact that their connection with the Army was not supposed to be known.

The agents went to considerable lengths to protect their cover. When a "Home Guard" was organized among civilian workers in Bermuda, both and enlisted. They attended weekly military drills, and eventually was appointed a platoon sergeant in the Home Guard.

But despite precautions, new threats of compromise popped up frequently. Once saw several soldiers whom he had known during his basic training in the United States. He crossed the street and went out of sight before they noticed him. When he reported the incident to Lieutenant Kinsey, was instructed that if he should meet them again, he should tell the soldiers that he was no longer in the Army. Fortunately, these men were transferred out of Bermuda about a week later.

In August 1943, and moved into the home of an English family near Hamilton. In a closet in their room there, the agents found a box of old papers which contained classified blueprints of the Kings Point Naval Base. They carried the blueprints to Lieutenant Kinsey, who turned the case over to the Office of Naval Intelligence for investigation.[100]

By the summer of 1943, Col. H. R. Kibler, Chief, CIC, was questioning the necessity for keeping two agents under cover in Bermuda in view of the drastic

100 Memo, subj: Interview with

reductions in the civilian labor force there. On 5 June 1943, he wrote to Major Powers to ask whether the undercover agents could be eliminated.[101] Major Powers recommended that and who had been in Bermuda for more than a year, be relieved and that one agent be sent to replace them. He pointed out that, of approximately 1,400 civilians employed within the Bermuda Base Command, more than 800 were aliens. At least one undercover agent was essential, he declared.[102]

Replacements Arrive

was selected to replace and in Bermuda. The S2 initiated steps for employment by the Post Engineer as a The Post Engineer then contacted the Division Engineer in New York City and asked that be hired.[103] preparations for his cover were similar to those of and before they entered Bermuda. He left New York for Bermuda on 1943 and arrived in the Islands the same day.[104] and returned to the United States on 31 1943, after 18 months of service in the Bermuda Base Command.[105]

Major Powers also recommended the replacement of T/Sgt. Philip Detweiler, who had been in Bermuda since October 1941.[106] Orders transferring S/Sgt. William B. Stansbury, Jr., to the Bermuda Base Command as a replacement for Detweiler were dated 22 October 1943, to be effective on or about 30 October 1943.[107] Stansbury arrived in Bermuda on 3 November.[108]

like and before him, continued to work among the civilian employees of the command. Although most of his reports concerned security leaks and expressions of disaffection by the civilian workers, he frequently notified Lieutenant Kinsey of instances of petty theft and other crimes committed by the civilian employees. These complaints were forwarded to the Provost Marshal for investigation.[109]

came by much of his information at drinking and gambling parties aboard a boat in St. George's Harbor. This ship, the Berkshire, was pressed into temporary service as quarters for some of the civilians, and liquor and talk flowed freely during off-duty hours. It was rumored that thousands of dollars often changed hands during the dice games of a single night. Disgruntled losers, usually drunk, took revenge by bitterly assailing the United States' role in the war. Some workers, by their own admission, came to Bermuda to escape the draft in the United States. Their remarks drew special attention from the undercover agent.

Reports, usually verbal, were channeled into the S2 office in a variety of ways, but a night meeting between and Stansbury was the most common method. Stansbury's wife was at Fort Bell as a civilian employee of the Quartermaster. When wanted to contact Stansbury, he walked in front of Mrs. Stansbury's desk and placed a pencil behind his ear. That was a signal for the two men to meet that night in a pre-arranged location. Sometimes they met at Stansbury's home, but more often it was in a back room at the Fort Bell Post Office which was secretly reserved for CIC use.

Stansbury, meanwhile, continued to conduct all overt investigations for the Bermuda detachment and in February 1944, when Lieutenant Kinsey was returned to the United States, Stansbury was designated as Special Agent in Charge of CIC operations in Bermuda. He continued in that capacity until some time in the summer, when a new detachment commander arrived.

Two months before Lieutenant Brown came to Bermuda, Lt. Col. Bates Raney replaced Major Powers as S2. Fortunately for CIC, Colonel Raney was well aware of the CIC mission and was convinced that counterintelligence activities were among the most important of his responsibilities as S2.

Working closely with Stansbury, Colonel Raney revamped detachment files, obtained more equipment and office space for CIC, and concentrated on improving liaison between CIC and Bermudian police, British authorities, and the Office of Naval Intelligence. Colonel Raney requested loyalty investigations on scores of

109 Memo for the Bermuda Base Command File, prepared by John K. Smart, dtd 16 Aug 55, subj: Interview with Augustus F. Brown, III, (Uncl) (Central Records Facility).

Bermudian employees of the Army who had never been given any sort of clearance. Soon Stansbury was ringing doorbells throughout the Islands to complete these personnel checks.

"Lord Haw-Haw" Scares Bermuda

Bermuda had the war jitters in early 1944. German submarines prowled the waters off the coast, and Axis propaganda broadcasts beamed at the Island did not let anyone forget it. "Lord Haw-Haw" was a special cause for consternation. No sooner would a ship tie up in Hamilton Harbor than the propagandist would broadcast its name, location, and assorted information about its crew. Both Stansbury and Coleman were ordered to check the possibility that enemy agents were transmitting information on the troop movements by clandestine radio but investigation proved fruitless. Reluctantly, they concluded that the reports originated from the German submarines.

The possibility that the enemy was smuggling information out of Bermuda remained, however--a possibility strong enough to convince Colonel Raney that more CIC agents were urgently needed in the Bermuda Base Command.

CIC Gets a New Commander

Colonel Raney's first move was to request a replacement for Lieutenant Kinsey. When none came he made a trip to the United States in an effort to obtain a CIC officer for Bermuda. The trip brought results. In the summer of 1944, 1st Lt. Augustus F. Brown, III, arrived to take command of the detachment.[110] Nevertheless, Colonel Raney continued to exercise close supervision over the detachment; the unit shared the same office with the S2, and Lieutenant Brown rarely took any action as detachment commander without first clearing it with Colonel Raney.

Security Measures Tightened

Emphasis during Lieutenant Brown's first months with the Bermuda detachment was on tightening security. Agents made frequent security surveys at Fort Bell and Kindley Field. Lieutenant Brown himself assumed the responsibility of giving security lectures to large groups of persons entering or leaving Bermuda. As soon as a United States ship docked in Bermuda, its passengers and crew were

110 Memo for the Bermuda Base Command File, prepared by John K. Smart, dtd 19 Aug 55, subj: Interview with William B. Stansbury, Jr., (Uncl) (Cen Rec Fac).

hustled to an auditorium, where Brown told them of security measures enforced in the Islands and warned of the consequences of violation.[111]

Stringent regulations were necessary because Bermuda was a rendezvous point for ships and planes bound for Europe to participate in the Allied invasion of France in the summer of 1944. Warships massed at Point X, within sight of the Islands, and Kindley Field was a refueling stop for bombers en route to bases in Europe and North Africa. CIC had to fight the natural tendency of the troops to speculate--publicly--about their destination and time of departure.

To counter this hazard, the detachment persuaded telephone company officials to instruct operators that they were to contact CIC immediately on overhearing conversations in which troop movements of any kind were mentioned. Special monitoring equipment was installed in the secret CIC room in the Post Office building to permit agents to listen to any telephone conversation at a signal from the operator. The plan worked. In one month, shortly before D-Day, agents trapped a captain, a lieutenant and seven enlisted men who disclosed classified information on troop movements in telephone conversations with friends.[112]

Activation of the 460th CIC Detachment

An organizational change was effected on 1 August 1944 with the formal activation of the 460th CIC Detachment, assigned to the Bermuda Base Command.[113] Agents in Bermuda previously were assigned to CIC, Military Intelligence Service, and were placed on detached service with the Bermuda Base Command. With activation of the 460th CIC Detachment, they came under the administrative control of the Bermuda Base Command.

Activation of the new detachment brought an increase in the authorized strength of CIC in Bermuda and touched off a new effort by Colonel Raney to increase its size. By the first of 1945, two officers and five enlisted men were on duty with the 460th.[114] Two agents, Thomas C. Smith and Richard M. Forbes,

were recruited locally. An officer, 2d Lt. Aurelio M. Prado, and a clerk, Walter O. Treas, arrived from the United States.[115]

In June 1945, [redacted] left the detachment to attend Infantry Officers Candidate School,[116] and the following month another agent was transferred out of CIC.[117] From that time until the detachment was deactivated in December 1945, its strength was never greater than two officers and three enlisted men.

Agents Use Technical Equipment

Despite its small size, the 460th was a well equipped detachment. A motor vehicle, obtained through Colonel Raney's efforts, was kept ready at all times for exclusive use of the unit.[118] Special investigative equipment included an ultra-violet ray lamp, used to detect hidden communications and markings on mail intercepted and processed by the detachment, a Graflex Fingerprint camera, Kodak Bantam camera, and Speak-O-Phone equipment. The fingerprint camera was often utilized for photographing documents in addition to its more common uses. Agents in the field employed the Bantam camera to photograph evidence of various types.[119]

Special training classes were conducted to familiarize agents with the investigative equipment. In photography, for example, all members of the detachment were assigned subjects to be photographed with certain types of film. After developing their pictures, the agents received a critique from an experienced photographer.[120]

But the detachment's training program was not limited to the use of special equipment. A buddy system of training was adopted, and one officer and three enlisted men who were new in CIC received instruction in the techniques of investigations, report writing, and interrogations from more experienced agents. Late in February 1945, an intensive 13-week training course in conversational Spanish was inaugurated. Classes were held for an hour and a half each Monday

and Thursday night, and attendance was compulsory. Lieutenant Prado and Agent Smith were instructors.[121]

CIC Gets Military Training

Throughout the command, Wednesday mornings were reserved for general military training for all Army personnel. The 460th adopted a program of specialized CIC training for these periods. Based on subject matter taught at CIC schools in the United States, the training included such subjects as these: military cryptography, report writing, office procedure, laws of evidence, preservation of evidence, laws of arrest, testifying in court, intelligence agencies in combat units, fingerprinting, map reading, undercover work, informant systems, countersabotage, and counterespionage. Basic military subjects like close order drill, camouflage, scouting and patrolling, and compass problems also were included. At least twice monthly, agents fired practice rounds with CIC weapons.[122]

A Disguise for an Undercover Agent

The Wednesday morning training sessions complicated things for the undercover agent. Brown, now a captain, believed that the detachment might be transferred to a more active theater, and he was eager for to participate in the training. Still, he was not willing to risk the compromise of identity as a CIC agent. Captain Brown finally devised a plan whereby could train with the rest of the detachment. On Wednesday mornings, did not report to his job. Instead, he donned a tattered fatigue uniform and dark glasses and slipped away to the training area to join the detachment. His identity was never detected.[123]

During July 1945, agents were assigned practical work in observation and description. Certain civilians on the base were chosen as subjects, and each agent was required to submit a full descriptive report, based on personal observation. Classroom discussion and comparison of the descriptions followed.[124]

By 1945, most agents assigned to the 460th were working in civilian clothing, especially when their duties required contact with officials of the Bermuda government or British military authorities.

Liaison With Other Agencies

Liaison was maintained not only with the British but also with U.S. Army agencies. The Bermuda Base Signal Officer frequently provided Signal Corps photographers to aid CIC agents in their investigations. Liaison with the Base Censorship Office permitted agents to intercept incoming and outgoing mail of persons suspected of Nazi sympathies.[125] Telephone conversations also could be monitored. Daily lists of money orders purchased on the post were submitted to the detachment by the Postal Officer. Agents examined the lists and noted transmittal of any unusual amounts of money.[126] Whenever suspect civilians left Bermuda for the United States, the detachment forwarded results of police agency checks, along with S2 201 files, to the Federal Bureau of Investigation's liaison agent at the Eastern Defense Command.

Operations of the 460th CIC were not spectacular during this period. Besides the undercover agent in the Post Engineer's office, other agents occasionally went under cover to gain first-hand information from observation of neutral ships which docked in St. George's Harbor with known Nazi agents or sympathizers aboard. Lack of sufficient personnel prevented a thorough exploitation of this technique, however.[127]

Much of the detachment's work in late 1944 and early 1945 was operation of an Exit Permit system adopted as a further security precaution. Under this system, which was also accepted by the British, CIC agents screened all persons leaving Bermuda, searching their baggage and personal possessions for any forbidden photographs, correspondence, and the like. Most of this work was dull routine.

CIC Nabs a Pornographer

What started out as a routine check sometimes turned abruptly into an interesting investigation, however. On one occasion when Stansbury was inspecting a cedar chest owned by a soldier who had already returned to the United States, the CIC agent's eyes fell on what appeared to be putty marks

125 Monthly Info Rpt, Lt Col Bates Raney to CG, ASF, 7 Mar 45, (Secret) (Cen Rec Fac).

126 Monthly Info Rpt, Capt Alexander G. Green, Jr., to CG, ASF, dtd 6 Jul 45, (Secret) (Cen Rec Fac).

127 Monthly Info Rpt, Lt Col Bates Raney to CG, ASF, dtd 7 Mar 45, (Secret) (Cen Rec Fac).

inside the lid of the chest.. Scraping away the putty, Stansbury discovered screws which held in place a hidden compartment within the lid. Inside were scores of pornographic pictures, along with several photographs of defense installations on Bermuda.

Colonel Raney arranged for CIC agents in New York City to meet the soldier when his ship docked there. Within two days, the owner was back in Bermuda facing CIC interrogators. Captain Brown, Stansbury, and other agents questioned the soldier for two days before he admitted any knowledge of the pictures. A Signal Corps photographer, the man finally admitted that he had used Government supplies to make the pornographic pictures for sale to troops in Bermuda. He eventually was convicted by a Court Martial on a minor charge.[128]

Bermuda Agents Get Into Pacific War

Another group of pictures also touched off an extensive investigation by the 460th CIC Detachment and made its personnel a vital link in the war in the Pacific.

On 13 December 1944, a Negro laborer discovered a cardboard box containing aerial photographs marked "Secret" alongside a path between his home and Kindley Field, where he was employed. He turned the container over to his supervisor and CIC was notified at once.

The box had been opened. The outside wrapper of the package was stamped "Intelligence Material" and the inner wrapper warned that the contents were secret.

By questioning personnel of the Air Transport Command, Kindley Field, CIC agents learned that the box was a part of a shipment from the Joint Intelligence Center, Pacific Ocean Areas, to the A2 of the 14th Air Force at Kunming, China. Records indicated that the box had been unloaded from a plane at Kindley Field on 12 December 1944 and placed on an Army truck for transportation to a nearby warehouse. Warehouse records revealed that the box never arrived there.

An inventory of the contents listed more than a thousand secret aerial photographs of Okinawa, in the Pacific Ocean. A check with the office of origin indicated that none of the photographs was missing.

CIC agents, led by Captain Brown, interrogated all persons known to have handled the box of photographs. From the testimony, they reconstructed the

128 Memo for the Bermuda Base Cmd File, prepared by John K. Smart, dtd 16 Aug 55, subj: Interview with Augustus F. Brown, III; and Memo for the Bermuda Base Cmd File, prepared by John K. Smart, dtd 19 Aug 55, Subj: Interview with William B. Stansbury, Jr., (both Uncl) (Cen Rec Fac).

story. After the carton had been loaded on the truck, the driver, newly arrived in Bermuda, took the wrong road to the warehouse. As the truck bounced over a rough coral pathway, the driver realized his mistake and turned around. At this point, the box probably fell from the truck onto the path where it was discovered the next day. When the Negro laborer saw the box the following morning, he opened it to see whether it contained anything of value to him. Finding nothing of interest, he gave it to his supervisor.

Captain Brown concluded that the photographs had been lost through an accident and that, though compromised, they had not fallen into hostile hands. Personnel of the Air Transport Command were warned to take adequate precautions in handling classified material in the future.

When United States Forces invaded Okinawa just three months later, agents of the 460th CIC watched the newspaper accounts of battle with special interest; though thousands of miles away and in a different ocean, the Bermuda detachment had played a vital role in the Okinawa campaign by recovering aerial photographs necessary in American military planning.[129]

Plane Crash Draws CIC Attention

Agents of the 460th CIC Detachment were also required to investigate cases of suspected sabotage involving military aircraft, since there was no separate detachment in Bermuda for air investigations. One such case resulted from the crash of a C-54A airplane on 21 April 1945.

The plane, bound for New York City from Casablanca, refueled at Kindley Field. Almost immediately after taking off from Kindley Field, the plane crashed into Castle Harbor Bay, between 300 and 400 yards from the end of the runway. In an effort to determine whether sabotage was responsible for the crash, agents of the 460th CIC interviewed the crew and 13 passengers of the C-54A, together with several witnesses to the accident.[130] Results of the investigation indicated that pilot error, rather than sabotage, was responsible.[131]

Even as late as 1945, use of an undercover agent to report on suspicious activities of civilian employees was considered one of the detachment's most important functions. Colonel Raney evaluated the undercover work among civilians in this manner:

> The most effective method of keeping in touch with the civilian employees in general and with certain of them who are under direct observation by this office, is by the use of an undercover Counter Intelligence Corps Special Agent. This Agent is placed in a strategic spot, as for example, in the personnel office where he would have access to the personnel records of the various employees. He is able to gain the confidence of certain employees as directed by S2, and to make reports concerning them. In this Command the presence of such an Agent has been of intestimable value and been worth more to this Command than the total operation to date of the Mass Observer Plan.[132]

CIC Spots a British Spy

One investigation by an undercover agent in the office turned up a foreign agent--but the suspect was revealed to be a British undercover operative rather than a Nazi spy. One a timekeeper for the was investigated as a possible Nazi agent when his peculiar activities aroused suspicion.

appeared to be a cultured, well-educated individual who was out of place performing routine clerical duties. He showed unusual interest in military information and informants told that was spending more money than he earned at his $50-per-week job at Fort Bell.

When a surveillance of failed to produce evidence of disloyalty, CIC agents searched his residence. There they found papers which identified as a British Intelligence agent who had come to Bermuda after completing an assignment in Trinidad. They also found a secret report which had written for the British Admiralty.

Armed with this information, Colonel Raney decided to enjoy a joke at the expense of British officers who had considered CIC an inferior intelligence organization. He went to British Intelligence officers and, during a conversation, casually mentioned that CIC agents were about to close in on a German spy named whom they had discovered working for the

132 Monthly Admin Rpt, Lt Col Bates Raney to CG, ASF, 8 Feb 45, (Secret) (Central Records Facility).

Embarrassed British officers quickly stammered an admission that was one of their men but they tried to minimize his work among the Americans by insisting that he had been placed there temporarily while awaiting assignment. They vouched for . . loyalty--and quickly withdrew him.[133]

80,000 Match Boxes

More often than not, investigations conducted by 460th CIC agents failed to disclose evidence of sabotage or espionage. But the men were thorough, nevertheless. In January 1945, the Commanding General, Eastern Defense Command, warned the S2 of the Bermuda Base Command that safety matches manufactured by one American company had been found to contain abrasive material or were covered completely with ignitable material. Agents of the 460th supervised examination of 80,000 boxes of safety matches sent by the American firm to Army and Navy installations in Bermuda. Only one box had been tampered with.[134]

As has been noted, mid-1945 and the cessation of hostilities in Europe brought an end to much of the work of the 460th. When agents were transferred, they were not replaced.

Captain Brown returned to the United States in November 1945 and Lieutenant Prado succeeded him as commanding officer.[135] A month later the detachment was deactivated and its members returned to the United States, their work in Bermuda completed.[136]

Section 1

INTRODUCTION

War in Europe and an impending crisis in the Far East forced recognition of the need for intensified counterintelligence coverage in the Caribbean, where the Panama Canal forged a vital link between East and West and where island territories held forth promise of strategic importance as bases for United States ships and aircraft.

The Corps of Intelligence Police had operated in the area since 1922, when two agents were dispatched to the Panama Canal Zone. But as late as 1938, the Corps' strength in the Caribbean had not been increased.[138]

After war broke out in Europe in 1939, the number of agents on duty in the Caribbean was gradually increased until in April 1941 when the authorized number of enlisted men was 19 agents in Panama and 12 in Puerto Rico.[139] The Caribbean Defense Command (CDF) was activated in May 1941 and steps were soon taken to spread counterintelligence coverage throughout the Caribbean area.

For, important as it was, the Panama Canal Zone was not the only U.S. controlled territory in the Caribbean area which had to be protected from military attack or from possible sabotage by the Axis powers. Besides the Canal Zone, leased from the Republic of Panama as a protective buffer zone for the vital waterway, the United States also held other Caribbean territories which served as important military, naval, and air bases.

Puerto Rico, up to July 1952, was an insular possession of the United States. The island was administered by a governor appointed by the President, and federal law, including the Selective Service Act, applied to the island as fully as to the United States. Not only did Puerto Rico serve as an important military installation but it also furnished a substantial number of men for the nation's armed forces during World War II.

The Virgin Islands, purchased from Denmark in 1917, were another territory of the United States in the Caribbean. Composed of nine main islands and some 75 islets, the Virgins were used as air and naval outposts. Residents, like those of Puerto Rico, possessed U.S. citizenship.

But the extent of the nation's military jurisdiction--and consequently the jurisdiction of its counterintelligence forces--extended beyond lands owned by the United States. For example, the United States had strategic naval and air bases on Cuba. Under destroyer-base lease agreements with Great Britain, the islands of Jamaica and Trinidad in the British West Indies also became sites for U.S. air and naval bases.

To achieve a workable system of military protection, the Caribbean Defense Command was divided into two smaller areas, or departments. The Panama Canal Department included the Canal Zone, the Republic of Panama, and the following surrounding countries in Central and South America: Guatemala, Honduras, British Honduras, El Salvador, Nicaragua, Costa Rica, Columbia, Ecuador, and Peru. The Antilles Department, known as the Puerto Rican Department before 1944, included both the Greater Antilles--Cuba, the Dominican Republic, Haiti, Puerto Rico, Southern Bahamas, Virgin Islands, and Jamaica--and the Lesser Antilles, among which Antigua, Martinique, and St. Lucia were important from a military standpoint. In addition, the adjacent islands of Aruba, Curacau, and Trinidad and the Guianas (British, Dutch, and French) and the coastal area of Venezuela all fell within the Antilles Department.

Eventually the organization of CIC in the Caribbean closely paralleled the departmental organization described above. But this was achieved only in 1944, when five numbered detachments were activated within the Caribbean Defense Command. The 470th CIC Detachment was attached to the Panama Canal Department; the 471st, to the Antilles Department; the 606th, to the Sixth Air Force; and the 472d, to the Antilles Air Command. The 469th CIC Detachment was assigned to the Caribbean Defense Command headquarters. As a headquarters detachment, the 469th was concerned primarily with administrative rather than investigative matters.[140]

140 Basic Doc. NOTE: Partial roster of Caribbean Detachment attached as Appendix 1, Part III.

Section 2

THE PANAMA DETACHMENT

The Panama Canal is a strategic life-line of American military and economic might and a crossroads of the world. Opened in 1914, the Canal cuts through the Isthmus of Panama to form a vital gateway between the Atlantic and Pacific Oceans. Its four locks are capable of raising and lowering the largest ocean-going vessels to move the ships through the Canal's 50-mile channel. By a treaty agreement negotiated in 1903, the United States leases from the Republic of Panama a strip of territory extending from coast to coast and roughly five miles on either side of the center line of the Canal. In return for an annual monetary payment, the United States exercises full sovereignty over the Canal Zone.

Because of the strategic importance of the Canal to this country, the need for counterintelligence protection in the Canal Zone was recognized comparatively early.[141] In July 1922, two enlisted members of the Corps of Intelligence Police were sent to the Canal Zone at the request of the Panama Canal Department.[142] Although specific duties of these early agents cannot be determined from existing records, they apparently were assigned to check on strangers in Panamanian villages and the traffic in explosives in Panama, and to investigate persons suspected of subversive activities.[143]

Whatever their jobs may have been, they must have been considered important. The Office of the Assistant Chief of Staff, G2, Panama Canal Department, made frequent requests for enlargement of the Corps of Intelligence Police in his area.[144]

But expansion was slow. As late as 1939, only three agents were on duty in the Panama Canal Department. In 1940, four agents were working out of headquarters at Quarry Heights, and an increase of eight members was contemplated by December 1940.[145]

Outbreak of World War II

War in Europe accelerated the expansion of the Corps of Intelligence Police in Panama. By June 1941, the War Department quota designated 27 agents for the Panama Canal Department. In accordance with a directive from The Adjutant General, enlisted personnel for the Corps were to be recruited locally when possible, supplementing those CIP agents to be sent to Panama from the United States.[146]

Mounting defense construction in Panama was largely responsible for the increased work load of CIP and the corresponding growth in size of the Panama Detachment. More and more civilian contractors and employees had to be cleared for important military projects, and each new defense establishment multiplied the threat of Axis espionage and sabotage. Security measures had to be tightened. To cope with the problem, the War Department increased the authorized strength of the CIP in Panama to 27 agents by 30 September 1941.[147]

But despite the larger quota, expansion lagged because of difficulties in procuring suitable agent personnel. On 30 September 1941 the Panama Detachment reported only 21 agents on duty--six short of the authorized strength.[148]

Procurement problems stemmed from three factors. First, draft laws in effect in 1941 stipulated that a selectee could not be sent outside the continental United States without his consent; consequently, enlisted men who might have been uniquely qualified for CIP duty in Panama could not be required to serve there. Second, promotions came slowly in CIP, and enlisted men within CDC were reluctant to transfer to an organization that offered less opportunity for advancement than their present line units. Finally, the cloak of secrecy that the Panama Canal Department had wrapped around CIP operations in the area obscured the very existence of CIP to some men who might otherwise have been interested.[149]

In October 1941, the detachment was divided into two field offices, one located over the railroad station in Panama City and the other in the Post Office at Cristobal, Canal Zone. CIP agents in each office operated under the immediate direction of a Special agent-in-charge, who was in turn responsible to an officer, whose headquarters were located in Panama City. Agents in these field offices were considered to be on a confidential status and, for the most part, operated under cover without credentials of any sort. Some agents, however, were

149 Basic Doc.

designated "open agents" and were permitted to identify themselves as members of the Corps of Intelligence Police when their duties required it.[150]

In November 1941, 1st Lt. Albert R. Haney was designated as Chief of the Corps of Intelligence Police Detachment, on duty with the Panama Canal Department.[151]

By the end of 1941, after the United States entered the war, the strength of the detachment stood at 53 agents. On 1 January 1942, these agents were transferred in grade to the new Counter Intelligence Corps, which had been designated by the War Department to supersede the old Corps of Intelligence Police.[152]

Expansion and Reorganization

An intense program of expansion and reorganization followed almost immediately. By April 1942, the strength of the detachment stood at 59 agents, most of whom were enlisted men.[153] Even more significant was a reorganization plan pushed by Lieutenant Haney to facilitate handling of new responsibilities which were constantly being assumed by CIC.

Early in the year, the detachment was divided into three parts for operational purposes--the Pacific Sector, the Atlantic Sector, and the Panama Sector, each with a Special agent in charge of investigations. Later, in December 1942, an officer was detailed in charge of the Pacific Sector.

Meanwhile, Lieutenant Haney enlarged upon his 1941 plan of distinguishing between open and undercover agents, carrying the separate classifications over into the organization of the detachment's field offices. Instead of requiring his agents to revert from open to undercover status intermittently, Lieutenant Haney established two types of field offices: secret and confidential. "Secret agents" working out of the secret field offices carried no credentials, but were given cover occupations. Their operations were confined to undercover activities, and they were not permitted to be seen in public with other CIC personnel. On the other hand, agents attached to the confidential field offices were furnished official Military Intelligence credentials and were free to make necessary contacts and to open investigations. They could identify themselves whenever necessary. Despite the distinction between types of offices and the restrictions on association between

153 Morning Rpt for 1 Apr 42, CIC Det, Panama Canal Dept, as cited in Basic Doc.

secret and confidential agents, both groups worked together very closely on many cases. Lieutenant Haney justified his new plan of organization in the following manner:

> "For the most part, Special agents must operate in the Republic of Panama where the population is small and the populace is unusually spy conscious. Experience has proven that it is impractical for a Special Agent to work on both undercover and open investigations without being detected. It is extremely difficult to operate successfully undercover in the interior of Panama as the population is sparse and strangers are conspicuous. In the principal cities, Panama and Colon, it has been difficult to operate successfully undercover for any period of time without being detected. It has, therefore, proven necessary to organize the Counter Intelligence Corps in the department into two parts, distinct and separate from each other...Every effort is made to keep separate the two types of agents, therefore each have their respective field offices and are not permitted to associate nor be seen together in public, although the two work very closely on investigations; one handling the undercover aspects and the other, the direct or open contacts..."[154]

Actually, the number of secret field offices was quite small compared with the number of confidential offices. Of 15 field offices established by November 1942, only two were secret.

155

The number and location of the detachment's field offices never remained static; frequent changes were made as varying conditions dictated. A reorganization of major importance was effected around November 1943, when the field offices which had been operating as secret offices were either closed or converted to confidential offices.

155 Ibid

Agent Compromise Serious Problem

In a report prepared in 1945, almost two years after the closing of the secret offices, Maj. Elbert D. Turner cited inadequate cover and repeated compromise of agents' identities as major reasons for discontinuing the operation of separate types of field offices. According to this report, cover stories prepared for agents were flimsy and inadequate, substantiated only by data listed on a "Restricted Area" pass given each secret agent.

Groups of strange men entering and leaving the offices at all hours of the day and night also attracted attention and caused Panamanians to speculate that the offices were fronts for some investigative or intelligence organization. Identities of the undercover agents were often compromised through constant surveillance. And a shipment of new automobiles to the detachment for use in both confidential and secret field offices further compromised the nature of the secret offices. The automobiles, all identical models, arrived at a time when new cars were not available in the area, except for official Government use. Moreover, their license tags were numbered consecutively. From the first, their appearance on city streets invited suspicions and prompted questions regarding the identity of the men who drove the new cars. Because the automobiles were used by both open and undercover agents, the connection of the secret offices with CIC was obvious to the careful observer.[156]

When the separate types of offices were discontinued around November 1943, Field Offices II and III were permanently closed. Secret offices which had been opened a short time before in the Panama Sector were redesignated as confidential offices, and roving agents took over most of the undercover activities in the small villages in the interior.

[157]

Closure of the secret offices did not mean that all undercover operations of the Panama Canal Department Detachment were unsuccessful. Often individual agents were able to acquire and maintain excellent cover which enabled them not only to fulfill their counterintelligence mission but also to gather positive information requested by G2's of the Panama Canal Department and the CDC. Indeed, positive intelligence had been an important part of the detachment's mission since the United States entered the war late in 1941.[158]

156 Appendix A, as cited in Basic Doc.

157 Ibid, p 12

158 Positive intelligence information was submitted to the Office of the AC of S, G2, Panama Canal Dept, in the form of "original" and "special" memorandum reports, on forms which were developed locally. These reports were never forwarded outside the area.

Emphasis on undercover missions by lone agents increased after 1st Lt. Clarence N. Coleman, executive officer under Captain Haney, took command of the detachment in February 1943. By 1 July 1943, when the unit had reached its peak strength of 77 agents, undercover agents were being used in a variety of situations.

Among these agents, who were being used primarily to gather positive intelligence, was one who was employed as Through his frequent contacts with Panamanian officials, he was able to provide G2 with considerable information concerning the local and national governments. Another agent posing as a representative of during 1943 and 1944 was able to gain the confidence of the Spanish Republican group in Panama City and Colon, and to obtain valuable information about the activities of the Falangists, a pro-Fascist group in the area. A former journalist was placed in [159] One agent traveled throughout the interior His job was to report on foreigners residing in the more inaccessible regions of Darien Province, the San Blas Islands, and the Province of Veraguas. Another agent was undercover as at Turbo, Columbia.[160]

Undercover Results in Mismanagement Charge

Undercover activities were the basis in 1943 for a misunderstanding which resulted in charges (unofficial) of mismanagement of the Panama Detachment by Caribbean Defense Command Headquarters. An intensive investigation followed.

Late in 1942, Col. Robert G. Kirkwood, AC of S, G2, CDC, requested the War Department to provide a number of Spanish-speaking agents, equipped with all papers and credentials necessary for them to be placed on undercover assignments anywhere in Central or South America. Colonel Kirkwood indicated that he had specific plans for employment of the agents in important undercover assignments and specified that the men were to be highly trained and carefully selected.[161]

Colonel Kirkwood's request was approved. During November and December 1942, 18 agents were selected from the various Service Commands in the United

161 Memo, E.A.R. to Col S.M. Montesinos, AC of S, G2, CDC, dtd 31 Mar 43, (Secret) (Cen Rec Fac).

States and were transferred to Miami to await shipment to the Caribbean.[162] In Miami, the group was formed into a detachment, under the command of 2d Lt. Nathan R. Preston, who previously had been assigned to the Washington Field Office of the CIC. During briefing sessions in Miami the men were told they had been selected for important, secret work. Most of them understood that they would be sent to Panama for processing and indoctrination, then returned to Miami, where they would be given cover as civilian employees of business firms operating in the area where they were to serve.[163]

However, a change in plans for counterintelligence coverage in Central and South America delayed departure of the detachment from Miami, and the group was held there, without duty, for more than two months. Finally, at the request of CDC, the men were sent to Panama in small groups, the last of them arriving there in April 1943.[164]

Meanwhile, Colonel Kirkwood had been transferred out of the command and his successor, Col. S. M. Montesinos, apparently did not know how the 18 men were to be used. Most of them were placed on duty with the Panama Canal Department Detachment, some in undercover assignments and others in open field offices. Lieutenant Preston, the commanding officer, was assigned to duty in Trinidad.[165]

Shortly after the men arrived in Panama, unofficial complaints concerning their use began to arrive in the United States. One of the earliest was a letter from Lieutenant Preston to Maj. Lowell Bradford at CIC headquarters in Baltimore, in which he stated:

> "...your original plans were completely altered. Colonel Kirkwood was no longer with Caribbean Defense Command, and instead one Colonel Montecines (sic) is the head, with Lt. Col. Edward Rew as his executive officer. Neither of these officers knew of the original plans, nor were expecting the new detachment. As a result, most of the men have been assigned to Panama Canal Department and are working...not at all as you outlined to me.... As nearly as I have learned thus far, there are already too many officers and

men here for the duties involved, and I have visions of slowly rotting in this hole, while I feel there is so much to be done elsewhere..., So you see much of your effort, in arranging cover for the men was wasted..."[166]

Other letters, mailed through unofficial channels to various counterintelligence officers in the United States, set forth specific charges of mismanagement in the Panama Canal Department. One such letter, addressed to Maj. Hugh D. Wise, Jr., then Chief of CIC, cryptically referred to the 18 as "replacement parts" for machinery and charged that "machinery" and "foremen" used in Panama were inferior to those employed in the United States.[167] Letters were also sent to the Director of Intelligence, Sixth Service Command, and to an officer in the Intelligence Division, Western Defense Command. The letters were essentially the same. They charged that the 18 men were not being used as originally planned, that they were not being used for CIC activities, that many of them had no duties at all, that certain CIC facilities and personnel were being used in the smuggling and sale of liquor, and that there was inefficient handling of CIC matters within the Panama Canal Department.[168]

Eventually the letters reflecting these changes reached the Counter Intelligence Corps Branch in Baltimore, where they came to the attention of Col. H. R. Kibler, Chief of CIC. Colonel Kibler ordered the entire group to Baltimore for questioning by a five-member Board of Inquiry he had appointed to investigate the charges.

Examination of the group convinced Colonel Kibler that the complaints were gross exaggerations, representing the views of not more than five men in the group. It was further determined that none of the men were employed on any activities other than normal CIC duties; that the Panama Detachment may have been overstaffed, but that several of the 18 actually were employed in important positions and were doing excellent work. The only changes which had any substance, in Colonel Kibler's opinion, were that some of the men had not received reimbursement of certain per diem due them in connection with their transfer to Panama and that in at least one specific instance, liquor had been sold by CIC personnel from a CIC boat to American soldiers stationed somewhere along the Central American Coast.[169]

169 Memo, Col H.R. Kibler to Col L.R. Forney, dtd 25 Aug 43, subj: CIC Activities, Panama Canal Dept, (Secret) (Cen Rec Fac).

Four members of the group, which had come to be known as the "Notorious Eighteen," were returned to their assignments in Panama. The remainder were transferred to other areas.

Since inspectors did not actually go into the Panama Canal Department to determine the degree of truth in the charges, it is impossible to tell, from existing records, what degree of justification there may have been for the complaints. Several factors must be considered in evaluating the case of the "Notorious Eighteen."

First, the men definitely were led to believe they had been selected for an important undercover mission. Maj. Lowell Bradford, CIC Operations Officer, briefed a few of the group in Washington before they were sent to Miami. Testimony before the Board of Inquiry indicates that Major Bradford stressed the importance and the secrecy of the mission for which they had been chosen. In Miami, Lieutenant Preston conveyed substantially the same impression to the remainder of the group.

Second, the special detachment was not employed in the manner its members expected. Instead of being placed on special undercover assignments throughout Central and South America, they were assigned to the Panama Canal Department Detachment with a variety of duties. It must be noted, however, that in most instances their work was consistent with the CIC mission.

Third, existing records indicate that the men selected to fill Colonel Kirkwood's request were not as highly qualified as he had desired. Colonel Kirkwood had specified that the agents were to be fluent in Spanish and that all were to be graduates of the CIC Advanced school in Chicago. Actually, at least 11 and possibly 12 of the 18 had not attended the Chicago school; a few had not attended a preliminary CIC training course. Three of the group did not speak Spanish, and only four were rated as excellent linguists by their superiors.[170]

Liaison With Panama Secret Police

170 Proceedings of a Board of Officers which convened at Hq, CIC, CIC, WD, 2327 N. Charles St, Balto, Md, 10 Aug 43 - 13 Aug 43, (Secret) (Cen Rec Fac).

Centralization of Organization

A process of centralization, begun in 1943, was culminated on 31 July 1944, when the Panama Canal Department Detachment was replaced by the newly activated 470th CIC Detachment, Caribbean Defense Command, attached to the Panama Canal Department.[171] The change was in name only; the detachment remained the same. Five days earlier, on 26 July, Maj. Elbert D. Turner had become detachment commander. Major Turner moved detachment headquarters from Quarry Heights to Diablo Heights, where it was combined with Field Office I. At the same time, the 606th CIC Detachment which had been operating with the 6th Air Force, Panama Canal Department, since February 1944, was formally activated.[172]

The new plan of organization brought all CIC personnel both in the Panama Canal Department and the Antilles Department more completely under the administrative jurisdiction of the Chief, CIC, Caribbean Defense Command. He was now to decide overall administrative policies, along with matters of promotions, rotation or reassignment.[173] He also was to supervise investigative procedures and training programs, and to coordinate all Corps activities with the Office of the AC of S, G2, Caribbean Defense Command. Under him came the chiefs of the detachments. The function of the Chief, 470th CIC Detachment, for example, was to direct all of the activities of the agents and officers under his command. He checked reports to insure that they met the standards set by the AC of S, G2, Panama Canal Department, to which the 470th Detachment was assigned. It should be noted that in the Panama Canal Department the detachment commander answered to the Chief, CIC, Caribbean Defense Command for administrative and policy matters and to the AC of S, G2, Panama Canal Department for the conduct of investigations.[174]

Decline Begins in July 1944

In the months following July 1944, there was a steady decline in the number of CIC personnel in the 470th Detachment as agents were reassigned to more critical areas and others left to attend Officer Candidate schools. On 31 March 1945, only five officers and 40 agents were on duty with the detachment.[175] During the same period, there were reductions in the number of field offices in the Panama Sector, so that only two, at David and Aguadulce, remained by May 1945.

Capt. Charles F. Berlitz, executive officer, became chief of the Panama Detachment on 9 April 1945, when Major Turner was reassigned to the 469th CIC Detachment at Caribbean Defense Command headquarters.[176] By 10 May 1945, the detachment had dwindled to five officers and 33 enlisted men.[177]

War Brings Change in Mission

Prior to World War II, counterintelligence operations in the Panama Canal Zone were restricted primarily to routine security measures. Before Pearl Harbor, the few Counter Intelligence Police Agents in the area spent most of their time conducting personnel investigations of civilian employees of defense contractors. To be sure, the agents kept watchful eyes on labor agitation, movements of aliens, suspected sabotage, traffic in contraband explosives and small arms, and activities of the scores of cabaret hostesses in the area, but rarely did any of these activities require extensive investigation.

War changed that. Threats of sabotage and espionage multiplied with mobilization. Persons who in peacetime would hardly have interested Counter Intelligence Police required constant scrutiny. Enemy aliens had to be interned, and controls on travel and communications had to be established.[178]

Problems peculiar to Panama Zone further complicated the work of the detachment there. Agents were confronted with investigations which normally would have been conducted by the Federal Bureau of Investigation. The FBI was specifically prohibited from performing counterintelligence measures in the Canal Zone or the Republic of Panama,[179] and CIC jurisdiction extended to many civilians who otherwise would have fallen within the scope of the FBI's investigative mission. Language barriers continually stymied agents who were not linguists.

1388

Spanish was a virtually indispensable tool, and agents occasionally had to deal with persons who spoke only German, Italian, French, or Japanese.

Immediately after Pearl Harbor, the Counter Intelligence Police Detachment assisted the Panamanian Police, the Canal Zone Police, and U.S. Military Police in rounding up Axis nationals for internment. By 27 December 1941, more than 950 Germans, Italians, and Japanese had been interned.[180]

But the initial roundup of potentially dangerous aliens was not sufficient. Some eventually were released, and CIC was forced to keep them under almost constant surveillance. This surveillance was extended to German, Italian, Japanese, Vichy French, and Spanish legations and consulates in Colon. These consulates were watched intermittently to determine their most frequent visitors.[181]

It must be noted that the CIC technically had no jurisdiction in Panama, outside the United States-controlled Canal Zone. But this created no problem. After Japan attacked Pearl Harbor the Panamanian government declared a state of "grave emergency" and agreed to assist the United States in all security matters.[182] Except for a brief period in 1941, during the political regime of Dr. Arnulfo Arias, pro-Nazi President of Panama, there was marked cooperation between Panamanian and U.S. authorities throughout the war. Through liaison with various agencies of the Panamanian government, CIC virtually had a free hand within the Republic of Panama.

Positive Intelligence Gained from Travel Control

One of the functions which war thrust upon the Panama Canal Department Detachment was travel control, which netted a wealth of positive intelligence throughout World War II. It began almost by accident.

In January 1942, one agent was detailed to interview a Chilean who was expected to cross the Canal Zone on a commercial airliner. His interview completed, the agent was instructed by Captain Haney to remain at Balboa Airport to establish some sort of control procedures over airline passengers. Soon the agent was asking routine background questions of all incoming and outgoing passengers and occasionally conducting detailed searches and interrogations of suspicious persons. Gradually a Watch List of suspicious persons believed to be traveling was compiled from G2 files and the name of each passenger was checked against this list.[183]

1389

Vigilance paid. A year after travel control was begun, a report on its operations stated that secret messages had been discovered in shoes, clothing, and body openings of suspicious persons who had been subjected to thorough search.[184]

In May 1942, several Special agents on duty with CDC were assigned to the Balboa Air Terminal to gather positive intelligence.[185] A year later, in July 1943, CIC and the Office of Naval Intelligence agreed to joint operation of the Travel Control Office, with CIC in charge. During the first year of joint operation, 78,846 passengers were processed. In 1945, approximately 7,000 passengers were being checked monthly.[186]

Liaison with the Port Captain's office in Panama City and Colon enabled CIC to extend its travel control function. In December 1942, agents of the Panama Detachment began checking and clearance of passengers and crews of sea-going vessels in those ports.[187]

Port control eventually was extended to the large ports of Balboa and Cristobal and numerous small ports along Panamanian shores. Agents operating in the "Blue Jacket" and the "Adele," small coastal schooners allocated to CIC, patrolled Atlantic and Pacific coasts and questioned individuals at landing points on both coast lines.[188]

Illegal Radios Frequently Reported

Reports of illegal radio transmitters frequently were received at CIC field offices, and agents used a variety of ruses to investigate the complaints. In Field Office I, for example, one agent was detailed to check all rumors of clandestine radio operations. After making discreet investigations of the occupants of a suspect building, the agent would then conduct a fixed surveillance of the building until he was familiar with the persons who visited it. Then, posing as a fire or water works inspector, telephone repair man, or insurance salesman,

184 Memo, 2d Lt John J. Morrissey to Captain Orth, dtd 8 Apr 43, subj: CIC Operations, Panama Canal Dept, (Conf) (Cen Rec Fac).

185 One of these agents, Charles F. Berlitz, subsequently was commissioned and placed in charge of Travel Control. In April 1945, he became chief of the 470th CIC Detachment.

he would gain entrance to the building for further investigation. When technical assistance was required, it was arranged through liaison with the Signal Corps.[189]

Field Office I also monitored telephone calls in Panama City.

C.

[redacted]

[191]

Agents Perform Photo Censorship

Photo censorship was another wartime function of the Panama Detachment. Approximately 90 percent of all film exposed in Panama was processed at the Panama City plant of Kodak Panama, Ltd. Since all film from U.S. Army posts in the area was developed there, an agent was assigned to the plant in November 1942 to serve as the official censor of films from the Army installations. Unofficially, he also exercised censorship authority over most of the film brought in by Panamanians.[192] Later, another agent performed similar duties at Colon.

Throughout the war, the detachment conducted security surveys of harbors at Balboa and Cristobal, of the Canal locks, and of military installations throughout the area. More emphasis was placed on these surveys as the defeat of Germany appeared imminent and CIC geared itself for its role in protecting the large numbers of troops who soon would be shipped from the European Theater to the Pacific through the Panama Canal.[193]

Assignment of Investigations

All cases investigated by the Panama Canal Department Detachment originated at the request of the AC of S, G2 of the department.[194] When cases were forwarded

194 This was not always true in the case of the "secret" field offices which operated for a period during 1942 and 1943. Often the agents assigned to these offices exercised their initiative in opening investigations.

to the detachment for investigation, the chief or the officer in charge of investigations determined a priority for the case and assigned it to the appropriate sector for action. The officer or Special agent in charge at sector level relayed the request for investigation to the field office which was to be responsible for making a report within the time limits specified by the priority affixed to the case. Priority A was considered "extra important;" it required a telephone report within 24 hours and a complete written report within 48 hours. Cases considered "very important" were labeled Priority B, with a seven day deadline for reporting. Priority C was a routine designation, and no report was necessary for 14 days.[195]

Detachment files reveal cases involving the investigation of suspected espionage, sabotage, and subversive activities. Some of these specific cases, which are typical of the work done by the detachment, are summarized below.

The "Florida" Case

Cabaret entertainers in the Republic of Panama clearly constituted in 1941 a grave counterintelligence problem because of their large number, dubious backgrounds and rapid turnover. In Colon alone there were at least 10 cabarets, among which the "Monte Carlo" and the "Florida Club" were the most outstanding. In Panama City the number was about the same. Each of the night clubs featured hostesses, known locally as "Blue Moon Girls," whose job ostensibly was to mingle with the male patrons, talk with them, and urge the purchase of drinks. Obviously, these girls were excellent sources of information for any enemy espionage agent seeking military and shipping intelligence. The situation was highly fluid, with new women--dancers, singers, hostesses, and prostitutes--constantly arriving from all parts of Central and South America as others changed their places of employment.

Late in 1941, reports were received to the effect that the "Florida," in Colon, was being used as an espionage center where hostesses were allegedly "pumping" military men and merchant seamen for information. This was quite within the realm of possibility. The average cabaret girl was far from being a paragon of virtue and probably would not be averse to earning money by supplying such information. Investigation disclosed that the owner of the "Florida," Manual Cunquero, had purchased the cafe from a known Nazi agent and that he was currently remitting regular sums of money to an Argentine bank strongly suspected of handling Axis interests in South America.

A mail cover placed on the "Florida" in January 1942 revealed that Cunquero was in direct contact with various persons throughout Latin America. Other persons, including certain Honduran contract laborers, working in the Canal Zone,

195 Memo, 2d Lt John J. Morrissey to Capt Charles E. Orth, dtd 13 Apr 43, subj: Operations of the CIC in Panama, (Conf) (Cen Rec Fac).

were also using the place as a letter drop. Among them were workers employed by one George Gough, known as the "King of Belize," a member of a wealthy family in British Honduras that controlled extensive shipping interests in the Caribbean. He had been suspected of rum-running in prohibition days and was a known smuggler. His connection with the "Florida" case stemmed from the fact that some of his ships were being used to transport the Honduran workers who received letters at the "Florida."

CIC informants subsequently reported that Gough's fleet of 10 auxiliary schooners was being used to refuel German submarines in the Caribbean and that he was passing on espionage information gathered by the diligent "Florida" hostesses. On 7 May 1942, Gough's vessels were searched by agents of the Panama Canal Department Detachment, but the ships did not carry a sufficient quantity of fuel oil for refueling purposes. However, the searchers did discover on one boat blueprints of naval air stations at Coca Solo and San Juan, along with numerous uncensored letters. The letters, all of a personal nature, were without apparent subversive intent, but the blueprints were classified. Their discovery led to the confiscation of the vessel and arrest of the crew and 30 passengers who were charged by American authorities under the Trading With the Enemy Act. Gough himself was later arrested, and the case received wide publicity in the newspapers, both in Panama and the United States, as the breaking of the "Caribbean Spy Ring." Although Gough and his associates were never brought to trial because of insufficient evidence, the AC of S, G2, Panama Canal Department, claimed that the submarine sinkings in the Caribbean showed a definite decrease after the case was publicized.

In the course of the "Florida Case," the CIC detachment attached to the Panama Canal Department employed a wide variety of investigative techniques. These included surveillance of suspected persons and places, translation of documents, mail cover, use of informants, interrogation of suspects, and raids and searches of the vessels involved. Detachment files indicate that unsuccessful legal prosecution of the case was due principally to a lack of knowledge of the law of evidence and failure to coordinate with the U.S. District Attorney who might otherwise have aided in the preparation of evidence. The files also indicate a certain degree of bias in the report writing of the agents, who tended to build a case on inadequate, circumstantial evidence.[196]

Other Suspects Deported

The "Florida Case" probably was the most sensational investigation conducted by the Panama Detachment. But others, less dramatic, kept the agents busy. One seemingly never ending task was the necessary screening and

196 App A, pp 6-9, Basic Doc.

checking of the cabaret girls in the Canal Zone and the Republic of Panama. The case of Adriana Barahona is typical.

Barahona was a Chilean girl employed at the Rialto Cabaret in Panama City. Information was received indicating that she had been the mistress of Gen. Friedrick Wolf, German Military Attache to Chile and later to Argentina. Wolf was reportedly the head of the Abwehr, the Intelligence Service of the German High Command, for eastern South America. He had resided with Barahona in Chile during 1942 and in Argentina during 1943 and 1944. Adriana had arrived in Panama on 21 November 1944 with a friend, Ernestyna del Carmen Arias Olave, who claimed to be a close friend of Dr. Arnulfo Arias, former anti-American, pro-Nazi President of Panama. She also worked at the Rialto Cabaret. Both women openly expressed their dislike for Panama. When CIC revealed this information to the Commanding General, Caribbean Defense Command, he requested the deportation of the girls because: "It is more than possible that Barahona and Arias are serving as sources of information to someone in Argentina, and their employment in a place habitually frequented by members of the military service is undesirable..."

Genevieve Batel, French dancer from Argentina and an employee of the Rialto Cabaret, was the subject of a similar investigation in 1944. Through investigation, the 470th CIC Detachment learned that Batel, while in Buenos Aires from 1942 to 1944, had been the mistress of one Dr. Karl Wilhelm Koerner, alias Carlos Guillermo Koerner, who had been arrested by Argentine authorities for subversive activities. Koerner was reportedly known to the American Embassy in Buenos Aires as a Nazi agent and spy, sub-director of the publication "Reconquista," a code operator in a local German Embassy, and partner with one Paul Schultz in the German picture propaganda service, Intergrafico.

When interrogated in Panama City, Batel told CIC agents that while she was living with Koerner she also prostituted herself to other men. This raised the possibility that Koerner had been using her as a tool to gain information. Although she disclaimed any knowledge of Koerner's activities in Argentina, the Commanding General again acted to effect her deportation.[197]

Sabotage Investigations

The threat of sabotage to the Panama Canal was always a major concern of the Panama Canal Department Detachment. Frequently, reports of possession or shipment of contraband explosives had to be investigated. Often the rumors were groundless, but the proof could only follow an investigation. The case of Jose Montalvo, Casa Largo, the subject of such an investigation, is a typical illustration.

197 App A, pp 20-21, Basic Doc.

CIC Investigates Illegal Explosives

On 19 April 1943, the detachment was notified that a quantity of dynamite had been found in the possession of Montalvo, a Panamanian. CIC agents who investigated the report found seven sticks of dynamite, fuses and detonators hidden under the roof of Montalvo's jungle shack. Interrogating him, they learned that he had found the dynamite near Madden Field following some construction work. He insisted that he intended to use the explosives not for any sabotage but for fishing in the Chagres River. The dynamite was confiscated and Montalvo was released after a warning about any further violation of this sort. Montalvo apparently was blissfully unaware that dynamite fishing was illegal or that such a quantity of dynamite was a potential sabotage menace to the Canal.[198]

A similar explosives case concerned the Colombian schooner Lucilla which arrived in Panama from Cartagena, Colombia, carrying as part of its cargo two cases of detonating caps and 100 cases of dynamite. Investigation by the detachment disclosed that the shipment had been arranged by Eladio Grimaldo, a Panamanian businessman who planned to smuggle the dynamite into the Republic of Panama. The Lucilla was searched on two separate occasions. No dynamite was found the first time because it had been hidden near the Colombian border. But 37 cases were discovered on the second search. On 17 March 1944, 20 more cases were picked up by a Colombian gunboat at Acandi, Colombia. The remainder of the shipment was never uncovered.

Brimaldo had arranged the shipment through the firm of Torres Y Torres Cia., of Bogota, Colombia, which had been suspected of being a cloak for Almacenes Hilda, a Swiss firm reported to be a German front organization. There were some tense moments at Cristobal when CIC agents boarded the U.S. barge which had brought the confiscated dynamite from the Lucilla. Excessive exposure to the sun had deteriorated the dynamite into a semi-liquid condition. It was 92 percent nitroglycerine!

Like Jose Montalvo in the previous case, Grimaldo claimed that the dynamite was to be used for fishing purposes. Authorities didn't believe him. Panamanian Police arrested Grimaldo and charged him with "attempted sabotage" despite CIC protests. CIC had suggested that Grimaldo be tried for his obvious violation of customs regulations. As it was, the sabotage charge was dismissed because of insufficient evidence.[199]

198 App A, p 13, Basic Doc.
199 Ibid, p 15.

"Ships at Sea" Cases Frequent

Although cases involving ships at sea may seem inconsistent with the CIC mission, such investigations were commonplace in the Panama Detachment. This was true partly because of the predominance of military forces and partly because of the absence of other investigative agencies. According to a 1943 report on CIC operations in Panama:

> The CIC is the only agency which conducts investigations, generally, of cases concerning espionage, sabotage, disaffection, treason, and sedition in the Panama Canal Zone. The Navy investigates directly only cases within its own personnel and on its posts and ships. Since the military is the dominant power in this area, even in some naval or maritime matters, the CIC in addition to its own duties, has been requested to investigate cases for the Navy, the Civil Authorities, Military Attaches, and the American and British Embassies. No other agency has a field force of investigators in the Panama Canal Department.[200]

One incident of suspected sabotage on the high seas led to an agent of the Panama Detachment being placed undercover aboard the SS Athos II, a French vessel engaged in Army transport work.

On 14 February 1944, a CIC agent, through a member of the Free French Liberation Committee of Panama City, submitted to the Office of the Assistant Chief of Staff, G2, Panama Canal Department, a report that pro-Vichy elements on board the Athos were potential saboteurs. A vessel of approximately 24,000 tons, the Athos had been taken over at the time of the North African invasion in November 1942 by American Forces and was being used as a U.S. troop transport, although the crew was still French. While the ship was anchored at Balboa, a French sailor informed the Free French representative that certain pro-Vichy, pro-Nazi individuals were still on board the vessel--that they had never been removed at Algiers by American or Free French authorities.

Then, on 20 February 1944, a cablegram reached Quarry Heights from the Galapagos Islands, announcing a suspicious breakdown of the vessel and the fact that sabotage was suspected by the master. Since the ship was carrying more than 1,500 U.S. Army technicians bound for India, reportedly to assist in establishing B-29 bomber bases, any delay was considered serious. A CIC agent accompanied by two naval officers, was sent by plane to the Galapagos to determine the nature and extent of the damage.

---

200 Memo, 1st Lt Thomas J. Carey to Lt Col Neville K. Adkinson, dtd 31 Jul 43, subj: CIC Det, Panama, (Secret) (Central Records Facility).

Investigation disclosed that the SS Athos II had been subjected to a series of mysterious accidents since it had been pressed into Allied service. On one occasion, an anchor chain parted, resulting in a minor collision with another vessel in an English harbor. Again, during a bad storm, the ship's rudder suddenly ceased to function, and the Athos threatened to capsize. En route to Cristobal the ship broke down mysteriously on three or four occasions. In a thick fog, near Norfolk, Virginia, the fog horn stopped working. Then engine trouble made it necessary for the vessel to return to Norfolk for repairs before continuing to Cristobal. Outside of Cristobal, there was another unexplained breakdown. Finally, on the way through the Canal, part of the ventilating system in the engine room broke down, and another stoppage occurred in Balboa Harbor on the Pacific side after the ship had passed through the Canal. The engine breakdown near the Galapagos was so serious that the vessel was compelled to turn back to Balboa for major overhauling.

The CIC agent who had been sent to investigate traveled in an undercover capacity aboard the Athos while it was proceeding back to Balboa. Posing as interpreter for the naval engineers who had accompanied him, the agent was able to gain the confidence of several of the ship's officers as well as some of the seamen. The consensus of the crew was that pro-Vichy elements on board were deliberately committing acts of sabotage. However, the agent also learned that while in New York for outfitting as a transport and other repairs, hasty and ill-advised work had been done on the vessel. That raised the possibility that some of the breakdowns, if not all of them, could have been due to the poor workmanship at the New York shipyard. Plans were made to continue the CIC undercover investigation.

At Balboa, the case was taken out of the hands of the CIC by an officer representing AC of S, G2, Panama Canal Department. A board of inquiry, composed of the G2 officer, the ship's captain, one of the ship's officers (who was one of the Vichy sympathizers mentioned in the CIC report of 14 February 1944) and a CIC agent as interpreter, questioned every member of the crew at length.

The board made no conclusive findings as to the cause of the breakdowns. Ultimately, the ship sailed for its destination from Balboa and arrived without further misadventure. It never was determined whether the delays were the result of clever sabotage, accident, or the carelessness of the New York shipyard.[201]

Wandering Ships Investigated

In October 1943, the tanker Y-2 left Balboa Harbor for Salinas, Ecuador, and the Galapagos with a cargo of 1,000 gallons of aviation gasoline. Commanded by

Capt. Moyle S. Swiber, a naturalized United States citizen of German parentage, the vessel failed to arrive at its destination on schedule. Since Axis submarines were known to be active in the Caribbean Sea, the Army Transportation Division was concerned when the vessel became two weeks overdue. Two weeks after his departure, Captain Swiber cabled the Army Transportation Division that his vessel had arrived in Mazatlan, Mexico--3,000 miles from his assigned destination.

Immediately another captain was dispatched to take command of the vessel. At this point, the Panama Canal Department Detachment entered the case to determine whether Captain Swiber had gone off his course with the intention of refueling an enemy submarine.

After the tanker had returned to Balboa, CIC investigation indicated that no U-boat refueling had taken place. The amount of fuel remaining on board showed that only the quantity necessary for the voyage had been consumed. Furthermore, no refueling could have occurred without the knowledge of the crew, who unanimously discounted the idea. The Ulysses-like peregrinations of Captain Swiber, it developed, stemmed from three distinct factors--administrative, semantic and psychological.

When Captain Swiber left Balboa, he was confused about his destination, but asked no questions, fearing that they would result not merely in clarification but also in the impugning of his intelligence. The Army Transportation Department order had stated the destination as Salinas, but the qualifying word "Ecuador" had been omitted. Evidently, the Army Transportation Department dispatcher had assumed that the captain would know that Salinas, Ecuador, was intended, inasmuch as the trip between the Canal Zone and that port was routine. Whether Captain Swiber was obtuse or merely unduly imaginative can only be left to speculation. The Panama Canal Department files do, however, state that "Captain Swiber himself was found to be a man not in complete control of his mental faculties."[202]

Sabotage Case Solved

Early in 1945, agents investigated an instance of communications sabotage which resulted in the arrest and conviction of an 18-year old Panamanian youth. On 18 January 1945, a disruption of official communications led to the discovery that several cables on Venado Island, an uninhabited island off the coast of the Republic of Panama, apparently had been cut with sharp stones.

Unable to locate any persons who had been on the island, CIC agents concentrated their activities at the little mainland fishing village of Camaron. There they

202 App A, p 15, Basic Doc.

posed as iguana hunters and sought a guide who would lead them on an expedition to Venado Island. On 20 January, two days after the severed cables were discovered, an 18-year old boy volunteered to guide the agents. In conversation with the boy, the agents learned that he had been on the island the day the cables were cut.

Intensive interrogation of the youth followed. On 21 January, he confessed to cutting the cables and led investigators to three sections of cable he had removed. Records show that the boy was tried and convicted, but they do not reveal the charge against him or the sentence he received.[203]

CIC Investigations Thwart Conspiracy

Subversive activities did not constitute a great portion of the CIC work load in Panama, although constant movement of aliens in the area always made the threat of subversive acts a real one. Occasionally political unrest or dissatisfaction within the Republic of Panama would result in a series of terrorist bombings, which usually came to CIC attention.

One such incident occured on 19 February 1945, when a U.S. Army officer in Panama City was slightly injured by a crude dynamite bomb which exploded in his automobile. Six days later a similar bomb was detonated between two Panama City cabarets.

A CIC agent was ordered to determine the reason for the bombings without divulging any official American interest in Panamanian political unrest. He was able to secure information about the incidents from a Nicaraguan formerly employed in the Canal Zone as an undercover agent with the Panama National Police. His job had been to check on a group of political exiles at the Hotel Tivoli, in Panama City, and to discover their plans to overthrow the government of Ricardo Adolfo de la Guardia. The tale he recounted to the CIC agent was a masterpiece of intrigue, plot and counterplot.

The bombings had been planned to create unrest in the Republic of Panama and to cause the Panamanian people to lose faith in the existing Government. The Nicaraguan and one , a Nicaraguan exiled to Panama after failure in a revolutionary plot in Costa Rica, were to work together at fomenting acts of terrorism. They met with s exiled in the Canal Zone, and planned an elaborate terrorist program. Their fantastic scheme included the kidnaping of the Chief of the Panama National Police, the burning of the Juan Franco Race Track, dynamiting the home of the Minister of Government and Justice; dynamiting a

203 470th CIC Det Monthly Info Rpt for Jan 45, Maj Elbert D. Turner, Jr., to CG, ASF, dtd 1 Feb 45, (Secret) (Cen Rec Fac).

ewspaper and blowing up the gas plants in Panama City, the assassination of Enrique Jimenez, considered to be the government's official candidate for the presidency of Panama, and, just for good measure, the indiscriminate placing of bombs in automobiles. All this was for the avowed purpose of stirring up unrest in the Republic of Panama.

The scheduled spree of murder and terror never came off. The information uncovered by the CIC resulted in the hasty departure of the conspirators from the Republic. The de la Guardia government had been warned in time.[204]

CIC Investigates Criminal Cases

Many of the investigations which CIC conducted did not involve counterintelligence matters. Often they were purely criminal cases, with the investigation conducted in the absence of the appropriate Army agency. In Panama there seemed to be a special pattern. An incident of a political nature would arise and call for investigation on the theory that subversive elements might have been the instigators. Of course, only after investigating could the authorities really know whether the skilled hand of an agent provacateur had masterminded the bombing or coup or any other of countless types of incidents. This was the way the investigation of the "Cotito Massacre" came about.

On 7 July 1941, in the Cotito Colony, located in the Chiriqui Province, a small religious group of Swiss were fired upon by the Panamanian Police, and 11 of the religionists were killed. Newspapers reported that the Swiss opened fire first with the result that the police had no alternative but to fire in self defense. Investigation by the Canal Zone Detachment revealed otherwise.

The Swiss religionists, living in the remote province, had been requested several times to come to the nearby town of David, Republic of Panama, to register as foreigners with the Panama National Police in accordance with law. They failed to comply with these requests and a squad of Panama Police was dispatched to compel registration by the colony members. The leader of the colony insisted that the sect recognized no government but their own religion, and no authority but God. Contrary to published reports, the religious group had no firearms except two shotguns which were never fired. What actually happened was that the leader in charge of the police had fired a shot in the air, intending to speed up the movement of the colony members, who were moving out of a building at the time. Other police took the shot as a signal for them to open fire on the Swiss.

From the standpoint of intelligence interest, there was no indication of subversive activities on the part of the Swiss, nor any evidence that their nationality

204 App A, p 19, Basic Doc.

and loyalty was other than they claimed. The case was listed in CIC files as a "special investigation," but existing records reveal no reason for CIC's interest in the incident.[205]

Travel and Alien Control

Several interesting cases developed from the Travel Control System established by CIC early in the war.

On 28 January 1942, Travel Control intercepted a letter written by Arnulfo Arias, former pro-Nazi President of Panama. The letter had been written in Mexico, where Arias was in exile. Carried by one Silvio Salazar, supposedly Arias' right-hand man, the letter was addressed to a woman, yet the salutation on the letter itself, "Querido Amigo," indicated that it was really intended for a man. In the letter Arias stated that he did not expect the new Panamanian Government to remain in power. He directed the addressee to keep in contact with one "Dr. W" for further instructions. The letter was turned over to Panamanian authorities and was instrumental in preventing Arias from returning to the Republic of Panama.[206]

Another illustrative case may be seen in a Travel Control Report dated 20 December 1944. Eugenia de Ades admitted during interrogation by CIC agents that she was not a Spanish citizen and, consequently, was not entitled to the Spanish passport with which she was travelling. She said her passport had been purchased by her husband. This incident led to the disclosure of a passport manufacturing syndicate; measures were taken to halt the production of the faked documents.

One of the regular informants among travellers who supplied positive intelligence to Travel Control was a . In passing through the Canal Zone, this man, supplied data about secret meetings in New York City. Another informant was a United States citizen, a , who reported on conditions in the different countries he visited in South America. Travel Control agents were encouraged to recruit informants among frequent travellers throughout Panama,[207]

205 App A, p 14, Basic Doc.
206 Ibid, p 10.
207 Ibid, p 20.

Axis Internees Screened

Another phase of positive Travel Control involved the screening of Axis internees being returned to the United States. During the war many Latin American countries rounded up Axis nationals who were sent to the United States, via the Canal Zone, for internment. In 1944 several trips were made by agents of the Panama Canal Department Detachment aboard passenger ships that were to put in at various Central and South American ports to pick up internees to be transported to the U.S.

Agents went to Chile, Peru, Ecuador, Costa Rica and Salvador. On each trip every internee was subjected to a search and was interrogated at length about his background, activities, and associates throughout the Western Hemisphere. An extensive card file of friends and connections of Axis nationals was developed in this way. Personal papers and documents were taken from the internees and carefully examined. In some cases, suspicious items formed the basis for further interrogation. Each internee was required to complete a statement of personal history.

On 19 May 1945 a CIC agent interrogated three German internees from Santiago, Chile, two of whom were to be tried in the United States as war criminals. Albert von Appen, one of the two, was a Nazi Party member who in 1939 had been trained for sabotage work in Latin America and later had attempted to destroy Allied shipping. Brois Max Dreher had helped to establish sabotage groups in Colombia and Venezuela after 1940. The third man, Heinrich Hallbauer, possessed Chilean citizenship and was a professor of mathematics in Valparaiso. He was charged with aiding German saboteurs, having disposed of a package of bombs for Von Appen.

Von Appen and Dreher were German saboteurs who had been sent to Latin America sometime in 1939 with the mission of committing sabotage themselves and establishing sabotage and espionage rings among Latin Americans of German descent. Hallbauer probably was an example of the latter class and shows how effectively the Nazis used German nationals and foreigners of German descent living abroad for their own nefarious purposes. Aside from the issue of legitimate dual citizenship, the view taken by Nazi Germany was that no one born of German parents could ever repudiate his allegiance to the Fatherland. Thus, despite any formal renunciation of German citizenship a person of German ancestry might make, the racist doctrine of "once a German, always a German" was held by the Nazis to bind forever. Many Germans living abroad readily accepted this doctrine even though they had long since emigrated from Germany and had adopted new citizenship. Those Germans abroad, who chose to remain loyal to their adopted country, were quite often coerced into serving Nazi interests by threats against relatives still residing in Germany.[208]

208 App A, p 22, Basic Doc.

Change in Types of Cases

During 1943 and early 1944, investigations of suspected espionage accounted for much of the detachment's work, but by November of 1944, the number of espionage and sabotage investigations had declined sharply. By way of comparison, in February 1944 35 espionage investigations were assigned to agents in the detachment, accounting for almost half the total investigations for the month. In November, nine months later, only seven espionage and 11 sabotage investigations were reported. And in January 1945, the detachment checked only two instances of suspected espionage and two of suspected sabotage.

With the decline in espionage and sabotage cases came an increase in investigations of subversive activities and routine personnel investigations. In February 1944 the detachment reported only 15 personnel investigations and no instances of subversive activities. But in January 1945, there were 195 personnel investigations which required 359 interviews and records check. In the same month, agents were assigned 133 cases involving subversive activities.

Other activities included occasional investigations of violations of AR 380-5 and instances of disaffection. As has already been indicated, frequent security surveys were conducted at harbors and Canal installations, and agents occasionally delivered security lectures to military personnel stationed in the area.[209]

Section 3

THE PUERTO RICAN DETACHMENT

Puerto Rico, one of the Greater Antilles, was occupied for the first time by American forces during the Spanish-American War in 1898. From that time until 25 July 1952, when it became the semi-autonomous Commonwealth of Puerto Rico, the island was an unincorporated insular possession of the United States, administered by a governor appointed by the President.

Counterintelligence operations on the island, however, were not begun until almost a half century after the coming of American forces. In 1933, Headquarters, II Corps, under whose military jurisdiction the island then lay, ordered the commanding officer on Puerto Rico to submit regular reports concerning subversive activities on the island. In the absence of CIP personnel in Puerto Rico, certain members of the Intelligence Section of the 65th Infantry, then stationed there, performed this task. Among the men entrusted with this responsibility were S/Sgt. Juan Vazquez and Cpl. Vicente Saras, who later were to become Major Vazquez, Chief, Administrative Section, Office of the AC of S, G2, Antilles Department, and Captain Saras, 470th CIC Detachment, Panama Canal Department.[210]

Not until 1939 was an agent assigned to work full time on counterintelligence matters in Puerto Rico. He was Sgt. Jack B. Cameron, who formerly had served with the CIP at Fort Sam Houston, Texas. Cameron arrived in Puerto Rico on 27 November 1939 to work directly under Lt. Col. C. S. Ferrin, G2 of the Puerto Rican Department, as part of the Domestic Intelligence Section of that office.

Special Agent Cameron was a pioneer. Without precedents or established operational standards to guide him, Cameron relied on his initiative and his previous CIP experience in making contacts, gathering information, and investigating whatever cases developed. Initially, his activities fell into four categories: (1) Liaison with the Federal Bureau of Investigation, Insular Police, and Immigration, Customs, and Postal authorities; (2) checking manifest lists for aliens and other potential suspects arriving in Puerto Rico; (3) developing and maintaining contact with informants; and (4) surveillance of suspicious persons, groups, and places.[211]

Cameron worked alone until August 1940, when two other agents were assigned to assist him. The two new men were Corporal Saras and Cpl. Adolfo Morales, who were transferred from the 65th Infantry to Detached Enlisted Mens

210 Interviews with Maj Juan Vazquez and Capt Vicente Saras, cited in Basic Doc.

211 201 File, Cameron, Jack B., cited in Basic Doc.

List (CIP). Like Cameron, the new agents operated under the direct control of the G2 of the Puerto Rican Department. For several months, Saras remained in the G2 office as a clerical assistant while Morales was used on undercover assignments in Puerto Rico.

Methods of operation had not been crystalized at this time, and CIP agents were allowed considerable freedom of action. Occasionally the G2 personally assigned cases to the agents. They were also charged with the responsibility of maintaining contact with Government agencies to receive any information which might be of CIP interest. Reports, highly informal, often took the form of a personal note to the AC of S, G2.[212]

Expansion Preceding World War II

The year 1941 was a period of growth for the CIP in Puerto Rico. A backlog of complaint cases involving at least four distinct subversive groups on the island was constantly expanding, forcing attention upon the need for additional investigative personnel. But growth did not come instantly. Even when increases in strength were authorized, procurement problems caused numerous delays.

On 1 February 1941, two agents were sent from the United States to bolster counterintelligence coverage in Puerto Rico. One, Philip Shapiro, was assigned to work at Borinquen Field under the supervision of the base intelligence officer there. The other, Richard W. Moore, later joined Shapiro after a two-month tour of duty at Ponce Air Base (later Losey Field). Shapiro and Moore reported to their respective base intelligence officers carrying letters of introduction from the G2, Puerto Rican Department.

Assignment of Shapiro and Moore to duty on the air bases was the first instance of agents in Puerto Rico being placed on duty outside department headquarters and was a forerunner of the system of field offices which was to be developed within the Puerto Rican Department. Although these agents were supervised by base intelligence officers, they still were accountable for their activities to the G2. Weekly handwritten reports, bearing no signature but the agent's initials, were forwarded to the G2 through Information copies of these reports were given to each base intelligence officer.[213]

212 Interview with Capt Vicente Saras, cited in Basic Doc.

213 201 File, Shapiro, Philip; 201 File, Moore, Richard W.; and Interview with Capt Vicente Saras, all cited in Basic Doc.

New tables of organization for CIP came in rapid succession during the first half of 1941. On 21 March, eight enlisted men were authorized for CIP in Puerto Rico.[214] A month later, a revised table of organization authorized 12 agents.[215] And on 23 June, still another table of organization increased the allotted strength to 25 men, nine of whom were to be placed on duty in Antigua, the Bahamas and Jamaica, British West Indies.[216]

Despite the authorized increase in strength, no new agents were added until summer. The original five agents continued working directly with the G2, until 7 June 1941, when Capt. Milton Buffington and 2d Lt. Pedro M. Velez, Jr., were assigned for CIP duty and a detachment organization began to take shape. Captain Buffington was made commanding officer of the Puerto Rican Detachment, with Lieutenant Velez as executive officer. The Office of the AC of S, G2, continued to handle most administrative matters for the detachment, however.

During the summer of 1941, partly because of concentrated efforts to build the detachment to its authorized strength, 11 Puerto Rican soldiers were transferred to CIP. By 31 September 1941, 15 agents were on duty with the detachment--10 less than the table of organization specified.[217]

Procurement problems stemmed from two factors: scarcity of Spanish-speaking agents in the United States and the low caliber, generally, of native Puerto Rican soldiers. Because of local economic conditions, large numbers of Puerto Ricans volunteered for Army service simply to escape pressing financial difficulties. With a host of volunteers on their hands, selective service officials did not find it necessary to draft large numbers of Puerto Ricans for military service. The result was that most of the Puerto Ricans who entered the Army were poorly qualified for CIP work.

A Period of Confusion

With expansion came confusion. Relatively new in the area, CIP was not widely known among military or civil authorities in Puerto Rico. Even intelligence officers of the various military installations located there were unaware of the

217 Interview with Maj Pedro M. Velez, Jr, cited in Basic Doc.

function of the Corps. Occasionally intelligence officers, insisting on doing their own work, refused to delegate counterintelligence work to CIP agents who had been assigned to assist them. One post intelligence officer held more than 30 pending cases in his desk until he was ordered by the AC of S, G2, to assign the work to two CIP agents.

When agents did receive case assignments, their work was often hamstrung by authorities who refused to recognize their credentials. Agents visiting posts, camps, bases, and stations occasionally were delayed for hours while authorities verified their military intelligence credentials.

These difficulties were gradually eliminated through good liaison between CIP and intelligence officers in the field, Insular Police, and other governmental agencies. One of the first steps in this direction was a meeting of all intelligence officers on the island, at which they were briefed on the proper functions of CIP and were shown how they could cooperate with the counterintelligence agents. Insular Police authorities lent their assistance by requesting all police officers on the island to cooperate with any CIP agents who might visit their offices.[218]

Despite these conferences, CIP's mission in Puerto Rico was not adequately defined. Before September 1941, agents had almost complete investigative jurisdiction within the military establishment, and exercised considerable jurisdiction over civilians. A Delimitations Agreement between Military Intelligence Division, Office of Naval Intelligence, and FBI in 1940 had defined the jurisdiction of those agencies within the United States. FBI had few agents in Puerto Rico, however, and CIP did not observe the strict delimitations of the agreement until September 1941, when FBI increased its strength on the island and insisted that the 1940 agreement be followed. Nevertheless, jurisdictional lines remained flexible for some time.[219]

There was an abundance of work for everyone in these days preceding Pearl Harbor. At least four subversive groups were active on the island, and cases involving their members were piling up almost daily. Among them were radical elements of all kinds. The Falange Tradicionalista Espanola, or Spanish Falange, was a pro-Fascist group which continued to attract a considerable following even after its official dissolution in January 1941. Another group, perhaps even more dangerous, was the Nationalist Party, whose members occasionally resorted to violence to promote the independence of Puerto Rico. Communist and Nazi organizations also were active. Members of all four groups had entered American

218 Interview with Maj Pedro M. Velez, Jr, cited in Basic Doc.

219 Interviews with Maj Pedro M. Velez, Jr, Maj Juan Vazquez, Capt Vicente Saras, and Lt Cmdr Raymond Rains, cited in Basic Doc.

military service, and CIP was forced to weed them out of sensitive positions. Moreover, the detachment occasionally was requested by G2 to conduct investigations of criminal cases.[220]

Captain Buffington was replaced as detachment commander in September 1941 by Capt. Harry G. Mumm, who served less than a month before relinquishing the position to Lieutenant Velez late in September. Lieutenant Velez directed the work of the detachment for the remainder of the year, with the assistance of 2d Lt. Vicente Saras and 2d Lt. Colin G. Hinds, two agents who had been commissioned. Lieutenant Saras was placed in charge of four agents at Borinquen Field; Lieutenant Hinds was assigned to Losey Field, with two agents under his command. Thus, another step in the development of a network of field offices for the detachment was completed.

Changes Caused by Outbreak of War

The strength of the Puerto Rican Detachment stood at 14 agents and three officers on 1 December 1941. Within a week this small group was to be plunged into hectic, emergency duty that would tax the stamina of every man.

On 7 December 1941 an urgent call went out to all agents in the field. Routine investigations were halted abruptly; agents took up guard posts at public utilities, bridges, and other vital points throughout Puerto Rico. For almost a week, agents stood by on a 24-hour basis until troops could be detailed for this duty. Within the next few weeks, the detachment assisted FBI and Office of Naval Intelligence in rounding up aliens and searching their homes.[221]

Security surveys and security training programs were intensified. At Borinquen Field, Lieutenant Saras organized his agents into sabotage teams and ordered them to attempt to get past guards on the field to perform mock acts of sabotage. When these agents met virtually no resistance, Lieutenant Saras was able to convince the base commander that present security measures were inadequate. Proper precautions were put in effect immediately.[222]

Organizational Expansion

War brought expansion and increased emphasis on the role of counterintelligence in Puerto Rico.

220 Interview with Capt Vicente Saras, cited in Basic Doc.

221 Interviews with Maj Pedro M. Velez, Capt Vicente Saras, and Maj Juan Vazquez, cited in Basic Doc.

222 Interview with Capt Vicente Saras, cited in Basic Doc.

In January 1942, just after the old CIP was officially redesignated CIC, Maj. Guillermo Pierluisi became officer in charge of the Puerto Rican Detachment. Lieutenant Velez reverted to his former position as executive officer.

Under the leadership of Major Pierluisi, efforts to bring the detachment up to strength were increased. By the end of January, 27 agents were serving with the detachment.[223] Two new officers, 2d Lt. George Banta and 2d Lt. Marvin S. Bennett, were transferred from the United States for duty with the CIC in Puerto Rico, bringing the total number of officers serving with the detachment to six.

The arrival of a new G2 for the Puerto Rican Department brought a definition of new CIC investigative and administrative procedures. Col. Francisco Parra, who became G2 in April 1942, specified that the detachment would investigate only sabotage and subversive activities involving military personnel and civilians employed on military reservations or under military control. Although no authority was granted for creation of an organized system of civilian informants throughout the island, private contacts were encouraged.[224] Previously, the G2 office had handled most administrative affairs of the detachment. But Colonel Parra turned those duties over to the detachment and Lieutenant Bennett became the responsible officer for servicing records, examination of report writing, maintenance of files, and other administrative routine. Four stenographers and two uniformed enlisted men assisted with clerical and messenger duties.[225]

Prestige of the detachment, along with morale of its members, was boosted considerably on 27 April 1942, when its offices were moved to the modern, air-conditioned Medical Arts building in San Juan. Two suites of offices were provided for the detachment commander, his officers, and his agents. In addition, the penthouse of the Medical Arts building was acquired for the Puerto Rico Detachment's Administrative Section. Total floor space of the new quarters was approximately 950 square feet[226]--quite a change from the small, poorly equipped offices originally occupied by the detachment. When the first CIP agents came to Puerto Rico, they were assigned office space in what had previously been used as a small storeroom in the G2 office, and, in June 1941, the detachment had moved to offices in the old Spanish "Beneficencia Barracks," Post of San Juan (later known as Fort Brooke). But Colonel Parra and Major Pierluisi considered these

226 Memo, Maj Neville K. Adkinson, to Chief, CIC, 10 Aug 42, subj: Counter Intelligence Activities, Puerto Rican Dept, (Uncl) (Cen Rec Fac).

offices inadequate and through their combined efforts the space in the Medical Arts building was acquired. Later, during 1943, agents constructed a sound-proof small arms range and a scientific crime detection laboratory in the basement of the Medical Arts building.

From the first, this laboratory played an important part in the investigative work of the Puerto Rican Detachment. Under the direction of Special Agent Tomas Alejandro, who was in charge of the laboratory, new facilities were constantly added and additional uses for the technical equipment were discovered. Investigative photography, fingerprinting, examination of questioned documents, use of moulage and plaster of paris casts, and ballistics work were made possible by the detachment's development of its own lab.[227]

As the detachment grew, its area of operations was expanded. During 1942, agents from the Puerto Rican Detachment provided counterintelligence coverage of Jamaica, British West Indies; St. Thomas, Virgin Islands; and St. Croix, Virgin Islands.

In March 1942, Major Pierluisi reorganized the detachment into sections corresponding to the major subversive groups on the Island, and all agents--except those assigned to Jamaica, the Virgin Islands, and specific Army posts on Puerto Rico--were placed in one of these sections. There were separate sections for Nazi, Nationalist, Spanish Falange, and Communist activities. An officer and from one to four agents were detailed to each section. In addition, a Sabotage and Robbery of Classified Information Sub-Section was established, with one officer and four agents. Two agents were detailed to an administrative subsection.[228]

One major supply problem--transportation--plagued the detachment early in 1942. No Government vehicles were assigned to the detachment, and agents often were unable to obtain gasoline for their personal automobiles. Eventually, the office was able to purchase gasoline, as a war agency, directly from distributors. Fuel thus obtained was stored in drums at an agent's home. Later a rationing system was established and agents were permitted to purchase 24 gallons of gasoline per week.[229]

Agent's Report Brings Investigation

But trouble of a different sort was brewing.

Convinced that laxity on the part of certain intelligence officers was creating a security hazard in Puerto Rico, Agent Laurence T. Bayley wrote to Maj. H. G. Sheen, Chief, CIC, requesting an investigation of counterintelligence activities in Puerto Rico. Agent Bayley prepared a 10-page memorandum for Major Sheen enumerating more than two dozen instances in which he believed certain matters to have been seriously mishandled. Bayley did not send his report through official channels but mailed it directly to Major Sheen. He reported substantially the following:

a. Supervising officers refused to accept agent reports which contained a preponderance of derogatory information.

b. In some instances investigations were waived entirely upon the recommendations of certain officers, even in complaint cases.

c. Personnel investigations were so superficial that persons who had been dismissed from Government jobs in the United States were employed in sensitive positions in Puerto Rico.

d. Time between completion of an agent report and the date of mailing the report often was three weeks to a month.

e. Higher authorities pigeon-holed a special report by Lieutenant Velez on Communist activities on the island.

f. Identities of agents had been hopelessly compromised.

g. Many leaks of information were believed to have resulted from careless talk by employees of the G2 office.

h. Agents were known to be enlisted men and as such were unable to obtain the cooperation of FBI and Office of Naval Intelligence personnel.

i. Agents were required to perform routine administrative and housekeeping duties and were occasionally required to serve as chauffeurs for officers in uniform.

j. Investigations were hampered by excessive restrictions on expenditures.

k. Some cases were closed on the basis of the opinion of an officer not assigned to the G2 rather than upon factual data produced as a result of competent investigation.

l. Unnecessary red tape made expeditious investigative action virtually impossible.[230]

Bayley's report received prompt and serious attention in the War Department. Major Sheen sent the allegations to Col. John T. Bissell, Chief of the War Department's Counter Intelligence Group. Colonel Bissell summarized the report for Maj. Gen. George V. Strong, War Department G2. Colonel Bissell's memorandum to General Strong gives the following indication of the weight which top intelligence officers placed on Bayley's report:

> Sergeant Bayley is an old soldier and has been connected with military intelligence activities for a considerable length of time. This office has no reason to doubt the judgment, ability, or motives of this soldier concerning the action taken by him, and the unorthodox method used by him in making his report lends weight to the belief that the situation in Puerto Rico demands immediate investigation...the nature of this report is such as to warrant immediate corrective action. It is recommended that this Group be authorized to send a commissioned officer to Puerto Rico for the purpose of inspecting military intelligence activities in general and the counterintelligence situation in particular. It is further recommended that three carefully selected, competent, Spanish-speaking agents of the CIC be sent undercover to Puerto Rico on temporary duty for the purpose of determining the exact nature and extent of enemy and subversive groups operating in that Department.[231]

Available records do not indicate whether the undercover agents were sent into Puerto Rico. However, the Commanding General of the Puerto Rican Department was ordered to forward files on specific cases mentioned by Bayley to the War Department, and arrangements were made to interview CIC officers and agents in the United States who had formerly served in Puerto Rico.[232]

A bitter letter to Colonel Bissell from Col. Thomas R. Phillips, Chief of Staff of the Puerto Rican Department, followed the order to send case files to

Washington. The Chief of Staff protested that Bayley had a "spy complex" and apparently was disgruntled as a result of his assignment. "...You can be certain that we, who have been here for two years, know all about it and Sergeant Bayley (who has been here since 20 January) knows nothing," Colonel Phillips wrote. "Needless to say, I think this particular matter was improperly handled in Washington."[233]

Maj. Neville K. Adkinson, CIC Executive Officer, was sent to Puerto Rico in July to conduct a thorough investigation of Counter Intelligence Corps activities there. Arriving in San Juan on 26 July, Major Adkinson spent 11 days questioning G2 and CIC personnel, including a six-hour interview with Agent Bayley.

On 10 August, Major Adkinson reported his findings in a 31-page memorandum to Major Sheen. Major Adkinson found that most of Bayley's allegations were based upon conditions which existed prior to Colonel Parra's appointment as G2, and that Colonel Parra had taken steps to correct undesirable situations which had come to his attention. Although Major Adkinson concluded that a majority of Bayley's charges were exaggerated, some were basically true. Among these were statements that persons were being employed in sensitive positions without adequate investigations; that identities of CIC agents had been compromised; that in some instances, agents were being used as chauffeurs for officers; and that "certain deficiencies" did exist in the administration of the detachment.

In talking with the agents of the Puerto Rican Detachment, Major Adkinson found all but one agent working 10 to 12 hours daily, seven days a week. Major Pierluisi had authorized his men to take off on Sundays, but agents were required by the G2 to account for all their time on reports of daily activities. When such reports showed that agents had devoted time to their own activities, they usually were questioned as to the necessity. Major Adkinson learned that Bayley had been subject to considerable criticism and threatened with punishment by Colonel Phillips as a result of the investigation; consequently, it was recommended that Bayley be transferred to one of the Service Commands in the United States.

At the time of the investigation, only 25 agents were on duty in Puerto Rico--13 short of the authorized strength. Major Adkinson also noted a deficiency in certain investigative equipment, particularly photographic equipment. His report included recommendations that at least four trained, Spanish-speaking agents be transferred to Puerto Rican Department and that additional investigative equipment be procured "as soon as practicable." Since some of the agents were found to be inadequately trained for their jobs, Major Adkinson recommended that the Puerto Rican Department be assigned a quota of at least two agents for attendance at

233 Ltr, Col Thomas R. Phillips to Col J. T. Bissell, 19 Jun 42, (Uncl) (Central Records Facility).

classes of the CIC Investigators' Training School until all agents of the detachment could complete the course.[234]

Major Pierluisi was transferred to the Office of the G2 of the department on 6 December 1942, and Maj. Verne O. Jackson became detachment commander. Major Jackson, executive officer of the detachment since August 1942, had come to Puerto Rico from the Panama Canal Department, where he had worked with the G2.[235]

Preliminary Training Course Inaugurated

In December 1942, the Puerto Rican Detachment began what eventually was to become the outstanding CIC training program in the Caribbean. In compliance with the War Department instructions, a preliminary training course designed to prepare agents for the advanced school at Chicago was inaugurated on 14 December 1942. The first session, attended by six agents, ran from 14 December to 9 January 1943. Classes were conducted six days a week, usually seven hours daily.

Agents were instructed by detachment officers in such subjects as Methods of Investigation, Report Writing, Safeguarding Military Information, Anti-American Ideologies, Counterespionage and Countersabotage, Personal Description, and Interrogations. Lectures on the various agencies performing counterintelligence investigations were included in the schedule.[236]

A second session of the school, following a similar pattern, ran from 11 January 1943 to 6 February 1943. The course was repeated during May of the same year, and again in July.

Training was intensified during 1943. With the construction of a small arms range in the basement of the Medical Arts building, agents soon were firing a prescribed number of practice rounds monthly. Weapons instruction and practice included not only the short-barrel .38 caliber revolver, but also the carbine, submachine gun, and the .45 caliber automatic pistol.

Additional training took the form of weekly evening meetings, during which training films were shown. As an aid to new agents arriving on the island, a handbook, "Puerto Rican Handbook for the Counter Intelligence Corps," was

1414

prepared by several experienced agents in the detachment. This handbook, containing information about insular geography, politics, social structure, and investigative problems and aids, served as a model for similar publications prepared by other detachments throughout the world.[237]

By the end of 1943 all agents in Puerto Rico had attended the preliminary training school and had gone to the advanced school in Chicago.[238]

Major Jackson was relieved as detachment commander on 22 February 1943, and Capt. Elbert D. Turner, Jr., assumed command.[239] Other changes followed.

A major change was the reorganization of the Caribbean Defense Command on 1 June 1943. The War Department redesignated the Puerto Rican Department as the Antilles Department with the result that the detachment's jurisdiction was extended to all the U.S. Army bases in the British West Indies and British Guiana, which the United States leased from the United Kingdom. The detachment which had been assigned to the Trinidad Sector and Base Command, now incorporated in the Antilles Department, was made a sub-detachment of the Antilles Detachment. As such, the sub-detachment in Trinidad continued to function as a separate detachment, except that the administrative accountability was maintained within the headquarters at San Juan.[240]

Detachment Reorganized

An internal reorganization of the detachment was effected under the leadership of Captain Turner, who felt that grouping of detachment personnel into subversive sections was impractical. Captain Turner established five divisions: Administrative Section, Investigative Section, Technical and Training Section, Inductee Section, and Security Section.[241]

Under this plan, the Administrative Section was charged with the maintenance of files, records, and other administrative matters. Assignment and supervision

of investigations were the responsibility of the Investigative Section, while the Technical Section and Training Section operated all the technical equipment and instructed others in its use.

The Inductee Section was staffed by Major Pierluisi, who was now working in the G2 office, and six agents, who checked all Puerto Rican inductees against subversive watch-lists. During its first year of operations, the section screened 15,170 inductees. The Security Section, responsible for all security surveys within the military establishment on Puerto Rico, conducted surveys of seven major military installations during the last six months of 1943.[242]

As a part of his reorganization program, Captain Turner also established a comprehensive system of field offices designed to give adequate counterintelligence coverage to the entire island. Eight field offices were created, most of them on military installations, and CIC agents were supervised by post intelligence officers to expedite investigations. Field offices and the number of agents assigned to them, as of June 1943, were as follows: San Juan, 15 agents; Losey Field, two agents; Fort Buchanan, three agents; Batista Airport, two agents; Camp Tortuguero, one agent; Henry Barracks, one agent; Camp O'Reilly, two agents; and Borinquen Field, three agents.[243] In addition, agents were occasionally dispatched on temporary duty to St. Thomas, St. Croix, Antiga, and smaller installations within the sector.[244]

The detachment grew rapidly during the first half of 1943, and peak strength of 64 agents was reached in July. During this period of growth, however, Captain Turner noted that prolonged investigations necessary for clearance of agents procured locally was delaying their assignment to CIC for as long as six months from the time of their selection.[245]

Several new officers were assigned to the detachment during 1943. Two first lieutenants, Robert McK. Foster, Jr., and Charles F. Bertlitz, were transferred from the Panama Canal Department, and Lieutenant Hinds was relieved. Later 2d Lt. Keith G. Sebelius came to the detachment from the headquarters of the Caribbean Defense Command.[246]

246 Basic Doc.

Late in the year, however, there was a gradual reduction in the detachment strength, and by the end of 1943 only 45 agents were on duty. A table of organization for the detachment was revised downward from 100 to 55 agents, with the concurrence of the detachment commander.[247]

Further reduction came in January 1944. Major Turner, convinced that the strength of the detachment was above current investigative requirements, began to weed out agents whom he considered unsuitable for CIC. Nine agents were transferred out of CIC into their former branch of service. Ten others were found unacceptable for service in Puerto Rico because of language difficulties and were sent to other areas.

Antilles Detachment Activated

Compensation for the reduction in strength came through activation on 31 March 1944 of a new CIC detachment attached to the Antilles Air Command. This detachment, the 472d, functioned with the Antilles Air Command until 1948, after the Air Force became a separate branch of service with its own office of Special Investigations. The new detachment relieved the Puerto Rican Detachment of responsibility for coverage of Air Corps personnel and installations and allowed agents who had been engaged in such work to be placed on other duties.[248]

On the other hand, the work load of the detachment was increased when Headquarters, Caribbean Defense Command, directed that investigations of civilians employed by the military establishment be conducted by the CIC instead of the Provost Marshal's office, which previously had performed this function.[249] On 17 May 1944, the War Department announced that CIC personnel, enlisted and commissioned, who since the early part of 1943 had been carried as assigned to CIC, Military Intelligence Service, War Department, would now be assigned to the Caribbean Defense Command. The change was effected on 18 March 1944, and agents serving with the Antilles Department were placed on detached service from the Caribbean Defense Command.[250]

Rugged Training Program Instituted

Another important revision early in 1944 was in the detachment's training program. Believing that many of his agents--if not the entire detachment--might

1417

soon be transferred to a more active theater, Major Turner instituted a rugged field training course designed to prepare his men for combat. In January, 14 agents were given special instructions in the operation and maintenance of light and heavy military vehicles. Twelve agents were sent to the "El Yunque Mountain" jungle training area in February for a four-day refresher course in field operations. Later, 21 agents were instructed in wireless transmission, using the Morse Code, and an early morning course in map reading was given daily until all agents were familiar with the use of military maps.[251]

But many of the detachment's training facilities were soon lost. In February 1944, the detachment was ordered to move its headquarters from the Medical Arts building in San Juan to a small, wooden, barracks-type building behind the Bachelor Officers Quarters at Fort Brooke. The move meant loss of the detachment's small arms range, technical laboratory, interrogation room, and training space. However, a new laboratory, smaller than the first, was soon constructed in the new location, and to compensate for the lack of training space, agents were given membership in the San Juan YMCA, where physical training was given three hours weekly.

An additional field office was set up in June 1944 at the newly constructed Fort Bundy in Puerto Rico. One agent was sent to Fort Bundy to work under the supervision of the post intelligence officer.

Pedro M. Velez, Jr., now a captain, became Chief, CIC, Antilles Department, on 31 July 1944,[252] just six days after the detachment had been redesignated as the 471st CIC Detachment, with an authorized strength of 22 agents.[253] Captain Velez stressed general counterintelligence coverage and placed less emphasis on training and administration. Although he found the strength of the detachment too small to carry out all of his plans, no new agents were obtained until September 1944, when additions brought the total number of enlisted men in the detachment to 35.[254]

Shortly after Captain Velez assumed command, the detachment began publication of a weekly news letter, known as "CIC News." Classified CONFIDENTIAL and bearing the admonition "Do not file, destroy by burning." The news letter was distributed to agents at the various field offices of the detachment. It contained summaries of outstanding investigations and personal news items concerning agents throughout the island.

Administration Red Tape Lessened

On 21 October 1944, Col. Eduardo Andino relieved Colonel Parra as AC of S, G2, in the Antilles Department. Working closely with the 471st CIC Detachment, Colonel Andino eliminated much administrative red tape between G2 and CIC offices to speed the flow of information from CIC to G2. Verbal reports, followed by written reports, were authorized.

Colonel Andino was largely responsible for the improvement of the detachment's facilities late in 1944. Nine civilian-type Government vehicles were acquired for use by agents. In November, the detachment moved to new quarters in Templo del Maestro building in San Juan. This made available an adequate interrogation room, a larger technical laboratory, a classroom, and a small day room for agents.[255]

Laboratory facilities were improved early in 1945 with the procurement of technical devices such as weight scales, micrometer, and caliper rules. More chemical reagents were obtained for investigative work.

One project which occupied agents' leisure time between January and May 1945 was the establishment of a detachment museum known as the Operations Display Room. Displays represented 13 of the most important cases solved by the unit. Other exhibits included a collection of anti-American propaganda confiscated by the CIC agents and samples of work done in the technical laboratory. A dual purpose of the museum was explained by the detachment commander in a memorandum to the G2. It not only served as a means of orientation for the new agents, but also boosted morale and organizational pride.

Another facility which the detachment opened in early 1945 was a Post Exchange branch at Detachment headquarters. Profits from operation of the branch PX went into a detachment fund, which was used for recreational purposes. As a part of this program, agents made a boat trip to St. Thomas and on at least four occasions, Sunday picnics for detachment personnel were held at nearby beaches.

With the end of the war came reduction in the size of the 471st CIC. In January 1945, 35 agents and seven officers were on duty, but by December there were only 18 agents and three officers. As a result of the decrease in personnel, the Security Section was reduced to one agent, with no officer assigned to it. Duties of the officer in charge of the Trinidad Sub-Detachment were also eliminated. One officer served as chief and operations officer; another, as executive and administrative officer. The third officer served as assistant operations officer and was also responsible for training. Ten civilian stenographers were employed until the end of September, when the number was reduced to seven.

255 Interview with Maj Pedro M. Velez, Jr, cited in Basic Doc.

Training During 1945

Two sessions of the preliminary training school, each 35 days in duration, were held during 1945, with a total of 17 new agents attending the course during February-March and June-July. Two agents from the 471st attended a two-month course at Camp Ritchie, Maryland. Weekly training sessions at detachment headquarters featured training films of general interest, lectures on investigative techniques, and discussions of the Puerto Rican political situation. Military training stressed subjects needed by CIC personnel serving in active theaters of operations. Besides frequent marches and hikes, agents were given instruction in close order drill, the squad and the platoon, patrolling, interior guard duty, military hygiene, first aid, customs of the service, military courtesy, map reading and aerial photography.

Liaison Activities

Close liaison was maintained between the detachment and Military Police, Criminal Investigation Division, Federal Bureau of Investigation, Office of Naval Intelligence, Insular Police, and Allied intelligence organizations. Military Police and Criminal Investigation Division occasionally requested the assistance of CIC technical laboratory personnel and attended several lectures given at the detachment's training schools.[256]

Subversive Organizations Cause Major Work

Most of the work of the Puerto Rican Department resulted from activities of four major subversive elements on the island.

The Nationalist Party, small but disciplined and fanatical, was active in political agitation throughout World War II. Because of its strong cry for independence, this group had considerable popular appeal. Openly hostile to the United States forces on the island, the Nationalists were constantly under CIC observation. Nazi and Falange groups espoused the Axis cause, and their members were considered likely to engage in espionage and sabotage. The Communist Party appealed mainly to native workers who were dissatisfied with their low standard of living, but Communist propaganda was also directed at members of the Armed Forces with the intent of creating strife and dissention.

Throughout the war, the Puerto Rican Detachment emphasized preventive measures in their dealings with these subversive elements. In 1942, shortly after the United States entered the war, agents concentrated on gathering

256 Memo, Maj Pedro M. Velez, Jr, to AC of S, G2, Antilles Dept, dtd 2 Jan 46, subj: Activities of the 471st CIC Det During the Year 1945, (Secret) (Departmental Records Br, AGO, Alexandria, Va.)

information concerning membership and activities of the subversive organizations. In addition, data was collected on all individuals who were believed to be anti-American. Information thus obtained formed the basis for extensive watch lists which eventually developed into files containing more than 42,000 folders, 66,000 reference cards, and hundreds of general reports.[257]

One important factor in the detachment's favor was that most of the agents were native Puerto Ricans who were able to operate under cover without excessive danger of compromise. Besides having perfect command of the language, these agents knew the people, places, and customs of the island intimately and were able to keep discreet watch on the subversive elements. Because other Federal investigative agencies on the island employed a majority of continental agents, the CIC detachment often could obtain results that were denied other agencies.[258]

Sabotage Investigations

In 1942, more than 35 sabotage cases--mostly of aircraft--were investigated. Ships and military installations also were sabotage targets. Although there were 46 sabotage investigations in 1943, few were of major importance. Twenty-two of the cases were successfully closed.[259]

In 1942 sabotage investigation centered around a P-40E Army airplane. Black paint had been substituted for oil in the plane's oil reservoir. The paint was traced to an American company, Aqua Systems, Inc., suspected in the United States of espionage and sabotage.[260] Not all the sabotage investigations revealed subversive intent, however. One case involved repeated short-circuiting of Army-leased telephone wires at Borinquen Field. Agents found the wires had been shorted by a psychopathic criminal on parole who only wanted to see the sparks fly.[261]

Agents of the Puerto Rican Detachment also investigated suspected sabotage at Army Transport Service piers in the port of Catano during May 1943. It was reported that as many as 10 tractor tires were being punctured daily in the course of operations. Through the use of informants and surveillance, agents traced the punctures to two civilian employees who admitted deliberately running the vehicles

over a board with large spikes in it. They insisted that they had no subversive intent; they were only dissatisfied with their wages.[262]

In another suspected sabotage incident, agents were asked to determine why Radio Station WKAQ had been unable to announce a blackout alarm. Agents found that a switch had been tampered with, and further investigation led to a confession from a soldier that he had moved the switch in an effort to tune in another station His actions made transmission of the blackout alarm impossible.[263]

Espionage Investigations

A passion for motion pictures caused one would-be spy to blunder into the hands of CIC agents early in the war.

Luis Manuel de la Rosa de Hostos, 18, dishonorably discharged from the Army in the summer of 1942 for repeated instances of AWOL, determined to "get even" with the Army by gathering military information for sale to the highest bidder.

Roaming the streets in a private's uniform and equipped with a supply of forged passes he had stolen before his discharge, the youth was able to wander in and out of military installations undetected, eating and sleeping among the troops and making copious notes everywhere he went.

When this method of collecting information failed to turn up enough military information to satisfy him, de la Rosa began breaking into automobiles owned by Army officers. His first attempt was successful. De la Rosa slashed the top of a convertible and once inside of the car, discovered a folder of confidential and secret documents which contained detailed outlines of air defense plans for Puerto Rico.

Now confident that he had valuable information, de la Rosa was ready to place the stolen documents, along with his personal notes, on the auction block. Using a German-English dictionary, he worded a pro-Nazi letter in German to a San Juan newspaper in hopes that its publications would cause Nazi leaders in Puerto Rico to contact him. When the newspaper refused to print the letter, de la Rosa made plans to sail to Santo Domingo, where he expected to locate German agents.

At Santurce, de la Rosa persuaded a theater manager to accept one of the stolen documents in lieu of the admission price. A week later, he pawned the

262 471st CIC Det Sabotage Files, dtd 29 May 43, subj: Punctured Tractor Tires at ATS Pier, Catano, Puerto Rico, cited in Basic Doc.

263 201 File, Sanchez, Ismael, cited in Basic Doc.

entire package of secret papers to a soda fountain operator for the price of another movie, promising to redeem the documents the next day with two packages of cigarettes.[264]

The man who loaned de la Rosa the money had other ideas. He read the papers and sensing their importance, telephoned the Office of Naval Intelligence as soon as de la Rosa slipped away to watch the movie. Navy investigators turned the documents over to CIC, whose agents already were investigating the theft.

De la Rosa was trapped. When he returned four days later to redeem the documents, Special Agent Philip Shapiro of the Puerto Rican Detachment was waiting to arrest him.

Under interrogation at Puerto Rico Detachment headquarters, de la Rosa vigorously denied any knowledge of the stolen papers. But he could not explain why he tried to reclaim them, nor could he account for a notebook he carried which contained lists of military installations throughout Puerto Rico, including antiaircraft gun and searchlight emplacements and figures on the number of troops at each post.

Under Shapiro's repeated questioning, de la Rosa soon confessed to the theft of the documents and unfolded a tale of abortive attempts at espionage which began almost a year earlier. Even before his induction into the Army, the boy had obtained photographs and maps of U.S. installations in Puerto Rico. He traded the pictures to the German consul in San Juan for German stamps bearing the swastika emblem. During his basic training at Camp Tortuguero, he stole numerous restricted training manuals and constantly quizzed company officers about military installations on the island.[265]

De la Rosa was not a part of an organized espionage net, although he claimed sympathy for the Nazi movement. Had he known how to peddle the information he collected, however, the consequences could have been serious. Fortunately, CIC agents apprehended him before the secret information reached the enemy's hands.

Because de la Rosa was a civilian, CIC released him to the FBI after the initial interrogation. He subsequently was convicted and sentenced to three

years in prison for theft of Government property. After this conviction, the United States Attorney in San Juan refused to press the espionage charge.[266]

Censorship Stamp Theft Investigated

Censorship was exercised in Puerto Rico during the war years, and although it was not a CIC function, cases involving censorship came to the detachment's attention. One such case in 1943 involved the theft of a rubber stamp used by the censor to indicate the approval of written material. Agents traced the missing stamp to John Henry Klapper, a writer, who admitted under interrogation that he had taken the stamp so that he could take out of the area certain articles and papers which otherwise would not have passed the censor. Records do not show what punishment Klapper received for his efforts to circumvent the censor.[267]

Another theft investigation involved the loss of an agent's credentials while he was watching a street procession in Santurce. When a newspaper published pictures of the procession, agents went to the newspaper photographer and obtained negatives of all the pictures he had made at the scene. Enlarged prints, made in the CIC darkroom, were carried to an Insular Police office, where police were able to identify two known pickpockets among the throngs. When the pickpockets returned to their homes, CIC agents and police were waiting to arrest them. Agents obtained confessions that the thieves had taken the credentials but had later destroyed them. The pickpockets were turned over to Insular authorities for prosecution.[268]

CIC Prevents a Transportation Tie-Up

The emphasis which the Puerto Rican Detachment placed on general counter-intelligence coverage as a preventive measure has already been noted. That emphasis paid off in 1943, when a confidential informant notified CIC agents that employees of the American Railroad Company of Puerto Rico, only railroad operating on the island, planned a strike to begin at noon the following day. The detachment immediately alerted the Chief of Staff, who in turn warned the Engineers to stand by. Railroad workers walked off their jobs as planned, but the strike was called off after four days when trains, operated by military personnel, ran on schedule.

---

266 FBI Rpt by John Miller Davenport, File No. 65-183, dtd 17 Feb 43, subj: Luis Manual de la Rosa de Hostos, (Uncl) (G2 Central Records Facility, Dossier No. XC 017 231).

267 201 File, Klapper, John Henry, cited in Basic Doc.

268 Interview with Maj Pedro M. Velez, Jr, cited in Basic Doc.

Agents learned that the strike had been instigated by Miguel Sanchez de Leon and Alberto Sanchez, both Communist labor agitators. Its objective was to enable Communist-influenced Confederacion General de Trabajadores to gain control of the independent Railroad Employees Union.

Quick action by the CIC detachment had prevented any sabotage or any halt in movement of vital military supplies.[269]

Criminal Cases Investigated

Not all the investigations conducted by the Puerto Rican Detachment had so direct a bearing on the national security. Agents occasionally were requested by G2 to conduct investigations of cases which were plainly not within the mission of the CIC.

A typical criminal case solved by the detachment resulted in the arrest of a gang composed of both men and women who had been assaulting and robbing American soldiers in the city of Santurce. Women members of the gang would lure the soldiers, on the pretense of amorous interest, to some secluded spot, where their male cohorts would beat and rob the victims. One soldier had been shot, and several others had been seriously injured. Technically, CIC had no jurisdiction, since the case involved criminal acts by civilians. But because of the adverse effect of the robberies on the Army morale and because of the failure of proper authorities to apprehend the mob, the Chief of Staff requested the detachment to investigate. Agents promptly rounded up the entire mob. Four men and two women were arrested and turned over to Insular Police for criminal prosecution.[270]

Task Force Plans Made

In the spring of 1943, it appeared that the Puerto Rican Detachment might participate in tactical operations. Increasing tension with Vichy Forces in the French West Indies led U.S. Army Forces in the Antilles to consider the possibility of landings in Martinique and Guadalupe. A provisional task force was contemplated for occupation of the islands, and CIC representatives were included in discussions of the tentative landings. On the basis of studies of maps and War Department surveys, a plan of operations was drawn up to include the assignment of agents to various towns and villages, with seizure of communication points and gendarmerie headquarters as immediate objectives. It was decided that half the CIC agents selected for this mission would go in uniform as soldiers attached to force headquarters. Others would go in undercover capacities consistent with their civilian backgrounds.

269 Interview with Maj Pedro M. Velez, Jr, cited in Basic Doc.
270 Ibid

In May, all French-speaking agents in Puerto Rico were recalled to detachment headquarters in San Juan. Since they were not told the reason for their recall, there was considerable grumbling--especially when they were given no investigative assignments during the two weeks they were under alert.

However, higher authorities decided against the proposed landings. Participation in landings, peaceful or otherwise, remains an interesting "might-have-been" in the annals of the Counter Intelligence Corps in the Caribbean.[271]

U.S. Soldiers in Rally Investigated

Typical of the work of the 471st CIC Detachment in the later years of the war was one case involving participation of U.S. soldiers in a rally staged by a radical group seeking the independence of Puerto Rico.

During the rally at the University of Puerto Rico on 20 November 1944, an American soldier created a sensation by leaping to his feet and declaring that he advocated the independence of Puerto Rico. A confidential informant at the University of Puerto Rico later told CIC agents that a Puerto Rican soldier stationed at Camp O'Reilly, had attended the rally with a continental American soldier who had stated that he was for Puerto Rican independence.

Following up this lead, agents obtained a picture of with an American friend, one who with was a member of the at Camp O'Reilly. Agents questioned other soldiers at Camp O'Reilly and determined that frequently went out together. Organizational pass records revealed that on the day of the incident, both men had been on pass for seven and one half hours.

One agent, concealing his identity, arranged to meet and offered him a ride to a distant town. During this trip, the agent gained confidence and by skillful questioning discovered that had attended the Independence rally together, and that was the continental American soldier who had declared himself. The agent also learned that was very anti-American because he felt he had been subjected to racial discrimination while attending an Army school in Virginia.

Investigation eventually revealed that both were active Communists.

As a result of this and similar cases, Army personnel in the Antilles Department were ordered not to participate in demonstrations, meetings, parades, and

271 App B, p 14, Basic Doc.

rallies either for or against Puerto Rican independence. Despite this ruling, 12 American soldiers attended the Second Pro-Independence Congress at Hato Rey, Puerto Rico, on 10 December 1944.

Undercover agents of the 471st CIC Detachment, present at all sessions of the congress, photographed every soldier attending the meetings and, through discreet inquiries, were able to determine the identity of all of the offenders. Besides the soldiers, two civilian Auxiliary Military Police Guards were identified. The auxiliary guards subsequently were discharged from Government employment, and appropriate action was taken against the soldiers to prevent any further political activities on their part.[272]

A case concluded early in 1945 illustrates the use of the detachment's technical and laboratory facilities.

was suspected of being a Communist because a confidential informant had reported that a person of the same name had signed an application for membership in the Communist Party of Puerto Rico on 1941. Over a period of a year, investigation failed to reveal definitely whether was a Communist or whether he had signed the application. Finally, agents were able to obtain photographs of the signature on the application and of payroll signature. Analysis in the detachment's laboratory revealed 91 points of coincidence and only nine points of noncoincidence in the two signatures. As a result, was identified as the person who had applied for membership in the Communist Party four years earlier.[273]

These cases demonstrate the use of various investigative techniques which were used frequently by the Puerto Rican Detachment--use of informants, records checks, undercover work, use of technical equipment, and general coverage of public places as a preventive measure.

Investigations were initiated at the request of the G2 office early in the war; however, the detachment automatically investigated all reports from Puerto Rican citizens who thought they knew of incidents of espionage or sabotage. Most of these complaints from spy-conscious civilians were of no importance, and the detachment found itself busy with exaggerated stories which did not check when investigated. One such report, for example, was that enemy agents were flashing signals to an enemy submarine from a certain beach. Agents investigated for three weeks, only to find that the lights were being caused by harmless crab fishermen searching beaches with sputtering torches. To preclude such unnecessary investigations,

272 . 471st CIC Det Monthly Info Rpt for Dec 44, Maj Pedro M. Velez, Jr, to CG, ASF, dtd 1 Jan 45, (Secret) (Cen Rec Fac).

273 . Ibid for 1 Jan 45.

the detachment eventually was directed to forward all complaints to the G2 in the form of a Summary of Information. G2 then evaluated the information and determined which reports would be investigated.[274]

Work of the detachment in Puerto Rico multiplied many times as the war progressed. In 1943, agents investigated 950 cases, in addition to the screening of more than 15,000 inductees.[275] But during 1945, the detachment conducted 9,607 investigations while screening 10,900 inductees.

Most of the work in 1945 concerned routine loyalty investigations--there were 9,251 of them of applicants for employment within the Antilles Department. A total of 187 applications were rejected on the basis of CIC reports.

Not reflected in these statistics were the security measures which the 471st maintained as checks against possible espionage or sabotage. Between January 1945 and the cessation of hostilities in August, the Security Section made 104 security surveys and spot checks of military installations, made security recommendations for 65 troop movements, and delivered 42 security lectures.

A travel control function also was assumed by the Security Section, and during 1945 more than 14,550 Army Transport Service passengers and approximately 3,000 air passengers were screened by agents at Trinidad, British West Indies, Borinquen Air Base, Batista Airport, and Army Base Operations at Isla Grande Airport in San Juan.

The agents of the 471st CIC also maintained weekly coverage of secret meetings of subversive groups in Puerto Rico. Some 214 contacts were made during 1945 with confidential informants who were providing information on the activities of such groups as the Executive Committee of the Marxist Movement of Puerto Rico, the Intellectual Communist Cell at the University of Puerto Rico, the National Board of Direction of the Nationalist Party of Puerto Rico, the Pro-Independence Congress, and the Independentist Youth Association. Internal security coverage was provided on 39 assemblies held by subversive groups during the year. Special efforts were made to gain information concerning operations of couriers of known subversive groups and of the actions of prominent foreign subversives who visited the island. Agents constantly checked Communist propaganda books and pamphlets coming into Puerto Rico from Cuba.[276]

Section 4

CIC IN TRINIDAD

Trinidad, a small British insular possession off the coast of Venezuela in the British West Indies, was important to the United States during World War II as the site of air and naval bases leased from Great Britain. American military forces on the island were governed by the Trinidad Sector and Base Command which fell within the Caribbean Defense Command.

In the summer of 1941, Brig. Gen. Ralph Talbot, Jr., Commanding General of the Trinidad Sector and Base Command, requested the allotment of eight Corps of Intelligence Police agents to his command.[277] Although the request was approved, by 30 September 1941 only one agent had been procured for duty in Trinidad.

Working out of the G2 office at Whitehall, this agent and three others who joined him before 7 December 1941 performed only limited counterintelligence service. Great Britain had been at war since 1939, and British security forces had both the local populace and transient personnel well under control. In addition to counterintelligence measures within the U.S. military establishment on Trinidad, the first Corps of Intelligence Police agents investigated suspected sabotage of Pan American Airways equipment and occasionally looked into purely criminal matters.

Unlike other detachments in the Caribbean, the small group in Trinidad was not plunged into frenzied activity by the entrance of the United States into World War II. During January 1942, the detachment reported only 14 investigations--nine of them routine loyalty checks.[278]

One of the three men who had recently reported from the United States was dismissed from the Corps for misconduct in January 1942, and a private selected locally was assigned as a replacement. Less than a month later he also was dismissed from the Corps. Two Special Agents were acquired from the II Corps Area on 15 February 1944, but still another agent was reduced to private and transferred out of the Corps in April. By July, there were eight agents on duty in Trinidad, and 1st Lt. Richard W. Clement had been assigned as the first commanding officer of the Trinidad Detachment.[279]

Agents saw little activity during the first six months of 1942. They assisted boarding officers in the interrogation of crews of ships calling at Port-of-Spain

277 Ltr, Brig Gen Ralph Talbot, Jr, to TAG, dtd 11 Jul 41, subj: Corps of Intelligence Police Ratings, (Conf) (Cen Rec Fac).

278 Basic Doc, p 34.

279 Ibid, p 35.

and on at least one occasion, in February 1944, boarded damaged ships to determine whether they had been hit by enemy torpedoes or damaged by saboteurs. The detachment was also concerned with labor trouble and possible espionage by employees of defense contractors in the area. Surveillance of harbor areas and places frequented by American military personnel on off-duty hours was continued throughout the war.[280]

Gradually the detachment grew. By November, 17 of 28 authorized vacancies were filled.[281] On 14 November 1942, the War Department was requested to increase the allotted strength to 43 agents, but there is no evidence that this request was given favorable consideration.[282]

Local acquisitions and five agents transferred from Panama boosted the strength of the detachment to 27 agents by mid-March 1944. First Lt. Anthony W. Lobb had come to Whitehall as Chief, CIC, in February, and in March was joined by 2d Lt. Nathan R. Preston who originally reported to Panama with the so-called "Notorious Eighteen."[284]

Six agents were assigned to sector headquarters; four to travel control duties with Air Transport and Troop Carrier Command at Waller Field; two to travel control at Piarco Airport in connection with British authorities; two with the S2 at Curacao; two in Aruba-Curacao; one at Paramaribo; one at Hyde Park, British Guiana; and three

During the spring of 1943, the detachment conducted an average of about 49 investigations monthly--less than two per agent.[285]

Lt. Col. P. N. Derzis, G2 of the Trinidad Sector and Base Command, believed that the detachment was overstrength. On 21 March 1943, after the arrival of five new agents in Trinidad, he protested to Col, S. M. Montesinos, G2 of the Caribbean Defense Command:

283 Basic Doc, p 36.

284 Ibid, p 64

285 Ibid, p 65

"At this time there are more than enough agents on duty at T.S. and B.C. and it is requested that no more be sent here until we can arrange their duties... For the time being, we would like to pare down our unit, weed out the less valuable men, and straighten things out. Until we do this we do not need any more agents."[286]

But Lt. Col. E. A. Rew, Chief, CIC, CDC, scoffed at such suggestions. Commenting on Colonel Derzis' letter, Colonel Rew remarked: "It is obvious... that the Officer-in-Charge of the Trinidad Sector and Base Command Counter Intelligence Corps Detachment is not making full use of men." Colonel Rew insisted that additional agents could be used at Aruba, Paramaribo, and Hyde Park, and that men should be permanently placed at Saint Lucia, Barbados, and Tobago.[287] On 8 April 1943, Colonel Rew inspected the CIC detachment in Trinidad and found "much to criticize" in the way agents were being employed.[288]

Apparently Colonel Rew's inspection did not effect immediate reforms. On 1 July 1943 the Trinidad Detachment became a sub-detachment of the Antilles Department CIC.[289] Capt. Elbert D. Turner, Jr., commander of the Antilles Detachment, also was dissatisfied with CIC operations in Trinidad at the time of the change. On 3 July he wrote:

"...I do not feel that proper use has been made of the CIC in Trinidad Sector. Neither the Officers nor Agents of that Detachment with whom I have talked appear to have any clear idea of the meaning of Counter-intelligence. The number of men reduced for disciplinary reasons in that Sector is an indication of either poor selection or poor control on the part of responsible Officers. The paucity of information in Counter-intelligence reports emanating from that Sector cannot be due to a complete lack of subversive activity... Two recent intelligence reports from the Aruba area illustrate what I may term failure of the CIC. The first mentioned possible attempt to use APO to smuggle U.S. currency, the other a woman of questionable reputation had been interrogating members of U.S. Armed Forces. In neither one was there indication of investigation by Counter Intelligence Corps."[290]

Section 5

THE 606th CIC DETACHMENT[292]

Mounting numbers of accidents and incidents of suspected sabotage involving aircraft, coupled with a corresponding increase in the routine work load of the Counter Intelligence Corps, led the War Department in 1943 to provide for activation of special CIC units to work with Army Air Commands.

Until 1943, the investigation of Army airplane accidents and defects in air materiel was a function of the CIC detachment within whose jurisdiction the incidents occurred. However, adequate investigation of such incidents usually required special technical knowledge which the average CIC agent did not have. In the Panama Canal Department, for example, agents lacked both the training and the time to check into aircraft accidents. In keeping with the new War Department policy, a special detachment was activated and attached to the Sixth Air Force, which was an air command in the Panama Canal Department.[293]

Originally, the detachment attached to the Sixth Air Force was designated simply as the Sixth Air Force CIC Detachment. Later, with the general reorganization of the CIC in the Caribbean Defense Command in 1944, its name was changed, on 31 July 1944, to the 606th CIC Detachment.[294]

The nucleus for the 606th consisted of two officers and four Special Agents. Commanding the group was 1st Lt. Rene Menendez, who was promoted to captain on 22 September 1944. There were few CIC personnel in the CDC whose background and abilities qualified them as well as Menendez for service in the Caribbean. Born and reared in Havana, Cuba, Captain Menendez came to the United States when he was 16 years old. As a result of this background he had excellent command of the Spanish language and general familiarity with the Caribbean and Latin American customs. After completing his education in the United States, Captain Menendez worked as foreign accountant handling accounts of Latin American subsidiaries of the Commercial Molasses Corporation in New York.

Executive officer under Captain Menendez was 1st Lt. Ben L. Robertson. He was subsequently given supervision over travel control, security, and crash investigations. His civilian experience included the operation of an oil pipeline company and work as an agent for a group of independent oil operators.

The four agents in the original group were Melvin M. Diggs, a Texan with considerable experience as a civilian investigator for Government agencies;

Clyde H. Moore, another Texan who had been a school teacher in civilian life; Nealy E. Butler, a Missouri lawyer; and Robert F. Gooch, a law student from California.[295]

They were brought together in Maryland in December 1943. Leaving the Port of Embarkation at New Orleans late in December, they arrived at Cristobal, C.Z. on 9 January 1944. There the detachment set up its headquarters at Albrook Field in a building in the NCO section of the base. Until the arrival of additional personnel, this building also served as quarters for the agents.

Direction and assistance in establishing the new detachment was given by Lt. Col. E. A. Rew, then chief of CIC, Caribbean Defense Command. Unfortunately, officials of the Sixth Air Force had not been given adequate notice of the arrival of the new detachment, and no arrangements had been made for the housing and physical needs of the agents. The situation was aggravated by the fact that the AC of S, A2, who was then Lt. Col. Robert W. Benn, had never worked with CIC and was not familiar with detachment operations. Further complications were the secrecy concerning modus operandi of the unit, and the fact that even the officials could not understand why the agents wore civilian clothes.[296]

On 29 February 1944, a second contingent of 16 agents arrived at Cristobal for duty with the detachment. All but three of these agents had traveled in civilian clothes. When the three in uniform later changed into civilian clothing, there was some embarrassment when they met former traveling companions among military personnel.

[297]

Four agents of this new group were placed [redacted] two of them operating in civilian clothes and two in uniform. The two men in uniform were assigned to France Field, C.Z., [redacted] When this mission was completed, they returned to civilian status at detachment headquarters.

Other agents were assigned as follows: Guatemala City, Guatemala Field Office, two agents; Salinas, Ecuador, Field Office, two agents; France Field, Canal Zone, one agent; San Jose, Costa Rica, one agent; Rio Hato Army Air Base, Puerto Rico, one agent.

For several weeks, agents were briefed on economic, political, subversive, and psychological conditions in the areas in which they would work. One agent

295 App C, pp 2-3, Basic Doc.
296 Ibid, pp 3-5
297 Ibid, p 6

who possessed considerable technical knowledge of Air Force materiel was assigned to the Intelligence Office, Panama Air Depot. The remainder were retained at detachment headquarters to be utilized as necessary. Initial assignments were based on an estimate of current needs. Many adjustments in the disposition of the agents were eventually made to meet unforseen exigencies and to increase the efficiency of the organization.[298]

When the first CIC agents arrived in January 1944 for duty with the Sixth Air Force they were six in number. The strength was increased to 22 by the arrival of the 16 agents in the second contingent. On 31 July 1944, when the detachment was formally activated as the 606th CIC Detachment attached to the Sixth Air Force, Panama Canal Department, only 14 agents and two officers were on duty with the detachment.[299]

All orders which initially attached CIC personnel to the Sixth Air Force specified that their assignments to the Counter Intelligence Corps, Military Intelligence Service, War Department, remained unchanged.[300] But on 19 March 1944, CIC agents and officers on duty with the Sixth Air Force were relieved from assignment to CIC, Military Intelligence Service, War Department, and were transferred to CIC, CDC.[301]

Mission of the Detachment

Purpose of the 606th was to relieve the Panama Detachment of routine counter-intelligence coverage for the Sixth Air Force and, more important, to provide expert investigation of airplane crashes and sabotage of Air Force materiel. For this latter function, the agents had received special training at Harrisburg, Pennsylvania, or Chanute Field, Illinois. Aside from the technical aspects of air investigations, the 606th was to operate much the same way as the other detachments in the Caribbean Defense Command.

During the first 12 months of operation, little of the detachment's work consisted of airplane crash investigations. Virtually all such work was accomplished by one Special agent whose prior experience qualified him for the job. At this time, it should be noted, the policy was for the detachment not to concern itself with crash investigations unless sabotage or subversion was indicated in the course of the normal Army Air Force investigations. In the early months of 1945, however,

298 App C, p 8, Basic Doc.

301 Par 6, SO No. 62, Hq, CDC, dtd 18 Mar 44, cited in Basic Doc.

an alarming number of crashes focused CIC attention on the problem and resulted, in March 1945, in the establishment of a crash investigations section within the detachment.[302]

Jurisdiction

The operational relationship between the Sixth Air Force Detachment and the Panama Canal Department Detachment (470th) was first set out in an agreement executed at Quarry Heights, C.Z., in March 1944. This agreement provided that the operations of the 606th would be "confined to Sixth Air Force installations, personnel, facilities, materiel, and equipment in the Panama Canal Department, the use and service of which are confined to the boundaries embracing the physical location of Sixth Air Force bases, stations, positions, and auxiliary fields."

With respect to leads uncovered during investigations, it was provided that requests for the development of such leads would be sent to the Panama Canal Department Detachment or to an Army Military Attache if outside the area where Panama Canal Department agents were operating. Actually, the literal terms of this agreement were modified by a high degree of cooperation between the two detachments and a spirit of mutual aid and coordination among individual agents.[303]

Four months later, the question of jurisdiction again arose with respect to the processing of personnel investigations which the 606th was then undertaking in considerable numbers. With the approval of the AC of S, G2, Panama Canal Department, the commanders of the 606th and the 470th worked out the following agreement: (1) The 606th was to investigate all civilian personnel employed by the Army Air Force in the Panama Canal Department; (2) The 606th was authorized to conduct all necessary investigations in the Canal Zone or in areas outside the Canal Zone where no agent from the 470th was stationed and where on hand there was a resident agent from the 606th; (3) The 470th was to make all record or agency checks in the Canal Zone and in the Republic of Panama, and it was to develop all leads concerning the investigations being conducted by the 606th in the Republic of Panama. It was also agreed that any inter-detachment problems were to be worked out by the respective commanding officers. Informal cooperation between the 606th and the 470th became and remained the watchword in their inter-detachment relationships.[304]

In its relations with higher intelligence echelons of the Caribbean Defense Command, the 606th had two distinct channels, one for administrative purposes and one for operational functions. In administrative matters, the commanding officer of the 606th dealt directly with the Chief, CIC, Caribbean Defense

302 App C, p 10, Basic Doc.
303 Ibid, p 18
304 Ibid, p 20

Command. Operationally, the detachment was under the direct supervision of the AC of S, A2, Sixth Air Force, who in turn worked closely with the G2, Panama Canal Department. In actual practice, however, it became difficult to distinguish between purely administrative and operational matters with the result that the A2 usually served as an intermediary between the Chief, CIC, Caribbean Defense Command, and the detachment commander.

Promotion and transfer orders and orders affecting the duty status of agents were usually published by the Caribbean Defense Command at the request of the Chief, CIC, Caribbean Defense Command. Operational orders, including movement orders and authorizations for allowances in lieu of rations and quarters, were published by the Sixth Air Force as "CIC Letter Orders." Often, verbal orders were used to move agents within the Sixth Air Force.

Field Offices Established

One of the first moves taken by the new detachment upon its arrival in the Sixth Air Force Area was the creation of a network of field offices which would insure adequate counterintelligence coverage for all major installations and bases utilized by the Sixth Air Force. There were five, located as follows: Field Office 1, Albrook Field and Panama Air Depot; Field Office 2, Guatemala City, Guatemala; Field Office 3, Salinas, Ecuador; Field Office 4, France Field, Canal Zone; and Field Office 5, Rio Hato, Puerto Rico.

Field Office 1 was a part of detachment headquarters. The area covered by this office included Albrook Field, the Panama Air Depot, Howard Field, and minor Air Force installations within working distance of Albrook Field. Originally, a "Special Agent-in-Charge" was designated to take charge of this office, but it later proved advisable to make this position an added duty of the detachment's chief investigator. Of the agents assigned to this office, one or two were detailed to duty with the intelligence officer at the Panama Air Depot. Security surveys were initially handled by this office, but a separate Security Survey Section within the detachment was organized later. One distinctive feature of operations was that while agents at all other field offices operated out of the offices of the base intelligence officer, at Albrook Field no agents were detailed specifically to the base A2, although close contact with that officer was maintained.

Field Office 2, in Guatemala City, was normally manned by one agent. This office was concerned with coverage for the Army Air Force installations at Guatemala City and San Jose, Guatemala, and Managua, Nicaragua. The agent-in-charge resided in Guatemala City, but his office was at the Air Force installation. He normally travelled between the various installations by military aircraft, although railroad service was available. Theoretically, the agent-in-charge here was responsible to the intelligence officer. But because the installation was small,

the commanding officer served as his own intelligence officer and the agent was often asked to give intelligence aid directly to the commanding officer. The agent on duty maintained close liaison with United States Military and Legal Attaches in Guatemala City. Occasionally, with the approval of the Military Attache, he conducted investigations within the city itself.

One agent was assigned to Field Office 3, at the Air Force installation in Salinas, Ecuador. Territory covered by this office also included the Army Air Base on the Galapagos Islands and an installation at Talara, Peru. Like the agent in Guatemala City, the Special agent-in-charge utilized military planes for travel in his assigned territory. Functions of the two field offices were much the same. One added function for the agent in Salinas was the clearance of native workers for the Galapagos Islands. Periodically, a boat was dispatched from the Galapagos to the mainland to bring newly-hired workers back to the islands. Meeting officials from the Galapagos Base when the boat docked at Guayaquil, Ecuador, the agent assisted them in hiring workers by making on-the-spot record checks. This procedure was, of course, adequate only for nonsensitive positions; nevertheless, it weeded out many undesirable employees.

The agent-in-charge of Field Office 4 had a desk in the office of the base A2 at France Field. This agent worked closely with the S2 on counterintelligence and security matters. He also developed leads assigned by detachment headquarters, including leads in the Atlantic Sector of the Canal Zone. In such cases, however, the Atlantic Sector office of the 470th CIC Detachment was advised beforehand. For transportation this agent was provided a detachment vehicle and, by using the Trans-Isthmian Highway, he could visit detachment headquarters at Albrook Field frequently.

Field Office 5 was designed to cover installations at David and Aguadulce in the Republic of Panama, in San Jose, Costa Rica, and in Rio Hato, Puerto Rico, where it was located. The duties of the agent assigned here were similar to those of the Special agent-in-charge of Field Office 4.[305]

Within detachment headquarters, the chain of command descended from the commanding officer through the executive officer to a Special agent-in-charge of administration and another who was designated chief investigator. The agent in charge of administration and the chief investigator exercised joint, direct liaison with field offices.

In March 1945, the addition of travel control functions and new emphasis on airplane crash investigations led to revamping of the detachment headquarters

305 App C, pp 16-19, Basic Doc.

1438

organization.[306] Lieutenant Robertson became security and crash investigations officer. Special agents under his supervision were assigned to direct crash investigations, travel control, and general security measures. Functions of the chief investigator and agent in charge of administration were not changed.

When clerical and routine office duties increased, civilian stenographers were employed to release agents for investigative work. By May 1945, four stenographers were working at detachment headquarters.

Some of these routine duties included maintenance of service records of agents within the detachment. All service records and allied papers were kept at detachment headquarters. Morning reports were routed to the Chief, CIC, CDC, who prepared consolidated morning reports.

In addition to its administrative files, the detachment maintained its own intelligence files and all intelligence files for the A2 of the Sixth Air Force. In March 1945, the A2 intelligence files were transferred to the 606th CIC Detachment and were combined with CIC files. All names appearing in reports were catalogued on small cards which provided a ready index to contents of the files.[307]

Protection of Identity of Agents

Unlike other CIC units in the Caribbean, the 606th was seldom faced with the compromise of identities of its agents. Most agents worked in civilian clothing, and their connection with the Army was classified secret. Agents were paid by check, and only those agents claiming an allowance in lieu of quarters were required to sign the payroll. Quarters usually were provided in the officers' area of the installation on which agents worked. In lieu of rations, agents received a subsistence allowance of $2.25 per day. No restrictions were placed on the movement of agents at the installations where they worked. All-area passes were provided. As a further protection for agents' identities, four civilian-type automobiles were available--three at detachment headquarters and one at France Field. Although few agents of the 606th were fluent in Spanish, this did not result in the compromise of their identities, since new agents worked among the native populace.[308]

Training

In preparation for assignment with Air Force CIC units, 15 of the first 20 agents assigned to the Sixth Air Force Detachment had attended the special CIC

306 2d Ind dtd 7 Mar 45 to Ltr, WD AGO 00.73 (26 Jan 45) OB-S-B-M, dtd 1 Feb 45, subj: Censorship of Communications Carried by Air Travelers, cited in Basic Doc.

307 App C, pp 26-27, Basic Doc.

308 Ibid, p 30

schools in airplane mechanics at either Harrisburg, Pennsylvania, or Chanute Field, Illinois. Of the other five, three had acquired experience by contact with the Air Forces as investigators or trainees. As a result, little emphasis was placed on training within the detachment. Daily language classes were held at detachment headquarters, and when the 606th began to recruit replacements locally in mid-1944, new agents were sent to preliminary training schools conducted by the Antilles Department at San Juan, Puerto Rico.[309]

At the outset of the detachment's operations, with 20 agents, there were more agents available than there were duties for them. To relieve this initial congestion several agents were transferred from the 606th to other detachments in CDC. As time went on, however, the 606th took on new responsibilities, and a shortage of personnel arose. Strength reports indicate that the average number of agents present for duty during the first 15 months of the detachment's existence was 16.[310]

CIC Operations

Until the detachment firmly established itself within the organizational framework of the Sixth Air Force, higher officials were prone to assign agents tasks that were not within the CIC mission. This was perhaps inevitable, since most Sixth Air Force officials were unfamiliar with the function of a CIC detachment. Many matters handled in the first months of operation were criminal cases of no counterintelligence interest. For example, of the first 10 cases investigated by the detachment, one involved the suicide of a soldier; another, a shortage of funds at an NCO Club. Both were solved.

Gradually, as the detachment established itself and proved its worth, it was permitted to devote most of its time to its counterintelligence mission. When the CIC detachment caught criminal suspects, its prestige as an investigative agency grew. Usually wide publicity was given to such achievements, and agents gained the reputation of being resourceful and competent men. One task assigned that was only on the periphery of counterintelligence coverage was the placement of agents in base intelligence offices to act in the capacity of base intelligence officers in the absence of regular base intelligence officers. Although these duties were chiefly administrative rather than investigative, the role played by agents so assigned contributed substantially to intelligence standards within the Sixth Air Force. Many base intelligence officers had received little specialized training; by working with the CIC agents assigned to them they were able to learn accepted intelligence techniques. Agents also relieved many of the base A2's to permit these officers to attend a school for Air Force intelligence officers in Orlando, Florida.

309 App C, p 31, Basic Doc.
310 Ibid, p 34

It may be taken as indicative of the high standards of ability and responsibility of CIC agents in the 606th that they were able to assume the staff officer functions of base intelligence officer, and, in many instances, perform them better than the commissioned personnel they relieved.[311]

Counterespionage, in the sense of protecting military information, was a vital part of the detachment's responsibility. Agents made security surveys of every major installation in the Sixth Air Force, and most of the minor bases, to determine their vulnerability not only to espionage but also to sabotage. From such surveys came necessary reforms and corrective measures. Since no known enemy-inspired activity occurred, it may be concluded that the surveys were largely successful.

At the same time, the detachment campaigned for security-mindedness among military and civilian personnel of the Sixth Air Force. Agents lectured on the necessity for safeguarding military information. During June 1944, 13 such lectures were given. Also a part of the security campaign was the distribution of eye-catching security posters, created by an agent with artistic ability. A pamphlet entitled "Back to the States," which combined security information with a handbook of customs and censorship regulations, was also published by the detachment.[312]

During the first 15 months of the detachment's operations, not one instance of known enemy-inspired sabotage or espionage occurred within the Sixth Air Force.

One of the important measures taken to achieve this remarkable result was the screening and clearing of civilian employees. Many of these workers were United States citizens who had received State Department permission to seek employment in the Canal Zone. Background investigations were conducted on applicants for sensitive positions. In the case of alien employees, recruited within the countries where the Sixth Air Force was operating, the background checking and screening was even more extensive. By means of hundreds of background investigations and agency checks, the 606th came to know and follow the activities of potentially subversive employees working for the Sixth Air Force. Several particularly suspect individuals were discharged as a result of this painstaking procedure.[313]

In the first month of its operations, January 1944, the detachment undertook only four investigations. But between July and December 1944, a total of 1,121 investigations were completed. Most of these investigations were the personnel

311 App C, p 13, Basic Doc.

313 Ibid, p 35

1441

type, but in the first 16 months of the detachment's existence there were 26 espionage and 73 sabotage cases, as well as 21 cases dealing with subversive activity. There were also 32 "special cases" which included criminal cases and others not readily classified.

Classification of cases was not always easy. A violation of censorship regulations, for example, might be classified as disaffection, espionage, sedition, or treason, depending on the particular circumstances.

Many of the detachment's accomplishments do not lend themselves to tabulation. The records do not reflect, for example, the valuable travel control function which was undertaken to insure that unauthorized military information was not carried by air passengers. Nor can statistics show the worth of improved intelligence coverage brought about by agents who served as intelligence officers.[314]

1442

Section 6

THE 472d CIC DETACHMENT[315]

The CIC detachment attached to the Sixth Air Force was less than a month old when the first officer and agents arrived in the Antilles Department to organize a similar unit for duty with the Antilles Air Command.

Capt. David B. Dickey, a Military Intelligence officer, arrived at San Juan, Puerto Rico, on 9 February 1944 to assume command of the detachment that was yet to be organized. Within five weeks, he had 12 agents under his command, and a 13th agent was on duty by the end of March. Detachment headquarters was established at San Juan in one of the buildings occupied by Headquarters, Antilles Air Command. On 18 March 1944 Captain Dickey and his agents were transferred from the CIC, Military Intelligence Service, War Department, to the Counter Intelligence Corps, Caribbean Defense Command. They were then placed on detached service with the Antilles Air Command.[316]

On 30 July 1944, the detachment moved with Headquarters, Antilles Air Command, to Borinquen Field, Puerto Rico. Up to this time, the detachment had no numerical designation. But with the reorganization of CIC within CDC, the detachment was formally activated as the 472d CIC Detachment, attached to the Antilles Air Command, on 31 July 1944. Its authorized strength was 22 enlisted men and one officer. Although the authorized strength was attained by nominally assigning men to the 472d from other CDC units, the number of agents actually on duty remained about 14. Men nominally assigned to the 472d were almost immediately placed on detached service with other detachments where they were needed more.[317]

Disposition of Agents

During March and April 1944, agents were distributed throughout the various air bases in the Antilles Air Command in the following manner: Atkinson Field, British Guiana, one agent; Borinquen Field, Puerto Rico, four agents; Waller Field, Trinidad, British West Indies, three agents; Batista Field, Cuba, two agents; and Vernam Field, Jamaica, two agents. All agents on duty outside detachment headquarters worked under the supervision of base A2's.

317 472d CIC Det Monthly Info Rpt for April 1945, dtd 1 May 45, cited in Basic Doc.

1443

Agents assigned to the various field offices were expected to conduct investigations of aircraft accidents, fires, and other incidents which might involve sabotage. They also conducted loyalty investigations of military and civilian personnel in key positions. Other duties included assisting the base intelligence officers in establishing and maintaining base security, investigations of alleged subversive activity and violations of AR 380-5, liaison with other War Department agencies and Allied intelligence officials, and the performance of any special duties which would aid in the accomplishment of the general mission of the CIC.[318]

Training

Most agents of the 472d had received specialized training at various Army air schools throughout the United States in addition to CIC training. Within the detachment, additional training took the form of language classes, the study of aircraft technical manuals and orders, physical exercise, and training films. Agents were also instructed in the preparation of security lectures, photography, fingerprinting, firearms proficiency, and security checks.

Since all of the agents in the 472d were continental Americans, some language difficulty was experienced. Few of the men spoke Spanish. A Puerto Rican interpreter was employed at the Borinquen Field office, and he accompanied agents who found it necessary to travel away from the base during an investigation. In addition, one of the agents stationed at Borinquen Field had formerly taught Spanish in an American university. Six agents were given a course of 20 lessons in conversational Spanish, and all were constantly encouraged to improve their Spanish.[319]

In April 1945, 1st Lt. Keith G. Sebelius, who had previously served as officer-in-charge of the 471st CIC Detachment's field office in Trinidad, was assigned to the 472d as executive officer. Captain Dickey was promoted to major during the same month.[320]

Operation

The primary task of the 472d was the investigation of crashes of military planes in the Antilles Air Command Area. In November 1944, a B-29 training program was initiated at Borinquen Field. A succession of B-29 crashes and accidents which followed called for considerable investigation by the CIC agents stationed there. Several months later this program was extended to Batista Field, Cuba, and Vernam Field, Jamaica. Similar coverage was given these bases by agents of the 472d working in cooperation with Second Air Force CIC agents.[321]

320 Ibid.
321 Ltr, AC of S, G2, CDC, to AC of S, G2, Antilles Dept, undated, subj: Second Air Force Personnel, cited in Basic Doc.

1444

All agents of the 472d worked in civilian clothing except officers and one administrative NCO stationed at Borinquen Field. Agents in civilian clothing went about the various installations as civilian employees of the War Department. They lived in officers' quarters and ate most of their meals at officers' clubs.[322]

In June 1944, the CIC in the Caribbean Defense Command took over the loyalty and character investigations of civilian employees from the Provost Marshal. Personnel investigations then became the bulk of the detachment's work. Of 137 case investigations performed in January 1945, all but 15 were of this type.[323]

Initially, air travel control was a responsibility of the agents stationed at Borinquen Field, Waller Field, and the headquarters of the 472d when it was located at San Juan. Such control entailed inspection of both baggage and personnel traveling by air. In the early part of 1945, this work was taken over by the S2 offices at both fields, and CIC agents were used for travel control only during rush periods and on Sundays and after hours.[324]

As in the case of the 606th CIC Detachment, the agents of the 472d were often asked to investigate criminal matters of no counterintelligence interest. Lt. Col. E. A. Rew, then the Chief, CIC, Caribbean Defense Command, had taken the position that CIC agents could be used on major extra-jurisdictional or criminal investigations, but he would not approve of their general use as criminal investigators. Actually, the only place where the criminal problem assumed any unusual proportions was at Batista Field, Cuba.[325]

Security surveys of major fields and bases were conducted frequently as a static counterintelligence measure. Similarly, security lectures and, whenever other duties permitted, censorship assistance were given by other agents of the 472d. When important persons, such as Gen. Hap Arnold and Mme. Chiang Kai Chek, arrived at Borinquen Field, agents there were detailed to security surveillance of the distinguished visitors.[326]

Activated late in the war, the 472d CIC Detachment conducted no spectacular investigations before the end of hostilities. Its work was routine, but necessary.

322 App D, p 9, Basic Doc.

323 472d CIC Det Monthly Statistical Rpt for Jan 45, dtd 1 Feb 45, (Secret) (Central Records Facility).

324 Memo, AC of S, G2, Antilles Dept, to all Base Intelligence Officers in Antilles Dept, dtd 5 Apr 44, subj: Travel Censorship Procedure, cited in Basic Doc.

325 Ltr, Hq Antilles Air Cmd to Base S2's, dtd 10 May 45, subj: CIC Investigations, cited in Basic Doc.

326 App D, p 8, Basic Doc.

Worth of static security measures cannot be measured in statistics, but the fact that no instances of enemy sabotage or espionage were detected within the Antilles Air Command is testimony to the effectiveness of these preventive measures.
